Continue to rinse for at least 10 minutes. Get medical attention. In the event of any complaints or symptoms, avoid further exposure. Wash clothing before reuse. Clean shoes thoroughly before reuse.

**Ingestion** : Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention if adverse health effects persist or are severe. Never give anything by mouth to an unconscious person. - Special protective actions for fire-fighters** : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.
- Special protective equipment for fire-fighters** : Fire-fighters should wear appropriate protective equipment and self-contained operated in positive pressure mode.

## Section 6. Accidental release measures

### Personal precautions, protective equipment and emergency procedures

- For non-emergency personnel** : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
- For emergency responders** : If specialised clothing is required to deal with the spillage, take note of materials. See also the information in "For non-emergency personnel".
- Environmental precautions** : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

### Methods and materials for containment and cleaning up

- Small spill** : Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
- Large spill** : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. in container for disposal according to local regulations (see Section 13) Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

## Section 8. Exposure controls/personal protection

### Control parameters

#### Occupational exposure limits

- None.
- Appropriate engineering controls** :
- Environmental exposure controls** :
- Good general ventilation should be sufficient to control worker exposure to airborne contaminants. Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

### Individual protection measures

- Hygiene measures** : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
- Eye/face protection** : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.

### Skin protection

- Hand protection** : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.
- Body protection** : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
- Other skin protection** : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
- Respiratory protection** : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

- Advice on general occupational hygiene** : Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

### Conditions for safe storage, including any incompatibilities

- : Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination. Store in accordance with local regulations. Use appropriate containment to avoid environmental contamination.

## Section 8. Exposure controls/personal protection

### Control parameters

#### Occupational exposure limits

None.

- Appropriate engineering controls** : Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

**Environmental exposure controls** : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

#### Individual protection measures

**Hygiene measures** : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

**Eye/face protection** : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.

#### Skin protection

**Hand protection** : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

**Body protection** : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

**Other skin protection** : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

**Respiratory protection** : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

**WAIVER:** The failure of Seller or Buyer to insist, in any one or more instances, upon the performance of any of the terms, covenants or conditions of this contract or to exercise any right hereunder shall not be construed as a waiver or relinquishment of the future performance of any such terms, covenant or condition or the future exercise of such rights, nor shall it be deemed to be a waiver or relinquishment of any other term, covenant or condition, or the exercise of any other rights under this contract. WAIVER: The failure of Seller or Buyer to insist, in any one or more instances, upon the performance of any of the terms, covenants or conditions of this contract or to exercise any right hereunder shall not be construed as a waiver or relinquishment of the future performance of any such terms, covenant or condition or the future exercise of such rights, nor shall it be deemed to be a waiver or relinquishment of any other term, covenant or condition, or the exercise of any other rights under this contract. ### **I. Summary:**

Fresno Bee operated a newspaper printing facility in Fresno, CA. On October 31, 2016, the District received ERC banking application from the applicant who surrendered the 18 Permits to Operate, C-521-4-0 through -21-0 and requested Emission Reduction Credits for VOCs. Copies of the surrendered Permits to Operate (PTOs) are attached (Attachment A) and the permits have been cancelled effective September 21, 2016 when they permanently ceased operations at this location.

Based on the historical operating data prior to the shutdown, the amounts of bankable Actual Emission Reductions (AER) for the emissions are as shown in the table below. These values were calculated, according to the provisions of District Rules 2201 and 2301, as detailed in Section V of this document:

<b>Bankable Emissions Reductions Credits (ERC)</b>				
<b>Pollutant</b>	<b>1<sup>st</sup> Qtr. ERC (lb/qtr)</b>	<b>2<sup>nd</sup> Qtr. ERC (lb/qtr)</b>	<b>3<sup>rd</sup> Qtr. ERC (lb/qtr)</b>	<b>4<sup>th</sup> Qtr. ERC (lb/qtr)</b>
NOx	0	0	0	0
VOC	2,728	2,572	2,291	2,977
CO	0	0	0	0
PM <sub>10</sub>	0	0	0	0
SOx	0	0	0	0

### **II. Applicable Rules:**

Rule 2201 New and Modified Stationary Source Review Rule (2/18/16)  
Rule 2301 Emission Reduction Credit Banking (1/19/12)  
Rule 4607 Graphic Arts and Paper, Film, Foil and Fabric Coating (12/18/08)

### **III. Location of Reductions:**

Physical Location of Equipment: 1626 E Street in Fresno, CA.

