**Community Air Protection Program
Annual Report
San Joaquin Valley Air Pollution Control District
Grant # G18-CAPP-26
Grant # G19-CAPP-26
Report # 3**

Implementation of AB 617 mandates requires significant investment in staffing resources, support services, and procurement of equipment by the San Joaquin Valley Air Pollution Control District (District), including development and implementation of additional emissions reporting, community air monitoring, Best Available Retrofit Control Technology (BARCT), and community emission reduction program requirements and measures. These requirements include strict implementation deadlines prescribed under AB 617 and related implementation guidance provided by CARB in their *Community Air Protection Blueprint*.

District expenditures to implement the requirements of AB 617 under these grant agreements are described in more detail in the report below. Given the ongoing implementation nature of the AB 617 program, expenditures are earned against the available resources as they are incurred, and are reported for both agreements by category of expense accordingly.

AB617 Expenditure and Fund Balance	2021 Report
Total Grant Award	33,100,000
Interest Earned	413,203
Total Revenue	33,513,203
Program Implementation Costs:	Actual
Services, Supplies and Equipment Purchases	6,000,967
Staffing and Support Resources	19,710,593
Total Costs	25,711,560
Available Balance as of April 30, 2021	7,801,643

IMPLEMENTATION OF STATE MANDATES UNDER AB 617:

Since 2018, CARB has selected fifteen (15) communities for AB 617 implementation statewide, including the San Joaquin Valley communities of South Central Fresno, Shafter, Stockton, and most recently Arvin/Lamont. As required under AB 617, the San

Joaquin Valley Air Pollution Control District's (District) Governing Board adopted the South Central Fresno and Shafter Community Emission Reduction Programs (CERPs) in September 2019, and CARB subsequently approved the CERPs in February 2020. In March 2021, the District's Governing Board adopted the Stockton CERP as the District's third community to transition to implementation.

The CERPs adopted for Valley communities were developed in consultation with Community Steering Committees (CSCs) to address community air pollution concerns and priorities. Since adoption of the CERPs for South Central Fresno and Shafter, the District has been working closely with the CSCs and local partners to implement CERP measures designed to reduce air pollution and exposure in the communities. The AB 617 community of Stockton began transitioning to the implementation phase after the CERP was adopted by the District Governing Board in March 2021. In addition to the CERP implementation work, the District has worked diligently to implement the Community Air Monitoring Plans in consultation with the CSCs, with extensive air monitoring now being deployed and conducted in each of the communities and shared with the public on the District's community-specific webpages.

On February 25, 2021, CARB selected the community of Arvin/Lamont as the fourth community in the San Joaquin Valley under the AB 617 program. The addition of Arvin/Lamont will continue to add to the District's ongoing work in implementing the AB 617 program. Working collaboratively with Arvin/Lamont community stakeholders, the District's early work in this community will be to establish a Community Steering Committee, finalize the community boundary, and establish the Community Steering Committee charter. Throughout the rest of the year, the District will work in consultation with the Arvin/Lamont CSC to develop a CERP and air monitoring plan to help address the needs of the community and meet the goals of AB 617 while moving forward with CERP and air monitoring implementation in the three other AB 617 communities.

The following provides details of the work required for each program area for selected communities under AB 617 over the course of time since the last annual report provided to CARB.

Community Outreach and Engagement

The District has utilized meaningful community engagement to guide the District's efforts in the following areas under AB 617:

- Identification and prioritization of communities for air quality monitoring and emissions reduction programs
- Design and implementation of community air quality monitoring networks
- Development of emission reduction programs
- Design and development of effective voluntary incentive-based emission reduction programs
- Prioritizing the sources and locations for expenditure of incentive dollars

- Developing and making publically accessible extensive technical information

To ensure successful implementation of AB 617, residents, businesses, community-based organizations, public agencies, environmental justice organizations, and other stakeholders within selected communities are fully engaged through the CSC in each community. The District has ensured that the CSCs are designed to facilitate inclusive and balanced public engagement by providing:

- Agenda-setting meetings with District, stakeholders, community co-hosts, CARB, and a third-party facilitator to collectively set expectations and plan for upcoming CSC meetings
- Real-time interpretation services in all languages requested by CSC members and members of the public, which to date is English, Spanish, and American Sign Language
- To address CSC recommendations for enhancing the availability of translation, District staff have moved up agenda setting meetings to provide for meeting materials to be prepared, translated, and delivered with more time for member review prior to meetings
- Extensive community-level participation and involvement by partner agencies and organizations, such as CARB, State Department of Pesticide Regulation (DPR), City of Fresno, City of Shafter, City of Stockton, Councils of Governments (COGs), Office of Environmental Health Hazard Assessment (OEHHA), Pacific Gas and Electric, Grid Alternatives, Community Action Partnership of Kern, Tree Fresno, Tree Foundation of Kern, the Port of Stockton, and others.
- A comprehensive and dedicated bilingual webpage with tools to view real-time air quality monitoring data and maps of emissions
- Neutral meeting facilitation to ensure meetings are inclusive and neutral by bringing out different points of view and preventing individuals from monopolizing discussions
- Board-approved stipend program for volunteer resident members of AB 617 CSCs (subject to availability of state AB 617 funding and approved allocations in the District's Budget), to help encourage sustained and meaningful community engagement
- Weekly phone calls and text exchanges with our Spanish speaking CSC members to ensure they are engaged in the process
- In response to the Governor's COVID-19 shelter-in-place order in March 2020, the District was first region in state to transition to virtual CSC meetings beginning in April 2020. These virtual meetings have been well-attended by committee members as well as other community stakeholders, with a wide range of agenda topics covered and extensive participation by meeting attendees.
- Understanding that some CSC members were limited in their ability to participate in the virtual meetings, and in coordination with community-based organizations, developed program to lend laptop computers and internet access to members of the CSC to allow full participation

The District has been working with CSCs to implement effective strategies, including engaging with Valley residents, businesses, agencies, and other stakeholders to identify and move forward with clean air investments in South Central Fresno, Shafter, and Stockton approved in the CERPs. Additionally, the District has begun meeting regularly with the Arvin/Lamont Community Steering Committee to begin to develop effective strategies, including engaging with Valley residents, businesses, agencies, and other stakeholders to identify clean air investments and strategies for inclusion in the CERP. Ensuring effective steering committees requires substantial investment of staffing and other resources to schedule, organize, and facilitate frequent off-site, after-hours public meetings with extensive related investigation and communications.

The District has looked for ways to continue engaging residents throughout the Valley as needed to solicit additional community input while using outreach and media events as opportunities to discuss AB617 and promote the various grant programs available (see Appendix E).

One recent example is the virtual Friday Night Live event held on Zoom and streamed live on Facebook, allowing residents and business members from across Shafter and South Central Fresno to learn about incentive opportunities available immediately and gather contact info and generate interest in upcoming funding opportunities. Attendees learned about AB 617 and where to find grant applications, shared their contact info and overall were informed about all of the great work occurring in the Valley's AB 617 communities. The District used targeted social media advertising to alert the AB 617 communities, provided all of the information in both English and Spanish and offered prizes to increase interest in the fun virtual event.

Additionally, District staff provides updates and seeks feedback from the Citizens Advisory Committee (CAC) and Environmental Justice Advisory Group (EJAG) as the implementation of AB 617 in the Valley continues to develop.

Ongoing Response to COVID-19 and meeting participation

In March of 2020, the global COVID-19 pandemic forced the District to discontinue in-person community steering committee meetings. To address this challenge and to move forward with the important work of continuing the implementation of AB 617, District staff surveyed each steering committee and found a consistent strong desire by CSC members to continue implementing AB 617, virtually, in all three of the selected communities.

As a result of this feedback, the District held a few practice meetings to familiarize the CSC's with a new "virtual" meeting platform and began moving all meetings to Zoom. During those meetings, the District addressed issues such as Spanish and American Sign Language interpretation needs, and provided important instruction to CSC members on the use of Zoom and how various features help facilitate a high level of discussion and interaction, which were keys to success for the in-person meetings.

The District also learned through CSC feedback that certain committee members could not participate in virtual meetings due to a lack of technology and connectivity in their home and has since been able to lend laptops with internet access to those members to allow them to attend virtually and participate in regularly scheduled AB 617 Steering Committee meetings and subcommittees.

With almost a year of zoom meetings now complete, staff, CSC members and public participants are better acquainted with the Zoom meeting process, including how to access interpretation and provide comments, as well as enjoy the convenience of attending evening meetings from the location of their choice.

Additionally, the District's Board approved stipend program to help cover time and expenses for community resident steering committee members that attend AB 617 meetings. In most cases, steering committee meetings occur in the evenings and may draw attendees away from their families and other obligations. Prior to the stipend program, Community resident steering committee members were not paid and did not have expenses reimbursed to participate in steering committee meetings. Providing stipends is an important way to support the critical participation that is needed as well as encourage sustained and meaningful community engagement throughout these processes.

Emissions Inventory and Reporting

Criteria and Toxics Report (CTR) Regulation Development

Under AB 617, CARB is tasked with developing a uniform statewide system for reporting inventories for criteria and air toxic emissions for stationary sources to the public. The uniform statewide system is currently under development. CARB is also leading an effort to develop a new regulation, titled the Regulation for the Reporting of Criteria Air Pollutants and Toxic Air Contaminants (CTR), to establish District permitted stationary source emissions inventory reporting requirements. Since the CTR regulation is being developed by CARB in two distinct phases or articles, the District's efforts on the CTR's development follows CARB's two-phased approach.

Phase I: General Requirements – Since January 2018, District staff has been heavily involved with other Districts and CARB in the development of Phase I of the CTR regulation, *General Requirements*. The District's involvement in this process includes executive management, management, supervisory, and staff-level employees. The type of engagement has been broad, including varying levels of involvement (daily, weekly, biweekly, and monthly activities) ranging from conference calls and other correspondence, to meetings and workshops. The District has met with CARB, industry, and various stakeholders on numerous occasions to address CTR implementation issues. As a result of these multiple consultations, District staff has proposed numerous edits to the proposed CTR language to streamline the implementation of the proposed regulation and further enhance the document.

Phase II: Uniformity (Calculating and Reporting Emissions) – In addition to the development of the General Requirements, the CTR will contain a Uniformity of emissions inventory reporting section that will be used to calculate emissions and

report data to CARB, with the end goal of a consistent statewide emissions inventory. The development of the Uniformity section is based on a sector-based or equipment type approach. To date, the sectors being analyzed are power generation, oil and gas, and landfills. Similar to Phase I, the District has been at the forefront of this effort, leading the workgroup that is developing the power generation guidance. District management and staff are also participating in the other two workgroups. The three workgroups have had multiple conference calls and have developed draft guidance documents.

Community Emissions Inventory Development

Stationary Source Emissions Inventory – Under the state’s AB 2588 - Air Toxics Hot Spots Information and Assessment program, the District conducts major work every year to update the criteria pollutant emissions inventory and toxic air contaminant (TAC) emissions inventory for stationary sources.

As a result of AB 617, the District was required to create emissions monitoring plans and CERPs for the Year One selected communities of South Central Fresno and Shafter, as well as the Year Two community of Stockton, and has begun the community engagement process for the selected Year Three community of Arvin-Lamont. To assist with the decision-making, and to inform the committees of existing conditions regarding air pollution, the District compiled criteria pollutant and Toxics Air Contaminant (TAC) emissions inventory data for all stationary sources in South Central Fresno, Shafter, and Stockton communities. The District is currently preparing the inventory data for Arvin-Lamont alongside the development of the formal community boundaries. This emissions inventory compilation process involves the following:

1. Identifying permitted facilities that are within the AB 617 communities;
2. Geocoding permitted facilities (i.e. converting street addresses to coordinates and then verifying the locations);
3. Surveying District permitted facilities and processing the information submitted to the District;
4. Following up with facilities that have not submitted emissions inventory to date;
5. Processing inventory data including quality assurance of the final data before data are submitted to CARB; and
6. Compiling the emissions inventory data from the District’s databases for each permitted facilities within the selected communities.

Area-wide and Mobile Source Emissions Inventory – The District assisted CARB in developing selected community-level emissions inventories for area-wide and mobile

sources. CARB has provided the area-wide and mobile source emissions data to date, with oversight and quality assurance provided by the District.

Emissions Inventory Summaries – The District compiled the emissions inventory from stationary sources and mobile sources under a single document. This compilation process and associated data were shared multiple times with the interested public and with Year One and Year Two steering committees, as well as presented in both English and Spanish and made available on each of the District’s selected community websites:

- Emissions Inventory Data for Shafter:
<http://community.valleyair.org/selected-communities/shafter>
- Emissions Inventory Data for South Central Fresno:
<http://community.valleyair.org/selected-communities/south-central-fresno>
- Emissions Inventory Data for Stockton:
<http://community.valleyair.org/selected-communities/stockton/>

The District is currently preparing the emissions inventory for the Arvin-Lamont community, alongside the development of the formal community boundaries.

Community Website Mapping and Emissions Inventory Tools

Using the compiled stationary source, mobile, and area-wide emissions inventory data, the District has created interactive website mapping tools and continues working to further enhance these available resources. The tools utilize the geocoding data and other spatially-based data to present the community-level emissions. In addition to emissions inventory information, the tools also indicate locations of sensitive receptors (schools, hospitals, care facilities).

The images below are example screen shots of the mapping tools from the community pages.

Image 1: Community Map with Permitted Facility Locations:

Legend:

PERMITTED SOURCES TYPES

-  GOVERNMENT FACILITY
-  FERTILIZER FACILITY
-  OTHER FACILITIES
-  GASOLINE DISPENSING FACILITY
-  PUBLIC UTILITY & TELECOMMUNICATIONS
-  CONCRETE FACILITY
-  COATING & METAL WORKING FACILITY
-  FACILITY OUTSIDE BOUNDARY
-  HOSPITAL & MEDICAL OFFICES

Map:

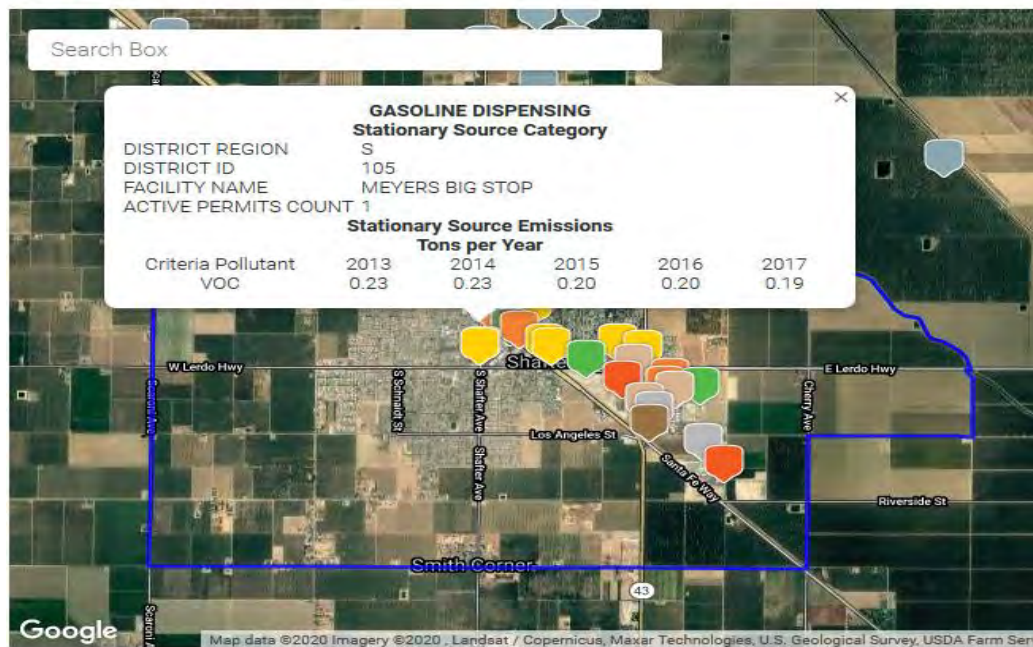

Image 2: General Map Emissions Inventory Data Functionality Demonstration:

Map:

The emissions inventory and spatial data were also utilized to create updated three dimensional (3D) representations of the inventory information. Overtime, with input from the communities, the District worked with CARB to provide 3D maps with

additional levels of visualization that allow the viewer to instantly gain perspective on the magnitude of mass emissions of the various permitted facilities within each 1 km grid cell compared to one another. The 3D map functionality is the equivalent of 360 degree tour of the communities, and includes various zoom levels. This map view also includes additional layers depicting CARB’s area-wide and mobile source emissions data on a 1 km grid cell.

Image 3: Map Emissions Inventory Functionality Demonstration:

Community Air Monitoring

Working with the CSCs, the District planned, deployed, and maintained new air monitoring networks in selected communities and used the best available science in evaluating potential air quality concerns. This included holding many public meetings on the subject of community air quality monitoring, gathering and considering input from the CSCs and the public, and establishing the Community Air Monitoring Plan for the South Central Fresno, Shafter, and Stockton communities, procuring a combination of costly air monitoring platforms equipped with highly specialized analyzers capable of monitoring a full range of criteria and toxic pollutants.

The District worked closely with the CSCs and the public in soliciting feedback and recommendations on how the networks should be designed. In these sessions, the CSCs provided valuable ideas and recommendations to the District on which pollutants should be measured, where to place monitors, and which sources of pollution should be investigated in the area. The District provides ongoing updates at the CSC meetings regarding progress in preparations for implementing the community networks.

Community air quality monitoring plans were discussed at several meetings. In these meetings, the District solicited comments and suggestions, and provided the committee members a wealth of information to consider, including platform and equipment listings, emissions levels for stationary, area, and mobile sources, toxics data, and more. The collection of this information assisted the committee members in making informed recommendations to the District regarding the community air monitoring networks.

In advance of the CSCs being established for each selected community, the District had already completed an extensive amount of work in preparing for the community air monitoring networks to be deployed in South Central Fresno, Shafter, and Stockton.

This work began in early 2018 with a thorough evaluation of the type of equipment that could be used in community air monitoring networks, as well as the platforms that could be used to house the equipment. Early in the planning stages, the District determined that a different approach would be needed for these community networks, when compared to more traditional stationary regulatory monitors, as the equipment being used may be moved more frequently, and would need to respond to various needs and goals that may change over time.

Based on these needs, the District established the following principles as equipment and platforms continued to be researched and developed:

- *Expanded capacity at lower cost:* Will provide the District with a broad range of monitoring capabilities for multiple air pollutants without having to unnecessarily spend large sums of money in building traditional stationary air monitoring stations and platforms.
- *Scalable:* Will provide flexibility to customize the air monitoring instrumentation based on the community monitoring needs identified for the selected location. This includes flexibility in the number of pollutants being monitored, monitoring duration and methods. Due to the cost-effectiveness of the proposed design, the assets provide capabilities for multiple platforms to be utilized when needed.
- *Portable:* Will provide mobility ranging from allowing movements from one community to another or movements within a community as needed.
- *Rapid deployment:* Can be assembled rapidly and will require less support infrastructure than traditional stationary air monitoring stations.

As an outcome of this comprehensive evaluation process, the District hired a contractor to oversee the design and development of a number of key platforms and assets to be used in the community air monitoring networks, including several stand-alone PM_{2.5} monitors, VOC and PM_{2.5} speciation equipment, 5 multi-pollutant compact air monitoring systems, 3 mobile air monitoring trailers, and 2 mobile air monitoring vans. The development and delivery of these assets has been completed, and are now available to the District to measure air quality at the community level in South Central Fresno, Shafter, and Stockton.

- **Stand-Alone PM2.5 Monitors:** The District will operate fixed air monitoring analyzers to measure ambient PM2.5. These will be placed in their respective locations for sufficient lengths of time to capture annual and peak PM2.5 pollution trends throughout the community, unless monitoring priorities change and monitor relocation is necessary.

- **Compact Multi-Pollutant Air Monitoring System:** These compact air monitoring systems will operate as semi-mobile platforms. Each platform will be equipped with advanced air monitoring analyzers measuring various pollutants, with the ability to communicate the community-level air quality in real time.

- **Air Monitoring Trailer:** These air monitoring trailer systems will operate as semi-mobile platforms. This platform will be equipped with advanced air monitoring analyzers with the ability to communicate the community-level air quality in real time.

- **Mobile Air Monitoring Van:** The van is ideal for targeting unmonitored areas of concern or regularly surveying the entire community within a short timeframe, allowing the District and the community to identify spatial air pollution trends throughout the region. The air monitoring van can also be useful for measuring pollution from on-road sources, and identifying sources of community-level air pollution. Additionally, the van can be parked in one location for longer periods of time to capture daily or weekly pollution from unmonitored areas within the community.

The air monitoring van is a useful tool for evaluation of a large geographic region, but these platforms are best designed for taking an instantaneous look at the measured pollutants when the monitoring occurred. The fixed and semi-mobile platforms are better equipped to measure daily variations in pollutant concentrations. The use of both mobile and semi-mobile monitoring platforms will be necessary to capture the full picture of the community's air pollution concerns.

These air monitoring systems provide real-time readings of the following:

- Ozone
- NO, NO₂, NO_x
- PM_{2.5}
- Black Carbon (BC)

- Carbon Monoxide
- Total VOC
- Specific VOC compounds via PTR-MS
- BTEX
- SO₂/H₂S

In addition, the community air monitoring networks also includes sampling equipment to capture air samples into canisters and filters for laboratory analysis to identify the VOC and PM_{2.5} compounds and species present in the local air. The District has also purchased additional equipment to support the vast collection of analyzers that will be operating in the communities. This support equipment includes zero air generators, calibrators, flow standards, data loggers, and various communication equipment.

These assets and equipment needs continual maintenance and oversight to ensure the successful operation of this new network. Staff will be responsible for operating and maintaining this new network so that it is functional and accurate at all times. These activities include but are not limited to regular maintenance, filter processing and handling, calibrations, and repairs ensuring equipment is operating at its optimal level and producing the most accurate air quality data at all times. In addition, the equipment being operated in the community air monitoring network also needs a large stock of consumables and spare parts to support the equipment being used. This takes ongoing organization, reconciliation, and ordering of parts to keep the equipment successfully operating.

Consistent with the community recommended air monitoring plan network designs, air monitoring systems have been fully implemented in certain locations while other locations are still in progress with varying challenges as described below.

South Central Fresno

In the community of South Central Fresno, the implementation status of deploying the community air monitoring network is as follows:

- *Roosevelt High School (PM_{2.5}):* The District has placed a real-time PM_{2.5} monitor (Met One BAM-1022) on the roof at Roosevelt High School on the corner of E. Tulare Avenue and S Barton Avenue. Operation of this analyzer began in March 2019.
- *Bitwise Stadium South (PM_{2.5}):* The District has placed a real-time PM_{2.5} monitor (Met One BAM-1022) on the roof at Bitwise Stadium South on the corner of Van Ness Avenue and Mono Street in downtown Fresno. Operation of this analyzer began in August 2019.

- *Fresno-Foundry Park (PM2.5, VOC/PM2.5 speciation)*: The District has placed a real-time PM2.5 monitor (Met One BAM-1020) at the existing District air monitoring site at Foundry Park Ave near the intersection of Jensen Avenue and Highway 99. The PM2.5 analyzer began its official operation in January 2020. The District also began operating VOC and PM2.5 speciation sampling at this location to begin to build an understanding of the relative comparison between the constituents that make-up the VOC and PM2.5 concentrations being experienced in the community. These speciation measurements began in December of 2019. On June 23, 2020, VOC and PM2.5 speciation air monitoring efforts were shifted to the air monitoring trailer at Malaga Elementary School.
- *Orange Center School (Multi-Pollutant Compact System)*: On September 2019, District staff presented a proposal to the superintendent and the board of the Orange Center School District. On February 13, 2020, the superintendent informed District staff that the school board had voted and denied the request due to a high number of ongoing projects already in progress at the school. In the interim, the air monitoring van was utilized to monitor areas nearby this location. As an alternative, the steering committee approved installation of the air monitoring system at West Fresno Middle School, only about a mile away from Orange Center Elementary School. The District worked with Washington Unified School District to install the compact multi-pollutant air monitoring system at West Fresno Middle School, located on the southwest corner of South Ivy Avenue and East Annadale Avenue. Operation of this system began on September 29, 2020.
- *Heaton Elementary School (PM2.5)*: The District has placed a real-time, standalone PM2.5 monitor on the roof of Heaton Elementary near the corner of McKinley Avenue and San Pablo Avenue. Operation of this analyzer began in June 2020. Prior to installing the monitor, the air monitoring van was utilized to monitor areas nearby this location.
- *Edison High School (Multi-Pollutant Compact System)*: The District has been in discussions with Fresno Unified School District to place an Air Pointer compact air monitoring system at Edison High School on the corner of East California Avenue and South Walnut Avenue. The District is still awaiting availability of resources from Fresno Unified School District to discuss implementation details. In the interim, the air monitoring van is being utilized to monitor areas nearby this location. In addition, the District is looking at alternative locations near the school to begin air monitoring operations while details continue to be developed with Fresno Unified School District, or should an agreement with the school district not be reached.
- *Yosemite Middle School (PM2.5)*: The District has placed a real-time, standalone PM2.5 monitor at Yosemite Middle School near the intersection of Olive Avenue and North 9th Street. Operation of this analyzer began in June

2020. Prior to installing the monitor, the air monitoring van was utilized to monitor air quality in areas nearby this location.

- *Malaga Elementary School (Air Monitoring Trailer):* The District worked with Fowler Unified School District to install the multi-pollutant air monitoring trailer at Malaga Elementary School on the corner of South Ward Avenue and East Central Avenue. Operation of this trailer began on June 18, 2020. In the interim, the air monitoring van was utilized to monitor areas nearby this location. On June 23, 2020, the District shifted its VOC and PM_{2.5} speciation sampling operations from the Fresno-Foundry site to the Malaga Elementary School site, which will build an understanding of the relative comparison between the constituents that comprise the VOC and PM_{2.5} concentrations present in this area of the community.
- *Madison Elementary School (PM_{2.5}):* The District has placed a real-time, standalone PM_{2.5} monitor at the school on the corner of S. Brawley Avenue and W. Madison Avenue. Operation of this analyzer began in February 2021. Prior to installing the monitor, the air monitoring van was utilized to monitor areas nearby this location.
- *Air Monitoring Van Routes:* In addition to the semi-mobile and fixed platforms, the District has been taking advantage of the considerable air monitoring capabilities of the air monitoring van to measure a variety of pollutants of concern throughout the community. Measurements taken with the air monitoring van will allow the District and the community steering committee to understand local air pollution in these small communities while also giving the District the ability to rapidly respond to air pollution concerns in other unmonitored regions. Intensive air monitoring operations with the mobile van began in January 2020. In addition, as described earlier, the air monitoring van has enabled the District to commence air monitoring activities in areas that are still awaiting approval for installation of semi-mobile and fixed air monitoring equipment.

Shafter

In the community of Shafter, the implementation status of deploying the community air monitoring network is as follows:

- *Shafter Department of Motor Vehicles (PM_{2.5}, VOC/PM_{2.5} speciation):* The District has placed a real-time PM_{2.5} monitor (Met One BAM-1022) on the roof of the DMV building on the corner of Pacific Avenue and Walker Street. Operation of this analyzer began in February 2019. Based on significant committee interest, the District deployed a temporary real-time EBAM PM₁₀ monitor to measure any impacts from nearby harvesting operations on the community, which operated from September 2019 through December 2019. The District also began operating VOC and PM_{2.5} speciation sampling at this location to begin to

build an understanding of the relative comparison between the constituents that make-up the VOC and PM_{2.5} concentrations being experienced in the community. These speciation measurements began in November 2019. In October 2020, upon CSC request, the District redeployed the EBAM for ongoing real-time PM₁₀ monitoring.

- *Grimmway Academy (PM_{2.5})*: The District has placed a real-time PM_{2.5} monitor (Met One BAM-1022) on the roof of a building at Grimmway Academy on the corner of Mettler Avenue and Los Angeles Avenue. Operation of this analyzer began in July 2019.
- *Sequoia Elementary (Multi-Pollutant Compact System)*: The District has worked with the Richland Unified School District to place a compact monitoring system at Sequoia Elementary on the corner of Mannel Avenue and Fresno Avenue. Operation of the compact monitoring system began in February 2021. Prior to installation of this system, the air monitoring van was utilized to monitor areas nearby this location. Additionally, the Department of Pesticide Regulations has agreed to continue monitoring for pesticides at their current site at Sequoia Elementary.
- *Golden Oak Elementary (PM_{2.5})*: The District has placed a real-time PM_{2.5} monitor at Golden Oak Elementary on the corner of S Wall Street and Lerdo Highway. Operation of this analyzer began in February 2021. Prior to installing the monitor, the air monitoring van was utilized to monitor areas nearby this location.
- *North Shafter Farm Labor Center (Air Monitoring Trailer)*: The District worked with the Housing Authority of Kern County to install the multi-pollutant air monitoring trailer at the North Shafter Farm Labor Center near Merced Avenue and Highway. Operation of this trailer began in February 2021. In the interim, the air monitoring van was utilized to monitor areas nearby this location.
- *Mexican Colony (PM_{2.5})*: The Community Steering Committee worked with the District to develop recommended locations for an additional fixed PM_{2.5} monitor. Due to the nature of the siting and power requirements for this analyzer, the District wanted to ensure that this monitor be installed on a secure roof where District personnel can have regular access. Kern County has recently purchased a property in the middle of Mexican Colony where they will be installing a pocket park. The District is having conversations regarding the possibility of installing the monitor at this location and has been talking with CSC members regarding this site. Until such a time that the permanent monitor can be installed, the District is using the mobile air monitoring van to monitor PM_{2.5} and other pollutants in the Mexican Colony area.

- *Air Monitoring Van Routes:* In addition to the semi-mobile and fixed platforms, the District has been taking advantage of the considerable air monitoring capabilities of the air monitoring van to measure a variety of pollutants of concern throughout the community. Measurements taken with the air monitoring van will allow the District and the community steering committee to understand local air pollution in these small communities while also giving the District the ability to rapidly respond to air pollution concerns in other unmonitored regions. Intensive air monitoring operations with the mobile van began in January 2020. In addition, as described earlier, the air monitoring van has enabled the District to commence air monitoring activities in areas that are still awaiting approval for installation of semi-mobile and fixed air monitoring equipment.
- *Pesticide Monitoring Locations:* The California Department of Pesticide Regulation committed to working with the District, CARB, and the Community Steering Committee to determine locations and frequency of pesticide monitoring in the Shafter area. This includes continuing the monitoring campaign at Sequoia Elementary School. A number of additional locations were recommended by the committee for additional pesticide monitoring, including possible monitoring near Maple Elementary School, Farm Labor Camp, and Mexican Colony. DPR will work with these recommendations and continue to keep the Shafter Community Steering Committee informed of any new developments concerning the pesticide monitoring program in the area.

Stockton

Beginning in May 2020, the District worked closely with the CSC to develop the Community Air Monitoring Plan. After extensive review and several meetings, in April 2021, the following locations that are all in the Stockton Unified School District were selected based on CSC recommendations:

- Victory Elementary (PM2.5, VOC Speciation Sampling)
- Washington Elementary (Air Monitoring Trailer)
- Hazelton Elementary (Multi-pollutant Compact System)
- Roosevelt Elementary (PM2.5)
- Taylor Elementary (PM2.5)
- Taft Elementary (PM2.5)
- Merlo Institute of Environmental Technology (Multi-pollutant Compact System)

The District is currently working closely with Stockton Unified School District to deploy air monitoring at these locations.

In addition to the semi-mobile and fixed platforms, the District has been taking advantage of the considerable air monitoring capabilities of the air monitoring van to measure a variety of pollutants of concern throughout the community. Measurements

taken with the air monitoring van will allow the District and the community steering committee to understand local air pollution in these small communities while also giving the District the ability to rapidly respond to air pollution concerns in other unmonitored regions. Air monitoring operations with the mobile van began in April 2021. In addition, the air monitoring van will enabled the District to commence air monitoring activities in areas that are still awaiting approval for installation of semi-mobile and fixed air monitoring equipment.

Community Emissions Reduction Program Development and Implementation

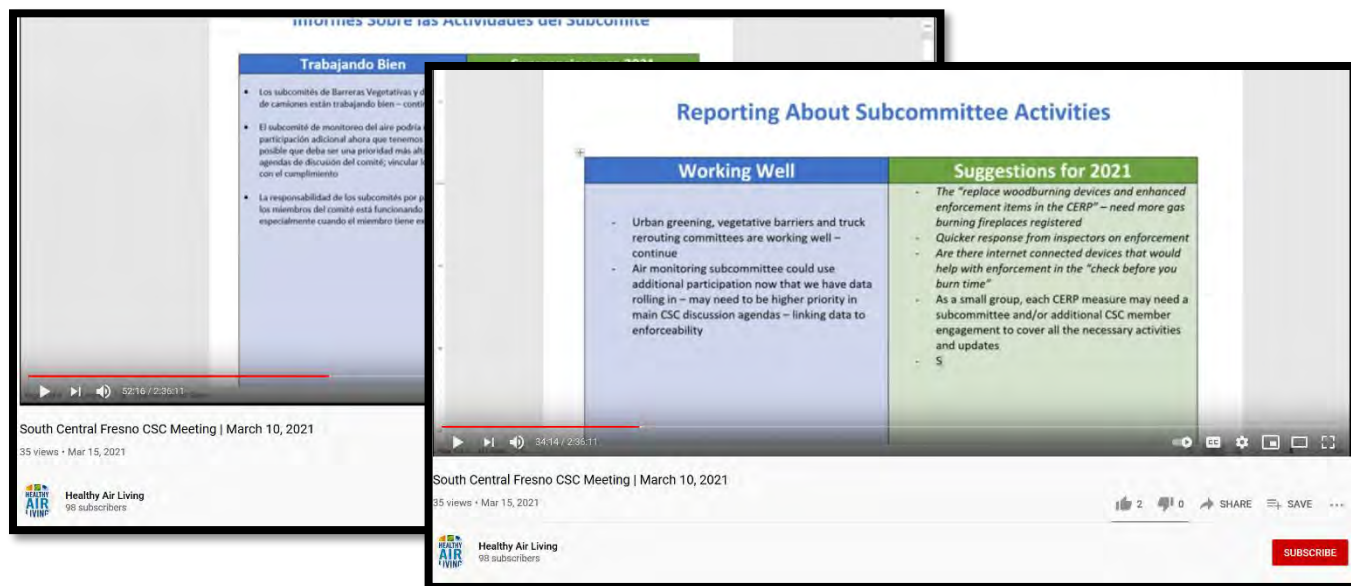

CERPs implemented under AB 617 are designed to reduce emissions of pollutants that have been shown to have adverse impacts on public health, including PM2.5 and TACs. As specified in CARB's Community Air Protection Program Blueprint, Appendix C (Criteria for Community Emission Reduction Programs), the approved CERPs were designed to focus on maximizing reductions of criteria air pollutants, such as reducing exposure to PM2.5 from local sources, and TACs which contribute to cumulative exposure burdens within the community.

The District worked with the CSCs to develop and adopt CERPs for both South Central Fresno and Shafter. The documents found in the various Appendices outline the process taken to identify and select measures to obtain emission reduction aimed at reducing emissions and elevated exposure burdens experienced by residents of each impacted community. Throughout the CERP development processes, the District engaged residents, stakeholders, EJ advocates, and local agencies within the two communities to better understand sources of community concern and prioritize strategies to reduce the associated pollution impacts. Both the South Central Fresno and Shafter CERPs were adopted by the District Governing Board September 19, 2019, and approved by CARB February 13, 2020.

The District has been working with the CSCs and partners to develop details and implement the measures included in the adopted CERPs, including engaging with Valley residents, businesses, agencies, and other stakeholders to identify and implement clean air measures and investments in the South Central Fresno, Shafter, and Stockton communities. The adopted CERPs in all three communities include a wide range of strategies to reduce air pollution and exposure. These strategies include incentive funding measures, regulatory strategies, public engagement strategies, enforcement strategies, and a number of additional strategies to be implemented in partnership with CARB, DPR, cities, counties, other agencies, community-based organizations, and other local partners. Many of the measures in the CERPs are incentive-based and require CARB's approval prior to being able to fund these measures. As the implementation of approved CERPs progresses, District staff has continued to engage with the CSCs in a number of areas, including:

- Development of incentive project plans for a variety of incentive-based measures in accordance with Community Air Protection incentive guidelines to enable the District to make available AB 617 funding for community-driven clean air projects
- Conducting targeted air quality-related outreach to promote available clean air programs, educate community regarding tools available to protect themselves during poor air quality episodes, and increase community engagement and participation in efforts to improve air quality
- Accelerating progress towards fulfillment of truck rerouting studies
- Facilitating community engagement with DPR and CARB on pesticide mitigation pilot projects and electronic notifications
- Enhanced community engagement and air quality considerations regarding land use decisions by cities and counties
- Development of school filtration program and deployment of electric school bus grant program
- Conducting education on energy efficiency opportunities for community residents
- Developing plans for vegetative barriers and urban greening in community-identified areas in partnership with local tree organizations and local agencies
- Conducting significant regulatory work, with added focus on sources of concern in the communities
- Conducting enhanced enforcement of local, District, and state regulations
- Deployment of extensive community air monitoring network in the Stockton community
- Continuing to enhance community participation and access to air monitoring data in AB 617 communities. Community air monitoring data and air monitoring summaries are available bilingually on a real-time basis on the District's individual AB 617 air monitoring webpages for the South Central Fresno and Shafter communities, and will soon be available for Stockton once deployed.

Additionally, the South Central Fresno Community has taken time the past several months to work through a set of strategic planning exercises to help refocus and reengage with the community on implementation of the CERP. These efforts have included extra meetings aimed at identifying room for improvements in the areas of CERP administration, District communication, and strategy prioritization. During these meetings, live notes were displayed in both English and Spanish for all CSC members to have full and meaningful participation in the brainstorming exercises.

Since CERP adoption, the District has been working on implementing a number of the CERP incentive measures as prioritized by the CSCs. This work includes working closely with CARB to finalize the needed amendments to the Community Air Protection (CAP) Guidelines that are necessary to provide funding for many of the CERP measures. The proposed CAP guideline amendments will provide the pathway to fund CERP measures that are outside of the prescribed funding categories currently in the guidelines. Once approved, the District will work closely with the CSCs to develop and submit project plans for implementing these incentive measures.

Community-Identified Project Plans for Adopted CERP Measures

Prior to being able to fund community-identified projects in CERPs, the District must develop and submit community-identified project plans in accordance with CARB’s Community Air Protection Incentive Guidelines and they must be approved by CARB. Since CARB approved the South Central Fresno and Shafter CERPs in February 2020, District staff have been working with CARB staff on development of these project plans. The District worked closely with CARB staff on the development of the Community Air Protection Incentive Guidelines for community-identified projects and were the first air district in the state to submit a project plan (South Central Fresno Truck Re-Route Study) using the draft guidelines. After the guidelines were finalized, the District’s Truck Re-Route Project Plan became the first one to be approved in the state on August 12, 2020. Since then, the District has been working with CARB and the CSC members and have developed and submitted nine additional project plans:

- Commercial Lawn and Garden Equipment Replacement Program (CARB Approved)
- Residential Lawn and Garden Equipment Replacement Program (CARB Approved)

- Alternatives to the Open Burning of Agricultural Materials (CARB Approved)
- Low Dust Nut Harvester Emission Reduction Program (CARB Approved)
- Vegetative Barriers and Urban Greening (Awaiting CARB Approval)
- Heavy-Duty Truck Replacement (Awaiting CARB Approval)
- Zero Emission Yard Truck Replacement Program (Awaiting CARB Approval)
- Charge Up Electric Vehicle Charger Incentive (Awaiting CARB Approval)
- Educational Training for Electric Vehicle Mechanics (Awaiting CARB Approval)

District staff continue to work closely with CSC members to illicit valuable information needed to complete incentive project plans and, as a result, the District will be submitting several additional community-identified project plans. Additionally, the District is now working with the Stockton CSC on prioritizing the measures included in their CERP, several of which will also require the development of community-identified project plans.

Arvin/ Lamont Selected as Year Three Community

Under state law, CARB was required to select additional communities for action under the third round of funding for AB 617 by January 1, 2020. In the District's development of Year Three community recommendations the District performed an extensive public engagement process to seek input from Valley residents, businesses, agencies, and other stakeholders through multiple public workshops. These efforts resulted in the District's Governing Board officially nominating the Arvin/Lamont area as a Year Three community, which was officially selected by CARB's Board in February 2021.

The City of Arvin and nearby Lamont are part of a small, rural community in Southeast Kern County, and have long been recognized as one of the most air quality impacted areas of the Valley. A number of heavily trafficked highways pass nearby, including Hwy 184 and Hwy 223, contributing to overall emissions in the community. The community is also surrounded by agricultural operations, industrial sources, and emissions traveling downwind from the City of Bakersfield to the northwest.

The proposed community of Arvin/Lamont (Figure 1) is approximately 17 square miles and has an estimated population of 37,000. The Arvin/Lamont community is impacted across a number of health and pollution indicators. Using the State CalEnviroScreen tool, the census tracts located within the proposed community rank in the top 15% statewide for overall CalEnviroScreen score, weighted for PM2.5 and ozone impacts, which represents a number of health and socioeconomic factors (asthma, cardiovascular disease, low birth weight, educational attainment, housing burdened low income households, linguistic isolation, poverty, and unemployment). Additionally, the Arvin/Lamont community was selected for the Institute for Local Government's Boost Program in collaboration with the Strategic Growth Council, which has afforded them technical assistance with capacity building for air quality improvement and energy

reduction. These efforts in the community allow the District and community to leverage resources to maximize benefits under AB 617.

Community of Arvin/Lamont

Just like the other three communities, the District will continue to closely engage with the Arvin/Lamont CSC throughout the year to build a community air monitoring plan and Community Emissions Reduction Program. Meetings began in March and have occurred monthly since.

Best Available Retrofit Control Technology (BARCT)

Background

AB 617 required districts that are in nonattainment for one or more air pollutants to adopt expedited schedules by January 2019 for the implementation of Best Available Retrofit Control Technology (BARCT). Significant work was necessary to demonstrate that existing rules met BARCT requirements or, where it was not clear that BARCT requirements were met, identify potential gaps in the existing rules, establish a rule-review schedule, and take the schedule to the District's Governing Board for approval before the deadline. The Board adopted the District's BARCT Analysis Schedule on December 20, 2018. The District is now implementing the plan, and, where necessary, developing rule amendments consistent with state BARCT requirements. The District must also share its findings with the state as CARB compiles the BARCT clearinghouse.

BARCT Analysis

As of January 1, 2017, 109 facilities within the District were identified by CARB as being subject to the state Cap-and-Trade program, the market-based compliance mechanism adopted by the state board pursuant to subdivision (c) of Section 38562, and therefore AB 617 BARCT requirements. The District utilized an extensive evaluation process to make an initial determination of whether the rules that apply to Cap-and-Trade facilities meet all state BARCT requirements, as mandated by AB 617. Evaluating the 109 affected facilities, the District identified that approximately 4,500 active permit units were within the scope of this BARCT analysis. From the 4,500 active permit units, the District determined that 32 District rules that apply to specific source categories of equipment were subject to the BARCT analysis required under AB 617.

District staff performed analysis of the 32 affected rules and determined that:

- 5 rules were superseded by a more stringent rule known to meet BARCT or by a rule subject to further BARCT analysis,
- 5 rules were determined to meet Most Stringent Measures (MSM) for NO_x, the only relevant pollutant for these affected rules and therefore meet BARCT, and
- 6 rules were specifically determined to meet BARCT through an extensive rule and source category evaluation that compared our rule requirements with federal and state air quality regulations and with regulations of other air districts in California.
- While the remaining 16 rules likely already meet BARCT due to the District's ongoing extensive regulatory evaluations and enhancements, the proposed BARCT implementation schedule includes commitments to establish updated BARCT determinations for these rules.

Section 40920.6(c)(3) of the Health and Safety Code requires Districts to give highest priority to conduct the BARCT analysis of those rules affecting permitted units that have not modified emissions-related permit conditions for the greatest period of time. To assist in further prioritization, the District also considered local public health, clean air benefits to the surrounding community, and regional air quality and attainment benefits by prioritizing units that emit NO_x and are located within communities selected for action under AB 617. In addition, while cost-effectiveness of controls can't be fully analyzed until each rule is addressed during the development of a BARCT rule, the District also prioritized rules with the greatest number of potentially affected units, which, when coupled to the law's requirement of prioritizing based on the length of time since the units were last modified, provides some consideration of the most likely controls to be cost-effective.

Expedited BARCT Implementation Schedule

As a part of the public process associated with establishing the Expedited BARCT Implementation Schedule, the District conducted a public scoping meeting on June 14,

2018, to solicit input from stakeholders regarding the District's proposed methodology to address the AB 617 requirement to adopt an expedited BARCT analysis schedule. The District then held a public workshop on November 1, 2018, to solicit further input from the stakeholders regarding the District's proposed BARCT implementation schedule. No comments were received from stakeholders after this workshop. Then, on December 20, 2018, the District's Governing Board approved the Expedited BARCT Implementation Schedule as required under AB 617 (See Appendix F).

Sixteen rules either have been, or are currently being, analyzed as identified in Appendix F. For all rules where further analysis is required to determine whether a District rule meets BARCT, the District will engage in a robust process to assess specific air pollution control technologies associated with each rule, taking into account the local public health and clean air benefits to the community, the air quality and attainment benefits of each control option, and the cost effectiveness of each control option.

Further BARCT Analysis

On July 30, 2020, the District held a public workshop to provide an update on BARCT rule evaluations. District Rules 4454 (Refinery Process Unit Turnaround), 4641 (Cutback, Slow Cure, and Emulsified Asphalt, and Paving and Maintenance Operations), and 4104 (Reduction of Animal Matter) were determined to satisfy BARCT.

The District began a rule making process in 2020 for Rules 4409 (Components at Light Crude Oil Production Facilities, Natural Gas Production Facilities, and Natural Gas Processing Facilities), 4455 (Components at Petroleum Refineries, Gas Liquids Processing Facilities, and Chemical Plants), 4623 (Storage of Organic Liquids), 4624 (Transfer of Organic Liquids), and 4401 (Steam Enhanced Crude Oil Production Wells) to explore opportunities to enhance the stringency of these rules and to ensure the continued implementation of BARCT. The District also began a rule making process in 2020 to enhance the stringency of Rule 4702 (Internal Combustion Engines) to satisfy BARCT.

On April 20, 2021, the District held a public workshop to provide an update on BARCT evaluations for Rules 4694 (Wine Fermentation and Storage Tanks), 4603 (Surface Coating of Metal Parts and Products, Plastic Parts and Products, and Pleasure Crafts), 4601 (Architectural Coatings), and 4566 (Organic Material Composting Operations).

Technology Clearinghouse

AB 617 requires CARB to establish and maintain a statewide clearinghouse that identifies the best available control technology, best available retrofit control technology for criteria air pollutants, and related technologies for the control of TACs.

Since 2019, District staff have been participating in bi-weekly conference calls with CARB and other air district staff to discuss the proposed changes to the statewide clearinghouse and the new database and website interface that CARB and their programming consultant is creating. Through collaborative discussions, the District has provided input on facility and pollutant definitions; source category, subcategory, and classification differences; public usability and device specificity; and many other topics. Additional meetings have been scheduled and significant work and testing of the new database and website is still needed before the statewide clearinghouse can be released for public use.

District staff is actively implementing the enforcement measures that were incorporated into the Community Emission Reduction Programs for the Shafter and South Central Fresno AB 617 communities.

Compliance and Enforcement

Enhanced Idling Diesel Enforcement

The District partnered with CARB to conduct targeted anti-idling enforcement in the Shafter and South Central Fresno communities. The state's anti-idling Airborne Toxic Control Measure limits nonessential (or unnecessary) vehicle idling to specific time limits. It is applicable to all diesel-fueled commercial motor vehicles with a gross vehicular weight rating (GVWR) of greater than 10,000 pounds. The diesel exhaust from excessive idling has the potential to impose significant adverse health and environmental impacts. Therefore, efforts to ensure compliance of the anti-idling regulation, especially near sensitive receptors, is important to limiting the potential for localized impacts within the community. The District prioritized surveillance locations based on community input, staff's knowledge of area truck stops and other locations with a high potential for idling, and CARB data on historical idling activity. The District conducted targeted enforcement efforts in Shafter (including the seven-mile buffer) and in South Central Fresno during each quarter of the 2020 calendar year.

Enhanced Stationary Source Inspection Frequency

The District conducts frequent inspections and investigations of permitted sources to determine compliance with a multitude of health-protective local, state, and federal air quality regulations targeting both criteria and toxic pollutants. These include (1) District rules and permit requirements; (2) statewide Airborne Toxic Control Measures; (3) statewide greenhouse gas regulations; and (4) federal New Source Performance Standards, National Emission Standards for Hazardous Air Pollutants, and Maximum Available Control Technology standards. The District closely monitors such sources and strictly enforces applicable requirements. Compliance evaluations are unannounced whenever possible and involve both a physical inspection of the facility and a review of operating and monitoring records. When a violation of a District permit,

rule, or regulation is identified, the District takes an appropriate level of enforcement action.

To limit the potential for localized air quality impacts associated with the failure to comply with emissions standards established by District permit, rule, or regulation, the District has increased the frequency of inspection at each facility that has had an emission violation over the past three (3) years. These facilities will be inspected at least twice per calendar year for the next five (5) years or until the facility has 4 consecutive inspections without an emission violation, whichever occurs first.

Enhanced Enforcement Of Wood-Burning Curtailments

District staff have allocated additional resources toward the enforcement of District Rule 4901 episodic curtailment requirements in the Shafter and South Central Fresno communities. The goal of this strategy is to limit the potential for localized PM_{2.5} impacts associated with the failure to comply with mandatory episodic wood burning curtailments under District Rule 4901. Currently, to optimize rule effectiveness and reduce the public health impact of wood smoke, the District dedicates extensive staffing resources to operate a robust Rule 4901 enforcement program covering all aspects of the rule. The District's strategy focuses on both compliance assistance and enforcement activities. On all curtailment days, the District dedicates significant staffing resources to conducting surveillance in neighborhoods and responding to complaints from members of the public to ensure compliance with the rule. The District treats fireplace surveillance and complaint response as the highest priority enforcement activity. On each curtailment day, a substantial number of the District's inspection staff are assigned to perform surveillance with a focus on areas where non-compliance with the rule has been historically high and/or where public complaints regarding burning have been common. Notwithstanding this focus, the District works to ensure that surveillance is conducted regularly in all areas subject to regulatory curtailments. In addition to the surveillance and complaint response conducted during normal business hours, the District also conducts surveillance and complaint response on weekends, holidays, and during nighttime hours. Specifically, during the 2020-21 wood burning curtailment season (November 1, 2020, through February 28, 2021), District staff conducted four (4) hours of surveillance within each community on each declared curtailment day (including weekends), in addition to responding to citizen complaints regarding wood burning activity.

Enhanced Enforcement to Reduce Illegal Burning of Residential Waste

Since adoption of the CERPs, and building on the District's existing surveillance and complaint response efforts, District staff conducted enhanced area-wide illegal burning surveillance in the Shafter and South Central Fresno communities. The goal of this strategy is to limit the potential for localized PM_{2.5} and toxic impacts associated with the illegal open burning of residential waste. Pursuant to District rules and state law, the burning of residential waste is illegal in the San Joaquin Valley. Recognizing both

the potential for localized exposure and regional air quality impacts associated with the burning of residential waste, the District promptly responds to all complaints regarding illegal burning, conducts regular area surveillance for the purpose of enforcing open burn prohibitions, and works closely with local fire agencies to encourage interdepartmental cooperation and cross-reporting of incidents. The District conducted targeted enforcement of illegal residential burning in Shafter and in South Central Fresno during each quarter of the 2020 calendar year, in addition to responding to citizen complaints regarding open burning.

Promoting Implementation of Conservation Tillage Practices

District staff partnered with the agricultural stakeholders and the County Ag Commissioner to host two workshops in Kern County (Shafter and Bakersfield) to discuss the District's Conservation Management Practices program. During the workshops, District staff provided training to attendees on the purpose and requirements of Rule 4550 – Conservation Management Practices, the first rule of its kind in the nation to reduce fugitive PM emissions from agricultural operations through the reduction in passes of agricultural equipment and implementation of other practices. The workshops also provided focused outreach to promote more widespread implementation of conservation tillage practices, such as cover cropping, no till, low till, strip till, and precision agriculture by highlighting the health and economic benefits that can be achieved from implementing conservation tillage practices.

Pilot Training Program for Conducting Self-Inspections at Gas Stations

The goal of this strategy is to limit the potential for air quality impacts associated with vapor recovery defects at gasoline dispensing stations in the South Central Fresno and Shafter communities. Gasoline dispensing stations are sources of volatile organic compound (VOC) and toxic emissions such as benzene. Accordingly, District rules require state-certified vapor recovery systems be installed, operated, and maintained in order to achieve at least 95% control of gasoline vapors. District staff inspects gasoline vapor recovery systems on a routine basis to detect equipment defects, such as torn hoses, damaged nozzles, and missing or non-certified parts, to ensure compliance with applicable state and local requirements. Furthermore, District staff routinely witnesses third-party source testing of gasoline vapor recovery systems to verify compliance with applicable leak standards and backpressure requirements. In addition, frequent and thorough self-inspections of vapor recovery systems by the facility operator aids in the identification and timely repair of vapor recovery system defects in the interim between District inspections and reduces the potential for localized impacts from excess emissions associated with equipment defects. The District is currently developing training material for this pilot program. District staff plans to meet one-on-one with gasoline dispensing facility owners/operators in the 2021 calendar year to provide this hands-on training, which will be custom tailored to the specific equipment (including VOC control devices) on site at each facility. District staff also plans to provide gasoline

dispensing facility owners/operators with additional resources and materials as they independently conduct their own self-inspections.

Community Emission Reduction Program

Light-Duty Vehicles Measures

Shafter Community Steering Committee

April 12, 2021

AB 617 Program Plan Process

- CARB requires program plans for each incentive measure not currently approved under state guidelines
- District has created and submitted program plans based on priorities of the community
 - Plans incorporate feedback from the steering committee
- Program plans are submitted to CARB for final approval
 - Once approved the incentive program will be implemented in the community and the District can utilize AB 617 funds

Status of Shafter Program Plans

- Approved

- Residential Lawn and Garden
- Commercial Lawn and Garden
- Low Dust Nut Harvester
- Alternatives to Ag Burning

- Submitted

- Electric Vehicle Charging
- Electric Vehicle Mechanics Training
- Heavy Duty Truck Replacement
- Zero Emission Yard Truck
- Vegetative Barriers/Urban Greening

- In Progress

- Vehicle Repairs
- Passenger Vehicle Replacement with Electric or Plug In
- Public Fleet Replacement
- Car Share Program
- Bike Lanes
- Road Dust and Road Paving
- Residential Wood Burning Device replacement

CERP Measure C.3 Installation of Electric Vehicle Charging Infrastructure

Measure C.3 – Installation of EV Charging Infrastructure

- Provide a combination of Level 2 and Level 3 electric vehicle charging infrastructure necessary to support the deployment of battery electric and plug in hybrid vehicles in the Shafter community
- \$850,000 in AB 617 funding provided for the installation of up to 78 electric vehicle chargers
- Target reductions:
 - No direct emission reductions associated with this measure, but supports the emission reductions associated with electric vehicle deployment

EV Charging Infrastructure Program Incentives

FUNDING

Charger Type	*Maximum Amount Per Unit	Minimum Cost Share
Level 2 Single Port	\$5,000	None
Level 2 Dual Port	\$6,000	None
Level 3/DC Fast Charger	\$25,000	30% of total cost
FUNDING CAP:	\$50,000 annually per applicant/site	

**Actual reimbursement of funds to applicant may be reduced depending on final eligible invoiced costs. The District maintains the right to waive funding caps of a case by case basis.*

EV Charging Infrastructure Program Requirements

- Applicant may not purchase or install any chargers prior to obtaining an approved voucher from the District
- Applicant must be a public agency, business, or a multi-unit dwelling
- Site requirements:
 - Must be publicly accessible, a place of employment for the purpose of workplace charging, or a combination of both
 - Accessible 24 hours a day/7 days a week if the project includes a Level 3 EV charger
 - Must be owned by the applicant or the applicant must provide written permission by the property owner that the installation of the EV chargers is allowed
 - Residential properties are ineligible

EV Charging Infrastructure Program Process

- Apply:
 - Must submit a completed voucher application
- Application review:
 - First-come, first-serve basis until program funds are exhausted
- Application approval:
 - A voucher will be issued upon approval of application
- Installation
 - Participant purchases and installs their EV charger
- Voucher Redemption:
 - Applicant has one year to purchase and install EV chargers from the voucher execution date to complete the project
 - Once complete, participant will submit a Claim for Payment packet for reimbursement
 - Reimbursement will be issued to the participant

Next Steps

- CARB to review and approve Program Plan
- District will make program available following CARB approval with funding dedicated only available to Shafter community
- District to work closely with CSC on an outreach strategy to ensure that community members are aware and fully participate

CERP Measure C.1 Tune-In Tune-Up Program in Shafter Community

Measure C.1 - Tune In Tune Up Program

- Tune-In Tune-Up program within Shafter Community to reduce emissions of high emitting passenger vehicles that may be in need of emissions-related repairs
- Measure would provide \$400,000 in funding for program aimed at repairing up to 500 vehicles in Shafter community
- Target reductions:
 - NOx: 4.6 tons

Vehicle Repair Program Incentives

- The voucher issued to eligible participants will pay up to \$850 worth of emissions-related repairs at participating STAR certified smog shop
 - Any costs over the \$850 limit, as well as repairs that are not related to emissions, will come as an out-of-pocket expense to be paid by the participant
 - Participant has the option to decline repairs if out-of-pocket expenses are not affordable
- Shafter Transmission and Smog recently added as participating smog shop

Vehicle Repair Program Requirements

- Failed emissions test from participating smog shop
 - The test result must indicate that emissions measured from vehicle were higher than acceptable levels resulting in a “fail”
 - Functional failures (loose gas cap, tampered) are not eligible for the program
- Participant must have owned and operated the vehicle for at least six months
 - Must provide proof of ownership (i.e. DMV registration, title, etc.)
 - Vehicle must be registered within the Shafter community targeted area
- Participant must be a resident within AB 617 Shafter community
- Participant must not have already received emissions-related repairs through the District’s vehicle repair program within the past 12 months

Vehicle Repair Program Process

- Tune In Tune Up event model within community of Shafter
 - Participant brings vehicle to designated event location
 - Vehicle will receive a free emissions screening
 - If the vehicle fails for emissions, participant will receive a voucher for repairs
 - If the vehicle passes for emissions, the vehicle is not eligible for repairs
 - If voucher is received, participant will schedule an appointment with a program participating STAR certified smog shop
 - A smog test and diagnostic exam will be performed on the vehicle to determine the types of repairs needed
 - Smog shop will complete the necessary repairs on the vehicle
 - A final smog test is completed to ensure that the vehicle passes smog and that emission reductions are achieved

Next Steps

- Due to ongoing COVID-19 public health and safety requirements weekend events have been suspended, the vehicle repair program would be implemented as follows until events are able to resume:
 - Call program partner Valley Clean Air Now (Valley CAN) at 1-800-806-2004 or complete online form at <http://valleyair.org/drivecleaninthesanjoaquin/repair>
 - Valley CAN will schedule an appointment with the participant to go to one of the participating STAR certified smog shops
 - A smog test and diagnostic exam will be performed to determine the types of repairs needed
 - Smog shop will complete the necessary repairs on the vehicle and perform a final smog test
- Program plan will be submitted to CARB late April for review and approval
- District to present program to District Governing Board to update program admin
- Upon approval, launch program with dedicated funding for program implementation in Shafter community
- District to work closely with CSC on an outreach strategy to ensure that community residents are aware and fully participate

CERP Measure C.2

Replacement of Passenger Vehicles with Battery Electric or Plug-in Hybrid Vehicles

Measure C.2 – Replacement of Passenger Vehicles with Battery Electric or Plug-In Hybrid Vehicles

- Replace old, high-polluting passenger vehicles with battery electric or plug-in hybrid vehicles
- \$6,000,000 in AB 617 funding provided for the replacement of up to 300 vehicles (up to \$20,000 per vehicle)
- Measure to use existing Board-approved criteria, with an enhanced incentive amount for Shafter community residents for new vehicles
 - Would build on highly successful existing program for replacing vehicles throughout Valley communities
- Target reductions:
 - PM2.5: 0.08 tons
 - NOx: 2.88 tons

Proposed Vehicle Replacement Program

- Limit to one replacement allowed per household
- Old vehicle requirements:
 - Model year 1999 or older, with an emission failure within 6 months
- Participant requirements:
 - Resident of Shafter AB 617 community with current driver's license
 - Meet income criteria
 - Owned the old vehicle for at least 6 month
 - Provide most recent 2 years proof of vehicle usage
 - Be able to secure finances to pay for costs that exceed the incentive
 - Maintain ownership of the new replacement vehicle for a minimum of 30 months from date of purchase

Proposed Vehicle Replacement Program

- Qualifying income levels (consistent with current program):

	Percentage Above the Federal Poverty Level		
Household / Family Size	225%	300%	400%
1	\$28,980	\$38,640	\$51,520
2	\$39,195	\$52,260	\$69,680
3	\$49,410	\$65,880	\$87,840
4	\$59,625	\$79,500	\$106,000
5	\$69,840	\$93,120	\$124,160
6	\$80,055	\$106,740	\$142,320
7	\$90,270	\$120,360	\$160,480
8	\$100,485	\$133,980	\$178,640
9	\$110,700	\$147,600	\$196,800
10	\$120,915	\$161,220	\$214,960

*Based on 2021 Federal Poverty Level as established by USDHHS <https://aspe.hhs.gov/poverty-guidelines>

*For information regarding additional incentives that may be available, please visit:

<https://driveclean.ca.gov/search-incentives>

Proposed Vehicle Replacement Program – New Enhanced Vehicle Incentive for Shafter Community Residents

AB 617 Shafter Community Replacement Incentive			
Federal Poverty Level	225%	300%	400%
<i>*New for Shafter Residents*</i>			
New EV/PHEV Purchase	\$20,000	\$18,000	\$16,000
<i>*Current Program Funding*</i>			
Used EV/PHEV Purchase	\$9,500	\$7,500	\$5,500

Proposed Vehicle Replacement Program – New Enhanced Vehicle Incentive for Shafter Community Residents

- Qualifying new replacement vehicle must be:
 - A Plug-in Hybrid Electric Vehicle (PHEV) or Battery Electric Vehicle (BEV)
 - A new vehicle (not used)
 - Purchased by participant and must be registered under the participant's name
 - Co-signers permitted
 - Insured as required by state law

Proposed Vehicle Replacement Program Process

- How participant can apply:
 - Online application or paper application
 - Call District for assistance completing application
 - Program partner assistance
- Application approval:
 - Selection criteria: Request for Application process or first-come first-serve process
 - If approved, application approval letter will be generated with list of participating dealership(s) and mailed or emailed to participant

Proposed Vehicle Replacement Program Process (cont.)

- Replacement Vehicle Selection:
 - Participant works with a participating dealership to select an eligible new/used replacement vehicle
- District will provide incentive for the participant to put towards the purchase of the new replacement vehicle
- Complete final transaction with dealership
 - Surrender old vehicle to dealership for dismantling

Next Steps

- District developed initial concepts for the program plan for discussion with Steering Committee
- Additional discussion with Steering Committee on the concepts for program implementation
- Finalize program plan for submittal to CARB for their review and approval
- District to present recommended program to District Governing Board for the review and approval
- District to launch program in community, including working with Steering Committee, program administrator, and local auto dealerships for participation in the program

Programa de Reducción de Emisiones de la Comunidad

Medidas de Vehículos Ligeros

Comité Directivo Comunitario de Shafter
12 de abril de 2021

Proceso del Plan del Programa AB 617

- CARB requiere planes de programa para cada medida de incentivo que actualmente no esté aprobada según las pautas estatales
- El Distrito ha creado y sometido planes de programas basados en las prioridades de la comunidad
 - Los planes incorporan comentarios del comité directivo
- Los planes del programa se envían a CARB para su aprobación final
 - Una vez aprobado, el programa de incentivos se implementará en la comunidad y el Distrito podrá utilizar los fondos de AB 617

Estado de los Planes del Programa de Shafter

- Aprobado

- Césped y Jardín Residencial
- Césped y Jardín Comercial
- Cosechadora de Nueces de Bajo Polvo
- Alternativas a la Quema Agrícola

- Sometido

- Cargadores de vehículos eléctricos
- Capacitación en Mecánica de Vehículos Eléctricos
- Reemplazo de Camiones de Servicio Pesado
- Camión de Patio de Cero Emisiones
- Barreras Vegetativas/Ecologización Urbana

- En Progreso

- Reparaciones de Vehículos
- Reemplazo de Vehículos de Pasajeros con Eléctrico o de Enchufe
- Reemplazo de Flotilla Publica
- Programa de Vehículo Compartido
- Carriles de Bicicleta
- Polvo de Carreteras y Pavimentación de Carreteras
- Reemplazo de Aparato de Quema de Leña Residencial

Medida C.3 del CERP

Instalación de Infraestructura de Carga de Vehículos Eléctricos

Medida C.3 – Instalación de Infraestructura de Carga de Vehículos Eléctricos

- Proporcionar una combinación de la infraestructura de carga de vehículos eléctricos de Nivel 2 y Nivel 3 necesaria para respaldar el despliegue de vehículos híbridos enchufables y eléctricos de batería en la comunidad de Shafter
- \$850,000 en fondos AB 617 proporcionados para la instalación de hasta 78 cargadores de vehículos eléctricos
- Objetivo de Reducciones:
 - No hay reducciones de emisiones directas asociadas con esta medida, pero respalda las reducciones de emisiones asociadas con el despliegue de vehículos eléctricos

Incentivos del Programa de Infraestructura de Carga de Vehículos Eléctricos

FONDOS

Tipo de Cargador	*Cantidad Máxima por Unidad	Costo Compartido Mínimo
Nivel 2 con un Puerto	\$5,000	Ninguno
Nivel 2 con dos Puertos	\$6,000	Ninguno
Nivel 3/DC Cargador Rápido	\$25,000	30% del costo total
LÍMITE DE FINANCIACIÓN:	\$50,000 anualmente por solicitante/sitio	

**El reembolso real de fondos al solicitante puede reducirse dependiendo de los costos finales facturados elegibles. El Distrito se reserva el derecho de renunciar a los límites de financiación caso por caso.*

Requisitos del Programa de Infraestructura de Carga de Vehículos Eléctricos

- El solicitante no puede comprar ni instalar ningún cargador antes de obtener un vale aprobado del Distrito
- El solicitante debe ser una agencia pública, un negocio o una vivienda de varias unidades
- Requisitos del sitio:
 - Debe tener acceso al público, un lugar de trabajo con el propósito de cargar durante el trabajo o una combinación de ambos
 - Accesible las 24 horas del día/7 días a la semana si el proyecto incluye un cargador para vehículos eléctricos de Nivel 3
 - Debe ser propiedad del solicitante o el solicitante debe proporcionar un permiso por escrito del propietario de que se permite la instalación de los cargadores de vehículos eléctricos
 - Las propiedades residenciales no son elegibles

Proceso del Programa de Infraestructura de Carga de Vehículos Eléctricos

- Aplicar:
 - Debe enviar una solicitud de vale completa
- Revisión de la Solicitud:
 - Por orden de llegada hasta que se agoten los fondos del programa
- Aprobación de la solicitud:
 - Se emitirá un vale tras la aprobación de la solicitud
- Instalación
 - El participante compra e instala su cargador de Vehículos Eléctricos
- Intercambio del Vale:
 - El solicitante tiene un año para comprar e instalar cargadores de vehículos eléctricos a partir de la fecha de ejecución del vale para completar el proyecto
 - Una vez completado, el participante enviará un paquete de Reclamo de Pago para reembolso
 - El reembolso se emitirá al participante

Próximos Pasos

- CARB revisará y aprobará el Plan del Programa
- El Distrito hará que el programa esté disponible después de la aprobación de CARB con fondos dedicados solo disponibles para la comunidad de Shafter
- El Distrito trabajará en estrecha colaboración con el Comité Directivo en una estrategia de alcance para garantizar que los miembros de la comunidad estén conscientes y participen plenamente

Medida C.1 del CERP Programa Tune-In Tune-Up en la Comunidad de Shafter

Medida C.1 – Programa Tune In Tune Up

- Programa Tune-In Tune-Up dentro de la Comunidad de Shafter para reducir las emisiones de los vehículos de pasajeros con altas emisiones que pueden necesitar reparaciones relacionadas con las emisiones
- La medida proporcionaría \$400,000 en fondos para el programa destinado a reparar hasta 500 vehículos en la comunidad de Shafter
- Objetivo de Reducciones:
 - NOx: 4.6 toneladas

Incentivos del Programa de Reparación de Vehículos

- El vale emitido a los participantes elegibles pagará hasta \$850 en reparaciones relacionadas con las emisiones en la tienda de smog certificada por STAR participante
 - Cualquier costo que supere el límite de \$850, así como las reparaciones que no estén relacionadas con las emisiones, serán un gasto de bolsillo a cargo del participante
 - El participante tiene la opción de rechazar las reparaciones si los gastos de bolsillo no son asequibles
- Shafter Transmission and Smog fueron agregados recientemente como taller de smog participante

Requisitos del Programa de Reparación de Vehículos

- Prueba de emisiones fallida del taller de smog participante
 - El resultado de la prueba debe indicar que las emisiones medidas del vehículo fueron más altas que los niveles aceptables, lo que resultó en una "falla"
 - Las fallas funcionales (tapa de gas suelta, alterada) no son elegibles para el programa
- El participante debe haber sido propietario y haber operado el vehículo durante al menos seis meses
 - Debe proporcionar prueba de propiedad (es decir, registro del DMV, título, etc.)
 - El vehículo debe estar registrado dentro del área de orientación de la comunidad Shafter
- El participante debe ser residente de la comunidad AB 617 de Shafter
- El participante no debe haber recibido reparaciones relacionadas con las emisiones a través del programa de reparación de vehículos del Distrito en los últimos 12 meses

Proceso del Programa de Reparación de Vehículos

- Tune In Tune Up evento dentro de la comunidad de Shafter
 - El participante lleva el vehículo al lugar designado para el evento
 - El vehículo recibirá un examen de emisiones gratuito
 - Si el vehículo falla por emisiones, el participante recibirá un vale para reparaciones
 - Si el vehículo pasa por las emisiones, el vehículo no es elegible para reparaciones
 - Si se recibe el vale, el participante programará una cita con un taller de smog certificado por STAR participante del programa
 - Se realizará una prueba de contaminación y un examen diagnóstico en el vehículo para determinar los tipos de reparaciones necesarias
 - El taller de smog completará las reparaciones necesarias en el vehículo
 - Se hará una prueba final de smog para garantizar que el vehículo pase el smog y que se logren reducciones de emisiones

Próximos Pasos

- Debido a los requisitos de seguridad y salud pública de COVID-19 en curso, se han suspendido los eventos de fin de semana, el programa de reparación de vehículos se implementaría de la siguiente manera hasta que los eventos puedan reanudarse:
 - Llame al socio del programa *Valley Clean Air Now (Valley CAN)* al 1-800-806-2004 o complete el formulario en línea en <http://valleyair.org/drivecleaninthesanjoaquin/repair>
 - Valley CAN programará una cita con el participante para ir a una de los talleres de smog certificadas por STAR participantes
 - Se realizará una prueba de contaminación y un examen de diagnóstico para determinar los tipos de reparaciones necesarias
 - El taller de smog completará las reparaciones necesarias en el vehículo y realizará una prueba final de smog
- El plan del programa se enviará a CARB a fines de abril para su revisión y aprobación
- El Distrito presentará el programa a la Mesa Directiva del Distrito para actualizar el administrador del programa
- Una vez aprobado, lanzar el programa con fondos específicos para la implementación del programa en la comunidad de Shafter
- El Distrito trabajará en colaboración con el Comité Directivo en una estrategia de alcance para garantizar que los residentes de la comunidad estén conscientes y participen plenamente

Medida C.2 del CERP

Reemplazo de Vehículos de Pasajeros con Vehículos Eléctricos de Batería o Híbridos Enchufables

Medida C.2 – Reemplazo de Vehículos de Pasajeros por Vehículos Eléctricos con Batería o Híbridos Enchufables

- Reemplazar los vehículos de pasajeros viejos y altamente contaminantes con un vehículo híbrido enchufable o eléctrico de batería
- \$6,000,000 en fondos AB 617 proporcionados para el reemplazo de hasta 300 vehículos (hasta \$20,000 por vehículo)
- Medida utilizará los criterios existentes aprobados por la Mesa Directiva, con un monto de incentivo mejorado para los residentes de la comunidad de Shafter para vehículos nuevos
 - Se basaría en un programa existente de gran éxito para reemplazar vehículos en todas las comunidades del Valle
- Objetivo de Reducciones:
 - PM2.5: 0.08 toneladas
 - NOx: 2.88 toneladas

Programa de Reemplazo de Vehículos Propuesto

- Límite de un reemplazo permitido por hogar
- Requisitos de vehículo antiguo:
 - Modelo del año 1999 o más antiguo, con una falla de emisión dentro de los 6 meses
- Requisitos del participante:
 - Residente de la comunidad AB 617 de Shafter con licencia de conducir vigente
 - Cumplir con los criterios de ingresos
 - Ser propietario del vehículo antiguo durante al menos 6 meses
 - Proporcione la prueba de uso del vehículo más reciente de 2 años
 - Ser capaz de asegurar las finanzas para pagar los costos que excedan el incentivo
 - Mantener la propiedad del nuevo vehículo de reemplazo durante un mínimo de 30 meses a partir de la fecha de compra

Programa de Reemplazo de Vehículos Propuesto

- Niveles de ingresos que califican (de acuerdo con el programa actual):

	Porcentaje por Encima del Nivel Federal de Pobreza		
Tamaño del Hogar/Familia	225%	300%	400%
1	\$28,980	\$38,640	\$51,520
2	\$39,195	\$52,260	\$69,680
3	\$49,410	\$65,880	\$87,840
4	\$59,625	\$79,500	\$106,000
5	\$69,840	\$93,120	\$124,160
6	\$80,055	\$106,740	\$142,320
7	\$90,270	\$120,360	\$160,480
8	\$100,485	\$133,980	\$178,640
9	\$110,700	\$147,600	\$196,800
10	\$120,915	\$161,220	\$214,960

*Basado en el Nivel Federal de Pobreza 2021 según lo establecido por USDHHS

<https://aspe.hhs.gov/poverty-guidelines>

*Para obtener información sobre incentivos adicionales que pueden estar disponibles, visite:

<https://driveclean.ca.gov/search-incentives>

Programa de Reemplazo de Vehículos Propuesto – Nuevo Incentivo Mejorado para Vehículos para los Residentes de la Comunidad de Shafter

Incentivo de Reemplazo Comunitario AB 617 de Shafter			
Nivel Federal de Pobreza	225%	300%	400%
<i>*Nuevo para Residentes de Shafter*</i>			
Nueva Compra de Vehículos Eléctricos/Híbrido Enchufable	\$20,000	\$18,000	\$16,000
<i>*Incentivos del Programa Actual*</i>			
Compra de Vehículos Eléctricos/Híbrido Enchufable Usados	\$9,500	\$7,500	\$5,500

Programa de Reemplazo de Vehículos Propuesto – Nuevo Incentivo Mejorado para Vehículos para los Residentes de la Comunidad de Shafter

- El vehículo de reemplazo nuevo que califica debe ser:
 - Un Vehículo Eléctrico Híbrido Enchufable (PHEV) o Vehículo Eléctrico con Batería (BEV)
 - Un vehículo nuevo (no usado)
 - Comprado por el participante y debe estar registrado a nombre del participante
 - Co-firmantes permitidos
 - Asegurado según como lo requiere la ley estatal

Proceso para el Propuesto Programa de Reemplazo de Vehículos

- Cómo puede aplicar el participante :
 - Solicitud en línea o en papel
 - Llame al Distrito para obtener ayuda para completar la solicitud
 - Asistencia de socios del programa
- Aprobación de la solicitud :
 - Criterios de selección: Proceso de Pedir una Solicitud o proceso por orden de llegada
 - Si se aprueba, se generará una carta de aprobación de la solicitud con la lista de concesionarios participantes y se enviará por correo postal o por correo electrónico al participante

Proceso para el Propuesto Programa de Reemplazo de Vehículos (cont.)

- Selección de Vehículo de Reemplazo :
 - El participante trabaja con un concesionario participante para seleccionar un nuevo/usado vehículo de reemplazo elegible
- El Distrito proporcionará un incentivo para que el participante invierta en la compra del nuevo vehículo de reemplazo
- Complete la transacción final con el concesionario
 - Entregue el vehículo antiguo al concesionario para que lo desmantele

Próximos Pasos

- El Distrito desarrolló conceptos iniciales para el plan del programa para su discusión con el Comité Directivo
- Discusión adicional con el Comité Directivo sobre los conceptos para la implementación del programa
- Finalizar el plan del programa para enviarlo a CARB para su revisión y aprobación
- El Distrito presentará el programa recomendado a la Mesa Directiva del Distrito para su revisión y aprobación
- El Distrito lanzará el programa en la comunidad, incluido el trabajo con el Comité Directivo, el administrador del programa y los concesionarios de automóviles locales para participar en el programa

CENTRAL CALIFORNIA
ASTHMA COLLABORATIVE

Our Mission

CCAC's mission is to provide education and direct services, build regional capacity and advocate for sensible policies that improve health and address inequities by reducing environmental impacts and emphasizing the prevention and management of chronic disease.

Our Vision

We see a San Joaquin Valley where the health of every resident is our foremost concern. We envision environments and systems of support for health reflected in the resources, information, activities and policies in every community.

CCAC Projects

- Asthma Impact Model (AIM)
- Clean Vehicle Empowerment Collaborative (CVEC)
 - EV Navigator Program
- Community Air Grant (CAG)
 - SJVAir Monitoring Network
- Children's Health and Air Pollution Study (CHAPS)
- SUMMATION

Community Air Grant (CAG) Program

Community Air Monitoring Network:

CCAC and its partners are in the process of implementing a Community Air Monitoring Network (SJVAIR) to collect and display real-time PM_{2.5} data in disadvantaged communities across the San Joaquin Valley. The network is focused on communities that are not located near an existing regulatory monitor and will provide easy access (website and text message alerts) to residents living in these underserved, predominantly rural communities.

The Asthma Impact Model (AIM) is CCAC's flagship program and addresses our goals as listed below.

EDUCATION

- Public/Communities/Institutions
- Individual/Family

DIRECT SERVICE

- Clinical
- Air Quality & Chronic Disease Behavior Change
- Individual/Family/Institutions

SYSTEM CHANGE & POLICY

DEVELOPMENT

- Advocacy

INCREASE CAPACITY

- CCAC Sustainability
- Regional Capacity

Asthma Impact Model (AIM)

A multi-component asthma intervention strategy composed of:

- In home environmental evaluations, health education, case management, testing and utilization review.

Partnerships with local Managed Care Organizations, agencies and clinicians.

Calculates and reports intervention outcomes and costs, determine policy implications, assess feasibility of scaling, and develop specific policy goals for sustainability.

"After the home assessment, it has been about a year since my son has had any symptoms."
—Janet Magana, Mother of AIM participant.

CENTRAL CALIFORNIA
ASTHMA COLLABORATIVE

Nuestra Mision

La mision de CCAC es proveer education y servicios directos, construir capacidad regional y abogar para policas sensibles que mejoren la sauld y dirigir conversaciones sobere falta de equidad por reducir impactos ambientales y enfatizar la prevencion y manejoamiento de enfermedades cronicas.

Nuestra Vision

Nosotros vemos a un Valle de San Joaquin donde la salud de cada residente es nuestra preocupacion principal. Nosotros visualizamos ambientes y sistemas de soporte para salud reflejada en los recursos, informacion, actividades, y policas en cada comunidad.

