Dear Michael Walker:

The California Air Resources Board (CARB) staff reviewed STAX Engineering's (STAX) Test Plan for the mobile water-based Xcap™ and STAXbox™ capture and control system to treat emissions from containership auxiliary engines for use as a CARB Approved Emissions Control Systems (CAECS).

On July 14, 2021, STAX submitted a preliminary Test Plan to obtain approval for the barge-based Xcap-1 and STAXbox.A-1 to be used as a CAECS for compliance with the 2020 Control Measure for Ocean-Going Vessels At Berth (2020 At Berth Regulation). CARB staff reviewed the Test Plan and submitted comments to STAX staff on September 2, 2021, November 5, 2021, December 3, 2021, and December 31, 2021. To address staff's comments, STAX revised the Test Plan on October 25, 2021, November 23, 2021, December 22, 2021, and again on January 3, 2022.

Based on CARB staff's review, and pursuant to section 93130.5(f) of the 2020 At Berth Regulation, STAX's Test Plan (Revision 4, Dated January 3, 2022, attached) is hereby approved in accordance with testing requirements under the CARB 2020 At Berth Regulation and the CARB Recommended Emissions Testing Guidelines for Ocean-Going Vessels. In order to obtain CARB's Executive Officer's approval of STAX's emissions control strategy application, STAX will need to complete all testing outlined in their Test Plan submitted on January 3, 2022, and provide all reports generated from these tests along with an application for an Executive Order. The application requirements that STAX must meet to submit test results are outlined in section 93130.5 of the 2020 At Berth Regulation.

Vessel visits that coincide with these tests may count as a compliant visit under the 2017 Advisory Scenario 5 or the research exceptions in section 93130.8 (d) or 93130.10 (e) of the 2020 At Berth Regulation; however, these sections only apply for testing identified in the Test Plan and conducted after April 20, 2022, when the Test Plan was approved.
