

California Air
Pollution Control
Officers
Association

Tung T. Le
Executive Director

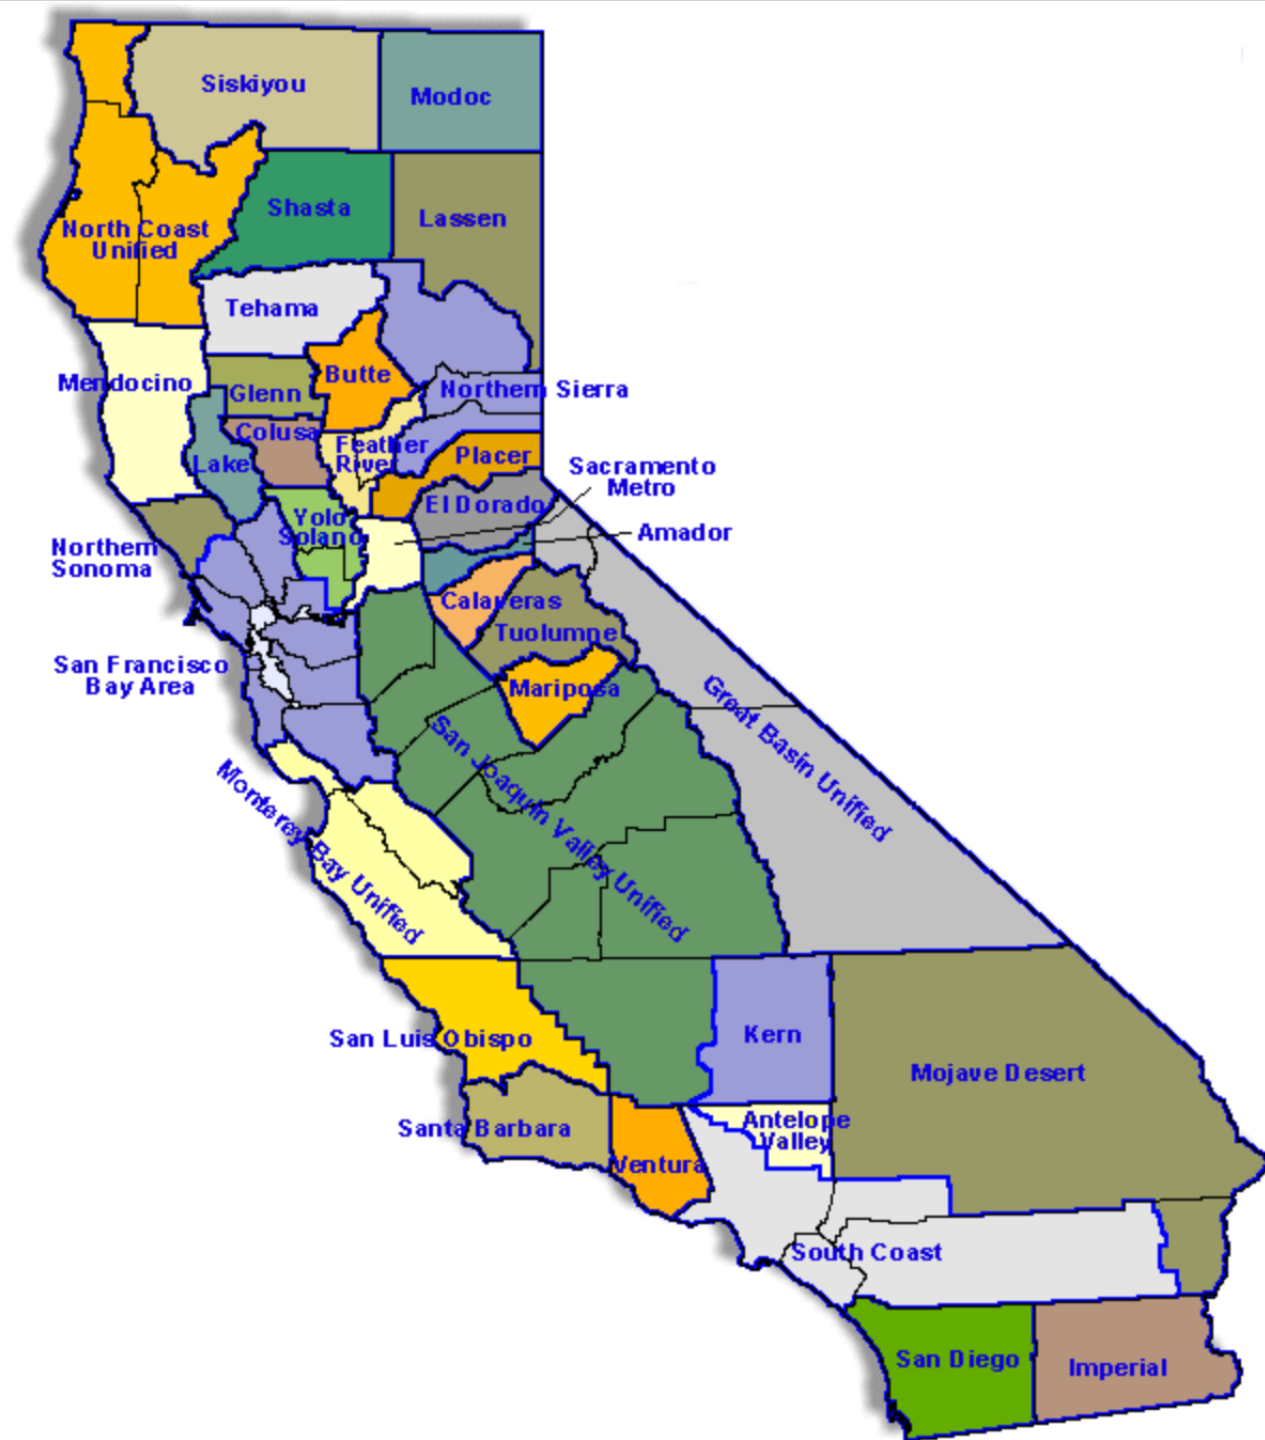

November 2, 2021

Responsibility for clean air is shared among