CCAC Proyectos

- Modelo de impacto del asma (AIM)
- Colaboración en el empoderamiento de vehículos limpios (CVEC)
- Programa EV Navigator
- Subvención aérea comunitaria (CAG)
- Red de monitoreo de SJVAir
- Estudio sobre la salud de los niños y la contaminación del aire (CHAPS)
- SUMMATION

Programa de Subvenciones Aéreas Comunitarias (CAG)

Red de monitoreo del aire de la comunidad: Ccac y sus socios están en el proceso de implementar una Red Comunitaria de Monitoreo del Aire (SJVAIR) para recopilar y mostrar datos pm2.5 en tiempo real en comunidades desfavorecidas en todo el Valle de San Joaquín. La red se centra en comunidades que no se encuentran cerca de un monitor regulatorio existente y proporcionarán fácil acceso (mensajes de sitio web y mensajes de texto) a los residentes que viven en estas comunidades desatendidas, predominantemente rurales.

El Modelo de Impacto del Asma (AIM) es el programa insignia del CCAC y aborda nuestros objetivos como se indica a continuación.

Educación

Público/Comunidades/Instituciones

Individuo/Familia

SERVICIO DIRECTO

Clínico

Calidad del aire y cambio crónico de
comportamiento de la enfermedad

Individuo/Familia/Instituciones

CAMBIO DE SISTEMA y DESARROLLO
DE POLÍTICAS

Abogacía

AUMENTAR LA CAPACIDAD

Sostenibilidad del CCAC

Capacidad regional

Modelo de impacto del asma (AIM)

Una estrategia multicomponente de intervención para el asma compuesta por:
En evaluaciones ambientales en el hogar, educación para la salud, gestión de casos, pruebas y revisión de utilización.

Asociaciones con organizaciones locales de atención administrada, agencias y médicos.

Calcula e informa los resultados y costos de intervención, determina las implicaciones de las políticas, evalúa la viabilidad de la escala y desarrolla objetivos de política específicos para la sostenibilidad.

"Después de la evaluación del hogar, ha pasado aproximadamente un año desde que mi hijo ha tenido algún síntoma."
—Janet Magana, madre del participante de AIM.

Agenda for Shafter Community Steering Committee Meeting #29

Monday, March 8, 2021 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
John Guinn, Wonderful Real Estate Development, Community Co-host
- 5:15 p.m. Standing Updates**
Community Air Monitoring Update
Valley Air District Staff
School Filtration & Bus Subcommittee Update
Valley Air District Staff
Other Agency Updates
Department of Pesticide Regulation
CARB
- 6:00 p.m. Update on Land Use Strategies**
Short update from Kern County Public Works Department regarding their efforts to support the land use measures in the CERP in coordination with the CSC and the City of Shafter
Yolanda Alcantar, Kern County Public Works Manager
- 6:20 p.m. Open Floor Discussion of CERP Strategy Progress**
Using the latest status updates included in the CERP [tracker](#), open floor discussion among CSC members, District staff, CARB and other agencies to discuss and clarify CERP strategies and next steps.
Hanna Stelmakhovych, Facilitator
- 6:50 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, April 12, 2021 via Zoom
- 6:55 p.m. Public Comment**

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #29

Lunes, 8 de marzo de 2021 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Para participar **solamente por teléfono** en Español:
Llamada gratuita: 888-240-3210
Código de acceso: 3373645#

- 5:00 p.m. Bienvenida, Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
John Guinn, Wonderful Real Estate Development, Co-anfitrión de la Comunidad
- 5:15 p.m. Actualizaciones Permanentes**
Actualización del Monitoreo del Aire de la Comunidad
Personal del Distrito del Aire del Valle
Actualización del Subcomité de Filtración y Autobuses Escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias
Departamento de Regulación de Pesticidas
CARB
- 6:00 p.m. Actualización sobre las Estrategias de Uso del Suelo**
Breve actualización del Departamento de Obras Públicas del Condado de Kern con respecto a sus esfuerzos para apoyar las medidas de uso del suelo en el CERP en coordinación con el Comité Directivo y la Ciudad de Shafter
Yolanda Alcantar, Gerente de Obras Públicas del Condado de Kern
- 6:20 p.m. Discusión Abierta Sobre el Progreso de la Estrategia del CERP**
Usando las últimas actualizaciones de estado incluidas en el [Informe de Medidas](#) del CERP, discusión abierta entre los miembros del Comité Directivo, el personal del Distrito, CARB y otras agencias para discutir y aclarar las estrategias del CERP y los próximos pasos.
Hanna Stelmakhovych, Facilitadora
- 6:50 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes, 12 de abril de 2021 a través de Zoom
- 6:55 p.m. Comentario Público**

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
Anabel Marquez, Community Co-host
- 5:15 p.m. Standing Updates**
Community Air Monitoring Update
Valley Air District Staff
School Filtration & Bus Subcommittee Update
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation, CARB
- 6:00 p.m. Update on Enforcement Activities**
District and CARB will each report on enforcement activities in the community over the last quarter and seek feedback for future enforcement efforts
Valarie Ballard, Valley Air District
Justin Shields, CARB
- 6:20 p.m. Present New Shafter Tracker**
Present and discuss the [new tracker](#) for Shafter and current priorities
Valley Air District Staff
- 6:45 p.m. New CSC Members**
Discuss applications received and potential next steps
Valley Air District Staff
- 6:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, March 8, 2021 via Zoom

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #28

Lunes, 8 de febrero de 2021 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Para participar **solamente por teléfono** en Español:
Llamada gratuita: 888-240-3210
Código de acceso: 3373645#

- 5:00 p.m. Bienvenida, Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
Anabel Marquez, Co-anfitriona de la Comunidad
- 5:15 p.m. Actualizaciones Permanentes**
Actualización del Monitoreo del Aire de la Comunidad
Personal del Distrito del Aire del Valle
Actualización del Subcomité de Filtración y Autobuses Escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias — Departamento de Regulación de Pesticidas (DPR), CARB
- 6:00 p.m. Actualización sobre actividades de Cumplimiento**
El Distrito y CARB informarán sobre las actividades de cumplimiento en la comunidad durante el último trimestre y buscarán comentarios para futuros esfuerzos de cumplimiento.
Valarie Ballard, Personal del Distrito del Aire
Justin Shields, CARB
- 6:20 p.m. Presentar el Nuevo Informe de Medidas**
Presentar y discutir el [nuevo Informe de Medidas](#) de Shafter y las prioridades actuales
Personal del Distrito del Aire
- 6:45 p.m. Nuevos Miembros del Comité Directivo**
Discutir las solicitudes recibidas y los posibles próximos pasos
Personal del Distrito del Aire
- 6:55 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes, 8 de marzo de 2021 a través de Zoom

Agenda for Shafter Community Steering Committee Meeting #27

Monday, January 11, 2021 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
Martha Murrieta, Community Co-host
- 5:10 p.m. Standing Updates**
Community Air Monitoring Update
Valley Air District Staff
School Filtration & Bus Subcommittee Update
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation, CARB
- 5:40 p.m. CERP Measure Mapping Exercise with City of Shafter**
Group discussion and mapping exercise using Social Pinpoint to identify additional areas for consideration by the City of Shafter for potential CERP measure related public works projects
Valley Air District Staff
Michael James, Director of Public Works
- 6:30 p.m. Commercial & Residential Lawn and Garden Equipment**
Discuss opportunities available to residents and contractors with these approved incentive measures in the Shafter CERP
Valley Air District Staff
- 6:50 p.m. Annual Enforcement Report**
Briefly present and discuss the [annual enforcement report](#)
Valley Air District Staff
- 6:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, February 8, 2021 via Zoom

Meeting Highlights*
AB 617 Shafter Community Steering Committee Meeting #26
December 14, 2020, 5:00pm - 7:00pm
Virtual Zoom Meeting

Action items for the Shafter Community Steering Committee (CSC):

- Send recommended locations for overnight monitoring by the van

Action items for the San Joaquin Valley Air Pollution Control District (District):

- Mail weekly Spanish monitoring reports to the CSC before each meeting
- Schedule meeting for more in-depth conversation with CSC and City of Shafter about proposed projects
- Provide the CSC with maps of all air monitoring locations
- Provide fully translated enforcement report to CSC by next meeting

Welcome and Introductions:

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, the District
Lynnda Martin, Community Co-host, Shafter Community Member

Hanna welcomed the Shafter CSC participants and introduced herself and the ILG team. She gave an overview of Zoom instructions, Spanish translation services, and provided an agenda overview.

Ryan thanked the CSC for participating in the final meeting of the year and expressed hope for 2021 and continued progress with the CERP implementation. Community co-host, Lynnda Martin, introduced herself and shared photos of the Shafter community, her perspective on the AB 617 impact on the region and how parts of the community could benefit from sidewalks and urban greening.

Standing Updates

Community Air Monitoring Update:

Chay Thao, Program Manager, the District

Chay gave an update on continued community air monitoring. Presentation highlights included:

- The District is continuing to monitor various locations with the van
- Working with Richland School District to install the electrical software at Sequoia and Golden Oak Elementary Schools
- Working with Shafter Labor Camp and electrical contractors in order to proceed with deploying an air monitoring trailer in that location
- Ammonia sampling has been completed at the DMV and mobile ammonia monitoring detected .6 PPM
- In the process of exploring how to integrate community air monitors with existing regulatory monitors in the RAAN system

Question: How is the District approaching the ammonia monitoring and in what locations?

District Answer: The CSC requested that we monitor on the west side. The District is using the same canisters we use for the VOC speciation collection.

Question from Spanish-speaker: In total, how many monitors are detecting the contamination?

District Answer: We have three at the schools. We already have some units installed at Shafter DMV for PM 10 and PM 2.5.

Follow up question from Spanish-speaker: Can the District give the CSC a list of locations?

District Answer: Yes, that is available on the website and we can give you a map of specific locations.

Question: Do you conduct the mobile monitoring during business hours or after hours? For Mexican Colony, it would be nice to know what is happening in the evenings. How many times have you gone there during the week and at what times?

District Answer: The District is starting to schedule a combination of times in the afternoon and evening at that location. We already have quite a few Mexican Colony locations for the van monitoring. But if the CSC has any additional locations to suggest, please send them so we can begin to schedule overnight monitoring.

School Filtration & Bus Subcommittee:

Jaime Holt, Chief Communications Officer, the District

Jaime provided an update on the School Filtration and Bus Subcommittee. Presentation highlights included:

- We are close to opening the application period for the school filtration program
- We have been in discussions with CARB staff about what kind of equipment can remove ozone/pollutants and viruses from the air in schools
- The District is continuing to work with Richland School District; they recently ordered a number of EV school buses and are exploring the possibility of ordering more

Question: Is the filtration only for schools, not residents? Can the program include children from 0-5 years?

District Answer: At this time, the program is only for schools and it is only for K-12.

Pesticide Monitoring Update:

Nan Singhasemanon, Assistant Director, Department of Pesticide Regulation (DPR)

Nan gave an update on pesticide monitoring. Presentation highlights included:

- Shafter has inspired other AB 617 communities so DPR is starting work with additional cities
- DPR kicked off the first monitoring study for the Mitigation pilot project on 1-3,D right near Shafter
- DPR will review data and evaluate the individual monitor studies
- First field study in Shafter should be made public in or around February
- DPR will return to a CSC meeting to share information from the presentation given at the recent regulation presentation
- DPR is currently conducting the air monitoring site selection review; they are focusing on 2021 and Shafter is one of the four sites DPR is considering

Question: If the state moves forward with legislation and passes some kind of notification process, would Shafter attempt a pilot so that when statewide legislation passes, they can point to us?

DPR Answer: That is the plan. If we can establish a local notification pilot in Shafter, we want to learn from that and scale it in other areas.

Question: Is the monitor at Sequoia still reading telone? There is a grower-to-grower notification process currently in place for the county. Is DPR looking at that same structure?

DPR Answer: The one constant has always been telone. DPR is trying to push back our air monitoring network to what it was before, which was 31 pesticides. On the notification front, I have heard a lot from the CSC about what you want to see. DPR is well aware of the elements of the notification and what the CSC is interested in and what has worked with the county in the past. Those conversations are going to play out a bit more before I can report back to you on a definitive direction.

Question from Spanish-speaker: We have been operating from theories and people keep dying. Do you believe that a pilot notification would be good in this case?

DPR Answer: I am not as familiar with the specifics of that program and its options right now, but I look forward to providing more specifics on that.

CARB Update:

Skott Wall, Office of Community Air Protection, California Air Resources Board (CARB)

Skott provided a CARB agency update. Presentation highlights included:

- Big changes to the CARB Board last week
- Tania Pacheco-Werner is replacing Dr. Sherriffs and Liane Randolph is replacing Mary Nichols

City of Shafter:

Jaime Holt, Chief Communications Officer, the District

Michael James, Public Works Director, City of Shafter

Jaime presented the Shafter CERP at-a-glance document and showcased measures that align with work the City of Shafter is doing. The City of Shafter representative spoke to the CSC about projects on the horizon with the city. Presentation highlights include:

- The District put together a CERP overview and shared it with the CSC; Jaime highlighted the specific CERP elements that relate to projects the City is currently working on
- The City of Shafter is working on street improvements in North Shafter
- Public Works is studying the feasibility of curbs and sidewalks throughout Shafter communities
- The city is extending its street sweeping services
- Kern County is contributing \$50,000 to the City to develop a safe and accessible parking lot off Lerdo Highway

Question from Spanish-speaker: Where is the location of the shared parking station?

City of Shafter Answer: There will be a parking lot that the county transit station will utilize near Lerdo Highway.

Question from Spanish-speaker: Can the City consider a project for Shafter Avenue? It has little to no sidewalks from the center to Mexican Colony, but a lot of kids walk home from school along that route.

City of Shafter Answer: I am sure residents from Mexican Colony and other communities that are unincorporated are well aware that the County of Kern has secured a grant to extend the city sewer system to these communities. That project is being engineered right now. We have to be careful to make sure that whatever street improvements we have put in place won't be compromised by the future sewer project. That is definitely a consideration.

Comment: I support the city's proposition of putting a sidewalk and bike path along Highway 43 so kids can safely get to the new park at Fresno Avenue.

City of Shafter Answer: The City is actively developing a grant application to develop a new park at that parcel. We have conducted five public workshops to get community feedback. Assuming we are successful, having a park would make the Highway 43 corridor improvements that much more important.

Question: Will there be ongoing conversations between the City and the CSC? If so, would it be ok to have a deeper conversation offline?

District Answer: We are definitely open to that and will look for times to schedule more conversation.

Question: Is Public Works the department that actually goes out and shovels? Based on the CERP, the rerouting has been a major issue for residents. Including the residents in these conversations is crucial. Has the City gone out and actually mapped possible locations where rerouting can happen?

City of Shafter Answer: If it involves anything in a public right-of-way or streets, it involves Public Works. There are active conversations and planning efforts underway to provide better traffic circulation for existing and future communities.

Comment from Spanish-speaker: I am worried about the idea of doing construction in the areas of Shafter and Central because it will take away some green areas and recreation in that community.

City of Shafter Answer: If we are referring to the park site, the City Council made it very clear that they want to retain visual curb appeal.

Comment from Community co-host: Thank you to the City of Shafter for presenting tonight. The CSC doesn't always get to hear about these projects. I hope we can all work together to move some of these projects forward in our community. I am in favor of a smaller committee to keep these discussions top of mind.

Low Dust Harvesting Equipment & Alternatives to Agricultural Burning:

Todd DeYoung, Director of Strategies & Incentives, the District

Todd gave an update on two CERP measures. Presentation highlights included:

- The District presented to its board in November and requested approval of the low dust harvester incentive program measure
- Authorization was given to open a district-wide program with additional funding and enhancements included in the Shafter CERP
- There is \$2.5 million in dedicated funding for this program in the Shafter area
- The program for Shafter pays up to 75% of cost of equipment
- For outreach, the Almond Board will provide a specific list of growers who operate in the area
- The District is still waiting on final approval from CARB
- As an alternative to ag burns, this program will provide incentives to growers to chip and reincorporate the material into the soil
- This funding is only for Shafter, so we won't be waiting for other projects from the Valley

Comment: Thank you for going above and beyond and asking CARB for additional funding.

District Response: Thank you. We need your help in the outreach for these programs. Please let us know if there are specific organizations we need to be talking to make this successful.

Annual Enforcement Report:

Ryan Hayashi, Deputy Air Pollution Control Officer, the District

Ryan reviewed the annual report and the comments received to date. Presentation highlights included:

- The District will have the report to the CSC by next meeting, fully translated
- Despite COVID, the District is still responding to complaints and monitoring

Public Comment:

No public comment.

Wrap Up/Next Steps:

Hanna Stelmakhovych, Facilitator, ILG

Hanna thanked everyone for participating in the meeting and thanked Lynnda for co-hosting. Lynnda thanked the CSC for their time and participation and expressed appreciation for working together through Zoom despite the year's challenges.

Reminders:

The next CSC meeting is Jan. 11 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*
Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #26
14 de diciembre de, 2020, 5:00pm - 7:00pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter (Comité):

- Enviar las ubicaciones recomendadas para el seguimiento nocturno por camioneta

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Enviar por correo los informes de monitoreo en español semanales al Comité antes de cada reunión
- Programar una reunión para una conversación más profunda con Comité y la Ciudad de Shafter sobre los proyectos propuestos
- Proporcionar al Comité mapas de todas las ubicaciones de monitoreo del aire
- Proporcionar un informe de cumplimiento completamente traducido al Comité para la próxima reunión

Bienvenida e Introducciones:

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Lynnda Martin, Coanfitriona Comunitaria, Miembro de la Comunidad de Shafter

Hanna dio la bienvenida a los participantes del Comité Directivo de Shafter y se presentó a sí misma y al equipo de ILG. Ella dio una descripción general de las instrucciones de Zoom, los servicios de traducción en español y proporcionó una descripción general de la agenda.

Ryan agradeció al Comité por participar en la reunión final del año y expresó su esperanza para el 2021 y el progreso continuo con la implementación del CERP. La coanfitriona de la comunidad, Lynnda Martin, se presentó y compartió fotos de la comunidad de Shafter, su perspectiva sobre el impacto de AB 617 en la región y cómo partes de la comunidad podrían beneficiarse de las aceras y la ecología urbana.

Actualizaciones Permanentes

Actualización de Monitoreo del Aire de la Comunidad:

Chay Thao, Gerente de Programa, el Distrito

Chay dio una actualización sobre el monitoreo continuo del aire de la comunidad. Puntos importantes de la presentación:

- El Distrito continúa monitoreando varios lugares con la camioneta
- Trabajando con el distrito escolar de Richland para instalar el software eléctrico en Sequoia y Golden Oak Elementary
- Trabajar con el Campo de Trabajo de Shafter y los contratistas eléctricos para proceder con el despliegue de un remolque de monitoreo de aire en esa ubicación.
- Se completó el muestreo de amoníaco en el DMV y se detectó monitoreo de amoníaco móvil .6 PPM

- En el proceso de explorar cómo integrar los monitores de aire de la comunidad con los monitores regulatorios existentes en el sistema RAAN

Pregunta: ¿Cómo se está acercando el Distrito al monitoreo de amoníaco y en qué ubicaciones?

Respuesta del Distrito: El Comité solicitó que monitoreáramos el lado oeste. El Distrito está usando los mismos recipientes que usamos para la colección de especiación de VOC.

Pregunta de Hispanohablante: En total, ¿cuántos monitores están detectando la contaminación?

Respuesta del Distrito: Tenemos tres en las escuelas. Ya tenemos algunas unidades instaladas en Shafter DMV para PM 10 y PM 2.5.

Pregunta de seguimiento de un hispanohablante: ¿Puede el Distrito darle al Comité una lista de ubicaciones?

Respuesta del Distrito: Sí, eso está disponible en el sitio web y podemos darle un mapa de ubicaciones específicas.

Pregunta: ¿Se realiza el monitoreo móvil durante el horario comercial o fuera del horario laboral?

Para la Colonia Mexicana, sería bueno saber lo que sucede por las noches. ¿Cuántas veces has ido durante la semana y a qué horas?

Respuesta del Distrito: El Distrito está comenzando a programar una combinación de horarios por la tarde y por la noche en ese lugar. Ya tenemos bastantes ubicaciones de colonias mexicanas para el monitoreo de camionetas. Pero si el Comité tiene ubicaciones adicionales para sugerir, envíelas para que podamos comenzar a programar el monitoreo nocturno.

Subcomité de Filtración y Autobuses Escolares:

Jaime Holt, Directora de Comunicaciones, el Distrito

Jaime presentó una actualización sobre el Subcomité de Filtración y Autobuses Escolares. Puntos importantes de la presentación:

- Estamos cerca de abrir el plazo de solicitud del programa de filtración escolar
- Hemos estado en conversaciones con el personal de CARB sobre qué tipo de equipo puede eliminar el ozono/contaminantes y virus del aire en las escuelas.
- El Distrito continúa trabajando con el Distrito Escolar de Richland; Recientemente ordenaron varios autobuses escolares EV y están explorando la posibilidad de pedir más

Pregunta: ¿La filtración es solo para escuelas, no para residentes? ¿El programa puede incluir niños de 0 a 5 años?

Respuesta del Distrito: En este momento, el programa es solo para escuelas y es solo para K-12.

Actualización de Monitoreo de Pesticidas:

Nan Singhasemanon, Subdirector, Departamento de Regulación de Pesticidas (DPR)

Nan dio una actualización sobre el monitoreo de pesticidas. Puntos importantes de la presentación:

- Shafter ha inspirado a otras comunidades de AB 617, por lo que el DPR está comenzando a trabajar con ciudades adicionales
- El DPR inició el primer estudio de monitoreo para el proyecto piloto de mitigación en 1-3, D, cerca de Shafter
- El DPR revisará los datos y evaluará los estudios de monitores individuales.
- El primer estudio de campo en Shafter debería hacerse público en febrero o alrededor de esa fecha.

- El DPR regresará a una reunión del Comité para compartir información de la presentación dada en la reciente presentación del reglamento.
- El DPR está llevando a cabo actualmente la revisión de selección del sitio de monitoreo del aire; se están enfocando en 2021 y Shafter es uno de los cuatro sitios que el DPR está considerando

Pregunta: Si el estado avanza con la legislación y aprueba algún tipo de proceso de notificación, ¿Shafter intentaría un piloto para que cuando se apruebe la legislación estatal, puedan señalarnos?

Respuesta de DPR: Ese es el plan. Si podemos establecer un piloto de notificación local en Shafter, queremos aprender de eso y escalarlo en otras áreas.

Pregunta: ¿El monitor de Sequoia sigue leyendo telone? Actualmente existe un proceso de notificación de productor a productor para el condado. ¿El DPR está mirando esa misma estructura?

Respuesta de DPR: La única constante siempre ha sido telone. El DPR está tratando de hacer retroceder nuestra red de monitoreo del aire a lo que era antes, que eran 31 pesticidas. En cuanto a las notificaciones, he escuchado mucho del Comité sobre lo que desea ver. El DPR conoce bien los elementos de la notificación y lo que le interesa al Comité y lo que ha funcionado con el condado en el pasado. Esas conversaciones se desarrollarán un poco más antes de que pueda informarles sobre una dirección definitiva.

Pregunta de Hispanohablante: Hemos estado operando desde teorías y la gente sigue muriendo. ¿Cree que una notificación piloto sería buena en este caso?

Respuesta de DPR: No estoy tan familiarizado con los detalles de ese programa y sus opciones en este momento, pero espero brindar más detalles al respecto.

Actualización de CARB:

Skott Wall, Oficina de Protección del Aire de la Comunidad, Junta de Recursos del Aire de California (CARB)

Skott proporcionó una actualización de la agencia CARB. Puntos importantes de la presentación:

- Grandes cambios en la Junta de CARB la semana pasada
- Tania Pacheco-Werner reemplaza al Dr. Sherriffs y Liane Randolph reemplaza a Mary Nichols

Ciudad de Shafter:

Jaime Holt, Directora de Comunicaciones, el Distrito

Michael James, Director de Obras Públicas, Ciudad de Shafter

Jaime presentó el documento del CERP de Shafter de un vistazo y mostró medidas que se alinean con el trabajo que está haciendo la ciudad de Shafter. El representante de City of Shafter habló con el Comité sobre proyectos en el horizonte con la ciudad. Puntos importantes de la presentación incluyen:

- El Distrito elaboró una descripción general del CERP y la compartió con el Comité; Jaime destacó los elementos específicos del CERP que se relacionan con los proyectos en los que la Ciudad está trabajando actualmente.
- La ciudad de Shafter está trabajando en mejoras de calles en North Shafter
- Obras Públicas está estudiando la viabilidad de bordillos y aceras en las comunidades de Shafter
- La ciudad está expandiendo sus servicios de barrido de calles

- El Condado de Kern está contribuyendo con \$50,000 a la ciudad para desarrollar un estacionamiento seguro y accesible junto a la autopista Lerdo.

Pregunta de un Hispanohablante: ¿Dónde está la ubicación de la estación de estacionamiento compartido?

Respuesta de la Ciudad de Shafter: Habrá un estacionamiento que la estación de tránsito del condado utilizará cerca de la autopista Lerdo.

Pregunta de un Hispanohablante: ¿Puede la Ciudad considerar un proyecto para Shafter Avenue? Tiene poca o ninguna acera desde el centro hasta la Colonia Mexicana, pero muchos niños caminan a casa desde la escuela a lo largo de esa ruta.

Respuesta de la Ciudad de Shafter: Estoy seguro de que los residentes de la Colonia Mexicana y otras comunidades que no están incorporadas saben muy bien que el Condado de Kern ha obtenido una subvención para extender el sistema de alcantarillado de la ciudad a estas comunidades. Ese proyecto se está diseñando ahora mismo. Tenemos que tener cuidado de asegurarnos de que las mejoras en las calles que hayamos implementado no se verán comprometidas por el futuro proyecto de alcantarillado. Eso es definitivamente una consideración.

Comentario: Apoyo la propuesta de la ciudad de poner una acera y un carril para bicicletas a lo largo de la autopista 43 para que los niños puedan llegar con seguridad al nuevo parque en Fresno Avenue.

Respuesta de la Ciudad de Shafter: La Ciudad está desarrollando activamente una solicitud de subvención para desarrollar un nuevo parque en esa parcela. Hemos realizado cinco talleres públicos para obtener comentarios de la comunidad. Suponiendo que tengamos éxito, tener un parque haría que las mejoras del corredor de la autopista 43 fueran mucho más importantes.

Pregunta: ¿Habrá conversaciones en curso entre la Ciudad y el Comité? Si es así, ¿estaría bien tener una conversación más profunda sin conexión?

Respuesta del Distrito: Definitivamente estamos abiertos a eso y buscaremos horarios para programar más conversaciones.

Pregunta: ¿Obras Públicas es el departamento que realmente sale a palear? Según el CERP, el cambio de ruta ha sido un problema importante para los residentes. Incluir a los residentes en estas conversaciones es crucial. ¿Ha salido la ciudad y realmente ha mapeado posibles ubicaciones donde pueden ocurrir cambios de ruta?

Respuesta de la Ciudad de Shafter: Si involucra algo en un derecho de paso público o calles, involucra Obras Públicas. Hay conversaciones activas y esfuerzos de planificación en curso para proporcionar una mejor circulación del tráfico para las comunidades existentes y futuras.

Comentario de un Hispanohablante: Me preocupa la idea de hacer construcción en las áreas de Shafter y Central porque quitará algunas áreas verdes y recreación en esa comunidad.

Respuesta de la Ciudad de Shafter: Si nos referimos al sitio del parque, el Ayuntamiento dejó muy claro que quieren mantener el atractivo visual de la acera.

Comentario del Coanfitrión de la Comunidad: Gracias a la Ciudad de Shafter por presentar esta noche. El Comité no siempre se entera de estos proyectos. Espero que todos podamos trabajar juntos para hacer avanzar algunos de estos proyectos en nuestra comunidad. Estoy a favor de un comité más pequeño para tener en cuenta estas discusiones.

Equipos de Cosecha de Polvo Bajo y Alternativas a la Quema Agrícola:

Todd DeYoung, Director de Estrategias e Incentivos, el Distrito

Todd dio una actualización sobre dos medidas del CERP. Puntos importantes de la presentación:

- El Distrito presentó a su mesa directivo en noviembre y solicitó la aprobación de la medida del programa de incentivos para cosechadoras de polvo bajo
- Se otorgó autorización para abrir un programa en todo el distrito con financiamiento adicional y mejoras incluidas en el CERP de Shafter
- Hay \$2.5 millones en fondos dedicados para este programa en el área de Shafter
- El programa de Shafter paga hasta el 75% del costo del equipo
- Para alcance, la Junta de Almendras proporcionará una lista específica de productores que operan en el área.
- El Distrito todavía está esperando la aprobación final de CARB
- Como alternativa a las quemaduras agrícolas, este programa proporcionará incentivos a los productores para que astillen y reincorporen el material al suelo.
- Esta financiación es solo para Shafter, por lo que no estaremos esperando otros proyectos del Valle.

Comentario: Gracias por ir más allá y pedirle a CARB fondos adicionales.

Respuesta del Distrito: Gracias. Necesitamos su ayuda en el alcance de estos programas. Háganos saber si hay organizaciones específicas con las que debemos hablar para que esto sea exitoso.

Informe Anual de Cumplimiento:

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Ryan revisó el informe anual y los comentarios recibidos hasta la fecha. Puntos importantes de la presentación:

- El Distrito tendrá el informe al Comité para la próxima reunión, completamente traducido.
- A pesar de COVID, el Distrito todavía está respondiendo a las quejas y monitoreando

Comentario Público:

No hay comentarios públicos.

Conclusión/Próximos pasos:

Hanna Stelmakhovych, Facilitadora, ILG

Hanna agradeció a todos por participar en la reunión y agradeció a Lynnda por ser coanfitriona. Lynnda agradeció al Comité por su tiempo y participación y expresó su agradecimiento por trabajar juntos a través de Zoom a pesar de los desafíos del año.

Recordatorios:

La próxima reunión del Comité es el 11 de enero a través de Zoom. Todas las presentaciones, los puntos importantes de las reuniones, las transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

* Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.

Agenda for Shafter Community Steering Committee Meeting #26

Monday, December 14, 2020 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
Lynnda Martin, Community Co-host
- 5:10 p.m. Standing Updates**
Community Air Monitoring Update
Valley Air District Staff
School Filtration & Bus Subcommittee Update
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation, CARB
- 5:40 p.m. City of Shafter**
Presentation – Potential City of Shafter public works projects and opportunities to partner with Shafter Community Emissions Reduction Program measures
Michael James, Director of Public Works
- 6:40 p.m. Low Dust Harvesting Equipment & Alternatives to Agricultural Burning**
Discuss plans and timeframes for outreach and implementation of these incentive measures adopted in the CERP
Valley Air District Staff
- 6:50 p.m. Annual Enforcement Report**
Briefly present and discuss the annual enforcement report
Valley Air District Staff
- 6:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, January 11, 2021 via Zoom

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #26

Lunes, 14 de diciembre de 2020 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-431-3632

Código de acceso: 8872455#

- 5:00 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
Lynnda Martin, Co-anfitriona de la Comunidad
- 5:10 p.m. Actualizaciones Permanentes**
Actualización del Monitoreo del Aire de la Comunidad
Personal del Distrito del Aire del Valle
Actualización del Subcomité de Filtración y Autobuses Escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias — Departamento de Regulación de Pesticidas (DPR), CARB
- 5:40 p.m. Ciudad de Shafter**
Presentación – Posibles proyectos de obras públicas de la Ciudad de Shafter y oportunidades para asociarse con las medidas del Programa de Reducción de Emisiones de la Comunidad de Shafter
Michael James, Director de Obras Públicas
- 6:40 p.m. Equipo de Cosecha de Bajo Polvo y Alternativas a la Quema Agrícola**
Discutir planes y plazos para el alcance e implementación de estos incentivos adoptados en el CERP
Personal del Distrito del Aire del Valle
- 6:50 p.m. Informe Anual de Cumplimiento**
Presentar y discutir brevemente el informe anual de cumplimiento
Personal del Distrito del Aire del Valle
- 6:55 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes, 11 de enero de 2021 a través de Zoom

336 Pacific Avenue, Shafter, California, 93263

December 3, 2020

Jaime Holt
Chief Communications Officer
San Joaquin Valley Air Pollution Control District
1990 E. Gettysburg Ave.
Fresno, CA 93726

Dear Ms. Holt:

As a follow-up to our recent virtual meeting held on November 17, 2020, I've prepared some background and details on potential projects within the City of Shafter. These projects could fulfill at least some of the key objectives that have been identified by the AB 617 Steering Committee. If possible, I would appreciate the opportunity to discuss these potential partnerships with the Committee at one of their regular meetings.

Thank you for your time and consideration. Please feel free to contact me with any questions, issues, or requests.

Sincerely,

Michael James
Public Works Director

Project No. 1 – Highway 43 Pedestrian and Bicycle Path Improvements at North Shafter

Description:

Construct a new paved shoulder and bicycle lane, curb and gutter, and sidewalk along the west side of State Route 43 between Mayer Lane and West Tulare Avenue.

Benefits:

- Facilitates and promotes safe and reliable pedestrian and bicycle transportation between the North Park and North Shafter communities and the Core City services, such as schools, shopping, and restaurants.
- Improves street drainage
- Reduces dust generation from vehicles.
- Complements proposed new park and drainage retention basin.

Anticipated Cost: \$1,000,000

Anticipated Completion If Funded: One year upon award.

Figure 1 – Highway 43 Project Location Map

Figure 2 – Highway 43 Addition to City Street Sweeping Schedule

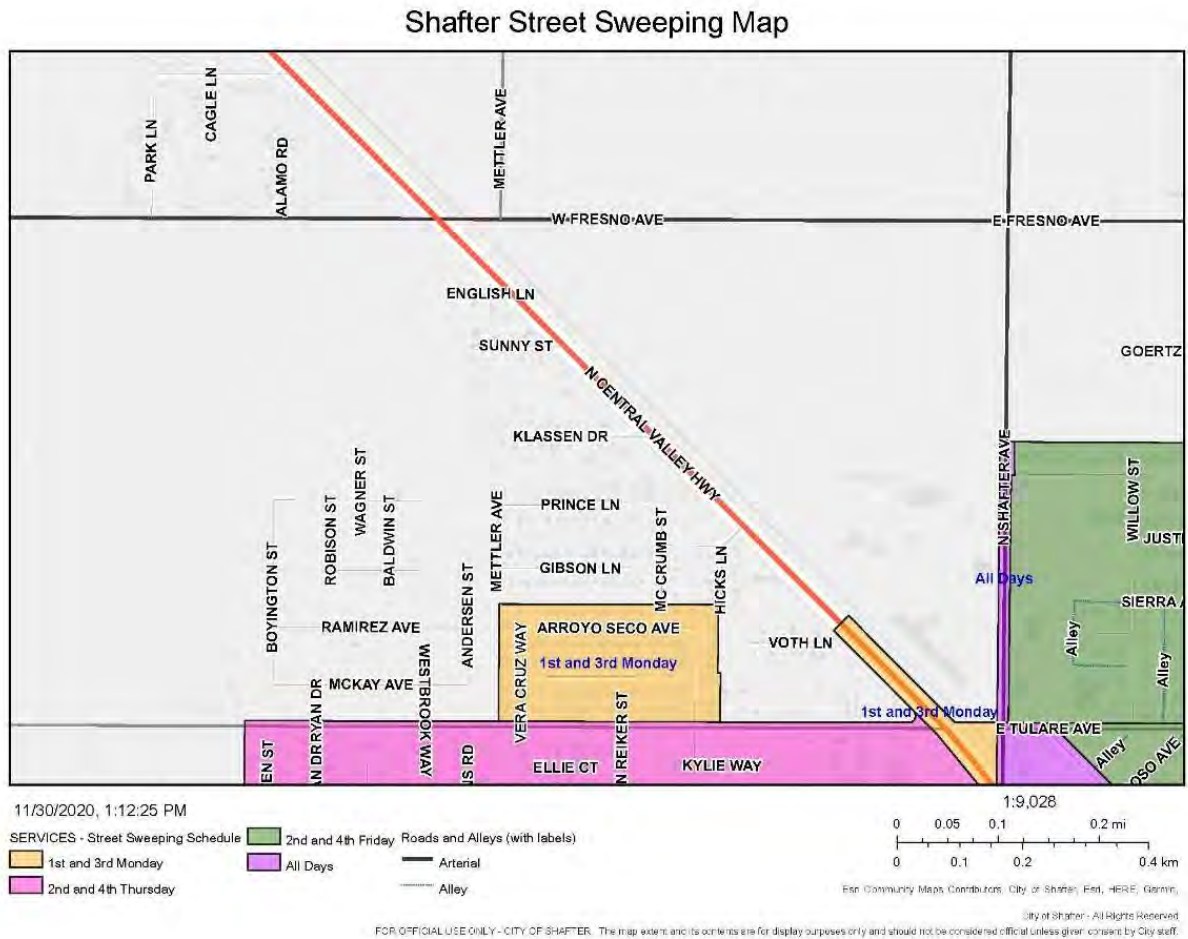

Figure 3 - Highway 43 School Bus Stop

Figure 4 - Existing Highway 43 Shoulder Looking North

Project No. 2 – Highway 43/Santa Fe Way Roundabout Intersection Right-of-Way Utility Relocations and Right-of-Way Acquisition

Description:

Relocate existing underground and above-ground utilities and purchase right-of-way to facilitate roundabout intersection project currently being designed by Caltrans for the intersection of State Route 43 at Santa Fe Way.

Benefits:

- Air pollution reduction through improved traffic movement efficiency.
- Improved safety with the removal of the Beech Avenue connection to the intersection.

Anticipated Cost: \$2,000,000

Anticipated Completion If Funded: One year upon award.

Figure 5 - Existing Roundabout Intersection

Figure 6 - Proposed Roundabout Intersection Layout

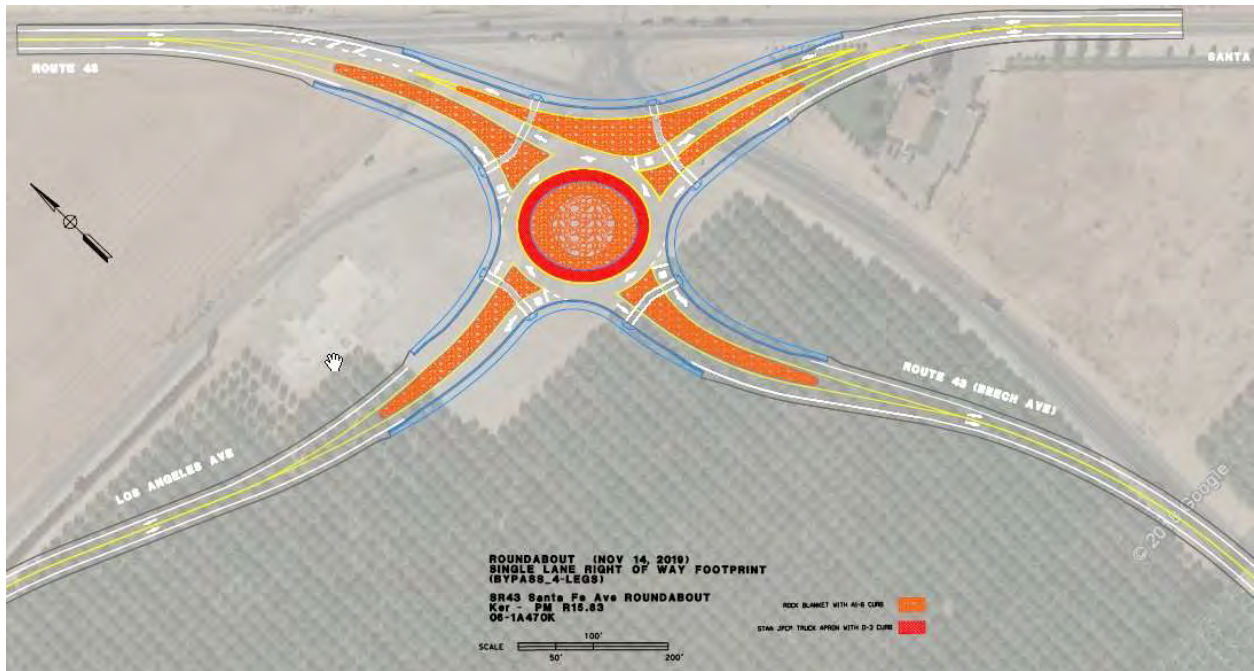

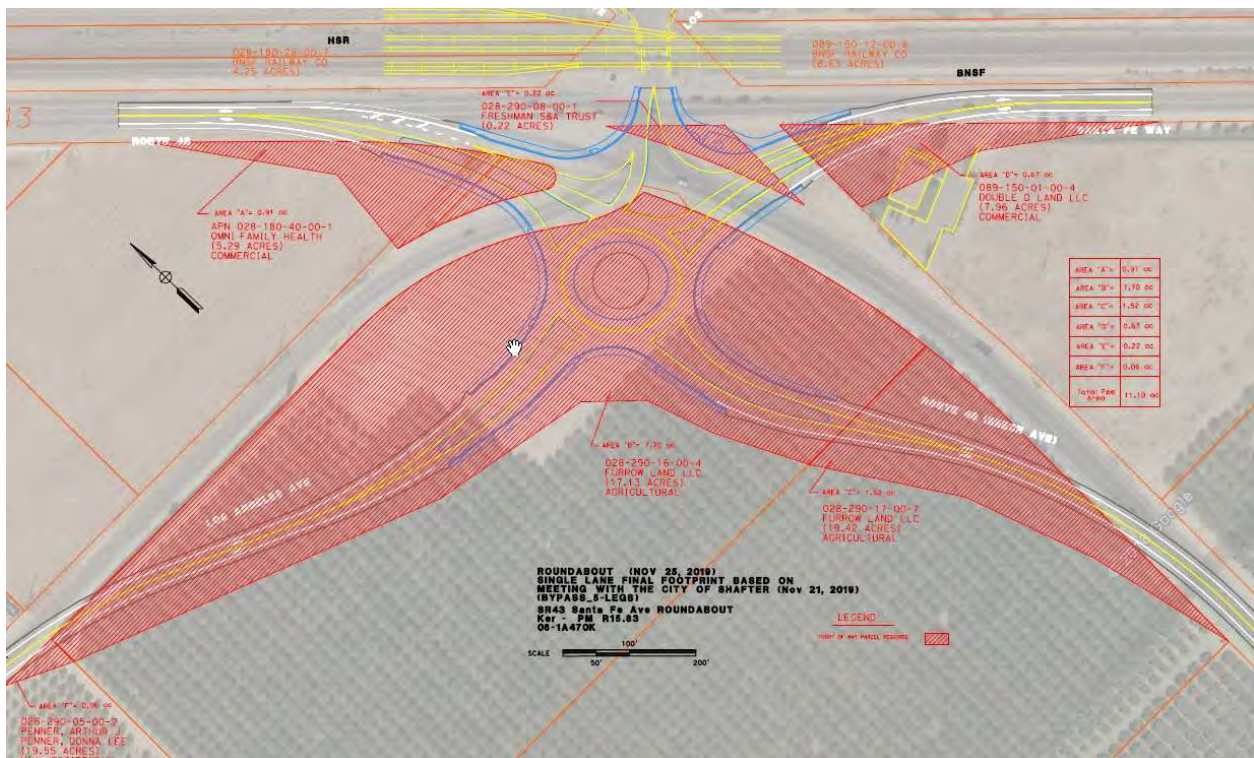

Figure 7 - Proposed Roundabout Right-of-Way Acquisition

Project No. 3 – Regional Electric Vehicle Charging Station

Description:

Equip as many as 40 existing City-owned parking spaces with electric vehicle charging stations.

Benefits:

- Large-scale and centrally-located facility to facilitate and promote electric vehicle usage.

Anticipated Cost: \$300,000

Anticipated Completion If Funded: One year upon award.

Figure 8 - Existing City Parking Lot Location

Figure 9 - Existing Parking Spaces

Project No. 4 – Future Transit Center Upgrades and Amenities

Description:

Add features to a planned parking lot and transit station at Stringham Park, including a transit rider kiosk, shaded benches, and possibly an electric vehicle charging station for those that visit downtown merchants and restaurants.

Benefits:

- Facilitates and promotes local and regional transit ridership.
- Complements City and County funding dedicated to developing a parking lot and transit center.

Anticipated Cost: \$100,000

Anticipated Completion If Funded: One year upon award.

336 Pacific Avenue, Shafter, California, 93263

3 de diciembre de 2020

Jaime Holt
Directora de Comunicaciones
Distrito de Control de la Contaminación del Aire del Valle de San Joaquín
1990 E. Gettysburg Ave.
Fresno, CA 93726

Estimada Sra. Holt:

Como seguimiento de nuestra reciente reunión virtual el 17 de noviembre de 2020, he preparado algunos antecedentes y detalles sobre posibles proyectos dentro de la Ciudad de Shafter. Estos proyectos podrían cumplir al menos algunos de los objetivos clave que han sido identificados por el Comité Directivo de AB 617. Si es posible, agradecería la oportunidad de discutir estas posibles asociaciones con el Comité en una de sus reuniones regulares.

Gracias por su tiempo y consideración. No dude en ponerse en contacto conmigo con cualquier pregunta, problema o solicitud.

Sinceramente,

Michael James
Director de Obras Públicas

Proyecto Núm. 1– Mejoras en la Ruta para Peatones y Bicicletas de la Autopista 43 en North Shafter

Descripción:

Construir un nuevo arcén pavimentado y carril para bicicletas, bordillo y alcantarilla, acera a lo largo del lado oeste de la ruta estatal 43 entre Mayer Lane y West Tulare Avenue.

Beneficios:

- Facilita y promueve el transporte seguro y confiable para peatones y ciclistas entre las comunidades de North Park y North Shafter y los servicios de Core City, como escuelas, tiendas y restaurantes.
- Mejora el drenaje de las calles.
- Reduce la generación de polvo de los vehículos.
- Complementa el nuevo parque propuesto y la cuenca de retención de drenaje.

Costo anticipado: \$1,000,000

Finalización Anticipada si se Financia: Menos de un año después de que se otorgue la financiación.

Proyecto Núm. 2 – Autopista 43 / Intersección de la Rotonda de Santa Fe Way Reubicaciones de Servicios Públicos de Derecho de Paso y Adquisición de Derecho de Paso

Descripción:

Reubicar los servicios públicos subterráneos y sobre el suelo existentes y comprar el derecho de paso para facilitar el proyecto de intersección de la rotonda que Caltrans está diseñando actualmente para la intersección de la ruta estatal 43 en Santa Fe Way.

Beneficios:

- Reducción de la contaminación del aire mediante la mejora de la eficiencia del movimiento del tráfico.
- Seguridad mejorada con la eliminación de la conexión de Beech Avenue a la intersección.

Costo anticipado: \$2,000,000

Finalización Anticipada si se Financia: Menos de un año después de que se otorgue la financiación.

Figura 6 - Diseño Propuesto de la Intersección de la Rotonda

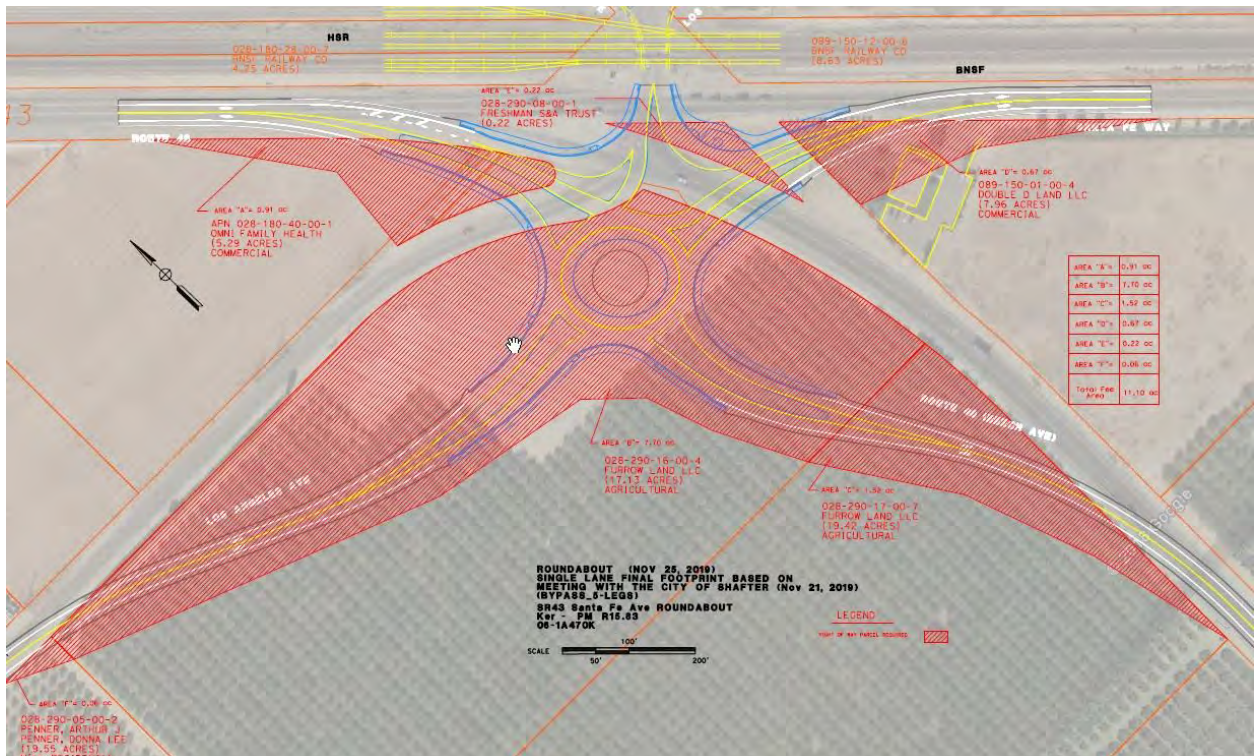

Figura 7 - Propuesta de Adquisición de Derecho de Paso de Rotonda

Proyecto Núm. 3 – Estación Regional de Carga de Vehículos Eléctricos

Descripción:

Equipar hasta 40 espacios de estacionamiento existentes de propiedad de la Ciudad con estaciones de carga de vehículos eléctricos.

Beneficios:

- Instalación a gran escala y ubicada en el centro para facilitar y promover el uso de vehículos eléctricos.

Costo Anticipado: \$300,000

Finalización anticipada si se financia: Menos de un año después de que se otorgue la financiación.

Figura 8 - Ubicación del Estacionamiento de la Ciudad Existente

Figura 9 - Espacios de Estacionamiento Existentes

Proyecto Núm. 4 – Mejoras y Comodidades Futuras del Centro de Tránsito

Descripción:

Agregar características al estacionamiento planificado y la estación de tránsito en Stringham Park, incluyendo el quiosco de pasajeros de tránsito, bancas con sombra y posiblemente una estación de carga de vehículos eléctricos para aquellos que visitan los comercios y restaurantes del centro.

Beneficios:

- Facilita y promueve la cantidad de pasajeros en tránsito local y regional.
- Complementa los fondos de la Ciudad y el Condado dedicados al desarrollo de un estacionamiento y un centro de tránsito.

Costo Anticipado: \$100,000

Finalización Anticipada si se Financia: Menos de un año después de que se otorgue la financiación.

Meeting Highlights*
AB 617 Shafter Community Steering Committee Meeting #25
November 9, 2020, 5:00 pm - 7:00 pm
Virtual Zoom Meeting

Action items for the Shafter Community Steering Committee (CSC):

- Provide input on possible sites for trees placed as part of urban greening efforts
- Email the District with any additional feedback on the annual report

Action items for San Joaquin Valley Air Pollution Control District (District):

- Share results of ammonia monitoring at next CSC meeting
- Distribute a survey for feedback about where trees will be most beneficial in Shafter

Welcome and Introductions:

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, the District
Angie Nelson, Community Co-host, Shafter Community Member

Hanna welcomed the Shafter CSC participants and introduced herself and the ILG team. She gave an overview of Zoom instructions and Spanish translation services. Hanna welcomed special guests Sandy Berg (CARB Board Member) and Dr. Alex Sherriffs (Board Member with CARB and the District).

Erica Manuel with ILG gave an overview of the agenda and meeting timeline. Ryan thanked the CSC for participating in the meeting and thanked the special guests for attending. He noted that the District staff is looking forward to feedback on and discussion about the annual report. Community co-host, Angie Nelson, introduced herself and her role with Community Action Partnership of Kern (CAPK). She thanked the CSC for allowing her to co-host the meeting.

Standing Updates

Air Monitoring Plan:

Jon Klassen, Director of Strategies and Incentives, the District

Jon gave an update on community air monitoring. Presentation highlights:

- The District is continuing to work with Richland School District to get the equipment set up at Sequoia Elementary School and Golden Oak Elementary School
- Staff is working with Shafter Labor Camp to install new equipment there
- There are new sites coming online soon and more data coming in about the Shafter area
- Based on requests from the CSC, the District has been doing some ammonia monitoring in the past week; samples are being sent to a lab and staff will share those results with CSC when they are available
- The purple air unit at the Shafter DMV site was not operating at the last meeting; it was just replaced and is now operational again
- Whenever one of the air monitoring sites or pieces of equipment isn't operating, the District will let the CSC know and begin investigation and repair

School Filtration & Bus Subcommittee:

Jaime Holt, Chief Communications Officer, the District

Jaime presented an update on the School Filtration and Bus Subcommittee. Presentation highlights:

- The District will launch the application for the school filtration program in a couple of weeks
- Staff learned they do not need to upgrade all school filters to MERV 14, they just need to ensure that the new filters are better filters than the school had before
- The District is looking at the Richland School District about electric school buses; Richland has participated in the school bus program in the past and staff is hoping to build upon those actions
- The District is working to get all schools in the Shafter area enrolled in the schools program, which includes getting some additional idling signs to those schools

Question: With regard to the school filter replacement, is that per season, per classroom, or do some schools just have better HVAC systems? What is the determinant of that? For the folks that can't have those filters, is the last resort the portable air filtration systems? What is the reality of retrofitting an entire HVAC system?

District Answer: Assessment is performed on a school by school basis. Most schools are trying to put in the higher filter levels, but some of the older schools have very old HVAC systems and can't accommodate the newer filters. The schools have to have assessments performed by a third party contractor to do an entire retrofit; the District would then bring the proposal back to the CSC, since large retrofits would eat a big chunk of funding.

Question: Has staff done any outreach to the 0-5yo daycares that service the agricultural or lower-income community?

District Answer: We can definitely look into that if it is something the CSC wants. We are focused on K-12 to begin with. The CAPP guidelines specifically say K-12.

Question from Spanish-speaker: Can the CSC have a specific amount of money allocated to the schools?

District Answer: Yes, we have \$250,000 in incentive funding for schools in Shafter.

Follow-up question: Do you believe that is the right amount of funding, given that there are not a lot of schools in our district?

District Answer: We have ten schools in the district within the Shafter boundaries and we think that will be enough money for those ten schools. Things can change and if they do change, staff will return to the CSC and share that.

Pesticide Monitoring Update:

Nan Singhasemanon, Assistant Director, Department of Pesticide Regulation (DPR)

Nan gave an update on pesticide monitoring. Presentation highlights:

- At the last scientific review panel meeting for AB 617, there was a presentation regarding the 1,3-D mitigation pilot
- DPR has entered into the fieldwork phase of the pilot, which means staff is working to identify fields and applicators with growers, commodity groups, and County Ag Commissioners to find those fields and approve them for study
- DPR has site criteria that has to be met in order to select a field and decide the location for monitoring

- DPR staff has identified a few fields already and is hoping to pick up one particular application soon
- DPR is hoping to do as many as five or six fields during the study
- The notification conversations have been picking up and there will be more details to discuss at the next CSC meeting

Question: Will CSC members know what areas are going to be in the pilot or is it after the fact that we will know?

DPR Answer: I can get back to you about that. Typically, it is purely a scientific study, so from a safety perspective DPR doesn't want folks to know and possibly visit the sites. I can get back to you on the specifics.

CARB Update:

Skott Wall, Office of Community Air Protection, California Air Resources Board (CARB)

Skott provided a CARB agency update. Presentation highlights:

- The blueprint is the guidance document that lays out the criteria for an emissions reduction program
- A subcommittee of the consultation group is meeting Nov. 18 from 1-4pm and CARB is looking for public participation

Vegetative Barriers and Urban Greening:

Melissa Iger, Tree Foundation of Kern

Melissa shared a presentation on the Tree Foundation of Kern. Presentation highlights:

- Tree Foundation of Kern has been planting trees to help mitigate air pollution since 1994
- There are numerous human benefits of trees
- SoCalGas has donated \$1,000 toward trees for Shafter

Question from Spanish-speaker: How many trees can we get? The streets and houses don't have any green coverage and sadly, Shafter doesn't help us upkeep vegetative barriers.

Guest-Speaker Answer: Bay laurel is a good tree for providing protection. Bushes and trees are the best vegetative barriers and you should have people go out every couple of weeks to hose them off.

District Comment: Maintenance for the trees and long-term irrigation needs to be looked into. The District is going to be starting the process of prioritizing this. It requires the District to submit a program plan to CARB. Staff will start working on that and partner with someone to do a survey of where these trees will be most beneficial.

Update on Incentive CERP Strategies and Outreach:

Brian Dodds, Program Manager, the District

Jaime Holt, Chief Communications Officer, the District

Brian gave an update on CERP strategies and the tracker. Jaime gave an overview of outreach. Presentation highlights:

- The measure tracker is on the Shafter community webpage, in both English and Spanish
- All CERP measures are identified and updated regularly
- The District welcomes feedback and questions
- CSC has already provided feedback on outreach strategies; the first round of outreach efforts included communications related to burning trash and the District put up a highly visible billboard to educate residents
- The District heard from the CSC that direct mail pieces in Shafter might be appropriate; a piece was drafted in both English and Spanish connecting people to the free solar option the CSC heard about from GRID Alternatives
- District is exploring the viability of publishing print advertisements
- Staff have put together a full outreach plan to discuss many of the strategies

Question: Can anybody find out how many registered wood stove inserts or freestanding wood stoves are in Shafter? On the open ag burning, I feel that the District should make special effort within the seven mile radius to contact the farmers who are pushing trees over and see what their plans are—they will be asking permission to burn very shortly. Lastly, there are 20 miles of grapevines ready to be burned within the boundary. There are dozens of homes and this field should not be burned.

District Answer: You are right on track with your comments. In regard to the wood stove devices, for the entire valley portion of Kern County, the number is just over 1,500 and there are four in Shafter. Thank you for the input, we have made note of it.

Final Draft of Annual Report:

Deputy Air Pollution Control Officer, the District

Ryan reviewed the annual report and the comments received. Presentation highlights:

- The report is 54 pages of detailed information summarizing the many discussions about the CERP measures developed by the CSC, the community air monitoring plan that was developed directly with the CSC, and the deployment of that equipment and implementation of those individual measures
- The District recalled the CSC request to see draft materials well in advance of the due date
- The District also recalled the CSC request to ensure timely translation of documents. For that reason, not only did the District post those documents online, but they also sent physical copies to Spanish-speaking CSC members
- The District did receive feedback on the documents and has been working to incorporate it
- Within a week or so, air monitoring data at the DMV site will be available in real time
- The annual report will go to the District board in November and CARB board in December

Comment: The progress that has been made is really good. Great job keeping up with everything.

District Response: Thank you.

Comment: I am drafting a letter to the residents in Shafter asking for their ideas about air quality. I am willing to walk and go door to door to give them that letter.

District Response: We love that idea and would love for you to help get the message out. Maybe we can package the letter with District materials so they also get the information on the solar program and all the things they can take advantage of.

Wrap Up/Next Steps:

Hanna Stelmakhovych, Facilitator, ILG

Hanna thanked everyone for participating in the meeting and thanked Angie for co-hosting. Ryan thanked the special guests for attending and offered them a chance to address the CSC.

Reminders:

The next CSC meeting is Dec. 14 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comment:

No public comment.

Puntos Importantes de la Reunión*
Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #25
9 de noviembre de 2020, 5:00 pm - 7:00 pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter (Comité):

- Proporcionar información sobre posibles sitios para árboles colocados como parte de los esfuerzos de ecologización urbana
- Enviar un correo electrónico al Distrito con cualquier comentario adicional sobre el informe anual

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Compartir los resultados del monitoreo de amoníaco en la próxima reunión del Comité
- Distribuir una encuesta para obtener comentarios sobre dónde los árboles serán más beneficiosos en Shafter

Bienvenida e Introducciones:

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Angie Nelson, Coanfitriona Comunitaria, Miembro de la Comunidad de Shafter

Hanna dio la bienvenida a los participantes del Comité de Shafter y se presentó a sí misma y al equipo de ILG. Dio una descripción general de las instrucciones de Zoom y los servicios de traducción al español. Hanna dio la bienvenida a los invitados especiales Sandy Berg (miembro de la junta de CARB) y el Dr. Alex Sherriffs (miembro de la junta de CARB y el Distrito).

Erica Manuel con ILG dio una descripción general de la agenda y el cronograma de la reunión. Ryan agradeció al Comité por participar en la reunión y agradeció a los invitados especiales por asistir. Señaló que el personal del Distrito espera recibir comentarios y discusiones sobre el informe anual. La coanfitriona de la comunidad, Angie Nelson, se presentó a sí misma y su papel en Community Action Partnership of Kern (CAPK). Agradeció al Comité por permitirle ser coanfitriona de la reunión.

Actualizaciones Permanentes

Plan de Monitoreo del Aire:

Jon Klassen, Director de Estrategias e Incentivos, el Distrito

Jon dio una actualización sobre el monitoreo del aire de la comunidad. Puntos importantes de la presentación:

- El Distrito continúa trabajando con el Distrito Escolar de Richland para instalar el equipo en Sequoia Elementary y la Golden Oak Elementary.
- El personal está trabajando con el Campo de Trabajo de Shafter para instalar nuevos equipos allí.
- Pronto habrá nuevos sitios en línea y más datos sobre el área de Shafter
- Según las solicitudes del Comité, el Distrito ha estado monitoreando el amoníaco la semana pasada; Las muestras se envían a un laboratorio y el personal compartirá esos resultados con el Comité cuando estén disponibles.

- La unidad de aire púrpura en el sitio de Shafter DMV no estaba funcionando en la última reunión; fue reemplazado y ahora está operativo nuevamente
- Siempre que uno de los sitios de monitoreo de aire o piezas de equipo no esté funcionando, el Distrito le informará al Comité y comenzará la investigación y reparación.

Subcomité de Filtración y Autobuses Escolares:

Jaime Holt, Directora de Comunicaciones, el Distrito

Jaime presentó una actualización sobre el Subcomité de Filtración y Autobuses Escolares. Puntos importantes de la presentación:

- El Distrito lanzará la solicitud para el programa de filtración escolar en un par de semanas.
- El personal aprendió que no es necesario actualizar todos los filtros de la escuela a MERV 14, solo deben asegurarse de que los nuevos filtros sean mejores que los que tenía la escuela antes.
- El Distrito está analizando al Distrito Escolar de Richland sobre los autobuses escolares eléctricos; Richland ha participado en el programa de autobuses escolares en el pasado y el personal espera aprovechar esas acciones.
- El Distrito está trabajando para que todas las escuelas del área de Shafter se inscriban en el programa de escuelas, que incluye la instalación de algunos carteles adicionales de “no dejar el motor encendido mientras estacionado” en esas escuelas.

Pregunta: Con respecto al reemplazo del filtro escolar, ¿es por temporada, por salón o algunas escuelas simplemente tienen mejores sistemas de HVAC? ¿Cuál es el determinante de eso? Para las personas que no pueden tener esos filtros, ¿el último recurso son los sistemas portátiles de filtración de aire? ¿Cuál es la realidad de la modernización de un sistema HVAC completo?

Respuesta del Distrito: La evaluación se realiza escuela por escuela. La mayoría de las escuelas están tratando de poner niveles de filtro más altos, pero algunas de las escuelas más antiguas tienen sistemas HVAC muy antiguos y no pueden acomodar los filtros más nuevos. Las escuelas deben tener evaluaciones realizadas por un contratista externo para hacer una modernización completa; el Distrito luego devolvería la propuesta al Comité, ya que las grandes modificaciones consumirían una gran parte de los fondos.

Pregunta: ¿Ha realizado el personal algún contacto con las guarderías de 0-5 años que prestan servicios a la comunidad agrícola o de bajos ingresos?

Respuesta del Distrito: Definitivamente podemos investigar eso si es algo que el Comité quiere. Estamos enfocados en K-12 para empezar. Las pautas de CAPP dicen específicamente K-12.

Pregunta de Hispanohablante: ¿Puede el Comité tener una cantidad específica de dinero asignada a las escuelas?

Respuesta del Distrito: Sí, tenemos \$250,000 en financiamiento de incentivos para escuelas en Shafter.

Siguiente Pregunta: ¿Creen que es la cantidad correcta de fondos, dado que no hay muchas escuelas en nuestro distrito?

Respuesta del Distrito: Tenemos diez escuelas en el distrito dentro de los límites de Shafter y creemos que será suficiente dinero para esas diez escuelas. Las cosas pueden cambiar y si cambian, el personal regresará al Comité y compartirá eso.

Actualización de Monitoreo de Pesticidas:

Nan Singhasemanon, Subdirector, Departamento de Regulación de Pesticidas (DPR)

Nan dio una actualización sobre el monitoreo de pesticidas. Puntos importantes de la presentación:

- En la última reunión del panel de revisión científica para AB 617, hubo una presentación sobre el piloto de mitigación 1,3-D
- El DPR ha entrado en la fase de trabajo de campo del piloto, lo que significa que el personal está trabajando para identificar campos y aplicadores con productores, grupos de productos básicos y comisionados agrícolas del condado para encontrar esos campos y aprobarlos para su estudio.
- El DPR tiene criterios de sitio que deben cumplirse para seleccionar un campo y decidir la ubicación para el monitoreo.
- El personal del DPR ya ha identificado algunos campos y espera recoger pronto una aplicación en particular.
- El DPR espera hacer hasta cinco o seis campos durante el estudio.
- Las conversaciones de notificación se han ido recuperando y habrá más detalles para discutir en la próxima reunión del Comité

Pregunta: ¿Sabrán los miembros de Comité qué áreas van a estar en el piloto o es después del hecho que sabremos?

Respuesta de DPR: Puedo contactarte sobre eso. Por lo general, es un estudio puramente científico, por lo que desde una perspectiva de seguridad, el DPR no quiere que la gente conozca y posiblemente visite los sitios. Puedo contactarte sobre los detalles.

Actualización de CARB:

Skott Wall, Oficina de Protección del Aire de la Comunidad, Junta de Recursos del Aire de California (CARB)

Skott proporcionó una actualización de la agencia CARB. Puntos importantes de la presentación:

- El plano es el documento de orientación que establece los criterios para un programa de reducción de emisiones
- Un subcomité del grupo de consulta se reunirá el 18 de noviembre de 1-4 pm y CARB está buscando la participación del público.

Barreras Vegetativas y Ecologización Urbana:

Melissa Iger, Tree Foundation of Kern

Melissa compartió una presentación sobre Tree Foundation of Kern. Puntos importantes de la presentación:

- Tree Foundation of Kern ha estado plantando árboles para ayudar a mitigar la contaminación del aire desde 1994
- Existen numerosos beneficios humanos de los árboles
- SoCalGas ha donado \$1,000 para árboles para Shafter

Pregunta de Hispanohablante: ¿Cuántos árboles podemos conseguir? Las calles y las casas no tienen cobertura verde y, lamentablemente, Shafter no nos ayuda a mantener las barreras vegetativas.

Respuesta de Orador Invitado: El laurel es un buen árbol para brindar protección. Los arbustos y los árboles son las mejores barreras vegetativas y debe hacer que la gente salga cada dos semanas para limpiarlos con manguera.

Comentario del Distrito: Es necesario estudiar el mantenimiento de los árboles y el riego a largo plazo. El Distrito va a comenzar el proceso de priorizar esto. Requiere que el Distrito envíe un plan de programa a CARB. El personal comenzará a trabajar en eso y se asociará con alguien para hacer una encuesta sobre dónde estos árboles serán más beneficiosos.

Actualización Sobre las Estrategias y el Alcance de Incentivos del CERP:

Brian Dodds, Gerente de Programa, el Distrito

Jaime Holt, Directora de Comunicaciones, el Distrito

Informe de medidas. Jaime dio una descripción general del alcance. Puntos importantes de la presentación:

- El informe de medidas está en la página web de la comunidad de Shafter, tanto en inglés como en español.
- Todas las medidas del CERP se identifican y actualizan periódicamente
- El Distrito agradece comentarios y preguntas
- El Comité ya ha proporcionado comentarios sobre las estrategias de alcance; la primera ronda de esfuerzos de alcance incluyó comunicaciones relacionadas con la quema de basura y el Distrito colocó una valla publicitaria muy visible para educar a los residentes
- El Distrito escuchó del Comité que las piezas de correo directo en Shafter podrían ser apropiadas; se redactó una tarjeta en inglés y español que conecta a las personas con la opción solar gratuita de la que el Comité escuchó de GRID Alternatives
- El Distrito está explorando la viabilidad de publicar anuncios impresos
- El personal ha elaborado un plan de alcance completo para discutir muchas de las estrategias

Pregunta: ¿Alguien puede averiguar cuántos insertos de estufa de leña registrados o estufas de leña independientes hay en Shafter? Sobre la quema abierta, creo que el Distrito debería hacer un esfuerzo especial dentro del radio de siete millas para contactar a los agricultores que están empujando árboles y ver cuáles son sus planes; ellos pedirán permiso para quemar muy pronto. Por último, hay 20 millas de viñas listas para ser quemadas dentro del límite. Hay decenas de viviendas y este campo no se debe quemar.

Respuesta del Distrito: Estás bien al punto con tus comentarios. Con respecto a los aparatos de leña, para toda la porción del valle del condado de Kern, el número es un poco más de 1,500 y hay cuatro en Shafter. Gracias por el aporte, lo hemos tomado nota.

Borrador Final del Informe Anual:

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Ryan revisó el informe anual y los comentarios recibidos. Puntos importantes de la presentación:

- El informe tiene 54 páginas de información detallada que resume las muchas discusiones sobre las medidas del CERP desarrolladas por el Comité, el plan de monitoreo del aire de la comunidad que se desarrolló directamente con el Comité, y el despliegue de ese equipo y la implementación de esas medidas individuales.
- El Distrito recordó la solicitud del Comité de ver los borradores de los materiales mucho antes de la fecha de vencimiento.

- El Distrito también recordó la solicitud de Comité para garantizar la traducción oportuna de los documentos. Por esa razón, el Distrito no solo publicó esos documentos en línea, sino que también envió copias físicas a los miembros de Comité de habla hispana.
- El Distrito recibió comentarios sobre los documentos y ha estado trabajando para incorporarlos.
- Dentro de una semana aproximadamente, los datos de monitoreo del aire en el sitio del DMV estarán disponibles en tiempo real
- El informe anual se enviará a la mesa directiva del Distrito en noviembre y a la junta de CARB en diciembre

Comentario: El progreso que se ha realizado es realmente bueno. Buen trabajo manteniéndome al día con todo.

Respuesta del Distrito: Gracias.

Comentario: Estoy redactando una carta para los residentes de Shafter pidiendo sus ideas sobre la calidad del aire. Estoy dispuesto a caminar e ir de puerta en puerta para darles esa carta.

Respuesta del Distrito: Nos encanta esa idea y nos encantaría que nos ayudaras a difundir el mensaje. Tal vez podamos empaquetar la carta con materiales del Distrito para que ellos también obtengan la información sobre el programa solar y todas las cosas que pueden aprovechar.

Conclusión/Próximos pasos:

Hanna Stelmakhovych, Facilitadora, ILG

Hanna agradeció a todos por participar en la reunión y agradeció a Angie por ser coanfitriona. Ryan agradeció a los invitados especiales por asistir y les ofreció la oportunidad de dirigirse al Comité.

Recordatorios:

La próxima reunión del Comité es el 14 de diciembre a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Comentario Público:

No hay comentarios públicos.

Agenda for Shafter Community Steering Committee Meeting #25

Monday, November 9, 2020 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
Angie Nelson, Community Co-host
- 5:10 p.m. Standing Updates**
Monitoring Plan Update — Mobile van activities, upcoming subcommittee meeting
Valley Air District Staff
School Filtration & Bus Subcommittee Update
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation (DPR), CARB
- 5:40 p.m. Vegetative Barriers and Urban Greening**
Presentation – Potential opportunities in Shafter
Melissa Iger, Tree Foundation of Kern
- 6:00 p.m. Update on Incentive CERP Strategies and Outreach**
Update on implementation of these incentive measures adopted in the CERP and review of [tracker](#)
Todd DeYoung, Valley Air District
- 6:45 p.m. Final Draft of Annual Report**
Discuss comments from CSC that have been received and incorporated into the [annual report](#)
Valley Air District Staff
- 6:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, December 14, Zoom Call

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #25

Lunes, 9 de noviembre de 2020 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/93242934733?pwd=UHISYXUzSGgwSkxWc0Z1clgwWU4wUT09>
Meeting ID: 932 4293 4733
Passcode: 617

Para participar **solamente por teléfono** en Español:
Llamada gratuita: 888-240-3210
Código de acceso: 7351704#

- 5:00 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
Angie Nelson, Co-anfitriona de la Comunidad
- 5:10 p.m. Actualizaciones Permanentes**
Actualización del Plan de Monitoreo — Actividades de la camioneta móvil, y próxima reunión del subcomité
Personal del Distrito del Aire del Valle
Actualización del Subcomité de Filtración y Autobuses Escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias — Departamento de Regulación de Pesticidas (DPR), CARB
- 5:40 p.m. Barreras Vegetativas y Ecologización Urbana**
Presentación – Oportunidades potenciales en Shafter
Melissa Iger, Tree Foundation of Kern
- 6:00 p.m. Actualización de las Estrategias Incentivas del CERP y Alcance**
Actualización sobre la implementación de los incentivos adoptados en el CERP y revisión del [reporte de medidas](#)
Todd DeYoung, Distrito del Aire del Valle
- 6:45 p.m. Borrador Final del Informe Anual**
Repasar comentarios del Comité Directivo que se han recibido e incorporado en el [informe anual](#)
Personal del Distrito del Aire del Valle
- 6:55 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes 14 de diciembre por Zoom

Aprende más: community.valleyair.org

Meeting Highlights*

AB 617 Shafter Community Steering Committee Meeting #24

October 12, 2020, 5:00pm-7:00pm

Virtual Zoom Meeting

Action items for the Shafter Community Steering Committee (CSC):

- Brainstorm topics to be discussed at potential future Air Monitoring Subcommittee meetings
- Suggest additional locations for the District to conduct their curtailment enforcement efforts
- Contact the District to receive a printed copy of the draft Annual Progress Report
- Provide feedback on the draft Annual Report by Oct. 23
- Contact the District with suggestions for additions to future CSC meeting agendas
- Give CARB suggestions for placement of “no-idling” signs
- Provide suggestions to CARB about where staff should be looking for heavy duty diesel trucks in the community, when they return to Shafter in Q4

Action items for San Joaquin Valley Air Pollution Control District (District):

- The District will provide more details about data from the air monitoring van at a future CSC meeting

Welcome and Introductions

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Martha Murrieta, Community Co-host, Shafter Community Member

Hanna welcomed the Shafter CSC participants and introduced herself and the ILG team. She gave an overview of Zoom instructions and Spanish translation services then reviewed the agenda. Ryan thanked everybody for attending and noted District is looking forward to feedback and discussion on the Annual Report. Community co-host, Martha Murrieta, introduced herself and explained she is looking forward to keeping the community clean and healthy.

Standing Updates: Air Monitoring Update

Chay Thao, Program Manager, Valley Air District

Chay gave a brief update on community air monitoring. Presentation highlights included:

- The District is continuing to monitor at Sequoia Elementary and Golden Oak Elementary
- The District is almost finished reviewing the lease agreement with Shafter Labor Camp
- Staff has started afternoon and evening PM monitoring in the community with the van to balance with morning monitoring
- The District used the van to respond to community inquiries and concerns, including one within the almond harvest area near Mexican Colony; data is on the website
- The Air Monitoring Subcommittee met on Sep. 22; the District compiled a list of questions from CSC members and assembled information to help answer questions related to air monitoring data

Question: The Shafter purple air monitor has been off for more than three weeks. Purple air monitoring is important because it updates every minute and a half and gives you the last ten

minutes average, which is very useful for rapid changes in smoke or dust. Can the PM 10 data accommodate hourly updates?

District Response: We are working on identifying the issue with that particular Purple air monitor. District staff has gone to the site and performed some maintenance on the monitor and will try to get it back online or replaced. The PM10 unit is designed to automatically upload to CARB's network, so we are looking for a way for the PM10 data to be integrated with District's system and to upload automatically

Standing Updates: School Filtration Subcommittee Update

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime presented an update on the School Filtration and Bus Subcommittee. Presentation highlights included:

- The District has been trying to put a grant application together for six public schools in the Shafter community for air filtration. Staff is gathering information about what they already have, what filters might work, and where there might be significant work that needs to be done in the schools
- Staff is trying to get MERV 13 filters into schools before kids head back to in-person instruction; the District has been talking to a company that has worked on this type of program in other parts of the state
- Staff hopes to have a draft grant application to share with the CSC at the next meeting
- The District has electric school buses that have been approved and are coming into the area through the Richmond School District

Standing Updates: Pesticide Monitoring Update

Minh Pham, Pesticides Programs Division, Department of Pesticide Regulation (DPR)

Minh Pham, DPR Supervisor, gave an update on pesticide monitoring. Presentation highlights included:

- The DPR Assistant Director, Nan Singhasemanon, recently presented at the scientific review panel regarding the 1,3-D mitigation pilot and plans moving forward
- DPR has been working closely with growers and applicators in different regions to identify areas to do the pilot program
- The pesticide air monitoring database was just updated with Shafter results at the end of September
- Ambient air monitoring data is coming in faster now and will be updated at the end of this month

Question: There were high readings for 1, 3-D last January in Shafter. Is there any explanation for what went wrong?

DPR Response: DPR did see a higher than normal application spike during the January month, however, that was within the realm of 20 PPB, whereas the acute threshold is in the 110 PPB, so it is well below the actual indicated threshold. DPR is still looking into it because it is a little bit lower than we would like it to be. Staff has looked at a lot of PUR usage reports and we did not see anything unusual.

Standing Updates: CARB Update

Skott Wall, Office of Community Air Protection, California Air Resources Board (CARB)

Skott provided a CARB agency update. Presentation highlights included:

- The Community Air Protection Blueprint, the guidance document that sets out all things related to AB 617, is going through a lengthy process of being reviewed for updates
- There is a subcommittee that brainstormed topics that should be reviewed for updates based upon first year learnings
- The subcommittee will meet on Oct. 15 at 1:00pm on Zoom to delve deeper into the categories of specific updates that need to be made on the Blueprint moving forward

Standing Updates: Enforcement Update

Jason Lawler, Air Quality Compliance Manager, Valley Air District

Justin Shields, Community Outreach & Enforcement, CARB

Jason gave a District enforcement update. Presentation highlights included:

- The District is responsible for five enforcement measures in the CERP: wood burning curtailment, illegal burning of residential waste, statewide anti-idling regulation, inspection frequency of stationary sources, and the pilot program for conducting self-inspections at gasoline stations
- Wood burning curtailment – this measure only happens in the winter, the information provided was for last year’s woodburning season (curtailment season is Nov. 1 through the end of February) District has committed that on each day that a curtailment is declared in Kern County, we will do four hours of enforcement within the Shafter community and was requesting additional feedback on locations, days, and times to focus enforcement from the CSC
- Illegal burning rules – this measure limits the potential for localized PM 2.5 and residential waste; District has completed targeted enforcement efforts of this measure for each of the first three quarters of 2020
- Statewide anti-idling regulation – District works in partnership with CARB to enforce this. The measure reduces localized PM 2.5 and toxic air quality impacts from heavy-duty diesel trucks was requesting additional feedback on locations, days, and times to focus enforcement from the CSC
- Stationary sources – when we adopted the CERP, District agreed to increase the frequency of inspections at permitted facilities within the Shafter community that have had emissions violations within the last 3 years to limit the localized toxic impacts
- Pilot training for self-inspections at gas stations – this is currently on hold, but is intended to provide hands-on training to gas station operators to limit the potential of air quality impacts from vapor recovery defects at gas stations
- In the first half of 2020, there were 12 complaints, which resulted in five enforcement actions

Justin provided a CARB enforcement update. Presentation highlights:

- CARB has “no-idling” signs available; they were designed with Caltrans to post on public roads to deter idling by heavy duty trucks
- CARB would like to know where these signs will have the most impact and can provide them to the community free of charge

- CARB has enhanced idling sweeps to also look at heavy duty diesel trucks to determine compliance, not only with CARB's idling regulation, but also with its truck and bus regulation and the transportation refrigeration unit regulations
- CARB performs desk audits to see if units are compliant
- CARB will update strategies based on feedback from the community
- CARB will be back in Shafter at the end of the year; please suggest where staff should be looking for trucks in the community

Question: Are there no-idling signs available for school zones?

