What issues (related to the Community Air Protection Program) should the Consultation Group weigh in on?

“ Health benefits tracking is critical ”

“ Long term funding ”

“ Getting past jobs vs the economy myth ”

“ Funding, areas of agreement,

From the chat:
-All of those are important. I second them.

Responses

Funding, areas of agreement, conflict resolution, zero vs near zero opportunities to give immediate reductions

How emissions data should be collected and communicated so that it is meaningful to communities, transparent, and accurate.

Implementation challenges & opportunities

Best practices and lessons learned

Sustainable long term funding Budget

Applying lessons learned to other communities

Getting past jobs vs the economy myth

Health benefits tracking is critical

How to forward environmental justice and equity; sustainable funding; transparent tracking of emission reduction programs; health tracking which demonstrates actual health benefits; dealing with conflicts more effectively

Health Metrics Long term funding

Innovative community solutions Health metrics

Responses

From the Chat:

- July 20th for sure. Aug 3 second choice.

-July 20 works for me. On Aug. 3 I will be in Maui

What is one thing you want CARB to know relative to the Community Air Protection Program?

“ Other local governments need to be supportive for the process to work ”

“ CARB will need to be more aggressive in its compliance and enforcement authorities as a cornerstone of equity in emission reductions. ”

From chat:
All above

Responses

There are differences in how the CERPs are being developed and implemented

There seem to be more days with high short term spikes

There needs to be a more formal and structured process for improving AB 617 CERP development and implementation with the newer communities, based on lessons learned from the older communities

All parts of California should have clean air.

how will AB617 deal with climate change impacts

Collaborate with public Health for better health outcomes information

Polluter pay

More teeth + transparent district progress toward AB 617 required activities -- particularly statewide mandates.

NEED MORE TEETH!!

The program needs to be funded and expanded to all CA LIC and DAC's as a standard.

Focus on enforcement and community driven solutions

High emission legacy sources should be phased out

We need quantifiable metrics to show real reductions in emissions and exposures are being achieved.

Need to understand authorities. Many of the issues we face can only be addressed by the legislature

It's a program with intention, but stuck at a lack of willingness

Other local governments need to be supportive for the process to work

Responses

data analysis and interpretation. Who will do? How will it be reported? How often and where? How will proportionate contribution to health impacts be determined.

Enhanced penalties

CARB will need to be more aggressive in its compliance and enforcement authorities as a cornerstone of equity in emission reductions.
