Background

CARB is developing a regulation to implement the "Electric Vehicle Charging Stations Open Access Act" (Senate Bill 454; Statutes of 2013). The Electric Vehicle Charging Stations Open Access Act is intended to ensure all drivers of plug-in electric vehicles

are able to access publicly available charging stations regardless of membership status. The proposed requirements include adoption of an interoperable billing standard at all publically available electric vehicle charging stations, and clear communication on electricity pricing. Additionally, the proposed requirements will standardize station location data sent to the Alternative Fuels Data Center (AFDC) from the National Renewable Energy Laboratory (NREL), to ensure accurate and up-to-date data is available to consumers.