Answer: The CARB no-idling signs can be posted on any public road. We also have no-idling signs specifically for school sites. District also has no-idling signs that they distribute to schools.

Discussion of Annual Progress Report

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime reviewed the latest draft of District's Annual Progress Report to CARB. Presentation highlights include:

- District needs feedback from the CSC by Oct. 23
- Staff will present the report to the District governing board at the November meeting, then it will be forwarded to CARB for their December board meeting
- In addition to the Annual Report, there are two additional attachments from CARB that have been sent to the CSC; please review all three documents
- Staff received a number of comments at the last meeting and have noted those and they will be incorporated into the next draft
- The report narrative includes: AB 617 background information, Shafter community overview, boundary, community engagement, and the transition to virtual meetings
- Technical elements include: community emissions inventory development, community air monitoring, stationary monitors and monitoring van, pesticide monitoring, weekly monitoring update, compliance and enforcement
- The report features a table of CERP enforcement measures and their status; also lists specific strategies in the CERP

Question: In the last CSC meeting, you mentioned that the report is still in draft form. Have you made any changes yet?

District Response: It is still a rough draft. At the time of the last CSC meeting we had just completed the initial draft so none of the CSC had seen it. The District has made changes based on feedback received and will continue to make additional edits to the report based on feedback received by Oct. 23 and will allow ample time for the CSC to comment on it.

Comment: I want to clarify that the item we are talking about for CARB's November board meeting is called the "regulation for reporting criteria air pollutants and toxic air contaminants." It is expanding the level of emissions sources that need to report their emissions to the District and then the District reports them to CARB.

Comment from Spanish-speaker: Everything sounds very good and hopefully soon, we will see new changes here in Shafter.

Question: Are the idling signs bilingual?

CARB Response: The ones that are geared toward heavy-duty diesel trucks are only in English; the other signs, which are geared towards passenger vehicles are also currently only in English. We are exploring how best to get signs in Spanish as well.

District Comment: I want to talk briefly about the impacts of the almond harvest on air quality. When the District receives these complaints, we always send staff out to speak with people conducting the harvest and ask them to implement best practice measures to limit and reduce the amount of dust they are generating. The CSC voted to include a measure that provides incentive funding to replace old equipment with low dust harvesting units. District staff have been collecting the names and contact information of the people harvesting the nuts as the Shafter CERP has a measure to replaced old harvesting equipment with low-dust equipment. We have submitted a project plan to CARB in order to fund this project and will be reaching out to the growers in Shafter.

Stipend Update

Erica Manuel, CEO & Executive Director, ILG

Erica updated the CSC on the stipend program. Presentation highlights:

- Thank you to all CSC residents who have signed up for the stipend program
- A few people are close to the \$600 annual tax reporting limit and ILG needs their W-9s to continue issuing checks
- A resident must be present for 75% of the meeting to receive a stipend for each eligible meeting
- Checks go out once a month usually in the 3rd or 4th week
- Please contact ILG or District any time to sign up for the program; signups will be retroactive and include all eligible meetings in 2020

Wrap Up/Next Steps

Hanna Stelmakhovych, Facilitator, ILG

Hanna thanked everyone for attending the meeting and asked Martha for closing remarks. Martha thanked the CSC and looks forward to co-hosting again in the future now that she has experienced it.

Question: How would District like to receive comments on the report?

District Response: District will accept comments in whatever format CSC members want to provide them. Email, verbal, hard copy, etc.

Reminders:

The next CSC meeting is Nov. 9 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*

Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #24

12 de octubre de 2020, 5:00pm-7:00pm

Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter:

- Realizar una lluvia de ideas sobre temas que se podrían hablar en reuniones futuras del Subcomité de Monitoreo del Aire
- Sugerir ubicaciones adicionales para que el Distrito lleve a cabo sus esfuerzos de cumplimiento de restricciones
- Comuníquese con el Distrito para recibir una copia impresa del borrador del Informe Anual
- Proporcionar comentarios sobre el borrador del Informe Anual antes del 23 de octubre
- Comuníquese con el Distrito con sugerencias para adiciones a futuras agendas de reuniones del Comité Directivo
- Dar sugerencias de CARB para la colocación de carteles de "contra dejar el motor encendido"
- Brindar sugerencias a CARB sobre dónde el personal debería buscar camiones diésel de servicio pesado en la comunidad, cuando regresen a Shafter en el cuarto trimestre

Artículos de Acción para el Distrito del Aire del Valle:

- El Distrito proporcionará más detalles sobre los datos de la camioneta de monitoreo del aire en una futura reunión del Comité Directivo

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Martha Murrieta, Coanfitriona Comunitaria, Miembro de la Comunidad de Shafter

Hanna dio la bienvenida a los participantes del Comité Directivo de Shafter y se presentó a sí misma y al equipo de ILG. Ella dio una descripción general de las instrucciones de Zoom y los servicios de traducción al español y luego revisó la agenda. Ryan agradeció a todos por asistir y señaló que el Distrito espera recibir comentarios y discusiones sobre el Informe Anual. La coanfitriona de la comunidad, Martha Murrieta, se presentó y explicó que espera mantener la comunidad limpia y saludable.

Actualizaciones Permanentes: Actualización del Monitoreo del Aire

Chay Thao, Gerente del Programa, Distrito del Aire del Valle

Chay dio una breve actualización sobre el monitoreo del aire de la comunidad. Los puntos más importantes de la presentación incluyeron:

- El Distrito continúa monitoreando en las escuelas primarias Sequoia y Golden Oak
- El Distrito casi ha terminado de revisar el contrato de arrendamiento con el Campo de Trabajo de Shafter
- El personal ha comenzado el monitoreo de tarde y noche en la comunidad con la camioneta para equilibrarlo con el monitoreo de la mañana

- El Distrito usó la camioneta para responder a consultas e inquietudes de la comunidad, incluyendo una dentro del área de cosecha de almendras cerca de la Colonia Mexicana; los datos están en el sitio web
- El Subcomité de Monitoreo del Aire se reunió el 22 de septiembre; el Distrito compiló una lista de preguntas de los miembros del Comité Directivo y reunió información para ayudar a responder preguntas relacionadas con los datos de monitoreo del aire

Pregunta: El monitor de Purple Air en Shafter ha estado apagado durante más de tres semanas. El monitoreo de Purple Air es importante porque se actualiza cada minuto y medio y le brinda el promedio de los últimos diez minutos, lo cual es muy útil para cambios rápidos de humo o polvo. ¿Pueden los datos de PM 10 adaptarse a las actualizaciones por hora?

Respuesta del Distrito: Estamos trabajando para identificar el problema con ese monitor de Purple Air en particular. El personal del Distrito ha ido al sitio y ha realizado algún mantenimiento en el monitor e intentará volver a ponerlo en línea o reemplazarlo. La unidad PM10 está diseñada para cargar automáticamente a la red de CARB, por lo que estamos buscando una manera de que los datos de PM10 se integren con el sistema del Distrito y se carguen automáticamente

Actualizaciones Permanentes: Actualización del Subcomité del Filtración en las Escuelas

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime presentó una actualización sobre el Subcomité de Filtración y Autobuses en las escuelas. Los puntos más importantes de la presentación incluyeron:

- El Distrito ha estado tratando de presentar una solicitud de subvención para seis escuelas públicas en la comunidad de Shafter para la filtración de aire. El personal está recopilando información sobre lo que ya tiene, qué filtros podrían funcionar y dónde podría haber trabajo significativo que deba realizarse en las escuelas
- El personal está tratando de introducir filtros MERV 13 en las escuelas antes de que los niños regresen a la instrucción en persona; el Distrito ha estado hablando con una empresa que ha trabajado en este tipo de programa en otras partes del estado
- El personal espera tener un borrador de la solicitud de subvención para compartir con el Comité Directivo en la próxima reunión
- El Distrito tiene autobuses escolares eléctricos que han sido aprobados y están ingresando al área a través del Distrito Escolar de Richmond

Actualizaciones Permanentes: Actualización del Monitoreo de Pesticidas

Minh Pham, División de Programas de Pesticidas, Departamento de Regulación de Pesticidas (DPR)

Minh Pham, Supervisor del DPR, dio una actualización sobre el monitoreo de pesticidas. Los puntos más importantes de la presentación incluyeron:

- El Subdirector del DPR, Nan Singhasemanon, presentó recientemente en el panel de revisión científica sobre el piloto de mitigación de 1,3-D y los planes para avanzar
- El DPR ha estado trabajando en estrecha colaboración con productores y aplicadores en diferentes regiones para identificar áreas para realizar el programa piloto
- La base de datos de monitoreo del aire de pesticidas se actualizó con los resultados de Shafter a fines de septiembre
- Los datos de monitoreo del aire ambiental están llegando más rápido ahora y se actualizarán a fines de este mes

Pregunta: Hubo lecturas altas para 1,3-D en enero pasado en Shafter. ¿Hay alguna explicación para lo que salió mal?

Respuesta del DPR: Sin embargo, el DPR vio un pico de aplicación más alto de lo normal durante el mes de enero, que estuvo dentro del ámbito de 20 PPB, mientras que el umbral agudo está en 110 PPB, por lo que está muy por debajo del umbral real indicado. DPR todavía lo está investigando porque es un poco más bajo de lo que nos gustaría que fuera. El personal ha examinado muchos informes de uso de PUR y no vimos nada inusual.

Actualizaciones Permanentes: Actualización de CARB

Skott Wall, Oficina de Protección del Aire Comunitario, CARB

Skott proporcionó una actualización de la agencia CARB. Los puntos más importantes de la presentación incluyeron:

- El Plan Marco de Protección del Aire de la Comunidad, el documento de orientación que establece todo lo relacionado con AB 617, está pasando por un largo proceso de revisión para actualizaciones
- Hay un subcomité que hizo una lluvia de ideas sobre temas que deben revisarse para obtener actualizaciones basadas en los aprendizajes del primer año
- El subcomité se reunirá el 15 de octubre a la 1:00pm a través de Zoom para profundizar en las categorías de actualizaciones específicas que deben realizarse en el Plan Marco en el futuro

Actualizaciones Permanentes: Actualización de Cumplimiento

Jason Lawler, Gerente de Cumplimiento de la Calidad del Aire, Distrito del Aire del Valle

Justin Shields, Alcance y Cumplimiento Comunitario, CARB

Jason dio una actualización del cumplimiento del Distrito. Los puntos más importantes de la presentación incluyeron:

- El Distrito es responsable de cinco medidas de cumplimiento en el CERP: reducción de la quema de leña, quema ilegal de desechos residenciales, regulación estatal contra dejar el motor encendido, frecuencia de inspección de fuentes estacionarias y el programa piloto para realizar autoinspecciones en estaciones de gasolina
- Restricción de la quema de leña—esta medida solo ocurre en el invierno, la información proporcionada fue para la temporada de quema de leña del año pasado (la temporada de reducción es del 1 de noviembre hasta finales de febrero) El Distrito se ha comprometido a que cada día que se declare una reducción en el Condado de Kern, haremos cuatro horas de cumplimiento dentro de la comunidad de Shafter y estaba solicitando comentarios adicionales sobre ubicaciones, días y horarios para enfocar el cumplimiento del Comité Directivo
- Reglas de quema ilegal—esta medida limita el potencial de PM 2.5 localizado y desechos residenciales; El Distrito ha completado los esfuerzos de cumplimiento específicos de esta medida para cada uno de los primeros tres trimestres de 2020
- Regulación estatal contra dejar el motor encendido—Distrito trabaja en asociación con CARB para hacer cumplir esto. La medida reduce los impactos localizados de PM 2.5 y la calidad del aire tóxico de los camiones diésel de servicio pesado solicitaba comentarios adicionales sobre ubicaciones, días y horarios para enfocar la aplicación del Comité Directivo
- Fuentes estacionarias—cuando adoptamos el CERP, el Distrito acordó aumentar la frecuencia de las inspecciones en las instalaciones permitidas dentro de la comunidad de

Shafter que han tenido infracciones de emisiones en los últimos 3 años para limitar los impactos tóxicos localizados

- Capacitación piloto para autoinspecciones en estaciones de servicio—actualmente está en espera, pero tiene la intención de brindar capacitación práctica a los operadores de estaciones de servicio para limitar el potencial de impactos en la calidad del aire por defectos de recuperación de vapor en las estaciones de servicio
- En el primer semestre de 2020, hubo 12 denuncias, que resultaron en cinco acciones de cumplimiento

Justin proporcionó una actualización del cumplimiento de CARB. Puntos importantes de la presentación:

- CARB tiene letreros de “contra dejar el motor encendido” disponibles; Fueron diseñados con Caltrans para publicar en vías públicas para disuadir a los camiones de servicio pesado de estar con los motores encendidos mientras estacionados
- A CARB le gustaría saber dónde estos carteles tendrán el mayor impacto y puede proporcionárselos a la comunidad sin cargo
- CARB ha mejorado los barridos en contra dejar el motor encendido para observar también los camiones diésel de servicio pesado para determinar el cumplimiento, no solo con la regulación de contra dejar el motor encendido de CARB, sino también con su regulación de camiones y autobuses y las regulaciones de unidades de refrigeración de transporte
- CARB realiza auditorías de escritorio para ver si las unidades cumplen
- CARB actualizará las estrategias basándose en los comentarios de la comunidad
- CARB volverá a Shafter a finales de año; sugiera dónde el personal debería buscar camiones en la comunidad

Pregunta: ¿Hay señales de prohibición de dejar el motor encendido disponibles para las zonas escolares?

Respuesta: Las señales CARB de contra dejar el motor encendido se pueden colocar en cualquier vía pública. También tenemos letreros de contra dejar el motor encendido específicamente para los sitios escolares. El Distrito también tiene letreros de no dejar el motor encendido que distribuyen a las escuelas.

Discusión del Reporte Anual

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime revisó el último borrador del Informe Anual del Distrito a CARB. Los puntos importantes de la presentación incluyen:

- El Distrito necesita comentarios del Comité Directivo antes del 23 de octubre
- El personal presentará el informe a la Mesa Directiva del Distrito en la reunión de noviembre, luego se enviará a CARB para su reunión de diciembre
- Además del Informe Anual, hay dos anexos adicionales de CARB que se han enviado al Comité Directivo; por favor revise los tres documentos
- El personal recibió una serie de comentarios en la última reunión y ha tomado nota y se incorporarán en el próximo borrador
- La descripción del informe incluye: información de antecedentes AB 617, descripción general de la comunidad de Shafter, límites, participación de la comunidad y la transición a reuniones virtuales

- Los elementos técnicos incluyen: desarrollo de inventario de emisiones de la comunidad, monitoreo del aire de la comunidad, monitores estacionarios y camioneta de monitoreo, monitoreo de pesticidas, actualización de monitoreo semanal, y cumplimiento
- El informe presenta una tabla de medidas de ejecución de CERP y su estado; también enumera estrategias específicas en el CERP

Pregunta: En la última reunión del Comité Directivo, mencionó que el informe todavía está en forma de borrador. ¿Ha realizado cambios todavía?

Respuesta del Distrito: Todavía es un borrador. En el momento de la última reunión del Comité Directivo, acabábamos de completar el borrador inicial, por lo que ninguno de los del Comité Directivo lo había visto. El Distrito ha realizado cambios en base a los comentarios recibidos y continuará haciendo modificaciones adicionales al informe en base a los comentarios recibidos hasta el 23 de octubre y dará tiempo suficiente para que el Comité Directivo comente al respecto.

Comentario: Quiero aclarar que el tema del que estamos hablando para la reunión de la Mesa Directiva de CARB en noviembre se llama "reglamento para reportar contaminantes atmosféricos de criterio y contaminantes atmosféricos tóxicos". Está expandiendo el nivel de fuentes de emisiones que necesitan reportar sus emisiones al Distrito y luego el Distrito las reporta a CARB.

Comentario de un Hispanohablante: Todo suena muy bien y con suerte, pronto veremos nuevos cambios aquí en Shafter.

Pregunta: ¿Son bilingües los letreros contra dejar el motor encendido?

Respuesta de CARB: Los que están orientados a camiones diésel de servicio pesado están solo en inglés; los otros letreros, que están dirigidos a vehículos de pasajeros, también están actualmente solo en inglés. También estamos explorando la mejor forma de obtener carteles en español.

Comentario del Distrito: Quiero hablar brevemente sobre los impactos de la cosecha de almendras en la calidad del aire. Cuando el Distrito recibe estas quejas, siempre enviamos personal para que hable con las personas que realizan la cosecha y les pedimos que implementen medidas de mejores prácticas para limitar y reducir la cantidad de polvo que están generando. El Comité Directivo votó a favor de incluir una medida que proporcione fondos de incentivo para reemplazar equipos viejos con unidades de recolección de polvo bajo. El personal del Distrito ha estado recopilando los nombres y la información de contacto de las personas que cosechan las nueces, ya que en el CERP de Shafter tiene una medida para reemplazar el equipo de cosecha viejo con equipo de bajo polvo. Hemos presentado un plan de proyecto a CARB para financiar este proyecto y nos comunicaremos con los productores de Shafter.

Actualización del Estipendio

Erica Manuel, CEO & Directora Ejecutiva, ILG

Erica actualizó al Comité Directivo sobre el programa de estipendios. Puntos importantes de la presentación:

- Gracias a todos los residentes del Comité Directivo que se han inscrito en el programa de estipendios
- Algunas personas están cerca del límite anual de declaración de impuestos de \$600 e ILG necesita sus W-9 para seguir emitiendo cheques
- Un residente debe estar presente durante el 75% de la reunión para recibir un estipendio por cada reunión elegible
- Los cheques salen una vez al mes, generalmente en la tercera o cuarta semana

- Comuníquese con ILG o el Distrito en cualquier momento para inscribirse en el programa; las inscripciones serán retroactivas e incluirán todas las reuniones elegibles en 2020

Concluir/Próximos Pasos

Hanna Stelmakhovych, Facilitadora, ILG

Hanna agradeció a todos por asistir a la reunión y le pidió a Martha por los comentarios finales. Martha agradeció al Comité Directivo y espera ser coanfitriona nuevamente en el futuro ahora que lo ha experimentado.

Pregunta: ¿Cómo le gustaría al Distrito recibir comentarios sobre el informe?

Respuesta del Distrito: El Distrito aceptará comentarios en cualquier formato que los miembros del Comité Directivo quieran proporcionarlo, correo electrónico, verbal, en papel, etc.

Recordatorios:

La próxima reunión del Comité Directivo es el 9 de noviembre a través de Zoom, Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Agenda for Shafter Community Steering Committee Meeting #24

Monday, October 12, 2020 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/93242934733>

Meeting ID: 932 4293 4733

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
Martha Murrieta, Community Co-host
- 5:15 p.m. Standing Updates**
Monitoring Plan Update — Mobile van activities, upcoming subcommittee meeting
Valley Air District Staff
School Filtration Subcommittee Update
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation (DPR), CARB
- 5:45 p.m. Enforcement Update**
Discussion of CARB and District enforcement
Jacob Whitson, Director of Compliance, Valley Air District
Justin Shields, California Air Resources Board (CARB)
- 6:15 p.m. Discussion of Annual Report feedback**
Review questions and comments from CSC regarding draft annual report to the community distributed last meeting.
Valley Air District Staff
- 6:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, November 9, Zoom Call

Learn more: community.valleyair.org

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #24

Lunes, 12 de octubre de 2020 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/93242934733>

Meeting ID: 932 4293 4733

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-240-3210

Código de acceso: 6559628#

- 5:00 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
Martha Murrieta, Co-anfitriona de la Comunidad
- 5:15 p.m. Actualizaciones Permanentes**
Actualización del Plan de Monitoreo — Actividades de la camioneta móvil, y próxima reunión del subcomité
Personal del Distrito del Aire del Valle
Actualización del Subcomité de Filtración Escolar
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias — Departamento de Regulación de Pesticidas (DPR), CARB
- 5:45 p.m. Actualización de Cumplimiento**
Discusión de Cumplimiento de CARB y el Distrito
Jacob Whitson, Director de Cumplimiento, Distrito del Aire del Valle
Justin Shields, Junta de Recursos del Aire de California (CARB)
- 6:00 p.m. Discusión del Reporte Anual**
Repasar preguntas y comentarios del Comité Directivo con respecto al borrador del reporte anual para la comunidad distribuido en la última reunión.
Personal del Distrito del Aire del Valle
- 6:45 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes 9 de noviembre por Zoom

Implementation of CERP Enforcement Measures in Shafter Community

AB 617 Community Steering Committee Meeting
October 12, 2020

CERP Enforcement Measures in Shafter Community

- RB.3 Enhanced Enforcement of Wood Burning Curtailments
- RB.5 Enhanced Enforcement to Reduce Illegal Burning of Residential Waste
- HD.3 Enhanced Enforcement of Statewide Anti-Idling Regulation
- IS.3 Enhanced Inspection Frequency of Stationary Sources
- IS.4 Pilot Training Program for Conducting Self-Inspections at Gas Stations

Enhanced Enforcement of Wood Burning Curtailments

- Enforcement of residential wood burning curtailments in District Rule 4901 to limit localized PM 2.5 impacts
- Effective each year from November 1 – February 28/29
- Dedicated 4 hours of enforcement in the Shafter Community on each declared curtailment day
- During 2019/2020 season
 - 1 public complaint responded to
 - 23 violations found
- CSC Feedback
 - Where and when should the District focus future enforcement?

2019/20 Residential Wood Burning Violations

Enhanced Enforcement to Reduce Illegal Burning of Residential Waste

- Enforcement of District Rule 4103 and CCR 93113 requirements to limit the potential for localized PM 2.5 and toxic impacts from illegal open burning of residential waste
- District inspectors conducted targeted enforcement efforts during each of the first three quarters of 2020
- During first half of 2020
 - 7 public complaints of open burning responded to
 - 12 open burning violations found
- CSC Feedback
 - Where and when should the District focus future enforcement?

Open Burning Violations (1st & 2nd Quarter 2020)

Enhanced Enforcement of Statewide Anti-Idling Regulation

- District enforcement, in partnership with CARB, of the State anti-idling regulation for heavy-duty diesel trucks and busses to reduce localized PM 2.5 and toxic air quality impacts
- District inspectors have conducted targeted enforcement efforts during each of the first three quarters of 2020
- Primarily focused around industry with frequent truck traffic
- CSC Feedback
 - What are some idling “hot spots” where the District can focus future enforcement efforts?
 - Are there certain times of day when idling tends to occur?

Enhanced Inspection Frequency of Permitted Stationary Sources

- To limit the potential for localized air quality impacts due to a failure to comply with emission standards established by District permits, rules, or regulations
- Increased frequency of inspections at each permitted facility within the Shafter community that has had an emissions violation in the past three (3) years
- Those facilities will be inspected at least twice per year until four (4) consecutive inspections without an emission violation
- During the first half of 2020 (Jan – Jun)
 - 19 Enforcement actions taken

Pilot Training Program for Conducting Self-Inspections at Gas Stations

- Providing hands-on training to gas station operators in the community to limit the potential for air quality impacts from vapor recovery defects at gasoline dispensing stations
- The District has developed a training outline for instructing gas station operators on conducting thorough self-inspections of the vapor recovery systems at their stations to aid in the identification and timely repair of vapor recovery system defects
- Hands-on training is currently on hold due to COVID-19 social distancing requirements

Response to Public Complaints in Shafter Community

- Complaints can be reported to the District by:
 - Telephone: (800) 926-5550
 - The District website: www.valleyair.org
 - Through the District mobile app
- During the first half of 2020, the District responded to 12 public complaints in the Shafter Community for residential open burning, fugitive dust, odors, and unpermitted equipment
- Five of those complaints resulted in enforcement action being taken

Implementación de Medidas de Cumplimiento del CERP en la Comunidad de Shafter

Reunión del Comité Directivo de la Comunidad AB 617
12 de octubre de 2020

Medidas de Cumplimiento del CERP en la Comunidad de Shafter

- RB.3 Cumplimiento Mejorado para las Reducciones de Quema de Leña
- RB.5 Cumplimiento Mejorado para Reducir la Quema Ilegal de Desechos Residenciales
- HD.3 Cumplimiento Mejorado para la Regulación Estatal Contra Motores Encendidos Mientras Estacionados
- IS.3 Frecuencia de Inspección Mejorada de Fuentes Estacionarias
- IS.4 Programa de Entrenamiento Piloto para la Realización de Autoinspecciones en Gasolineras

Cumplimiento Mejorado para las Reducciones de Quema de Leña

- Cumplimiento de restricciones de la quema de leña residencial en la Regla 4901 del Distrito para limitar los impactos localizados de PM 2.5
- Efectivo cada año del 1 de noviembre al 28/29 de febrero
- Se dedicaron 4 horas de cumplimiento en la comunidad de Shafter en cada día de reducción declarado
- Durante la temporada 2019/2020
 - 1 queja pública respondida
 - 23 infracciones encontradas
- Comentarios de Comité Directivo
 - ¿Dónde y cuándo debería el Distrito enfocar el cumplimiento en el futuro?

Infracciones de Quema de Leña Residencial 2019/20

Cumplimiento Mejorado para Reducir la Quema Ilegal de Desechos Residenciales

- Cumplimiento de los requisitos de la Regla 4103 del Distrito y CCR 93113 para limitar el potencial de PM 2.5 localizado e impactos tóxicos de la quema ilegal al aire libre de desechos residenciales
- Los inspectores de Distrito llevaron a cabo esfuerzos de cumplimiento específicos durante cada uno de los primeros tres trimestres de 2020
- Durante la primer mitad de 2020
 - 7 quejas públicas de quema al aire libre respondidas
 - 12 infracciones de quema al aire libre encontradas
- Comentarios de Comité Directivo
 - ¿Dónde y cuándo debería el Distrito enfocar el cumplimiento en el futuro?

Infracciones de Quema al Aire Libre (Primer y Segundo Trimestre de 2020)

Cumplimiento Mejorado para la Regulación Estatal Contra Motores Encendidos Mientras Estacionados

- Cumplimiento del Distrito, en asociación con CARB, de la regulación estatal contra motores encendidos mientras estacionados para camiones y autobuses diésel de servicio pesado para reducir el PM 2.5 localizado y los impactos tóxicos en la calidad del aire
- Los inspectores de Distrito han realizado esfuerzos de cumplimiento específicos durante cada uno de los primeros tres trimestres de 2020
- Centrado principalmente en la industria con tráfico frecuente de camiones
- Comentarios de Comité Directivo
 - ¿Cuáles son algunos de las “zonas conflictivas” de motores encendidos mientras estacionados donde el Distrito puede enfocar los esfuerzos futuros de cumplimiento?
 - ¿Hay ciertos momentos del día en los que tiende a ocurrir los motores encendidos mientras estacionados?

Frecuencia de Inspección Mejorada de Fuentes Estacionarias

- Limitar el potencial de impactos localizados en la calidad del aire debido al incumplimiento de los estándares de emisión establecidos por los permisos, reglas o regulaciones del Distrito
- Aumentar la frecuencia de inspecciones en cada instalación permitida dentro de la comunidad de Shafter que ha tenido una infracción de emisiones en los últimos tres (3) años
- Esas instalaciones serán inspeccionadas al menos dos veces al año hasta que cuatro (4) inspecciones consecutivas no tengan ninguna infracción de emisiones
- Durante el primer semestre de 2020 (Enero – Junio)
 - 19 Acciones de Cumplimiento fueron tomadas

Programa de Entrenamiento Piloto para la Realización de Autoinspecciones en Gasolineras

- Brindar entrenamiento activo a los operadores de estaciones de servicio en la comunidad para limitar el potencial de impactos en la calidad del aire por defectos de recuperación de vapor en las estaciones de dispensación de gasolina
- El Distrito ha desarrollado un esquema de entrenamiento para instruir a los operadores de estaciones de servicio en la realización de autoinspecciones exhaustivas de los sistemas de recuperación de vapor en sus estaciones para ayudar en la identificación y reparación oportuna de los defectos del sistema de recuperación de vapor
- El entrenamiento activo está actualmente en espera debido a los requisitos de distanciamiento social de COVID-19

Respuesta a las Quejas Públicas en la Comunidad de Shafter

- Las quejas se pueden reportar al Distrito por:
 - Teléfono: (800) 926-5550
 - El sitio web del Distrito: www.valleyair.org
 - A través de la aplicación móvil del Distrito
- Durante la primera mitad de 2020, el Distrito respondió a 12 quejas públicas en la Comunidad de Shafter por quema al aire libre residencial, polvo fugitivo, olores y equipo no permitido
- Cinco de esas quejas resultaron en la acción de cumplimiento

Meeting Highlights*
AB 617 Shafter Community Steering Committee Meeting #23
September 14, 2020, 5:00pm-7:00pm
Virtual Zoom Meeting

Action items for the Shafter Community Steering Committee (CSC):

- Contact SJVAPCD to request specific agenda items for future meetings
- Email SJVAPCD if you want a printed copy of the draft Annual Report that will go to CARB later this year

Action items for San Joaquin Valley Air Pollution Control District (SJVAPCD):

- Send solar outreach materials via email or mail if requested

Welcome and Introductions

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Hanna welcomed the Shafter CSC participants and introduced herself and the ILG team. She gave an overview of Zoom instructions and Spanish translation services then reviewed the agenda, presentations, and timeline of the meeting. Hanna outlined Zoom controls and chat box etiquette. She also reminded CSC members about the attendance requirements to qualify for a stipend for the meeting. Ryan thanked everybody for attending and for their continued support of programs like AB 617 to improve air quality.

Monitoring Plan Update

Jaime Holt, Chief Communications Officer, Valley Air District
Jon Klassen, Director of Strategy & Incentives, Valley Air District

Jaime and Jon presented an update on current air quality, the monitoring plan, and the school filtration and bus subcommittee. Presentation highlights include:

- Wildfire smoke is having significant air quality impacts across the Valley, while still significant, the impacts in Kern County have been slightly less than other parts of the Valley
- To date, 3.2 million acres have burned across the state, which is a new record
- The District advises the public to limit outdoor activity, stay inside as much as possible, and change HVAC filters as often as possible
- For homes without HVAC systems, the District has shared how to make a DIY air filter using an air filter and box fan
- N95 masks are the best masks to protect against smoke and air pollution
- Many serious diseases are linked to this bad air quality
- The CSC requested an air monitoring subcommittee meeting, which is scheduled for Sep. 22 at 4:00pm
- The District has been working with the Richland School District to install air monitoring equipment at the Sequoia Elementary School and Golden Oak Elementary School and hopes to have it up and running soon
- In response to CSC feedback, the District has modified the use of the air monitoring van to ensure that air quality data is collected across all time periods with the highest expected readings

- The District took measurements of the almond harvest in Mexican Colony area and presented this information in the weekly air monitoring updates posted to the website
- The District has contacted all the schools in the Shafter AB 617 community about their interest in air filtration at the schools, and all are very receptive to additional air filtration at the schools
- The District has three electric school buses in the Shafter area approved for funding

Question: Where on the Valley Air webpage are the directions for building your own air filter? When did the Air District start promoting that? I think it is important to promote the better air filters; the \$20 filter is the best you can get.

District Response: We just started promoting it and we put the link in the chat. Good point, thank you.

Question from Spanish-speaker: Can you provide an air quality report, especially since the almond harvest is underway and kids are returning to school?

District Response: The air pollution levels of PM10 and PM2.5 is elevated, primarily due to the wildfires. To respond to the concerns about dust from the almond harvest, the District has moved the air monitoring van to the harvest area to take measurements near the almond orchards.

Pesticide Regulation Update

Nan Singhasemanon, Assistant Director, Department of Pesticide Regulation (DPR)

Nan gave an update on various DPR efforts and pesticide monitoring. Presentation highlights:

- Last week the CSC had a kickoff of the pesticide subcommittee meeting, which went well.
- DPR was able to provide participants with a list of pesticide monitoring data specific to Shafter and answer technical questions and this data (the data was added to the community air monitoring page)
- DPR is presenting about the 1, 3-D mitigation pilot to a scientific review panel on Oct. 9. This topic will be related to AB 617 areas, specifically Shafter
- DPR is working more directly with 1, 3-D applicators and growers to identify the fields where it can conduct field monitoring
- DPR does not have an update yet on the statewide notification but is trying to determine if it will be legislative or rulemaking

Comment: The tactic by the local Ag. Commissioner seems to be stall and delay for the notification. I think CARB and DPR need to jointly stand up to the Commissioner so we can get going. What happened around January of 2020 to give that high reading of 1, 3-D? It is unfortunate that the CSC had to discover the data ourselves.

District Response: The District is always looking to make information easier for the CSC to find. On the air monitoring page of the Shafter CSC page, we included all of the pesticide information.

DPR Response: It is important to evaluate anomalous readings like mentioned. DPR tries to look at the wind speed, direction and environmental factors. We put together a summary and I can see us sharing that in the future when we finish.

CARB Update

Skott Wall, Office of Community Air Protection, CARB

Skott presented about the September CARB Board Meeting. Presentation highlights:

- CARB Board meeting is on Thursday, Sep. 24

- The CSC may want to tune in for an informational update that CARB staff will be providing to the Board on the status of AB 617 implementation in all Year One communities that have had their CERPs approved, including Shafter.
- There are other items on the agenda starting at noon, such as a presentation on the California Air Toxics Program and ongoing efforts to reduce community exposure to toxic air contaminants.
- The meeting will be on Zoom and webinar and the AB 617 agenda item will begin at 4pm.

Comment: If CARB is looking for people to provide a community perspective of the 6-month update or what the CSC has accomplished so far, I am happy to help.

CARB Response: Thank you.

Question from Spanish-speaker: How often do you read the monitors in Shafter?

District Response: The District is continuously evaluating the monitors in Shafter. We visit our sites at least once a week performing maintenance, filter exchanges, and making sure all the instruments are calibrated to ensure that accurate data is being collected and shared with the community.

Question: Why weren't we notified at the beginning of the year?

District Response: The District has been doing updates to this CSC for a while and that is how we have made adjustments based on suggestions. The information is also on the website. The District measures certain things through the air monitoring equipment and DPR measures other things through their equipment.

DPR Response: DPR measures mainly pesticides. COVID obstructed our lab capacity, staff travel and safety and we have made adjustments for the last few months. The frequency of sampling is weekly.

Outreach Strategy for Solar Measures

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime gave an update on the previous solar measures presented to the CSC. Presentation highlights:

- CSC submitted great ideas for how the District can promote solar programs within the Shafter community
- The District put a communications and outreach plan together to accomplish those goals
- The plan targets homeowners who live within a one-mile radius of Shafter
- The District pulled mailing lists of almost 2,000 homes in Shafter
- Based on feedback from the CSC, the District will be developing and sharing a draft postcard that will be used to inform residents about solar programs and how they can call to get more information; the postcard will be in both English and Spanish
- The postcard will cost about \$1,500; this money comes out of District's outreach funds
- The District will also buy social media ads targeted at all Shafter residents, which is about \$800 to reach roughly 17,000 users in the community
- The District will also advertise in the Shafter Press newspaper, which will cost a little more than \$1,000

Comment: The Shafter Press is a great way to get it out to the community. Because of COVID, they have combined Shafter and Wasco.

District Response: The good thing is, even though we are focused on Shafter residents taking advantage of this program, it is also open to Wasco residents.

Question: When the solar information comes out, will you send the information to the CSC or do we have to look for it on the social media platforms?

District Response: It was emailed and/or hard mailed out before the last meeting, but SJVAPCD is more than happy to send it out again.

Annual Report Review and Discussion

Jessica Olsen, Program Manager, Valley Air District

Jessica provided a thorough overview of the draft Annual Progress Report that is required by CARB. Presentation highlights include:

- Printed copies of a Spanish version of the draft report were mailed to the Spanish speakers and should have arrived before the CSC meeting
- Other CSC members should have received an electronic version of the draft report via email
- The Annual Progress Report is a culmination of all the effort and work from the CSC and other community members; it is required but not due for a few weeks
- It has been 7 months since CARB approved the Shafter CERP and the CSC has accomplished a lot in this time frame
- The draft Annual Progress Report is posted on the Shafter community webpage
- The report includes a table of measures along with a status update
- The CARB Enforcement Report for 2019 and Statewide Measures is also posted on the CSC webpage
- CSC members have plenty of time to review the report and provide feedback to the District

Comment: The seven mile radius is stated as not official in this report, but I thought we settled a year ago that the seven mile radius is indeed in the Shafter boundary. The report mentions PM 10 monitoring is temporary, but it was never intended to be temporary. The appendices aren't included yet and I would like to see what is included in them. Last, since this report is concentrating on the last 6 months, the District should have a clear response to the CARB resolution, which did make some changes.

District Response: Thank you for your comments, we will look to make these changes to the report.

Comment from Spanish-speaker: I got my hard copy on Saturday. Is it expected that I should have read it and be ready by this meeting?

District Response: The District does not expect anyone to have read any or all of this by today's meeting. We just wanted to get it in your hands so we could discuss it together. We will be discussing this at the next CSC meeting in October and for however much longer the CSC wants to give feedback.

Question: Is the District looking for the CSC to give verbal feedback on the report or written comments; what are the expectations? If the CSC finds an error in the report, are you open to changing it?

District Response: We will accept whatever kind of feedback and in any type of format you prefer. We are looking to see if the way we put this report together conveys the work that has been done on each of these measures and all of the meetings and efforts that you as a CSC have put forth. Yes, this report is in draft form.

Question: Why is it that you are mentioning the report to be done by next month if the District is going to report back on the 24th?

Answer: The meeting on September 24th is a CARB update to their own CARB Board; it is not related to this annual progress report.

Wrap Up/Next Steps

Hanna Stelmakhovych, Facilitator, ILG

Hanna reiterated the opportunities for engagement for the CSC. Erica Manuel, CEO of ILG, reminded CSC members about the stipend program and encouraged residents to contact ILG with any questions. Sign-ups are still being accepted.

Hanna notified the CSC that this would be Jessica Olsen's last meeting for a few months since she plans to depart for maternity leave in late September.

Reminders:

The Shafter Air Monitoring subcommittee meeting is September 22 at 4:00pm. CARB's Board Meeting is September 24 at 4:00pm. The next CSC meeting is October 12 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*
Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #23
14 de septiembre de 2020, 5:00pm-7:00pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter:

- Comuníquese con el Distrito del Aire para solicitar/sugerir puntos de la agenda para reuniones futuras
- Envíe un correo electrónico al Distrito del Aire si desea una copia impresa del borrador del Informe Anual que se enviará a CARB más adelante este año

Artículos de Acción para el Distrito del Aire del Valle:

- Enviar materiales de alcance sobre solar por correo electrónico o correo postal si se solicita

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Hanna dio la bienvenida a los participantes del Comité Directivo de Shafter y se presentó a sí misma y al equipo de ILG. Dio una descripción general de las instrucciones de Zoom y los servicios de traducción al español y luego revisó la agenda, las presentaciones y el cronograma de la reunión. Hanna describió los controles de Zoom y la etiqueta de la caja de chat. También recordó a los miembros del Comité Directivo sobre los requisitos de asistencia para calificar para un estipendio para la reunión. Ryan agradeció a todos por asistir y por su continuo apoyo a programas como AB 617 para mejorar la calidad del aire.

Actualización del Plan de Monitoreo

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jon Klassen, Director de Estrategias e Incentivos, Distrito del Aire del Valle

Jaime y Jon presentaron una actualización sobre la calidad actual del aire, el plan de monitoreo y el subcomité de filtración y autobuses escolares. Los puntos más importantes de la presentación incluyen:

- El humo de los incendios forestales está teniendo un impacto significativo en la calidad del aire en todo el Valle, aunque sigue siendo significativo, los impactos en el condado de Kern han sido un poco menores que en otras partes del Valle
- Hasta la fecha, 3.2 millones de acres se han quemado en todo el estado, lo cual es un nuevo récord.
- El Distrito aconseja al público que limite la actividad al aire libre, permanezca adentro tanto como sea posible y cambie los filtros de HVAC con la mayor frecuencia posible
- Para hogares sin sistemas de HVAC, el Distrito ha compartido cómo hacer un filtro de aire hecho en casa usando un filtro de aire y un ventilador de caja
- Las máscaras N95 son las mejores máscaras para proteger contra el humo y la contaminación del aire
- Muchas enfermedades graves están relacionadas con esta mala calidad del aire
- El Comité Directivo solicitó una reunión del subcomité de monitoreo del aire, que está programada para el 22 de septiembre a las 4:00pm

- El Distrito ha estado trabajando con el Distrito Escolar de Richland para instalar equipo de monitoreo de aire en la escuela primaria Sequoia y la escuela primaria Golden Oak y espera tenerlo en funcionamiento pronto
- En respuesta a los comentarios del Comité Directivo, el Distrito ha modificado el uso de la camioneta de monitoreo del aire para asegurar que los datos de la calidad del aire se recopilen en todos los períodos de tiempo con las lecturas más altas esperadas
- El Distrito tomó medidas de la cosecha de almendras en el área de la Colonia Mexicana y presentó esta información en las actualizaciones semanales de monitoreo del aire publicadas en el sitio web
- El Distrito se ha puesto en contacto con todas las escuelas de la comunidad de Shafter bajo AB 617 sobre su interés en la filtración de aire en las escuelas, y todas son muy receptivas a la filtración de aire adicional en las escuelas
- El Distrito tiene tres autobuses escolares eléctricos en el área de Shafter aprobados para financiamiento

Pregunta: ¿En qué lugar de la página web del Distrito del Aire del Valle se encuentran las instrucciones para construir su propio filtro de aire? ¿Cuándo empezó el Distrito del Aire a promover eso? Creo que es importante promover mejores filtros de aire; el filtro de \$20 es lo mejor que puede obtener.

Respuesta del Distrito: Acabamos de empezar a promoverlo y pusimos el enlace en el chat. Buen punto, gracias.

Pregunta de un Hispanohablante: ¿Puede proporcionar un informe de la calidad del aire, especialmente porque la cosecha de almendras está en marcha y los niños están regresando a la escuela?

Respuesta del Distrito: Los niveles de contaminación del aire de PM10 y PM2.5 son elevados, principalmente debido a los incendios forestales. Para responder a las preocupaciones sobre el polvo de la cosecha de almendras, el Distrito ha trasladado la camioneta de monitoreo de aire al área de cosecha para tomar medidas cerca de los huertos de almendros.

Actualización de la Regulación de Pesticidas

Nan Singhasemanon, Subdirector, Departamento de Regulación de Pesticidas (DPR)

Nan dio una actualización sobre varios esfuerzos del DPR y monitoreo de pesticidas. Puntos importantes de la presentación:

- La semana pasada, el Comité Directivo dio inicio a la reunión del subcomité de pesticidas, que fue bien.
- El DPR pudo proporcionar a los participantes una lista de datos de monitoreo de pesticidas específicos de Shafter y responder preguntas técnicas y estos datos (los datos se agregaron a la página de monitoreo del aire de la comunidad)
- El DPR presentará sobre el piloto de mitigación de 1, 3-D a un panel de revisión científica el 9 de octubre. Este tema estará relacionado con las áreas AB 617, específicamente Shafter
- El DPR está trabajando más directamente con los aplicadores y productores de 1, 3-D para identificar los campos donde puede realizar el monitoreo de campo
- El DPR aún no tiene una actualización sobre la notificación a nivel estatal, pero está tratando de determinar si será legislativa o normativa

Comentario: La táctica del Comisionado Agrícola local parece estar retrasado para la notificación. Creo que CARB y DPR deben enfrentarse conjuntamente al Comisionado para que podamos

ponernos en marcha. ¿Qué sucedió alrededor de enero de 2020 para dar esa lectura alta de 1, 3-D? Es lamentable que el Comité Directivo haya tenido que descubrir los datos nosotros mismos.

Respuesta del Distrito: El Distrito siempre busca facilitar la búsqueda de información para el Comité Directivo. En la página de monitoreo del aire de la página del Comité Directivo de Shafter, incluimos toda la información sobre pesticidas.

Respuesta del DPR: Es importante evaluar lecturas anómalas como las mencionadas. DPR intenta observar la velocidad del viento, la dirección y los factores ambientales. Hicimos un resumen y puedo ver que compartiremos eso en el futuro cuando terminemos.

Actualización de CARB

Skott Wall, Oficina de Protección del Aire Comunitario, CARB

Skott presentó sobre la reunión de la Mesa Directiva de CARB de septiembre. Puntos importantes de la presentación:

- La reunión de la Mesa Directiva de CARB es el jueves 24 de septiembre
- Es posible que el Comité Directivo desee sintonizarse para recibir una actualización informativa que el personal de CARB proporcionará a la Mesa sobre el estado de la implementación de AB 617 en todas las comunidades del Año Uno que han aprobado sus CERP, incluyendo Shafter.
- Hay otros puntos en la agenda a partir del mediodía, como una presentación sobre el Programa de Tóxicos del Aire de California y los esfuerzos continuos para reducir la exposición de la comunidad a los contaminantes tóxicos del aire.
- La reunión será a través de Zoom y webinar y el tema de la agenda AB 617 comenzará a las 4pm.

Comentario: Si CARB está buscando personas que brinden una perspectiva comunitaria de la actualización de 6 meses o lo que el Comité Directivo ha logrado hasta ahora, me complace ayudar.

Respuesta de CARB: Gracias.

Pregunta de un Hispanohablante: ¿Con qué frecuencia lee los monitores en Shafter?

Respuesta del Distrito: El Distrito está evaluando continuamente a los monitores en Shafter. Visitamos nuestros sitios al menos una vez a la semana realizando mantenimiento, intercambios de filtros y asegurándonos de que todos los instrumentos estén calibrados para garantizar que se recopilen y compartan datos precisos con la comunidad.

Pregunta: ¿Por qué no nos notificaron a principios de año?

Respuesta del Distrito: El Distrito ha estado actualizando este Comité Directivo por un tiempo y así es como hemos hecho ajustes basados en sugerencias. La información también está en el sitio web. El Distrito mide ciertas cosas a través del equipo de monitoreo del aire y el DPR mide otras cosas a través de su equipo.

Respuesta del DPR: El DPR mide principalmente pesticidas. COVID obstruyó la capacidad de nuestro laboratorio, los viajes del personal y la seguridad, y hemos realizado ajustes durante los últimos meses. La frecuencia de muestreo es semanal.

Estrategia de Alcance para Medidas Solares

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime dio una actualización sobre las medidas solares anteriores presentadas al Comité Directivo. Puntos importantes de la presentación:

- El Comité Directivo presentó grandes ideas sobre cómo el Distrito puede promover programas solares dentro de la comunidad de Shafter
- El Distrito elaboró un plan de comunicación y alcance para lograr esas metas
- El plan se dirige a los propietarios de viviendas que viven en un radio de una milla de Shafter
- El Distrito sacó listas de correo de casi 2,000 hogares en Shafter
- Basado en los comentarios del Comité Directivo, el Distrito desarrollará y compartirá un borrador de postal que se usará para informar a los residentes sobre los programas solares y cómo pueden llamar para obtener más información; la postal estará en inglés y español
- La postal costará alrededor de \$1,500; este dinero proviene de los fondos de alcance del Distrito
- El Distrito también comprará anuncios en las redes sociales dirigidos a todos los residentes de Shafter, que son aproximadamente \$800 para llegar a aproximadamente 17,000 usuarios en la comunidad
- El Distrito también hará publicidad en el periódico Shafter Press, que costará un poco más de \$1,000

Comentario: Shafter Press es una excelente manera de difundirlo entre la comunidad. Debido a COVID, han combinado Shafter y Wasco.

Respuesta del Distrito: Lo bueno es que, aunque estamos enfocados en que los residentes de Shafter aprovechen este programa, también está abierto a los residentes de Wasco.

Pregunta: Cuando salga la información solar, ¿enviará la información al Comité Directivo o tenemos que buscarla en las plataformas de redes sociales?

Respuesta del Distrito: Fue enviado por correo electrónico y/o por correo postal antes de la última reunión, pero el Distrito está más que feliz de enviarlo nuevamente.

Revisión y Discusión del Informe Anual

Jessica Olsen, Gerente de Programas, Distrito del Aire del Valle

Jessica brindó una descripción general completa del borrador del Informe de Progreso Anual requerido por CARB. Los puntos más importantes de la presentación incluyen:

- Se enviaron por correo copias impresas de una versión en español del borrador del informe a los hispanohablantes y deberían haber llegado antes de la reunión del Comité Directivo
- Otros miembros del Comité Directivo deberían haber recibido una versión electrónica del borrador del informe por correo electrónico
- El Informe de Progreso Anual es la culminación de todo el esfuerzo y trabajo del Comité Directivo y otros miembros de la comunidad; es obligatorio, pero no se debe entregar hasta dentro de algunas semanas
- Han pasado 7 meses desde que CARB aprobó el CERP de Shafter y el Comité Directivo ha logrado mucho en este período de tiempo
- El borrador del Informe de Progreso Anual se publica en la página web de la comunidad de Shafter
- El informe incluye una tabla de medidas junto con una actualización de estado
- El Informe de Cumplimiento de CARB para 2019 y las medidas estatales también se publica en la página web del Comité Directivo
- Los miembros del Comité Directivo tienen mucho tiempo para revisar el informe y proporcionar comentarios al Distrito

Comentario: El radio de siete millas se indica como no oficial en este informe, pero pensé que habíamos establecido hace un año que el radio de siete millas se encuentra en el límite de Shafter. El informe menciona que el monitoreo de PM 10 es temporal, pero nunca se pretendió que fuera temporal. Los apéndices aún no están incluidos y me gustaría ver qué se incluye en ellos. Por último, dado que este informe se concentra en los últimos 6 meses, el Distrito debería tener una respuesta clara a la resolución de CARB, que hizo algunos cambios.

Respuesta del Distrito: Gracias por sus comentarios, buscaremos hacer estos cambios en el informe.

Comentario de un Hispanohablante: Recibí mi copia impresa el sábado. ¿Se espera que lo haya leído y esté listo para esta reunión?

Respuesta del Distrito: El Distrito no espera que nadie haya leído nada o todo esto para la reunión de hoy. Solo queríamos tenerlo en sus manos para poder discutirlo juntos. Discutiremos esto en la próxima reunión del Comité Directivo en octubre y durante mucho más tiempo el Comité Directivo quiera dar su opinión.

Pregunta: ¿El Distrito está buscando al Comité Directivo para dar comentarios verbales sobre el informe o comentarios escritos? ¿cuáles son las expectativas? Si el Comité Directivo encuentra un error en el informe, ¿está dispuesto a cambiarlo?

Respuesta del Distrito: Aceptaremos cualquier tipo de comentarios y en el formato que prefiera. Queremos ver si la forma en que elaboramos este informe transmite el trabajo que se ha realizado en cada una de estas medidas y todas las reuniones y esfuerzos que ustedes como el Comité Directivo han presentado. Sí, este informe está en forma de borrador.

Pregunta: ¿Por qué está mencionando el informe que se realizará el próximo mes si el Distrito va a informar el 24?

Respuesta: La reunión del 24 de septiembre es una actualización de CARB para su propia Mesa Directiva de CARB; no está relacionado con este informe de progreso anual.

Concluir/Próximos Pasos

Hanna Stelmakhovych, Facilitadora, ILG

Hanna reiteró las oportunidades de participación para el Comité Directivo. Erica Manuel, Directora Ejecutiva de ILG, recordó a los miembros del Comité Directivo sobre el programa de estipendios y alentó a los residentes a comunicarse con ILG si tienen alguna pregunta. Aún se están aceptando las solicitudes.

Hanna notificó al Comité Directivo que esta sería la última reunión de Jessica Olsen durante unos meses, ya que planea estar fuera unos meses debido a licencia por maternidad a fines de septiembre.

Recordatorios:

La reunión del Subcomité de Monitoreo del Aire de Shafter es el 22 de septiembre a las 4:00pm. La reunión de la Mesa Directiva de CARB es el 24 de septiembre a las 4:00pm. La próxima reunión del Comité Directivo es el 12 de octubre a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Agenda for Shafter Community Steering Committee Meeting #23

Monday, September 14, 2020 – 5:00 pm – 7:00 pm

Zoom Meeting: <https://zoom.us/j/92164695325>
Meeting ID: 921 6469 5325

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 5:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
- 5:20 p.m. Standing Updates**
Monitoring Plan Update — Mobile van activities, upcoming subcommittee meeting
Valley Air District Staff
Subcommittee Update — School filtration and school bus measure updates
Valley Air District Staff
Other Agency Updates — Department of Pesticide Regulation (DPR), CARB
- 5:45 p.m. Outreach Strategy for Solar Measures**
Solicit feedback from CSC on how to best provide information about GRID Alternatives solar programs for Shafter residents
Valley Air District Staff
- 6:00 p.m. Review and Discuss Annual Report**
Discussion with CSC, District, and CARB about the draft annual report to the community. Soliciting feedback on report and how to best communicate progress moving forward.
Valley Air District Staff
- 6:45 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, October 12, Zoom Call

Learn more: community.valleyair.org

Agenda para el Comité Directivo de la Comunidad de Shafter Reunión #23

Lunes, 14 de septiembre de 2020 – 5:00 pm – 7:00 pm

Reunión por Zoom: <https://zoom.us/j/92164695325>

Meeting ID: 921 6469 5325

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-431-3632

Código de acceso: 8097028

- 5:00 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
- 5:20 p.m. Actualizaciones Permanentes**
Actualización de Monitoreo de Aire — Actividades de la camioneta móvil, y próxima reunión del subcomité
Personal del Distrito del Aire del Valle
Actualización del Subcomité — Actualizaciones de las medidas de filtración escolar y autobuses escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias — Departamento de Regulación de Pesticidas (DPR), CARB
- 5:45 p.m. Estrategia de Alcance para Medidas Solares**
Solicitar comentarios del Comité Directivo sobre la mejor manera de proporcionar información sobre los programas solares de GRID Alternatives para los residentes de Shafter
Personal del Distrito del Aire del Valle
- 6:00 p.m. Repasar y Discutir el Reporte Anual**
Discusión con el Comité Directivo, el Distrito y CARB sobre el borrador del reporte anual para la comunidad. Solicitar comentarios sobre el reporte y cómo comunicar mejor el progreso en el futuro.
Personal del Distrito del Aire del Valle
- 6:45 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes 12 de octubre por Zoom

Aprende más: community.valleyair.org

Meeting Highlights*

AB 617 Shafter Community Steering Committee Meeting #22

August 10, 2020, 3:00pm-5:00pm

Virtual Zoom Meeting

Action items for the Shafter Community Steering Committee:

- Contact the Air District to request/suggest agenda items for future meetings

Action items for San Joaquin Valley Air Pollution Control District:

- Organize a special meeting on community air monitoring and consider assembling an air monitoring subcommittee
- Email CSC members with phone numbers and contact information for all energy and solar programs presented
- Consider another CSC member poll about meeting start times about starting meetings later so more members can attend

Welcome and Introductions:

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)

Erica Manuel, CEO & Executive Director, ILG

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Hanna welcomed the Shafter CSC participants, guests, speakers and members of the public and introduced herself and the ILG team. She gave an overview of Zoom instructions and Spanish translation services then reviewed the agenda and timeline of the meeting. Erica outlined Zoom and chat box etiquette. Ryan thanked everybody for attending and continued support of the AB 617 program. Ryan provided a stipend update:

- After state-led efforts to provide resident members of steering committees failed, the Air District found a path to provide stipends to resident members of the CSC
- Stipends will include a \$75 reimbursement per regularly scheduled, full CSC meeting for up to 15 meetings per year, which is equivalent to \$1,125 per calendar year
- Subcommittee meetings do not qualify for reimbursement
- Stipends are subject to the availability of AB 617 funding on an annual basis
- ILG will provide the stipends, which will be retroactive to January 2020
- There will be an application required to receive the stipends
- Stipends can be expected within 30 days of the full CSC meeting
- To qualify for a stipend, a resident member must be present for 75% of the CSC meeting or 90 minutes of a 2 hour meeting
- There will be a record kept of any residents that participate together on the same computer or Zoom screen

Question: What will the resident need to do procedurally or will it be automatic? How will alternates qualify?

District Response: The next step is to go to the Governing Board for approval on Aug. 20. If it is approved, the District will work with ILG to notify all resident members. If a resident is interested in receiving a stipend, ILG will work with them to get the necessary paperwork filed. Alternates qualify when they are filling in for the primary member when they cannot attend. Our understanding is alternates are people who are interested and want to participate in the process, but do not have the time to fully commit to the process.

Monitoring Plan Update:

Chay Thao, Program Manager, Valley Air District

Chay presented an update on community air monitoring and an overview of ozone trends. Presentation highlights include:

- The District is continuing to conduct localized air monitoring in the Shafter community
- The air monitoring van is actively monitoring pollutants in areas of interest and CSC-recommended locations
- The District compared the ozone readings in Shafter to the Bakersfield, Oildale, and the Bakersfield Municipal Airport sites and the readings appear to be consistent between all sites for 2019 and 2020
- The mobile air monitoring van has measured PM2.5, ozone, CO, NO2, and SO2 and all are below the federal allowable standards
- A detailed quarterly report will be available soon and we are working to make it easier for everyone to access the data

Comment: This report would be more useful if it included all the mobile data that has been collected, including data on the same day from different locations around Shafter to see how the measurements vary by location. Federal data seems less relevant at this time. We also recommend developing a special committee where Air District experts can go through the monitoring data.

Question: The Shafter monitor has always been well below Bakersfield for ozone, but this year we have more violations than the Bakersfield monitor. Why has this turned around?

District Response: Typically Bakersfield tends to be one of the higher sites. There hasn't been a rise in Shafter, but you are correct; it's running higher than Bakersfield. Our initial analysis has been looking at vehicle miles traveled (VMT) on the freeways and how it affects ozone as it relates to the shelter-in-place orders. The site at Bakersfield, being closer to Highway 99 should be more sensitive to the changes in the shelter-in-place orders due to decreased traffic, which could partially explain the decrease seen there, whereas activities around the Shafter area do not appear to have been impacted to the same degree due to the shelter-in-place order.

Comment: Looking at regional and statewide trends during this pandemic, there has been a decline in air pollution. If the information is available, can we look at the data for this same timeframe from a year ago and see how the pandemic has played a role in this decline? I second the motion to having a subcommittee for the community air monitoring plan.

District Response: In the next couple of months, we will have data to compare with the previous year and will be able to look at the impact of the pandemic on emissions.

Question: When you use the mobile air monitoring van, is it during business hours or after-hours?

District Response: It has been during business hours, however, we will take hours into consideration for future monitoring to ensure we are fully capturing the spectrum of monitoring information.

School Filtration and School Bus Measures Update:

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime gave an overview of the school filtration subcommittee meeting. Presentation highlights:

- The District has developed an application for school filtration based on the guidelines for AB 617 that have come from CARB

- The District has been contacting all the schools to connect with them and understand their individual circumstances and capabilities to install new air filters
- The District will be circling back on school buses, currently we have three electric buses currently headed to Shafter

Pesticide Measures Update:

Nan Singhasemanon, Department of Pesticide Regulation (DPR)

Nan mentioned a recent in-person meeting between a few CSC members and the Kern County Farm Bureau about pesticide notifications and gave a brief update. Presentation highlights include:

- There have been a number of meetings about the mitigation pilot and they are on track to look at applications this fall
- Work will occur in the Shafter area
- The next standing update will have more to report

Comment: If the group wants to have a subcommittee on pesticides, are CARB, and DPR are willing to participate?

Question from Spanish-Speaker: She received a letter for solar energy and was breaking down the percentage of low income requirements and is wondering if an elderly person who makes more than is stated can qualify?

ILG Response: You are taking us into our next agenda item and we will answer that question shortly.

Solar and Energy Efficiency:

Bertha Aguilar, GRID Alternatives

Sarah Sharpe, California Public Utilities Commission (CPUC)

Jessica Olsen, Program Manager, Valley Air District

Todd Payne, Community Action Partnership of Kern (CPAK)

Jessica provided an overview of some items included in the Shafter CERP--seeking incentives for local businesses and homeowners to install solar panels and energy storage, weatherization, and enhanced energy efficiency. Three guest speakers with related opportunities and programs presented to the group.

GRID Alternatives presentation highlights:

- GRID Alternatives aims to help families save up to 80% on their electric bills
- All systems are provided at no cost due to a DAC-SASH program, which is a single family solar homes program
- All GRID Alternatives' programs are income-based
- GRID Alternatives offers energy education and training for employment in the solar industry

Question: The cost on an older home's breaker box and some re-wiring could cost the homeowner. Solar should not be put on a roof unless the roof has at least a 15-20 year life expectancy. A lot of people have an adequate roof, but it might not last 10-15 more years. Is there money for these other costs as well?

GRID Alternatives Response: We have a construction person who ensures the roof is in good condition. If it is not, they let the homeowner know. If breaker boxes are older and won't pass the city inspection, we include that in the cost and upgrade the box.

Hanna prompted the CSC with a question about how we can help promote this program and let the rest of the Shafter community know about it.

Comment/Question: We have to fully understand the program before we can promote it. If someone goes to solar, they are probably also considering electric vehicles and electrifying their entire house. How much over the last year or two of usage do you allow the homeowner to go? Can they go 30% over what the usage was assuming they are going to use more electricity and less fuel like gasoline for a car and natural gas for a house?

GRID Alternatives Response: We calculate usage for the last 12 months and design the system accordingly. Bringing in an electric vehicle would require a completely different calculation.

CPUC Presentation Highlights:

- The CPUC has a Disadvantaged Community Advisory Group and has adopted an Environmental and Social Justice Action Plan
- The DAC-Green Tariff package makes solar energy available to people who cannot put it on their home, such as renters or people who have an old roof
- The utilities purchase green energy from a solar farm and the CPUC sells it to the community members who sign up and live in a disadvantaged community
- The CPUC just adopted a program to automatically enroll people into this DAC-Green Tariff program
- There are roughly 180 households in Shafter that are qualified
- The DAC-Community Solar program just launched and is meant for people who cannot put solar on their own home
- To qualify, they must live in the vicinity of a solar facility and have a community sponsor who puts solar on their property and signs up low-income communities within its vicinity—up to 40 miles away
- The Self-Generation Incentive Program provides battery storage on a home and there is \$1 billion available through 2024

Question: With regard to electrification of home heating, hot water, and cooking, what state programs are coming down the road to help people fully electrify their home?

CPUC Response: What you're talking about would fall under "building de-carbonization". There was legislation passed last year directing the CPUC to develop some programs. Those are being developed right now and we are happy to have you as a party in the proceeding.

CAPK Presentation Highlights:

- CAPK has utility assistance and weatherization programs, funded by state and federal dollars
- A client can call in, request information, receive the application, and schedule a time to meet one of the techs to help with set up
- If someone qualifies for either of the programs, they qualify for both—they have the same income guidelines
- Once a year, CAPK can pay one utility bill for clients
- For weatherization, CAPK will come out and do a home assessment, see what the house qualifies for and replace everything for free

Comment: There have been complaints in the San Joaquin Valley about solar fraud. The CPUC is happy to help people file complaints. If you have received solar and were told it was free, but later found out you had debt on your mortgage, please contact the CPUC.

CERP Measures Tracker Update:

Jessica Olsen, Program Manager, Valley Air District

Todd DeYoung, Director of Strategy & Incentives, Valley Air District

Jessica presented the CERP Measures Tracker, which has been posted on the main Shafter webpage. Presentation highlights:

- The tracker is in English and Spanish and has been designed to track the progress of every single measure in the CERP
- Based on the type of measure, the measure number and the description as written in the CERP, anyone can see the details of what we wanted to accomplish in the CERP at the time, then a status update on implementation, as of the date of publication
- Links are included if there was a recent presentation on that measure
- With regard to the CERP measure incentive program development, the funding that goes along with the CERP is tied to the community air protection program (CAPP) guidelines
- For programs that don't fit within the existing CAP guidelines, there is a process for getting community identified projects approved so state funding can be used; many of the incentive-based measures identified in Shafter fall into that bucket
- The District has 12-13 measures in the development process of right now and once submitted, will need to work with CARB staff to get them approved
- Draft program plans will be posted on the community webpage so CSC members can see what is being proposed, in addition to being emailed out to the committee

Question: Is the tracker something that's currently running at the Shafter 617 portal? Is there methodology or criteria on how different metrics are being implemented?

District Response: Yes. As we are developing the individual measures and submitting them to CARB. The measures have a lot more detail, so as they are posted CSC members can dive into each one and see exactly what is being proposed.

Wrap Up/Next Steps:

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)

Hanna reiterated the request from the CSC to have an air monitoring-specific subcommittee meeting and thanked everybody for participating in the meeting.

Question: Is it possible to consider moving our meeting time to later in the day?

District Response: We took a poll to select this start time, but we are happy to re-evaluate and see if another time works better for CSC members.

Comment: I run a small community solar company based in Fresno and we are looking for community partners that might be able to collaborate on community-designed and community-owned solar projects. I will put my info in the chat if anyone wants to follow up.

Reminders:

Next meeting is September 14 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*

Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #22

10 de agosto de 2020, 3:00pm-5:00pm

Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter:

- Comuníquese con el Distrito del Aire para solicitar/sugerir puntos de la agenda para reuniones futuras

Artículos de Acción para el Distrito del Aire:

- Organizar una reunión especial sobre monitoreo del aire de la comunidad y considerar la posibilidad de formar un subcomité de monitoreo del aire
- Enviar un correo electrónico a los miembros del Comité Directivo con números de teléfono e información de contacto para todos los programas de energía y energía solar presentados
- Considerar otra encuesta de los miembros del Comité Directivo sobre las horas de inicio de las reuniones sobre cómo comenzar las reuniones más tarde para que puedan asistir más miembros

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Erica Manuel, CEO & Director Ejecutivo, ILG

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Hanna dio la bienvenida a los participantes del Comité Directivo de Shafter, invitados, oradores y miembros del público y se presentó a sí misma y al equipo de ILG. Ella dio una descripción general de las instrucciones de Zoom y los servicios de traducción en español y luego repasó la agenda y el cronograma de la reunión. Erica describió la etiqueta de Zoom y el chat. Ryan agradeció a todos por asistir y continuar apoyando el programa AB 617. Ryan proporcionó una actualización del estipendio:

- Después de que fracasaron los esfuerzos dirigidos por el estado para proporcionar miembros residentes de los comités directivos, el Distrito del Aire encontró un camino para proporcionar estipendios a los miembros residentes del Comité Directivo
- Los estipendios incluirán un reembolso de \$75 por reunión del Comité Directivo programada regularmente para hasta 15 reuniones por año, lo que equivale a \$1,125 por año calendario
- Las reuniones del subcomité no califican para reembolso
- Los estipendios están sujetos a la disponibilidad de fondos AB 617 anualmente
- ILG proporcionará los estipendios, que serán retroactivos a enero de 2020
- Se requerirá una solicitud para recibir los estipendios
- Se pueden esperar estipendios dentro de los 30 días posteriores a la reunión completa del Comité Directivo
- Para calificar para un estipendio, un miembro residente debe estar presente durante el 75% de la reunión del Comité Directivo o 90 minutos de una reunión de 2 horas
- Se mantendrá un registro de los residentes que participen juntos en la misma computadora o pantalla Zoom

Pregunta: ¿Qué deberá hacer el residente de manera procesal o será automático? ¿Cómo calificarán los suplentes?

Respuesta del Distrito: El siguiente paso es ir a la Mesa Directiva para su aprobación el 20 de agosto. Si se aprueba, el Distrito trabajará con ILG para notificar a todos los miembros residentes. Si un residente está interesado en recibir un estipendio, ILG trabajará con él para que se presente la documentación necesaria. Los suplentes califican cuando están reemplazando al miembro principal cuando no pueden asistir. Entendemos que los suplentes son personas que están interesadas y quieren participar en el proceso, pero no tienen el tiempo para comprometerse completamente con el proceso.

Actualización del Plan de Monitoreo:

Chay Thao, Gerente de Programa, Distrito del Aire del Valle

Chay presentó una actualización sobre el monitoreo del aire de la comunidad y una descripción general de las tendencias del ozono. Los puntos importantes de la presentación incluyen:

- El Distrito continúa llevando a cabo un monitoreo del aire localizado en la comunidad de Shafter
- La camioneta de monitoreo del aire está monitoreando activamente los contaminantes en áreas de interés y ubicaciones recomendadas por el Comité Directivo
- El Distrito comparó las lecturas de ozono en Shafter con los sitios de Bakersfield, Oildale y el Aeropuerto Municipal de Bakersfield y las lecturas parecen ser consistentes entre todos los sitios para 2019 y 2020
- La camioneta de monitoreo de aire móvil ha medido PM2.5, ozono, CO, NO2 y SO2 y todos están por debajo de los estándares federales permitidos
- Pronto estará disponible un informe trimestral detallado y estamos trabajando para que sea más fácil para todos acceder a los datos

Comentario: Este informe sería más útil si incluyera todos los datos móviles que se han recopilado, incluidos los datos del mismo día de diferentes ubicaciones alrededor de Shafter para ver cómo varían las mediciones según la ubicación. Los datos federales parecen menos relevantes en este momento. También recomendamos desarrollar un comité especial donde los expertos del Distrito del Aire puedan revisar los datos de monitoreo.

Pregunta: El monitor de Shafter siempre ha estado muy por debajo de Bakersfield para el ozono, pero este año tenemos más violaciones que el monitor Bakersfield. ¿Por qué ha cambiado esto?

Respuesta del Distrito: Normalmente, Bakersfield tiende a ser uno de los sitios más altos. No ha habido un aumento en Shafter, pero tienes razón; está corriendo más alto que Bakersfield. Nuestro análisis inicial ha estado analizando las millas recorridas por vehículos (VMT) en las autopistas y cómo afecta el ozono en lo que respecta a las órdenes de refugio en el lugar. El sitio en Bakersfield, al estar más cerca de la autopista 99, debería ser más sensible a los cambios en las órdenes de refugio en el lugar debido a la disminución del tráfico, lo que podría explicar parcialmente la disminución observada allí, mientras que las actividades alrededor del área de Shafter no parecen haberse visto afectado en el mismo grado debido a la orden de refugio en el lugar.

Comentario: Al observar las tendencias regionales y estatales durante esta pandemia, ha habido una disminución en la contaminación del aire. Si la información está disponible, ¿podemos mirar los datos para este mismo período de tiempo de hace un año y ver cómo la pandemia ha jugado un papel en esta disminución? Apoyo la moción de tener un subcomité para el plan de monitoreo del aire de la comunidad.

Respuesta del Distrito: En los próximos meses, tendremos datos para comparar con el año anterior y podremos observar el impacto de la pandemia en las emisiones.

Pregunta: Cuando usa la camioneta de monitoreo de aire móvil, ¿es durante el horario laboral o fuera del horario laboral?

Respuesta del Distrito: Ha sido durante el horario laboral, sin embargo, tomaremos en consideración las horas para el monitoreo futuro para asegurarnos de que estamos capturando completamente el espectro de información de monitoreo.

Actualización de Medidas de Filtración Escolar y Autobuses Escolares:

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime dio una descripción general de la reunión del subcomité de filtración escolar. Puntos importantes de la presentación:

- El Distrito ha desarrollado una aplicación para filtración escolar basada en las pautas para AB 617 que provienen de CARB
- El Distrito se ha puesto en contacto con todas las escuelas para conectarse con ellos y comprender sus circunstancias y capacidades individuales para instalar nuevos filtros de aire
- El Distrito regresará al tema de los autobuses escolares, actualmente tenemos tres autobuses eléctricos que se dirigen a Shafter

Actualización de las Medidas de Pesticidas:

Nan Singhasemanon, Departamento de Regulación de Pesticidas (DPR)

Nan mencionó una reunión en persona reciente entre algunos miembros del Comité Directivo y la Oficina Agrícola del Condado de Kern sobre las notificaciones de pesticidas y brindó una breve actualización. Los puntos importantes de la presentación incluyen:

- Ha habido una serie de reuniones sobre el piloto de mitigación y están en camino de analizar las aplicaciones este otoño
- El trabajo se llevará a cabo en el área de Shafter
- La próxima actualización permanente tendrá más que informar

Comentario: Si el grupo quiere tener un subcomité sobre pesticidas, ¿están el CARB y el DPR dispuestos a participar?

Pregunta de Hispanohablante: Recibió una carta sobre energía solar y estaba desglosando el porcentaje de requisitos de bajos ingresos y se pregunta si una persona mayor que gana más de lo que se indica puede calificar.

Respuesta de ILG: Nos está llevando a nuestro próximo punto de la agenda y responderemos esa pregunta en breve.

Eficiencia Solar y Energética:

Bertha Aguilar, GRID Alternatives

Sarah Sharpe, Comisión de Servicios Públicos de California (CPUC)

Jessica Olsen, Gerente de Programas, Distrito del Aire del Valle

Todd Payne, Community Action Partnership of Kern (CPAK)

Jessica proporcionó una descripción general de algunos elementos incluidos en el CERP de Shafter—que buscan incentivos para que las empresas locales y los propietarios de viviendas instalen paneles solares y almacenamiento de energía, climatización y una mayor eficiencia energética. Tres oradores invitados con oportunidades y programas relacionados presentaron al grupo.

Puntos importantes de la presentación de GRID Alternatives:

- GRID Alternatives tiene como objetivo ayudar a las familias a ahorrar hasta un 80% en sus facturas de electricidad
- Todos los sistemas se proporcionan sin costo debido a un programa DAC-SASH, que es un programa de viviendas solares unifamiliares
- Todos los programas de GRID Alternatives se basan en los ingresos
- GRID Alternatives ofrece educación y formación energética para el empleo en la industria solar

Pregunta: El costo de la caja de disyuntores de una casa antigua y algunos cambios de cableado podrían costarle al propietario. La energía solar no debe colocarse en un techo a menos que el techo tenga al menos una esperanza de vida de 15 a 20 años. Mucha gente tiene un techo adecuado, pero puede que no dure entre 10 y 15 años más. ¿Hay dinero para estos otros costos también?

Respuesta de GRID Alternatives: Contamos con una persona de construcción que se asegura de que el techo esté en buenas condiciones. Si no es así, se lo informan al propietario. Si las cajas de interruptores son más antiguas y no pasan la inspección de la ciudad, lo incluimos en el costo y mejoramos la caja.

Hanna impulsó al Comité Directivo con una pregunta sobre cómo podemos ayudar a promover este programa y dejar que el resto de la comunidad Shafter lo sepa.

Comentario/Pregunta: Tenemos que comprender completamente el programa antes de poder promoverlo. Si alguien va a la energía solar, probablemente también esté considerando los vehículos eléctricos y la electrificación de toda su casa. ¿Cuánto durante los últimos dos años de uso le permite al propietario ir? ¿Pueden superar el 30% del uso asumiendo que van a usar más electricidad y menos combustible como gasolina para un automóvil y gas natural para una casa?

Respuesta de GRID Alternatives: Calculamos el uso de los últimos 12 meses y diseñamos el sistema de acuerdo. Llevar un vehículo eléctrico requeriría un cálculo completamente diferente.

Puntos Importantes de la Presentación de la CPUC:

- La CPUC tiene un Grupo Asesor de Comunidades Desfavorecidas y ha adoptado un Plan de Acción de Justicia Social y Ambiental
- El paquete de DAC-Green Tariff hace que la energía solar esté disponible para las personas que no pueden instalarla en su hogar, como inquilinos o personas que tienen un techo viejo
- Los servicios públicos compran energía verde de una granja solar y la CPUC la vende a los miembros de la comunidad que se inscriben y viven en una comunidad desfavorecida
- La CPUC acaba de adoptar un programa para inscribir automáticamente a las personas en el programa DAC-Green Tariff
- Hay aproximadamente 180 hogares en Shafter que están calificados
- El programa DAC-Community Solar acaba de lanzarse y está destinado a personas que no pueden instalar energía solar en su propia casa
- Para calificar, deben vivir en las cercanías de una instalación solar y tener un patrocinador comunitario que coloque energía solar en su propiedad y registre comunidades de bajos ingresos dentro de su vecindad—hasta a 40 millas de distancia
- El Self-Generation Incentive Program proporciona almacenamiento de batería en un hogar y hay \$1 mil millones disponibles hasta 2024

Pregunta: Con respecto a la electrificación de la calefacción, el agua caliente y cocinar en el hogar, ¿qué programas estatales se avocan para ayudar a las personas a electrificar completamente su hogar?

Respuesta de la CPUC: De lo que está hablando se incluiría en la "descarbonización de edificios". El año pasado se aprobó una legislación que ordena a la CPUC que desarrolle algunos programas. Estos se están desarrollando en este momento y nos complace tenerlos como parte del procedimiento.

Puntos importantes de la presentación CAPK:

- CAPK tiene programas de climatización y asistencia de servicios públicos, financiados con dólares estatales y federales
- Un cliente puede llamar, solicitar información, recibir la solicitud y programar una cita para reunirse con uno de los técnicos para ayudar con la configuración
- Si alguien califica para cualquiera de los programas, califica para ambos—tienen las mismas pautas de ingresos
- Una vez al año, CAPK puede pagar una factura de servicios públicos para los clientes
- Para la climatización, CAPK saldrá y hará una evaluación del hogar, verá para qué califica la casa y reemplazará todo gratis

Comentario: Ha habido quejas en el Valle de San Joaquín sobre el fraude solar. La CPUC se complace en ayudar a las personas a presentar quejas. Si recibió energía solar y le dijeron que era gratis, pero luego descubrió que tenía una deuda en su hipoteca, comuníquese con la CPUC.

Actualización del Reporte de las Medidas del CERP:

Jessica Olsen, Gerente de Programa, Distrito del Aire del Valle

Todd DeYoung, Director de Estrategia e Incentivos, Distrito del Aire del Valle

Jessica presentó el Reporte de las Medidas del CERP, que se ha publicado en la página web principal de Shafter. Puntos importantes de la presentación:

- El reporte de las medidas está en inglés y español y ha sido diseñado para monitorear el progreso de cada medida en el CERP
- Según el tipo de medida, el número de la medida y la descripción tal como está escrita en el CERP, cualquiera puede ver los detalles de lo que queremos lograr en el CERP en ese momento, luego una actualización del estado de implementación, a la fecha de publicación
- Se incluyen enlaces si hubo una presentación reciente sobre esa medida
- Con respecto al desarrollo del programa de las medidas de incentivos del CERP, el financiamiento que acompaña al CERP está vinculado a las directrices del programa comunitario de protección del aire (CAPP, por sus siglas en inglés)
- Para los programas que no se ajustan a las pautas existentes del CAP, existe un proceso para obtener la aprobación de proyectos identificados por la comunidad para que se puedan utilizar los fondos estatales; muchas de las medidas basadas en incentivos identificadas en Shafter caen en ese grupo
- El Distrito tiene 12-13 medidas en el proceso de desarrollo en este momento y una vez enviadas, deberá trabajar con el personal de CARB para obtener su aprobación
- El borrador de los planes del programa se publicarán en la página web de la comunidad para que los miembros del Comité Directivo puedan ver lo que se propone, además de enviarse por correo electrónico al comité

Pregunta: ¿El reporte de las medidas es algo que se está ejecutando actualmente en el portal de Shafter 617? ¿Existe una metodología o criterios sobre cómo se están implementando las diferentes métricas?

Respuesta del Distrito: Sí. A medida que desarrollamos las medidas individuales y las presentamos a CARB. Las medidas tienen mucho más detalle, por lo que a medida que se publican, los miembros del Comité Directivo pueden profundizar en cada una y ver exactamente lo que se propone.

Resumen/Próximos Pasos:

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Hanna reiteró la solicitud del Comité Directivo de tener una reunión del subcomité específico de monitoreo del aire y agradeció a todos por participar en la reunión.

Pregunta: ¿Es posible considerar cambiar la hora de nuestra reunión para más tarde en el día?

Respuesta del Distrito: Realizamos una encuesta para seleccionar esta hora de inicio, pero nos complace volver a evaluar y ver si otra hora funciona mejor para los miembros del Comité Directivo.

Comentario: Yo dirijo una pequeña empresa de energía solar comunitaria con sede en Fresno y estamos buscando socios comunitarios que puedan colaborar en proyectos solares diseñados y de propiedad comunitaria. Pondré mi información en el chat si alguien quiere hacer un seguimiento.