#### **IV. Method of Generating Reductions:**

The AER's were generated by shutting down a newspaper printing operation. The equipment description for the unit is as follows:

**C-521-4-0 thru -21-0:** GRAPHIC ARTS PRINTING OPERATION WITH A MAN-ROLAND MODEL SO499 SO9347 FLEXOMAN-M COLDSET WEB-FED FLEXOGRAPHIC PRINTING PRESS, UNITS #1 - 18

#### **V. Calculations:**

##### **A. Assumptions**

- Annual emissions will be rounded to the nearest pound in accordance with the District Policy APR-1105.
- Average VOC emissions calculated from Emissions Inventory submittals 2011 to 2015.

Year	2011	2012	2013	2014	2015	Average
Emissions Inventory (tons/year)	5.46	4.97	4.96	4.80	4.17	4.87

##### **B. Emission Factors (EF)**

Emissions will be determined based on VOC content of each ink and monthly usage. Records of monthly ink usage have been provided by applicant.

##### **C. Baseline Period Determination**

In accordance with District Rule 2201, Section 3.8, the baseline period is the two consecutive years of operation immediately prior to the submission of the complete application; or another period of at least two consecutive years within the five years immediately prior to the submission of the complete application, if it is more representative of normal source operations (NSO).

The application to bank the Emission Reduction Credits (ERCs) from the shutdown of the operation was received on October 31, 2016. A representative period from 2011 through 2015 will be used to represent the normal operation within the five-year period immediately prior to submission of the complete application. The difference between the two-year average and NSO was calculated using the following equation:

$$\text{Difference} = ((\text{Year 1 Rate} + \text{Year 2 Rate}) / 2) - 5\text{-year Average Rate}$$

For the 2011 and 2012 period, the difference was calculated as follows:

$$\text{Difference} = ((5.46 + 4.97 / 2) - 4.87 = 5.22 - 4.87 = 0.35 \text{ tons/year}$$

The calculation was repeated for each of the two-year periods in the last five years and the results are shown on the following table:

Year	Emissions Inventory (tons/year)	Difference between two-year average and NSO (tons/yr)
2011	5.46	
2012	4.97	0.35
2013	4.96	0.095
2014	4.80	0.01
2015	4.17	-0.42
5-year Averages	<b>4.87</b>	

For the five-years immediately preceding the shutdown, the period most closely matching the normal source operation five-year average is 2013 – 2014.

#### D. Historical Actual Emissions (HAEs) Calculations

The facility has maintained monthly ink usage by ink type. These monthly ink usage records have reconciled with five year ink invoices from facility's supplier INX International Ink Co. VOC content and density of each ink has been verified by Safety Data Sheets.

The monthly VOC emissions are calculated from these records as shown below.

$$\text{HAE VOCs} = \frac{\text{InkUsage (lbs)}}{\text{InkDensity (lbs/gal)}} \times \text{Ink VOC Content (lbs/gal)}$$

SUMMARY EMISSIONS (Pounds): VOCs:

VOCs	2013	2014	Average
1st Quarter:	2,954	3,107	3,031
2nd Quarter:	2,897	2,819	2,858
3rd Quarter:	2,413	2,679	2,546
4th Quarter:	3,727	2,889	3,308
Annual Total:	11,991	11,494	11,743

#### E. Adjustment to Historical Actual Emissions (HAE):

##### Emissions Adjusted for Rule 4607 - Graphic Arts And Paper, Film, Foil And Fabric Coating:

District Rule 4607 limits VOC emissions from graphic arts operations and paper and fabric coating operations associated with graphic arts operations. This rule sets VOC content limits for inks, coatings, and other related VOC containing materials for printing and coating operations related to graphic arts. The newspaper printing operation was in compliance with this rule at the time of the ERC application submittal by having ink VOC content less than Rule limit for Flexographic Ink on Porous Substrates of 1.88 lb/gal. This has been verified by Safety Data Sheets of the inks used in newspaper printing operation. Therefore, no adjustments are needed for Rule 4607.