federal, state, local agencies, and communities.

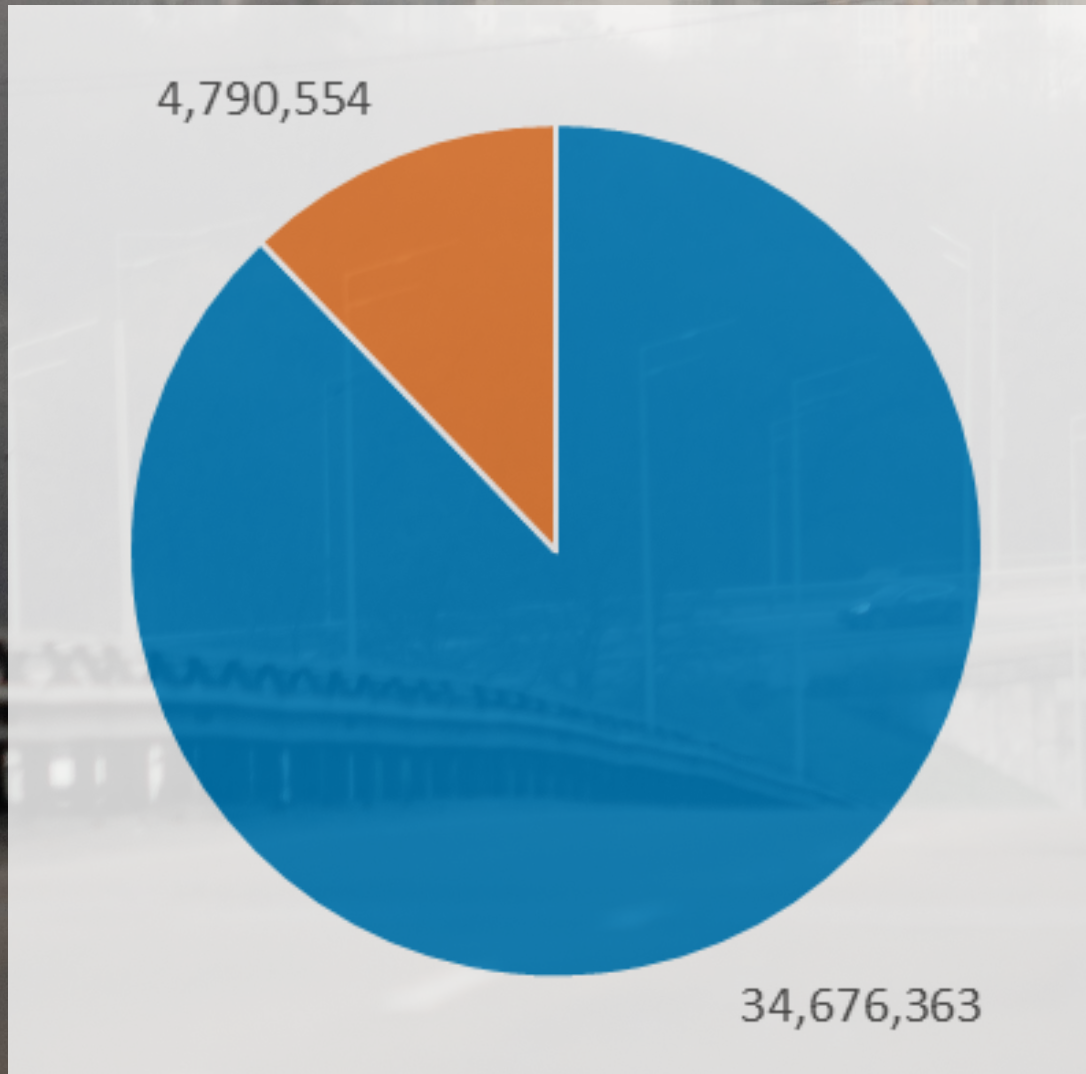

California Air Districts

Air Districts address localized air pollution
that endangers community health.