Recordatorios:

La próxima reunión es el 14 de septiembre a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Agenda for Shafter Community Steering Committee Meeting #22

Monday, August 10, 2020 – 3:00 pm – 5:00 pm

Zoom Meeting: <https://zoom.us/j/92578037702>

Meeting ID: **925 7803 7702**

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 3:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
- 3:10 p.m. Resident Community Steering Committee member stipends**
Ryan Hayashi, Valley Air District
- 3:20 p.m. Standing Updates**
Monitoring Plan Update — Mobile van activities, ozone season trends
Valley Air District Staff
Subcommittee Update — School filtration and school bus measure updates
Valley Air District Staff
Other Agency Updates — *Department of Pesticide Regulation (DPR), CARB*
- 3:45 p.m. Solar and Energy Efficiency**
Partners from California Public Utilities Commission (CPUC) and Grid Alternatives to present on opportunities for residents to access programs to immediately reduce energy bills, take advantage of solar programs. Looking for feedback on how to engage the community.
CPUC
Grid Alternatives
- 4:45 p.m. Review Measures Tracker and Status Updates**
Valley Air District Staff
- 4:55 p.m. Wrap Up/Next Steps**
Next Meeting: Monday, September 14, 3pm-5pm Zoom Call

Learn more: community.valleyair.org

Agenda para el Comité Directivo Comunitario de Shafter Reunión #22

lunes, 10 de agosto de 2020 – 3:00 p.m. a 5:00 p.m.

Reunión por Zoom: <https://zoom.us/j/92578037702>
Meeting ID: **925 7803 7702**

Para participar solamente por teléfono en Español:
Llamada gratuita: 888-431-3632
Código de acceso: 1237790

- 3:00 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
- 3:10 p.m. Estipendios para Miembros Residentes del Comité Directivo de la Comunidad**
Ryan Hayashi, Distrito del Aire del Valle
- 3:20 p.m. Actualizaciones Permanentes**
Actualizacion del Plan de Monitoreo — Actividades de las camioneta móvil, tendencias de la temporada de ozono
Personal del Distrito del Aire del Valle
Actualizacion del Subcomite — Actualizaciones de medidas de filtración escolar y autobuses escolares
Personal del Distrito del Aire del Valle
Otras Actualizaciones de Agencias: Departamento de Regulación de Pesticidas (DPR), CARB
- 3:45 p.m. Eficiencia Solar y Energética**
Socios de la Comisión de Servicios Públicos de California (CPUC, por sus siglas en inglés) y Grid Alternatives ofrecen oportunidades para que los residentes accedan a programas para reducir de inmediato las facturas de energía, aprovechando los programas solares. Buscando comentarios sobre cómo involucrar a la comunidad.
CPUC
Grid Alternatives
- 4:45 p.m. Revisar el Reporte de Medidas y Actualizaciones de Estado**
Personal del Distrito del Aire del Valle
- 4:55 p.m. Concluir/Próximos Pasos**
Próxima Reunión: lunes, 14 de septiembre, 3pm-5pm por Zoom

Shafter AB 617 Community Air Monitoring Update

Community Steering Committee Meeting
August 10, 2020

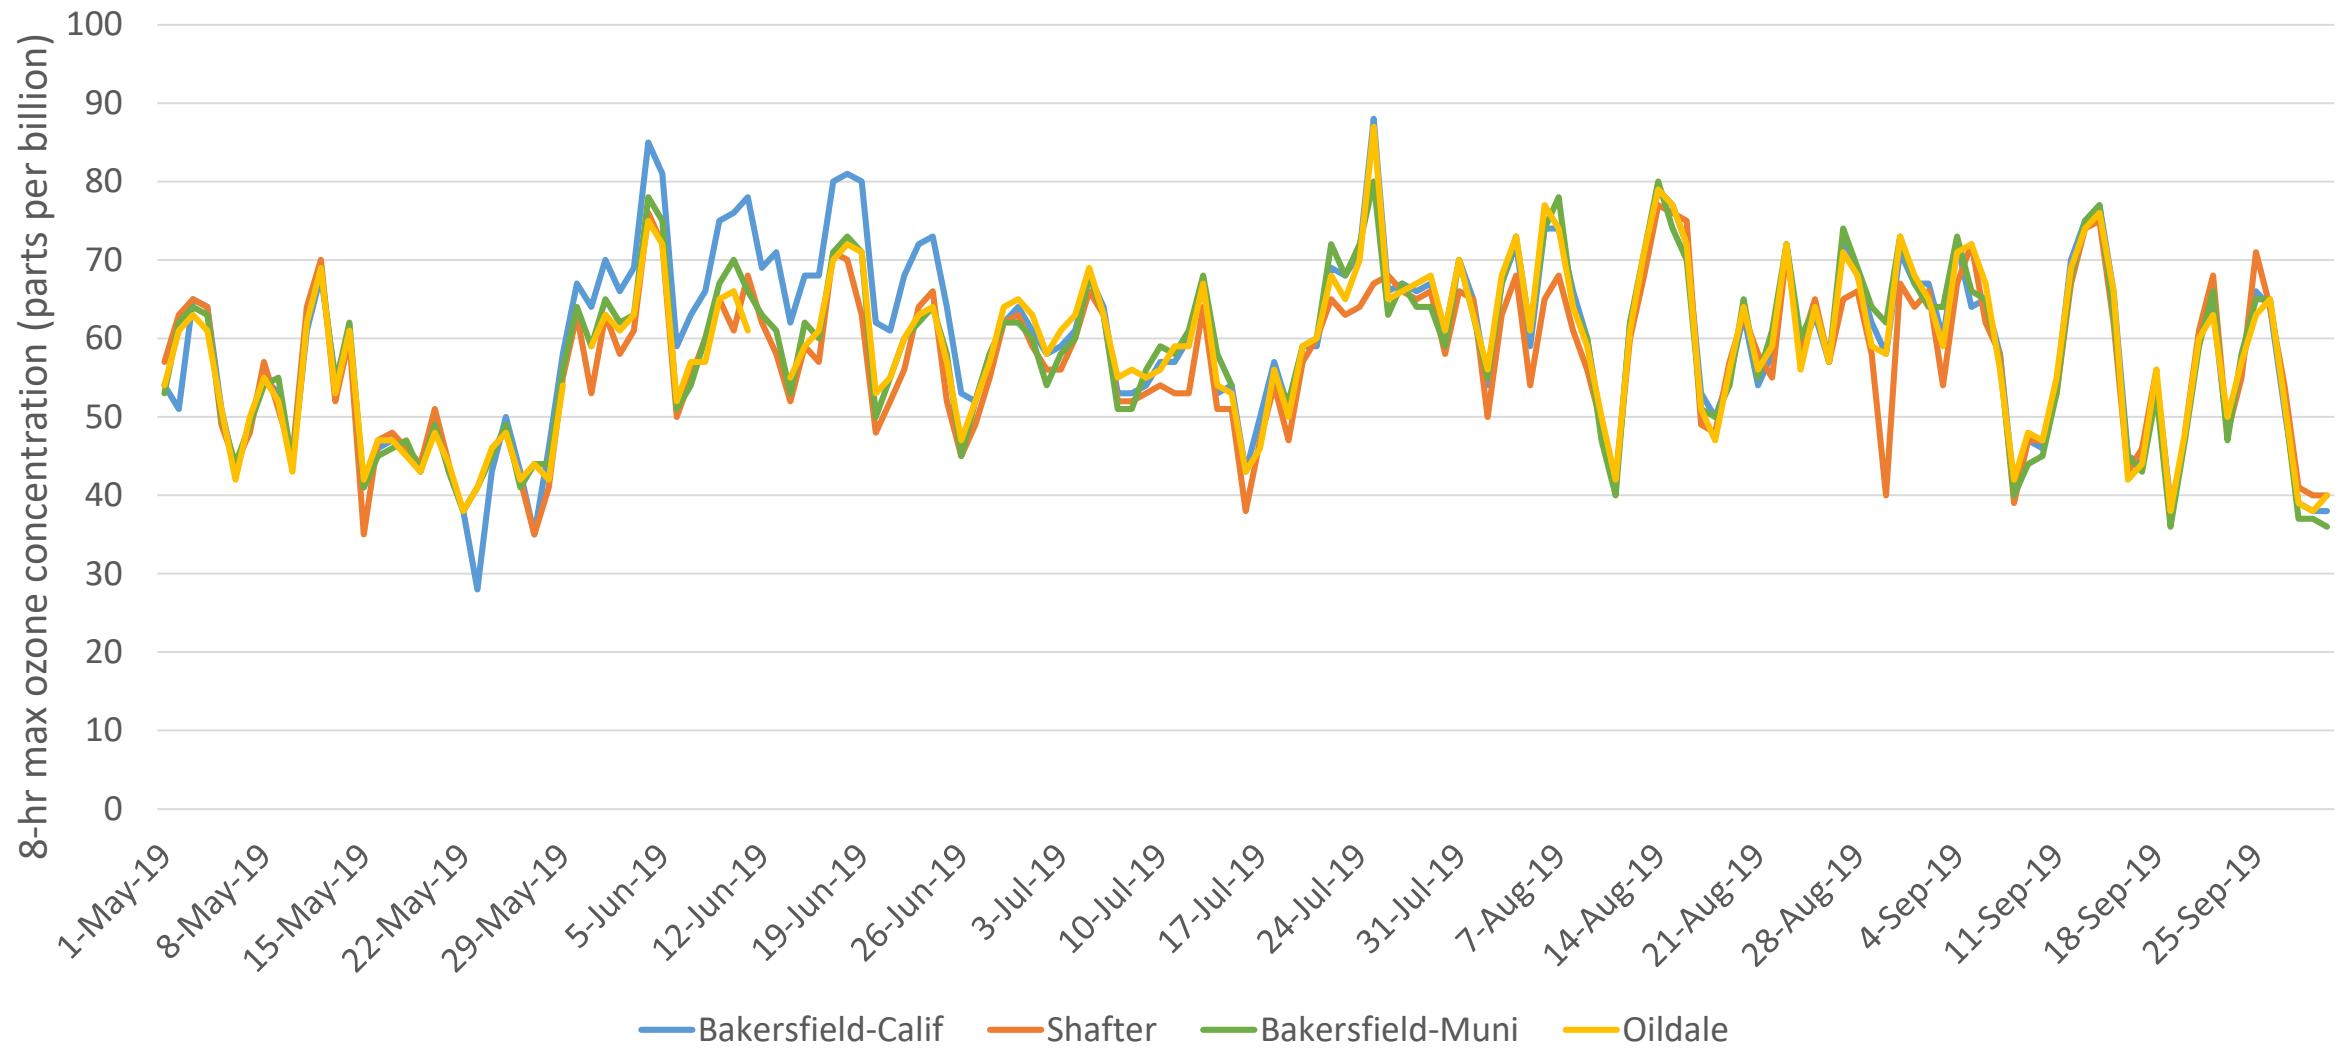

Ongoing Community Air Monitoring

- District continuing to conduct localized air monitoring in the Shafter community
- Richland School District Governing Board will review to approve the Districts plan to install monitors at Golden Oak and Sequoia Elementary on August 10th
- Lease agreement has been sent to North Shafter Migrant Labor Center for Trailer installation
- Air monitoring van actively being used to regularly monitor pollutants in areas of interest of the community and near recommended site locations for network design
- Intensive PM_{2.5} and VOC speciation sampling and laboratory analysis being conducted since late 2019

Ozone in Shafter Comparison

- Compared Ozone in Shafter with other nearby areas
 - Bakersfield California
 - Bakersfield Municipal Airport
 - Oildale
- For 2019 and 2020, ozone is fairly consistent between all areas

8-hr Ozone Comparison (May-Sept 2019)

8-hr Ozone Comparison (May-August 4th 2020)

Mobile Air Monitoring Van Activities

- The mobile air monitoring vans has been monitoring at Golden Oak, Farm Labor Center, and Sequoia Elementary until the site is approved to be developed.
- Site A: North Shafter site focusing on measuring Agriculture sites*
- Site B: Centered around 4 dairies
- Site C: Airport and Industrial area
- Site D: Mexican Colony

*Minimal monitoring. Resources currently used to temporarily monitor Farm Labor Center & Sequoia

Mobile Air Monitoring Van Activities (cont'd)

- Monitoring in the van has been occurring since January 2020
- The concentrations of pollutants measured for all locations are as follow:
 - PM2.5 highest reading of 16 $\mu\text{g}/\text{m}^3$, below the federal standard of 35 $\mu\text{g}/\text{m}^3$
 - Ozone highest reading of 64 ppb, below the federal 8-hr ozone standard of 70 ppb
 - CO highest reading of 0.4 ppm, below the federal 1-hr CO standard of 35 ppmv
 - NO2 highest reading of 37 ppb, below the federal 1-hr NO2 standard of 100 ppb
 - SO2 highest reading of 3.1 ppb, below the federal 1-hr SO2 standard of 75 ppb
 - VOC analyzers did not detect any measurable benzene, toluene, ethylbenzene, or xylene (BTEX) emissions at selected locations during this monitoring period

North Shafter Farm Labor Center

- Monitoring occurred March 31; April 16

Golden Oak Elementary

- Monitoring occurred March 11; April 9, 23; May 20; June 25

Sequoia Elementary

- Monitoring occurred April 23, May 14, June 25

Site B: West Side Dairies

- Monitoring occurred March 31; April 29; May 20; June 30

Site C: Airport/Industrial Area Monitoring

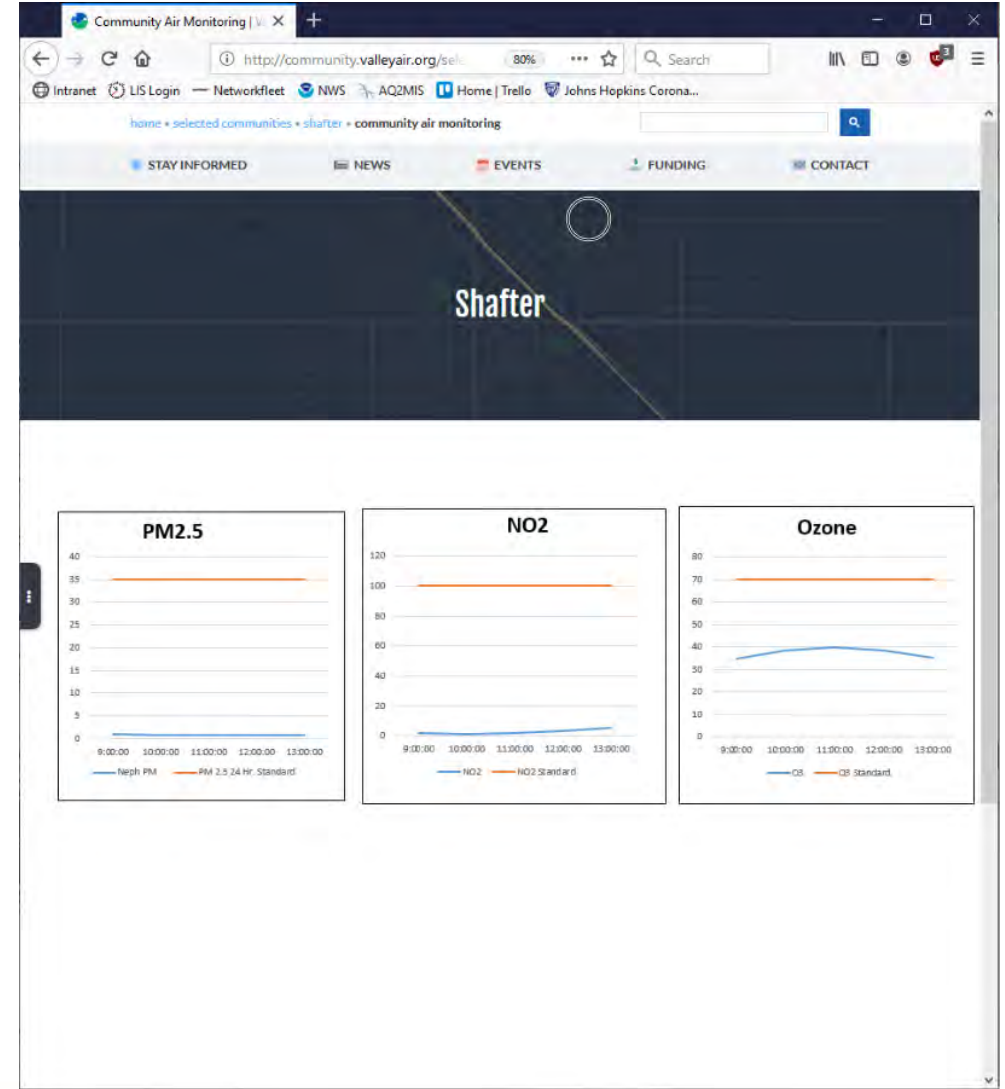

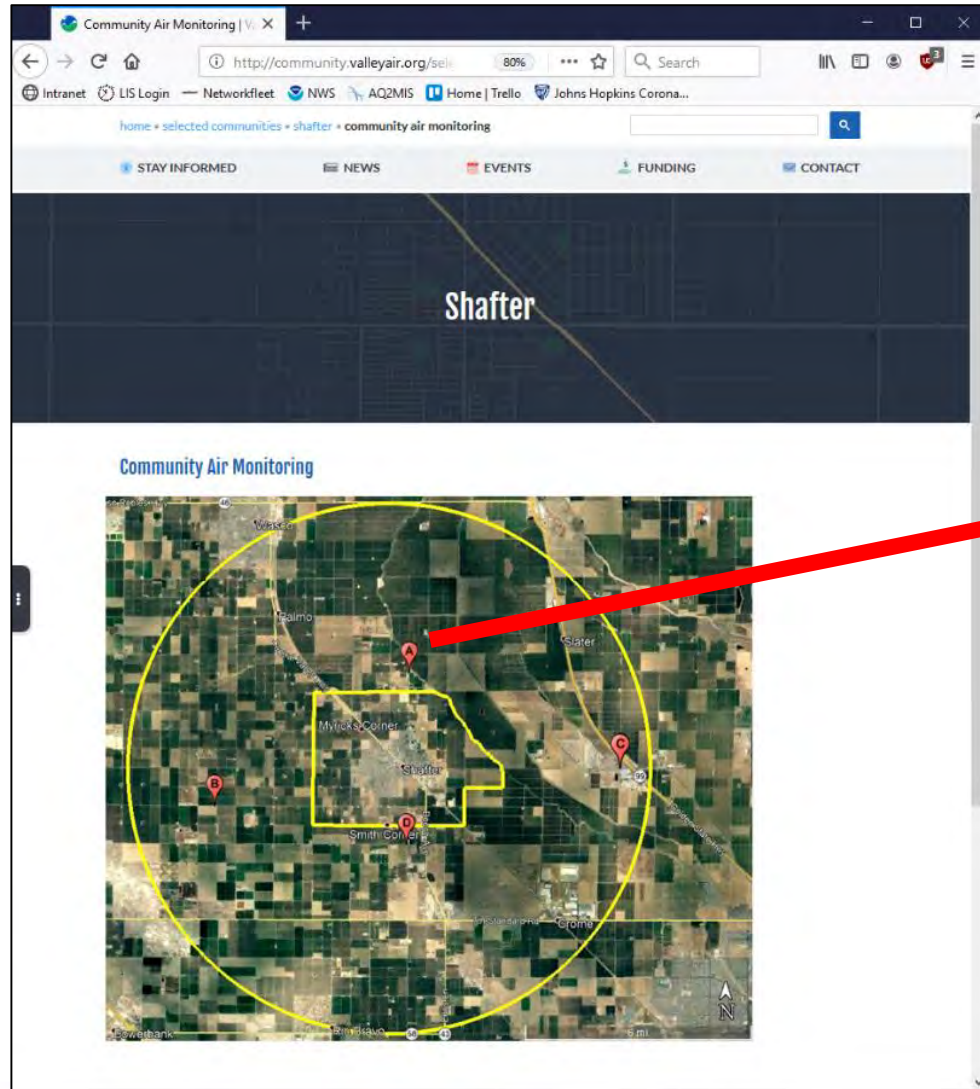

- Monitoring occurred April 2, May 14

Site D: Mexican Colony Monitoring

- Monitoring occurred March 25; April 16, 29; June 30; July 29

Proposed Website Tools for Mobile Monitoring

Comments/Questions?

Actualización del Monitoreo del Aire Comunitario de Shafter AB 617

Reunión del Comité Directivo Comunitarios
10 de Agosto de 2020

Monitoreo Continuo del Aire de la Comunidad

- El Distrito continúa realizando un monitoreo del aire localizado en la comunidad de Shafter
- La Mesa Directiva del Distrito Escolar de Richland revisará para aprobar el plan del Distrito para instalar monitores en Golden Oak y Sequoia Elementary el 10 de agosto
- El contrato de arrendamiento se ha enviado al Centro de Trabajo Migratorio de North Shafter para la instalación del remolque
- La camioneta de monitoreo del aire se usa actualmente para monitorear regularmente los contaminantes en áreas de interés de la comunidad y cerca de las ubicaciones recomendadas para el diseño de la red
- Muestreo intensivo de especiación de PM2.5 y VOC y análisis de laboratorio que se están realizando desde fines de 2019

Comparación de Ozono en Shafter

- Comparación de Ozono en Shafter con otras áreas cercanas
 - Bakersfield California
 - Bakersfield Municipal Airport
 - Oildale
- Para 2019 y 2020, el ozono es bastante constante en todas las áreas

Comparación de Ozono de 8-horas (mayo-sept 2019)

Comparación de Ozono de 8-horas (mayo-4 de agosto 2020)

Actividades de la Camioneta de Monitoreo del Aire Móvil

- Las camionetas móviles de monitoreo de aire han estado monitoreando en Golden Oak, Centro de Trabajo y Sequoia Elementary hasta que se apruebe el desarrollo del sitio.
- Sitio A: Sitio de North Shafter centrado en medir sitios de agricultura*
- Sitio B: Centrado alrededor de 4 lecherías
- Sitio C: Aeropuerto y área industrial
- Sitio D: Mexican Colony

*Seguimiento mínimo. Recursos utilizados actualmente para monitorear temporalmente el Centro de Trabajo y Sequoia

Actividades de la Camioneta de Monitoreo del Aire Móvil (cont.)

- El monitoreo en la camioneta ha estado ocurriendo desde enero de 2020
- Las concentraciones de contaminantes medidas para todas las ubicaciones son las siguientes:
 - Lectura más alta de PM2.5, 16 $\mu\text{g}/\text{m}^3$, por debajo del estándar federal de 35 $\mu\text{g}/\text{m}^3$
 - Lectura más alta de ozono de 64 ppb, por debajo del estándar federal de ozono de 8-horas de 70 ppb
 - Lectura más alta de CO de 0.4 ppm, por debajo del estándar federal de CO de 1-hora de 35 ppmv
 - Lectura más alta de NO2 de 37 ppb, por debajo del estándar federal de NO2 de 1- hora de 100 ppb
 - Lectura más alta de SO2 de 3.1 ppb, por debajo del estándar federal de SO2 de 1 hora de 75 ppb
 - Los analizadores de VOC no detectaron emisiones mensurables de benceno, tolueno, etilbenceno o xileno (BTEX) en ubicaciones seleccionadas durante este período de monitoreo

Centro de Trabajo en North Shafter

- Monitoreo ocurrió 31 de marzo; 16 de abril

Golden Oak Elementary

- Monitoreo ocurrió 11 de marzo; 9, 23 de abril; 20 de mayo; 25 de junio

Sequoia Elementary

- Monitoreo ocurrió 23 de abril, 14 de mayo, 25 de junio

Sitio B: Lecherías en el lado Oeste

- Monitoreo ocurrió 31 de marzo; 29 de abril; 20 de mayo; 30 de junio

Sitio C: Monitoreo en Aeropuerto/Área Industrial

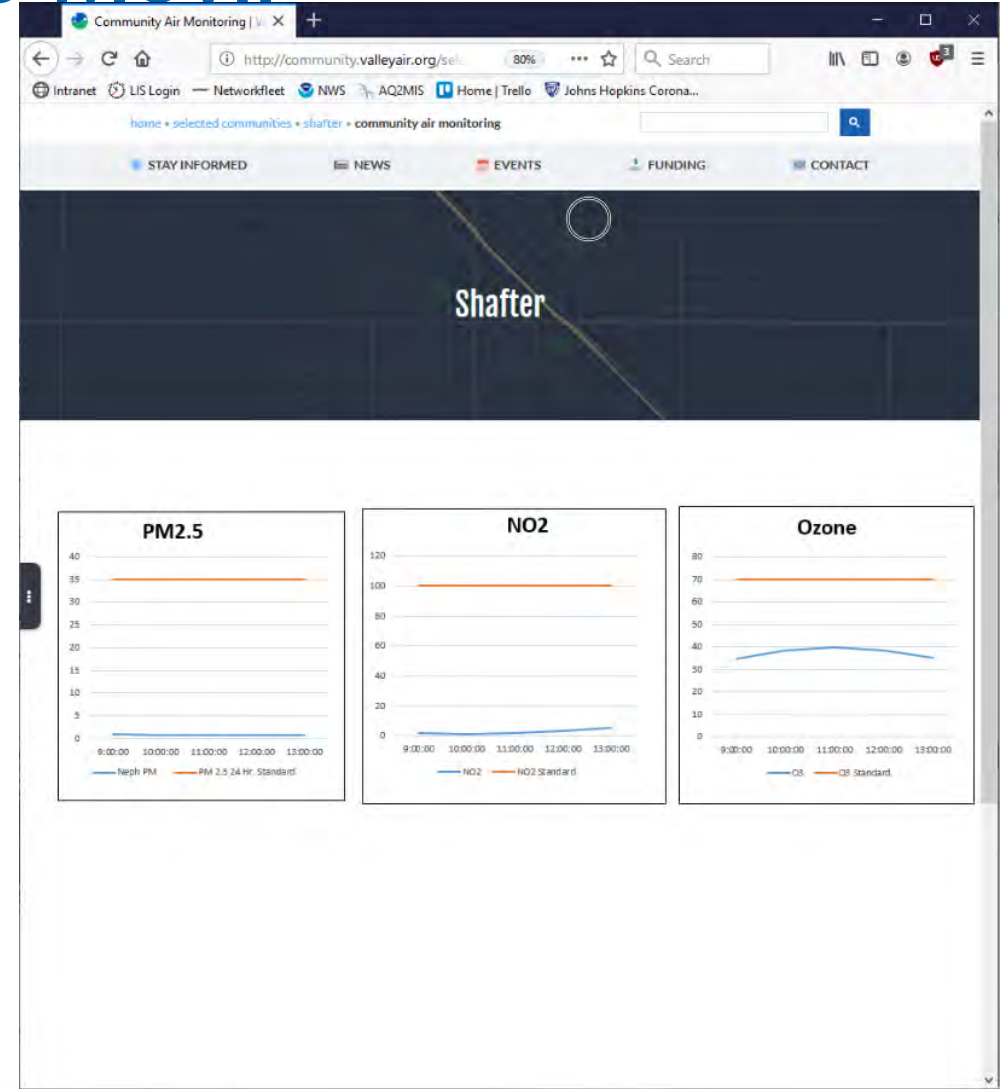

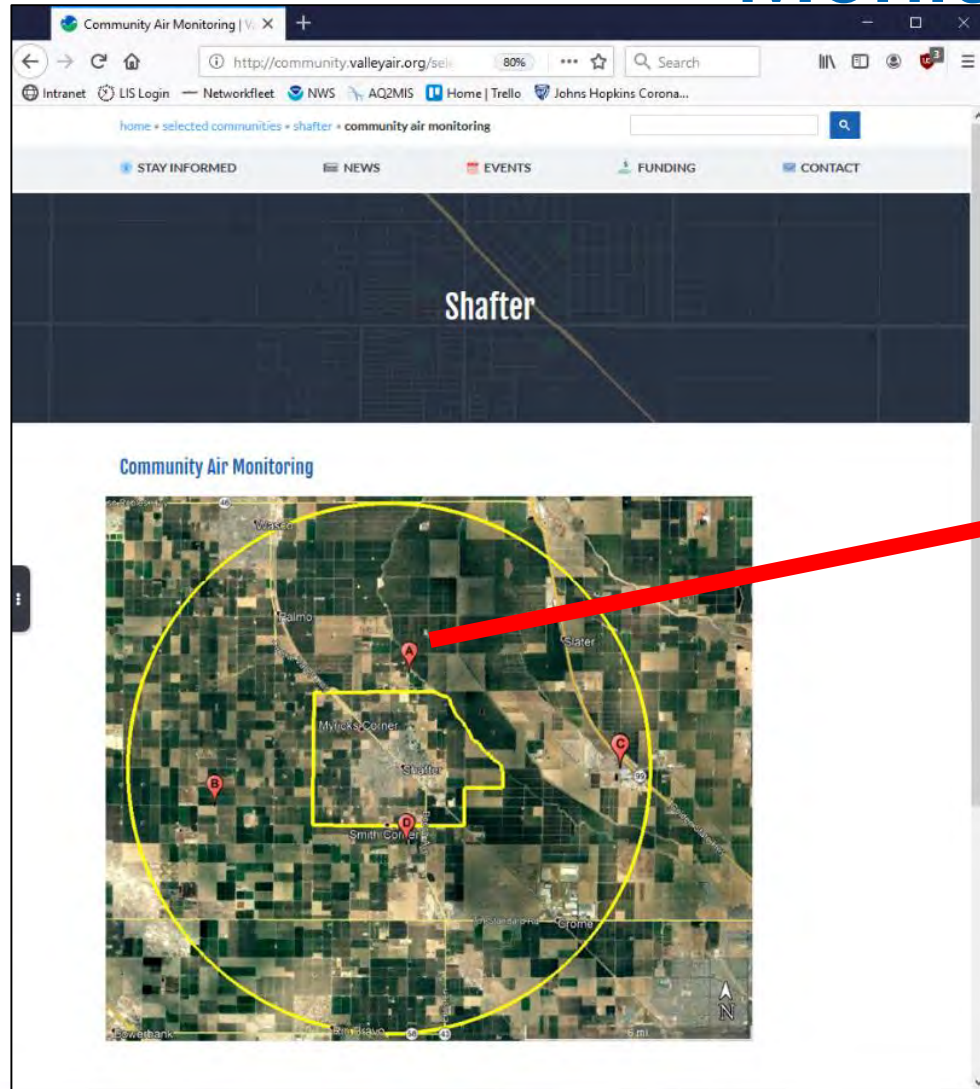

- Monitoreo ocurrió 2 de abril, 14 de mayo

Sitio D: Monitoreo en Mexican Colony

- Monitoreo ocurrió 25 de marzo; 16, 29 de abril; 30 de junio; 29 de julio

Herramientas de Sitio Web Propuestas para Monitoreo Móvil

Comentarios/¿Preguntas?

AB 617- Energy Opportunities for Shafter

Sarah Sharpe
Senior Advisor, Commissioner Martha Guzman Aceves
California Public Utilities Commission (CPUC)
August 10, 2020

About the CPUC

- The CPUC regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies.

Electric and
Natural Gas
Utilities

Communications

Rail

Passenger
& Moving

Water

Background

- Disadvantaged Communities Advisory Group (DACAG) joint group with Energy Commission- established March 2018
- CPUC Environmental Social Justice Action Plan- adopted February 2019

Intro

- AB 617 Report- November 25,2019 available at: www.cpuc.ca.gov/Guzman_Aceves/
- Clarify which Investor Owned Utility (IOU) Territory for each community
- Identify relevant IOU programs based on emissions profile and community priorities
- Increase coordination between CPUC, CARB and regional air districts.

COVID19 Protections

Implementing Resolution M-4842 and Residential and Small Commercial Customer Protections, including:

- (1) Disconnections moratoria,
- (2) Waiver of all deposits and late fees,
- (3) Payment plan options,
- (4) Support of low income and vulnerable populations through increased enrollment in CARE, FERA, medical baseline, and Energy Savings Assistance (ESA) programs,
- (5) Enhanced public outreach, and
- (6) CCA/DA/IOU cost recovery / sharing arrangements.

Complete listing of all COVID protections available at: <https://www.cpuc.ca.gov/covid19protections/>

Clean Energy Deployment - Net Energy Metering(NEM) for DACs

DAC-Community Solar (DAC-CS)

- Solar facility must be located in a top 25% DAC or San Joaquin Valley pilot community
- Open to residential customers in top 25% DACs within 5 miles of the solar facility (or 40 miles for SJV pilot communities)
- At least 50% of subscribers must be low-income
- Subscribers receive 20% discount on their overall electric bill
- Can serve up to 41 MW and 6800 customers statewide
- Sponsor must be a non-profit or local governmental entity (could be school or Community Choice Aggregator)
- PG&E just completed first cycle of RFO, selections announced soon.
- Another cycle planned this year

Zero-Emission Vehicle Deployment

- **Direct Current Fast Chargers (DCFC) Make Ready Program**
 - \$22.4M total budget, 5-year implementation
 - Install make-ready infrastructure at 54 sites to support 234 DCFC stations
 - 25% of sites must be located in a DAC
 - Provides up to \$25,000 rebate to sites to support the purchase of DCFC
 - Requires all DCFC to be publicly accessible
- **EV Charge Schools (AB 1082)**
 - \$5.76M total budget, 2-year implementation
 - 88-132 level 2 (L2) ports at 22 schools.
 - 40% of sites must be located in a DAC
 - Will target schools located in Alameda, Fresno, and San Joaquin counties, but can broaden outreach to other schools located in a DAC.
- **EV Charge Parks (AB 1083)**
 - \$5.54M total budget, 2-year implementation
 - 40 L2 ports and 3 DCFC at 15 state parks
 - 25% of sites must be located in a DAC
- **Empower EV - no DAC target, but all customers will be low-moderate income.**
 - \$4.13M total budget, 1-year implementation
 - Approximately 2,000 L2 chargers and 800 panel upgrades.
 - Provides a \$500 point of sale rebate for low-moderate income (LMI) customers to purchase and install residential L2 chargers and \$2,000 rebate for a panel upgrades.
 - Income threshold defined by customers at or under 400% of the Federal Poverty Level.
 - Available to home owners and tenants living at a rental property.
 - PG&E will partner with Community Based Organizations to perform outreach to LMI customers.
- If you also interested in medium duty/heavy duty programs, below is some information on PG&E's Fleet Ready program
- **Fleet Ready**
 - \$236M total budget, 5-year implementation
 - Minimum 700 sites and support the electrification of at least 6,500 MD/HD fleet vehicles
 - 25% of program budget must be spent on infrastructure installed in a DAC
 - 50% of EVSE cost rebate for DAC sites and sites that will support electric school and transit buses.

CPUC Former & Future Pilots & Programs

Clean Energy Deployment

- San Joaquin Valley (SJV) Proceeding Phase III
- SB 1477 Building Decarbonization Pilots
 - Building Initiative for Low-Emissions Development (BUILD)
 - Technology and Equipment for Clean Heating (TECH)

Zero-Emission Vehicle Deployment

- SB 350 Transportation Electrification Plug-in Electric Vehicle (PEV) Submetering Pilot
- PG&E and SCE Demand Response Pilots
- Department of Defense Vehicle-to-Grid (V2G) PilotProjects

Demand Response

- Disadvantaged Communities Demand Response (DAC-DR) Pilot- South Fresno

Agriculture Programs

- Dairy Biomethane Pilot Program
- Agricultural Internal Combustion Engine Conversion Incentive (AG-ICE)

CPUC Program Options to Promote Clean Energy and Reduce Air Pollution in AB 617 Environmental and Social Justice Communities

The Office of California Public Utilities Commission (CPUC) [Commissioner Martha Guzman Aceves](#) has issued a report on agency program options with the potential to expand the benefits of clean energy and help reduce emissions in Assembly Bill (AB) 617 communities.

EXECUTIVE SUMMARY

This report develops a typology of air pollution source sectors affecting the initial 10 communities selected pursuant to AB 617 for air monitoring and community emissions reduction programs through the [California Air Resources Board \(CARB\)'s Community Air Protection Program](#). The typology organizes the key pollution sources identified in each community's air monitoring and emissions reduction programs and is used to identify programs of the CPUC with the potential to reduce emissions and promote clean energy in each community. Pending and former CPUC programs with potential applications for the relevant emission source sectors are also discussed as policy opportunities for consideration.

Although this report is primarily a guide for regional air districts to navigate CPUC program options for reducing emissions, recommendations for regional and state decisionmakers are also offered. Whereas this document identifies CPUC program options with relevance to the challenges faced by AB 617 communities, additional analysis is needed at the community level to evaluate the effectiveness and the cost implications of each program.

The implementation of the Community Air Protection Program comes at a critical juncture for the CPUC with the CPUC's recent adoption of its [Environmental and Social Justice Action Plan](#) and its expanded focus on serving the needs of disadvantaged communities (DACs) pursuant to Senate Bill (SB) 350. As regional air districts prepare to implement their proposed plans for the Program's first-year and CARB prepares to consider selection of additional communities, there is a significant role for the CPUC to collaborate with CARB and the air districts while considering how to leverage agency programs to improve environmental and social justice outcomes statewide.

CURRENT PROGRAMS

The following programs may be available to provide benefits in AB 617 ESJ communities:

Clean Energy Deployment

- Solar on Multifamily Affordable Housing (SOMAH)
- DAC-Single Family Solar Homes (DAC-SASH)
- DAC-Green Tariff (DAC-GT)
- Green Tariff Shared Renewables (GTSR) in DACs
- Community Solar Green Tariff (CSGT)
- California Solar Initiative Thermal (CSI-T)
- Self-Generation Incentive Program (SGIP)
- Electric Program Investment Charge (EPIC)

Low-Emission Nonrenewables

- Net Energy Metering Fuel Cell (NEMFC)

Zero-Emission Vehicle Deployment

- Plug-in Electric Vehicle (PEV) Time-of-Use Rates
- Low-Carbon Fuel Standard PEV Rates
- SDG&E Champions for Clean Air
- SB 350 Electrification Projects
- EV Infrastructure Pilot Programs: Power Your Drive, Charge Ready, EV Charge Network
- Infrastructure Pilot Programs at Schools and State Parks and Beaches

Energy Efficiency

- Energy Savings Assistance (ESA)
- Utility Energy Efficiency Programs

Demand Response

- DAC-Demand Response (DAC-DR)

AB 617- Oportunidades en Energía para Shafter

Sarah Sharpe
Consejera Sénior, Comisaria Martha Guzman Aceves

Natural Gas
Utilities

Communications

Rail

Passenger
& Moving

Water

Antecedentes

- Grupo Asesor de Comunidades Desfavorecidas (DACAG) grupo conjunto con la Comisión de Energía- establecido en marzo de 2018
- Plan de Acción de Justicia Social y Ambiental de la CPUC- adoptado en febrero de 2019

Introducción

- AB 617 Informe- 25 de noviembre de 2019 disponible en: www.cpuc.ca.gov/Guzman_Aceves/
- Aclarar para cada comunidad a cual territorio de Utilidad Poseído del Inversores (IOU) pertenece
- Identificar relevantes IOU Programas basado en el perfil de emisiones y las prioridades de la comunidad
- Aumentar la coordinación entre CPUC, CARB y los distritos de aire regionales.

Protecciones durante COVID19

Implementación de la Resolución M-4842 y Protección de Clientes Residenciales y Pequeños Negocios, incluyendo:

- (1) Moratoria de Desconexiones,
- (2) Exención de todos los depósitos y cargos por mora,
- (3) Opciones de planes de pago,
- (4) Apoyo a poblaciones de bajos ingresos y vulnerables a través del aumento de las programas de CARE, FERA, medical baseline, and Energy Savings Assistance (ESA)
- (5) Mayor divulgación pública, y
- (6) CCA/DA/IOU acuerdos de recuperación/compartición de costos.

Lista completa de todas las protecciones COVID disponibles en:

<https://www.cpuc.ca.gov/covid19protections/>

Despliegue de energía limpia - Medición neta de energía (NEM) para DACs

Se crearon beneficios de la energía solar para familias de bajos ingresos en DACs que no podían instalar energía solar en su techo.

DAC-Green Tariff (DAC-GT)

- Decisión de autoinscriba pasó el mes pasado, los avisos deberían salir este mes
- ~18.500 hogares en territorio PG&E estarán inscritos para un descuento adicional del 20% en la factura y 100% de energía limpia de proyectos solares (**aproximadamente 180 hogares en Shafter de 3 distritos censales**)
- Los factores utilizados para determinar el alto riesgo de desconexión de los clientes para la inscripción automática incluyen:
 - Ubicado en uno de los distritos censales más importantes de CalEnviroScreen ubicados en el territorio de servicio de PG&E;
 - Ocho o más avisos de morosidad que desencadenan de tres a seis procesos de cobro por año;
 - Dos o menos pagos "Return to Maker" (es decir, cheques devueltos);
 - Dos o menos desconexiones dentro de 12 meses;
 - Seis o más pagos en los últimos 12 meses (indicando el esfuerzo de pago de un cliente); Y
 - "Saldo total adeudado" es mayor que \$0 (sin saldo de crédito a cuenta).

Despliegue de energía limpia - Medición neta de energía (NEM) para DACs

DAC- Solar Comunitaria (DAC-CS)

- Las instalaciones solares deben estar ubicadas en una comunidad del superior 25% de DACs o comunidad piloto de San Joaquín Valley
- Abierto a clientes residenciales en los superior 25% de DACs del dentro de 5 millas de la instalación solar (o 40 millas para las comunidades piloto de SJV)
- Al menos el 50% de los suscriptores deben ser de bajos ingresos
- Los suscriptores reciben un 20% de descuento en su factura eléctrica general
- Puede atender hasta 41 MW y 6800 clientes en todo el estado
- El Patrocinador debe ser una entidad gubernamental local o sin fines de lucro (podría ser una escuela o un agregador de opciones comunitarias)
- PG&E acaba de completar el primer ciclo de RFO, las selecciones anunciadas pronto.
- Otro ciclo planeado este año

Despliegue de energía limpia - Medición neta de energía (NEM) para DAC

Esfuerzos para ampliar el acceso a la energía solar para familias de bajos ingresos e inquilinos.

Solar en viviendas asequibles multifamiliares (SOMAH)- www.calsomah.org

- Equipo de Administradores del Programa: Asociación para la Asequibilidad Energética (AEA), el Centro de Energía Sostenible (CSE) y **LAS Alternativas GRID (GRID)**, Alternativas a la Cuadrícula
- **DAC-Hogares solares para familias individuales (DAC-SASH)-**
- Program Administrator: **Grid Alternatives**
- El programa proporciona \$8.5 millones en incentivos anualmente hasta 2030, para ayudar a los propietarios de viviendas en comunidades desfavorecidas a ser solares, para ser financiados por ingresos de derechos de emisión de gases de efecto invernadero de servicios públicos o fondos del programa de propósito público.

Despliegue de energía limpia -Almacenamiento

Programa de Incentivos a la Autogeneración (SGIP) - www.pge.com/sgip

El almacenamiento de la batería puede ser un componente importante de un plan de preparación para emergencias más robusto en caso de un corte de energía.

- Ofrece descuentos para instalar tecnología de almacenamiento de energía en instalaciones residenciales y no residenciales.
 - Las tecnologías de almacenamiento incluyen sistemas de almacenamiento de baterías que pueden funcionar durante un corte de energía.
 - En preparación para la próxima temporada de incendios forestales, la CPUC ha autorizado una financiación de más de 1.000 millones de dólares hasta 2024 para SGIP.
 - Este financiamiento incluye la priorización de las comunidades que viven en áreas de alta amenaza contra incendios, comunidades que han experimentado dos o más eventos de cierre de energía de seguridad pública (PSPS, por sus", por sus", por sus cuentas, por sus alrededores), así como clientes de **bajos ingresos y médicamente vulnerables**. Los fondos también están disponibles para "instalaciones críticas" que apoyan la resiliencia de la comunidad en caso de un PSPS o un incendio forestal.
- 9 • Dependiendo de la batería y cuánto la esté utilizando, las baterías pueden proporcionar energía durante varias horas o más.

Despliegue de vehículos sin emisiones

- Reembolsos DE PEV estándar de combustible de bajo carbono- <https://ev.pge.com/incentives/>
- Vehículo eléctrico enchufable (PEV) Tasas de tiempo de uso:
 - 2 tarifas disponibles
 - EV-B

Despliegue de vehículos sin emisiones

- **Programa de Cargadores Rápidos de Corriente Directa (DCFC) Make Ready**
 - \$22,4 millones de presupuesto total, ejecución a 5 años
 - Instale la infraestructura lista en 54 sitios para apoyar 234 DCFC stations
 - El 25% de los sitios deben estar ubicados en un DAC
 - Proporciona hasta \$25,000 de reembolso a sitios para apoyar la compra de DCFC
 - Requiere que todos los DCFC sean accesibles al público
- **Escuelas de Carga EV (AB 1082)**
 - \$5.76M presupuesto total, ejecución a 2 años
 - 88-132 puertos de nivel 2 (L2) en 22 escuelas.
 - El 40% de los sitios deben estar ubicados en un DAC
 - Se dirigirá a las escuelas ubicadas en los condados de Alameda, Fresno y San Joaquín, pero puede ampliar el alcance a otras escuelas ubicadas en un DAC.
- **Parques de carga EV (AB 1083)**
 - \$5.54M presupuesto total, ejecución a 2 años
 - 40 puertos L2 y 3 DCFC en 15 parques estatales
 - El 25% de los sitios deben estar ubicados en un DAC
- **Empoderar EV - *no tiene como objetivo DAC, pero todos los clientes tendrán ingresos bajos y moderados.***
 - \$4.13M presupuesto total, implementación a 1 año
 - Aproximadamente 2.000 cargadores L2 y 800 actualizaciones de paneles.
 - Proporciona un reembolso de \$500 punto de venta para que los clientes de bajos y moderados ingresos (LMI) compren e instalen cargadores L2 residenciales y un reembolso de \$2,000 para actualizaciones de un panel.
 - Umbral de ingresos definido por los clientes en o por debajo del 400% del Nivel Federal de Pobreza.
 - Disponible para propietarios de casas y inquilinos que viven en una propiedad de alquiler.
 - PG&E se asociará con organizaciones comunitarias para realizar actividades de divulgación a los clientes de LMI.

Despliegue de vehículos sin emisiones

Si también está interesado en programas de servicio medio/servicio pesado, a continuación encontrará información sobre el programa Fleet Ready de PG&E.

Fleet Ready

- Presupuesto total de \$236M, implementación a 5 años
- Mínimo 700 sitios y apoyar la electrificación de al menos 6.500 vehículos de flota MD/HD
- El 25% del presupuesto del programa debe destinarse a la infraestructura instalada en un DAC
- 50% de los reembolsos de costos de EVSE para sitios y sitios de DAC que apoyarán a la escuela eléctrica y los autobuses de tránsito.

Energy Efficiency

- **Asistencia para el ahorro de energía (ESA)**

- Los participantes en el programa CARE también pueden calificar para el programa de Asistencia de Ahorro de Energía.
- Si vives en una casa, apartamento o casa móvil de cinco años o más, podrías recibir mejoras gratuitas para hacer que tu hogar sea más eficiente energéticamente, seguro y cómodo.
- Tanto los inquilinos como los propietarios son elegibles.
- Debido a COVID19 todas las OME están permitiendo temporalmente la autocertificación de ingresos a través de una declaración jurada para el programa e
-

CPUC Former & Future Pilots & Programs

Clean Energy Deployment

- Procedimiento Valle de San Joaquín (SVJ) Fase III
- SB 1477 Pilotos de descarbonización de edificios
 - Iniciativa de construcción para el desarrollo de bajas emisiones (BUILD)
 - Tecnología y equipo para calefacción limpia (TECH)

Zero-Emission Vehicle Deployment

- SB 350 Piloto de submestro de vehículo eléctrico enchufable de electrificación de transporte (PEV)
- Departamento de Defensa Vehículo a Cuadrícula (V2G) Pilot Projects

Agriculture Programs

- Incentivo a la conversión del motor de combustión interna agrícola (AG-ICE)

Opciones de Programas del CPUC para promover la energía limpia y reducir la contaminación del aire en comunidades de justicia ambiental y social de AB 617

La Comisaria [Martha Guzman Aceves](#) de la Comisión de Servicios Públicos de California (CPUC), ha publicado un informe sobre opciones de los programas de agencia con el potencial de ampliar los beneficios de las energías limpias y ayudar a reducir las emisiones en las comunidades de la Ley de la Asamblea (AB) 617.

RESUMEN EJECUTIVO

Este informe desarrolla una clasificación de fuentes de contaminación del aire que afectan a las 10 comunidades seleccionadas por el AB 617 para programas de monitoreo del aire y reducción de emisiones comunitarias a través de [California Air Resources Board \(CARB\)'s Community Air Protection Program](#). La clasificación organiza las fuentes de contaminación identificadas por el monitoreo del aire y reducción de emisiones de cada comunidad y se utiliza para identificar programas del CPUC con el potencial de reducir las emisiones y promover la energía limpia en cada comunidad. Los programas de CPUC pendientes y anteriores con aplicaciones potenciales para los sectores de fuentes de emisión también están en consideración para pólizas nuevas.

Aunque este informe es principalmente una guía para los distritos regionales del aire que navegan las opciones que ofrece CPUC que puedan apoyar a reducir las emisiones, también ofrece recomendaciones para los encargados a niveles regionales y estatales. Aunque este documento identifica los programas del CPUC que pueden mejorar los problemas que enfrentan las comunidades de la AB 617, se necesita un análisis adicional a nivel comunitario para evaluar la eficacia y las implicaciones de costos de cada programa.

La implementación del Programa Comunitario de Protección del Aire se presenta durante un tiempo importante en el CPUC, especialmente que el CPUC implemento el [Environmental and Social Justice Action Plan](#) y se enfoca en atender las necesidades de las comunidades desfavorecidas (DAC) identificadas por el Proyecto de Ley del Senado (SB) 350. A medida que los Distritos de Aire Regionales se preparan para implementar sus planes propuestos para el primer año del Programa y CARB se prepara para considerar la selección de comunidades adicionales, el CPUC tiene la oportunidad de colaborar con CARB y los Distritos de Aire para aprovechar los programas de la agencia en asistir obtener la justicia ambiental y social en todo el estado.

PROGRAMAS ACTUALES

Los siguientes programas quizás estén disponibles para proporcionar beneficios en las comunidades del AB 617 ESJ:

Despliegue de energía limpia

- Solar en viviendas multifamiliares económico s(SOMAH)
- Casas solares para familias individuales DAC (DAC-SASH)
- Dac-Tarifa Verde (DAC-GT)
- Tarifa Verde, Energías renovables compartidas (GTSR) en los DAC
- Solar Comunitario Tarifa Verde (CSGT)
- Iniciativa Solar Térmica California (CSI-T)
- Programa de Incentivos de Autogeneración (SGIP)
- Cargo por inversión del Programa Eléctrico (EPIC)

No renovables de bajas emisiones

- Celda de combustible de medición de energía neta (NEMFC)

Despliegue de vehículos sin emisiones

- Tarifas de tiempo de uso para vehículos eléctricos enchufables (PEV)
- Tarifas de PEV estándar de combustible de bajo carbono
- Campeones de ODS&E por aire limpio
- PROYECTOS de Electrificación SB 350
- Programas piloto de infraestructura EV: Encienda su Manejada, Listo para Cargar, Red de Carga EV
- Programas piloto de infraestructura en escuelas y parques y playas estatales

Eficiencia energética

- Asistencia para el Ahorro de Energía (ESA)

Save money with the sun!

You may qualify for programs that can help **save you money** on electricity and fuel costs!

Lower your electric bills

PEOPLE IN YOUR HOUSEHOLD	ANNUAL HOUSEHOLD INCOME
1	\$34,480
3	\$54,300
4	\$65,500
5	\$76,700
6	\$87,900
7	\$99,100
8	\$XX,XXX

Save up to 90% on your monthly electric bills and bring clean energy to your neighborhood.

If you own your own home and your household income is within these limits, you may qualify to receive a solar electric system **at NO COST** through GRID Alternatives' Energy for All Program.

Spend less on gas

PEOPLE IN YOUR HOUSEHOLD	ANNUAL HOUSEHOLD INCOME
1	\$49,960
2	\$67,640
3	\$85,320
4	\$103,000
5	\$120,680
6	\$XXX,XXX
7	\$XXX,XXX

Electric cars combat climate change, replacing cars that pollute our neighborhoods.

[Program name] helps qualified residents retire their older cars and replace them with clean, efficient electric vehicles. Your household income will determine the amount of money you can receive from this program.

CLEAN CARS FOR ALL

Savings for you, clean power for your community.

ENERGY FOR ALL

State Funded Solar Systems!

Lower Your Electric Bill!

ENERGY FOR ALL
A program of GRID Alternatives

Eligibility Requirements

- You must own and live in your home.
- Your roof must be suitable for a solar electric system.
- You must reside in Southern California Edison territory.
- Your total household income must be at or below 80% of the county's median income.

HOUSEHOLD SIZE	ANNUAL GROSS INCOME
1	\$39,150
2	\$44,750
3	\$50,350
4	\$55,900
5	\$60,400
6	\$64,850
7	\$69,350
8	\$73,800

Do you pay more than you can afford for electricity?

You might qualify for a statewide program to help you save on your energy bills.

If you own your home and are at or below these income requirements, you can save up to **80%** on your electric bill!

Do you qualify?

PEOPLE IN YOUR HOUSEHOLD	ANNUAL HOUSEHOLD INCOME
1-2	\$33,820
3	\$42,661
4	\$51,501
5	\$60,341
6	\$69,181
7	\$78,021

Household limits expire June 1, 2020.

THE ENERGY FOR ALL PROGRAM WILL HELP YOU:

- Save money
- Invest in your home
- Bring clean power to your neighborhood
- Be a clean energy leader in your community

Meeting Highlights*

AB 617 Shafter Community Steering Committee Meeting #21

July 13, 2020 3:00pm-5:00pm

Zoom Virtual Meeting

Action items for the Shafter Community Steering Committee:

- Contact the Valley Air District if interested in being a community co-host for a future meeting.
- Let the Valley Air District know if you're interested in continuing PM 10 monitoring in Shafter.
- Continue to inform the Valley Air District
 - About particular locations where CSC members have observed residential burning.
 - Whether open burning is more prevalent at particular times of the day.
 - About particular locations where CSC members have observed residential burning.
 - Whether illegal idling is more prevalent at particular times of the day.
 - Where the District should focus future enforcement efforts.

Action items for San Joaquin Valley Air Pollution Control Air District:

- Report back to the CSC with the number of facilities with past violations on illegal burning and fireplaces that will be inspected more frequently in the seven-mile radius.
- Provide a tool that shows where implementation of measures is taking place.

Welcome and Introductions

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Hanna welcomed the all participants, introduced the ILG team, and gave an agenda overview and Zoom instructions. Translation instructions were given for Spanish speaking members. Ryan provided a welcome and thanked everyone for attending.

Enforcement Measures Update

Jake Felton, Director of Compliance, Valley Air District

Helena Rhim, Air Protection Specialist, California Air Resources Board (CARB)

Jake presented on the status of implementation of Community Emission Reduction Program (CERP) enforcement measures and solicited feedback. Presentation highlights:

- The District performs enforcement on a full suite of compliance assurance and assistance activities
- The District encourages everyone to share air pollution concerns
- Stationary source inspections and complaint investigations are conducted to determine compliance with health protective local, state, and federal regulations that target criteria and toxic air pollutants
- There was enhanced enforcement of District Rule 4901 during the 2019/20 wood burning fireplace and wood burning heaters curtailment season performed in the Shafter community to limit localized PM2.5 impacts because there have been additional violations recorded in

the past year, which consisted of 4 hours of surveillance performed on each day a curtailment was declared by the District

- Ongoing enhanced enforcement will focus where residential wood burning is most prevalent and in areas of concern identified by CSC and members of the public
- Enhanced enforcement of open burning is performed by trained field staff that look to immediately address any type of open burning non-compliance in the Shafter community and to take appropriate enforcement action when confirmed
- A few questions for the CSC to consider:
 - Are there particular locations where CSC members have observed residential burning?
 - Where should the District focus future enforcement efforts?
 - Is open burning more prevalent at particular times of the day?
- The District has been performing enhanced inspections of permitted facilities with emissions violations
- The District developed a pilot training program to assist gas station operators with conducting thorough self-inspections of the vapor recovery systems at their stations, however, due to the COVID-19 pandemic and the need to work closely with the facility staff to provide the training, the training has been postponed
- The District and CARB enforcement staff have been conducting enhanced enforcement of the state's heavy duty vehicle anti-idling regulations.
- A few questions for the CSC to consider:
 - Are there particular locations where CSC members have observed illegal idling?
 - Where should the District focus future enforcement efforts?
 - Is idling more prevalent at particular times of day?

Question: On the 4901 fireplace violations that we found last year and the 4103 illegal burning, (about 17 total) were any fines paid because of those violations?

Answer: The statistics only reflect enforcement during the 19/20 season and violations result in monetary penalties.

Question: What about the 4103 illegal burning that includes burning on farms that has not been properly permitted?

Answer: Any violations of Rule 4103 documented by District staff, whether by a resident, business, or a farmer, results in the District taking enforcement action against the person or party.

Question: When the person is inspecting four hours a day for fireplace violations, are they looking at them for other illegal burning around Shafter?

Answer: Yes. Regardless of what particular enforcement activity is being performed, if any other potential non-compliance is observed, trained District staff will investigate the matter and take appropriate enforcement action when necessary.

Question: Of the facilities that have past violations that are now going to be inspected more frequently, can you tell me how many there are in the seven-mile radius?

Answer: I don't have that number on hand, but can get it to you.

CARB's Helena Rhim provided training to the CSC on proper filing of environmental complaints. Presentation highlights included:

- When CARB or District staff aren't around to witness a reportable air pollution violation, there are options
- You are your community's biggest resource and enforcement's biggest tool
- After filing the complaint, the complaint will be investigated or referred to the correct regulatory agency for follow-up
- Be as descriptive as possible when reporting a complaint
- A district inspector will be assigned the complaint
- The inspector will contact the reporting party, investigate the complaint, take appropriate action, and then follow-up with the reporting party
- Not all complaints can be resolved immediately; please be patient and continue to file complaints if a violation reoccurs
- One household can complain once per day about a specific complaint
- In 2019 in Shafter, CARB conducted 213 program inspections on heavy-duty diesel vehicles and found 204 were in compliance
- CARB conducted an idling sweep in the first quarter of 2020 and didn't find any idling violations

Question: Who would be the appropriate agency to complain to when the smoke levels in Shafter were measured a couple hundred times above any health standards on July 4th?

Answer: The Valley Air District.

Chat Question: Are there follow up tracking codes or names that we can ask for when making a complaint, especially if there is no update on a complaint after some time has passed?

Chat Answer: Whenever you make a complaint to California Environmental Protection Agency (CalEPA) you will be given a complaint number for follow-up (COMP-####). You are welcome to contact me (Helena Rhim) about your claim status. When subject to Valley Air District requirements, the District inspector will contact you before/after your complaint is investigated and will follow up with findings. If you call to file a complaint, please ask for the complaint number. If you submit a complaint online or via our mobile app, the complaint number will be provided to you.

Breakout Groups:

The facilitators described the breakout group process and all attendees transitioned to smaller breakout groups for more in-depth discussion about enforcement measures that are happening or need to happen in Shafter community.

Highlights from the Group Discussion Report Outs:

Group #1:

- The group spoke a lot about idle trucks and their path through Shafter. They discussed sensitive areas in front of Golden Oaks Elementary School, how heavy traffic affects how long diesel trucks are there, and how the accumulated emissions affect the air near the school.

They also covered a few points on the increased audits and inspections for sites that have known histories of violations as well.

Group #2:

- Fireworks are a big issue. The smoke seems to have been extremely bad this year. There was a lot of smoke from legal and illegal fireworks in June. These issues seem to continue well before and after major holidays.
- The group also discussed legal and illegal burning that goes on around the community (mostly in the country). Trees that are burned legally are supposed to be dry, but we also see the burning of green and wet trees. There appears to be no real enforcement of that once the permit is given. There is also legal burning of tires and pesticide bags that pollute the air.

Group #3:

- The group had a back and forth discussion about the extensive Committee work and input provided since the beginning, and about CERP implementation measures that mostly appear to be existing District projects.
- The group did not focus on types and locations of the emission reduction measures and would like to have future opportunity to do that.

Group #4:

- The group members are eager to see progress on the implementation of the CERP measures.
- The group recalled that the District will be submitting a report to CARB in a few weeks and would like to have another meeting to discuss that report, review it and provide feedback.

CARB Resolution and September Report to CARB

Skott Wall, Community Liaison, CARB

Skott provided an update on the CARB resolution on the Shafter CERP and focused on several board-directed action items related to incentives and pesticides. These action items include:

- Develop a process for making adjustments to incentive measures based on the priorities of the steering committee.
- Develop specific criteria for project selection and funding amounts and consider community priorities.
- Provide flexibility in the passenger vehicle replacement program.
- Provide resources in the urban greening strategy.
- The Department of Pesticide Regulation (DPR) will work to implement a pilot study for 1,3-D and include mitigation methods that achieve reductions equivalent to Totally Impermeable Film (TIF) tarping.
- DPR will identify options for a suitable pesticide notification system in the Shafter area
- Continue to develop local emissions information.

- Update program's technical description of pesticide authorities to be consistent with state's language.

District: All the points made by CARB regarding the Resolution will require a significant coordination with CARB, the District, and DPR and the District looks forward to working together with the CSC on these efforts.

Question: Given the Resolution that we just heard, what is the timeline of incentivizing individuals to change the house heating system from natural gas to an electric heat pump?

District: One of the processes we have to go through is determining if there are any existing incentive programs that have already been approved by CARB. If not, then the new program guidelines have to be approved. We are working closely with CARB to expedite this process.

Standing Updates

Val Dolcini, Director, California Department of Pesticide Regulation (CDPR)

Jon Klassen, Director of Air Quality Science and Planning, Valley Air District

Jaime Holt, Chief Communication Officer, Valley Air District

Jessica Olsen, Program Manager, Valley Air District

Val gave a brief update on pesticide notifications. Presentation highlights:

- Mitigation pilots are moving forward.
- DPR has had conversations with the chemical manufacturers, Agricultural Commissioners, growers, applicators, etc.
- We are working towards mitigation pilots that would begin in September and would seek to achieve the same effectiveness as TIF tarping.
- Many conversations are already taking place. The goal is to build a strong foundation for improvements to the pilot notification program. We're meeting with some CSC members, the Kern County Ag Commissioner, other advocates in the Central Valley, CARB, and the Kern County Farm Bureau.
- This will be a slow process, but one that we are committed to.
- It may be tough to measure our process, but we're excited to be engaged in collaborative conversations for the first time ever.
- We will report back as we make progress.

Question: What is the update from the Agricultural Commissioner on the notification? That's a big part of the notification coming from DPR.

Answer: The Commissioner will need to be at the table with a wide range of people to hear from the community about what they would like to see in the notification system.

Jon gave a brief update on PM10 monitoring in Shafter. Presentation highlights:

- Last year, we monitored from approximately August through the end of the year to capture emissions from the harvest season in the Shafter area.

- We need feedback from the CSC to know if you are interested in having us follow the same process this year.

Comment: Some CSC members have not been able to discuss this deeply, but I think there is strong support for this. The reason it is needed became clear when we saw a minimum of four PM10 violations in Shafter in the fall. The Air District claims to be in compliance with that standard, yet four violations a year is in clear violation of that standard. We need another season or two of data and would ideally like to have at least five years of data going forward.

Jaime gave a brief update on the CERP implementation and the School Air Filtration and School Bus Replacement Subcommittee. Presentation highlights:

- The kick off meeting took place this month.
- There is a need to better understand the inventory at various schools, site needs and the costs associated with improvements.
- Some schools may be newer and it may be as easy as giving them an inexpensive air filter; some schools that are older may have complex systems that don't allow us to easily do that.
- We have already begun to do some outreach based on the CSC ideas shared at January CSC meeting, including securing a billboard (CERP strategy), to educate the community about trash burning.
- We are also actively advertising on social media and we have launched the real time air advisory network app.

Jessica gave a brief update on the CERP Strategies Tracker. Presentation highlights:

- The Valley Air District has developed a document that tracks CERP implementation progress. The document will be translated in Spanish and posted on the website shortly.
- Besides staying informed about the implementation updates and the District's work and outcomes, CSC members will be able to use this tool as a menu of options to identify discussion items for the next committee meetings and review summaries from these discussions.

Question: Is it possible to have another CSC meeting before the August meeting? We want to go over the CARB report and do our follow up.

Answer: There will be a verbal progress report given in September to the CARB Board followed by the comprehensive written annual report for Valley Air District board meeting in October. There will be an opportunity and time (more than several weeks) for the Committee to review and provide input on the annual report.

Wrap Up/Next Steps

Hanna Stelmakhovich, ILG

Hanna thanked everybody for participating in the meeting.

Public Comment:

No public comment.

Reminders:

The next meeting is August 10 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*
Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #21
13 de julio de 2020 3:00pm-5:00pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Shafter:

- Comuníquese con el Distrito del Aire del Valle si está interesado en ser un coanfitrión de la comunidad para una reunión futura.
- Informe al Distrito del Aire del Valle si está interesado en continuar con el monitoreo de PM 10 en Shafter.
- Continuar informando al Distrito del Aire del Valle
 - Acerca de lugares particulares donde los miembros del Comité han observado incendios residenciales.
 - Si la quema al aire libre es más frecuente en determinados momentos del día.
 - Acerca de lugares particulares donde los miembros del Comité han observado incendios residenciales.
 - Si el dejar el motor encendido ilegal es más frecuente en determinados momentos del día.
 - Dónde el Distrito debería enfocar los esfuerzos futuros de cumplimiento.

Artículos de Acción para el Distrito del Aire:

- Informar al Comité con el número de instalaciones con infracciones pasadas sobre quema ilegal y chimeneas que serán inspeccionadas con más frecuencia en el radio de siete millas.
- Proporcionar una herramienta que muestre dónde se está llevando a cabo la implementación de las medidas.

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)
Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle

Hanna dio la bienvenida a todos los participantes, presentó al equipo de ILG y dio una descripción general de la agenda y las instrucciones de Zoom. Se dieron instrucciones de traducción para miembros de habla hispana. Ryan dio la bienvenida y agradeció a todos por asistir.

Actualización de las Medidas de Cumplimiento

Jake Felton, Director de Cumplimiento, Distrito del Aire del Valle
Helena Rhim, Especialista de Protección del Aire, Junta de Recursos del Aire de California (CARB)

Jake presentó el estado de implementación de las medidas de cumplimiento del Programa de Reducción de Emisiones Comunitarias (CERP) y solicitó comentarios. Puntos importantes de la presentación:

- El Distrito realiza el cumplimiento de un conjunto completo de actividades de asistencia y garantía de cumplimiento

- El Distrito anima a todos a compartir sus preocupaciones sobre la contaminación del aire.
- Se realizan inspecciones de fuentes estacionarias e investigaciones de quejas para determinar el cumplimiento de las regulaciones locales, estatales y federales de protección de la salud que se enfocan en los contaminantes criterio y tóxicos del aire.
- Se mejoró el cumplimiento de la Regla 4901 del Distrito durante la temporada 2019/20 de restricción de chimeneas y aparatos de leña que se llevó a cabo en la comunidad de Shafter para limitar los impactos de PM2.5 localizados porque se han registrado infracciones adicionales en el último año, que consistieron en 4 horas de vigilancia realizadas cada día en que el Distrito declaró una restricción
- El cumplimiento mejorado continua se enfocará donde la quema de leña residencial es más frecuente y en áreas de preocupación identificadas por el Comité y miembros del público.
- El cumplimiento mejorado de la quema al aire libre es realizado por personal de campo capacitado que busca abordar de inmediato cualquier tipo de incumplimiento de la quema al aire libre en la comunidad de Shafter y tomar las medidas de cumplimiento apropiadas cuando se confirma.
- Algunas preguntas para que el Comité las considere:
 - ¿Hay lugares particulares donde los miembros del Comité hayan observado incendios residenciales?
 - ¿Dónde debe enfocar el Distrito los esfuerzos futuros de cumplimiento?
 - ¿La quema al aire libre es más frecuente en determinados momentos del día?
- El Distrito ha estado realizando inspecciones mejoradas de instalaciones permitidas con infracciones de emisiones.
- El Distrito desarrolló un programa de capacitación piloto para ayudar a los operadores de estaciones de servicio a realizar autoinspecciones exhaustivas de los sistemas de recuperación de vapor en sus estaciones, sin embargo, debido a la pandemia de COVID-19 y la necesidad de trabajar en estrecha colaboración con el personal de la instalación para proporcionar la capacitación, la capacitación se ha pospuesto
- El personal del Distrito y de CARB ha estado llevando a cabo un cumplimiento mejorado de las regulaciones estatales contra dejar el motor encendido de vehículos de servicio pesado.
- Algunas preguntas para que el Comité las considere:
 - ¿Hay lugares en particular donde los miembros del Comité hayan observado motores encendidos mientras estacionados ilegal?
 - ¿Dónde debe enfocar el Distrito los esfuerzos futuros de cumplimiento?
 - ¿El dejar el motor encendido mientras estacionado es más frecuente en determinados momentos del día?

Pregunta: Sobre las infracciones (Regla 4901) de chimeneas que encontramos el año pasado y las quemas ilegales (Reglad 4103), (alrededor de 17 en total) ¿se pagaron multas debido a esas infracciones?

Respuesta: Las estadísticas solo reflejan el cumplimiento durante la temporada 19/20 y las infracciones dan lugar a sanciones monetarias.

Pregunta: ¿Qué pasa con la quema ilegal (Regla 4103) que incluye la quema en granjas que no ha sido debidamente permitida?

Respuesta: Cualquier infracción de la Regla 4103 documentada por el personal del Distrito, ya sea por un residente, una empresa o un agricultor, tiene como resultado que el Distrito tome medidas de cumplimiento contra la persona o parte.

Pregunta: Cuando la persona está inspeccionando cuatro horas al día en busca de infracciones de chimeneas, ¿están mirando por otras quemas ilegales alrededor de Shafter?

Respuesta: Sí. Independientemente de la actividad de cumplimiento en particular que se esté realizando, si se observa cualquier otro incumplimiento potencial, el personal capacitado del Distrito investigará el asunto y tomará las medidas de cumplimiento apropiadas cuando sea necesario.

Pregunta: De las instalaciones que han tenido infracciones pasadas que ahora serán inspeccionadas con más frecuencia, ¿puede decirme cuántas hay en el radio de siete millas?

Respuesta: No tengo ese número a mano, pero puedo dárselo.

Helena Rhim de CARB brindó capacitación al Comité sobre la presentación adecuada de quejas ambientales. Puntos importantes de la presentación incluyeron:

- Cuando el personal de CARB o del Distrito no está presente para presenciar una infracción denunciante de contaminación del aire, existen opciones
- Eres el recurso más grande de tu comunidad y la herramienta más grande para hacer cumplir la ley
- Después de presentar la queja, la queja será investigada o remitida a la agencia reguladora correspondiente para su seguimiento.
- Sea lo más descriptivo posible al informar una queja
- Se asignará la queja a un inspector de distrito
- El inspector se pondrá en contacto con la parte informante, investigará la queja, tomará las medidas adecuadas y luego hará un seguimiento con la parte denunciante.
- No todas las quejas se pueden resolver de inmediato; tenga paciencia y continúe presentando quejas si se repite una infracción
- Un hogar puede quejarse una vez al día sobre una queja específica
- En 2019 en Shafter, CARB llevó a cabo 213 inspecciones del programa en vehículos diésel de servicio pesado y encontró que 204 cumplían
- CARB realizó un barrido de motores encendidos mientras estacionados en el primer trimestre de 2020 y no encontró ninguna infracción de inactividad

Pregunta: ¿Quién sería la agencia apropiada para quejarse cuando los niveles de humo en Shafter se midieron un par de cientos de veces por encima de los estándares de salud el 4 de julio?

Respuesta: El Distrito del Aire del Valle.

Pregunta por Chat: ¿Existen códigos de seguimiento o nombres que podamos solicitar al presentar una queja, especialmente si no se actualiza una queja después de un tiempo?

Respuesta por Chat: Siempre que presente una queja ante la Agencia de Protección Ambiental de California (CalEPA), se le dará un número de queja para seguimiento (COMP-####). Puede ponerse en contacto conmigo (Helena Rhim) sobre el estado de su reclamo. Cuando esté sujeto a los

requisitos del Distrito de Aire del Valle, el inspector del Distrito se comunicará con usted antes o después de que se investigue su queja y hará un seguimiento de los hallazgos. Si llama para presentar una queja, solicite el número de queja. Si envía una queja en línea o mediante nuestra aplicación móvil, se le proporcionará el número de queja.

Grupos de Trabajo:

Los facilitadores describieron el proceso de los grupos de trabajo y todos los asistentes pasaron a grupos de trabajo más pequeños para una discusión más profunda sobre las medidas de cumplimiento que están sucediendo o deben suceder en la comunidad de Shafter.

Puntos importantes de los informes de los grupos de trabajo:

Grupo #1:

- El grupo habló mucho sobre camiones con motores encendidos mientras estacionados y su camino a través de Shafter. Hablaron sobre áreas sensibles frente a la Escuela Golden Oaks, cómo el tráfico pesado afecta el tiempo que los camiones diésel están allí y cómo las emisiones acumuladas afectan el aire cerca de la escuela. También cubrieron algunos puntos sobre el aumento de auditorías e inspecciones para sitios que también tienen antecedentes conocidos de infracciones.

Grupo #2:

- Los fuegos artificiales son un gran problema. El humo parece haber sido extremadamente malo este año. Había mucho humo de fuegos artificiales legales e ilegales en junio. Estos problemas parecen continuar mucho antes y después de los principales días feriados.
- El grupo también discutió las quemas legales e ilegales que ocurren en la comunidad (principalmente en el campo). Se supone que los árboles que se queman legalmente están secos, pero también vemos la quema de árboles verdes y húmedos. No parece haber un cumplimiento real de eso una vez que se otorga el permiso. También existe la quema legal de neumáticos y bolsas de pesticidas que contaminan el aire.

Grupo #3:

- El grupo tuvo una discusión sobre el extenso trabajo del Comité y los aportes proporcionados desde el principio, y sobre las medidas de implementación del CERP que en su mayoría parecen ser proyectos existentes del Distrito.
- El grupo no se centró en los tipos y ubicaciones de las medidas de reducción de emisiones y le gustaría tener una oportunidad futura para hacerlo.

Grupo #4:

- Los miembros del grupo están ansiosos por ver el progreso de la implementación de las medidas del CERP.
- El grupo recordó que el Distrito enviará un informe a CARB en unas pocas semanas y le gustaría tener otra reunión para discutir ese informe, revisarlo y proporcionar comentarios.

Resolución de CARB e Informe de septiembre a CARB

Skott Wall, Enlace Comunitario, CARB

Skott proporcionó una actualización sobre la resolución de CARB sobre el CERP de Shafter y se centró en varios elementos de acción dirigidos por la Mesa relacionados con incentivos y pesticidas. Estos elementos de acción incluyen:

- Desarrollar un proceso para hacer ajustes a los incentivos basados en las prioridades del comité directivo.
- Desarrollar criterios específicos para la selección de proyectos y montos de financiamiento y considerar las prioridades de la comunidad.
- Brindar flexibilidad en el programa de reemplazo de vehículos de pasajeros.
- Aportar recursos en la estrategia de ecologización urbana.
- El Departamento de Regulación de Pesticidas (DPR) trabajará para implementar un estudio piloto para 1,3-D e incluirá métodos de mitigación que logren reducciones equivalentes a la lona de Plástico Totalmente Impermeable (TIF).
- El DPR identificará opciones para un sistema de notificación de pesticidas adecuado en el área de Shafter
- Continuar desarrollando información sobre emisiones locales.
- Actualizar la descripción técnica del programa de las autoridades de pesticidas para que sea consistente con el lenguaje del estado.

Distrito: Todos los puntos hechos por CARB con respecto a la Resolución requerirán una coordinación significativa con CARB, el Distrito y el DPR y el Distrito espera trabajar junto con el Comité en estos esfuerzos.

Pregunta: Dada la Resolución que acabamos de escuchar, ¿cuál es el cronograma para incentivar a las personas a cambiar el sistema de calefacción de la casa de gas natural a una bomba de calor eléctrica?

Distrito: Uno de los procesos por los que tenemos que pasar es determinar si hay programas de incentivos existentes que ya hayan sido aprobados por CARB. Si no es así, se deben aprobar las nuevas directrices del programa. Estamos trabajando en estrecha colaboración con CARB para acelerar este proceso.

Actualizaciones Permanentes

Val Dolcini, Director, Departamento de Regulación de Pesticidas de California (CDPR)

Jon Klassen, Director de Ciencia y Planificación de la Calidad del Aire, Distrito del Aire

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jessica Olsen, Gerente de Programas, Distrito del Aire del Valle

Val dio una breve actualización sobre las notificaciones de pesticidas. Puntos importantes de la presentación:

- Los pilotos de mitigación están avanzando.
- El DPR ha tenido conversaciones con los fabricantes de productos químicos, los comisionados agrícolas, los productores, los aplicadores, etc.
- Estamos trabajando hacia pilotos de mitigación que comenzarían en septiembre y buscarían lograr la misma efectividad que la lona TIF.

- Ya se están llevando a cabo muchas conversaciones. El objetivo es construir una base sólida para mejorar el programa piloto de notificaciones. Nos reuniremos con algunos miembros del Comité, el Comisionado de Agricultura del Condado de Kern, otros defensores en el Valle Central, CARB y la Oficina Agrícola del Condado de Kern.
- Este será un proceso lento, pero con el que estamos comprometidos.
- Puede ser difícil medir nuestro proceso, pero estamos entusiasmados de participar en conversaciones colaborativas por primera vez.
- Informaremos a medida que avancemos.

Pregunta: ¿Cuál es la actualización del Comisionado de Agricultura sobre la notificación? Esa es una gran parte de la notificación que proviene del DPR.

Respuesta: El Comisionado deberá estar en la mesa con una amplia gama de personas para escuchar a la comunidad sobre lo que les gustaría ver en el sistema de notificación.

Jon dio una breve actualización sobre el monitoreo de PM10 en Shafter. Puntos importantes de la presentación:

- El año pasado, monitoreamos desde aproximadamente agosto hasta el final del año para capturar las emisiones de la temporada de cosecha en el área de Shafter.
- Necesitamos comentarios del Comité para saber si está interesado en que sigamos el mismo proceso este año.

Comentario: Algunos miembros del Comité no han podido discutir esto en profundidad, pero creo que hay un fuerte apoyo para esto. La razón por la que se necesita quedó clara cuando vimos un mínimo de cuatro infracciones de PM10 en Shafter en el otoño. El Distrito del Aire afirma estar en cumplimiento con ese estándar, sin embargo, cuatro infracciones al año es una clara violación de ese estándar. Necesitamos otra temporada o dos de datos e idealmente nos gustaría tener al menos cinco años de datos en el futuro.

Jaime dio una breve actualización sobre la implementación del CERP y el Subcomité de Filtración de Aire Escolar y Reemplazo de Autobuses Escolares. Puntos importantes de la presentación:

- La reunión inicial tuvo lugar este mes.
- Existe la necesidad de comprender mejor el inventario en varias escuelas, las necesidades del sitio y los costos asociados con las mejoras.
- Algunas escuelas pueden ser más nuevas y puede ser tan fácil como darles un filtro de aire económico; algunas escuelas que son más antiguas pueden tener sistemas complejos que no nos permiten hacer eso fácilmente.
- Ya hemos comenzado a hacer alcance basado en las ideas del Comité compartidas en la reunión del Comité de enero, incluyendo la obtención de una valla publicitaria (estrategia del CERP), para educar a la comunidad sobre la quema de basura.
- También estamos publicitando activamente en las redes sociales y hemos lanzado la aplicación del sistema de la calidad del aire en tiempo real.

Jessica dio una breve actualización sobre Reporte de las Estrategias del CERP. Puntos importantes de la presentación:

- El Distrito del Aire del Valle ha desarrollado un documento que monitorea el progreso de la implementación del CERP. El documento se traducirá al español y se publicará en el sitio web próximamente.
- Además de mantenerse informados sobre las actualizaciones de implementación y el trabajo y los resultados del Distrito, los miembros del Comité podrán utilizar esta herramienta como un menú de opciones para identificar elementos de discusión para las próximas reuniones del comité y revisar resúmenes de estas discusiones.

Pregunta: ¿Es posible tener otra reunión del Comité antes de la reunión de agosto? Queremos repasar el informe de CARB y hacer nuestro seguimiento.