#### F. Post Project Potential to Emit (PE2)

As discussed above, the subject equipment has been permanently shut down and the PTOs were surrendered to the District. Therefore the PE2 = 0 for all emissions.

#### G. Air Quality Improvement Deduction

The air quality improvement deduction (AQID), per Rule 2201, Section 3.6, is 10% of the AER, before the AER is eligible for banking. The AQID were calculated according to the following formula:  $AQID = AER \times 10\%$

VOCs	AER	AQID
1st Quarter:	3,031	303
2nd Quarter:	2,858	286
3rd Quarter:	2,546	255
4th Quarter:	3,308	331
Annual Total:	11,743	1,175

## H. Emission Reductions Eligible for Banking

The emission reductions eligible for banking are the difference between the historical actual emissions and the potential to emit after the project. Since the post-project emissions = 0 for all pollutants, the emission reductions eligible for banking equals the HAE, minus the AQID.

$$\text{Bankable AER} = \text{AER} - \text{AQID}$$

VOCs	AER	AQID	Bankable AER
1st Quarter:	3,031	303	2,728
2nd Quarter:	2,858	286	2,572
3rd Quarter:	2,546	255	2,291
4th Quarter:	3,308	331	2,977
Annual Total:	11,743	1,175	10,568

## VI. Compliance:

### Rule 2301 - Emission Reduction Credit Banking

#### **Section 4.0 - Eligibility of Emission Reductions**

Section 4.2, specifies the criteria by which emission reductions, that have occurred after September 19, 1991, are eligible for banking. The emission reductions in this project occurred when the PTOs for the newspaper printing equipment was surrendered, effective September 21, 2016. As these emission reductions occurred after September 19, 1991, the criteria in Section 4.2 must be satisfied.

Section 4.2.1 requires that the emission reductions are real, surplus, quantifiable, and enforceable.

#### **Real:**

The emission reductions were generated by the shutdown of a newspaper printing operation. The real emissions were calculated from actual historic production throughput ink use data. The printing equipment has been removed from service and the permit was subsequently surrendered to the District. Therefore, the emission reductions are real.

#### **Surplus:**

There are no laws, rules, regulations, agreements, orders, or permits requiring any of the emission reductions which generated the ERC:

- Shutdown of the printing operation was voluntary and not required by any law, rule, agreement, or regulation.
- These ERCs are not needed for their current or proposed operations.

- The emission factors are not subject to additional adjustments and therefore surplus to the requirements of the District's Ozone Plans and District Rule 4607.

Therefore, the emission reductions satisfy the surplus requirement.

**Permanent:**

The newspaper printing operation has been shut down, and the PTO has been surrendered. Further operation requires an application to the District for a new operating permit.

Fresno Bee is owned by the McClatchy Company who also owns Merced Sun-Star and Modesto Bee within the San Joaquin Valley Air Pollution Control District. Printing of Fresno Bee at 1626 E street was ceased on July 30, 2016 and Permit to Operate was surrendered on September 21, 2016. Fresno Bee is now being printed in Sacramento Bee printing operation along with Merced Sun-Star and Modesto Bee. It is expected as such, that there will be no shifting of the past emissions to a similar facility in the San Joaquin Valley.

Therefore, the emission reductions satisfy the permanent requirement.

**Quantifiable:**

Actual Emission Reductions (AER) amounts were calculated from historic ink use data and methods according to District Rule 2201. Therefore, the reductions are quantifiable.

Therefore, the emission reductions satisfy the quantifiable requirement.

**Enforceable:**

The PTO for this facility has been surrendered and the printing presses cannot be operated without a valid PTO. Due to universal decline in printing media industry, it would be readily apparent if it were to be operated in the future.

Therefore, the emission reductions satisfy the enforceable requirement.