Californians Living in Ozone Non-Attainment in 2021 (2015 Standard)

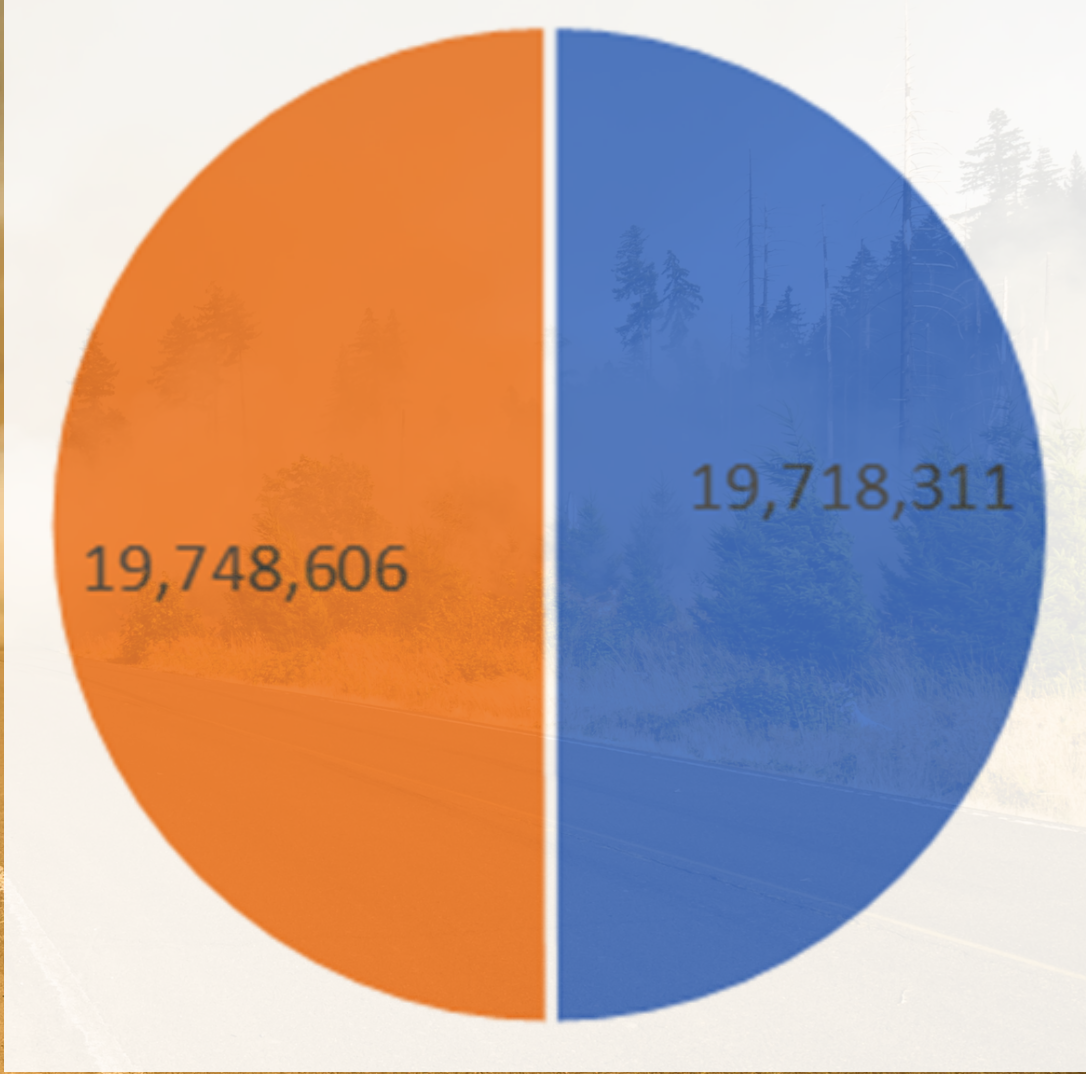

- Population Living in Non-Attainment
- Population Living in Attainment

Californians Living in PM2.5 Non-Attainment in 2021 (2015 Standard)

- Population Living in Non-Attainment
- Population Living in Attainment

The Road Ahead

When Backup Generators are Needed

- For existing units, Air Districts will determine need and may use enforcement discretion to allow operation in response to emergencies
- New generators must meet current Best Available Control Technology (BACT)
- Must ensure backup resources are as clean as possible
- Local/regional emissions are an issue of not just air quality but of equity
- As California transitions to cleaner energy, we must be mindful of approaches that exacerbate local/regional impacts

Thirteen 2,700 hp Tier II diesel engines in Marysville

Major UP Railline

Low income homes and apartments

26 Megawatt diesel power station
All Tier II engines