Respuesta: Habrá un informe de progreso verbal entregado en septiembre a la Junta de CARB seguido de un informe anual completo por escrito para la reunión de la Mesa Directiva del Distrito del Aire del Valle en octubre. Habrá una oportunidad y tiempo (más de varias semanas) para que el Comité revise y proporcione comentarios sobre el informe anual.

Resumen/Próximos Pasos

Hanna Stelmakhovych, ILG

Hanna agradeció a todos por participar en la reunión.

Comentario público:

Ningún comentario público.

Recordatorios:

La próxima reunión es el 10 de agosto a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

* *Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Agenda for Shafter Community Steering Committee Meeting #21

Monday, July 13, 2020 – 3:00 pm – 5:00 pm

Zoom Meeting: <https://zoom.us/j/92524913516>
Meeting ID: 925 2491 3516

Teleconference Dial In: 888 788 0099 US (Toll-free)

- 3:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
- 3:10 p.m. Enforcement Measures Update**
Discussion of CARB and District enforcement measures, including feedback on upcoming enforcement activities and discussion on how to file a complaint
Justin Shields, California Air Resources Board (CARB)
Jake Felton, Director of Compliance, Valley Air District
- Breakout Groups**
- 4:10 p.m. CARB Resolution and September Report to CARB**
Walk through the Board Resolution adopted by CARB in approval of the Shafter Community Emissions Reduction Program (CERP) and discuss September update to CARB
Valley Air District Staff
CARB Staff
- 4:35 p.m. Standing Updates**
Department of Pesticide Regulation (DPR): Pesticide notification update
Monitoring Plan: PM10 monitoring discussion
- 4:55 p.m. Wrap Up/Next Steps**
Next Meeting August 10, 2020: Zoom Call

Agenda para el Comité Directivo Comunitario de Shafter Reunión #21

Lunes, 13 de julio de 2020 – 3:00 pm a 5:00 pm

Reunión por Zoom: <https://zoom.us/j/92524913516>

Meeting ID: **925 2491 3516**

Teleconferencia: 888 788 0099 US (Llamada gratuita en inglés)

Para participar solamente por teléfono en Español:

Llamada gratuita: 888-431-3632

Código de acceso: 7406354

3:00 p.m.

Bienvenida e Introducciones

Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

3:10 p.m.

Actualización de las Medidas de Cumplimiento

Discusión de la implementación de la medida de cumplimiento del Distrito y CARB, incluyendo la solicitud de comentarios sobre las próximas actividades de cumplimiento y discusión sobre cómo presentar una queja

Justin Shields, Junta de Recursos del Aire de California (CARB)

Jake Felton, Director de Cumplimiento, Distrito del Aire del Valle

Discusiones en Grupo

4:10 p.m.

Resolución de CARB e Informe de septiembre a CARB

Repasar la Resolución de la Mesa adoptada por CARB en la aprobación del Programa de Reducción de Emisiones Comunitarias de Shafter (CERP) y hablar acerca de la actualización de septiembre a CARB

Personal del Distrito del Aire del Valle

Personal de CARB

4:35 p.m.

Actualizaciones

Departamento de Reglamentación de Pesticidas (DPR): Actualización de notificación de pesticidas

Plan de Monitoreo: Discusión de monitoreo de PM10

4:55 p.m.

Concluir/Próximos Pasos

Próxima Reunión 10 de agosto de 2020: Llamada por Zoom

Implementation of CERP Enforcement Measures in Shafter Community

AB 617 Community Steering Committee Meeting
July 13, 2020

Enforcement Program

- The District performs a full suite of enforcement and compliance assurance/assistance activities:
 - Inspections (routine and start-up) of both permitted and unpermitted sources
 - Equipment breakdown investigations
 - Source test observations
 - District-conducted monitoring and source testing
 - Complaint investigations

Enforcement Program (cont'd)

- Inspections and investigations are conducted to determine compliance with a multitude of health-protective local, state, and federal air quality regulations targeting both criteria and toxic pollutants. These include:
 - District rules and permit requirements, including Nonattainment New Source Review and Prevention of Significant Deterioration requirements
 - ARB's Airborne Toxic Control Measures
 - ARB's greenhouse gas regulations affecting landfills; oil and gas production, processing, transmission, and storage facilities; and refrigeration systems
 - Federal New Source Performance Standards, National Emission Standards for Hazardous Air Pollutants, and Maximum Available Control Technology standards

Elements of Enforcement Program

- Inspections and investigations of permitted sources
 - Advanced detection and monitoring equipment, CEMS
- Investigations of public complaints
- Enforcement of residential wood burning curtailments
- Enforcement of open burning prohibitions
- Conservation Management Practices program
- Fugitive dust program
- Portable equipment registration/inspection program
- Enforcement of federal asbestos standard
- Gasoline dispensing facility program
- Enforcement of consumer product and point-of-sale regulations
- Commercial diesel idling enforcement
- Indirect Source Review enforcement

Enhanced Enforcement of District Rule 4901 (Wood Burning Fireplace and Wood Burning Heaters) Curtailments

- To limit the potential for localized PM_{2.5} impacts associated with the failure to comply with mandatory episodic wood burning curtailments, District staff will conduct at least four (4) hours of surveillance within the Shafter community on each declared curtailment day for the next five (5) winter seasons to enhance the enforcement of District Rule 4901. The District will work with the Community Steering Committee to focus surveillance efforts in areas where wood burning is more prevalent.

Enhanced Enforcement of District Rule 4103 (Open Burning)

- To limit the potential for localized PM2.5 and toxic impacts associated with the illegal open burning of residential waste, District will conduct targeted surveillance efforts within the Shafter community. Building on the District's existing surveillance and complaint response efforts, the District will conduct additional targeted surveillance efforts in the Shafter community at least once per quarter for the next five (5) years. The District will work with the Community Steering Committee to focus surveillance efforts in areas where illegal residential open burning has historically occurred.

Enhanced Enforcement of District Rule 4103 (Open Burning) (cont'd)

- Feedback?
 - Are there particular locations where CSC has observed residential burning?
 - Where should District focus future enforcement efforts?
 - Is open burning more prevalent at particular times of day?

Fireplace and Open Burning Violations

Calendar Year
2020-Q1

Rule 4901

Rule 4103

CCR 93113

Enhanced Inspection Frequency of Permitted Sources

- To limit the potential for localized air quality impacts associated with the failure to comply with emissions standards established by District permit, rule, or regulation, the District will increase the frequency of inspection at each facility that has had an emission violation over the past three (3) years. These facilities will be inspected at least twice per calendar year for the next five (5) years or until the facility has four (4) consecutive inspections without an emission violation, whichever occurs first.

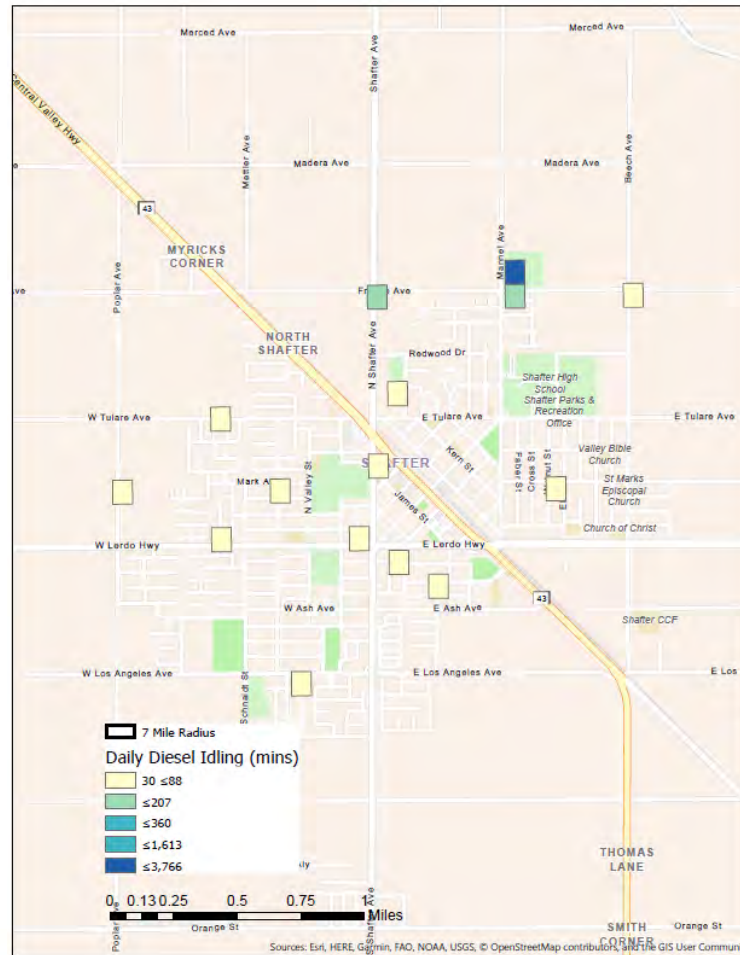

Pilot Training Program for Conducting Self-Inspections at Gas Stations

- To limit the potential for air quality impacts associated with vapor recovery defects at gasoline dispensing stations, the District will develop a pilot training program to instruct gas station operators on conducting thorough self-inspections of the vapor recovery systems at their stations to aid in the identification and timely repair of vapor recovery system defects. The District will provide this hands-on training to each gas station operator in the community.

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation

- To limit the potential for localized PM2.5 and toxic air quality impacts associated with failure to comply with the state's heavy-duty vehicle anti-idling regulation, the District will partner with CARB to conduct additional targeted anti-idling enforcement efforts in Shafter community at least once per quarter for the next five (5) years. The District and CARB will work with the Community Steering Committee to identify heavy-duty vehicle idling “hot spots,” especially those near schools, to aid in focusing the enforcement efforts.

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation (cont'd)

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation (cont'd)

- Feedback?
 - Are there particular locations where CSC has observed illegal idling?
 - Where should District focus future enforcement efforts?
 - Is idling more prevalent at particular times of day?

Implementación de Medidas de Cumplimiento del CERP en la Comunidad de Shafter

Reunión del Comité Directivo de la Comunidad AB 617
13 de julio de 2020

Programa de Cumplimiento

- El Distrito realiza un conjunto completo de actividades de aseguramiento/asistencia de cumplimiento:
 - Inspecciones (rutina y de inicio) de fuentes permitidas y no permitidas
 - Investigaciones de equipos descompuestos
 - Observaciones de prueba de fuente
 - Monitoreo conducido por el Distrito y pruebas de fuente
 - Investigaciones de quejas

Programa de Cumplimiento (cont)

- Se realizan inspecciones e investigaciones para determinar el cumplimiento de una multitud de regulaciones protectoras de la salud de calidad del aire locales, estatales y federales que se enfocan tanto en los criterios como en los contaminantes tóxicos. Éstos incluyen:
 - Reglas del Distrito y requisitos de permisos, incluidos los requisitos de Revisión de Nueva Fuente de Incumplimiento y requisitos de Prevención de Deterioro Significativo
 - Medidas de Control de Tóxicos de Aire de ARB
 - Las regulaciones de gases de efecto invernadero de ARB que afectan a los vertederos; instalaciones de producción, procesamiento, transmisión y almacenamiento de petróleo y gas; y sistemas de refrigeración
 - Estándares Federales de Desempeño de Nuevas Fuentes, Estándares Nacionales de Emisión para Contaminantes Peligrosos del Aire y Estándares de Tecnología de Control Máxima Disponible

Elementos del Programa de Cumplimiento

- Inspecciones e investigaciones de fuentes permitidas
 - Equipos avanzados de detección y monitoreo, CEMS
- Investigaciones de quejas públicas
- Cumplimiento de la reducción de quema de leña residencial
- Cumplimiento de prohibiciones de quema al aire libre
- Programa de Prácticas de Manejo de Conservación
- Programa de polvo fugitivo
- Programa de registro/inspección de equipos portátiles
- Cumplimiento de la regla federal de asbesto
- Programa de instalación de dispensación de gasolina
- Cumplimiento de las regulaciones de productos de consumo y puntos de venta
- Cumplimiento de camiones de diesel comerciales estacionados con el motor encendido
- Cumplimiento de revisión de fuentes indirectas

Cumplimiento Mejorado de la Regla 4901 del Distrito (chimenea de leña y calentadores de leña)

- Reducciones para limitar el potencial de impactos localizados de PM2.5 asociados con el incumplimiento de las restricciones obligatorias episódicas para la quema de leña, el personal del Distrito realizará al menos cuatro (4) horas de vigilancia dentro de la comunidad Shafter en cada día de restricción declarada durante las próximas cinco (5) temporadas de invierno para mejorar el cumplimiento de la Regla 4901 del Distrito. El Distrito trabajará con el Comité Directivo de la Comunidad para enfocar los esfuerzos de vigilancia en áreas donde la quema de leña es más frecuente.

Cumplimiento mejorado de la Regla 4103 del Distrito (Quema al Aire Libre)

- Para limitar el potencial de PM2.5 localizado y los impactos tóxicos asociados con la quema ilegal al aire libre de residuos residenciales, el Distrito llevará a cabo esfuerzos de vigilancia específicos dentro de la comunidad Shafter. Sobre la base de los esfuerzos existentes de vigilancia y respuesta de quejas del Distrito, el Distrito llevará a cabo esfuerzos de vigilancia específicos adicionales en la comunidad Shafter al menos una vez por trimestre durante los próximos cinco (5) años. El Distrito trabajará con el Comité Directivo de la Comunidad para enfocar los esfuerzos de vigilancia en áreas donde históricamente se han hecho quemadas residenciales ilegales al aire libre.

Cumplimiento mejorado de la Regla 4103 del Distrito (Quema al Aire Libre) (cont)

- ¿Comentarios?
 - ¿Hay lugares particulares donde el Comité Directivo de la comunidad ha observado quemas residenciales?
 - ¿Dónde debe enfocar el Distrito los esfuerzos futuros de cumplimiento?
 - ¿La quema al aire libre es más frecuente en ciertas horas del día?

Violaciones de Chimenea y Quemadas al Aire Libre

Calendar Year
2020-Q1

Rule 4901

Rule 4103

CCR 93113

Frecuencia de Inspección Mejorada de Fuentes Permitidas

- Para limitar el potencial de impactos localizados en la calidad del aire asociados con el incumplimiento de los estándares de emisiones establecidos por el permiso, la regla o la regulación del Distrito, el Distrito aumentará la frecuencia de la inspección en cada instalación que haya tenido una violación de emisiones en los últimos tres (3) años. Estas instalaciones serán inspeccionadas al menos dos veces por año de calendario durante los próximos cinco (5) años o hasta que la instalación tenga cuatro (4) inspecciones consecutivas sin una violación de emisiones, lo que ocurra primero.

Programa Piloto de Capacitación para Realizar Autoinspecciones en Gasolineras

- Para limitar el potencial de impactos en la calidad del aire asociados con los defectos de recuperación de vapor en las estaciones dispensadoras de gasolina, el Distrito desarrollará un programa de capacitación piloto para instruir a los operadores de estaciones de servicio en la realización de autoinspecciones exhaustivas de los sistemas de recuperación de vapor en sus estaciones para ayudar en la identificación y reparación oportuna de defectos del sistema de recuperación de vapor. El Distrito proporcionará esta capacitación práctica a cada operador de estación de servicio en la comunidad.

Mejora de Cumplimiento de la Regulación Estatal Contra Dejar el Motor Encendido para Vehículos de Servicio Pesado

- Para limitar el potencial de PM2.5 localizado y los impactos tóxicos a la calidad del aire asociados con el incumplimiento de la regulación estatal contra el dejar el motor encendido de vehículos de servicio pesado, el Distrito se asociará con CARB para llevar a cabo esfuerzos adicionales de cumplimiento de la ley contra el dejar el motor encendido en la comunidad de Centro-Sur Fresno al menos una vez por trimestre durante los próximos 5 años. El Distrito y CARB trabajarán con el Comité Directivo para identificar las “zonas conflictivas” donde dejan el motor encendidos de vehículos de servicio pesado, especialmente aquellos cerca de las escuelas, para ayudar a enfocar los esfuerzos de cumplimiento.

Mejora de Cumplimiento de la Regulación Estatal Contra Dejar el Motor Encendido para Vehículos de Servicio Pesado (cont)

Mejora de Cumplimiento de la Regulación Estatal Contra Dejar el Motor Encendido para Vehículos de Servicio Pesado (cont'd)

- ¿Comentarios?
 - ¿Hay lugares particulares donde el Comité Directivo ha observado vehículos con el motor encendido ilegalmente?
 - ¿Dónde debe enfocar el Distrito los esfuerzos futuros de cumplimiento?
 - ¿El dejar el motor encendido es más frecuente en ciertos momentos del día?

What can we all do about these concerns?

Reporting Environmental Complaints

Remember the 5 Ws:

- ✓ WHAT is your complaint about?
- ✓ WHERE does it occur?
- ✓ WHEN does it occur? Is it ongoing?
- ✓ WHO is the potential source?
- ✓ WHY should you complain?

It's okay to complain if it's simply a nuisance!

Do you wish to receive further updates regarding this complaint?

Role of the Inspector

1. A district inspector will be assigned the complaint.
2. The inspector will contact the reporting party to obtain additional information and to let them know that the complaint was received.
3. The inspector will investigate the complaint.
4. The inspector will take appropriate action if required for complaint resolution.
5. The inspector will follow-up with the reporting party and inform them of the resolution.

After the Complaint

What happens next at the air district or state level?

Complaints do not always get resolved following the initial investigation, so it is important to:

1. Continue to file complaints when it reoccurs.
2. Be patient, not everything can be fixed immediately.

2019 Enforcement Update

Enforcement History

2020 1st Quarter Idling Sweep

- CARB staff participated in Idling sweeps with the District.
- CARB looked at:
 - **53 vehicles within the boundary**
 - No idling violations were discovered during the sweep
 - **4 Transportation Refrigeration Units (TRUs)**
 - 1 was and is still currently pending verification
 - **1 Off-Road vehicle**
 - Equipment Identification Number (EIN) not found in DOORS

Thank you for helping protect Californians by improving our air quality!

1. A un inspector del distrito se le asignará la queja
2. El inspector se pondrá en contacto con el/la informante para obtener información adicional y para hacerles saber que la queja fue recibida.
3. El inspector investigará la queja.
4. El inspector tomará las medidas apropiadas si es necesario para la resolución de quejas.
5. El inspector hará un seguimiento con el/la informante y le informará de la resolución.

Después de la Queja

¿Qué sucede después a nivel del distrito del aire o estatal?

Las quejas no siempre se resuelven después de la investigación inicial, por lo que es importante:

1. Continúe presentando quejas cuando vuelva a ocurrir.
2. Sea paciente, no todo se puede arreglar de inmediato.

Datos de cumplimiento del 2019

Programa	Inspecciones	En cumplimiento	Violaciones		Tasa de cumplimiento
			Emisión	No - Emisión	
Programa de Inspecciones a Vehículos de uso Pesado (HDVIP por sus siglas en inglés)	146	142	1	3	97%
Fuera de la carretera	4	4	0	0	100%
Smart Way	14	14	0	0	100%
Vehículo de Recolección de Residuos Sólidos (SWCV por sus siglas en inglés)	1	1	0	0	100%
Unidades de Transporte Refrigeradas (TRU por sus siglas en inglés)	6	4	1	1	67%
Camiones y Autobuses	42	39	3	0	93%
Total	213	204	5	4	96%

Comparacion de años

2020 1er trimestre barrido de motores encendidos

- El personal de CARB participó en barridos de motores encendidos con el Distrito.
- CARB miró :
 - **53 vehiculos dentro de la area**
 - No se descubrieron violaciones de motores encendidos
 - **4 Unidades de Refrigeracion (TRUs por sus siglas en ingles)**
 - Uno estaba y todavia esta pendiente de verificacion
 - **1 Vehiculo Fuera de la Carretera**
 - Numero de identificacion del equipo (EIN) no fue encontrado en (DOORS)

¡Gracias por ayudar a proteger a los californianos mejorando nuestra calidad del aire!

¿De qué otra manera podemos ayudar?

- Información básica sobre la contaminación del aire
- Contaminación de la agricultura
- Contaminación de otras industrias ¿cuáles?

Meeting Highlights*
AB 617 Shafter Community Steering Committee Meeting #20
June 1, 2020, 3:00 pm – 5:00 pm
Zoom Virtual Meeting

Action items/reminders for the Shafter Community Steering Committee:

- Submit interest in participating in a subcommittee for the school filtration measures

Action items for the Valley Air District:

- Provide an answer on the pesticide measures update
- Provide information on dairy monitoring
- Provide an update on the pilot notification for Shafter
- Follow up on number of IC engines in the CRC oil field
- Give the steering committee another opportunity to discuss the response to the comment letter
- Prioritize getting resident participant stipend figured out with CARB

Welcome and Introductions

Hanna Stelmakhovych, Facilitator, ILG

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Hanna welcomed the Shafter Community Steering Committee (CSC) participants, went over the Zoom instructions for participation, thanked everyone for attending and held the roll call. Ryan thanked the attendees on behalf of the San Joaquin Valley Air Pollution Control District (District) for their continued participation in AB 617.

Pesticide Measures Update:

Minh Pham, CA Dept. of Pesticide Regulations

Minh provided an update on the mitigation of 1,3-Dichloropropene and the implementation of a pilot study DPR is aiming for early fall. Questions were held until the end. Presentation highlights:

- 1,3-Dichloropropene (1,3-D) is a pre-plant fumigant used to control nematodes, insects, and disease organisms in the soil, which is specific to the Shafter area; the majority comes from fruit and nut trees
- There are restrictions in place for the use of the material
- DPR is going to be assessing additional control measures to mitigate 1,3-D usage
- DPR is working to set up additional monitoring at the Sequoia Elementary School in Shafter as part of its pilot, but had to change its sampling methodology because they do not have the lab capability right now
- There is currently no viable commercially scalable alternative to 1,3-D and proposing various mitigation options will have a cost effect and may not achieve the results in terms of emissions reductions
- DPR is aiming to reduce 60% of 1,3-D emissions
- Several members of the Shafter community have been vocal about their support for totally impermeable film (TIF) tarping, so DPR looked at the benefits of tarping

- DPR looked at three options for the pilot program, which allow more efficacy and flexibility depending on the crop—70% field capacity, a water seal either post or pre-treatment, and a 24-inch depth injection so the fumigant goes further down and is not able to escape the earth
- The pilot program objectives are to collect and evaluate monitoring data for these new methods and validate what DPR has done on a computer modeling estimate

Question: Interested in hearing slightly more about the scale monitoring and how that looks in Shafter. If it continues, will it be the same amount of constituents being monitored or is that going to decrease as well?

DPR Response: Budget cuts will not affect our ambient air monitoring, we have committed to being in Shafter—it's one of the four sites we were able to save with the budgetary constraints. We will absolutely continue ambient air monitoring. As far as the constituents, normally we would be monitoring for 32 pesticides right now, but because the lab has scaled down, there is nobody doing analysis for us, so right now the only thing that we can do is 1,3-D. We should be coming back online and re-doing all 32 pesticides after COVID-19 travel restrictions are up.

Air Monitoring Plan Update:

Brad Dawson, Supervising Air Quality Instrument Specialist, Valley Air District

Brad presented an update on the AB 617 Community Air Monitoring. Presentation highlights:

- There was a letter sent out recently by a couple of CSC members and this group will be discussing some of those topics in this presentation
- The District is continuing to conduct localized air monitoring for the Shafter community
- The District is actively using the air monitoring van throughout the Shafter community in areas identified as a priority by the steering committee
- Since late 2019, the District has been conducting bi-weekly speciation air sampling and sending filters and canisters to an independent lab to analyze for VOCs and PM2.5
- A PM2.5 monitor will be deployed soon at Sequoia Elementary School
- Pending monitoring sites include: Golden Oak Elementary School, Sequoia Elementary School, and Farm Labor Camp
- The daily PM2.5 is trending very well in the first quarter of 2020
- Our sites on average for the quarter were a couple micrograms per meters cubed cleaner than surrounding communities with sites near Shafter
- During monitoring van outings, the District has not detected any measurements that exceeded the federal standard
- From all of the sampling conducted for 68 different tested compounds, the District only detected nine
- CARB is building a data portal called AQ view
- The District will have quarterly reports available online

Question: We did ask for PM10 monitoring to be in place very quickly so it would be there for the almond harvest and never intended for it to stop at the end of December. We really need to get that back for this coming summer. PM10 is dust. We are already finding dust on our tabletops and we would really like to know what is in our air, so please ask CARB. Another question I have on the

PM2.5 speciation, you have black carbon and organic carbon, which one of those would be from wood burning.

District Response: Organic carbon comes from many different sources, predominantly from fuels consisting of wood. Diesel soot would be primarily black carbon.

Question: So what I noticed is a lot of organic carbon seems to taper off in the warmer months when there is less wood burning for heating, so we'd like to know if there's a relationship there between the winter months and the organic carbon that's in the air and wood burning.

District Response: Once the District gets additional seasonal data and continues to give reports to this steering committee, we will be better able to answer that question.

Question: I noticed a lot of ammonium sulfate rivaling ammonium nitrate. What is the source and is this normal throughout the Valley?

District Response: It is premature to be able to pinpoint where it is coming from exactly; the summer months may provide a better picture. The District will continue to dig into the data to see what the PM speciation profile looks like in Shafter versus Bakersfield or Fresno.

Comment: Although methanol was detected below the hazardous level, we would really like to know where that methanol is coming from.

District Response: We have seen these compounds be prevalent in Fresno as well. Once we have more seasonal impact data, we will be able to see the trends. I can say that methanol is prevalent in pretty much everything.

Question: Does anyone have an update on the pilot notification for Shafter?

District Response: All unanswered questions will be captured and followed up on at a future meeting.

Question: When are our CERP programs going to start implementation? Are we going to vote on which ones we are going to bring forward as a committee?

District Response: Implementation has already begun. There is a timeline associated with the funding that's available for this particular year. The District been working with CARB to see if there is any way to look at some sort of COVID related delays and the impact that's had on the industry. In terms of what we're doing with getting certain CERP measures off the ground, there are a certain number of those that we are working on now. Those are included in the community air protection guidelines. CARB is about to approve Chapter 6 guidance and we are working with them on that framework.

Question: We had bumped up the money for Shafter for school filtration systems--will that be part of chapter 6 or can that happen now?

District Response: Those are already included and do not have to go through this new process. We are already moving forward with looking at contractors and working with the school districts.

Question: Is there an outline available for us to see the prioritization somewhere on the District website?

District Response: We shared the prioritization a couple meetings ago, but we are trying to make them front and center. We would like to send out a comprehensive reminder of all the measures that still need to go through that guidance process and then maybe that will give us an idea of what this group wants to hear about at the upcoming meetings. We were thinking of getting a group subcommittee and soliciting this group to see who would want to be involved.

Comment Letter Response Review

Jessica Olsen, Program Manager, Valley Air District

Jessica gave a high-level overview of the comprehensive process that went into answering the questions submitted by a few CSC members. Presentation highlights:

- The first couple of questions are follow-ups to the inventory request that CARB and the Air District needed to provide answers to
- There are questions about dairies and how we will continue to get more information about these dairies
- The second question came with an attachment and we located the units that were requested from the facility and our knowledge of all of the different emissions inventory data for all of those units, which hopefully answers the question
- Question three was about IC engines and Ag pumps. One of our measures is to replace anything that runs off natural gas or diesel with electricity, so understanding what the emissions are currently will help us understand what is available to be replaced
- The response to the fourth question should provide detailed information regarding IC dairy engines
- Question five was a specific question about this facility, so it was comprehensive as question two as well
- Question six was a repeat of a request last year; the district and CARB worked together to put together an area-wide and facility source list that breaks down emission by month
- We provide links for those that want to see the monthly uploaded data
- Purple air sensors--we have one in Shafter that is next to the regulatory air monitoring station; we show the tracking of the purple air and the regulatory air monitoring and how they track in each of the quarters
- You can see the different hourly average readings for the pollutants that we measured in the van outside of Golden Oak Elementary. Same with Mexican Colony
- There is monitoring being performed near the local dairies and this information is captured in the quarterly air monitoring reports
- We have provided links to the real-time data and hourly monitoring and this data is updated monthly, while we wait for CARB's AQview system to be begin working again
- We have some DMV information about the types of vehicles registered in Shafter and vehicle age
- The same goes for CARB gathering the yard locomotive and yard tractor questions
- We did provide a summary of all the incentives provided within the seven-mile radius over the past five years. All of the details are attached

Question: I was wondering how the CARB / Railway group meetings went. They had talked about possibly getting the trains to stop doing their back and forth, since it backs up all the traffic.

District Response: Unfortunately, those meetings have been deferred due to COVID. They will resume once we can all get back together and do in-person meetings. CARB's rail group put together a response and will make sure that it gets translated and goes out to the committee.

Question: Regarding the agriculture stationary internal combustion engines, I am still disappointed that we are not getting an answer on how many of those are there in the seven-mile radius. We are just getting numbers on total emissions. We want to know how many engines there are because a lot of money has been allocated for switching those engines to electric. On JP oil facilities, happy to see you have information for us that was missing. From what I read, there are 22 stationary IC

engines pumping oil in the JP oil field and they all burn field gas. Can anybody tell me how field gas differs from the gas people burn in homes?

District Response: Without knowing the specific makeup of that particular field, the quality of the gas varies greatly depending on the field. We did not do an analysis of the gas makeup in this case. At this point, we cannot fully answer that question.

Question: I am assuming there is sulfur in the gas that would not be allowed in the natural gas we burn in our home. Why are they allowed to burn gas with such a high sulfur content? We asked the question about IC engines in the CRC oil field; the District and CARB should have gotten back to us, we asked the question for a reason. I do not know how you can disrespect us so much.

District Response: No disrespect was intended. You can be critical of the process; we probably could have and should have done more. We will take this opportunity to look at it further and get back with the information.

Wrap Up/Next Steps

Hanna Stelmakhovych, Facilitator, ILG

The District would really like to get going on many of these incentive measures. One of the big ones we can get going on is the school filtration measure. If CSC members could use their raise hand function now to indicate their interest in being a part of a subcommittee for this measure, please do so.

Similarly, the details will go out very soon from the District on the rest of the measures and we can use that to help prioritize what we talk about at the next meeting, including following up on any of the other admissions inventory data.

Reminders:

Next meeting is July 13 via Zoom

Puntos Importantes de la Reunión*

Reunión del Comité Directivo de la Comunidad AB 617 de Shafter #20

1 de junio de 2020, 3:00 pm – 5:00 pm

Reunión Virtual por Zoom

Artículos de Acción/Recordatorios para el Comité Directivo de la Comunidad de Shafter:

- Someter interés en participar en un subcomité de medidas de filtración escolar

Artículos de Acción para el Distrito del Aire:

- Proporcionar una respuesta sobre la actualización de las medidas de pesticidas
- Proporcionar información sobre el monitoreo de lecherías
- Proporcionar una actualización sobre la notificación piloto para Shafter
- Seguimiento de la cantidad de motores de combustión interna en el campo petrolero CRC
- Darle al comité directivo otra oportunidad para discutir la respuesta a la carta de comentarios
- Priorizar la obtención del estipendio de participante residente con CARB

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, ILG

Ryan Hayashi, Oficial Adjunto de Control de la Contaminación del Aire, Distrito del Aire del Valle

Hanna dio la bienvenida a los participantes del Comité Directivo de la Comunidad Shafter (Comité Directivo), repasó las instrucciones de Zoom para la participación, agradeció a todos por asistir y pasó lista. Ryan agradeció a los asistentes en nombre del Distrito del Control de la Contaminación del Aire del Valle de San Joaquín (Distrito) por su participación continua en AB 617.

Actualización de las Medidas de Pesticidas:

Minh Pham, Departamento de Regulaciones de Pesticidas de CA

Minh proporcionó una actualización sobre la mitigación del 1,3-dicloropropeno y la implementación de un estudio piloto que el DPR apunta a principios del otoño. Las preguntas se mantuvieron hasta el final. Puntos importantes de la presentación:

- El 1,3-dicloropropeno (1,3-D) es un fumigante previo a la siembra que se usa para controlar nematodos, insectos y organismos patógenos en el suelo, que es específico del área de Shafter; la mayoría proviene de árboles frutales y de nueces
- Existen restricciones para el uso del material
- El DPR evaluará medidas de control adicionales para mitigar el uso de 1,3-D
- El DPR está trabajando para establecer un monitoreo adicional en la Sequoia Elementary School en Shafter como parte de su piloto, pero tuvo que cambiar su metodología de muestreo porque no tienen la capacidad de laboratorio en este momento
- Actualmente no existe una alternativa viable comercialmente escalable al 1,3-D y proponer varias opciones de mitigación tendrá un efecto en los costos y es posible que no logre los resultados en términos de reducción de emisiones
- DPR tiene como objetivo reducir el 60% de las emisiones de 1,3-D
- Varios miembros de la comunidad Shafter han expresado su apoyo a la lona de plástico totalmente impermeable (TIF), por lo que el DPR analizó los beneficios de la lona.

- El DPR analizó tres opciones para el programa piloto, que permiten una mayor eficacia y flexibilidad según el cultivo – 70% de la capacidad de campo, un sello de agua ya sea después o antes del tratamiento, y una inyección de profundidad de 24 pulgadas para que el fumigante baje más y no puede escapar de la tierra
- Los objetivos del programa piloto son recopilar y evaluar datos de monitoreo para estos nuevos métodos y validar lo que ha hecho el DPR en una estimación de modelado por computadora

Pregunta: Interesado en escuchar un poco más sobre el monitoreo de escala y cómo se ve en Shafter. Si continúa, ¿se controlará la misma cantidad de componentes o también disminuirá?

Respuesta del DPR: Los recortes presupuestarios no afectarán nuestro monitoreo del aire ambiental, nos hemos comprometido a estar en Shafter, es uno de los cuatro sitios que pudimos ahorrar con las restricciones presupuestarias. Continuaremos absolutamente con el monitoreo del aire ambiental. En cuanto a los componentes, normalmente estaríamos monitoreando 32 pesticidas en este momento, pero debido a que el laboratorio se ha reducido, no hay nadie haciendo análisis por nosotros, así que ahora lo único que podemos hacer es 1,3-D. Deberíamos volver a estar en línea y rehacer los 32 pesticidas después de que las restricciones de viaje de COVID-19 hayan levantado.

Actualización del Plan de Monitoreo del Aire:

Brad Dawson, Especialista Supervisor en Instrumentos de Calidad del Aire, Distrito del Aire del Valle

Brad presentó una actualización sobre el monitoreo del aire comunitario de AB 617. Puntos importantes de la presentación:

- Recientemente, un par de miembros del Comité Directivo enviaron una carta y este grupo discutirá algunos de esos temas en esta presentación
- El Distrito continúa realizando un monitoreo de aire localizado para la comunidad de Shafter
- El Distrito está utilizando activamente la camioneta de monitoreo del aire en toda la comunidad de Shafter en áreas identificadas como una prioridad por el comité directivo
- Desde finales de 2019, el Distrito ha estado llevando a cabo muestreos de aire de especiación quincenales y enviando filtros y recipientes a un laboratorio independiente para analizar VOC y PM2.5
- Pronto se implementará un monitor de PM2.5 en Sequoia Elementary School
- Los sitios de monitoreo pendientes incluyen: Golden Oak Elementary School, Sequoia Elementary School y Campo de Trabajo Agrícola
- El PM2.5 diario tiene una muy buena tendencia en el primer trimestre de 2020
- Nuestros sitios en promedio para el trimestre fueron un par de microgramos por metro cúbico más limpios que las comunidades circundantes con sitios cerca de Shafter
- Durante el monitoreo de las salidas en camioneta, el Distrito no ha detectado ninguna medición que exceda el estándar federal
- De todo el muestreo realizado para 68 compuestos probados diferentes, el Distrito solo detectó nueve
- CARB está construyendo un portal de datos llamado AQ-*view
- El Distrito tendrá informes trimestrales disponibles en línea

Pregunta: Pedimos que el monitoreo de PM10 estuviera en su lugar muy rápidamente para que estuviera allí para la cosecha de almendras y nunca tuvimos la intención de que se detuviera a fines de diciembre. Realmente necesitamos recuperar eso para el próximo verano. PM10 es polvo. Ya estamos encontrando polvo en nuestras mesas y realmente nos gustaría saber qué hay en nuestro aire, así que pregúntenle a CARB. Otra pregunta que tengo sobre la especiación PM2.5, tiene carbono negro y carbono orgánico, cuál de esos sería de la quema de leña.

Respuesta del Distrito: El carbono orgánico proviene de muchas fuentes diferentes, principalmente de combustibles compuestos de leña. El hollín diésel sería principalmente carbón negro.

Pregunta: Entonces, lo que noté es que una gran cantidad de carbono orgánico parece disminuir en los meses más cálidos, cuando se quema menos leña para calefacción, por lo que nos gustaría saber si existe una relación entre los meses de invierno y el carbono orgánico que se encuentra en el aire y la quema de leña.

Respuesta del Distrito: Una vez que el Distrito obtenga datos adicionales de la temporada y continúe dando informes a este comité directivo, estaremos en mejores condiciones para responder esa pregunta.

Pregunta: Noté que una gran cantidad de sulfato de amonio rivalizaba con el nitrato de amonio. ¿Cuál es la fuente? ¿Es esto normal en todo el Valle?

Respuesta del Distrito: Es prematuro poder señalar de dónde proviene exactamente; los meses de verano pueden proporcionar una mejor imagen. El Distrito continuará investigando los datos para ver cómo se ve el perfil de especiación de PM en Shafter en comparación con Bakersfield o Fresno.

Comentario: Aunque se detectó metanol por debajo del nivel peligroso, realmente nos gustaría saber de dónde viene ese metanol.

Respuesta del Distrito: Hemos visto que estos compuestos también prevalecen en Fresno. Una vez que tengamos más datos de impacto estacional, podremos ver las tendencias. Puedo decir que el metanol prevalece en casi todo.

Pregunta: ¿Alguien tiene una actualización sobre la notificación piloto de Shafter?

Respuesta del Distrito: Todas las preguntas sin respuesta se capturarán y se les dará seguimiento en una reunión futura.

Pregunta: ¿Cuándo comenzarán a implementarse nuestros programas del CERP? ¿Vamos a votar cuáles vamos a presentar como comité?

Respuesta del Distrito: La implementación ya ha comenzado. Hay un cronograma asociado con la financiación que está disponible para este año en particular. El Distrito ha estado trabajando con CARB para ver si hay alguna forma de ver algún tipo de demora relacionada con COVID y el impacto que ha tenido en la industria. En términos de lo que estamos haciendo para poner en marcha ciertas medidas CERP, hay un cierto número de ellas en las que estamos trabajando ahora. Estos están incluidos en las pautas de protección del aire de la comunidad. CARB está a punto de aprobar la guía del Capítulo 6 y estamos trabajando con ellos en ese marco.

Pregunta: Habíamos aumentado el dinero de Shafter para los sistemas de filtración de la escuela – ¿será eso parte del capítulo 6 o puede suceder ahora?

Respuesta del Distrito: Esos ya están incluidos y no tienen que pasar por este nuevo proceso. Ya estamos avanzando en la búsqueda de contratistas y trabajando con los distritos escolares.

Pregunta: ¿Hay un esquema disponible para que podamos ver la priorización en algún lugar del sitio web del Distrito?

Respuesta del Distrito: Compartimos la priorización hace un par de reuniones, pero estamos tratando de que estén al frente y al centro. Nos gustaría enviar un recordatorio completo de todas las medidas que aún deben pasar por ese proceso de orientación y luego tal vez eso nos dé una idea de lo que este grupo quiere escuchar en las próximas reuniones. Estábamos pensando en conseguir un subcomité de grupo y solicitar a este grupo para ver quién querría participar.

Revisión de Respuesta de Carta de Comentario

Jessica Olsen, Gerente del Programa, Distrito del Aire del Valle

Jessica brindó una descripción general de alto nivel del proceso integral que se llevó a cabo para responder las preguntas enviadas por algunos miembros del Comité Directivo. Puntos importantes de la presentación:

- Las primeras dos preguntas son seguimientos a la solicitud de inventario que CARB y el Distrito del Aire necesitaban para responder
- Hay preguntas sobre las lecherías y cómo continuaremos obteniendo más información sobre estas lecherías
- La segunda pregunta vino con un archivo adjunto y ubicamos las unidades que se solicitaron de la instalación y nuestro conocimiento de todos los diferentes datos del inventario de emisiones para todas esas unidades, lo que con suerte responde a la pregunta
- La pregunta tres se refería a motores de combustión interna y bombas agrícolas. Una de nuestras medidas es reemplazar cualquier cosa que funcione con gas natural o diésel con electricidad, por lo que comprender cuáles son las emisiones actualmente nos ayudará a comprender qué hay disponible para ser reemplazado
- La respuesta a la cuarta pregunta proporciona información detallada sobre los motores de combustión interna en lecherías
- La pregunta cinco era una pregunta específica sobre esta instalación, por lo que también era completa como la pregunta dos
- La pregunta seis fue una repetición de una solicitud del año pasado; el Distrito y CARB trabajaron juntos para armar una lista de fuentes de instalaciones y de toda el área que analiza las emisiones por mes
- Proporcionamos enlaces para aquellos que desean ver los datos cargados mensualmente
- Sensores de Purple Air: tenemos uno en Shafter que está al lado de la estación reguladora de monitoreo del aire; mostramos el seguimiento del Purple Air y el control del aire regulatorio y cómo se rastrean en cada uno de los trimestres
- Puede ver las diferentes lecturas promedio por hora de los contaminantes que medimos en la camioneta fuera de Golden Oak Elementary. Lo mismo con la Mexican Colony
- Se está realizando un monitoreo cerca de las lecherías locales y esta información se captura en los informes trimestrales de monitoreo del aire
- Hemos proporcionado enlaces a los datos en tiempo real y al monitoreo por hora, y estos datos se actualizan mensualmente, mientras esperamos que el sistema AQview de CARB comience a funcionar nuevamente
- Tenemos información del DMV sobre los tipos de vehículos registrados en Shafter y la antigüedad del vehículo
- Lo mismo ocurre con CARB que reúne las preguntas sobre locomotoras y tractores de patio
- Proporcionamos un resumen de todos los incentivos proporcionados dentro del radio de siete millas durante los últimos cinco años. Todos los detalles se adjuntan

Pregunta: Me preguntaba cómo fueron las reuniones del grupo CARB/Railway. Habían hablado de la posibilidad de que los trenes dejaran de hacer su ida y vuelta, ya que esto detiene todo el tráfico.

Respuesta del Distrito: Desafortunadamente, esas reuniones se han aplazado debido a COVID. Se reanudarán una vez que podamos volver a estar juntos y hacer reuniones en persona. El grupo ferroviario de CARB preparó una respuesta y se asegurará de que se traduzca y se envíe al comité.

Pregunta: Con respecto a los motores agrícolas de combustión interna estacionarios, todavía estoy decepcionado de que no obtengamos una respuesta sobre cuántos de ellos hay en el radio de siete millas. Solo estamos obteniendo cifras sobre las emisiones totales. Queremos saber cuántos motores hay porque se ha asignado mucho dinero para cambiar esos motores a eléctricos. En las instalaciones de JP Oil, feliz de ver que tiene información para nosotros que faltaba. Por lo que leí, hay 22 motores de combustión interna estacionarios que bombean petróleo en el campo petrolífero de JP y todos queman gas de campo. ¿Alguien puede decirme en qué se diferencia el gas de campo del gas que la gente quema en los hogares?

Respuesta del Distrito: Sin conocer la composición específica de ese campo en particular, la calidad del gas varía mucho según el campo. En este caso, no hicimos un análisis de la composición de gas. En este punto, no podemos responder completamente esa pregunta.

Pregunta: Supongo que hay azufre en el gas que no estaría permitido en el gas natural que quemamos en nuestra casa. ¿Por qué se les permite quemar gas con un contenido de azufre tan alto? Hicimos la pregunta sobre los motores de combustión interna en el campo petrolero CRC; el Distrito y CARB deberían habernos contactado, hicimos la pregunta por una razón. No se como pueden faltarnos tanto al respeto.

Respuesta del Distrito: No se pretendía faltarle el respeto. Puede ser crítico con el proceso; probablemente podríamos y deberíamos haber hecho más. Aprovecharemos esta oportunidad para analizarlo más a fondo y volver con la información.

Concluir/Próximos Pasos

Hanna Stelmakhovych, Facilitadora, ILG

Al Distrito realmente le gustaría poner en marcha muchas de estas medidas de incentivo. Uno de la medidas más grande que podemos poner en marcha es la medida de filtración escolar. Si los miembros del Comité Directivo pudieran usar su función de levantar la mano ahora para indicar su interés en ser parte de un subcomité para esta medida, hágalo ahorita por favor.

Del mismo modo, los detalles del Distrito se darán a conocer muy pronto sobre el resto de las medidas y podemos usar eso para ayudar a priorizar lo que hablamos en la próxima reunión, incluyendo el seguimiento de cualquiera de los otros datos del inventario de admisiones.

Recordatorios:

La próxima reunión es el 13 de julio a través de Zoom

Agenda for Shafter Community Steering Committee Meeting #20

Monday, June 1, 2020 – 3:00 pm – 5:00 pm

Zoom Meeting: <https://zoom.us/j/96219236845>
Meeting ID: 962 1923 6845

Update on the Mitigation of 1,3-Dichloropropene and Pilot Studies

Minh Pham

June 1, 2020

Shafter AB617 Community
Steering Committee Meeting

Presentation Outline

- Background
- Mitigation Approach
- Mitigation Options
- Pilot Studies
- Q&A

Background: 1,3-Dichloropropene

- Pre-plant fumigant used to control nematodes, insects, and disease organisms in the soil.
- Major uses in California include fruit and nut trees, strawberries, grapes, and carrots crops.
- Listed as a restricted material.
- In part due to recent elevated 1,3-D measured air concentrations, DPR is proposing additional control measures to mitigate 1,3-D acute health effects to bystanders.

Mitigation Approach and Available Options

- DPR used HYDRUS and AERFUM computer models to identify various mitigation measures.
 - DPR's use of HYDRUS and AERFUM went through an intensive external peer review process coordinated by the University of California.

- Options Available to Address Acute Exposures:
 - Limit or prohibit 1,3-D applications
 - Require use of TIF tarps
 - Increase buffer zone distances
 - Require stringent application documentation
 - Set minimum soil moisture content threshold for applications
 - Use of new reduced-emission application methods

Image: Shutterstock.com

Pilot Program

- Considerations:
 - 1,3-D is extensively used with annual average of 12.6m lbs applied (2011-2015).
 - No currently available viable commercial-scale alternatives to 1,3-D.
 - Proposed mitigation measures could be costly and may not achieve the desired emission reduction targets.
- DPR will be conducting a pilot program in selected high-use regions located near DPR air monitoring sites in Shafter, Parlier, and Delhi to test effectiveness and feasibility of proposed mitigation options.
- Applications of 1,3-D in the selected regions during the pilot program timeframe will need to adhere to DPR proposed mitigation options.
- The pilot program will begin in September 2020 and will run for one year.

Reducing 1,3-D Emissions

- Both US EPA and DPR offer a 60% buffer zone reduction credit when applicators use TIF tarps in certain fumigant applications.
- Computer modeling conducted by DPR show that 60% emission reduction equates to at least a 60% buffer zone reduction for most field sizes or application rates.
- Therefore, for this mitigation effort, DPR aims to reduce 1,3-D emissions by at least 60% compared to the standard 18" deep untarped application.
- DPR has identified several options that result in 1,3-D emission reductions of at least 60% compared to untarped fumigations.

Reducing 1,3-D Emissions in Shafter

- What are the equivalent technology(s) for emission reductions that provide similar results to tarping?

- One of these options could potentially provide similar reductions to tarping

Identified Mitigation Options

1. Use of TIF tarps

- This method would require application field to be covered with DPR-approved TIF tarps.

2. Pre-application moisture content of 70% field capacity

- Field irrigation to create a “barrier” or “cap” of soil moisture at **3-9” below the soil surface**.
- The exact irrigation volume required to meet 70% of “field capacity” (FC) depends on pre-existing soil conditions.

3. Post-application water seal

- Irrigation creates a zone of high moisture near the soil surface (“water seal”), slowing fumigant emissions.

4. Require fumigant injection at lower depths

- Under this option, 1,3-D is injected at a depth of at least 24” below the soil surface.
- Greater depth of injection increases the amount of time the fumigant spends in the soil and leads to lower emissions.

Identified Mitigation Options

5. **24" injection depth combined with post-application water seal**
 - This option is a combination of *Mitigation Options 3 and 4*.

6. **50% of the field covered with TIF combined with standard 18" injection method**
 - A field is entirely fumigated, but rows are alternately sealed with TIF
 - 100% of the field area is fumigated: 50% will be covered by TIF, and 50% will be uncovered.

7. **50% of the field covered with TIF combined with deeper 24" injection method**
 - Same as above but injection depth is set at 24".

8. **Pre-application 70% FC moisture cap combined with 50% of field covered with TIF**
 - This option is a combination of *Mitigation Options 2 and 6*.

Identified Mitigation Options

9. **Pre-application 70% FC moisture cap combined with 24" injection method and 50% TIF**
 - This option is a combination of *Mitigation Options 2, 4, and 6*.
10. **Pre-application 70% FC moisture cap combined with 24" injection method and post-application water seal**
 - This option is a combination of *Mitigation Options 2, 3, and 4*.
11. **Untarped fumigation at injection depth of 18" (FFM 1206) with expanded buffer zones or reduced application size**
 - Based on application rate and field size, buffer zones ranging up to ¼ mile may be required.
12. **Untarped fumigation at injection depth of 12" (FFM 1201) with expanded buffer zones or reduced application size**
 - Based on application rate and field size, buffer zones ranging up to ¼ mile may be required.

Note: DPR continues to work to refine identified options and continues to seek input on additional options to explore.

Identified Mitigation Options

Application Method Options	Application rate (lb/ac)							
	100	110	125	150	200	250	300	332
1. TIF (FFM1242 or FFM 1247)	MR	MR	MR	MR	MR	MR	MR	MR
2. 70% FC moisture cap & 18" Injection	MR	MR	MR	MR	45 MR (200ft)	20 40 (200ft)	10 25 (200ft)	5 20 (200ft)
3. Post-application water seal & 18" Injection	MR	MR	MR	MR	MR	50 MR (200ft)	30 50 (200ft)	20 35 (200ft)
4. 24" injection	MR	MR	MR	MR	MR	40 70 (200ft)	25 40 (200ft)	15 30 (200ft)
5. 24" injection & post-application water seal	MR	MR	MR	MR	MR	MR	60 MR (200ft)	40 70 (200ft)
6. 50% TIF & 18" injection	MR	MR	MR	MR	70 MR (200ft)	35 55 (200ft)	20 35 (200ft)	10 25 (200ft)
7. 50% TIF & 24" injection	MR	MR	MR	MR	MR	MR	MR	MR
8. 50% TIF & 70% FC moisture cap & 18" injection	MR	MR	MR	MR	MR	65 MR (200ft)	40 65 (200ft)	30 50 (200ft)
9. 50% TIF & 70% FC moisture cap & 24" injection	MR	MR	MR	MR	MR	MR	MR	MR
10. 24" injection & 70% FC & water seal	MR	MR	MR	MR	MR	MR	MR	MR
11. Standard 18" Injection (FFM1206)	MR	65 MR (200ft) MR (500ft)	45 70 (200ft) MR (500ft)	25 40 (200ft) MR (500ft)	10 20 (200ft) 55 (500ft)	5 10 (200ft) 30 (500ft)	3 5 (200ft) 20 (500ft)	2 5 (200ft) 15 (500ft)
12. Standard 12" injection (FFM1201)	10 20 (200ft) 55 (500ft)	10 15 (200ft) 45 (500ft)	5 10 (200ft) 35 (500ft)	4 5 (200ft) 25 (500ft)	2 4 (200ft) 10 (500ft)	2 3 (200ft) 5 (500ft)	1 2 (200ft) 5 (500ft)	NA 1 (200ft) 5 (500ft)

Numbers on table refer to maximum application block size allowed per given method and application rate combination.

NA = Not Allowed

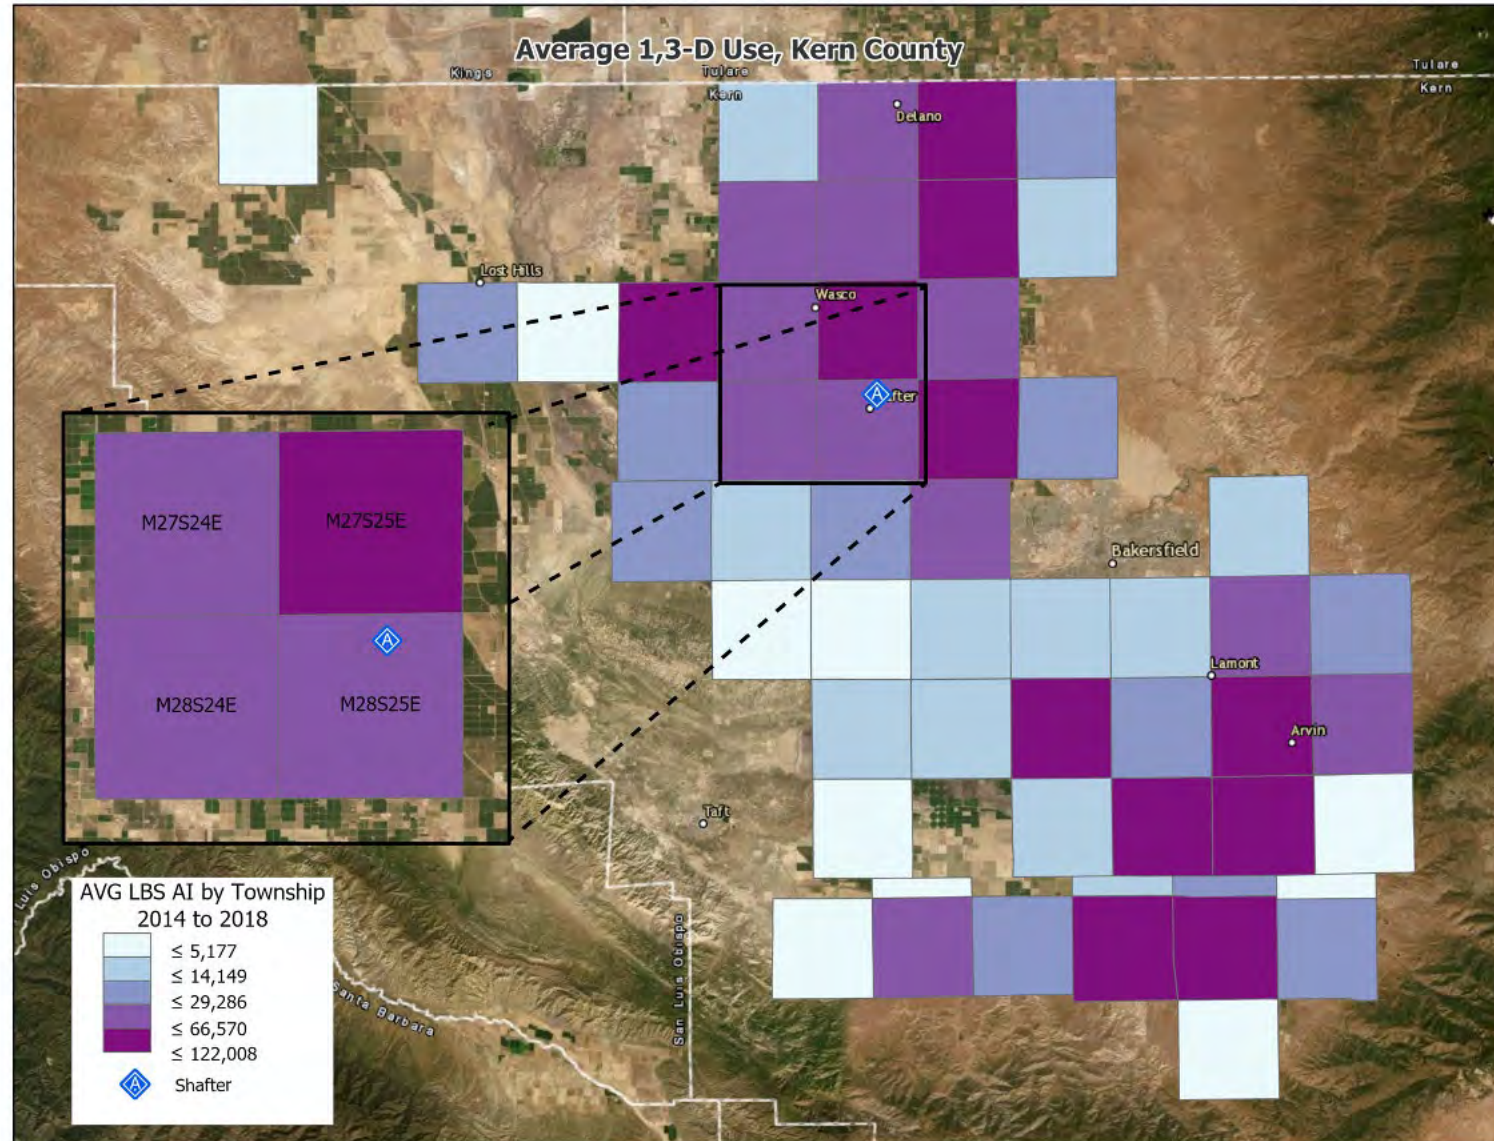

MR = Minimum Restrictions = Application blocks ≤ 80 ac and 100 ft. buffer zone for 7 d.

Objectives of Pilot Program and Enhanced Monitoring Efforts

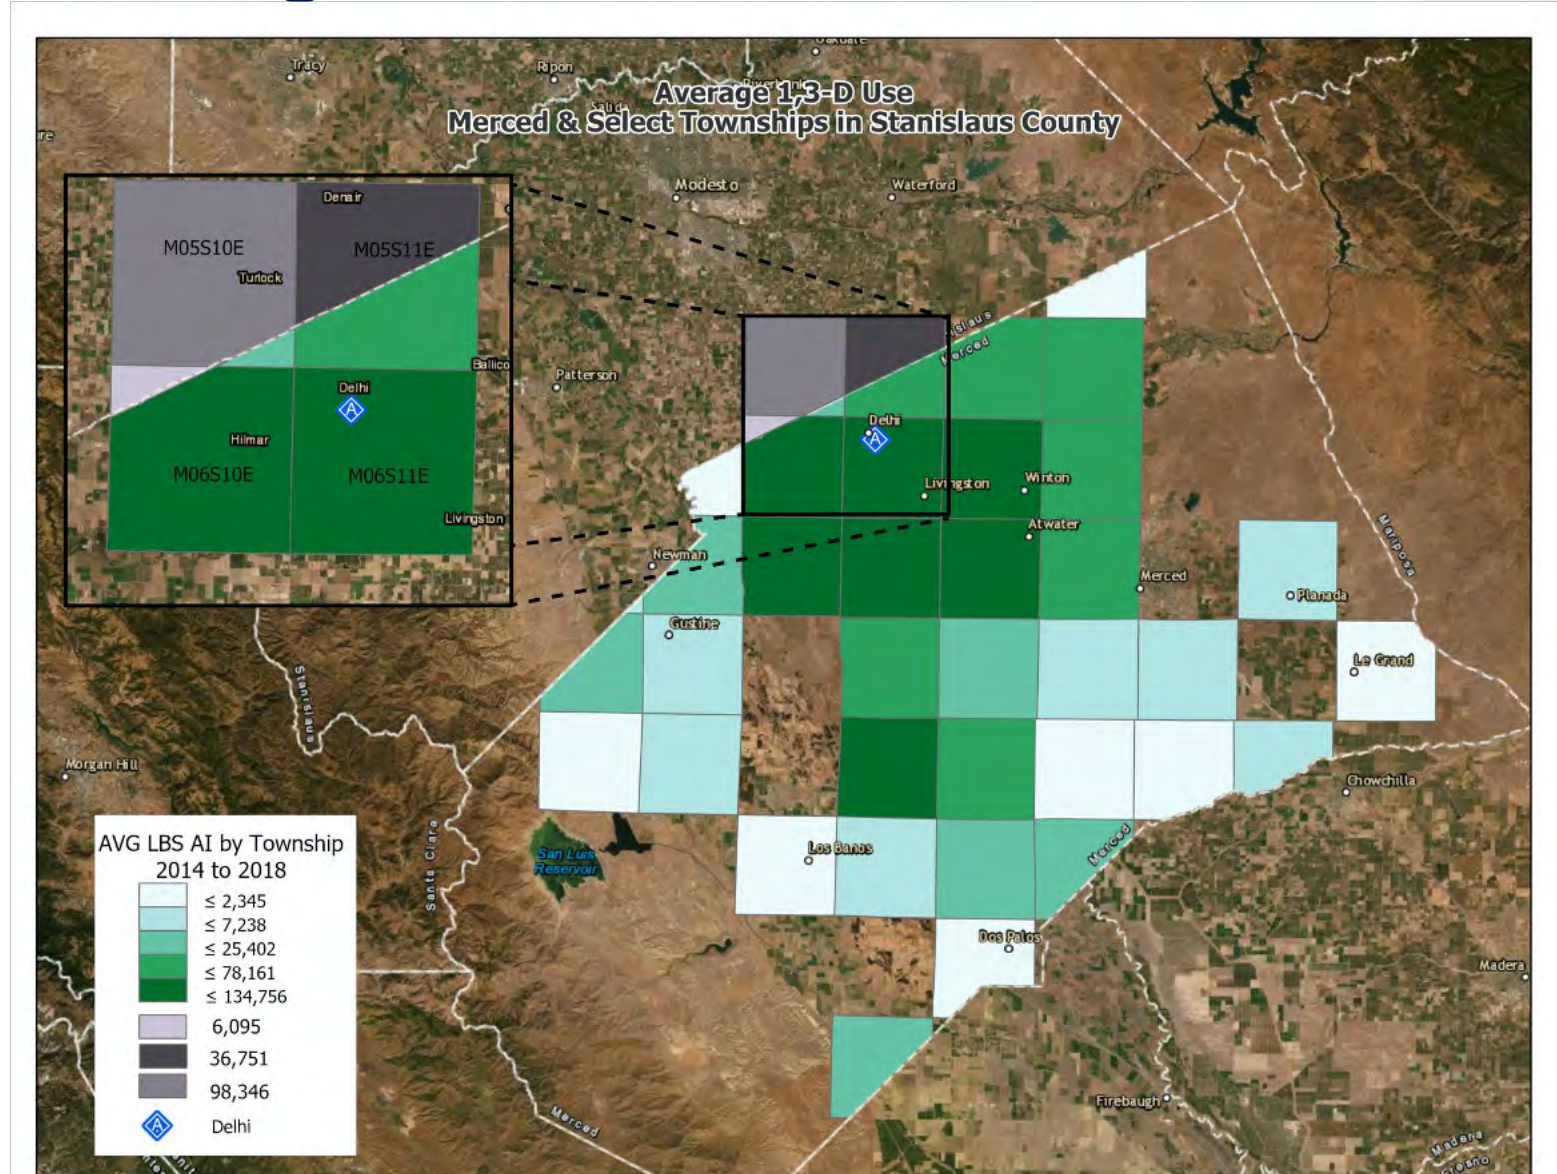

- Pilot program objectives:
 - To collect and evaluate monitoring data from new methods to validate computer modeling estimates, and
 - To evaluate feasibility of proposed mitigation options, and
 - To evaluate effectiveness of mitigation options aimed towards reducing emissions of 1,3-D for statewide implementation.
- Enhanced monitoring efforts during pilot program:
 - Continued ambient air monitoring efforts in the area.
 - Intensive ambient air monitoring during high-use season.
 - Application-site monitoring studies to measure and validate estimated emissions from new application methods.

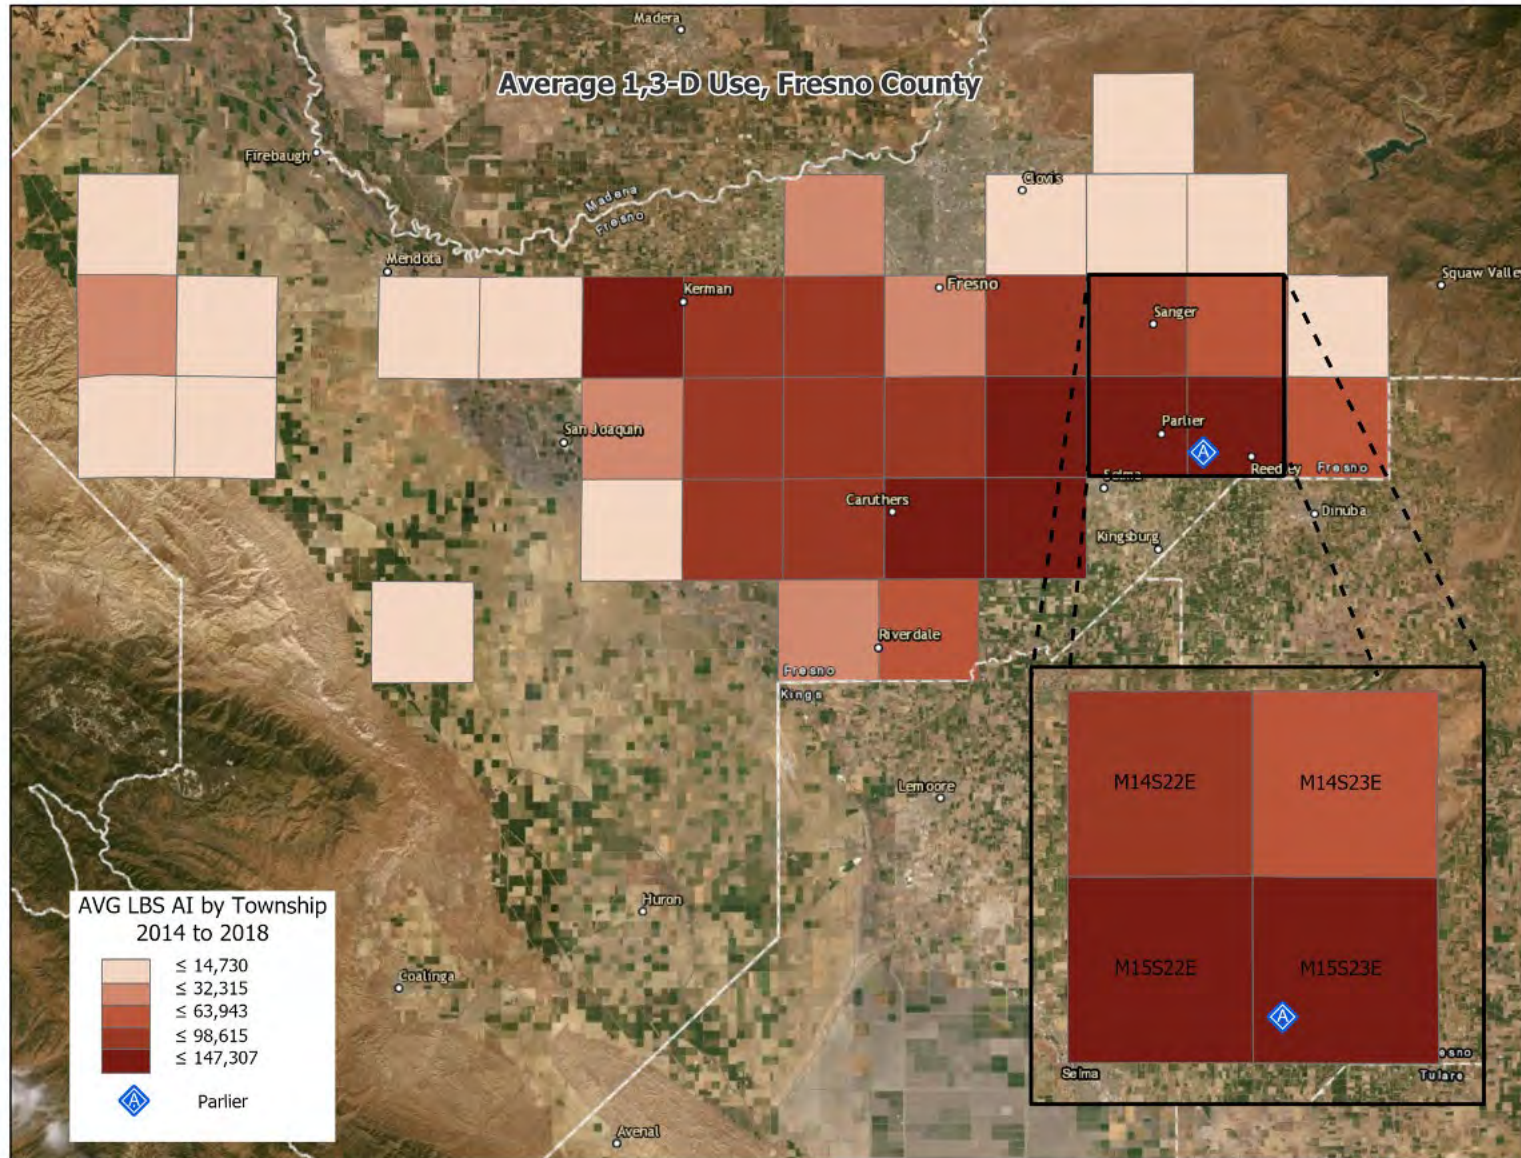

Selected Pilot Program Area: Kern County

Selected Pilot Program Area: Merced-Stanislaus Counties

Selected Pilot Program Area: Fresno County

Questions?

Actualización sobre la Mitigación del 1,3-Dicloropropeno y Estudios Piloto

Minh Pham

1 de junio de 2020

Reunión del Comité Directivo Comunitario de Shafter AB617

Resumen de la Presentación

- Antecedentes
- Enfoque de Mitigación
- Opciones de Mitigación
- Estudios Piloto
- Preguntas y Respuestas

Antecedentes: 1,3-Dicloropropeno

- Fumigante antes de la siembra utilizado para controlar nematodos, insectos y organismos patógenos en el suelo.
- Los usos principales en California incluyen arboles de fruta y nueces, fresas, uvas y zanahorias.
- Listado como material restringido.
- En parte debido a las recientes elevadas concentraciones de 1,3-D en el aire medidas, el DPR propone medidas de control adicionales para mitigar los efectos agudos sobre la salud de 1,3-D a los transeúntes.

Enfoque de Mitigación y Opciones Disponibles

- El DPR utilizó modelos informáticos HYDRUS y AERFUM para identificar diversas medidas de mitigación.
 - El uso de DPR de HYDRUS y AERFUM pasó por un proceso intensivo de revisión externo por pares coordinado por la Universidad de California.
- Opciones Disponibles para Abordar Exposiciones Agudas :
 - Limitar o prohibir las aplicaciones de 1,3-D
 - Requerir el uso de lonas TIF
 - Aumentar las distancias de la zona de amortiguamiento
 - Requerir documentación de aplicación estricta
 - Establecer el umbral mínimo de contenido de humedad del suelo para aplicaciones
 - Uso de nuevos métodos de aplicación de menos emisiones

Image: Shutterstock.com

Programa Piloto

- Consideraciones:
 - 1,3-D se usa ampliamente con un promedio anual de 12.6 millones de libras aplicadas (2011-2015).
 - Actualmente no hay alternativas viables a escala comercial para 1,3-D.
 - Las medidas de mitigación propuestas podrían ser costosas y podrían no alcanzar los objetivos de reducción de emisiones deseados.
- El DPR llevará a cabo un programa piloto en regiones seleccionadas de alto uso ubicadas cerca de los sitios de monitoreo del aire de DPR en Shafter, Parlier y Delhi para evaluar la efectividad y la viabilidad de las opciones de mitigación propuestas.
- Las aplicaciones de 1,3-D en las regiones seleccionadas durante el plazo del programa piloto deberán cumplir con las opciones de mitigación propuestas por el DPR.
- El programa piloto comenzará en septiembre de 2020 y tendrá una duración de un año.

Reducción de Emisiones de 1,3-D

- Tanto la EPA como DPR ofrecen un crédito de reducción de la zona de amortiguamiento de 60% cuando los aplicadores usan lonas TIF en ciertas aplicaciones de fumigantes.
- El modelado por computadora realizado por DPR muestra que una reducción de emisiones del 60% equivale a por lo menos una reducción de la zona de amortiguamiento del 60% para la mayoría de los tamaños de los campos o las tasas de aplicación.
- Por lo tanto, para este esfuerzo de mitigación, el DPR tiene como objetivo reducir las emisiones de 1,3-D por lo menos un 60% en comparación con la aplicación estándar de 18" sin interrupciones.
- DPR ha identificado varias opciones que resultan en reducciones de emisiones de 1,3-D de al menos 60% en comparación con las fumigaciones sin interrupción.

Reducción de las Emisiones de 1,3-D en Shafter

- ¿Cuáles son las tecnologías equivalentes para la reducción de emisiones que brindan resultados similares al usar lonas?

- Una de estas opciones podría proporcionar reducciones similares a lonas.

Opciones de Mitigación Identificadas

1. Uso de lonas TIF

- Este método requeriría que el campo de aplicación esté cubierto con lonas TIF aprobadas por DPR.

2. Contenido de humedad previo a la aplicación del 70% de capacidad de campo

- Riego de campo para crear una "barrera" o "capa" de humedad del suelo a **3-9" debajo de la superficie del suelo.**
- El volumen exacto de riego requerido para cumplir con el 70% de la "capacidad de campo" (FC) depende de las condiciones del suelo preexistentes.

3. Sello de agua después de aplicación

- El riego crea una zona de alta humedad cerca de la superficie del suelo ("sello de agua"), desacelerando emisiones de fumigantes.

4. Requiere inyección de fumigante a profundidades más bajas

- Bajo esta opción, se inyecta 1,3-D a una profundidad de al menos 24" debajo de la superficie del suelo.
- Una mayor profundidad de inyección aumenta la cantidad de tiempo que el fumigante pasa en el suelo y reduce las emisiones.

Opciones de Mitigación Identificadas

5. **Profundidad de inyección de 24" combinada con sello de agua posterior a la aplicación**
 - Esta opción es una combinación de las *Opciones de Mitigación 3 y 4*.

6. **50% del campo cubierto con TIF combinado con el método de inyección estándar de 18"**
 - Un campo es completamente fumigado, pero las filas se sellan alternativamente con TIF
 - El 100% del área de campo es fumigado: el 50% es cubierto por TIF y el 50% estará descubierto.

7. **50% del campo cubierto con TIF combinado con un método de inyección más profundo de 24"**
 - Lo mismo que el anterior, pero la profundidad de inyección se establece a 24".

8. **Pre-aplicación del límite de humedad de capacidad de campo de 70% combinada con 50% de campo cubierto con TIF**
 - Esta opción es una combinación de las *Opciones de Mitigación 2 y 6*.

Opciones de Mitigación Identificadas

9. Pre-aplicación del límite de humedad de capacidad de campo de 70% combinada con el método de inyección de 24" y 50% de TIF

- Esta opción es una combinación de las *Opciones de Mitigación 2, 4 y 6*.

10. Pre-aplicación del límite de humedad de capacidad de campo de 70% combinada con un método de inyección de 24" y sello de agua posterior a la aplicación

- Esta opción es una combinación de las *Opciones de Mitigación 2, 3 y 4*.

11. Fumigación sin lona a una profundidad de inyección de 18" (FFM 1206) con zonas de amortiguación expandidas o tamaño de aplicación reducido

- Según la tasa de aplicación y el tamaño del campo, es posible que se requieran zonas de amortiguación de hasta ¼ de milla.

12. Fumigación sin lona a una profundidad de inyección de 12" (FFM 1201) con zonas de amortiguación expandidas o tamaño de aplicación reducido

- Según la tasa de aplicación y el tamaño del campo, es posible que se requieran zonas de amortiguación de hasta ¼ de milla.

Nota: DPR continúa trabajando para refinar las opciones identificadas y continúa buscando información sobre opciones adicionales para explorar.

Opciones de Mitigación Identificadas

Opciones de Método de Aplicación	Rango de Aplicación (lb/ac)							
	100	110	125	150	200	250	300	332
1. TIF (FFM1242 o FFM 1247)	MR	MR	MR	MR	MR	MR	MR	MR
2. Límite de humedad de capacidad de campo de 70% e inyección de 18"	MR	MR	MR	MR	45 MR (200ft)	20 40 (200ft)	10 25 (200ft)	5 20 (200ft)
3. Sello de agua posterior a la aplicación e inyección de 18"	MR	MR	MR	MR	MR	50 MR (200ft)	30 50 (200ft)	20 35 (200ft)
4. Inyección de 24"	MR	MR	MR	MR	MR	40 70 (200ft)	25 40 (200ft)	15 30 (200ft)
5. Inyección de 24" y sello de agua posterior a la aplicación	MR	MR	MR	MR	MR	MR	60 MR (200ft)	40 70 (200ft)
6. 50% TIF e inyección de 18"	MR	MR	MR	MR	70 MR (200ft)	35 55 (200ft)	20 35 (200ft)	10 25 (200ft)
7. 50% TIF e inyección de 24"	MR	MR	MR	MR	MR	MR	MR	MR
8. 50% TIF y límite de humedad de capacidad de campo de 70% y 18" de inyección	MR	MR	MR	MR	MR	65 MR (200ft)	40 65 (200ft)	30 50 (200ft)
9. 50% TIF y límite de humedad de capacidad de campo de 70% y 24" de inyección	MR	MR	MR	MR	MR	MR	MR	MR
10. Inyección de 24" y 70% de capacidad de campo y sello de agua	MR	MR	MR	MR	MR	MR	MR	MR
11. Inyección estándar de 18" (FFM1206)	MR	65 MR (200ft) MR (500ft)	45 70 (200ft) MR (500ft)	25 40 (200ft) MR (500ft)	10 20 (200ft) 55 (500ft)	5 10 (200ft) 30 (500ft)	3 5 (200ft) 20 (500ft)	2 5 (200ft) 15 (500ft)
12. Inyección estándar de 12" (FFM1201)	10 20 (200ft) 55 (500ft)	10 15 (200ft) 45 (500ft)	5 10 (200ft) 35 (500ft)	4 5 (200ft) 25 (500ft)	2 4 (200ft) 10 (500ft)	2 3 (200ft) 5 (500ft)	1 2 (200ft) 5 (500ft)	NA 1 (200ft) 5 (500ft)

Los números en la tabla se refieren al tamaño máximo de bloque de aplicación permitido por método dado y combinación de tasa de aplicación.

MR = Restricciones mínimas = Bloques de aplicación ≤ 80 ac y 100 pies. Zona de amortiguación durante 7d.