Section 4.2.2 requires that AER be calculated in accordance with the procedure in Rule 2201 (New and Modified Stationary Source Review Rule), including any adjustments for use of Community Bank offsets. As detailed in Section V Calculations, the AER were calculated according to the procedure in Rule 2201 and the past permitting of the facility did not include Community Bank ERC.

Therefore, the emission reductions satisfy the requirements of this section.

Section 4.2.3 requires that an application be filed no later than 180 days after the reduction occurred. The ERC banking application was filed on October 31, 2016. According to District Policy APR 1805, the date of the shutdown is considered to be the date on which the PTO is surrendered, unless the equipment was removed or the District determines the owner did

not intend to operate again. Since the District has no evidence that either of these were the case, the printing presses are considered to be operational at time of permit surrender. The application was filed concurrently with the newspaper printing closure and is therefore considered timely.

Based on applicant information, the facility was last operated on July 30, 2016, so even if the last date of operation was considered to be the closure date, the application would still have been filed within 180 days.

Therefore, the emission reductions satisfy the timely submittal requirement of this section.

Section 4.2.4 applies to emissions from non-permitted units. The newspaper printing operation was permitted so this section is not applicable.

Section 4.3 applies to banking offsets which were provided for cancelled Authorities to Construct. These emissions were not previously banked so this section is not applicable.

Section 4.4 refers to source categories which are not eligible for ERC. The categories do not include newspaper printing shutdowns, so this section is not applicable.

Section 4.5 details criteria for determining eligibility of Green House Gas (GHG) emissions for banking. There was no GHG emissions from newspaper printing operation so this section is not applicable.

## **Section 5.0 - ERC Application Procedures**

Section 5.5 of Rule 2301 states that ERC certificate applications for reductions shall be submitted within 180 days after the emission reduction occurs. The ERC application was received on October 31, 2016. The applicant surrendered the PTOs and therefore permanently ceased operations at this location effective September 21, 2016. Therefore, the application was submitted in a timely fashion.

## **Section 6.0 - Registration of ERC Certificates**

The APCO may only grant an ERC Certificate after the emission reductions have actually occurred upon satisfaction of the following applicable provisions:

This emission reduction is surplus and additional of all requirements pursuant to Section 4.5.3.4. Therefore the ERC certificate shall include the following notation:

"This emission reduction is surplus and additional to all applicable regulatory requirements."

Compliance with Rule 2301 has been demonstrated and no adjustments are required under this rule.

**VII. Recommendation:**

Pending a successful Public Noticing period, issue Emission Reduction Credit certificates to Fresno Bee in accordance with the amounts specified on the draft ERC certificates in Attachment D.

If an enclosed system is used, it must totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing, draining procedures, and it must be used according to manufacturer's recommendations and must be closed when not in use. [District Rule 4607]
14. Permittee shall store or dispose of fresh or spent solvents, waste solvent cleaning materials, coatings, adhesives, catalysts, thinners, and inks in closed, non-absorbent, non-leaking containers. The containers shall remain closed at all times except when depositing or removing the contents of the containers or when the container is empty. [District Rule 4607]
15. Permittee shall maintain a current file of coatings, inks, adhesives, fountain solutions, wash primers, and solvents in use and in storage. The file shall include material safety data sheet (MSDS) or product data sheet showing the material name, manufacturer's name, VOC content as applied, mixing instruction, and density. [District Rule 4607]
16. Permittee shall record on a monthly basis, the type and amount of each ink, coating, adhesive, fountain solution, wash primer, and solvent used. [District Rule 4607]
17. All records shall be retained for a period of at least 5 years and shall be made available for District inspection upon request. [District Rule 4607]