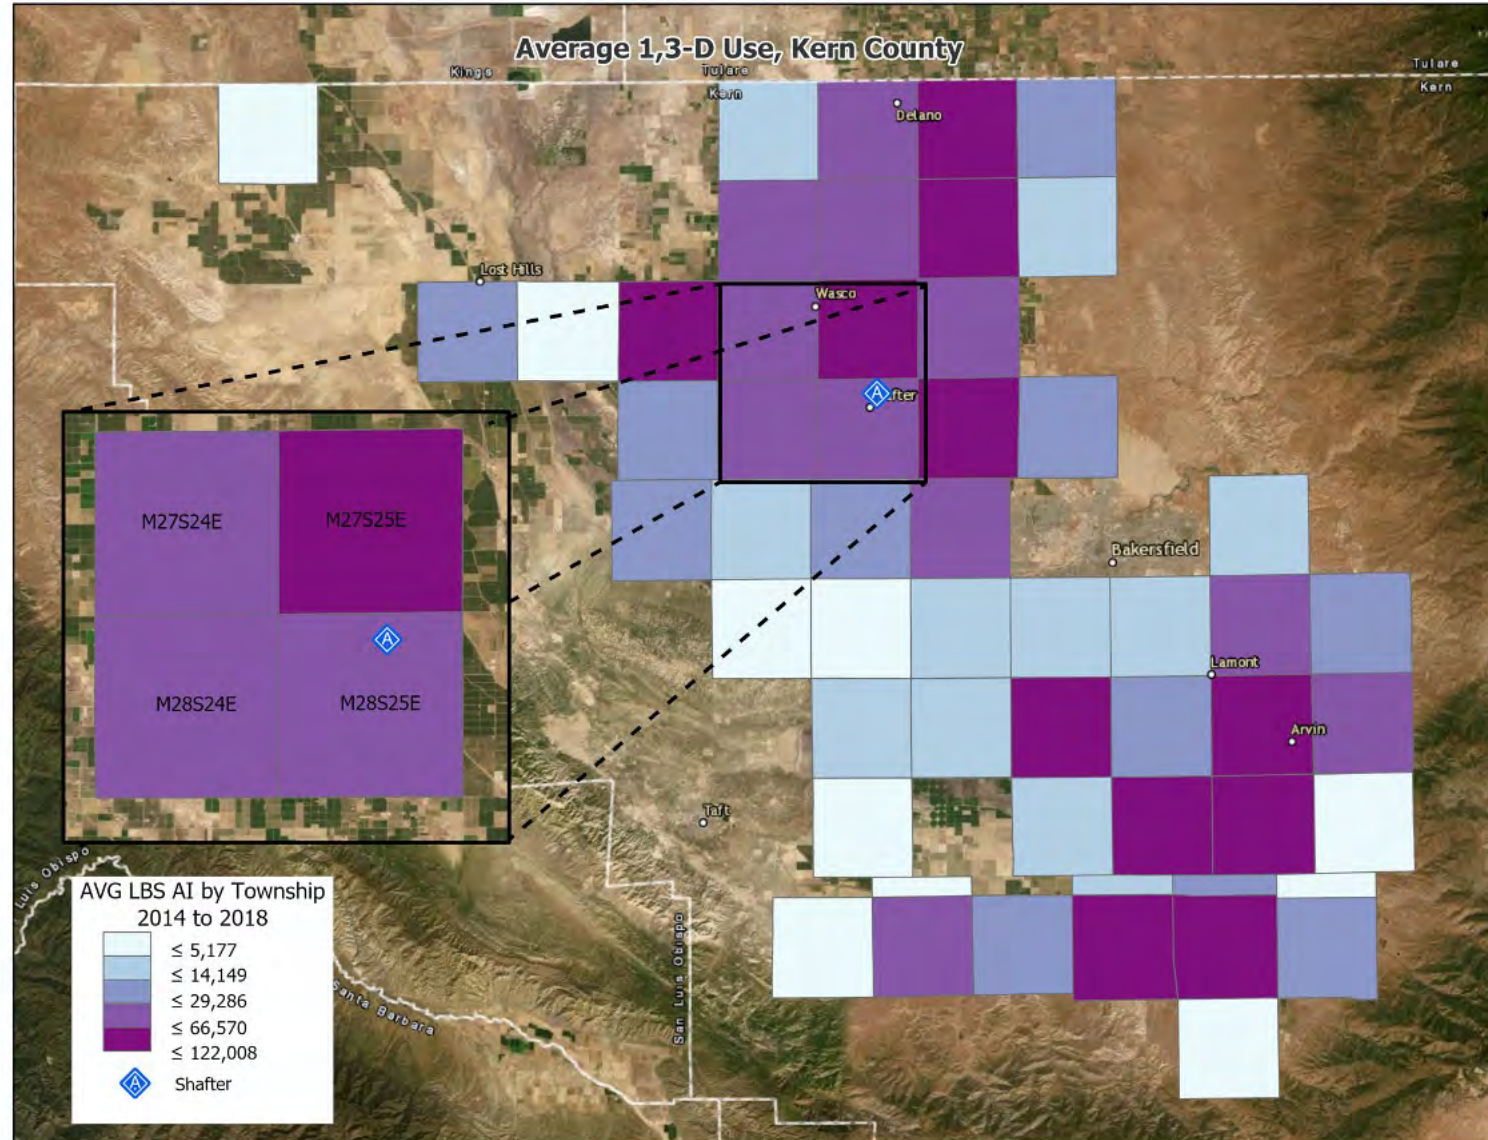

NA = No permitido

Objetivos del Programa Piloto y Esfuerzos de Monitoreo Mejorados

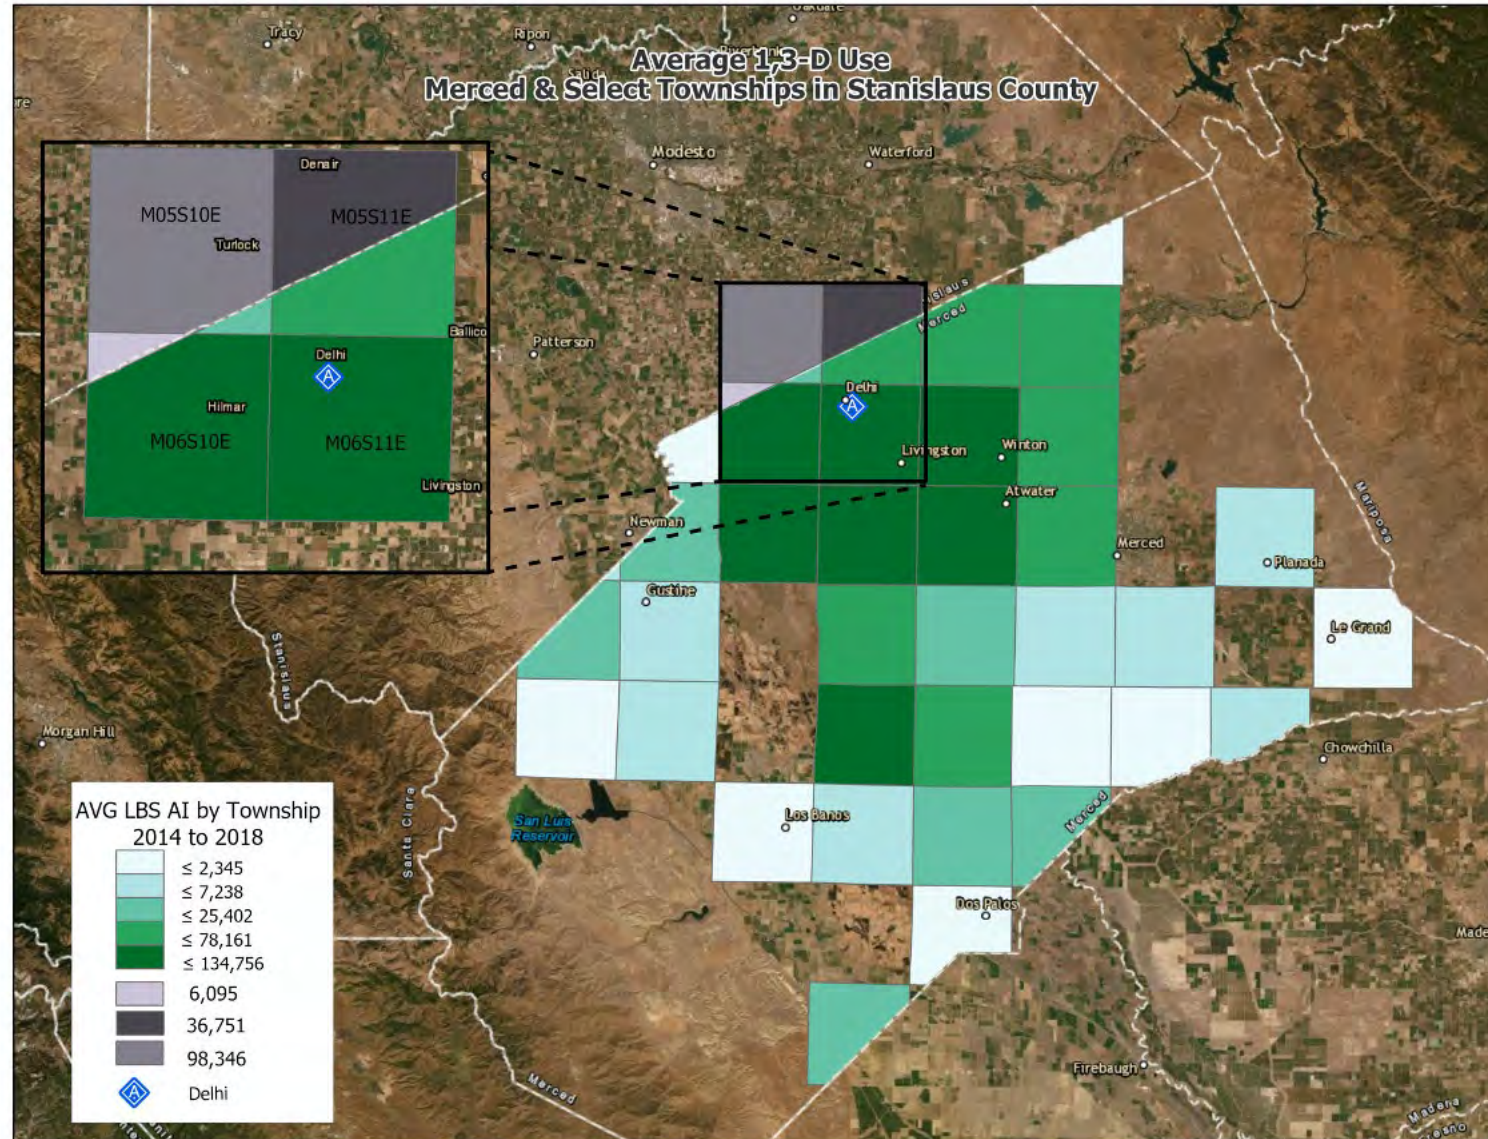

- Objetivos del programa piloto:
 - Para recopilar y evaluar datos de monitoreo de nuevos métodos para validar estimaciones de modelado por computadora, y
 - Evaluar la viabilidad de las opciones de mitigación propuestas, y
 - Evaluar la efectividad de las opciones de mitigación destinadas a reducir las emisiones de 1,3-D para la implementación en todo el estado.
- Esfuerzos de monitoreo mejorados durante el programa piloto:
 - Esfuerzos continuos de monitoreo del aire ambiental en el área.
 - Monitoreo intensivo del aire ambiental durante la temporada de alto uso.
 - Estudios de monitoreo en el sitio de la aplicación para medir y validar las emisiones estimadas de los nuevos métodos de aplicación.

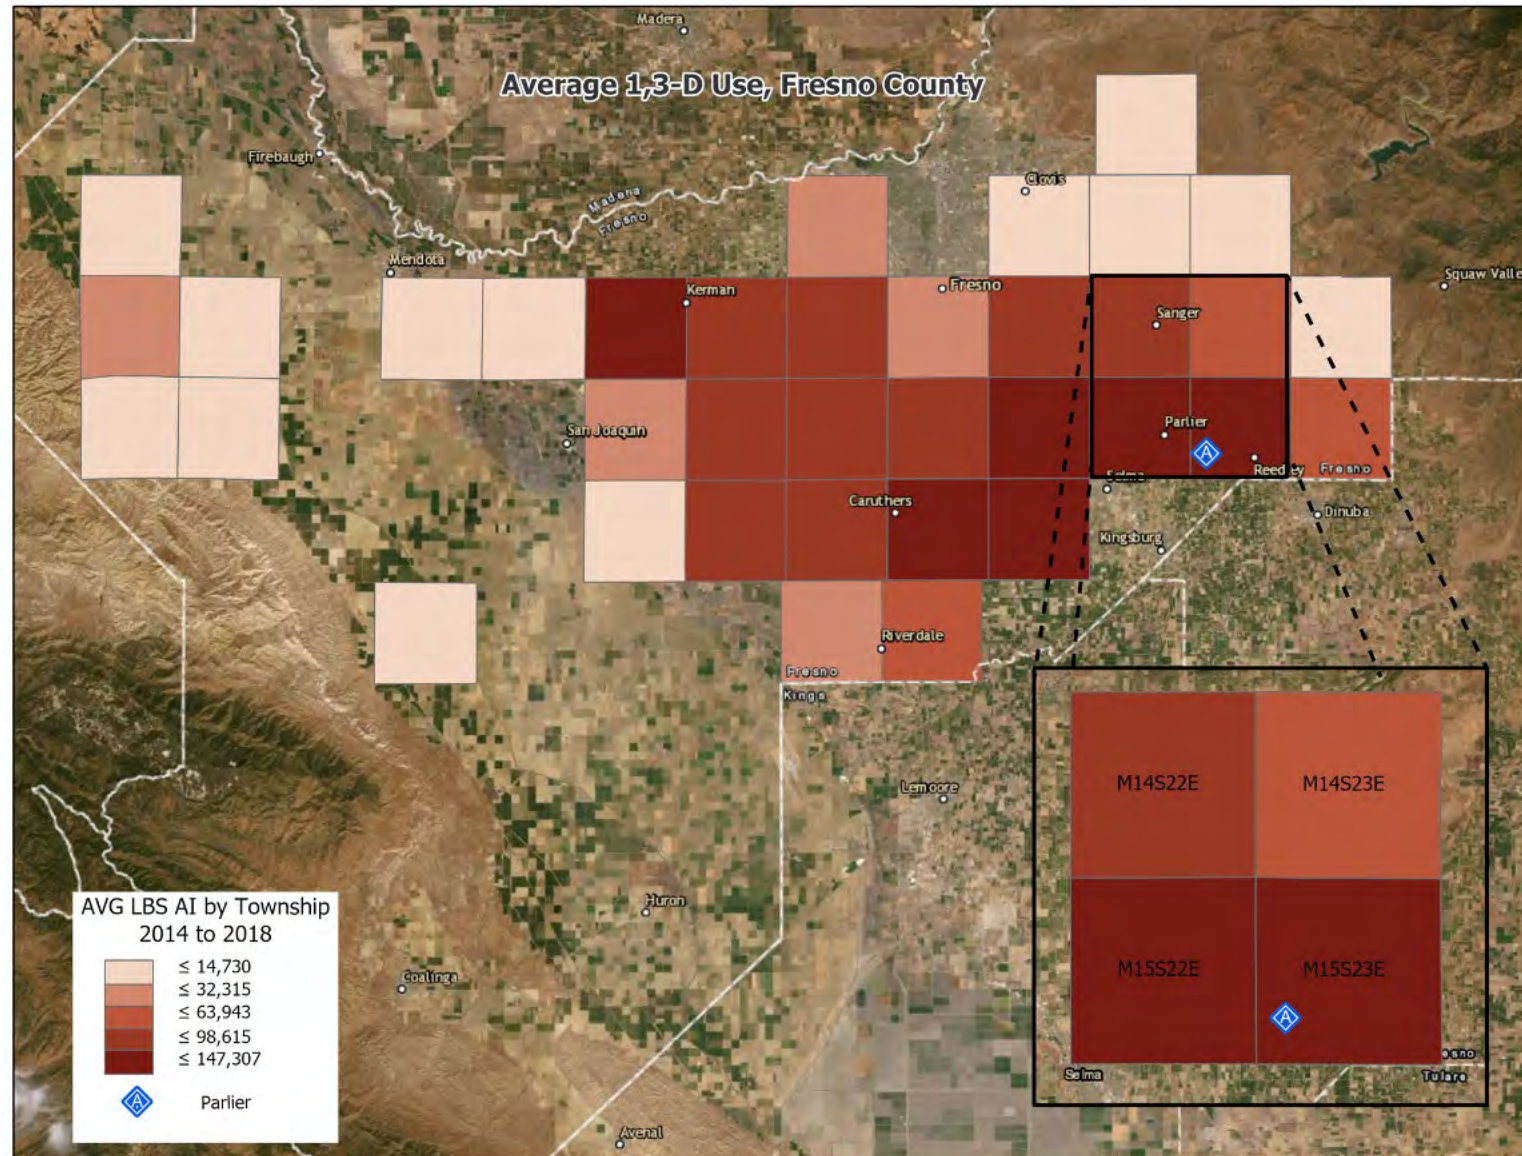

Área Seleccionada del Programa Piloto: Condado de Kern

Área Seleccionada del Programa Piloto: Condado de Fresno

¿Preguntas?

Shafter AB 617 Community Air Monitoring Update

Community Steering Committee Meeting
June 1, 2020

Ongoing Community Air Monitoring

- District continuing to conduct localized air monitoring in the Shafter community
- Working to deploy additional air monitoring platforms across the community, according to Community Steering Committee recommended network design
 - Due to lengthy administrative process in deploying additional equipment at schools, researching nearby alternative locations
- Air monitoring van actively being used to regularly monitor pollutants in areas of interest of the community and near recommended site locations for network design
- Intensive PM_{2.5} and VOC speciation sampling and laboratory analysis being conducted since late 2019

Community Air Monitoring Network Design

-  DPR Pesticide Monitoring
-  Stand-Alone PM2.5
-  Compact Air Monitoring System
-  Trailer
-  Mobile Monitoring Van

- Drive on a regular schedule throughout entire boundary all year
- Respond to community concerns
- 
- Recommended focus route

Community Air Monitoring Platforms

Community Air Monitoring Platforms (cont'd)

Community Air Monitoring Platforms (cont'd)

Online Sites in Shafter

Real-Time PM2.5

- PM2.5 at Shafter DMV (PM10 measurements through December 2019)
- PM2.5 at Grimmway Academy

VOC and PM2.5 Speciation

- Shafter DMV
- Measurements to continue here until the Farm Labor Center trailer is in place

Mobile Air Monitoring Van

- Regular measurements in community designated areas of interest and in community selected locations

Pending Sites in Shafter

Real-Time PM2.5

- **Golden Oak Elementary:**
Waiting on Richland School District, working on alternative locations

Compact Multi-Pollutant Air Monitoring System

- **Sequoia Elementary School:**
Waiting on Richland School District, working on alternative locations

Air Monitoring Trailer

- **Farm Labor Center:**
Waiting on Kern Housing Authority, working on alternative locations

Daily Average PM2.5 Data Comparison

January 1 – March 31, 2020

Comparison of Average PM2.5 January 1 – March 31, 2020

Site	Average PM2.5 Concentration ($\mu\text{g}/\text{m}^3$)
Shafter-DMV	10.0
Shafter-Grimmway	10.3
Bakersfield-California*	13.3
Corcoran*	13.9

*Nearest PM2.5 air monitoring sites to Shafter

Mobile Air Monitoring Van Activities

- Site A: North Shafter site among agricultural operations
- Site B: Centered among dairy operations
- Site C: Airport and Industrial area
- Site D: Mexican Colony

Mobile Air Monitoring Van Activities (cont'd)

- Short-term measurements taken in multiple locations on various days in January 2020
- The concentrations of pollutants measured for all locations were below federal standards during this period:
 - PM2.5 did not exceed $14.5 \mu\text{g}/\text{m}^3$, below the federal 24-hr PM2.5 standard of $35 \mu\text{g}/\text{m}^3$
 - Ozone did not exceed 35 ppb, below the federal 8-hr ozone standard of 70 ppb
 - CO did not exceed 0.3 ppm, below the federal 1-hr CO standard of 35 ppmv
 - NO2 did not exceed 29.6 ppb, below the federal 1-hr NO2 standard of 100 ppb
 - SO2 did not exceed 1.9 ppb, below the federal 1-hr SO2 standard of 75 ppb
 - VOC analyzers did not detect any measurable benzene, toluene, ethylbenzene, or xylene (BTEX) emissions at selected locations during this monitoring period
 - BTEX is a good indicator of VOC concentrations as a whole

Mobile Air Monitoring Van Activities (cont'd)

- Multiple hour measurements taken at single locations in March 2020
 - Collected data allowed for better comparison with federal air quality standards
 - District focusing these efforts in areas identified in the Community Air Monitoring Plan
- Example: March 25 measurements at Mexican Colony

PM2.5 Speciation Analysis

Shafter DMV Site (January 2020 – March 2020)

VOC Speciation Analysis

- VOC measurements and speciation laboratory analysis being conducted at Shafter DMV site since December 2019
- Laboratory analysis isolates concentrations of 68 VOC species
 - Results show trace or no detections of most VOC species
 - Focusing results on which species were detected in laboratory analysis

Detected VOC Species

Availability of Collected Community Air Quality Data

- Real-time community air monitoring data available on District AB 617 webpage at:
<http://community.valleyair.org/community-air-monitoring>
- CARB's statewide air quality data portal (AQview) displays and provides community air monitoring data from AB 617 communities
 - AQview website located at: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Air quality data from Valley AB 617 communities now available at this website
 - Monthly data will continue to be made available as air monitoring campaign continues
 - Development ongoing, new features to be added

Development and Availability of Ongoing Reports

- District in the process of delivering a comprehensive quarterly report summarizing air monitoring data collected
 - Quarterly reports will be posted to District AB 617 webpage
- Detailed reports of laboratory PM_{2.5} and VOC speciation analysis also to be posted on District AB 617 webpage
- Report summarizing collected air monitoring data from February 2019 through March 2020 will be available at:

<http://community.valleyair.org/selected-communities/shafter/air-monitoring/>

Comments/Questions?

Actualización de Monitoreo del Aire de la Comunidad AB 617 de Shafter

Reunión del Comité Directivo Comunitario
1 de junio de 2020

Monitoreo Continuo del Aire Comunitario

- El Distrito continúa realizando monitoreo de aire localizado en la comunidad de Shafter
- Trabajando para desplegar plataformas de monitoreo de aire adicionales en toda la comunidad, de acuerdo con el diseño de red recomendado por el Comité Directivo de la Comunidad
 - Debido al largo proceso administrativo en el despliegue de equipos adicionales en las escuelas, investigando ubicaciones alternativas cercanas
- Camioneta de monitoreo de aire se esta usando activamente para monitorear regularmente los contaminantes en áreas de interés de la comunidad y cerca de las ubicaciones recomendadas para el diseño de la red
- Pruebas intensivas de especiación de PM_{2.5} y VOC y análisis de laboratorio se han llevado a cabo desde los fines de 2019

Diseño del Sistema de Monitoreo del Aire Comunitario

Monitoreo de Pesticidas de DPR

PM2.5 Independiente

Sistema Compacto de Monitoreo del Aire

Remolque

Camioneta de Monitoreo Móvil

- Conducir en horario regular a través de todo el límite durante todo el año
- Responder a las preocupaciones de la comunidad
- Ruta de enfoque recomendada

Plataformas de Monitoreo del Aire Comunitario

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Sitios en Línea en Shafter

PM2.5 en Tiempo Real

- PM2.5 en DMV de Shafter (Medidas de PM10 hasta diciembre de 2019)
- PM2.5 en Grimmway Academy

Especiación de VOC y PM2.5

- DMV de Shafter
- Las medidas continuarán aquí hasta que el remolque del Farm Labor Center esté en su lugar

Camioneta de Monitoreo del Aire Móvil

- Medidas regulares en áreas de interés designadas por la comunidad y en ubicaciones seleccionadas por la comunidad

Sitios Pendientes en Shafter

PM2.5 en Tiempo Real

- **Golden Oak Elementary:**
Esperando en el Distrito Escolar de Richland, trabajando en ubicaciones alternativas

Sistema Compacto de Monitoreo del Aire Multi-Contaminante

- **Sequoia Elementary School:**
Esperando en el Distrito Escolar de Richland, trabajando en ubicaciones alternativas

Remolque de Monitoreo del Aire

- **Farm Labor Center:**
Esperando a la Autoridad de Vivienda de Kern, trabajando en ubicaciones alternativas

Comparación del Promedio Diario de Datos de PM2.5 1 de enero de 2020 - 31 de marzo de 2020

Comparación de Promedio de PM 2.5

1 de enero - 31 de marzo de 2020

Sitio	Concentración de Promedio de PM2.5 ($\mu\text{g}/\text{m}^3$)
Shafter-DMV	10.0
Shafter-Grimmway	10.3
Bakersfield-California*	13.3
Corcoran*	13.9

*Sitios de monitoreo de aire PM2.5 más cercanos a Shafter

Actividades de Camioneta de Monitoreo del Aire Móvil

- Sitio A: Sitio de North Shafter entre operaciones agrícolas
- Sitio B: Centrado entre las operaciones lácteas
- Sitio C: Aeropuerto y área industrial
- Sitio D: Mexican Colony

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de corto plazo tomadas en múltiples ubicaciones en varios días en enero de 2020
- Las concentraciones de contaminantes medidas para todas las ubicaciones estuvieron por debajo de los estándares federales durante este período:
 - PM2.5 no excedió 14.5 $\mu\text{g}/\text{m}^3$, debajo del estándar federal PM2.5 de 24-hr de 35 $\mu\text{g}/\text{m}^3$
 - Ozono no excedió 35 ppb, debajo del estándar federal de ozono de 8-hr de 70 ppb
 - CO no excedió 0.3 ppm, debajo del estándar federal de CO de 1-hr CO de 35 ppmv
 - NO2 no excedió 29.6 ppb, debajo del estándar federal de NO2 de 1-hr de 100 ppb
 - SO2 no excedió 1.9 ppb, debajo del estándar federal de SO2 de 1-hr SO2 de 75 ppb
 - Los analizadores de VOC no detectaron emisiones mensurables de benceno, tolueno, etilbenceno o xileno (BTEX) en ubicaciones seleccionadas durante este período de monitoreo
 - BTEX es un buen indicador de las concentraciones de VOC en su totalidad

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de varias horas tomadas en ubicaciones individuales en marzo de 2020
 - Los datos recopilados permitieron una mejor comparación con los estándares federales de calidad del aire
 - Distrito enfocando estos esfuerzos en áreas identificadas en el Plan Comunitario de Monitoreo del Aire
- Ejemplo: medidas del 25 de marzo cerca de la Mexican Colony

Análisis de Especiación de PM2.5

Sitio de DMV de Shafter (enero 2020 – marzo 2020)

Análisis de Especiación de VOC

- Las medidas de VOC y el análisis de laboratorio de especiación se han llevado a cabo en el sitio de DMV de Shafter desde diciembre 2019
- El análisis de laboratorio aísla las concentraciones de 68 especies de VOC
 - Los resultados muestran trazas o no detecciones de la mayoría de las especies de VOC
 - Enfocando resultados sobre qué especies fueron detectadas en análisis de laboratorio

Especies de VOC Detectadas

Disponibilidad de Datos Recopilados de la Calidad del Aire de la Comunidad

- Datos de monitoreo de aire comunitario en tiempo real disponibles en la página web del Distrito AB 617 en:
<http://community.valleyair.org/community-air-monitoring>
- El portal de datos de calidad del aire de todo el estado de CARB (AQview) muestra y proporciona datos de monitoreo del aire comunitario de las comunidades AB 617
 - Sitio web de AQview ubicado en: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Los datos de calidad del aire de las comunidades AB 617 del Valle ahora están disponibles en este sitio web
 - Los datos mensuales continuarán disponibles a medida que continúe la campaña de monitoreo del aire
 - Desarrollo continuo, nuevas características se agregarán

Desarrollo y Disponibilidad de Reportes Continuos

- Distrito en el proceso de entregar un informe trimestral completo que resume los datos de monitoreo del aire recopilados
 - Los informes trimestrales se publicarán en la página web del Distrito AB 617
- Los informes detallados del análisis de especiación de PM2.5 y VOC de laboratorio también se publicarán en la página web del Distrito AB 617
- El informe que resume los datos recopilados de monitoreo del aire desde febrero de 2019 hasta marzo de 2020 estará disponible en :
<http://community.valleyair.org/selected-communities/shafter/air-monitoring/>

Comentarios/¿Preguntas?

California Air Resources Board

Re: Emission Inventory Information Requests

Dear CARB and SJVAPCD,

Outstanding Requests

There are outstanding requests from March of 2019 for information about local pollution sources within the 7-mile radius that have not been adequately answered. Some of these requests below were partially answered and some were not answered at all. Some related information was promised but not yet received.

1. Dairies: There are ten large dairies either within the 7-mile radius or just outside. Please provide the total estimated emissions of VOCs, ammonia, H₂S, N₂O, methane, PM₁₀, PM_{2.5}, and methanol from these ten dairies as a whole. If area-wide emissions from dairies are known then estimating the emissions from these ten dairies should be possible by looking at relative cow numbers that are permitted.
2. JP Oil: Information about this company's emissions of VOCs, PM_{2.5}, NO_x, and TAC's within the 7-mile radius was promised a year ago but nothing has been provided.
3. There are many stationary IC engines pumping water for agricultural within the 7-mile radius. One item in the CERP is incentive money for farmers to convert these engines to electricity. How many of these permitted stationary source IC engines are in the 7-mile radius and what are the estimated emissions of NO_x, PM_{2.5}, and VOCs from these engines. This should be broken down by fuel type as well, basically diesel or natural gas.
4. In addition to the above request on agricultural irrigation pumps, what are the emissions from permitted stationary IC engines at the ten dairies in the area? This should include any permitted IC engines used for mixing feed, pumping water, generating electricity, or other possible uses on the dairy sites.
5. Many IC engines have been observed running oil well pumps or related equipment in both the CRC and JP Oil operations within the 7-mile radius. How many of these have been permitted, what are the associated emissions of NO_x, PM_{2.5}, and VOC's, and how many are within 2500 feet of a grid electricity source?
6. Related to the Shafter emission inventory provided and/or requested, what are the seasonal or monthly breakdown of these emission totals? For example, during peak harvest seasons there is far more trucking activity, field equipment activity, and processing plant activity. Another example is winter time only heating of buildings with natural gas and wood burning.

New Requests (CAMP)

1. All Shafter PM10 monitoring results with hourly and daily averages.
2. A comparison of Purple Air monitoring results (24-hour averages) between the 548 Walker sensor located at the Shafter DMV office and the JPL_Bakersfield_CARB sensor located at the California and Stockdale "official" monitoring location.
3. Results of monitoring emissions such as diesel soot and PM2.5 from Lerdo Hwy traffic at Golden Oak Elementary. This monitoring should be ongoing at either the Kindergarten or Pre-school playgrounds, each located immediately adjacent to stop signs.
4. Results of monitoring at the Mexican Colony.
5. Results of monitoring near to local dairies such as the location previously suggested at Magnolia and Burbank where there exists a fenced cell phone tower area with electricity.
6. Results of monitoring at the Labor Camp on Merced and Hwy 43.
7. Results of monitoring at the industrial sites near Lerdo Hwy and Hwy 99.
8. All hourly data from the PM2.5 monitors at Grimmway Academy and the DMV site.
8. Please provide DMV information about the number of private vehicles registered in Shafter by age.
9. How many yard locomotives are being currently used more than 100 hours per year (or some other comparative number) within the 7-mile radius and what tier engines do they each have?
10. How many yard tractors are being currently used more than 100 hours per year (or some other comparative number) within the 7-mile radius?
11. Please provide detailed information about all air district or CARB incentive funding spent during the past five years within the 7-mile radius of Shafter including the type of equipment replaced, dollar amounts, quantities, and emission reductions. With the emission reductions show emissions reduced compared to incentive money spent and details, including formulas, of how these numbers were calculated.

Responses to all 17 requests above should be given in writing at least one week before the next meeting of the Shafter Steering Committee so that they can be discussed at that meeting.

Sincerely,

Tom Frantz
Gustavo Aguirre Jr,
Byanka Santoyo

AB 617 Emission Inventory, Shafter
 Letter dated March 9 2020, Tom Frantz and Gustavo Aguirre, Jr.
 Re: AB 617 Shafter Emission Inventory Requests
 Received on March 9, 2020

Question	Topic/Category	Response																		
2019 Outstanding Requests:																				
1.	Dairy	<p>CARB’s emissions inventory for Shafter included area-wide emission estimates for all dairy sources in the community (7-mile radius) for both criteria pollutants and toxics, including ammonia. The planning level emission inventory for area and mobile sources are available under the “California Air Resources Board Data” at http://community.valleyair.org/selected-communities/shafter</p> <table border="1"> <thead> <tr> <th></th> <th>NOx (tpy)</th> <th>ROG (tpy)</th> <th>PM10 (tpy)</th> <th>PM2.5 (tpy)</th> <th>NH3 (tpy)</th> </tr> </thead> <tbody> <tr> <td>Dairy Cattle</td> <td>0.00</td> <td>85.83</td> <td>19.58</td> <td>2.24</td> <td>310.24</td> </tr> <tr> <td>Silage – Unspecified</td> <td>0.00</td> <td>133.28</td> <td>0.00</td> <td>0.00</td> <td>0.00</td> </tr> </tbody> </table> <p>CARB/District developed area source emission methodologies are available at https://ww2.arb.ca.gov/index-methodologies-major-category</p> <p>CARB/District methodologies for farming operations are available here: https://ww2.arb.ca.gov/arb-miscellaneous-process-methodologies-livestock</p> <p>The above link includes a link to SJVAPCD’s Dairy VOC Emission Factors Report.</p> <p>Additionally, as part of implementing the CERP, the District will be working with CDFA, NRCS, CDQAP, and local dairies in the community to implement emission reduction opportunities identified in the CERP, including examining the potential and feasibility of various alternative manure management practices to reduce emissions and to promote these practices at dairies near the community of Shafter. In the future, dairy-specific information will be collected through the Criteria and Air Toxics Reporting Regulation and AB 2588 Hot Spots updates.</p>		NOx (tpy)	ROG (tpy)	PM10 (tpy)	PM2.5 (tpy)	NH3 (tpy)	Dairy Cattle	0.00	85.83	19.58	2.24	310.24	Silage – Unspecified	0.00	133.28	0.00	0.00	0.00
	NOx (tpy)	ROG (tpy)	PM10 (tpy)	PM2.5 (tpy)	NH3 (tpy)															
Dairy Cattle	0.00	85.83	19.58	2.24	310.24															
Silage – Unspecified	0.00	133.28	0.00	0.00	0.00															
2.	JP Oil	<p>JP Oil has multiple operational sites in the Shafter 7-mile radius area. Under the annual emissions inventory program, the District consolidates, under the main facility, emissions inventory data from the different sites</p>																		

	Question	Topic/Category	Response
	<p>and TAC's within the 7-mile radius was promised a year ago but nothing has been provided.</p> <p>Original 2019 Question: The emissions of permitted sources do not include JP Oil located on the south side of Shafter and within the 7-mile boundary. This information needs to be included. For JP Oil, flaring emissions per year for the past five years should be included. CRC emissions from flaring should also be a separate category by year and type of emission for the past five years.</p>		<p>located in the area. The District has compiled a report of the emissions inventory data from JP Oil under the specific sites located within the Shafter 7-mile radius area.</p> <p>The map below is a reference for the approximate location of each unit reported in the attached JP Oil Emissions Inventory starting on page A-1.</p> 
3.	<p>There are many stationary IC engines pumping water for agricultural within the 7-mile radius. One item in the CERP is incentive money for</p>	<p>Incentives - IC Engines Ag Pumps</p>	<p>CARB's emissions inventory for Shafter included area-wide emission estimates for ag engines; emissions for some pollutants are summarized here. The planning level emission inventory for area and mobile sources are available under the "California Air Resources Board Data" at http://community.valleyair.org/selected-communities/shafter. Facility specific reported emissions is currently not available.</p> <p>(continued on next page)</p>

	Question	Topic/Category	Response																																																					
	farmers to convert these engines to electricity. 	Question	Topic/Category	Response
5.	<p>Many IC engines have been observed running oil well pumps or related equipment in both the CRC and JP Oil operations within the 7-mile radius. How many of these have been permitted, what are the associated emissions of NOx, PM2.5, and VOC's, and how many are within 2500 feet of a grid electricity source?</p>	<p>IC Engines in Ag, Oil Production (CRC & JP Oil)</p>	<p>Based on discussions with CRC, the oil wells are driven by electric motors and they do not operate any IC engines for this purpose in the 7-mile radius.</p> <p>JP Oil has multiple operational sites in the Shafter 7-mile radius area. Under the annual emissions inventory program, the District consolidates under the main facility emissions inventory data from the different sites, located in the area. However, to address the request, the District is has compiled a report the emissions inventory data from JP Oil under the specific sites located within the Shafter 7-mile radius area.</p> <p>The map below is a reference for the approximate location of each unit reported in the attached JP Oil Emissions Inventory starting on page A-1, where 19 of these units are IC Engines.</p> 

	Question	Topic/Category	Response
6.	<p>Related to the Shafter emission inventory provided and/or requested, what are the seasonal or monthly breakdown of these emission totals? For example, during peak harvest seasons there is far more trucking activity, field equipment activity, and processing plant activity. Another example is winter time only heating of buildings with natural gas and wood burning.</p>	<p>Temporal Emissions</p>	<p>The 2017 emission inventory for Shafter included annual emissions in tons per year for all source categories in the Shafter 7-mile radius. The emission inventory is available at http://community.valleyair.org/selected-communities/shafter. CARB and District staff have looked at stationary point (facilities) and area-wide emissions and have developed a monthly emission profile for these sources.</p> <p><u>District Permitted Sources:</u> The annual emissions inventory data received from permitted facilities contains information regarding facility monthly activity level. District staff has reconciled the facility monthly activity level information contained in the emission inventory database, when available, to establish monthly emissions inventory for each facility in the Shafter AB 617 project area.</p> <p><u>Please see attached PDF “Facility Emissions” starting on page A-6 for more details.</u></p> <p><u>CARB Area Sources:</u> Using established temporal data annual area source emissions can be resolved by month, week, day and hour. Temporal data are stored in CARB’s emission inventory database. Each local air district assigns temporal data for all processes at each facility in their district to represent when emissions at each process occur. CARB or district staff also assign temporal data for each area source category by county/air basin/district. CARB has developed monthly emissions for some of the top area source categories.</p> <p><u>Please see attached PDF “Shafter Top Areawide Categories Monthly Emissions” starting on page A-12 for more details.</u></p>

	Question	Topic/Category	Response
2.	<p>A comparison of Purple Air monitoring results (24-hour averages) between the 548 Walker sensor located at the Shafter DMV office and the JPL_Bakersfield_CARB sensor located at the California and Stockdale “official” monitoring location.</p>	<p>Monitoring</p>	<p>Two Purple Air sensors are sampling outdoor concentrations of PM_{2.5} near regulatory monitors located in Shafter and Bakersfield.</p>  <p>Bakersfield-CA is the closest regulatory PM_{2.5} monitor. A similar monitor has been placed on the roof of the DMV office at Shafter. The two monitors show similar trends throughout the year. The Shafter Purple Air sensor began collecting data March 5, 2019. The following charts are a breakdown of each regulatory monitor and Purple Air sensor within each quarter from Feb. 6, 2019, until Feb. 29, 2020.</p> <p>The dotted lines depict the Purple Air sensors; while the solid lines depict the regulatory and the regulatory equivalent monitors. “FEM” means the monitor is in the regulatory network. “BAM” is the same type of monitor in the community network.</p> <p>Purple Air sensors are useful for spatial evaluation of trends (i.e. are we seeing elevated PM in part of a community?). However, these sensors are not a suitable substitute for the regulatory monitors deployed by the District and CARB. The District’s PM_{2.5} monitors, including the two regulatory-grade monitoring sites in the graphs below, are routinely calibrated and maintained by trained technicians, and show relatively</p>

	Question	Topic/Category	Response
			<p>consistent levels across the analysis period. The purple air sensors, which are not regulatory-grade and are not capable of being calibrated, lack the same level of quality assurance as the regulatory monitors. As a result, studies have shown that the data tends to be more volatile, especially at higher concentrations. Which can be seen during the higher PM2.5 months of Q4 2019 and Q1 2020. The District is continuing to evaluate Purple Air sensors in other locations in the Valley as a part of the Technical Evaluation of Sensor Technology (TEST) program, all of which have shown a similar trend of over-estimating PM2.5 concentrations during elevated periods.</p> <p>For more information on the District’s TEST program, please visit: https://www.valleyair.org/aqmonitoring/test/</p>

	Question	Topic/Category	Response																									
9.	How many yard locomotives are being currently used more than 100 hours per year (or some other comparative number) within the 7-mile radius and what tier engines do they each have?	Yard Locomotives	<p>CARB does not have information on locomotive activity in the Shafter community; however, for your reference, we have attached a map that includes an inventory of how many railyards surround the community, including Class 3 and Military/Industrial railyards. Please see attached PDF “Railyard Summary Maps for Shafter” starting on page A-18.</p> <p>Additionally, as part of implementing the CERP, the District will be working with local rail yards and locomotive companies to implement emission reduction opportunities identified in the CERP, including examining the potential and feasibility of replacing older, high-polluting railyard switchers with the cleanest available technology near the community of Shafter.</p>																									
10	How many yard tractors are being currently used more than 100 hours per year (or some other comparative number) within the 7-mile radius?	Yard Tractors	<p>CARB does not collect detailed facility specific data on yard tractors. However, CARB’s In-Use Off-Road Diesel-Fueled Fleets Regulation (Off-road Regulation) and Mobile Cargo Handling Equipment Regulation do have reporting requirements for fleets subject to these regulations. Based on fleets who have reported in the Diesel Off-Road Online Reporting System (DOORS), the reporting system for the Off-Road Regulation, there are four yard trucks reported for ZIP Codes 93314 and 93308. Please note that under this regulation, fleets do not have to report where the vehicles are being used, rather they are reported as a statewide fleet under the company location. Some fleets may report by location, but not all. Fleets also do not report usage information, unless they are claiming low-use which is less than 200 hours/year.</p> <p>The table below lists the company name and address for the four yard trucks reported in DOORS. However, none of these locations fall within the Shafter 7-mile radius. The closest facility is about 0.85 miles outside the boundary, Frito-Lay facility at 28801 Highway 58. The others are more than 3 miles away.</p> <table border="1" data-bbox="783 1084 2064 1325"> <thead> <tr> <th>Company name</th> <th>Mailing address</th> <th>City</th> <th>State</th> <th>ZIP</th> </tr> </thead> <tbody> <tr> <td>Johasee Rebar, LP</td> <td>18059 Rosedale Hwy</td> <td>Bakersfield</td> <td>CA</td> <td>93314</td> </tr> <tr> <td>Frito-Lay North America, Inc.</td> <td>28801 Highway 58</td> <td>Bakersfield</td> <td>CA</td> <td>93314</td> </tr> <tr> <td>Frito-Lay North America, Inc.</td> <td>28801 Highway 58</td> <td>Bakersfield</td> <td>CA</td> <td>93314</td> </tr> <tr> <td>C&J Well Services, Inc.</td> <td>7515 Rosedale Highway</td> <td>Bakersfield</td> <td>CA</td> <td>93308</td> </tr> </tbody> </table>	Company name	Mailing address	City	State	ZIP	Johasee Rebar, LP	18059 Rosedale Hwy	Bakersfield	CA	93314	Frito-Lay North America, Inc.	28801 Highway 58	Bakersfield	CA	93314	Frito-Lay North America, Inc.	28801 Highway 58	Bakersfield	CA	93314	C&J Well Services, Inc.	7515 Rosedale Highway	Bakersfield	CA	93308

San Joaquin Railyards*

¹Class 1 Switchers may be frequently reassigned to a different railyard or a different region for operational needs. Class 1 major railyards switcher counts are from 2007-2009 Health Risk Assessments (HRA). Class 3, Passenger and Military/Industrial based on 2016 staff communication.

*Major railyard: One of selected 18 railyards in 2007-2009 HRA. Non-Major railyard is a Class 1 railyard that is not a Major railyard.

Class 1 Non-Major* Railyards

UP Tracy	
Operations	Classification
Switchers	Contact UP for tiers/count.

Class 3 Railyards

CCT (Central California Traction) Lodi Yard	
Operations	Switching
Switchers ²	5x Pre-Tier 0, 3x Genset (combined with CCT Port of Stockton Yard)

WI (West Isle Railroad) Yard	
Operations	Switching
Switchers ²	1x Pre-Tier 0

* Railyards in this document are locations where switchers operate or maintenance activities occur.

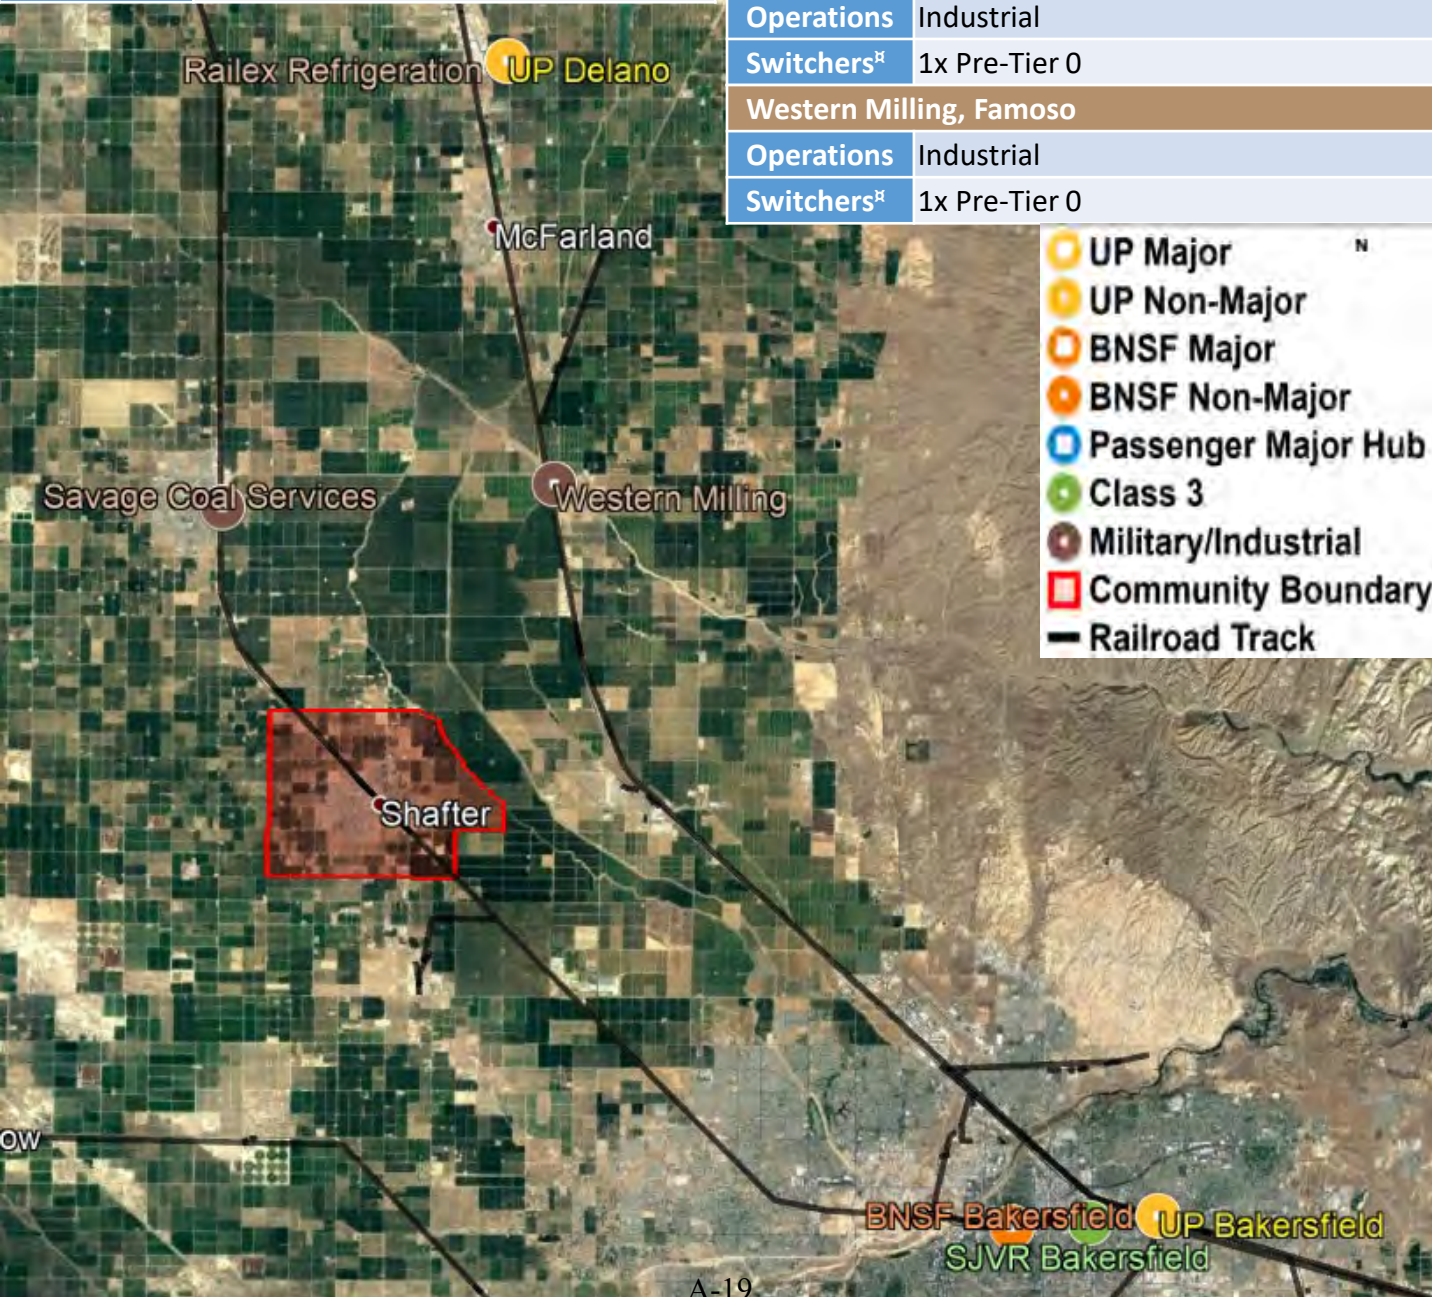

Shafter and Vicinity

Class 1 Non-Major* Railyards

UP Delano	
Operations	Classification
Switchers st	Contact UP for tiers/count.
UP Bakersfield	
Operations	Classification
Switchers st	Contact UP for tiers/count.
BNSF Bakersfield	
Operations	Classification
Switchers st	Contact BNSF for tiers/count.

Class 3 Railyards

SJVR Bakersfield	
Operations	Switching
Switchers st	18x Pre-Tier 0, 4x Tier 4 (all 3 SJVR yards combined)
Military / Industrial	
Railrex Refrigeration	
Operations	Industrial
Switchers st	1x Pre-Tier 0
Savage Coal Services	
Operations	Industrial
Switchers st	1x Pre-Tier 0
Western Milling, Famoso	
Operations	Industrial
Switchers st	1x Pre-Tier 0

- UP Major
- UP Non-Major
- BNSF Major
- BNSF Non-Major
- Passenger Major Hub
- Class 3

Inventario de Emisiones bajo AB 617, Shafter
 Carta fechada el 20 de marzo de 2019, Tom Frantz y Gustavo Aguirre, Jr.
 Sobre: Solicitudes de Inventario de Emisiones bajo AB 617 para Shafter
 Recibido el 9 de marzo de 2020

	Pregunta	Tema/Categoría	Respuesta																		
Solicitudes Pendientes de 2019:																					
1.	Hay diez grandes lecherías dentro del radio de 7 millas o afuera por poco. Por favor indique las emisiones totales estimadas de VOCs, amoníaco, H2S, N2O, metano, PM10, PM2.5 y metanol de estas diez lecherías en su conjunto. Si se conocen las emisiones de las lecherías en toda el área, entonces debería ser posible estimar las emisiones de estas diez lecherías observando los números relativos de vacas permitidas.	Lechería	<p>El inventario de emisiones para Shafter que CARB desarrollo incluye estimaciones de emisiones de área para todas las lecheras en la comunidad (radio de 7 millas) para contaminantes de criterio y toxinas, incluyendo amoníaco. El inventario de emisiones al nivel de planeación para fuentes de área y móviles esta disponible bajo "California Air Resources Board Data" en la página: http://community.valleyair.org/selected-communities/shafter</p> <table border="1" data-bbox="787 727 2066 850"> <thead> <tr> <th></th> <th>NOx (tpy)</th> <th>ROG (tpy)</th> <th>PM10 (tpy)</th> <th>PM2.5 (tpy)</th> <th>NH3 (tpy)</th> </tr> </thead> <tbody> <tr> <td>Vacas Lecheras</td> <td>0.00</td> <td>85.83</td> <td>19.58</td> <td>2.24</td> <td>310.24</td> </tr> <tr> <td>Forraje – No especificado</td> <td>0.00</td> <td>133.28</td> <td>0.00</td> <td>0.00</td> <td>0.00</td> </tr> </tbody> </table> <p>Metodologías para emisiones de área desarrolladas por CARB o el Distrito están disponible en https://ww2.arb.ca.gov/index-methodologies-major-category</p> <p>Metodologías para emisiones de operaciones agrícolas desarrolladas por CARB o el Distrito están disponible aquí: https://ww2.arb.ca.gov/arb-miscellaneous-process-methodologies-livestock</p> <p>El enlace antedicho incluye el enlace al reporte de Factores de Emisiones de VOC de Lecheras desarrollado por SJVAPCD.</p> <p>Además, como parte de la implementación del CERP, el Distrito trabajará con CDFA, NRCS, CDQAP y las lecherías locales en la comunidad para implementar oportunidades de reducción de emisiones identificadas en el CERP, incluyendo el examen del potencial y la viabilidad de varias prácticas alternativas de manejo de estiércol para reducir las emisiones y promover estas prácticas en las lecherías cercanas a la comunidad de Shafter. En el futuro, la información específica de las lecherías se recolectará a través del Reglamento de</p>		NOx (tpy)	ROG (tpy)	PM10 (tpy)	PM2.5 (tpy)	NH3 (tpy)	Vacas Lecheras	0.00	85.83	19.58	2.24	310.24	Forraje – No especificado	0.00	133.28	0.00	0.00	0.00
	NOx (tpy)	ROG (tpy)	PM10 (tpy)	PM2.5 (tpy)	NH3 (tpy)																
Vacas Lecheras	0.00	85.83	19.58	2.24	310.24																
Forraje – No especificado	0.00	133.28	0.00	0.00	0.00																

	Pregunta	Tema/Categoría	Respuesta
			Informes de los Contaminantes de Criterio y Tóxicos del Aire y las actualizaciones de las Zonas Conflictivas de AB 2588.
2.	<p>Hace un año se prometió información sobre las emisiones de VOCs, PM2.5, NOx y TACs de esta compañía dentro del radio de 7 millas, pero no se ha proporcionado nada.</p> <p>Pregunta original de 2019: Las emisiones de las fuentes permitidas no incluyen JP Oil ubicado en el lado sur de Shafter y dentro del límite de 7 millas. Esta información debe ser incluida. Para JP Oil, se deben incluir las emisiones de llamaradas por año durante los últimos cinco años. Las emisiones de CRC de llamaradas también deberían ser una categoría separada por año y</p>	<p>JP Oil</p>	<p>JP Oil tiene múltiples sitios operativos en el área de radio de 7 millas en Shafter. Bajo el programa de inventario de emisiones anuales, el Distrito consolida bajo los datos del inventario de emisiones de las instalaciones principales de los diferentes sitios, ubicados en el área. El Distrito ha compilado un informe de los datos del inventario de emisiones de JP Oil en los sitios específicos ubicados dentro del área del radio de 7 millas en Shafter.</p> <p>El siguiente mapa es una referencia para la ubicación aproximada de cada unidad informada en el documento de JP Oil adjunto. Inventario de Emisiones a partir de la página A-1.</p> 

	Pregunta	Tema/Categoría	Respuesta															
	tipo de emisión durante los últimos cinco años.																	
3.	Hay muchos motores de combustión interna estacionarios que bombean agua para la agricultura dentro del radio de 7 millas. Un elemento del CERP es el dinero de incentivo para que los agricultores conviertan estos motores en electricidad. Cuántos de estos motores de combustión interna de fuente estacionaria permitidos están en el radio de 7 millas y cuáles son las emisiones estimadas de NOx, PM2.5 y VOCs de estos motores. Esto también debe estar separado por tipo de combustible,	Incentivos – Pompas Agrícolas de Motores de Combustión Interna	<p>Emisiones de motores agrícolas son incluidos bajo el inventario de las emisiones de área de CARB; emisiones para algunos contaminantes son resumidos aquí. El inventario de emisiones al nivel de planeación para fuentes de área y móviles esta disponible bajo “California Air Resources Board Data” en la página http://community.valleyair.org/selected-communities/shafter. Reporte de emisiones por instalación actualmente no es disponible.</p> <table border="1"> <thead> <tr> <th></th> <th>NOx (tpy)</th> <th>ROG (tpy)</th> <th>PM10 (tpy)</th> <th>PM2.5 (tpy)</th> </tr> </thead> <tbody> <tr> <td>Bomba Agrícola Estacionaria</td> <td>10.71</td> <td>0.84</td> <td>0.34</td> <td>0.33</td> </tr> <tr> <td>Bomba Agrícola Portátil</td> <td>14.10</td> <td>1.76</td> <td>0.76</td> <td>0.74</td> </tr> </tbody> </table> <p>Metodologías desarrolladas por CARB/El Distrito relacionadas a motores de combustión interna en los sectores de agricultura son disponibles aquí: https://ww2.arb.ca.gov/fuel-combustion-methodologies.</p> <p>Como parte de la implementación del CERP, el Distrito trabajará con fuentes agrícolas en la comunidad para implementar oportunidades de reducción de emisiones identificadas en el CERP, incluyendo la electrificación de motores cuando sea posible.</p>		NOx (tpy)	ROG (tpy)	PM10 (tpy)	PM2.5 (tpy)	Bomba Agrícola Estacionaria	10.71	0.84	0.34	0.33	Bomba Agrícola Portátil	14.10	1.76	0.76	0.74

	Pregunta	Tema/Categoría	Respuesta																																																	
	básicamente diésel o gas natural.																																																			
4.	Además de la solicitud anterior sobre las pompas de riego agrícola, ¿cuáles son las emisiones de los motores de combustión interna estacionarios permitidos en las diez lecherías de la zona? Esto debe incluir cualquier motor de combustión interna permitido utilizado para mezclar alimentos, bombear agua, generar electricidad u otros usos posibles en los sitios de lecherías.	Lecherías – Motores de Combustión Interna	<p>Por favor vea la respuesta a la pregunta 3.</p> <p>El Distrito ha recolectado datos de emisiones de las 5 lecherías ubicadas dentro del radio de 7 millas de Shafter y el Distrito está proporcionando datos de emisiones permitidos de estas fuentes. Las emisiones se basan en todo el equipo permitido, incluyendo las operaciones y el equipo en la lechería y, para las lecherías con motores permitidos en la fuente, las emisiones de esos también. Al revisar los datos, es importante tener en cuenta que estas son las emisiones máximas permitidas por el permiso y para muchas de las lecherías, las emisiones reales podrían ser considerablemente menores. Los datos de emisiones reales de las lecherías individuales no están disponibles actualmente. En el futuro, la información específica de las lecherías se recolectará a través del Reglamento de Informes de los Contaminantes de Criterio y Tóxicos del Aire y las actualizaciones de las Zonas Conflictivas de AB 2588.</p> <table border="1"> <thead> <tr> <th>NOMBRE DE INSTALACIÓN</th> <th>Motores</th> <th>NO_x (lb/año)</th> <th>SO_x (lb/año)</th> <th>PM₁₀ (lb/año)</th> <th>CO (lb/año)</th> <th>VOC (lb/año)</th> </tr> </thead> <tbody> <tr> <td>AUKEMAN DAIRY</td> <td>1</td> <td>772</td> <td>0</td> <td>37</td> <td>235</td> <td>88</td> </tr> <tr> <td>FAIAL FARMS 2</td> <td>1</td> <td>1,213</td> <td>1</td> <td>58</td> <td>369</td> <td>138</td> </tr> <tr> <td>OASIS HOLSTEIN DAIRY</td> <td>1</td> <td>882</td> <td>0</td> <td>44</td> <td>268</td> <td>101</td> </tr> <tr> <td>SKYVIEW DAIRY</td> <td>2</td> <td>3,163</td> <td>16</td> <td>152</td> <td>27,878</td> <td>458</td> </tr> <tr> <td>TJAARDA DAIRY</td> <td>3</td> <td>1,377</td> <td>15</td> <td>93</td> <td>485</td> <td>130</td> </tr> <tr> <td colspan="2">Total/ Año</td> <td>7,407</td> <td>32</td> <td>384</td> <td>29,235</td> <td>915</td> </tr> </tbody> </table>	NOMBRE DE INSTALACIÓN	Motores	NO _x (lb/año)	SO _x (lb/año)	PM ₁₀ (lb/año)	CO (lb/año)	VOC (lb/año)	AUKEMAN DAIRY	1	772	0	37	235	88	FAIAL FARMS 2	1	1,213	1	58	369	138	OASIS HOLSTEIN DAIRY	1	882	0	44	268	101	SKYVIEW DAIRY	2	3,163	16	152	27,878	458	TJAARDA DAIRY	3	1,377	15	93	485	130	Total/ Año		7,407	32	384	29,235	915

5.	Se ha observado que muchos motores de combustión interna funcionan con	Motores de Combustión Interna en Agricultura,	Según las discusiones con CRC, los pozos de petróleo son impulsados por motores eléctricos y no operan ningún motor de combustión interna para este propósito en el radio de 7 millas.																																																	

	Pregunta	Tema/Categoría	Respuesta
	<p>bombas de pozos de petróleo o equipos relacionados en las operaciones de CRC y JP Oil dentro del radio de 7 millas. ¿Cuántos de estos tienen permisos, cuáles son las emisiones asociadas de NOx, PM2.5 y VOC, y cuántos están dentro de 2500 pies de una fuente de electricidad?</p>	<p>Producción de Petróleo (CRC & JP Oil)</p>	<p>JP Oil tiene múltiples sitios operativos en el área de radio de 7 millas en Shafter. Bajo el programa de inventario de emisiones anuales, el Distrito consolida bajo los datos del inventario de emisiones de las instalaciones principales de los diferentes sitios, ubicados en el área. Sin embargo, para abordar la solicitud, el Distrito ha compilado un informe de los datos del inventario de emisiones de JP Oil en los sitios específicos ubicados dentro del área del radio de 7 millas en Shafter. El equipo se opera de manera consistente a las operaciones.</p> <p>El siguiente mapa es una referencia para la ubicación aproximada de cada unidad informada en el Inventario de Emisiones de JP Oil adjunto, donde 19 de estas unidades son Motores de Combustión Interna.</p> 
6.	<p>En relación con el inventario de emisiones de Shafter</p>	<p>Emisiones Temporales</p>	<p>El inventario de emisiones del 2017 para Shafter incluye emisiones anuales en toneladas por año para todas las categorías de fuentes en el radio de 7-millas de Shafter. El inventario de emisiones es disponible aquí: http://community.valleyair.org/selected-communities/shafter. CARB y el Distrito han revisado las fuentes</p>

	Pregunta	Tema/Categoría	Respuesta
	<p>que se ha proporcionado y/o solicitado, ¿cuál es el desglose estacional o mensual de estos totales de emisiones? Por ejemplo, durante las temporadas pico de cosecha, hay mucha más actividad de transporte por camión, actividad de equipo de campo y actividad de planta de procesamiento. Otro ejemplo es la calefacción en el invierno solamente de edificios con gas natural y leña.</p>		<p>de emisiones de instalaciones estacionarias (instalaciones) y fuentes de área y han desarrollado un perfil de emisiones mensuales para estas fuentes.</p> <p><u>Fuentes Permitidas por el Distrito:</u> Los datos de inventario de emisiones anuales recibidos de las instalaciones permitidas contienen información parcial sobre el nivel de actividad mensual de la instalación. El personal del Distrito ha conciliado la lista de las instalaciones con la información del nivel de actividad mensual contenida en la base de datos del inventario de emisiones, cuando esté disponible, para establecer un inventario de emisiones mensual para cada instalación en el área de proyecto de Shafter bajo AB 617.</p> <p><u>Consulte el PDF adjunto “Facility Emissions” empezando en la página A-6 para obtener más detalles.</u></p> <p><u>Fuentes de Área de CARB:</u> Usando datos temporales establecidos, emisiones anuales de área pueden ser convertidos a emisiones por mes, semana, día y hora. Datos temporales son guardados en la base de datos de inventarios de emisiones de CARB. Cada distrito de aire asigna datos temporales para todos los procesos ocurriendo en cada instalación en su distrito para representar cuando ocurren las emisiones por cada proceso. El personal de CARB o el Distrito asignan datos temporales para cada categoría de fuente de área por condado/distrito de aire. CARD ha desarrollado emisiones mensuales para las fuentes de área mayores en la comunidad.</p> <p><u>Favor de ver el PDF adjunto “Shafter Top Area-wide Categories Monthly TPY” empezando en la página A-12 para más detalles.</u></p>

	Pregunta	Tema/Categoría	Respuesta
			<p>Además, el Distrito presentó esta información en la reunión #17 del comité directivo de la comunidad el 13 de enero de 2020.</p>
2.	<p>Una comparación de los resultados de monitoreo de Purple Air (promedios de 24 horas) entre el sensor en 548 Walker ubicado en la oficina del DMV en Shafter y el sensor JPL_Bakersfield_CARB ubicado en la ubicación de monitoreo "oficial" de California y Stockdale.</p>	<p>Monitoreo</p>	<p>Dos sensores de Purple Air están tomando muestras de las concentraciones exteriores de PM2.5 cerca de los monitores regulatorios ubicados en Shafter y Bakersfield.</p>  <p>Bakersfield-CA es el analizador regulatorio de PM2.5 más cercano. Se colocó un analizador similar en el techo de la oficina del DMV en Shafter. Los dos analizadores muestran tendencias similares durante todo el año. El sensor Purple Air en Shafter comenzó a recopilar datos el 5 de marzo de 2019. Los siguientes cuadros son un desglose de cada analizador dentro de cada trimestre desde el 6 de febrero de 2019 hasta el 29 de febrero de 2020.</p>

	Pregunta	Tema/Categoría	Respuesta
			<p>Las líneas punteadas representan los sensores de Purple Air: mientras que las líneas continuas representan los regulatorios y los equivalentes monitores regulatorios. "FEM" significa que el monitor está en el sistema regulatorio. "BAM" es el mismo tipo de monitor en el sistema comunitario.</p> <p>Los sensores de Purple Air son útiles para la evaluación espacial de tendencias (es decir, ¿estamos viendo PM elevado en parte de una comunidad?). Sin embargo, estos sensores no son un sustituto adecuado para los monitores regulatorios implementados por el Distrito y CARB. Los monitores PM2.5 del Distrito, incluyendo los dos sitios de monitoreo de grado regulatorio en los gráficos a continuación, son calibrados y mantenidos de manera rutinaria por técnicos capacitados, y muestran niveles relativamente consistentes durante todo el período de análisis. Los sensores de Purple Air, que no son de grado regulatorio, no pueden calibrarse y carecen del mismo nivel de garantía de calidad que los monitores regulatorios; tienden a ser más volátiles, especialmente a concentraciones más altas. Esto es aún más evidente durante los meses más altos de PM2.5 del cuarto trimestre de 2019 y el primer trimestre de 2020. El Distrito opera y analiza sensores de Purple Air en otros lugares del Valle como parte del programa de Evaluación Técnica de Tecnología de Sensores (TEST, por sus siglas en inglés), todos que han mostrado una tendencia similar de sobreestimar las concentraciones de PM2.5 durante períodos elevados.</p> <p>Para más información acerca del programa TEST del Distrito, por favor visite: https://www.valleyair.org/aqmonitoring/test/</p>

Inventario de Emisiones bajo AB 617 para Shafter

8a.	Todos los datos por hora de los monitores de PM2.5 en Grimmway Academy y el sitio del DMV.	Monitoreo	Los datos de monitoreo de aire PM2.5 en tiempo real y las actualizaciones de monitoreo de aire que se han informado trimestralmente en las reuniones de CSC están disponibles aquí: http://community.valleyair.org/selected-communities/shafter/air-monitoring/ Todos los valores por hora monitoreados se cargan mensualmente en el portal AQView de CARB y están disponibles para descargar aquí: https://aqview.arb.ca.gov/data.html								
8b.	Proporcione información del DMV	Datos de Vehículos	CARB ha resumido los datos de registro del 2018 del Departamento de Vehículos Motorizados de California (DMV) para el código postal de 93263 dentro de el radio de 7 millas de Shafter. La siguiente tabla								

	Pregunta	Tema/Categoría	Respuesta										
	sobre la cantidad de vehículos privados registrados en Shafter por edad.		<p>proporciona la población de vehículos de pasajeros según los datos de registro. Adicionalmente, para su referencia, CARB también ha resumido los datos de población de vehículos de carretera por año de modelo para todos los vehículos en el código postal de 93263; favor de ver el archivo de Excel “Shafter Vehicle Population for ZIP Code 93263”. Por favor tenga en cuenta que a diferencia a los vehículos de pasajeros, muchas de las categorías de vehículos en la carretera (por ejemplo, camiones) no siempre operan donde están registrados.</p> <table border="1" data-bbox="787 548 1940 777"> <thead> <tr> <th data-bbox="787 548 1818 613">Vehículos de Pasajeros Registrados*</th> <th data-bbox="1818 548 1940 613">5,711</th> </tr> </thead> <tbody> <tr> <td data-bbox="787 613 1818 654"><i>Motores de Gasolina de Combustión Interna (acrónimo en inglés “ICE”)</i></td> <td data-bbox="1818 613 1940 654">5,680</td> </tr> <tr> <td data-bbox="787 654 1818 695"><i>Diesel ICE</i></td> <td data-bbox="1818 654 1940 695">11</td> </tr> <tr> <td data-bbox="787 695 1818 735"><i>Vehículos Eléctricos Híbridos Enchufables de Gasolina (acrónimo en inglés “PHEV”)</i></td> <td data-bbox="1818 695 1940 735">14</td> </tr> <tr> <td data-bbox="787 735 1818 777"><i>Vehículos Eléctricos de Batería</i></td> <td data-bbox="1818 735 1940 777">6</td> </tr> </tbody> </table> <p>Nota: Datos de registración de vehículos fue agregado solo para el código postal de 93263. Datos para códigos postales 93206, 93250, 93280, 93308, 93314 no fueron incluidos siendo que caen parcialmente dentro del radio de 7 millas.</p> <p>Favor de ver el mapa en la siguiente página.</p>	Vehículos de Pasajeros Registrados*	5,711	<i>Motores de Gasolina de Combustión Interna (acrónimo en inglés “ICE”)</i>	5,680	<i>Diesel ICE</i>	11	<i>Vehículos Eléctricos Híbridos Enchufables de Gasolina (acrónimo en inglés “PHEV”)</i>	14	<i>Vehículos Eléctricos de Batería</i>	6

	Pregunta	Tema/Categoría	Respuesta															
9.	¿Cuántas locomotoras de patio se utilizan actualmente más de 100 horas por año (o algún otro número comparativo) dentro del radio de 7 millas y qué nivel de motores tienen cada una?	Locomotoras de Patio	CARB no tiene información sobre la actividad de locomotores en la comunidad Shafter; sin embargo, para su referencia, hemos adjuntado un mapa que incluye un inventario de cuántos patios ferroviarios rodean la comunidad, incluyendo patios ferroviarios de clase 3 y militares / industriales. Favor de ver el PDF adjunto titulado "Railyard Summary Maps for Shafter".															
10.	¿Cuántos tractores de yarda se usan actualmente más de 100 horas por año (o algún otro número comparativo) dentro del radio de 7 millas?	Tractores de Yarda	<p>CARB no colecta datos específicos de instalaciones sobre el uso de tractores de terminal. Sin embargo, el Reglamento de Vehículos Todoterreno de Diesel en Flotas (abreviado en inglés "Off-road Regulation") de CARB y el Reglamento de Equipo de Manejo de Carga Móvil requieren reportar informes para flotas sujetas a estas regulaciones. Según las flotas que informaron el Sistema de Informes en Línea de Vehículos Todoterreno Diesel (acrónimo en inglés "DOORS"), el sistema de informes para el "Off-road Regulation", se reportaron cuatro tractores de terminal para los códigos postales 93314 y 93308. Tengan en cuenta que según este reglamento las flotas no tienen que informar dónde se utilizan los vehículos, sino que se registra una flota estatal según la dirección de envío de la empresa. Algunas flotas pueden informar por ubicación, pero no todas. Las flotas tampoco informan la información de uso, a menos que estén reclamando un uso bajo, lo cual es menos de 200 horas/año.</p> <p>La siguiente tabla anota el nombre y domicilio de las compañías que reportaron los cuatro tractores de terminal en DOORS. Sin embargo, ninguna de estas ubicaciones cae bajo el radio de 7 millas de Shafter. La instalación más cercana cae 0.85 millas fuera del perímetro, esta es la instalación de Frito-Lay en 28801 Highway 58. Las otras instalaciones caen mas de 3 millas del perímetro</p> <table border="1"> <thead> <tr> <th>Company name</th> <th>Mailing address</th> <th>City</th> <th>State</th> <th>ZIP</th> </tr> </thead> <tbody> <tr> <td>Johasee Rebar, LP</td> <td>18059 Rosedale Hwy</td> <td>Bakersfield</td> <td>CA</td> <td>93314</td> </tr> <tr> <td>Frito-Lay North America, Inc.</td> <td>28801 Highway 58</td> <td>Bakersfield</td> <td>CA</td> <td>93314</td> </tr> </tbody> </table>	Company name	Mailing address	City	State	ZIP	Johasee Rebar, LP	18059 Rosedale Hwy	Bakersfield	CA	93314	Frito-Lay North America, Inc.	28801 Highway 58	Bakersfield	CA	93314

11.	Por favor proporcione información detallada sobre todos los fondos de incentivos del Distrito del Aire o CARB gastados durante los últimos cinco años dentro del radio de 7 millas de Shafter, incluyendo el tipo de equipo reemplazado, cantidades en dólares, cantidades, y reducciones de emisiones. Con las reducciones de emisiones, muestre emisiones reducidas en comparación con el dinero del incentivo gastado y detalles, incluyendo fórmulas, de cómo se calcularon estos números.	Incentivos	<p>La siguiente tabla resume los proyectos de incentivos dentro del radio de 7 millas en los últimos 5 años. Las reducciones de emisiones se calcularon utilizando la metodología de cálculo del programa aprobado.</p> <table border="1"> <thead> <tr> <th>Tipo de Programa</th> <th>Número de Contratos</th> <th>Cantidad Monetaria de Contratos</th> <th>Reducciones Totales de Emisiones</th> </tr> </thead> <tbody> <tr> <td>Burn Cleaner</td> <td>41</td> <td>\$92,500</td> <td>16.71</td> </tr> <tr> <td>Heavy Duty</td> <td>122</td> <td>\$6,073,914.55</td> <td>551.44</td> </tr> <tr> <td>Lawn and Garden</td> <td>6</td> <td>\$975.00</td> <td>0.00</td> </tr> <tr> <td>Light Duty</td> <td>38</td> <td>\$181,080.00</td> <td>.47</td> </tr> <tr> <td>Public Benefit</td> <td>11</td> <td>\$165,555.94</td> <td>.00</td> </tr> <tr> <td>Total</td> <td>218</td> <td>\$6,514,025.49</td> <td>568.63</td> </tr> </tbody> </table> <p>Consulte la hoja de cálculo adjunta titulada "Shafter Incentives" empezando en la página A-20 para obtener más información.</p>					Tipo de Programa	Número de Contratos	Cantidad Monetaria de Contratos	Reducciones Totales de Emisiones	Burn Cleaner	41	\$92,500	16.71	Heavy Duty	122	\$6,073,914.55	551.44	Lawn and Garden	6	\$975.00	0.00	Light Duty	38	\$181,080.00	.47	Public Benefit	11	\$165,555.94	.00	Total	218	\$6,514,025.49	568.63

Patio Ferroviario de San Joaquin *

Switchers de Clase 1 frecuentemente pueden ser reasignados a diferentes patios ferroviario o a diferentes regiones para necesidades de operación. La mayoría de recuentos de Switchers de Clase 1 son de la Evaluación de Riesgo a la Salud (HRA) del 2007 – 2009. El recuento de Clase 3, Pasajero y Militar/Industrial es basado en comunicación con personal en el 2016. *Patio Ferroviario Mayor: Uno de los 18 patios ferroviarios seleccionados en el HRA 2007-2009. Patios ferroviarios No Mayor es un patio ferroviario Clase 1 que no es un patio ferroviario mayor.

Clase 1 No-Mayor* Patio Ferroviario

UP Tracy

Operaciones	Clasificación
Switchers	Contacte a UP para obtener niveles / cuenta

Clase 3 Patio Ferroviario

CCT (Central California Traction) Patio de Lodi

Operaciones	Switching
Switchers [†]	5x Pre-Nivel 0, 3x Genset (combinado con CCT Puerto de Stockton)

WI (West Isle Railroad) Patio

Operaciones	Switching
Switchers [†]	1x Pre-Nivel 0

* Patios Ferroviarios en este documento son ubicaciones donde operan los switchers o se realizan actividades de mantenimiento.

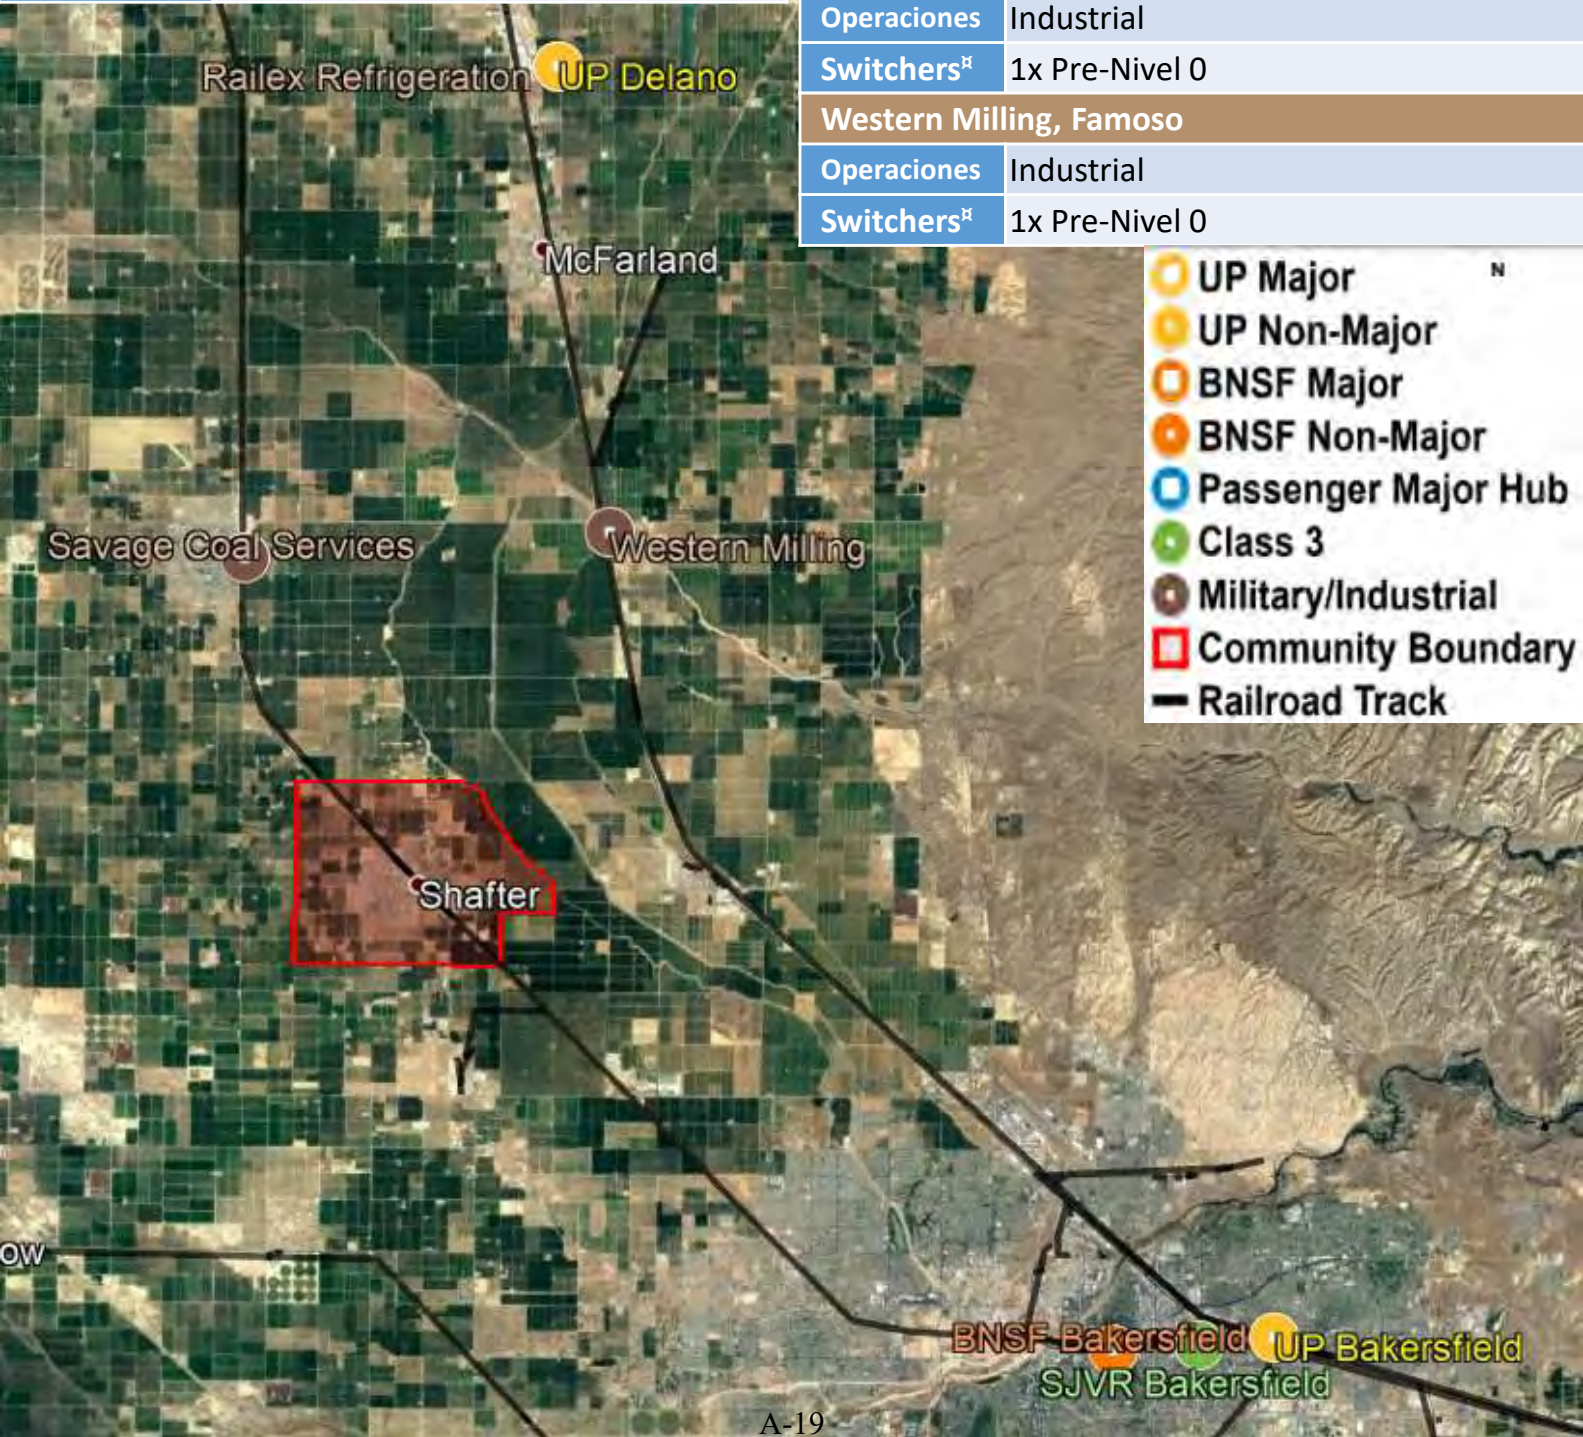

Shafter y Vecindad

Clase 1 No-Mayor* Patios Ferroviarios

UP Delano	
Operaciones	Clasificación
Switchers	Contacte a UP para niveles/cuenta.
UP Bakersfield	
Operaciones	Clasificación
Switchers [†]	Contacte a UP para niveles/cuenta.
BNSF Bakersfield	
Operaciones	Clasificación
Switchers [†]	Contacte a BNSF para niveles/cuenta.

Clase 3 Patios Ferroviarios

SJVR Bakersfield	
Operaciones	Switching
Switchers [†]	18x Pre-Nivel 0, 4x Tier 4 (los 3 patios ferroviarios de SJVR combinados)
Militar / Industrial	
Railex Refrigeration	
Operaciones	Industrial
Switchers [†]	1x Pre-Nivel 0
Savage Coal Services	
Operaciones	Industrial
Switchers [†]	1x Pre-Nivel 0
Western Milling, Famoso	
Operaciones	Industrial
Switchers [†]	1x Pre-Nivel 0

Agenda for Shafter Community Steering Committee Meeting #19

Monday, May 18, 2020 – 3:00pm – 5:00pm

Zoom Meeting: <https://zoom.us/j/95026532737>

Meeting ID: 950 2653 2737

Teleconference: 888 788 0099 US (Toll-free)

- 3:00 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
- 3:20 p.m. Zoom How-To**
Review of Zoom tools, proper use, and virtual meeting etiquette
Hanna Stelmakhovych, Facilitator
- 4:20 p.m. District Online Resources**
Walk through the various resources and tools available online at
community.valleyair.org
Jessica Olsen, Valley Air District
- 4:35 p.m. Wrap Up/Next Steps**
Next Meeting June 1, 2020: Zoom Call

Learn more: community.valleyair.org

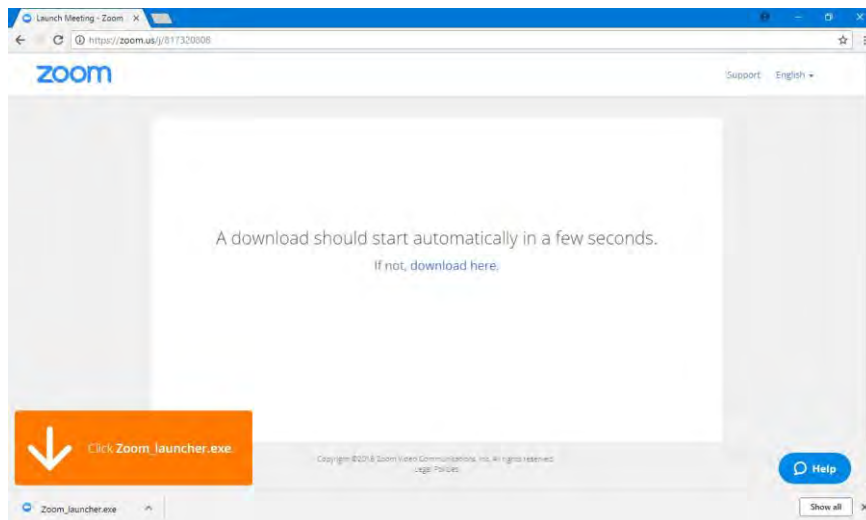

ZOOM INSTRUCTIONS FOR AB 617 PARTICIPANTS

Before a Zoom meeting:

1. You will need a computer, tablet, or smartphone with a speaker or headphones. You will have the opportunity to check your audio and video immediately upon joining a meeting.
2. You will receive an email inviting you to participate in a Zoom meeting from the Valley Air District. The notification will include a link to **Join Zoom**. If you are unable to join using either a computer, tablet or smartphone, you can still listen to the meeting .via phone using the call in number and 9-digit meeting ID provided.

Joining Zoom meeting from your computer:

5-10 min before start time of your meeting, click on the link in your invitation. You *may* be instructed to download the Zoom application.

Once the Zoom app is installed, you should see this window pop up. Click on Zoom Meetings and then on the **Open Link** button.

Zoom app may ask for your name. The text entered in this box will be your name in the participant list and will appear under your web cam video. Click the **Join Meeting** button after you have typed your name.

Your Zoom video:

You have an opportunity to join with or without video.

Your Zoom Audio:

Please choose how you would like to like to hear and to talk to the other participants in the Zoom meeting. You have two audio options: join audio by computer or join audio by phone.

You have an opportunity to test your audio by clicking on “Test Computer Audio.” Once you are satisfied that your audio works, click on “Join audio by computer.”

OR To join via telephone:

1. On your phone, dial the teleconferencing number provided in your invitation.
2. Enter the **Meeting ID number** (also provided in your invitation) when prompted using your touch-tone keypad.
3. If you have already joined the meeting via computer, please enter your **Participant ID** associated with your Zoom participation. *(Picture is an example of what you will see on the screen. Your numbers will be different).*

To minimize the potential echo during the meeting, please pick one audio option – Phone or Computer Audio.

Switching between computer and phone audio:

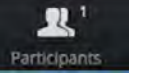

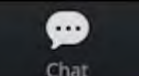

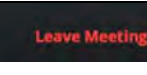

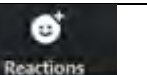

If you need to switch between computer and phone audio, click the bottom left corner arrow on your screen and select **Join Phone Audio** in the pop up menu. Follow the instructions below.

Exploring Participant Controls on the bottom of your screen:

	Once your audio is working, you will see a different icon: a microphone. You can click on this icon to Mute and Unmute yourself.
--	--

 <p>Start Video</p>	<p>Click on this icon to start your video. If this is the first time you are using Zoom, you will be asked to allow Zoom to use your camera. Click Allow.</p>
 <p>Invite</p>	<p>This icon allows you to invite other people to join the meeting.</p>
 <p>Participants</p>	<p>This icon tells you how many people are currently in the meeting. View Participant list – opens a pop-out screen that includes a “Raise Hand” icon that you may use to raise a virtual hand.</p>
 <p>Share Screen</p>	<p>If the host of the meeting allows it, you can share your screen by clicking the Share Screen icon. This means that the other participants will be able to see your desktop or the application you want to share.</p>
 <p>Chat</p>	<p>Click on this icon to access the chat window and chat with other participants. You can send a message to the entire group or to an individual user. Please be aware that even a private chat may end up in a public record of the zoom meeting. As you already do when face-to-face, show respect to others when using the chat box.</p>
 <p>Leave Meeting</p>	<p>Click here to leave the meeting when it is over or if you need leave the meeting early while it continues for the other participants.</p>
 <p>Reactions</p>	<p>Zoom offers to reactions to provide nonverbal feedback. Click the type of reaction you would like to send: clapping hands or thumbs up. The reaction will display for 5 seconds.</p>

Joining Zoom meeting from tablet or phone:

1. Make sure you have downloaded the Zoom app on your smartphone. You can download it just like you would download any other app: from the App Store or Google Play Store (Android).
2. Tap either **Personal Link Name** or **Join with a meeting ID** and enter your information. Then tap Join.
3. To join the meeting, you will be asked to enter Your Name and then tap Continue.

4. Select **Join with Video**
5. Confirm your audio preferences. IF you have strong internet connection, there is no reason not to use Internet Audio
6. Note the icons at the bottom are the same.

General Meeting Best Practices when participating in a Zoom Meeting

These will be refined as we all learn how to have effective AB 617 virtual meetings together

- The host will mute all participants during presentations to reduce background noise.
- Check your internet speed. If you are using free wifi you may need to keep your camera off to improve sound and/or image quality.
- Turn your camera on and have your camera at eye level.
- Stay muted unless you are talking to reduce background noise.
- Use chat box to submit comments / questions.
- To vote, use the vote button on the bottom of the screen.
- Make sure you sit in a well-lit and quiet place.
- Be mindful of what is going on behind you. Think about having solid wall behind you or turning on the virtual background.

If you have any questions regarding Zoom and/or are experiencing technical difficulties, please contact Heather Heinks at (559) 230-5898 or (559)994-7591 for assistance.

Listening to Language Interpretation

1. In your meeting/webinar controls, click **Interpretation**. Which can be located at the bottom of the screen.

2. Click the language that you would like to hear. For this meeting, you will have English and Spanish as your options.

3. To only hear the interpreted language, click **Mute Original Audio**.

If you have questions during the meeting, please use the chat feature and type in your question. District staff will translate the question for the presenters to respond. If you are not able to use the chat box, let the interpreter know of your question by raising your hand and District staff will interpret acknowledge you and type it into the chat box for you.

This is a public meeting, so please be aware that even a private chat may end up in a public record of the zoom meeting. As you already do when face-to-face, show respect to others when using the chat box.

Agenda para el Comité Directivo Comunitario de Shafter Reunión #19

18 de mayo de 2020 – 3:00 pm a 5:00 pm

Reunión por Zoom: <https://zoom.us/j/95026532737>

Meeting ID: 950 2653 2737

Teleconferencia: 888 788 0099 US (Llamada gratuita)

- 3:00 p.m. Bienvenida, Introducciones**
Hanna Stelmakhovych, Institute for Local Government, Facilitadora
Ryan Hayashi, Distrito del Aire del Valle
- 3:20 p.m. Guía Básica para Zoom**
Repaso de las herramientas, el uso apropiado, y la etiqueta de reuniones virtuales en Zoom
Hanna Stelmakhovych, Facilitadora
- 4:20 p.m. Recursos En Línea del Distrito**
Hablar sobre los diversos mapas, documentos, recursos, y herramientas disponible en línea en community.valleyair.org
Jessica Olsen, Distrito del Aire del Valle
- 4:35 p.m. Concluir/ Próximos Pasos**
Próxima Reunión 1 de junio de 2020: Llamada por Zoom

Aprende más: community.valleyair.org

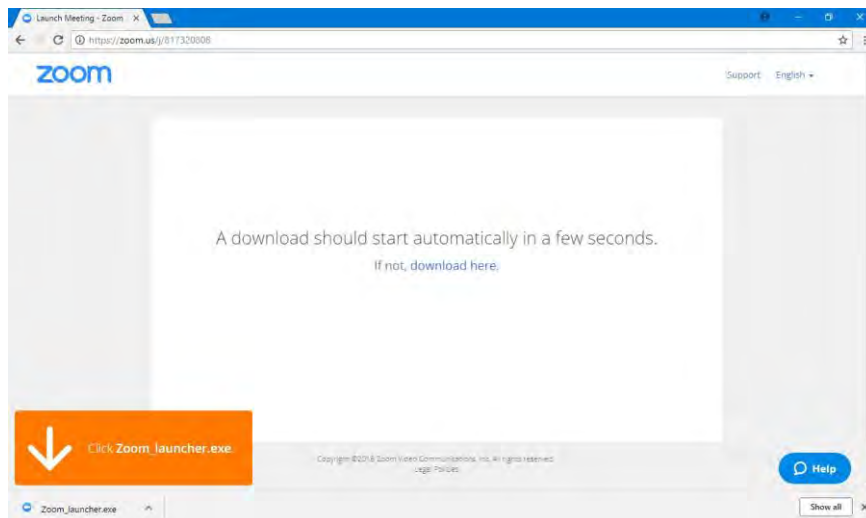

INSTRUCCIONES DE ZOOM PARA PARTICIPANTES DE AB 617

Antes de una reunión por Zoom:

1. Necesitará una computadora, tableta o teléfono inteligente con una bocina o audífonos. Tendrá una oportunidad de verificar su audio y video inmediatamente después de unirse a una reunión.
2. Recibirá un correo electrónico invitándole a participar en una reunión del Distrito del Aire del Valle. La notificación incluirá un enlace para unirse a Zoom (**Join Zoom**). Si no puede unirse usando una computadora, tableta o teléfono inteligente, aún puede escuchar la reunión a través del teléfono usando el número de llamada y la identificación de la reunión de 9 dígitos.

Unirse a la reunión por Zoom desde su computadora:

5-10 minutos antes de la hora de inicio de su reunión, haga clic en el enlace de su invitación. Es **posible** que le indique que descargue la aplicación Zoom.

Una vez que la aplicación Zoom está instalada, debería de ver esta ventana emergente. Haga clic en Zoom Meetings y luego en el botón **Open Link**.

La aplicación Zoom puede preguntar por su nombre. El texto ingresado en este cuadro será su nombre en la lista de participantes y aparecerá debajo de su video de cámara web. Haga clic en el botón **Join Meeting** después de haber escrito su nombre.

Su video de Zoom:

Tiene la oportunidad de unirse con o sin video.

Su audio de Zoom:

Elija cómo le gustaría escuchar y hablar con los demás participantes en la reunión de Zoom. Tiene dos opciones de audio: unir por **audio by computer (audio por computadora)** o unir por **audio by phone (audio por teléfono)**.

Tiene la oportunidad de probar su audio haciendo clic en “**Test Computer Audio.**” Una vez que esté satisfecho de que su audio funciona, haga clic en “**Join audio by computer.**”

○ Para unirse por teléfono:

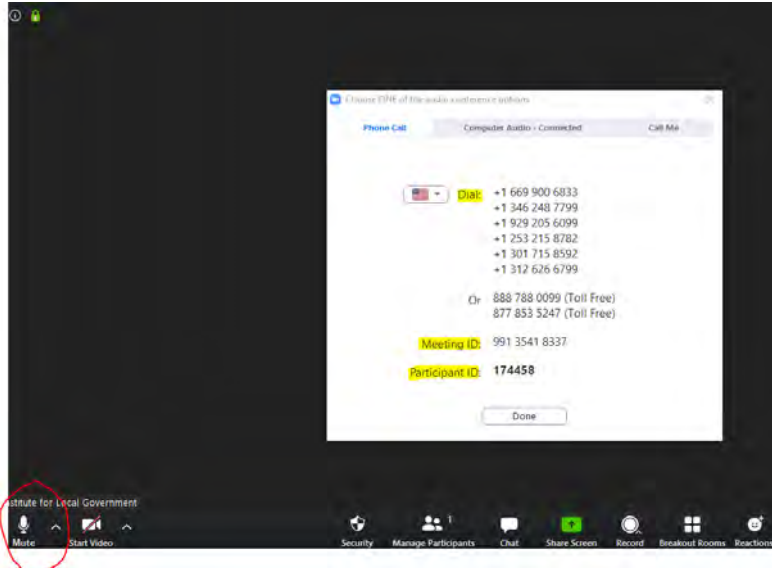

1. En su teléfono, marque el número de teleconferencia proporcionado en su invitación.
2. Ingrese el número de **Meeting ID** (también incluido en su invitación) cuando se le solicite en su teclado.
3. Si ya se unió a la reunión por computadora, ingrese el **Participant ID** asociada con su participación de Zoom. (La imagen es un ejemplo de lo que verá en la pantalla. Sus números serán diferentes).

Para minimizar el eco potencial durante la reunión, elija una opción de audio – Audio por Computadora o Teléfono.

Cambiar entre la computadora y el audio del teléfono:

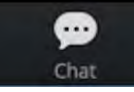

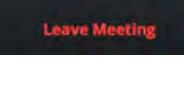

Si necesita cambiar entre la computadora y el audio del teléfono, haga clic en la flecha de la esquina inferior izquierda de la pantalla y seleccione **Join Phone Audio** en el menú emergente. Siga las instrucciones debajo.

Explorando los Controles de los Participantes en la parte inferior de la pantalla:

	Una vez que su audio esté funcionando, verá un icono diferente: un micrófono. Puede hacer clic en este icono para Silenciar y Activar el sonido.
---	--

	<p>Haga clic en este icono para comenzar su video. Si es la primera vez que usa Zoom, se le pedirá que permita que Zoom use su cámara. Haz clic en Allow.</p>
	<p>Este icono le permite invitar a otras personas a unirse a la reunión.</p>
	<p>Este icono le indica cuántas personas hay actualmente en la reunión. Ver lista de participantes/View Participant List – abre una pantalla emergente que incluye un icono de "Levantar mano/Raise Hand" que puede usar para levantar una mano virtual.</p>
	<p>Si el anfitrión de la reunión lo permite, puede compartir su pantalla haciendo clic en el icono Share Screen. Esto significa que los demás participantes podrán ver de escritorio o la aplicación que desea compartir.</p>
	<p>Haga clic en este icono para acceder a la ventana de chat y chatear con otros participantes. Puede enviar un mensaje a todo el grupo o a un usuario individual. Tenga en cuenta que incluso un chat privado puede terminar en un registro público de la reunión de zoom. Como ya lo hace cuando está cara a cara, muestre respeto a los demás cuando use el chat.</p>
	<p>Haga clic aquí para dejar la reunión cuando termine o si necesita dejarla temprano mientras continúa para los demás participantes.</p>
	<p>Zoom ofrece reacciones para proporcionar comentarios no verbales. Haga clic en el tipo de reacción que le gustaría enviar: aplaudir o levantar el pulgar. La reacción se mostrará durante 5 segundos.</p>

Unirse a la reunión de Zoom desde tableta o teléfono:

1. Asegúrese de haber descargado la aplicación Zoom en su teléfono inteligente. Puede descargarlo como lo haría con cualquier otra aplicación: desde App Store o Google Play Store (Android).
2. Toque **Personal Link Name** o **Join with a meeting ID** e ingrese su información. Luego toque Join.
3. Para unirse a la reunión, se le pedirá que ingrese Su nombre y luego toque Continue.

4. Seleccione **Join with Video**
5. Confirme sus preferencias de audio. Si tiene una buena conexión al internet, no hay razón para no usar Internet Audio
6. Tenga en cuenta que los iconos en la parte inferior son los mismos.

Mejores Prácticas de Reuniones Generales al participar en una Reunión de Zoom

Estos serán refinados a medida que todos aprendamos cómo tener reuniones virtuales de AB 617 efectivas

- El anfitrión silenciará a todos los participantes durante las presentaciones para reducir el ruido de fondo.
- Verifique su velocidad de internet. Si está utilizando wifi gratuito, es posible que deba mantener su cámara apagada para mejorar la calidad del sonido y/o la imagen.
- Prenda su cámara y manténgala al nivel de los ojos.
- Permanezca en silencio a menos que esté hablando para reducir el ruido de fondo.
- Use el chat para enviar comentarios/preguntas.

- Para votar, use el botón votar en la parte inferior de la pantalla.
- Asegúrese de sentarse en un lugar bien iluminado y tranquilo.
- Sea consciente de lo que sucede detrás de usted. Piense en tener una pared sólida detrás de usted o activar el fondo virtual.

Si tiene alguna pregunta sobre Zoom y/o tiene dificultades técnicas, comuníquese con Heather Heinks al (559) 230-5898 o (559) 994-7591 para obtener ayuda.

Cómo escuchar la interpretación de un idioma

1. En los controles de la reunión o el seminario web, haga clic en **Interpretación**. Esto se puede localizar en la parte de abajo.

2. Haga clic en el idioma que desee escuchar. Para esta reunión, va a poder ver la opción de inglés y español.

3. Para escuchar solo el idioma interpretado, haga clic en **Silenciar audio original**. (Mute Original Audio)

Si tiene preguntas durante la reunión, utilice la función de chat y escriba su pregunta. El personal del Distrito traducirá la pregunta para que los presentadores respondan. Si no puede utilizar el cuadro de chat, informe al intérprete de su pregunta levantando la mano y el personal del Distrito lo interpretará y lo escribirá en el cuadro de chat.

Esta es una reunión pública, así que tenga en cuenta que incluso un chat privado puede terminar en un registro público de la reunión de zoom. Como ya lo hace cuando está cara a cara, muestre respeto a los demás cuando use el chat.

AB 617 Shafter CERP At-A-Glance

On the following pages you will find the top air quality concerns as identified by the Shafter Community Steering Committee and the strategies developed to address those concerns. Please refer to the full CERP document to fully understand the community, the steering committee, the air quality challenges, the CERP strategies and other issues. This document is simply a very small snapshot of the larger document.

Trucks & Trains

Reduce idling of trucks by providing charging infrastructure

Replace trucks with zero and near zero emission trucks

More enforcement of anti-idling

Truck rerouting

Relace old diesel train equipment with cleaner equipment

Have electric cars for dial-a-ride service

Replace old school buses with zero and near zero emission buses

Older & High Polluting Cars

Host events to repair old high polluting car

Car sharing program

Train electrical vehicle mechanics

Replace old cars with electric or hybrid electric cars

More electric vehicle charging locations

Reduce cars idling through education

Agricultural Operations

Replace nut harvesting equipment with cleaner equipment

Replace ag equipment with cleaner equipment

Reduce exposure to pesticides

Promote practices that reduce dust and emissions from fields and dairies

Replace open burning with clean alternatives

Oil & Gas Operations

Encourage set-backs

Self-inspections at gas stations

Encourage new technology

Reduce flaring

Reduce emissions from operations

Increase inspections

Residential Burning

Replace old fireplaces and wood burning devices with cleaner devices

Reduce trash burning through enforcement

Reduce trash burning through education

Educate the public about wood burning

More enforcement of "No Burn" days

Install More Solar

Reduce Emissions from Restaurant Cooking

Land-Use/Industrial Development

Reduce high-speed rail construction emissions

Fund bike paths

Encourage things that reduce the need for cars

Work with the city, county and community on land use issues

Dust and Roads

Increase street sweeping

Fund road and sidewalk improvements

Industrial Processes

Reduce emissions from industries through regulations

Reduce emissions from industries through new incentives

Trees and Lawns

Replace old dirty home lawn care equipment

Replace old dirty commercial lawn care equipment

Install vegetative barriers

Plant more trees

Schools

Improve air filtration in schools

Increase school participation in "Healthy Air Living Shools" program

Indoor Air Quality

Promote weatherization programs for homes

Outreach

Educate the public about how they can protect themselves from poor air quality

Work with the community to bring more air quality funds to the community

Educate the public about air quality

AB 617 CERP de Shafter de un Vistazo

En las siguientes páginas encontrará las principales preocupaciones sobre la calidad del aire identificadas por el Comité Directivo de la Comunidad de Shafter y las estrategias desarrolladas para abordar esas preocupaciones. Consulte el documento completo del CERP para comprender completamente la comunidad, el comité directivo, los desafíos de la calidad del aire, las estrategias del CERP y otros temas. Este documento es simplemente una pequeña imagen del documento más grande.

Camiones y Trenes

Reducir camiones con motores encendidos mientras estacionados al proveer infraestructura de carga

Desviación de camiones

Reemplazar camiones con camiones de cero o casi cero emisiones

Reemplazar equipos antiguos de trenes con equipo más nuevo

Reemplazar los autobuses escolares antiguos con autobuses de cero o casi cero emisiones

Más cumplimiento de motores encendidos mientras estacionados

Tener autos eléctricos para servicio dial-a-ride

Autos Antiguos y Altamente Contaminantes

Organizar eventos para reparar autos antiguos altamente contaminantes

Reemplazar autos antiguos con autos eléctricos o híbridos

Programa para autos compartidos

Más ubicaciones de carga de vehículos eléctricos

Entrenar mecánicos sobre vehículos eléctricos

Reducir los vehículos con motores encendidos mientras estacionados a través de la educación

Operaciones Agrícolas

Reemplazar el equipo de recolección de nueces con equipo menos contaminante

Reducir la exposición a pesticidas

Promover prácticas que reduzcan el polvo y las emisiones de campos y lecherías

Reemplazar equipo agrícola con equipo menos contaminante

Reemplazar la quema al aire libre con alternativas limpias

Operaciones de Petr6leo y Gas

Animar contratiempos

Autoinspecciones en gasolineras

Animar las nuevas tecnologías

Reducir llamaradas

Reducir las emisiones de las operaciones

Aumentar inspecciones

Quema Residencial

Reducir la quema de basura a trav6s de la educaci6n

Reducir la quema de basura a trav6s del cumplimiento

Reducir la quema de basura a trav6s de la educaci6n

Educar al p6blico sobre la quema de leña

M6s cumplimiento en los días de "No Quemar"

Instalar M6s Solar

Reducir las Emisiones de la Cocina en Restaurantes

Desarrollo de Uso de Suelo/Industria

Reducir las emisiones de la construcci6n del tren de alta velocidad

Financiar carriles de bicicletas

Alentar cosas que reduzcan las necesidades de autom6viles

Trabajar con la ciudad, el condado y la comunidad en cuestiones de uso de suelo

Polvo y Carreteras

Aumentar el barrido de calles

Financiar mejoramiento de carreteras y aceras

Procesos Industriales

Reducir las emisiones de las industrias a través de regulaciones

Reducir las emisiones de las industrias a través de nuevos incentivos

Árboles y Césped

Reemplazar el equipo antiguo y contaminante para el cuidado de césped residencial

Reemplazar el equipo antiguo y contaminante para el cuidado de césped comercial

Instalar barreras vegetativas

Plantar más árboles

Escuelas

Mejorar la filtración de aire en las escuelas

Aumentar la participación escolar en el programa "Healthy Air Living Schools"

Calidad del Aire Interior

Promover programas de climatización para hogares

Alcance

Educar al público sobre cómo pueden protegerse de la mala calidad del aire

Trabajar con la comunidad para traer más fondos de calidad del aire a la comunidad

Educar al público sobre la calidad del aire

State of California
AIR RESOURCES BOARD

AB 617 Community Air Protection Program –
Community Emissions Reduction Program for Shafter

Resolution 20-06

February 13, 2020

Agenda Item No.: 20-3-1

WHEREAS, sections 39600 and 39601 of the Health and Safety Code authorize the California Air Resources Board (CARB or Board) to adopt standards, rules and regulations and to do such acts as may be necessary for the proper execution of the powers and duties granted to and imposed upon the Board by law;

WHEREAS, California's air quality programs have led to significant public health improvements; however, certain communities continue to experience environmental and health inequities from air pollution;

WHEREAS, many of these communities are affected by multiple stationary, area, and mobile sources of air pollution and suffer disproportionate health impacts;

WHEREAS, the high cumulative exposure burdens in these communities are a public health concern, contributing to health conditions such as cardiorespiratory disease, increased cancer risk, and an increased risk of premature death;

WHEREAS, expedited emission reductions of toxic air contaminants (TACs) and criteria air pollutants in communities with high cumulative exposure burdens are critical to reduce these disproportionate health impacts;

WHEREAS, Assembly Bill (AB) 617 (C. Garcia, Statutes of 2017, chapter 136) added sections 39607.1, 40920.8, 42411, 42705.5, 44391.2 and amended sections 40920.6, 42400, 42402 in the Health and Safety Code, requiring a new community-focused program to address criteria air pollutants and toxic air contaminants;

WHEREAS, AB 617 is a significant step in transforming California's air quality programs to address air pollution disparities at the neighborhood level;

WHEREAS, the Legislature has demonstrated an ongoing commitment to improving air quality in California's most burdened communities through the allocation of nearly \$750 million to CARB, with subsequent distribution to local air districts, as "Community Air Protection" funds to reduce exposure in highly impacted communities;

WHEREAS, statute required CARB by October 1, 2018, to engage stakeholders through a robust public process to set overall Program requirements to reduce toxic air contaminant and criteria air pollutant emissions in communities with high cumulative

exposure, and select initial communities with high cumulative exposure burdens for the deployment of community air monitoring systems and/or the development of community emissions reduction programs;

WHEREAS, on September 27, 2018, CARB approved the *Community Air Protection Blueprint: For Selecting Communities, Preparing Community Emissions Reduction Programs, Identifying Statewide Strategies, and Conducting Community Air Monitoring* (Blueprint), which described criteria for the development of community emissions reduction programs by air districts, in conformance with the requirements of AB 617, and determined that the Blueprint and online Resource Center met statutory requirements for CARB to develop a monitoring plan and state strategy;

WHEREAS, statute requires that community emissions reduction programs be consistent with the state strategy;

WHEREAS on September 27, 2018, CARB selected the community of Shafter to develop a community emissions reduction program as one of ten initial communities;

WHEREAS, the San Joaquin Valley Air Pollution Control District (District) convened a steering committee comprised of Shafter community residents, non-profit organizations, businesses, and local government representatives and developed a community emissions reduction program to improve air quality in Shafter, titled "Shafter Community Emissions Reduction Program" (Program), included as Attachment A;

WHEREAS, the District conducted a public process to develop the Program over the course of a year including a series of 19 public meetings, including community steering committee meetings and workshops;

WHEREAS, the community has identified pesticide controls as of particular importance, requesting the inclusion of following pesticide emissions reduction measures: ban all untarped applications of 1,3-D in Shafter; reduce the annual township cap for 1,3-D in Shafter; require notices of intent for restricted pesticide applications and make them publicly available; prohibit aerial spraying for all pesticide toxic air contaminants; establish 24/7 one-mile buffer zones around sensitive receptor locations; and evaluate the toxicity of all carcinogenic and reproductive pesticide toxic air contaminants followed by identification of emission reduction and mitigation actions;

WHEREAS, the Department of Pesticide Regulation (DPR) has regulatory authority over pesticides in their pesticidal use, per section 39655 of the Health and Safety Code and section 14022 of the Food and Agricultural Code, some pesticides are also classified as TACs and so can be regulated as a TAC, and as smog-forming compounds as they become waste gases outside of their pesticidal use; State law establishes a system of overlapping authorities between pesticide and air regulators to address these complex problems;

WHEREAS, pesticide applicators are required to notify the County Agricultural Commissioner (CAC) prior to the use of restricted materials, while other pesticides are required to be reported after they have been applied; restricted materials are pesticides

deemed to have a higher potential to cause harm to public health, farm workers, domestic animals, honeybees, the environment, wildlife, or other crops compared to other pesticides and may, with certain exceptions, be purchased and used only by or under the supervision of a certified commercial or private applicator under a permit issued by the CAC;

WHEREAS, DPR regulations¹ provide minimum distance standards for certain agricultural pesticide applications near school sites, restrict days and hours of pesticide applications to school site closures, and require growers to provide written, annual notifications to school site administrators of all agricultural pesticides that may be used on fields within ¼ mile of a school site with no exceptions;

WHEREAS, DPR became actively involved with CARB, the District, and the community steering committee when pesticides were expressed as one of the top concerns in the community;

WHEREAS, DPR has committed to the following actions:

- Continue operation of the pesticide air monitoring past the conclusion of the CARB-DPR 2-year limited term monitoring collaboration;
- Explore options to expand pesticide air monitoring activities in the Shafter area;
- Work with Kern County Agricultural Commissioner's Office, CARB, the District, and the community steering committee to identify feasible options for the development and implementation of a suitable pesticide application notification system in the Shafter area;
- Develop regulations to reduce exposures to 1,3-D in ambient air;
- Work with local partners to identify and promote use of alternative agricultural practices in the Shafter area; and
- Promote the adoption and implementation of effective integrated pest management systems and practices and encourage Shafter groups to apply for Pest Management Alliance Grants to aid in this effort;

WHEREAS, CARB will continue to work with DPR to identify and implement efforts to address the effects of pesticide use within its authority;

WHEREAS, the District Governing Board approved the Program on September 19, 2019, and submitted it to CARB on September 30, 2019;

WHEREAS, CARB staff hosted a community meeting, coinciding with a community steering committee meeting, on November 4, 2019, to hear directly from the community steering committee and the public on the Program;

WHEREAS, local decisions that determine land use and traffic patterns impact exposure to air pollution, and in many impacted communities throughout the State, including Shafter, the proximity of emissions sources to nearby sensitive receptors like schools, homes, and day care centers exacerbates the cumulative exposure burden;

¹ California Code of Regulations, Title 3 (3CCR), sections 6690-6692 address agricultural pesticide applications near public K-12 schools and licensed child day care centers, collectively referred to as school sites.

WHEREAS, historic land use decisions have created disproportionate impacts in many communities throughout the State;

WHEREAS, the State has emphasized the importance of incorporating environmental justice into city and county planning to address existing and new environmental injustice through the passage of Senate Bill 1000 (Levy, Chapter 587, Statutes of 2016), requiring general plans to include environmental justice elements and policies, and the Governor's Office of Planning and Research's General Plan Guidelines;

WHEREAS, CARB staff reviewed the Program to determine whether it meets the criteria established in the Blueprint and considered the perspectives of the community steering committee members in developing recommendations to the Board;

WHEREAS, CARB staff have identified key strengths of the Program to highlight for future communities as well as specific aspects of the Program that will need further definition to support successful implementation in the areas of reduction strategies, pesticides and technical enhancements;

WHEREAS, aspects of the Program may change over implementation, including implementation timeframes, technical information, and strategy prioritization;

WHEREAS, staff has proposed that CARB approve the Shafter community emissions reduction program and direct CARB staff to work with the District and DPR to take actions to strengthen implementation as set forth in Attachment B: the Shafter Community Emissions Reduction Program Staff Report (Staff Report), released to the public on January 24, 2020;

WHEREAS, the District, CARB, DPR, and other agencies should continue to work with the community steering committee to expeditiously implement the Program, including measurable progress on the additional actions set forth in Attachment B prior to the first annual reporting due October 1, 2020;

WHEREAS, CARB's regulatory program that involves the adoption, approval, amendment, or repeal of standards, rules, regulations, or plans has been certified by the Secretary for Natural Resources under Public Resources Code section 21080.5 of the California Environmental Quality Act (CEQA; Title 14, California Code of Regulations, section 15251 (d)), and CARB conducts its CEQA review according to this certified program (Title 17, California Code of Regulations, sections 60000-60008);

WHEREAS, staff has determined that the Proposed Project is exempt from CEQA under the following exemptions: (1) Title 14, California Code of Regulations, section 15061 ("Common Sense Exemption") as it can be seen with certainty and supported by the record evidence that there is no possibility that the activity in question may have a significant effect on the environment; (2) Title 14 California Code of Regulations, section 15308 ("Class 8" exemption: Actions Taken by Regulatory Agencies for Protection of the Environment) because the record evidence shows that the Proposed Project will enhance the environment by better protecting the public from health impacts associated with exposure to air pollution within the project area, the Proposed Project includes

procedures for protection of the environment and the Proposed Project does not relax any applicable standards; (3) Title 14, California Code of Regulations, section 15306 (“Class 6” exemption: Information Collection) because the record evidence shows that many of the Proposed Project’s implementing measures involve outreach and data collection from various parties to better hone particular efforts from implementing agencies in reducing localized pollution levels which may lead to actions by those agencies; and (4) Title 14 California Code of Regulations, section 15321 (“Class 21” exemption: Enforcement Actions by Regulatory Agencies) because the record evidence shows that the Proposed Project incorporates actions by implementing agencies to enforce permits from the districts or other entitlements for use issued, adopted or prescribed by applicable regulatory agencies or enforcement of laws, general rules, standards, objectives administered or adopted by regulatory agencies identified as implementing agencies in the Proposed Project.

Board Findings

WHEREAS, in consideration of the applicable statutory and Blueprint requirements, written and oral testimony provided by community members, the District, and other stakeholders, the Board finds that:

- the Program is a community emissions reduction program pursuant to AB 617;
- the Program was developed with the community steering committee in an open public process, in consultation with affected parties, through numerous public workshops, individual meetings, and other outreach efforts, and these efforts are expected to continue;
- the Program addresses key elements required in statute and the Blueprint and will benefit from additional actions to support successful implementation in the areas of reduction strategies and process; and
- the Program is exempt from CEQA under Title 14, California Code of Regulations, sections 15061, 15306, 15308 and 15321 for the reasons stated herein.

NOW, THEREFORE, BE IT RESOLVED that the Board hereby approves the Program as set forth in Attachment A pursuant to additional direction to CARB staff, DPR and the District subject to the following actions taking place as set forth in this Resolution:

- CARB staff works with the District, DPR, and the community steering committee to take the additional actions to strengthen implementation, as defined in the Staff Report in Attachment B on pages 8 and 9 and as modified by this Resolution, to do the following:
 1. Include a process for making adjustments to incentive measure funding amounts based on ongoing discussions and recommendations from the community steering committee, and continue engaging the committee on prioritization of incentive measures and project selection.
 2. Develop and provide specific criteria for project funding amounts and project selection, and clarify in the “Metrics to Track Progress” the process for adjusting allocations when projects are undersubscribed or oversubscribed, including the following considerations:

- Provide funding for the replacement of natural gas residential heating devices with electrical heat pumps without requirements for the replacement of a fireplace or wood burning device.
 - Provide sufficient flexibility to ensure the passenger vehicle replacement strategy can be fully subscribed.
 - Provide mechanisms and resources for the ongoing maintenance of trees as part of the urban greening strategy.
3. Update the emissions reduction targets as new information becomes available for the regulatory and other strategies that do not yet have defined benefits where quantification is feasible.
 4. Consider the specific impacts of exposure to 1,3-D in the Shafter community to inform development of DPR's statewide rulemaking for 1,3-D.
 5. Continue to work together to identify additional actions related to the pesticide concerns identified by community steering committee members.
 6. Continue to collect and develop additional Shafter specific emissions information to build upon the current community-level inventory.
- DPR works to implement a pilot study for 1,3-D in Shafter and include mitigation methods that achieve reductions equivalent to Totally Impermeable Film (TIF) tarping.
 - At CARB's request and review, the District updates the Program's technical description of regulatory authorities over pesticides and requirements for pesticide notifications to be consistent with the State's language contained in the Staff Report and this Resolution under the administrative delegation provided to the Air Pollution Control Officer.
 - CARB staff, the District, DPR, and the community steering committee report back to the Board semi-annually, or as directed by the Board, on implementation of these actions.

BE IT FURTHER RESOLVED that the Board directs the District to submit annual reports to CARB by October 1 of each year beginning in 2020, developed in accordance with the Blueprint requirements, and including updates on the implementation of the Program and measurable progress made regarding the additional actions required in this Resolution. The report should be developed in collaboration with the community steering committee with steering committee input documented in the report.

BE IT FURTHER RESOLVED that CARB will develop a template for reporting back on implementation of the Program, which shall also include any additional strategies that have been identified. The template will include items included in the Blueprint requirements for annual reports, along with other specific actions called for in the Resolution.

BE IT FURTHER RESOLVED that the Board affirms the existing authority of CARB staff to review and interpret aspects of the community emissions reduction programs and delegates to the Executive Officer, or his or her designee, the authority to approve District changes to the Program, in a manner compliant with CEQA, that he or she deems necessary to enable effective implementation of the Program, provided that such changes are consistent with statute and the goals established by the Board. Staff shall

identify those changes when the Board receives an update on the annual report on the Program.

I hereby certify that the above is a true and correct copy of Resolution 20-6 as adopted by the California Air Resources Board.

/s/

Ryan Sakazaki, Board Clerk

Resolution 20-06

February 13, 2020

Identification of Attachments to the Board Resolution

Attachment A*: *Proposed Shafter community emissions reduction program, submitted to CARB on September 30, 2019*
https://ww2.arb.ca.gov/capp_2018_ad_cerps

Attachment B: *Shafter Community Emissions Reduction Program Staff Report*

***Attachment A is NOT attached to the proposed resolution; it is simply described on this page.**

Estado de California
Consejo de Recursos del Aire de California

AB 617 Programa de Protección del Aire en la Comunidad –
Programa de Reducción de Emisiones en la Comunidad de Shafter

Resolución 20-06

13 de febrero de 2020

Número de Artículo de la Agenda: 20-3-1

CONSIDERANDO QUE, las secciones 39600 y 39601 del Código de Salud y Seguridad autorizan al Consejo de Recursos del Aire de California (CARB o Consejo) a adoptar normas, reglas y regulaciones y para realizar los actos que sean necesarios para la ejecución adecuada de los poderes y deberes otorgados e impuestos al Consejo por ley;

CONSIDERANDO QUE, los programas de calidad del aire de California han llevado a mejoras significativas en la salud pública; sin embargo, ciertas comunidades continúan experimentando inequidades ambientales y de salud debido a la contaminación del aire.;

CONSIDERANDO QUE, muchas de estas comunidades se ven afectadas por múltiples fuentes estacionarias, de área y móviles de contaminación del aire y sufren impactos desproporcionados en la salud;

CONSIDERANDO QUE, las altas cargas de exposición acumulada en estas comunidades son un problema de salud pública, ya que contribuyen a afecciones de salud como enfermedades cardiorrespiratorias, un mayor riesgo de cáncer y un mayor riesgo de muerte prematura;

CONSIDERANDO QUE, las reducciones expeditas de emisiones de contaminantes tóxicos del aire (TAC) y contaminantes atmosféricos de criterio en comunidades con altas cargas de exposición acumulativa son críticas para reducir estos impactos desproporcionados en la salud;

CONSIDERANDO QUE, El proyecto de ley de la Asamblea (AB) 617 (C. García, Estatutos de 2017, capítulo 136) agregó las secciones 39607.1, 40920.8, 42411, 42705.5, 44391.2 y modificó las secciones 40920.6, 42400, 42402 en el Código de Salud y Seguridad, que requieren un nuevo programa centrado en la comunidad para abordar criterios de contaminantes del aire y contaminantes tóxicos del aire;

CONSIDERANDO QUE, AB 617 es un paso significativo en la transformación de los programas de calidad del aire de California para abordar las disparidades de contaminación del aire a nivel de vecindario;

CONSIDERANDO QUE, la Legislatura ha demostrado un compromiso continuo para mejorar la calidad del aire en las comunidades más agobiadas de California a través de la asignación de casi \$ 750 millones a CARB, con posterior distribución a los

distritos de aire locales, como fondos de "Protección del Aire en la Comunidad" para reducir la exposición en comunidades altamente impactadas;

CONSIDERANDO QUE, El estatuto requería que CARB antes del 1 de octubre de 2018, involucrara a las partes interesadas a través de un proceso público sólido para establecer los requisitos generales del Programa para reducir las emisiones

contaminantes tóxicas del aire y los emisiones de los criterios contaminantes del aire en comunidades con altos niveles acumulativos exposición, y seleccionar comunidades iniciales con altas cargas de exposición acumulativa para el despliegue de sistemas de monitoreo del aire en la comunidad y / o el desarrollo de programas de reducción de emisiones en la comunidad;

CONSIDERANDO QUE, el 27 de septiembre de 2018, CARB aprobó el *Plan Marco de la Protección del Aire en la Comunidad: Para Seleccionar a las Comunidades, Preparar los Programas de Reducción de Emisiones en las Comunidades, Identificar las Estrategias Estatales y Monitorear el Aire de las Comunidades* (Plan Marco), que describe los criterios para el desarrollo de programas de reducción de emisiones en la comunidad por distritos de aire, de conformidad con los requisitos de AB 617, y determinó que el Plan Marco y el Centro de Recursos en línea cumplieron con los requisitos legales para que CARB desarrolle un plan de monitoreo y una estrategia estatal;

CONSIDERANDO QUE, el estatuto requiere que los programas de reducción de emisiones en la comunidad sean consistentes con la estrategia estatal;

CONSIDERANDO QUE, el 27 de septiembre de 2018, CARB seleccionó a la comunidad de Shafter para desarrollar un programa de reducción de emisiones en la comunidad como una de las diez comunidades iniciales;

CONSIDERANDO QUE, El Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito) convocó a un comité directivo compuesto por residentes de la comunidad de Shafter, organizaciones sin fines de lucro, empresas y representantes del gobierno local y desarrolló un programa de reducción de emisiones en la comunidad para mejorar la calidad del aire en Shafter, titulado "Programa de Reducción de Emisiones en la Comunidad de Shafter "(Programa), incluido como Anexo A;

CONSIDERANDO QUE, el Distrito llevó a cabo un proceso público para desarrollar el Programa en el transcurso de un año, que incluyó una serie de 19 reuniones públicas, incluidas reuniones y talleres del comité directivo de la comunidad;

CONSIDERANDO QUE, la comunidad ha identificado los controles de pesticidas como de particular importancia, solicitando la inclusión de las siguientes medidas de reducción de emisiones de pesticidas: prohibir todas las aplicaciones sin interrupción de 1,3-D en Shafter; reducir el límite anual del municipio para 1,3-D en Shafter; requerir avisos de intención para aplicaciones restringidas de pesticidas y hacerlos disponibles públicamente; prohibir la fumigación aérea de todos los contaminantes tóxicos del aire para pesticidas; establecer zonas de amortiguamiento de una milla las 24 horas, los 7 días de la semana, alrededor de ubicaciones sensibles de receptores y evaluar la toxicidad de todos los contaminantes tóxicos del aire cancerígenos y reproductivos seguido de la identificación de reducción de emisiones y acciones de

mitigación;

CONSIDERANDO QUE, el Departamento de Regulación de Pesticidas (DPR) tiene autoridad reguladora sobre los pesticidas en su uso de pesticidas, según la sección 39655 del Código de Salud y Seguridad y la sección 14022 del Código de Alimentos y Agricultura, algunos pesticidas también se clasifican como TAC y, por lo tanto, pueden regularse como un TAC, y como compuestos formadores de smog a medida que se convierten en gases residuales fuera de su uso de pesticidas; La ley estatal establece un sistema de autoridades superpuestas entre los pesticidas y los reguladores del aire para abordar estos problemas complejos;

CONSIDERANDO QUE, los aplicadores de pesticidas deben notificar al Comisionado Agrícola del Condado (CAC) antes del uso de materiales restringidos, mientras otros pesticidas deben informarse después de que se hayan aplicado; los materiales restringidos son pesticidas que se considera que tienen un mayor potencial para causar daños a la salud pública, a los trabajadores agrícolas, a los animales domésticos, a las abejas melíferas, al medio ambiente, a la vida silvestre u otros cultivos en comparación con otros pesticidas y, con ciertas excepciones, solo pueden ser comprados y utilizados o bajo la supervisión de un aplicador comercial o privado certificado bajo un permiso emitido por el CAC;

CONSIDERANDO QUE, Las regulaciones¹ del DPR brindan estándares de distancia mínima para ciertas aplicaciones de pesticidas agrícolas cerca de los sitios escolares, restringen los días y las horas de aplicaciones de pesticidas al cierre de los sitios escolares, y requieren que los productores envíen notificaciones anuales por escrito a los administradores del sitio escolar de todos los pesticidas agrícolas que se pueden usar en los campos dentro de ¼ de milla de un sitio escolar sin excepciones

CONSIDERANDO QUE, DPR se involucró activamente con CARB, el Distrito y el comité directivo de la comunidad cuando los pesticidas se expresaron como una de las principales inquietudes de la comunidad;

CONSIDERANDO QUE, DPR se ha comprometido a las siguientes acciones:

- Continuar la operación del monitoreo de pesticidas en el aire después de la conclusión de la colaboración de monitoreo de CARB-DPR de término limitado de 2 años;
- Explorar opciones para expandir las actividades de monitoreo de pesticidas en el aire en el área de Shafter;
- Trabajar con la Oficina del Comisionado Agrícola del Condado de Kern, CARB, el Distrito y el comité directivo de la comunidad para identificar opciones viables para el desarrollo e implementación de un sistema adecuado de notificación de aplicación de pesticidas en el área de Shafter;
- Desarrollar regulaciones para reducir las exposiciones a 1,3-D en el aire ambiente;
- Trabajar con socios locales para identificar y promover el uso de prácticas agrícolas alternativas en el área de Shafter; y
- Promover la adopción e implementación de sistemas y prácticas eficaces de manejo integrado de plagas y alentar a los grupos de Shafter a solicitar subvenciones de la Alianza para el Manejo de Plagas para ayudar en este esfuerzo;

CONSIDERANDO QUE, CARB continuará trabajando con DPR para identificar e implementar esfuerzos para abordar los efectos del uso de pesticidas dentro de su autoridad;

CONSIDERANDO QUE, el Consejo de Gobierno del Distrito aprobó el Programa el 19 de septiembre de 2019 y lo presentó a CARB el 30 de septiembre de 2019;

CONSIDERANDO QUE, el personal de CARB organizó una reunión comunitaria, coincidiendo con una reunión del comité directivo de la comunidad, el 4 de noviembre de 2019, para escuchar directamente del comité directivo de la comunidad y del público sobre el Programa;

CONSIDERANDO QUE, las decisiones locales que determinan el uso del terreno y los patrones de tráfico impactan la exposición a la contaminación del aire, y en muchas comunidades afectadas en todo el estado, incluido Shafter, la proximidad de las fuentes de emisiones a receptores sensibles cercanos como escuelas, hogares y guarderías exacerba la carga de exposición acumulativa;

CONSIDERANDO QUE, las decisiones históricas sobre el uso del terreno han creado impactos desproporcionados en muchas comunidades en todo el estado;

CONSIDERANDO QUE, el Estado ha enfatizado la importancia de incorporar la justicia ambiental en la planificación de la ciudad y el condado para abordar la injusticia ambiental existente y nueva a través de la aprobación del Proyecto de Ley 1000 del Senado (Levy, Capítulo 587, Estatutos de 2016), que requiere planes generales para incluir elementos y políticas de justicia ambiental y Directrices del Plan General de la Oficina de Planificación e Investigación del Gobernador;

CONSIDERANDO QUE, el personal de CARB revisó el Programa para determinar si cumple con los criterios establecidos en el Plan Marco y consideró las perspectivas de los miembros del comité directivo de la comunidad al desarrollar recomendaciones para el Consejo;

CONSIDERANDO QUE, el personal de CARB ha identificado las fortalezas clave del Programa para resaltar para las comunidades futuras, así como los aspectos específicos del Programa que necesitarán una definición adicional para apoyar la implementación exitosa en las áreas de estrategias de reducción, pesticidas y mejoras técnicas;

¹ El Código de Regulaciones de California, Título 3 (3CCR), secciones 6690-6692 aborda las aplicaciones de pesticidas agrícolas cerca de las escuelas públicas K-12 y guarderías con licencia, denominadas colectivamente como sitios escolares.

CONSIDERANDO QUE, los aspectos del programa pueden cambiar con respecto a la implementación, incluidos los plazos de implementación, la información técnica y la priorización de la estrategia;

CONSIDERANDO QUE, el personal ha propuesto que CARB apruebe el programa de reducción de emisiones en la comunidad de Shafter y dirija al personal de CARB a trabajar con el Distrito y el DPR para tomar medidas para fortalecer la implementación como se establece en el Anexo B: Informe del Personal del Programa de Reducción de Emisiones en la Comunidad de Shafter (Informe del Personal) lanzado al público el 24 de enero de 2020;

CONSIDERANDO QUE, el Distrito, CARB, DPR y otras agencias deben continuar trabajando con el comité directivo de la comunidad para implementar rápidamente el Programa, incluido el progreso medible en las acciones adicionales establecidas en el Anexo B antes del primer informe anual que vence el 1 de octubre de 2020;

CONSIDERANDO QUE, el programa regulatorio de CARB que involucra la adopción, aprobación, enmienda o derogación de estándares, reglas, regulaciones o planes ha sido certificado por el Secretario de Recursos Naturales bajo la sección 21080.5 del Código de Recursos Públicos de la Ley de Calidad Ambiental de California (CEQA; Título 14, Código de Regulaciones de California, sección 15251 (d)), y CARB realiza su revisión CEQA de acuerdo con este programa certificado (Título 17, Código de Regulaciones de California, secciones 60000-60008);

CONSIDERANDO QUE, el personal ha determinado que el Proyecto Propuesto está exento de CEQA bajo las siguientes exenciones: (1) Título 14, Código de Regulaciones de California, sección 15061 ("Exención de sentido común") como se puede ver con certeza y respaldado por la evidencia de que no hay posibilidad de que la actividad en cuestión pueda tener un efecto significativo en el medio ambiente; (2) Título 14 del Código de Regulaciones de California, sección 15308 (exención de "Clase 8": Acciones tomadas por agencias reguladoras para la protección del medio ambiente) porque la

evidencia de registro muestra que el Proyecto Propuesto mejorará el medio ambiente al proteger mejor al público de la salud impactos asociados con la exposición a la contaminación del aire dentro del área del proyecto, el Proyecto Propuesto incluye procedimientos para la protección del medio ambiente y el Proyecto Propuesto no relaja ninguna norma aplicable; (3) Título 14, Código de Regulaciones de California, sección 15306 (exención de "Clase 6": Recopilación de información) porque la evidencia del registro muestra que muchas de las medidas de implementación del Proyecto Propuesto incluyen divulgación y recopilación de datos de varias partes para perfeccionar mejor los esfuerzos particulares de implementar agencias para reducir los niveles de contaminación localizados que pueden conducir a acciones de esas agencias; y (4) Título 14 del Código de Regulaciones de California, sección 15321 (exención "Clase 21": Acciones de cumplimiento por parte de las agencias reguladoras) porque la evidencia de registro muestra que el Proyecto Propuesto incorpora acciones de las agencias implementadoras para hacer cumplir los permisos de los distritos u otros derechos para uso emitido, adoptado o prescrito por agencias reguladoras aplicables o cumplimiento de leyes, reglas generales, estándares, objetivos administrados o adoptados por agencias reguladoras identificadas como agencias implementadoras en el Proyecto Propuesto.

Resultados del Consejo

CONSIDERANDO QUE, en consideración de los requisitos legales y del Plan Marco aplicables, el testimonio escrito y oral proporcionado por los miembros de la comunidad, el Distrito y otras partes interesadas, el Consejo considera que:

- el Programa es un programa de reducción de emisiones en la comunidad de conformidad con AB 617;
- el Programa se desarrolló con el comité directivo de la comunidad en un proceso público abierto, en consulta con las partes afectadas, a través de numerosos talleres públicos, reuniones individuales y otros esfuerzos de divulgación, y se espera que estos esfuerzos continúen;
- el Programa aborda los elementos clave requeridos en el estatuto y el Plan Marco y se beneficiará de acciones adicionales para apoyar la implementación exitosa en las áreas de estrategias de reducción y proceso; y
- el Programa está exento de CEQA bajo el Título 14, Código de Regulaciones de California, secciones 15061, 15306, 15308 y 15321 por las razones establecidas en este documento.

AHORA, POR LO TANTO, SE RESUELVA que el Consejo aquí aprueba el Programa como se establece en el Anexo A de conformidad con las instrucciones adicionales para el personal de CARB, DPR y el Distrito sujeto a las siguientes acciones que tienen lugar como se establece en esta Resolución:

- El personal de CARB trabaja con el Distrito, el DPR y el comité directivo de la comunidad para tomar medidas adicionales para fortalecer la implementación, tal como se define en el Informe del Personal en el Anexo B en las páginas 8 y 9 y según lo modificado por esta Resolución, para hacer lo siguiente:
 1. Incluir un proceso para hacer ajustes a los montos de financiamiento de las medidas de incentivos basados en las discusiones y recomendaciones continuas del comité directivo de la comunidad, y continúe involucrando al comité en la priorización de las medidas de incentivos y la selección de proyectos.

2. Desarrollar y proporcionar criterios específicos para los montos de financiamiento del proyecto y la selección del proyecto, y aclare en las "Métricas para realizar un seguimiento del progreso" el proceso para ajustar las asignaciones cuando los proyectos tienen una baja o excesiva suscripción, incluidas las siguientes consideraciones:
 - Proporcionar fondos para el reemplazo de dispositivos de calefacción residencial de gas natural con bombas de calor eléctricas sin requisitos para el reemplazo de una chimenea o dispositivo de leña.
 - Proporcione suficiente flexibilidad para garantizar que la estrategia de reemplazo del vehículo de pasajeros pueda suscribirse por completo.
 - Proporcionar mecanismos y recursos para el mantenimiento continuo de los árboles como parte de la estrategia de urbanización ecológica.
 3. Actualizar los objetivos de reducción de emisiones a medida que haya nueva información disponible para las estrategias regulatorias y otras que aún no tienen beneficios definidos donde la cuantificación es factible.
 4. Considerar los impactos específicos de la exposición a 1,3-D en la comunidad de Shafter para informar el desarrollo de la reglamentación estatal de DPR para 1,3-D.
 5. Continuar trabajando juntos para identificar acciones adicionales relacionadas con las inquietudes de pesticidas identificadas por los miembros del comité directivo de la comunidad.
 6. Continuar recolectando y desarrollando información adicional de emisiones específicas de Shafter para construir sobre el inventario actual a nivel comunitario.
- DPR trabaja para implementar un estudio piloto para 1,3-D en Shafter e incluye métodos de mitigación que logran reducciones equivalentes a la cobertura de capa totalmente impermeable (TIF).
 - A solicitud y revisión de CARB, el Distrito actualiza la descripción técnica del Programa de las autoridades reguladoras sobre los pesticidas y los requisitos para que las notificaciones de pesticidas sean consistentes con el lenguaje del Estado contenido en el Informe del Personal y esta Resolución bajo la delegación administrativa proporcionada al Oficial de Control de la Contaminación del Aire.
 - El personal de CARB, el Distrito, el DPR y el comité directivo de la comunidad informan al Consejo semestralmente, o según lo indique el Consejo, sobre la implementación de estas acciones.

SE RESUELVE ADEMÁS que el Consejo ordena al Distrito que presente informes anuales a CARB antes del 1 de octubre de cada año a partir de 2020, desarrollado de acuerdo con los requisitos del Plan Marco e incluyendo actualizaciones sobre la implementación del Programa y el progreso medible realizado con respecto a las acciones adicionales requeridas en esta Resolución. El informe debe desarrollarse en colaboración con el comité directivo de la comunidad con los aportes del comité directivo documentados en el informe.

SE RESUELVE ADEMÁS que CARB desarrollará un modelo para informar sobre la implementación del Programa, que también incluirá cualquier estrategia adicional que

se haya identificado. El modelo incluirá elementos incluidos en los requisitos del Plan Marco para los informes anuales, junto con otras acciones específicas requeridas en la Resolución.

SE RESUELVE ADEMÁS que el Consejo afirma la autoridad existente del personal de CARB para revisar e interpretar aspectos de los programas de reducción de emisiones en la comunidad y delega al Oficial Ejecutivo, o su designado, la autoridad para aprobar los cambios del Distrito al Programa, de una manera que cumpla con CEQA , que él o ella considere necesario para permitir la implementación efectiva del Programa, siempre que dichos cambios sean consistentes con el estatuto y las metas establecidas por el Consejo. El personal identificará esos cambios cuando el Consejo reciba una actualización del informe anual sobre el Programa.

Por la presente certifico que lo anterior es una copia verdadera y correcta de la Resolución 20-6 adoptada por el Consejo de Recursos del Aire de California.

Existing Control of Air Pollution Sources of Concern to AB 617 Communities

AB 617 COMMUNITY EMISSION REDUCTION PROGRAM DEVELOPMENT

San Joaquin Valley
AIR POLLUTION CONTROL DISTRICT

Air Pollution Control: Who Does What?

Agency Jurisdictions

Federal and state laws require emission control measures in areas where air pollution exceeds standards. The San Joaquin Valley is one of these areas. With a variety of state and federal agencies implementing air pollution reduction programs, it can be difficult to understand the mission and jurisdiction of each organization.

The federal government, primarily through the Environmental Protection Agency, sets air quality standards, oversees state and local actions, and implements programs for toxic air pollutants, heavy-duty trucks, locomotives, ships, aircraft, off-road diesel equipment, and some types of industrial equipment.

State government, through the California Air Resources Board (CARB) and Bureau of Automotive Repair, sets more stringent state standards, oversees local actions, and implements programs for motor vehicle emissions, fuels, and smog checks.

Local air pollution control districts, such as the San Joaquin Valley Air Pollution Control District (District), develop plans and implement control measures in their areas. These controls primarily affect stationary sources such as factories and plants. Local air districts also conduct public education and outreach efforts such as the District's *Healthy Air Living*, *Check Before You Burn*, and *Drive Clean in the San Joaquin* voluntary programs.

Local cities and counties are responsible for implementing air friendly community planning that promotes pedestrian traffic, commute alternatives and cleaner transit fleets. City and County governments develop land use plans and make decisions about how cities should grow and expand.

While their jurisdiction and specific programs may vary, all of these organizations share a common goal: to work cooperatively in establishing comprehensive air quality control programs to benefit all California residents.

Assembly Bill (AB) 617 allows the District an exciting opportunity to continue to improve air quality, by partnering with community members in CARB selected communities to reduce local pollution and to help further protect the health of disadvantaged communities. Local air quality monitoring and community member engagement will be critical components to further understanding pollution impacts on local neighborhoods and developing effective strategies to reduce the cumulative exposure burden in highly impacted communities.

About the San Joaquin Valley Air Pollution Control District

The District regulates stationary sources of air pollution, implements control measures, and develops and implements plans to improve air quality in the San Joaquin Valley.

Nearly 650 rules and regulations have been adopted by the District over a period of nearly three decades, each reducing the amount of emissions that a facility may emit. A strict permitting process ensures that facilities operating in the Valley have the best available control technologies feasible to install for all permitted facility types, and ensures that new equipment and facilities in the Valley do not increase the risk of health impacts due to exposure to harmful air pollutants for local residents. These stringent requirements protect Valley communities from both regional and local air pollution and associated health impacts. See Appendix A for more information about health-protective permitting measures that apply to sources regulated by the District.

The District also works with CARB to make plans for attainment of health-protective air quality standards for the eight counties in the San Joaquin Valley. The District and CARB recently adopted the *2018 PM2.5 Plan*, which committed to make existing rules and regulations potentially even more stringent for stationary sources like boilers, glass plants, internal combustion engines, and commercial charbroilers. Emissions information gathered annually by the Air District and CARB, and scientific modeling, have shown that the majority of pollution in the Valley, and the majority of the pollution-related health impacts, come from mobile sources, and so CARB has also committed to major emission reductions from mobile sources through increased enforcement and incentive funding in the Valley. To further target sources outside of the District's regulatory jurisdiction, the *2018 PM2.5 Plan* also included a commitment to implement several different incentive programs for sources such as yard equipment, buses, and passenger cars. Emission reductions from this regional plan for attainment will benefit AB 617-selected communities by improving ambient air quality.

Additional regulatory controls and incentive programs that directly impact air pollution sources that have been discussed as being of concern to the AB 617 selected communities of Shafter and South Central Fresno are further discussed in this Community Steering Committee source categories of concern Informational packet. Visit Valleyair.org for more information about District rules, policies, and available incentive programs that address these sources and many others!

Control of Mobile Sources of Air Pollution

Passenger Car Pollution

State and Federal requirements control emissions from passenger vehicles. The Valley Air District does not have jurisdiction over these sources. However, due to the large amount of air pollution that originates from passenger vehicles in the Valley, the District has implemented a suite of programs to reduce pollution from these mobile sources.

- Employer Based Trip Reduction (District Rule 9410) requires large employers to implement measures to encourage employees to take alternative transportation to work through the establishment of an Employer Trip Reduction Implementation Plan (eTRIP).
 - An eTRIP is a set of measures that encourages employees to use alternative transportation and ridesharing for their morning and evening commutes
 - Each measure contributes to a workplace where it is easier for employees to choose to use ridesharing or alternative transportation
 - Through this rule, single-occupancy vehicle trips are reduced, thus reducing emissions of oxides of nitrogen (NOx), volatile organic compounds (VOC) and particulate matter (PM).
- District Healthy Air Living school program promotes no idling while picking up children at school
 - “No idling” signs are provided to schools to encourage drivers to turn off their engines
- Indirect Source Rule (District Rule 9510) accounts for mobile source emissions from construction and new development projects and ensures that emissions from these activities are mitigated through on site activities or through payment of mitigation fees
- District offers a variety of incentive programs to reduce emissions from passenger vehicles. These include the following options:
 - Tune In Tune Up vehicle repair program
<http://valleyair.org/drivecleaninthesanjoaquin/repair/> provides up to \$850 in funding to repair high emitting vehicles identified at weekend Tune In Tune Up events
 - The Districts vehicle replacement program
<https://www.valleyair.org/drivecleaninthesanjoaquin/replace/> provides up to \$9,500 for Valley residents to replace their 1999 or older high emitting vehicles with newer, cleaner options including battery electric, plug in hybrid, or hybrid vehicles
 - The District offers rebates up to \$3,000 for the purchase or lease of new clean air vehicles including battery electric, fuel cell, plug in hybrid, zero emissions motorcycles, and advanced technology natural gas vehicles
<https://www.valleyair.org/drivecleaninthesanjoaquin/rebate/>

- The District provides incentives up to \$50,000 per project for electric vehicle charging infrastructure through the Charge Up Program <http://valleyair.org/grants/chargeup.htm>

- CARB mobile source strategy calls for increasing the deployment of plug in hybrid, battery electric vehicles and fuel cell vehicles in order to attain federal ozone standards, reduce greenhouse gas emissions, minimize health risks, reduce petroleum usage and increase energy efficiency.

School and Transit Buses

- Controlled by the California Air Resources Board Statewide Truck and Bus Regulation that requires transition to cleaner technology over time. Generally phased in by model year. <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>
- District has a variety of incentive programs available for school bus fleets interested in transitioning their fleets to cleaner technology, including:
 - The District operates a local school bus replacement program. The Electric School Bus Incentive Program provides monetary incentives for the replacement of existing diesel yellow school buses that transport public school children to and from school with all electric school buses. Eligible applicants are public school districts, Joint Power Authorities (JPA), and privately owned yellow school buses that are contracted with a public school to transport public school children.
 - <http://valleyair.org/grants/electric-school-bus.htm>
- School bus replacements can be funded as an eligible project category utilizing funding provided to support AB 617. These projects are administered according to the Carl Moyer Program guidelines and are subject to additional requirements contained within the approved AB 617 Community Air Protection Guidelines. This program is operated by the District.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>
- Upcoming Volkswagen Mitigation Trust Program funding: The District is administering \$130 million in funding on behalf of the State of California to replace diesel school and transit buses throughout California with all-electric zero-emission buses. This program will be launching in the fall, 2019.
 - <http://vwbusmoney.valleyair.org/>

Emissions from Heavy Duty Trucks

- Diesel powered heavy-duty trucks are subject to statewide ARB Truck and Bus Regulation which requires all equipment to meet 2010 emission standards by 2023. All 2009 and older heavy-duty diesel trucks will be off the road by January 1, 2023.
(<https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>)
- District offers incentives to reduce emissions from heavy-duty diesel trucks. This includes the following options:
 - Heavy Duty Truck Replacement Program (<http://valleyair.org/grants/truck-replacement.htm>) provides up to \$200,000 in funding to replace 2009 or older heavy-duty diesel trucks with the cleanest technology available
 - The District will implement a Heavy-Duty Truck Repair Pilot Program to provide financial assistance to small fleet truck owners and operators to provide durable repairs for broken emissions components or systems in summer 2019
 - The District is developing new program for Heavy-Duty Alternative Fuel Infrastructure which will provide local businesses and agencies incentive funding to install alternative fueling infrastructure (electric, hydrogen, etc.) to support the increased deployment of heavy-duty advanced clean technology vehicles

Locomotives

- Currently, there exist no CARB and EPA requirements controlling emissions relating to the transportation of goods via locomotive freight.
- The District offers two incentive programs for Locomotive fleets interested in transitioning to newer, clean technology, including:
 - Proposition 1B (Locomotives) (<http://valleyair.org/grants/locomotives-prop1b.htm>) incentivizes the reduction of emissions and health risks associated with freight movement along California's trade corridors via upgrading to cleaner technologies or installation of emissions capture and control systems.
 - Locomotive replacements can be funded as an eligible project category utilizing funding provided to support AB 617. These projects are administered according to Proposition 1B guidelines and are subject to additional requirements contained within the approved AB 617 Community Air Protection Guidelines. This program is operated by the District.
 - State Legislature Proposition 1B provides funding for the replacement of old locomotive engines under this program
 - All locomotive engines funded under Prop 1B must be EPA Tier 4 Certified and pass California Air Resources Board Verification
 - Locomotive Program (<http://valleyair.org/grants/locomotive.htm>) incentivizes the replacement of old, high-polluting locomotives to new, low-polluting Tier 4 engines.
 - Locomotive replacements can be funded as an eligible project category utilizing funding provided to support AB 617. These projects are administered according to the Carl Moyer Program guidelines and are subject to additional requirements contained within the approved AB 617 Community Air Protection Guidelines. This program is operated by the District.
 - Carl Moyer Grant Program provides funding for the replacement of old locomotive engines under this program

- All locomotive engines funded with Carl Moyer monies must be EPA Tier 4 Certified and pass California Air Resources Board Verification
- To date, The District has administered nearly \$66 million dollars to fund the replacement of old, high-polluting locomotive engines with new, tier 4 and CARB verified locomotive engines.
- South Coast APCD is administering Volkswagen Environmental Mitigation Trust for California Funding on behalf of the State of California to replace high-polluting locomotive engines throughout California with newer, low-polluting Tier 4, CARB verified locomotive engines. This program will be launching in the fall, 2019.
 - <http://www.aqmd.gov/vw/>
 - <https://ww2.arb.ca.gov/our-work/programs/volkswagen-environmental-mitigation-trust-california/about>

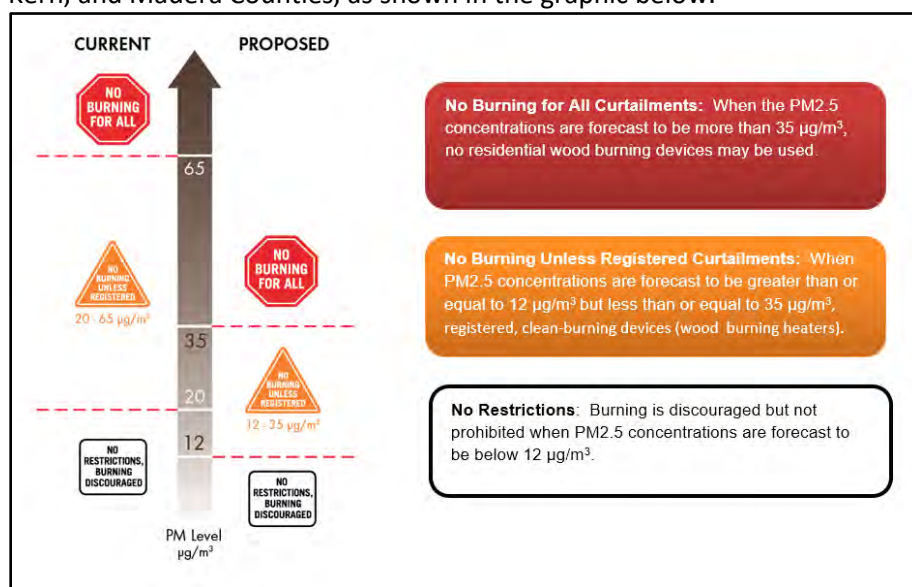

Control of Residential and Urban Sources

Residential Wood Burning

The wood burning fireplaces and wood burning heaters source category includes emissions from wood burning fireplaces, wood burning heaters, and outdoor wood burning devices. During winter, one of the largest sources of particulate pollution comes from residential wood burning. Emissions are the result of incomplete wood combustion and are emitted into Valley neighborhoods where residents live and play. Hazardous air pollutants released from residential wood burning include: PM_{2.5}, PM₁₀, NO_x, benzene, aldehydes, dioxin, and polycyclic aromatic hydrocarbons (PAHs).

Residential wood burning is subject to the following regulatory measures:

- SJVAPCD (District) Rule 4901 (<https://www.valleyair.org/rules/currnrules/r4901.pdf>)
- Check Before you Burn program (<https://www.valleyair.org/aqinfo/cbyb.htm>)
 - Through the District's Check Before You Burn program, which is based on Rule 4901, the District has declared and enforced episodic wood burning curtailments, also called "No burn" days, since 2003.
 - Check Before You Burn and District Rule 4901 reduce harmful species of PM_{2.5} when and where those reductions are most needed, in impacted urbanized areas when the local weather is forecast to hamper particulate matter dispersion.
 - The District is currently proposing to amend the existing curtailment levels for Fresno, Kern, and Madera Counties, as shown in the graphic below.

Additionally, the District utilizes the following non-regulatory measures to reduce pollution from wood smoke in the Valley:

- Burn Cleaner Incentive Program (<http://valleyair.org/grants/apps/burncleaner/Home>): Incentive funding for the replacement of older more polluting wood burning heaters to cleaner wood burning heaters. This program has replaced over 16,600 uncertified wood stoves with EPA-certified and clean burning natural gas devices in the Valley since 2009.

NEW DEVICE TO BE PURCHASED	INCENTIVE AMOUNT
Certified wood insert/freestanding stove	Up to \$1,000
Certified pellet insert/freestanding stove	Up to \$1,000
Natural gas insert/freestanding stove	Up to \$1,000
Any eligible device if applicant is eligible for low-income	Up to \$2,500
Additional incentive towards gas device (for both Standard and Low-income)	Up to \$500*

**Applies only to eligible installation costs beyond the funding amount*

- **Public Outreach and Education:** The District takes part in media interviews and responds to public calls phone calls and emails related to residential wood burning. The District also utilizes tools such as the Real-Time Air Advisory Network and the “Valley Air” app, and social media, and multimedia advertising campaigns (billboards, radio, tv, etc.) to spread awareness

Development Projects - Construction and Operations

Development projects are controlled through a suite of rules, including the District’s Indirect Source Review Rule and Regulation VIII requirements, further discussed below. Additionally, the District provides city and county agencies with guidance on sustainability measures that best reduce air pollution, as well as analyzing the potential impacts of new projects and ways developers can reduce air quality impacts through the CEQA process.

Indirect Source Review (ISR) Rule

District [Rule 9510 \(Indirect Source Review \(ISR\)\)](#) reduces NOx and PM10 emissions from mobile and area sources associated with construction and operation of new development projects in the Valley. The ISR rule applies to developers of new residential, commercial and industrial projects and to transportation and transit projects whose emissions will exceed certain thresholds contained in the rule.

- This rule was adopted in December 15, 2005, and amended in December, 2017.
- This is the only rule of its kind in the State of California and throughout the nation. The District’s rule is recognized as the benchmark, or best available control, for regulating these indirect sources of emissions, and other air districts
- The ISR rule encourages clean air designs to be incorporated into the development project, or, if insufficient emissions reductions can be designed into the project, by paying a mitigation fee that will be used to fund off-site emissions reduction projects.

Voluntary Emission Reduction Agreement (VERA) Program

A VERA is a mitigation measure under the California Environmental Quality Act (CEQA) by which the project proponent provides pound-for-pound mitigation of air emissions increases through a process that funds and implements emission reduction projects administered through the District’s incentive grant programs. A VERA can be implemented to address air quality impacts under CEQA, from both construction and operational phases of a project.

Regulation VIII (Fugitive PM10 Prohibition) / Dust Control Plan (DCP)

The District’s Regulation VIII series (Fugitive PM10 Prohibitions) was adopted in November 2001, and subsequently amended in 2004. This rule series contains a comprehensive suite of rules designed to

reduce fugitive PM10 emissions from a range of sources. The Regulation VIII rules are implemented via the District's Dust Control Plan (DCP) program:

https://www.valleyair.org/busind/comply/PM10/compliance_PM10.htm

Rule 8011: General Requirements

The provisions of Rule 8011 are applicable to specified outdoor fugitive dust sources. In 2004, the District adopted amendments to Regulation VIII to upgrade existing RACM level rules to meet the more stringent BACM level required in serious PM10 nonattainment areas.

Rule 8021: Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities

Rule 8021 applies to construction or demolition related disturbances of soil, including land clearing, grubbing, scraping, excavation, extraction, land leveling, grading, cut and fill operations, travel on the site, travel access roads to and from the site, and demolition activities. The rule also applies to construction of new landfill disposal sites or modifications to existing landfill disposal sites prior to commencement of landfilling activities.

Rule 8031: Bulk Materials

Rule 8031 applies to the outside storage and handling of any unpackaged material, which emits or has the potential to emit dust when stored or handled.

Rule 8041: Carryout and Trackout

Rule 8041 applies to the prevention and cleanup of mud and dirt whenever it is deposited (carryout and trackout) onto public paved roads from activities subject to the requirements of Rules 8021, 8031, 8061, and 8071.

Rule 8051: Open Areas

Rule 8051 applies to any open area 0.5 acres or more within urban areas, or 3.0 acres or more within rural areas that contains at least 1,000 square feet of disturbed surface area.

Rule 8061: Paved and Unpaved Roads

Rule 8061 establishes standards for the construction of new and modified paved roads in accordance with published guidelines by the American Association of State Highway and Transportation Officials for road construction and applies to any paved, unpaved, or modified public or private road, street highway, freeway, alley way, access drive, access easement, or driveway.

Rule 8071: Unpaved Vehicle/Equipment Traffic Areas

Rule 8071 is applicable to unpaved vehicle/equipment areas, including parking, fueling, service, shipping, receiving, and transfer areas.

Rule 8081: Agricultural Sources

Rule 8081 applies to "off-field" agricultural sources including, but not limited to, unpaved roads, unpaved vehicle/equipment traffic areas, and bulk materials.

Commercial Charbroiling

The charbroiling source category consists of two types of commercial charbroilers: chain-driven and underfired. A chain-driven charbroiler is a semi-enclosed broiler that moves food mechanically through the device on a grated grill to cook the food for a specific amount of time. An underfired charbroiler has a metal "grid," a heavy-duty grill similar to that of a home barbecue, with gas burners, electric heating elements, or solid fuel (wood or charcoal) located under the grill to provide heat to cook the food. The

smoke and vapors generated by cooking on either type of charbroiler contain water, VOCs, and PM. Larger particles and grease are typically captured by the grease filter of the ventilation hood over the charbroiler. The remaining VOCs and particulate pollution are exhausted outside the restaurant, unless a secondary control is installed.

- District Rule 4692 reduces emissions by requiring catalytic oxidizers for chain-driven commercial charbroilers, such as those located at fast-food restaurants, that meet rule applicability thresholds
- Rule 4692 requires emission controls for chain-driven charbroilers that cook 400 pounds of meat or more per week
- The original rule, adopted in March 2002, reduced PM_{2.5} emissions from chain-driven charbroilers by 84%. The September 2009 rule amendment expanded rule applicability to more chain-driven charbroilers, reducing 25% of the remaining PM_{2.5} chain-driven charbroiler emissions

In 2018, the District amended Rule 4692 to implement a registration and reporting requirement for underfired charbroiler operations in order to gather better inventory and emissions information for this source category. Using new survey and registration information, the District will pursue reductions in commercial underfired charbroiler emissions through an incentive-based approach to fund the installation of controls for commercial underfired charbroilers within urban boundaries in hot-spot areas of Fresno, Kern, and Madera counties, with a future year regulatory requirement to encourage participation by Valley businesses.