12. For a permittee using any solvent containing more than 25 g/L of VOC for organic solvent cleaning, solvent shall not be atomized into the open air unless it is vented to a VOC control device. This provision shall not apply to operations where roller or blanket wash is applied automatically and the cleaning of the nozzle tips of automated spray equipment systems, except for robotic systems, and cleaning with nonpropellant-induced, hand-held spray bottles or containers which solvents are dispensed without a propellant-induced force. [District Rule 4607]
13. For a permittee using any solvent containing more than 25 g/L of VOC for organic solvent cleaning, the permittee shall not use VOC-containing material to clean spray equipment used for the application of coatings, adhesives, or ink, unless an enclosed system or equipment that is proven to be equally effective at controlling emissions is used for cleaning. If an enclosed system is used, it must totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing, draining procedures, and it must be used according to manufacturer's recommendations and must be closed when not in use. [District Rule 4607]
14. Permittee shall store or dispose of fresh or spent solvents, waste solvent cleaning materials, coatings, adhesives, catalysts, thinners, and inks in closed, non-absorbent, non-leaking containers. The containers shall remain closed at all times except when depositing or removing the contents of the containers or when the container is empty. [District Rule 4607]
15. Permittee shall maintain a current file of coatings, inks, adhesives, fountain solutions, wash primers, and solvents in use and in storage. The file shall include material safety data sheet (MSDS) or product data sheet showing the material name, manufacturer's name, VOC content as applied, mixing instruction, and density. [District Rule 4607]
16. Permittee shall record on a monthly basis, the type and amount of each ink, coating, adhesive, fountain solution, wash primer, and solvent used. [District Rule 4607]
17. All records shall be retained for a period of at least 5 years and shall be made available for District inspection upon request. [District Rule 4607]

These terms and conditions are part of the Facility-wide Permit to Operate.

12. For a permittee using any solvent containing more than 25 g/L of VOC for organic solvent cleaning, solvent shall not be atomized into the open air unless it is vented to a VOC control device. This provision shall not apply to operations where roller or blanket wash is applied automatically and the cleaning of the nozzle tips of automated spray equipment systems, except for robotic systems, and cleaning with nonpropellant-induced, hand-held spray bottles or containers which solvents are dispensed without a propellant-induced force. [District Rule 4607]
13. For a permittee using any solvent containing more than 25 g/L of VOC for organic solvent cleaning, the permittee shall not use VOC-containing material to clean spray equipment used for the application of coatings, adhesives, or ink, unless an enclosed system or equipment that is proven to be equally effective at controlling emissions is used for cleaning. If an enclosed system is used, it must totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing, draining procedures, and it must be used according to manufacturer's recommendations and must be closed when not in use. [District Rule 4607]
14. Permittee shall store or dispose of fresh or spent solvents, waste solvent cleaning materials, coatings, adhesives, catalysts, thinners, and inks in closed, non-absorbent, non-leaking containers. The containers shall remain closed at all times except when depositing or removing the contents of the containers or when the container is empty. [District Rule 4607]
15. Permittee shall maintain a current file of coatings, inks, adhesives, fountain solutions, wash primers, and solvents in use and in storage. The file shall include material safety data sheet (MSDS) or product data sheet showing the material name, manufacturer's name, VOC content as applied, mixing instruction, and density. [District Rule 4607]
16. Permittee shall record on a monthly basis, the type and amount of each ink, coating, adhesive, fountain solution, wash primer, and solvent used. [District Rule 4607]
17. All records shall be retained for a period of at least 5 years and shall be made available for District inspection upon request. [District Rule 4607]

**RE: Cancellation of Permit(s) To Operate**

Dear Mr. Ochinerero:

Pursuant to your request, Permit to Operate #'s C-521-4-0 thru -21 have been cancelled.

Please pay close attention to the following important information:

- The equipment described by the above permits must be placed out of service and rendered non-operational.
- Operating equipment without a permit is a violation of District regulations and is subject to enforcement action.
- Should you decide to place this equipment back into service, you must first obtain an Authority to Construct permit from the District. The equipment will be treated as new, and additional control equipment, more stringent emission limits, and/or emission offsets, may be required. An application and instructions for an Authority to Construct can be found at <http://www.valleyair.org/busind/pto/ptoforms/1ptoforidx.htm>.

Should you have any questions, please contact Errol Villegas at (559) 230-5900.

Sincerely,

Gentlemen,

Please see the email request below to cancel PTOs C-521-4 thru -21, as equipment not in service as of 7/31/16. I already added comments under facility detail screen and each cancelling PTO. Email also scanned in PAS. Please proceed with the cancellation. Thanks