Lawn and Garden Equipment

- CARB has a small off-road engine (SORE) program, which includes lawn and garden equipment. In 2020, CARB will consider new standards for small engines to help California meet its goal of reducing smog-forming pollutant emissions from mobile sources by 80 percent in 2031 (<https://ww2.arb.ca.gov/our-work/programs/small-off-road-engines-sore>).
- District offers incentives to help reduce emissions from gas-powered lawn and garden equipment. The Clean Green Yard Machines (CGYM) Program includes the following:
 - Residential CGYM provides rebates for the replacement of an old gas-powered mower with a new electric mower and for the purchase of eligible new electric lawn and garden electric equipment without replacements (<http://www.valleyair.org/grants/cgym.htm>). To date, this program has replaced over 6,700 mowers with over \$1.5 million in funding.
 - Commercial CGYM launched in May 2019 and provides funding for the replacement of eligible old gas-powered lawn and garden equipment with battery-powered options for public agencies, private entities, and businesses <http://valleyair.org/grants/cgym-commercial.htm>

Mitigation Measures for Schools

- Managed by Outreach and Communications team
- The Healthy Air Living Schools program provides free tools, resources, and education to Valley schools and their communities (<http://healthyairliving.com/schools>)
- Encourages schools to adopt Real-time Air Advisory Network (RAAN), modify outdoor activities, communicate air quality challenges and progress, request educational speakers, adopt anti-idling initiatives, and stay engaged through ongoing personalized support

- Deployed Real-time Electronic Air-Quality Display (READ) technology for more than 25 schools, which provides real-time air quality data and is a highly visible alternative to the retired Air Quality Flag Program. Additional schools are now participating using their own monitor to display a customized URL provided by the District
- Currently 959 schools in the Valley utilize the District's air quality notifications to adjust outdoor activities and notify staff, students and parents

General Outreach

- Managed by the Outreach and Communications team
- Improves public health through education, partnership, outreach, and cooperation with the media, public, businesses, government, and others
- Coordinates events, delivers presentations, responds to the media 24/7, manages social networks, pilots innovative outreach campaigns like the HAL Schools and Check Before You Burn programs, and connects with the public in multiple languages across any medium
- Executes annual comprehensive multi-lingual advertising campaigns for Healthy Air Living/Summer Ozone season, Check Before You Burn and a variety of grant programs utilizing various media resources including television, radio, billboards, social media, digital networks and more.
- Provides air quality data from the Real Time Air Advisory network (RAAN) of monitors across the Valley, to more than 8,000 registered users who receive alerts via text or email for locations they choose to follow
- Provides a free mobile app for android and iOS that allows users to save up to 10 Valley locations to view current air quality data from RAAN, report air quality issues and check wood burning status during Check Before You Burn season.

Control of Agricultural Sources of Concern

Open Burning

State laws require Districts to have provisions for the disposal of agricultural waste through open burning. The San Joaquin Valley has the toughest restrictions on burning of agricultural materials in the state. State legislation is phasing out such activity, but it is still allowed for a few crop types where there are no economically or technologically feasible alternatives to burning available. In accordance with state law, on a daily basis District staff determines when, how much, and where burning can occur.

The limited open burning still allowed is managed under the District's comprehensive Smoke Management System (SMS) to minimize ambient air quality impacts. Burn permits issued by the District and daily authorization is required for all open burning of agricultural waste. Each day, District staff analyze potential impacts, local meteorology, air quality conditions, atmospheric holding capacity, and other factors when making determinations on how much material may be burned in each of the over 100 burn zones that the Valley is broken into in the SMS. Open burning is only allowed if atmospheric conditions are such that no adverse air quality impacts are expected. The goal of the SMS is to protect public health and prevent significant deterioration in air quality as the result of open burning.

- Controlled by District Rule 4103 (Open Burning)
(<https://www.valleyair.org/rules/curnrules/r4103.pdf>)
- Alternative to Open Ag Burning Incentive Pilot Program
 - Provides incentives for chipping or shredding agricultural material, with the materials being required to be used for soil incorporation or land application on agricultural land
 - A total of \$1,644,320 has been offered to fund these projects to date
 - This program has resulted in approximately 200 tons of NOx, 241 tons of VOC, and 337 tons of PM emission reductions to date

Agricultural Tractors

- Agricultural tractors are not controlled by a regulation.
- To be eligible the facility must be engaged in agricultural operations as defined by the California Air Resources Board. <http://valleyair.org/grants/documents/tractor/Guidelines.pdf>
- Agricultural tractor replacements can be funded as an eligible project category utilizing funding provided to support AB 617. These projects are administered according to the Carl Moyer Program guidelines and are subject to additional requirements contained within the approved AB 617 Community Air Protection Guidelines. This program is operated by the District.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>
- Projects are funded on a first come first serve
<http://valleyair.org/grants/documents/tractor/Ag-Off-Road-Repalcement-App.pdf>

Agricultural Trucks

- Controlled by the California Air Resources Board Statewide Truck and Bus Regulation that requires transition to cleaner technology over time. Generally phased in by model year.
<https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>

- The FARMER Ag Truck Replacement Program provides incentive funds for the replacement of heavy-duty diesel agricultural trucks.
<http://valleyair.org/grants/documents/FARMER/guidelines.pdf>
- Eligible agricultural trucks must be in current compliance with the State of California’s On-Road Truck and Bus Regulation under the following compliance options
 - Agricultural Vehicle Extension
 - Low-Use Exemption
 - Specialty Agricultural Vehicle Extension
 - Model Year Schedule and the truck must operate as an “agricultural vehicle” as defined in the truck and bus regulation.
<https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>
- Agricultural truck replacements can be funded as an eligible project category utilizing funding from the FARMER program. These projects are administered according to the FARMER Program guidelines.
<http://valleyair.org/grants/documents/FARMER/application.pdf>

Agricultural Pump Replacement Program

- Controlled by the San Joaquin Valley Air Pollution Control District that required a transition to cleaner technology over time. Generally phased in by tier level.
 - https://www.valleyair.org/rules/currnrules/R4702_Clean.pdf
- District has a variety of incentive programs available for agricultural operations interested in transitioning their engines to cleaner technology, including:
 - The District operates a local agricultural replacement program. The Agricultural Pump Incentive Program provides monetary incentives for the replacement of Tier 3 engines to Tier 4f engines and Tier 3 or Tier 4f engines to electric motors
 - <http://valleyair.org/grants/agpump.htm>
- Agricultural Pump Replacements can be funded as an eligible project category utilizing funding provided to support AB 617. These projects are administered according to the Carl Moyer Program guidelines and are subject to additional requirements contained within the approved AB 617 Community Air Protection Guidelines. This program is operated by the District.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>

Dust from Orchards, Vineyards, and Row Crops

The District requires that growers implement conservation management practices to reduce air pollution from agricultural operations

- Growers must submit a conservation management plan to the District for approval, as required by District Rule 4550 (Conservation Management Practices)
 - Within this plan, farmers detail specific measures they will be implementing to reduce dust emissions from their facility
 - District staff regularly inspect Valley farms to ensure compliance with rule requirements
 - Emission reductions achieved by the implementation of these practices by Valley farmers has helped the Valley be in attainment of the federal air quality standards for PM10
- The District has worked closely with representatives from the agricultural community to evaluate new harvesting equipment and practices that can effectively reduce dust from harvest activities

- Based on the significant dust emission reductions that low-dust harvesting equipment can provide, the District is offering funding for the replacement of older, conventional nut harvesters or sweepers with new, low-dust technology equipment for use in nut harvesting operations
 - This incentive funding can also be packaged with our Tractor Replacement funding to upgrade the tractor used to pull harvesting equipment
 - Eligible Equipment must be low-dust harvesting equipment achieving at least 40% reduction in particulate matter emissions as demonstrated by available peer-reviewed information and/or District-approved methodology
 - More information is available here: <http://valleyair.org/grants/low-dust-nut-harvester.htm>

Pesticide application control and monitoring

The Valley Air District is prohibited by state law from regulating pesticides. The Department of Pesticide Regulation (DPR) regulates pesticides under a comprehensive program that encompasses enforcement of pesticide use in agricultural and urban environments. DPR oversees a multi-tiered enforcement infrastructure and is vested by the [U.S. Environmental Protection Agency](#) with primary responsibility to enforce federal pesticide laws in California. DPR directs and oversees County Agricultural Commissioner enforcement of pesticide and environmental laws and regulations locally, including enforcement for the Department of Consumer Affairs' Structural Pest Control Board.

- More information about DPR's Air Program is available here: <https://www.cdpr.ca.gov/docs/emon/airinit/airmenu.htm>
- DPR requires farmers to notify the department before they apply any form of pesticide
- Additionally, agricultural operators are subject to strict rules that limit overspray and drift from the approved site of application, and may be subject to fines for violations
- Schools near a pesticide application must be notified by DPR to allow the school to take precautions to prevent exposure. Please visit the DPR website for more information about DPR's regulation of pesticide spraying near schools: https://www.cdpr.ca.gov/docs/enforce/pesticide_applications_near_schoolsites.htm

Dairy Operations

Dairy Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4570 \(Confined Animal Facilities\)](#) and [Rule 4550 \(Conservation Management Practices\)](#)

The purpose of Rule 4570 is to limit VOC emissions from Confined Animal Facilities (CAFs). This rule applies to facilities where animals are corralled, penned, or otherwise caused to remain in restricted areas and primarily fed by a means other than grazing for at least 45 days in any twelve-month period. In addition to limiting VOC emissions, Rule 4570 also includes measures that limit ammonia (NH₃) emissions from these operations. The purpose of Rule 4550 is to limit fugitive dust emissions from agricultural operations. Dairy operations are subject to stringent enforcement provisions, including ongoing mitigation measures and annual inspections.

Dairy operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)

Dairy operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Dairy Digesters

- California Department of Food Agriculture (CDFA) Dairy Digester Research and Development Program (DDRDP) provides financial assistance for the installation of dairy digesters in California.
 - <https://www.cdfa.ca.gov/oefi/ddrdp/>
- CDFA receives funding from California Climate Investments for methane emissions reductions from dairy and livestock operations.
- Current DDRDP projects are expected to reduce greenhouse gas emissions by an estimated 12.9 million metric tons of CO₂e.
- CDFA has a list of the projects they have funded on their website
 - https://www.cdfa.ca.gov/oefi/ddrdp/docs/2019-DDRDP_ApplicationsReceived.pdf

Alternative Manure Management Program (AMMP)

- California Department of Food and Agriculture (CDFA) Alternative Manure Management Program (AMMP) provides financial assistance for the implementation of non-digester manure management practices
 - Currently, eligible practices for funding through AMMP include: pasture-based based management; solid separation or conversion from flush to scrape in conjunction with some form of drying or composting of collected manure.

Control of Stationary Sources of Concern

Glass Manufacturing Plants

Glass melting furnaces in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4354 \(Glass Melting Furnaces\)](#)

Rule 4354 is among the most stringent rules in the nation for glass melting furnaces. The purpose of this rule is to limit NO_x, SO_x, volatile organic compounds (VOC), carbon monoxide (CO), and PM emissions from glass melting furnaces. The NO_x emission limits contained within Rule 4354 require the installation of the best available NO_x technology (i.e. oxy-fuel firing or SCR systems). Facilities with glass melting furnaces are subject to stringent enforcement provisions, including the installation of continuous emissions monitoring equipment and annual inspections.

In addition to Rule 4354 requirements, glass manufacturing plants are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - [40 CFR 60 Subpart CC – Standards of Performance for Glass Manufacturing Plants](#)
 - 40 CFR 60 Subpart PPP (Standards of Performance for Wool Fiberglass Insulation Manufacturing Plants)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - [40 CFR 61 Subpart N – National Emission Standard for Inorganic Arsenic Emissions from Glass Manufacturing Plants](#)
 - 40 CFR 63 Subpart NNN (National Emission Standards for Hazardous Air Pollutants for Wool Fiberglass Manufacturing Plants)
 - [40 CFR 61 Subpart SSSSS – Glass Manufacturing Area Sources](#)
- EPA – Alternative Control Technology (ACT)
 - 435/R-94-037 (Alternative Control Techniques Document—NO_x Emissions from Glass Manufacturing)

Glass manufacturing plants are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4202 \(Particulate Matter – Emission Rate\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)
- [40 CFR 64 – Compliance Assurance Monitoring](#)

Glass manufacturing plants in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Biomass Plants

Biomass facilities in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4352 \(Solid Fuel Fired Boilers, Steam Generators, and Process Heaters\)](#)

The purpose of Rule 4352 is to limit NO_x and CO emissions from any boiler, steam generator or process heater fired on solid fuel. The most recent amendments, in December 2011, strengthened the rule by lowering NO_x emissions limits for biomass facilities and for municipal solid waste facilities and for all other solid fuel fired units. Facilities with solid fuel fired boilers, such as biomass plants are subject to stringent enforcement provisions, including annual source testing requirements and annual inspections.

In addition to Rule 4352 requirements, biomass plants are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - 40 CFR 60 Subpart Cb – Emission Guidelines and Compliance Times for Municipal Waste Combustors that are Constructed on or before December 19, 1995
 - 40 CFR 60 Subpart D – Standards of Performance for Fossil-Fuel-Fired Steam Generators for which Construction is Commenced after August 17, 1971
 - 40 CFR 60 Subpart Db – Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - [40 CFR 63 Subpart DDDDD – National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters](#)
- EPA – Alternative Control Technology (ACT)
 - 453/R-94-022 (Alternative Control Techniques Document– NO_x Emissions from Industrial/Commercial/ Institutional Boilers)
 - 453/R-94-023 (Alternative Control Techniques Document– NO_x Emissions from Utility Boilers)

Biomass plants are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)
- [40 CFR 64 – Compliance Assurance Monitoring](#)

Biomass plants in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Autobody Coating Operations

Autobody Coating Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4612 \(Motor Vehicle and Mobile Equipment Coating Operations\)](#)

The purpose of Rule 4612 is to limit VOC emissions from coatings of motor vehicles, mobile equipment, and associated parts and components, and associated organic solvent cleaning, storage, and disposal. This rule applies to any person who supplies, sells, offers for sale, manufactures, or distributes any automotive coating for use within the District, as well as any person who uses, applies, or solicits the use or application of any automotive coating within the District. Facilities that perform autobody coating operations are subject to stringent enforcement provisions, including annual inspections.

In addition to Rule 4612 requirements, autobody coating operations may also be subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - 40 CFR 60 Subpart MM (Standards of Performance for Automobile and Light-Duty Truck Surface Coating Operations)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - [40 CFR 63 Subpart HHHHHH – National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources](#)
 - 40 CFR 63 Subpart IIII (National Emission Standards for HAPs: Surface Coating of Automobiles and Light-Duty Trucks)
- EPA – Control Technique Guidelines (CTG)
 - 450/2-76-028 (Control of Volatile Organic Emissions from Existing Stationary Sources – Volume I: Control Methods for Surface Coating Operations)
 - 450/2-77-008 (Control of Volatile Organic Emissions from Existing Stationary Sources – Volume II: Surface Coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks)
 - 453/R-08-006 (Control Techniques Guidelines for Automobile and Light-Duty Truck Assembly Coatings)
- EPA – Alternative Control Technology (ACT)
 - EPA-453/R-94-017 (Alternative Control Techniques Document – Surface Coating of Automotive/Transportation and Business Machine Plastic Parts)

Autobody coating operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#) – if using booth heater
- [District Rule 4801 \(Sulfur Compounds\)](#) – if using booth heater

Autobody coating operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Gasoline Pipeline Terminals

Gasoline Pipeline Terminals in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4623 \(Storage of Organic Liquids\)](#) and [Rule 4624 \(Organic Liquid Loading\)](#)

The purpose of Rule 4623 is to limit VOC emissions from the storage of organic liquids. This rule applies to any tank with a capacity of 1,100 gallons or greater in which any organic liquid is placed, held, or stored. The purpose of Rule 4624 is to limit VOC emissions from the transfer of organic liquids. This rule applies to organic liquid transfer facilities. Facilities that store or transfer organic liquids, such as gasoline pipeline terminals are subject to stringent enforcement provisions, including quarterly leak inspection requirements and annual inspections.

In addition to Rule 4623 and Rule 4624 requirements, gasoline pipeline terminals may also be subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - [40 CFR 60 Subpart Kb – Standards of Performance for Volatile Organic Liquid Storage Vessels \(Including Petroleum Liquid Storage Vessels\)](#)
 - [40 CFR 60 Subpart XX - Standards of Performance for Bulk Gasoline Terminals](#)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - Subpart BBBB – Gasoline Distribution Bulk Terminals, Bulk Plants, and Pipeline Facilities
 - 40 CFR 63 Subpart EEE – Organic Liquids Distribution (Non-Gasoline)
 - [40 CFR 63 Subpart R - National Emissions Standards for Gasoline Distribution Facilities](#)
- EPA – Control Technique Guidelines (CTG)
 - 450/2-77-035 (Control of Volatile Organic Emissions from Bulk Plants)
 - 450/2-77-036 (Control Techniques Guideline Document for Control of Volatile Organic Emissions from Storage of Petroleum Liquids in Fixed Roof Tanks)
 - 450/2-78-047 (Control Techniques Guideline Document for Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks)
- EPA – Alternative Control Technology (ACT)
 - 453/R-94-001 (Alternative Control Techniques Document for Volatile Organic Liquid Storage in Floating and Fixed Roof Tanks)

Gasoline pipeline terminals typically have auxiliary equipment that are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)

Gasoline pipeline terminals in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Rendering Operations

Rendering Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4104 \(Reduction of Animal Matter\)](#)

The purpose of Rule 4104 is to limit air contaminants from source operations used for the reduction of animal matter by requiring gases, vapors, and gas-entrained effluent from the process to be incinerated at temperatures not less than 1200 degrees Fahrenheit or processed in an equally effective manner. Facilities that perform rendering operations are subject to stringent enforcement provisions, including annual source testing requirements and annual inspections.

Rendering operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)

These facilities generally use steam from a boiler (indirect-fired) or a rotary dryer (direct-fired) for their operations, which generates NOx emissions from these combustion units; these combustion units are regulated by other District rules. Rendering operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Fiberglass Boat Manufacturing Operations

Fiberglass Boat Manufacturing Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4684 \(Polyester Resin Operations\)](#)

The purpose of Rule 4684 is to limit VOC emissions from commercial and industrial polyester resin operations, fiberglass boat manufacturing operations, organic solvent cleaning, and the storage and disposal of all solvents and waste solvent materials associated with such operations. Facilities that perform fiberglass boat manufacturing operations are subject to stringent enforcement provisions, including annual inspections.

In addition to Rule 4684 requirements, fiberglass boat manufacturing operations are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - 40 CFR Part 61 Subpart VVVV (National Emission Standards for Hazardous Air Pollutants for Boat Manufacturing)
- EPA – Control Technique Guidelines (CTG)
 - 450/3-83-006 (Control of Volatile Organic Compound Emissions from Manufacture of High-Density Polyethylene, Polypropylene, and Polystyrene Resins)
 - 453/R-08-004 (Control Technique for Fiberglass Boat Manufacturing Materials)

Fiberglass boat manufacturing operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)

Fiberglass boat manufacturing operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Pump Manufacturing Operations

Pump Manufacturing Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4603 \(Surface Coating of Metal Parts and Products, Plastic Parts and Products, and Pleasure Crafts\)](#)

The purpose of Rule 4603 is to limit VOC emissions from the surface coating of metal parts or products, large appliances' parts or products, metal furniture, plastic parts and products, and pleasure crafts, and to the organic solvent cleaning and storage and disposal of all solvents and waste solvent materials associated with such coatings. Facilities that perform pump manufacturing operations are subject to stringent enforcement provisions, including annual inspections.

In addition to Rule 4603 requirements, pump manufacturing operations are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - 40 CFR Part 63 Subpart M (NESHAP for Surface Coating of Miscellaneous Metal Parts and Products)
- EPA – Control Technique Guidelines (CTG)
 - 450/2-78-015 (Control of Volatile Organic Emissions from Existing Stationary Sources – Volume VI: Surface Coating of Miscellaneous Metal Parts and Products)
 - 453/R-08-003 (Control Techniques Guidelines for Miscellaneous Metal and Plastic Parts Coatings)
- EPA – Alternative Control Technology (ACT)
 - 453/R-94-015 (Alternative Control Techniques Document – Industrial Cleaning Solvents)

Pump manufacturing operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4202 \(Particulate Matter – Emission Rate\)](#)

Pump manufacturing operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Oil and Gas Operations

Oil and Gas Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) Rules:
 - [Rule 2260 \(Registration Requirements for Equipment Subject to California's Oil and Gas Regulation\)](#)
 - [Rule 4311 \(Flares\)](#),
 - [Rule 4401 \(Steam-Enhanced Crude Oil Production Wells\)](#)
 - [Rule 4402 \(Crude Oil Production Sumps\)](#)
 - [Rule 4404 \(Heavy Oil Test Station - Kern County\)](#)
 - [Rule 4407 \(In-Situ Combustion Well Vents\)](#)
 - [Rule 4408 \(Glycol Dehydration Systems\)](#)
 - [Rule 4409 \(Components at Light Crude Oil Production Facilities, Natural Gas Processing Facilities, and Natural Gas Processing Facilities\)](#),
 - [Rule 4453 \(Refinery Vacuum Producing Devices or Systems\)](#)
 - [Rule 4454 \(Refinery Process Unit Turnaround\)](#)
 - [Rule 4455 \(Components at Petroleum Refineries, Gas Liquids Processing Facilities, and Chemical Plants\)](#),
 - [Rule 4623 \(Storage of Organic Liquids\), and](#)
 - [Rule 4624 \(Transfer of Organic Liquid\)](#)

The purpose of Rule 2260 is to provide a registration process that satisfies the requirements of California's Oil and Gas Regulation, which limits methane emissions and leaks from equipment used in the oil and gas industry.

The purpose of Rule 4311 is to establish flaring requirements and reduce VOC, NO_x, and SO_x emissions from operations involving the use of flares.

The purpose of Rule 4401 is to limit VOC emissions from steam-enhanced crude oil production wells and related piping. These operations are subject to stringent emission control and leak detection and repair requirements.

The purpose of Rule 4402 is to limit VOC emissions from sumps used to store crude oil and produced water in crude oil production operations.

The purpose of Rule 4404 is to limit VOC emissions from the operation of heavy oil test stations, i.e. a tank setting used to measure and collect crude oil from individual wells.

The purpose of Rule 4407 is to limit VOC emissions from in-situ combustion wells and related piping. This process is largely no longer in use by oil production companies in the District. These operations are subject to stringent emission control and leak detection and repair requirements.

The purpose of Rule 4408 is to limit VOC emissions from glycol dehydration system; a process in water vapor is removed from produced gas.

The purpose of Rule 4409 is to limit VOC emissions from leaking components at light crude oil production facilities, natural gas production facilities, and natural gas processing facilities.

The purpose of Rule 4453 is to limit VOC emissions from refinery vacuum producing devices or systems by requiring that gasses from these systems be collected and controlled.

The purpose of Rule 4454 is to limit VOC emissions resulting from the purging, repair, cleaning, or otherwise opening or releasing pressure from a refinery vessel during a process unit turnaround, i.e. taking equipment out of service for maintenance.

The purpose of Rule 4455 is to limit VOC emissions from leaking components at petroleum refineries, gas liquids process facilities, and chemical plants.

The purpose of Rule 4623 is to limit VOC emissions the storage of organic liquids, including crude oil.

The purpose of Rule 4624 is to limit VOC emissions the transfer of organic liquids.

In addition to the above District requirements, oil and gas operations are also subject to Federal regulations, which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - [40 CFR 60 Subpart Kb – Standards of Performance for Volatile Organic Liquid Storage Vessels \(Including Petroleum Liquid Storage Vessels\)](#)
 - [40 CFR 60 Subparts OOOO and OOOOa Crude Oil and Natural Gas Production, Transmission, and Distribution](#)
- EPA – Control Technique Guidelines (CTG)
 - 450/2-77-036 (Control Techniques Guideline Document for Control of Volatile Organic Emissions from Storage of Petroleum Liquids in Fixed Roof Tanks)
 - 450/2-78-047 (Control Techniques Guideline Document for Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks)
- EPA – Alternative Control Technology (ACT)
 - 453/R-94-001 (Alternative Control Techniques Document for Volatile Organic Liquid Storage in Floating and Fixed Roof Tanks)

Oil and gas operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)

Oil and gas operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Landfill Operations

Landfill Operations in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4642 \(Solid Waste Disposal Sites\)](#) and [Rule 4311 \(Flares\)](#)

The purpose of Rule 4642 is to limit VOC emissions from solid waste disposal sites. The provisions of this rule apply to any solid waste disposal sites with a gas collection system and/or control device in operation, or undergoing maintenance or repair. The purpose of Rule 4311 is to establish flaring requirements and reduce VOC, NO_x, and SO_x emissions from operations involving the use of flares. Flaring is a high temperature oxidation process used to burn combustible components, primarily hydrocarbons, of waste gases from industrial operations, primarily for the purpose of controlling emissions and as a safety device. Landfill operations are subject to stringent enforcement provisions, including surface testing, and annual inspections.

In addition to Rule 4642 and Rule 4311 requirements, landfill operations are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - 40 CFR 60 Subpart CC (Emission Guidelines and Compliance Times for Municipal Solid Waste Landfills)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - 40 CFR 63 Subpart AAAA (National Emission Standards for Hazardous Air Pollutants from Municipal Solid Waste Landfills)

Landfill operations are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 2520 \(Federally Mandated Operating Permits\)](#)

Landfill operations in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

General Industrial Equipment (Boilers greater than 5 MMBtu/hr)

Boilers greater than 5 MMBtu/hr in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4306](#) and [Rule 4320 \(Boilers, Process Heaters, and Steam Generators Greater than 5 MMBtu/hr\)](#)

Boilers are used to produce hot water or generate steam and are used in many different industries throughout the District. The purpose of these rules is to limit NO_x, carbon monoxide (CO), and particulate matter (PM) emissions from boilers, steam generators, and process heaters of this size range. Boilers are subject to stringent enforcement provisions, including source testing, and annual inspections.

In addition to Rule 4306 and Rule 4320 requirements, boilers are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - 40 CFR 60 Subpart D (Standards of Performance for Fossil-Fuel Fired Steam Generators for Which Construction Is Commenced After August 17, 1971)
 - 40 CFR 60 Subpart Db (Standards of Performance for Industrial- Commercial- Institutional Steam Generating Units)
 - 40 CFR 60 Subpart Dc (Standards of Performance for Small Industrial- Commercial- Institutional Steam Generating Units)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - 40 CFR 63 Subpart DDDDD (NESHAP for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters)
- EPA – Alternative Control Technology (ACT)
 - 453/R-93-022 (Alternative Control Techniques Document – NO_x Emissions from Industrial/Commercial/Institutional Boilers)
 - 453/R-93-023 (Alternative Control Techniques Document – NO_x Emissions from Utility Boilers)
 - 453/R-93-034 (Alternative Control Techniques Document – NO_x emissions from Process Heaters)

Boilers are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)

Boilers in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

General Industrial Equipment (Internal Combustion (IC) Engines)

IC engines in the San Joaquin Valley are subject to the following regulatory measures:

- SJVAPCD (District) [Rule 4702 \(Internal Combustion Engines\)](#)

IC engines are used to produce mechanical power or generate electricity by powering a generator and are used in many different industries throughout the District. The purpose of this rule is to limit NO_x, CO, VOC, and SO_x emissions from any internal combustion (IC) engine rated at 25 brake horsepower (bhp) or greater. IC Engines are subject to stringent enforcement provisions, including source testing, and annual inspections.

In addition to Rule 4702 requirements, IC engines are also subject to Federal regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than Federal regulations.

- [District Rule 4001 \(New Source Performance Standards\)](#)
 - 40 CFR 60 Subpart IIII (Standards of Performance for Stationary Compression Ignition Internal Combustion Engines)
 - 40 CFR 60 Subpart JJJJ (Standards of Performance for Stationary Spark Ignition Internal Combustion Engines)
- [District Rule 4002 \(National Emission Standards for Hazardous Air Pollutants\)](#)
 - 40 CFR 63 Subpart ZZZZ (NESHAP for Stationary Reciprocating Internal Combustion Engines)
- EPA – Alternative Control Technology (ACT)
 - 453/R-93-032 (Alternative Control Techniques Document – NO_x Emissions from Stationary Reciprocating Internal Combustion Engines)

IC engines are also subject to state regulations which requires specific types of new, modified, and reconstructed facilities to directly reduce emissions of criteria and/or toxic air pollutants. However, District prohibitory rules are typically more stringent than state regulations.

- Air Toxic Control Measures (ATCM)
 - 17 CCR 93114 (ATCM to Reduce Particulate Emissions from Diesel-Fueled Engines— Standards for Nonvehicular Diesel Fuel)
 - 17 CCR 93115 (ATCM for Stationary Compression Ignition Engines)

IC engines are also subject to other applicable rules and regulations and must demonstrate continued compliance with these additional requirements.

- [District Rule 4101 \(Visible Emissions\)](#)
- [District Rule 4201 \(Particulate Matter – Concentration\)](#)
- [District Rule 4301 \(Fuel Burning Equipment\)](#)
- [District Rule 4801 \(Sulfur Compounds\)](#)
- [District Rule 1080 \(Stack Monitoring\)](#)
- [District Rule 1081 \(Source Sampling\)](#)

IC engines in the Valley are also subject to other generally applicable regulations, ensuring that these operations have installed the most stringent control technologies feasible and are meeting the other stringent requirements of these rules. (See Appendix A)

Enforcement Programs

Enforcement Programs

The District's Compliance Department performs a full suite of enforcement and compliance assistance related activities to ensure compliance with District, state and federal rules and regulations. The program objectives for the Compliance Department are set forth in federal and state law and the District's air quality attainment plans. In order to meet these program objectives, District staff perform inspections at approximately 9,200 permitted facilities, responds to approximately 3,000 public complaints each year, investigates equipment breakdowns at facilities, and verifies emissions reductions at thousands of locations where emission reduction incentive projects have been implemented. When violations are discovered, Notices to Comply are issued for first-time minor violations. Notices of Violation, which generally carry a monetary penalty, are issued for more serious, typically emissions-based violations as well as repeat minor violations.

The major functions of the District's Compliance Department are as follows:

Inspections of Stationary Sources

The District performs thousands of comprehensive on-site inspections each year to ensure compliance with District requirements. Inspections are a vital to ensuring that emission reductions called for in rules, regulations and permits are achieved in practice. With very few exceptions, all inspections are conducted unannounced because it is important to observe facilities as they normally operate to most effectively determine compliance.

Complaint Investigations

The District receives thousands of complaints each year for which timely responses and investigations of alleged sources of non-compliance are given top priority. Inspectors are on-call 24 hours per day and use automated voicemail and computer systems to facilitate the timely response to complaints in order to abate potential public nuisances and other in progress violations. Along these same lines, the District has developed online tools to enable easy submittal of complaints, including video and photographs, online and through mobile smartphone applications. The District provides a bilingual (Spanish-English) telephone complaint line and also has the capability to utilize translation services to ensure that all communities and groups within the Valley are properly served.

Open Burning

Open burning is strictly regulated under District rules 4103 (Open Burning) and 4106 (Prescribed Burning and Hazard Reduction Burning). The District conducts thousands of inspections each year to ensure compliance with permits and plans for agricultural operations, land management agencies, and residences. Furthermore, District inspection staff conduct routine surveillance throughout the Valley to enforce illegal burning rules, including, but not limited to, illegal residential trash burning.

Wood Burning Heater and Fireplaces

The District has a robust enforcement program to ensure compliance with District Rule 4901 (Wood Burning Fireplaces and Wood Burning Heaters). The District assigns inspectors to conduct proactive surveillance of neighborhoods in counties with declared wood burning curtailments and responds to complaints from the public regarding potential illegal fireplace burning. The District also routinely conducts surveillance on weekends, holidays, and evenings throughout the winter season when the mandatory curtailments are in effect.

Fugitive Dust Regulations

Inspections are routinely conducted on potential sources of outdoor fugitive dust such as construction and earthmoving operations, unpaved roads and traffic areas, bulk material storage piles, open areas, and agricultural operations. During these inspections the District ensures compliance with dust mitigation plan measures, visible dust emission standards, and surface stabilization requirements.

Emissions Testing and Monitoring

District inspectors oversee thousands of third-party source tests conducted at facilities for the purpose of measuring air pollutants and demonstrating compliance with permitted emission limits. The District also utilizes its own source testing van and portable exhaust gas analyzers to assess the emissions from engines, boilers, and other combustion devices to ensure they are operating according to specifications and complying with all requirements.

Emission Reduction Incentive Program Inspections

To ensure that the emission reduction projects funded by the District's incentive programs are real and permanent, the District monitors the pre-project and post-project contract performance of grant recipients. Thousands of inspections are conducted to verify that equipment is appropriately controlled or replaced and that it is adequately maintained. Furthermore, the District also conducts inspections to verify that older equipment has been destroyed when required as part of the grant contract.

Compliance Assistance

The District's Compliance Assistance program emphasizes an educational approach to help Valley businesses and residents comply with a variety of air pollution regulations. Businesses and residents throughout the Valley are provided with individualized assistance, compliance assistance bulletins, education training courses, and certification programs to aid in their understanding and compliance with District, state and federal rules and regulations.

California Air Resources Board Enforcement

CARB inspects a variety of sources for compliance with State air quality regulations. More information about CARB's enforcement policy and programs is available at the CARB Enforcement Programs website: <https://www.arb.ca.gov/enf/enf.htm>

Appendix A

District Rule 2201, New and Modified Stationary Sources Review

[District Rule 2201, New and Modified Stationary Source Review](#), applies to all new stationary sources and all modifications to existing stationary sources that are subject to District permit requirements. Under Rule 2201, new facilities or facilities modifying equipment must obtain an Authority to Construct (ATC) permit prior to construction, and are subject to stringent requirements, including:

- **Best Available Control Technology (BACT)**
- **Risk Management Review (RMR)**
- **Toxic Best Available Control Technology (T-BACT)**
- **Ambient Air Quality Analysis (AAQA)**

Best Available Control Technology (BACT): For each emissions unit (specific piece of equipment) that has the potential to emit over the 2 lb/day BACT threshold, the District requires the use of the best available air pollution control technology commonly used to control emissions from similar type of equipment. The District is also conducting an analysis to determine if, based on specific criteria, cleaner technologies that are not commonly used for these type of equipment could be used to further reduce emissions from the proposed equipment. This very stringent requirement ensures that the most effective air pollution control technique is utilized resulting in reduced public exposure to air pollutants and toxic air contaminants.

Risk Management Reviews (RMR): As required under [California Health and Safety Code 41700](#) and [Rule 4102 \(Nuisance\)](#), the District conducts RMRs to ensure that the public exposure to toxic air contaminants from projects required to obtain an ATC, is less than significant. Very complex computer models and the most conservative assumptions are used to assess the project's maximum impact on resident's health. Projects resulting in estimated significant health risk for the public are not approved.

Toxic Best Available Control Technology (T-BACT): When T-BACT is triggered under a Risk Management Review (RMR) analysis, the District conducts a T-BACT analysis to ensure the most stringent control technique is utilized resulting in reduced public exposure to toxic air contaminants. T-BACT is required for units emitting air toxic emissions that result in a cancer risk of greater than one-in-a-million, and projects that would pose significant impacts to nearby residences or businesses. Projects resulting in estimated significant health risk for the public are not approved.

Ambient Air Quality Analysis (AAQA): The U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) have established National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS), respectively, for numerous pollutants. Under Rule 2201, the District conducts AAQAs to ensure that project related emissions would cause or make worse a violation of the State or National ambient air quality standard. This analysis ensures that the public exposure to certain criteria air pollutants is less than the maximum allowed concentration in outdoor air without harm to public.

AB 2588 (Air Toxics Hot Spots Information and Assessment Act)

The District's implementation of [AB 2588](#), California's Air Toxics "Hot Spots" Information and Assessment Act, has resulted in dramatic reductions in emissions of air toxics from existing sources in the San Joaquin Valley. Under this right-to-know law, the District has worked with 5,700 Valley facilities to quantify emissions of air toxics, determine the health risk caused by those emissions, report

emissions and any significant risks through written public reports and neighborhood public meetings, and take steps to reduce such risks. As a result of these efforts, and the subsequent reductions in air toxics, since 2007 there have been no Valley facilities posing a significant risk to any Valley resident under the “Hot Spots” program.

California Environmental Quality Act (CEQA)

CEQA is the state law that requires environmental impacts to be assessed on projects and disclosed to the public, and also requires significant impacts be mitigated to a less than significant level when feasible. Through the implementation of CEQA, the District carefully reviews land developers’ project proposals, new stationary source permits, and attainment plans and rules for compliance with CEQA requirements.

Controles Existentes de las Fuentes de Contaminación del Aire que Preocupan a las Comunidades AB 617

DESARROLLO DEL PROGRAMA DE REDUCCIÓN DE EMISIONES AB 617

San Joaquin Valley
AIR POLLUTION CONTROL DISTRICT

Control de la Contaminación del Aire: ¿Quién Hace Qué?

Jurisdicciones de las Agencias

Las leyes federales y estatales requieren medidas de control de emisiones en áreas donde la contaminación del aire excede los estándares. El Valle de San Joaquín es una de estas áreas. Con una variedad de agencias estatales y federales que implementan programas de reducción de la contaminación del aire, puede ser difícil entender la misión y la jurisdicción de cada organización.

El gobierno federal, principalmente a través de la Agencia de Protección Ambiental, establece estándares de calidad del aire, supervisa las acciones estatales y locales, e implementa programas para contaminantes tóxicos del aire, camiones de servicio pesado, locomotoras, barcos, aeronaves, equipo de diésel para vehículos todo terreno, y algunos tipos de equipos industriales.

El gobierno estatal, a través de la Junta de Recursos del Aire de California (CARB, por sus siglas en inglés) y la Oficina de Reparación Automotriz (BAR, por sus siglas en inglés), establecen estándares estatales más estrictos, supervisan las acciones locales, e implementan programas para emisiones de vehículos, combustibles, y puebras de emisiones.

Los distritos locales de control de la contaminación del aire, como el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito), desarrollan planes e implementan medidas de control en sus áreas. Estos controles afectan principalmente a fuentes estacionarias como fábricas e instalaciones industriales. Los distritos locales de aire también realizan actividades de educación pública y esfuerzos de alcance, tales como los programas voluntarios *Aire Limpio*, *Vida Sana*; *Confirma Antes de Quemar*; y *Drive Clean en San Joaquín* del Distrito.

Las ciudades y los condados locales son responsables de implementar una planificación comunitaria de aire limpio que promueve el tráfico pedestre, las alternativas de viajes y las flotillas de tránsito menos contaminantes. Los gobiernos de la ciudad y del condado desarrollan planes de uso de la tierra y toman decisiones sobre cómo las ciudades deben crecer y expandirse.

Mientras su jurisdicción y sus programas específicos pueden variar, todas estas organizaciones comparten un objetivo común: trabajar en cooperación para establecer programas de control de la calidad del aire para beneficiar a todos los residentes de California.

La Ley de la Asamblea (AB) 617 le brinda al Distrito una oportunidad emocionante para continuar mejorando la calidad del aire, al asociarse con miembros de la comunidad en las comunidades seleccionadas por CARB para reducir la contaminación local y ayudar a proteger aún más la salud de las comunidades desfavorecidas. El monitoreo de la calidad del aire local y el compromiso de los miembros de la comunidad serán componentes críticos para comprender mejor los impactos de la contaminación en los vecindarios locales y desarrollar estrategias efectivas para reducir la carga de exposición acumulada en comunidades altamente afectadas.

Acerca del Distrito de Control de la Contaminación del Aire del Valle de San Joaquín

El Distrito regula las fuentes estacionarias de contaminación del aire, implementa medidas de control y desarrolla e implementa planes para mejorar la calidad del aire en el Valle de San Joaquín.

Cerca de 650 reglas y regulaciones han sido adoptadas por el Distrito durante un período de casi tres décadas, cada una reduciendo la cantidad de emisiones que puede emitir una instalación. Un estricto proceso de permisos garantiza que las instalaciones que operan en el Valle tengan las mejores tecnologías de control disponibles que se puedan instalar para todos los tipos de instalaciones permitidas, y garantiza que los nuevos equipos e instalaciones en el Valle no aumenten el riesgo de impactos en la salud debido a la exposición a contaminantes del aire dañinos para residentes locales. Estos estrictos requisitos protegen a las comunidades del Valle tanto de la contaminación del aire regional como local y los impactos asociados a la salud. Consulte el Apéndice A para obtener más información sobre las medidas de permisos de protección de la salud que se aplican a las fuentes reguladas por el Distrito.

El Distrito también trabaja con CARB para hacer planes para alcanzar los estándares de calidad del aire que protegen la salud de los ocho condados en el Valle de San Joaquín. El Distrito y CARB adoptaron recientemente el *Plan PM2.5 de 2018*, que se comprometió a hacer que las reglas y regulaciones existentes sean potencialmente más estrictas para fuentes estacionarias como calderas, fábricas de vidrio, motores de combustión interna y parillas comerciales. La información sobre emisiones recopilada anualmente por el Distrito del Aire, y los modelos científicos, han demostrado que la mayor parte de la contaminación en el Valle, y la mayoría de los impactos en la salud relacionados con la contaminación provienen de fuentes móviles, por lo que CARB también se ha comprometido a reducir considerablemente las emisiones de las fuentes móviles a través de reforzar el cumplimiento y financiamiento de incentivos en el Valle. Para centrarse aún más en las fuentes fuera de la jurisdicción del Distrito, el *Plan PM2.5 de 2018* también incluye el compromiso de implementar varios programas de incentivos diferentes para fuentes tales como equipos de jardinería, autobuses y automóviles de pasajeros. Las reducciones de emisiones para el logro de este plan regional beneficiarán a las comunidades seleccionadas por AB 617 al mejorar la calidad del aire ambiente.

Los controles regulatorios adicionales y los programas de incentivos que afectan directamente las fuentes de contaminación del aire que se han discutido como preocupantes para las comunidades seleccionadas de AB 617 de Shafter y Centro-Sur Fresno se analizan con mayor detalle en las categorías de fuentes de interés de este Comité Directivo Comunitario. ¡Visite valleyair.org para obtener más información sobre las reglas, políticas y programas de incentivos disponibles del Distrito que abordan estas fuentes y muchas otras!

Control de Fuentes Móviles de Contaminación del Aire

Contaminación de Vehículos de Pasajeros

Requisitos Estatales y Federales controlan las emisiones de vehículos de pasajeros. El Distrito no tiene jurisdicción sobre estas fuentes. Sin embargo, debido a la gran cantidad de contaminación del aire que producen los vehículos de pasajeros en el Valle, el Distrito ha implementado varios programas para reducir la contaminación de estas fuentes móviles.

- Employer Based Trip Reduction (*Reducción de Viajes Basados en el Empleador*) (Regla del Distrito 9410) requiere que los grandes empleadores implementen medidas para motivar a los empleados a tomar medidas de transporte alternativo al trabajo a través del establecimiento de un Plan de Implementación para la Reducción de Viajes de los Empleadores (eTRIP, por sus siglas en inglés).
 - Un eTRIP es una colección de medidas que motivan a los empleados a utilizar transporte alternativo y el viaje compartido para sus viajes en las mañanas y por las tardes
 - Cada medida contribuye a un lugar de trabajo donde es más fácil para los empleados elegir usar viajes compartidos o transporte alternativo
 - A través de esta regla, se reducen los viajes en vehículos con una persona, así reduciendo las emisiones de óxidos de nitrógeno (NOx), compuestos orgánicos volátiles (VOC), y material particulado (PM).
- El programa escolar del Distrito *Healthy Air Living Schools* promueve una campaña de “No idling” para combatir los vehículos en ralentí cuando van por sus hijos a la escuela
 - Se proporcionan letreros de “No idling” a las escuelas para alentar a los conductores a apagar los motores de sus vehículos
- Regla de Fuentes Indirectas (Regla del Distrito 9510) toma en cuenta las emisiones de fuentes móviles de los proyectos de construcción y de nuevos desarrollos y asegura que las emisiones de estas actividades son mitigadas a través de las actividades en el sitio o a través de pago de tarifas de mitigación
- El Distrito ofrece una variedad de programas de incentivos para reducir las emisiones de los vehículos de pasajeros. Estos incluyen las siguientes opciones:
 - Tune In Tune Up programa de reparación de vehículos
<http://valleyair.org/drivecleaninthesanjoaquin/repair/> proporciona hasta \$850 en incentivos para reparar vehículos altamente contaminantes identificados en eventos de fin de semana de Tune In Tune Up
 - El programa de reemplazo del vehículo del Distrito
<https://www.valleyair.org/drivecleaninthesanjoaquin/replace/> proporciona hasta \$9,500 para que los residentes del Valle reemplacen sus vehículos altamente contaminantes de 1999 o más antiguos con opciones más nuevas, menos contaminantes incluyendo un eléctrico de batería, híbridos de enchufe, o vehículos híbridos
 - El Distrito ofrece reembolsos de hasta \$3,000 para la compra o arrendamiento de vehículos nuevos de aire limpio, incluyendo eléctricos de batería, celdas de combustible, híbridos enchufables, motocicletas de cero emisiones, y vehículos de tecnología avanzada de gas natural
<https://www.valleyair.org/drivecleaninthesanjoaquin/rebate/>

- El Distrito proporciona incentivos de hasta \$50,000 por proyecto para la infraestructura de carga para vehículos eléctricos a través del Programa Charge Up <http://valleyair.org/grants/chargeup.htm>

- La estrategia de fuentes móviles de CARB exige aumentar el despliegue de vehículos híbridos enchufables, vehículos de eléctricos de batería y celdas de combustible para lograr los estándares federales de ozono, reducir las emisiones de gases de efecto invernadero, minimizar los riesgos a la salud, reducir el uso de petróleo y aumentar la eficiencia energética.

Autobuses Escolares y de Tránsito

- Controlado por la Regulación estatal de Autobuses y Camiones de CARB cual requiere la transición a una tecnología más limpia con el tiempo. Generalmente en fases por año del modelo. <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>
- El Distrito tiene una variedad de programas de incentivos disponibles para flotillas de autobuses escolares interesados en cambiar sus flotillas a una tecnología más limpia, incluyendo:
 - El Distrito opera un programa local del reemplazo de autobuses escolares. El Programa de Incentivos para Autobuses Escolares Eléctricos proporciona incentivos monetarios para el reemplazo de los autobuses escolares amarillos de diésel existentes cual transportan a los estudiantes de las escuelas públicas hacia y desde la escuela con autobuses escolares completamente eléctricos. Los solicitantes elegibles son distritos de escuelas públicas, Joint Power Authorities (JPA, por sus siglas en inglés) y autobuses escolares amarillos de propiedad privada que se contratan con una escuela pública para transportar niños de escuelas públicas.
 - <http://valleyair.org/grants/electric-school-bus.htm>
- Los reemplazos de autobuses escolares pueden ser financiados como una categoría de proyecto elegible utilizando fondos proporcionados para apoyar AB 617. Estos proyectos son administrados de acuerdo con las pautas del programa Carl Moyer y están sujetos a requisitos adicionales contenidos en las Pautas de Protección del Aire de la Comunidad de AB 617 aprobadas. Este programa esta operado por el Distrito.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>
- Próximamente fondos del Programa del Fideicomiso de Mitigación de Volkswagen: El Distrito está administrando \$130 millones en fondos en nombre del Estado de California para reemplazar autobuses escolares y de tránsito de diésel en todo California por autobuses completamente eléctricos con cero emisiones. Este programa se lanzará en el otoño de 2019.
 - <http://vwbusmoney.valleyair.org/>

Emisiones de Camiones de Servicio Pesado

- Los camiones de servicio pesado de diésel están sujetos a la Regulación estatal de Autobuses y Camiones de ARB que exige que todos los equipos cumplan con los estándares de emisiones de 2010 para el año 2023. Todos los camiones de servicio pesado de diésel del 2009 y anteriores estarán fuera de la carretera antes del 1 de enero de 2023.
(<https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>)
- El Distrito ofrece incentivos para reducir las emisiones de los camiones diesel de servicio pesado. Esto incluye las siguientes opciones:
 - Programa de Reemplazo de Camiones de Servicio Pesado (<http://valleyair.org/grants/truck-replacement.htm>) proporciona hasta \$200,000 en fondos para reemplazar camiones diesel de servicio pesado de 2009 o más antiguos con la tecnología más limpia disponible
 - El Distrito implementará un Programa Piloto de Reparación de Camiones de Servicio Pesado para brindar asistencia financiera a los propietarios y operadores de camiones de flotillas pequeñas para proporcionar reparaciones durables para componentes o sistemas de emisiones descompuestos en el verano de 2019
 - El Distrito está desarrollando un nuevo programa para Infraestructura de Combustible Alternativo para Camiones de Servicio Pesado que proporcionará fondos de incentivo a los negocios y agencias locales para instalar infraestructura de combustible alternativa (eléctrico, hidrógeno, etc.) para respaldar el mayor despliegue de vehículos de servicio pesado de tecnología limpia avanzada

Locomotoras

- Actualmente, no existen requisitos de CARB y EPA que controlen las emisiones relacionadas con el transporte de mercancías mediante fletes de locomotoras.
- El Distrito ofrece dos programas de incentivos para las flotas de locomotoras interesadas en hacer la transición a una tecnología nueva y menos contaminante, que incluye:
 - Proposición 1B (Locomotoras) (<http://valleyair.org/grants/locomotives-prop1b.htm>) incentiva la reducción de las emisiones y los riesgos para la salud asociados con el movimiento de carga a lo largo de los corredores comerciales de California mediante la actualización a tecnologías menos contaminantes o la instalación de sistemas de control y captura de emisiones.
 - Los reemplazos de locomotoras pueden ser financiados como una categoría de proyecto elegible utilizando el financiamiento proporcionado para respaldar AB 617. Estos proyectos se administran de acuerdo con el guía de la Propuesta 1B y están sujetos a requisitos adicionales contenidos en el Guía de Protección del Aire de la Comunidad AB 617 aprobadas. Este programa es operado por el Distrito.
 - La Propuesta 1B de la Legislatura del Estado proporciona fondos para el reemplazo de los motores de locomotoras antiguas bajo este programa
 - Todos los motores de locomotoras financiados bajo la Proposición 1B deben ser certificados Nivel 4 por la EPA y pasar la verificación de la Junta de Recursos del Aire de California
 - Programa de locomotoras (<http://valleyair.org/grants/locomotive.htm>) incentiva la sustitución de locomotoras atiguas y altamente contaminantes por motores nuevos Nivel 4 y menos contaminantes.
 - Los reemplazos de locomotoras pueden ser financiados como una categoría de proyecto elegible utilizando los fondos proporcionados para respaldar AB 617. Estos proyectos se administran de acuerdo con el guía del Programa Carl Moyer y están sujetos a requisitos adicionales incluidos en el Guía de Protección de la Comunidad de AB 617 aprobadas. Este programa es operado por el Distrito.

- El Programa de Incentivos Carl Moyer proporciona fondos para el reemplazo de motores de locomotoras antiguos en este programa
- Todos los motores de locomotoras financiados con dinero de Carl Moyer deben contar con la certificación Nivel 4 de la EPA y pasar la verificación CARB
- Hasta la fecha, el Distrito ha administrado casi \$66 millones de dólares para financiar el reemplazo de motores de locomotoras antiguos y altamente contaminantes con motores de locomotoras nuevos de Nivel 4 y verificados por CARB.
- South Coast APCD está administrando el Fideicomiso de Mitigación Ambiental de Volkswagen para los Fondos de California en nombre del Estado de California para reemplazar los motores de locomotoras altamente contaminantes en todo California con motores de locomotoras más nuevos, menos contaminantes de Nivel 4, y verificados por CARB. Este programa se lanzará en el otoño de 2019.

 - <https://ww2.arb.ca.gov/our-work/programs/volkswagen-environmental-mitigation-trust-california/about>

Control de Fuentes Residenciales y Urbanas

Quema de Leña Residencial

La categoría de fuente de las chimeneas y los calentadores de leña incluyen las emisiones de las chimeneas de leña, los calentadores de leña y los aparatos para quemar leña al aire libre. Durante el invierno, una de las mayores fuentes de contaminación por partículas viene de la quema de leña residencial. Las emisiones son el resultado de una combustión incompleta de la leña y se emiten en los vecindarios de Valle donde los residentes viven y juegan. Los contaminantes del aire peligrosos que se desprenden de la quema de madera residencial incluyen: PM2.5, PM10, NOx, benceno, aldehídos, dioxinas e hidrocarburos aromáticos policíclicos (PAHs, por sus siglas en inglés).

La quema de leña residencial está sujeta a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) Regla 4901 (<https://www.valleyair.org/rules/currnrules/r4901.pdf>)
- Programa de Confirma Antes de Quemar (<https://www.valleyair.org/aqinfo/cbyb.htm>)
 - A través del programa de Confirma Antes de Quemar del Distrito, que se basa en la Regla 4901, el Distrito ha declarado e implementado reducciones de quema de leña episódicas, también llamadas días de "No quemar", desde 2003.
 - Confirmar Antes de Quemar y la Regla del Distrito 4901 reducen las especies dañinas de PM2.5 cuando y donde esas reducciones son más necesarias, en las áreas urbanizadas afectadas cuando se pronóstica que el clima local dificultará la dispersión de materia particulada.
 - El Distrito propone actualmente enmendar los niveles de reducción existentes para los condados de Madera, Fresno y Kern, como se muestra en el gráfico a continuación.

Además, el Distrito utiliza las siguientes medidas no regulatorias para reducir la contaminación del humo de leña en el Valle:

- Programa de Incentivo de Burn Cleaner (<http://valleyair.org/grants/apps/burncleaner/Home>): Fondos de incentivos para el reemplazo de calentadores de leña más antiguos y más contaminantes por calentadores de leña menos contaminantes. Este programa ha reemplazado más de 16,600 estufas de leña no certificadas con aparatos de gas natural certificados y aprobados por la EPA en el Valle desde 2009.

NUEVO APARATO PARA COMPRAR	CANTIDAD DE INCENTIVO
Inserto/estufa de leña certificada	Hasta \$1,000
Inserto de combustible granulado/estufa certificada	Hasta \$1,000
Inserto/estufa de gas natural	Hasta \$1,000
Cualquier aparato elegible si el solicitante es elegible para bajos ingresos	Hasta \$2,500
Incentivo adicional para aparatos de gas (tanto para aplicaciones Estándares y de Bajos Ingresos)	Hasta \$500*
<i>*Se aplica solo a los costos de instalación elegibles más allá del cantidad de financiación</i>	

- Difusión Pública y Educación: El Distrito participa en entrevistas con los medios de comunicación y responde a llamadas públicas, llamadas telefónicas y correos electrónicos relacionados con la quema de leña residencial. El Distrito también utiliza herramientas como Sistema de Notificación de la Calidad del Aire Actual y la aplicación “Valley Air”, redes sociales y campañas publicitarias de multimedia (carteles, radio, televisión, etc.) para difundir información

Proyectos de Desarrollo - Construcción y Operaciones

Los proyectos de desarrollo se controlan a través de un conjunto de reglas, que incluyen los requisitos de la Regla de Revisión de Fuente Indirecta del Distrito y la Regulación VIII, como se explica a continuación. Además, el Distrito proporciona a las agencias de la ciudad y el condado orientación sobre las medidas de sostenibilidad que mejor reducen la contaminación del aire, así como el análisis de los posibles impactos de los nuevos proyectos y las formas en que los desarrolladores pueden reducir los impactos en la calidad del aire a través del proceso CEQA.

Regla de Revisión de Fuente Indirecta (ISR)

La [Regla del Distrito 9510 \(Revisión de Fuente Indirecta \(ISR\)\)](#) reduce las emisiones de NOx y PM10 de las fuentes móviles y de área asociadas con la construcción y operación de nuevos proyectos de desarrollo en el Valle. La regla ISR se aplica a los desarrolladores de nuevos proyectos residenciales, comerciales e industriales y a los proyectos de transporte y tránsito cuyas emisiones excedan ciertos umbrales contenidos en la regla.

- Esta regla fue adoptada el 15 de diciembre de 2005 y modificada en diciembre de 2017.
- Esta es la única regla de su tipo en el estado de California y en todo el país. La regla del Distrito es reconocida como el punto de referencia, o el mejor control disponible, para regular estas fuentes indirectas de emisiones, y otros distritos del aire.
- La regla ISR alienta que los diseños de aire limpio se incorporen al proyecto de desarrollo o, si se pueden diseñar reducciones de emisiones insuficientes en el proyecto, pagando una tarifa de mitigación que se usará para financiar proyectos de reducción de emisiones fuera del sitio.

Programa de Acuerdo de Reducción de Emisiones Voluntarias (VERA, por sus siglas en inglés)

Una VERA es una medida de mitigación según la Ley de Calidad Ambiental de California (CEQA) por la cual el proponente del proyecto proporciona mitigación de libra-por-libra de los aumentos de emisiones a través de un proceso que financia e implementa proyectos de reducción de emisiones administrados a través de los programas de subvenciones de incentivos del Distrito. Se puede implementar una VERA para abordar los impactos en la calidad del aire bajo CEQA, desde las fases de construcción y operativas de un proyecto.

Regulación VIII (Prohibición de PM10 Fugitivas) / Plan de Control de Polvo (DCP, por sus siglas en inglés)

La serie de Regulación VIII del Distrito (Prohibiciones de PM10 Fugitivas) se adoptó en noviembre de 2001 y se modificó posteriormente en 2004. Esta serie de reglas contiene un conjunto completo de reglas diseñadas para reducir las emisiones fugitivas de PM10 de una variedad de fuentes. Las reglas del Reglamento VIII se implementan a través del programa del Plan de Control de Polvo (DCP) del Distrito:

https://www.valleyair.org/busind/comply/PM10/compliance_PM10.htm

Regla 8011: Requerimientos Generales

Las disposiciones de la Regla 8011 son aplicables a fuentes de polvo fugitivo al aire libre especificadas. En 2004, el Distrito adoptó enmiendas a la Regla VIII para actualizar las reglas existentes del nivel RACM para cumplir con el nivel más estricto de BACM requerido en áreas serias de no cumplimiento de PM10.

Regla 8021: Construcción, Demolición, Excavación, Extracción y Otras Actividades de Movimiento de Tierras

La Regla 8021 se aplica a las perturbaciones del suelo relacionadas con la construcción o la demolición, incluidas las operaciones de desmonte, desbroce, raspado, excavación, extracción, nivelación del terreno, clasificación, corte y relleno, viajes en el sitio, caminos de acceso a los viajes hacia y desde el sitio y actividades de demolición. La regla también se aplica a la construcción de nuevos vertederos o modificaciones a vertederos existentes antes del comienzo de las actividades de relleno.

Regla 8031: Materiales a Granel

La Regla 8031 se aplica al almacenamiento y manejo externos de cualquier material no empaquetado, que emite o tiene el potencial de emitir polvo cuando se almacena o maneja.

Rule 8041: Arrastre y Rastrea

La Regla 8041 se aplica a la prevención y limpieza de lodo y tierra cuando se deposita (arrastre y rastrea) en carreteras pavimentadas públicas de actividades sujetas a los requisitos de las Reglas 8021, 8031, 8061 y 8071.

Regla 8051: Áreas Abierta

La Regla 8051 se aplica a cualquier área abierta de 0.5 acres o más dentro de áreas urbanas, o 3.0 acres o más dentro de áreas rurales que contengan al menos 1,000 pies cuadrados de área de superficie perturbada.

Regla 8061: Carreteras Pavimentadas y No Pavimentadas

La Regla 8061 establecen estándares para la construcción de carreteras pavimentadas nuevas y modificadas de acuerdo con el guía publicado por la Asociación Americana de Funcionarios de Carreteras Estatales y de Transporte para la construcción de carreteras y se aplica a cualquier carretera pública o privada pavimentada, no pavimentada o modificada, carretera de calle, autopista, callejón, unidad de acceso, servidumbre de acceso o camino de entrada.

Regla 8071: Áreas de Tráfico de Vehículos/Equipos No Pavimentados

La Regla 8071 se aplica a áreas de vehículos/equipos sin pavimentar, que incluyen áreas de estacionamiento, abastecimiento de combustible, servicio, envío, recepción y transferencia.

Regla 8081: Fuentes Agrícolas

La Regla 8081 se aplica a las fuentes agrícolas "fuera de campo", que incluyen, entre otras, carreteras sin pavimentar, áreas de tráfico de vehículos/equipos sin pavimentar y materiales a granel.

Parrillas Comerciales

La categoría de fuente de las parrillas comerciales consiste de dos tipos de parrillas: parrillas impulsadas por cadena y parrilla bajo fuego. La parrilla impulsada por cadena es un asador semicerrado que mueve los alimentos mecánicamente a través del dispositivo en una parrilla rallada para concinar los alimentos durante un tiempo específico. La parrilla bajo fuego tiene una “rejilla” de metal, una parrilla de servicio pesado similar a la de una barbacoa casera, con quemadores de gas, elementos de calefacción eléctrica o combustible sólido (leña o carbón) ubicado debajo de la parrilla para proporcionar calor para cocinar los alimentos. El humo y los vapores generados al cocinar en cualquiera de los dos tipos de parrillas contienen agua, VOCs y PM. Las partículas más grandes y la grasa generalmente son capturadas por el filtro de grasa de la campana de ventilación sobre la parrilla. Los VOCs restantes y la contaminación por partículas se agotan fuera del restaurante, a menos que se instale un control secundario.

- La Regla del Distrito 4692 reduce las emisiones al exigir oxidantes catalíticos para las parrillas comerciales de cadenas, como los que se encuentran en restaurantes de comida rápida, que cumplen con los requisitos de aplicación de la regla
- La Regla 4692 requiere controles de emisión para parrillas de cadena que concinan 400 libras de carne o más por semana
- La regla original, adoptada en marzo de 2002, redujo las emisiones de PM2.5 de las parrillas impulsadas por cadena por 84%. La modificación de la regla de septiembre de 2009 amplió la relevancia de la regla a más parrillas implusados por cadena, reduciendo el 25% de PM2.5 de las restantes emisiones de parrillas impulsadas por cadena

En 2018, el Distrito modificó la Regla 4692 para implementar un requisito de registro e informe para las operaciones de parrillas bajo fuego con el fin de recopilar mejor información de inventario y emisiones para esta categoría de fuente. Mediante el uso de nueva información de encuestas y registros, el Distrito buscará reducciones en las emisiones de parrillas comerciales de bajo fuego a través de un enfoque basado en incentivos para finaciar la instalación de controles para parrillas comerciales de bajo fuego dentro de los límites urbanos en las zonas conflictivas de los condados de Fresno, Kern y Madera, con un requisito reglamentario para el año futuro para alentar la participación de las empresas del Valle.

Equipo de de Césped y Jardinería

- CARB tiene un pequeño programa de motor para uso fuera de la carretera (SORE, por sus siglas en inglés), que incluye equipo de césped y jardinería. En 2020, CARB considerará nuevos estándares para motores pequeños para ayudar a California a cumplir su objetivo de reducir las emisiones de contaminantes generadores de smog de fuentes móviles en un 80 por ciento en 2031 (<https://ww2.arb.ca.gov/our-work/programs/small-off-road-engines-sore>).
- El Distrito ofrece incentivos para ayudar a reducir las emisiones de los equipos de césped y jardín apoderados por gasolina. El programa Clean Green Yard Machines (CGYM) incluye lo siguiente:
 - El Programa de CGYM Residencial ofrece reembolsos para el reemplazo de un cortacésped de gasolina antigua por un nuevo cortacésped eléctrico y para la compra de nuevos equipos de jardinería eléctricos elegibles sin tener un reemplazo (<http://www.valleyair.org/grants/cgym.htm>). Hasta la fecha, este programa ha reemplazado más de 6,700 cortacéspedes con más de \$ 1.5 millones en fondos.
 - El Programa de CGYM Comercial se lanzó en mayo de 2019 y proporciona fondos para el reemplazo de equipos de jardinería antiguos elegibles por equipo de batería para agencias públicas, entidades privadas y empresas <http://valleyair.org/grants/cgym-commercial.htm>

Medidas de Mitigación para las Escuelas

- Dirigido por el Equipo de Alcance y Comunicación
- El programa de Healthy Living Living Schools proporciona herramientas, recursos y educación gratuitos a las escuelas de Valle y sus comunidades (<http://healthyairliving.com/schools>)
- Alienta a las escuelas a adoptar el Sistema de Notificación de Calidad del Aire Actual (RAAN, por sus siglas en inglés), a modificar las actividades al aire libre, a comunicar los desafíos y el progreso de la calidad del aire, a solicitar información educativa, a adoptar iniciativas contra el ralenti y a mantenerse comprometidas a través del apoyo personalizado continuo
- Se implementó la tecnología del Monitor Electrónico de la Calidad del Aire Actual (READ, por sus siglas en inglés) a más de 25 escuelas, que proporciona datos de la calidad del aire actual y es una alternativa altamente visible al Programa de Banderas de la Calidad del Aire retirado. Las escuelas adicionales ahora participan utilizando su propio monitor para mostrar un URL personalizada proporcionada por el Distrito
- Actualmente 959 escuelas en el Valle utilizan las notificaciones de calidad del aire del Distrito para modificar las actividades al aire libre y notificar al personal, a los estudiantes y a los padres

Alcance General

- Dirigido por el Equipo de Alcance y Comunicación
- Mejora la salud pública a través de la educación, la asociación, la divulgación y la cooperación con los medios de comunicación, el público, las empresas, el gobierno y otros
- Coordina eventos, ofrece presentaciones, responde a los medios de comunicación las 24 horas del día, los 7 días de la semana, administra redes sociales, realiza campañas innovadoras de difusión como las Escuelas HAL y los programas Confirma Antes de Quemar, y se conecta con el público en varios idiomas en cualquier medio
- Ejecuta campañas anuales extensas de publicidad en varios idiomas para Aire Limpio, Vida Sana/temporada de Ozono de Verano, Confirma Antes de Quemar y una variedad de programas de incentivos utilizando diversos recursos de medios como televisión, radio, carteles, redes sociales, redes digitales y más.
- Proporciona datos de calidad del aire del Sistema de Notificación de Calidad del Aire Actual (RAAN) de monitores en todo el Valle a más de 8,000 usuarios registrados que reciben alertas por mensaje de texto o correo electrónico para las ubicaciones que eligen seguir.
- Proporciona una aplicación gratuita para Android y iOS que permite a los usuarios guardar hasta 10 ubicaciones del Valle para ver los datos actuales de calidad del aire de RAAN, informar problemas de calidad del aire y verificar el estado de quema de leña durante la temporada de "Confirma Antes de Quemar".

Control de Fuentes Agrícolas de Preocupación

Quema al Aire Libre

Las leyes estatales requieren que los Distritos tengan disposiciones para la eliminación de desechos agrícolas a través de quemas al aire libre. El Valle de San Joaquín tiene las restricciones más estrictas para quemar materiales agrícolas en el estado. La legislación estatal está eliminando estas actividades, pero aún se permite la quema a aire libre para algunos tipos de cultivos donde no hay alternativas económicas o tecnológicamente factibles disponibles para la quema. De acuerdo con la ley estatal, diariamente el personal del Distrito determina cuándo, cuánto y dónde puede ocurrir la quema.

La quema al aire libre limitada todavía permitida se administra bajo el Sistema de Gestión de Humo (SMS, por sus siglas en inglés) del Distrito para minimizar los impactos en la calidad del aire ambiental. Los permisos de quema emitidos por el Distrito y la autorización diaria se requieren para toda quema al aire libre de desechos agrícolas. Cada día, el personal del Distrito analiza los impactos potenciales, la meteorología local, las condiciones de la calidad del aire, la capacidad de retención atmosférica y otros factores al determinar cuánto material puede quemarse en cada una de las casi 100 zonas de quema en las que el Valle está separado dentro de SMS. La quema al aire libre solo se permite si las condiciones atmosféricas son tales que no se esperan impactos adversos en la calidad del aire. El objetivo del SMS es proteger la salud pública y prevenir un deterioro significativo en la calidad del aire como resultado de la quema al aire libre.

- Controlado por la Regla del Distrito 4103 (Quema al Aire Libre) (<https://www.valleyair.org/rules/currentrules/r4103.pdf>)
- Programa Piloto de Incentivos para Alternativas a la Quema de Agricultura al Aire Libre
 - Brinda incentivos para gravillar o triturar material agrícola, y se requiere que los materiales se utilicen para la incorporación de suelo o la aplicación de tierras en tierras agrícolas
 - Se ha ofrecido un total de \$1,644,320 para financiar estos proyectos hasta la fecha
 - Este programa ha dado como resultado aproximadamente 200 toneladas de NOx, 241 toneladas de VOC y 337 toneladas de reducción de emisiones de PM hasta la fecha

Tractores Agrícolas

- Los tractores agrícolas no están controlados por una regulación.
- Para ser elegible, la instalación debe participar en operaciones agrícolas según como lo defina CARB. <http://valleyair.org/grants/documents/tractor/Guidelines.pdf>
- Los reemplazos de tractores agrícolas pueden ser financiados como una categoría de proyecto elegible utilizando el financiamiento proporcionado para respaldar AB 617. Estos proyectos se administran de acuerdo con el Guía del Programa Carl Moyer y están sujetos a requisitos adicionales contenidos en el Guía de Protección del Aire de la Comunidad AB 617 aprobadas. Este programa es operado por el Distrito.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>
- Los proyectos se financian por orden de llegada <http://valleyair.org/grants/documents/tractor/Ag-Off-Road-Repalcement-App.pdf>

Camiones Agrícolas

- Controlado por la Regulación Estatal de Camiones y Autobuses de CARB que requiere la transición a una tecnología menos contaminante a través del tiempo. Generalmente en fases por año del modelo. <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>
- El Programa de Reemplazo de Camiones Agrícolas de FARMER proporciona fondos de incentivo para el reemplazo de camiones agrícolas de diésel de servicio pesado. <http://valleyair.org/grants/documents/FARMER/guidelines.pdf>
- Los camiones agrícolas elegibles deben estar en cumplimiento de las reglas vigentes de Camiones y Autobuses de Carretera del Estado de California bajo las siguientes opciones de cumplimiento
 - Extensión de Vehículos Agrícolas

- Exención de Bajo Uso
- Extensión Especializada de Vehículos Agrícolas
- El Horario del Año de Modelo y el camión deben operar como un “vehículo agrícola” como se define en la regulación de camiones y autobuses.
<https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>
- Los reemplazos de camiones agrícolas pueden ser financiados como una categoría de proyecto elegible utilizando fondos del programa FARMER. Estos proyectos son administrados de acuerdo al guía del programa FARMER.
<http://valleyair.org/grants/documents/FARMER/application.pdf>

Programa de Reemplazo de Bombas Agrícolas

- Controlado por el Distrito que requirió una transición a una tecnología menos contaminante con el tiempo. Generalmente en fases por nivel.
 - https://www.valleyair.org/rules/currnrules/R4702_Clean.pdf
- El Distrito tiene una variedad de programas de incentivos disponibles para las operaciones agrícolas interesadas en hacer la transición de sus motores a una tecnología menos contaminante, incluyendo:
 - El Distrito opera un programa local de reemplazo agrícola. El Programa de Incentivos para Bombas Agrícolas proporciona incentivos monetarios para el reemplazo de motores Nivel 3 a motores Nivel 4f y motores Tier 3 o Nivel 4f a motores eléctricos
 - <http://valleyair.org/grants/agpump.htm>
- Los reemplazos de bombas agrícolas pueden financiarse como una categoría de proyecto elegible utilizando el financiamiento proporcionado para respaldar AB 617. Estos proyectos se administran de acuerdo con el guía del Programa Carl Moyer y están sujetos a requisitos adicionales incluidos en el Guía de Protección de la Comunidad de AB 617 aprobada. Este programa es operado por el Distrito.
 - <https://www.arb.ca.gov/msprog/cap/capfunds.htm>

Polvo de Huertas, Viñedos, y Cultivos en Hileras

El Distrito requiere que los cultivadores implementen prácticas de manejo de conservación para reducir la contaminación del aire de las operaciones agrícolas

- Los cultivadores deben presentar un plan de manejo de conservación al Distrito para su aprobación, como lo requiere la [Regla del Distrito 4550 \(Prácticas de Manejo de Conservación\)](#)
 - Dentro de este plan, los agricultores detallan las medidas específicas que implementarán para reducir las emisiones de polvo de sus instalaciones
 - El personal del Distrito inspecciona regularmente las granjas del Valle para garantizar el cumplimiento de los requisitos de la regla
 - Las reducciones de emisiones logradas por la implementación de estas prácticas por parte de los agricultores del Valle han ayudado al Valle a cumplir con los estándares federales de calidad del aire para PM 10
- El Distrito ha trabajado en estrecha colaboración con representantes de la comunidad agrícola para evaluar nuevos equipos y prácticas de cosecha que pueden reducir efectivamente el polvo de las actividades de cosecha
- Basado en las reducciones de emisiones significativas de polvo que pueden proporcionar los equipos de recolección que producen menos polvo, el Distrito está ofreciendo fondos para el reemplazo de cosechadoras o barredoras de nueces convencionales más antiguas con equipos de tecnología de bajo polvo para uso en operaciones de recolección de nueces
 - Este incentivo puede ser combinado con el Reemplazo de Tractor para mejorar el uso del tractor de cosecha

- Equipos elegibles deberán ser equipos de recolección que producen menos polvo para lograr al menos el 40% de reducción de partículas como lo demuestra la información evaluada por colegas y/o la metodología aprobada por el Distrito
- Más información está disponible aquí: <http://valleyair.org/grants/low-dust-nut-harvester.htm>

Control y monitoreo de aplicación de pesticidas

El Distrito del Aire del Valle está prohibido por ley estatal de regular pesticidas. El Departamento de Regulación de Pesticidas (DPR, por sus siglas en inglés) regula los pesticidas bajo un programa integral que abarca el cumplimiento con la aplicación del uso de pesticidas en entornos agrícolas y urbanos. El DPR supervisa una infraestructura de cumplimiento de múltiples niveles y es otorgado por la [Agencia de Protección Ambiental de los Estados Unidos](#) con la responsabilidad principal de hacer cumplir las leyes federales de pesticidas en California. El DPR dirige y supervisa a los Comisionados Agrícolas del Condado hacer cumplir las leyes y reglamentos sobre pesticidas y ambientales a nivel local, incluyendo el cumplimiento de la Junta de Control de Plagas Estructurales del Departamento de Asuntos del Consumidor.

- Más información sobre el Programa del Aire de DPR está disponible aquí: <https://www.cdpr.ca.gov/docs/emon/airinit/airmenu.htm>
- El DPR requiere que los agricultores notifiquen al departamento antes de aplicar cualquier forma de pesticida
- Adicionalmente, los operadores agrícolas están sujetos a reglas estrictas que limitan el exceso de pulverización y la deriva del sitio de aplicación aprobado, y pueden estar sujetos a multas por infracciones
- Las escuelas cercanas a la aplicación de pesticidas deben ser notificadas por el DPR para permitir que la escuela tome precauciones para evitar la exposición. Por favor visite el sitio web del DPR para obtener más información sobre la regulación del DPR sobre la fumigación de pesticidas cerca de las escuelas: https://www.cdpr.ca.gov/docs/enforce/pesticide_applications_near_schoolsites.htm

Lecherías

Las operaciones de lecherías en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4570 \(Instalaciones para Animales Confinados\)](#) y [Regla 4550 \(Prácticas de Manejo de Conservación\)](#)

El propósito de la Regla 4570 es limitar las emisiones de VOC de las Instalaciones para Animales Confinados (CAF, por sus siglas en inglés). Esta regla se aplica a las instalaciones donde los animales están acorralados, encerrados o de otra manera hacen que permanezcan en áreas restringidas y se alimentan principalmente por un medio distinto al pastoreo durante al menos 45 días en cualquier período de doce meses. Además de limitar las emisiones de VOC, la Regla 4570 también incluye medidas que limitan las emisiones de amoníaco (NH₃) de estas operaciones. El propósito de la Regla 4550 es limitar las emisiones de polvo fugitivo de las operaciones agrícolas. Las operaciones de lecherías están sujetas a estrictas disposiciones de cumplimiento, incluidas las medidas de mitigación en curso y las inspecciones anuales. Las operaciones de lecherías también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)

Las operaciones de lecherías en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Digestores Lácteos

- El Programa de Investigación y Desarrollo de Digestores Lácteos (DDRDP, por sus siglas en inglés) del Departamento de Agricultura de Alimentos de California (CDFA, por sus siglas en inglés) proporciona asistencia financiera para la instalación de digestores de productos lácteos en California.

- <https://www.cdfa.ca.gov/oefi/ddrdp/>
- CDFA recibe fondos de Inversiones Climáticas de California para la reducción de emisiones de metano de las operaciones lecheras y ganaderas.
- Se espera que los proyectos actuales del DDRDP reduzcan las emisiones de gases de efecto invernadero por aproximadamente 12.9 millones de toneladas métricas de CO₂e.
- CDFA tiene una lista de los proyectos que han financiado en su sitio web
 - https://www.cdfa.ca.gov/oefi/ddrdp/docs/2019-DDRDP_ApplicationsReceived.pdf

Programa de Gestión de Estiércol Alternativo (AMMP, por sus siglas en inglés)

- El Programa de Gestión de Estiércol Alternativo (AMMP) del Departamento de Alimentos y Agricultura de California brinda asistencia financiera para la implementación de prácticas de manejo de estiércol no digestores
 - Actualmente, las prácticas elegibles para financiamiento a través de AMMP incluyen: manejo basado en pasturas; separación sólida o conversión de descarga a raspadura junto con alguna forma de secado o compostaje del estiércol recolectado.
 - https://www.cdfa.ca.gov/oefi/ddrdp/docs/2019-DDRDP_ApplicationsReceived.pdf

Control de Emisiones de Fuentes Estacionarias de Preocupación

Instalaciones de Fabricación de Vidrio

Los hornos de fusión de vidrio en el Valle de San Joaquín están sujetos a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4354 \(Hornos de Fusión de Vidrio\)](#)

La Regla 4354 es una de las reglas más estrictas en la nación para hornos de fusión de vidrio. El propósito de esta regla es limitar las emisiones de NOx, SOx, compuestos orgánicos volátiles (VOC, por sus siglas en inglés), monóxido de carbono (CO) y emisiones de PM de los hornos de fusión de vidrio. Los límites de emisión de NOx contenidos en la Regla 4354 requieren la instalación de la mejor tecnología de NOx disponible (es decir, sistemas de oxidación o SCR). Las instalaciones con hornos de fusión de vidrio están sujetas a estrictas disposiciones de cumplimiento, incluyendo la instalación de equipos de monitoreo continuo de emisiones e inspecciones anuales.

Además de los requisitos de la Regla 4354, las instalaciones de fabricación de vidrio también están sujetas a regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)
 - [40 CFR \(Código de Regulaciones Federales\) 60 Subparte CC – Estándares de Rendimiento para Instalaciones de Fabricación de Vidrio](#)
 - 40 CFR 60 Subparte PPP (Estándares de Rendimiento para Instalaciones de Fabricación de Aislamiento de Lana de Fibra de Vidrio)
- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)
 - [40 CFR 61 Subparte N – Estándar Nacional de Emisión para Emisiones de Arsénico Inorgánico de Instalaciones de Fabricación de Vidrio](#)
 - 40 CFR 63 Subparte NNN (Estándares Nacionales de Emisiones de Contaminantes Peligrosos del Aire para Instalaciones de Fabricación de Lana de Fibra de Vidrio)
 - [40 CFR 61 Subparte SSSSSS – Fuentes de Área de Fabricación de Vidrio](#)
- EPA – Tecnología de Control Alternativo (ACT, por sus siglas en inglés)
 - 435/R-94-037 (Documento de Técnicas de Control Alternativo — Emisiones de NOx en la Fabricación de Vidrio)

Las instalaciones de fabricación de vidrio también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4202 \(Materia Particulada - Tasa de Emisión\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)
- [40 CFR 64 – Monitoreo de Aseguramiento de Cumplimiento](#)

Las instalaciones de fabricación de vidrio en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Instalaciones de Biomasa

Las instalaciones de biomasa en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4352 \(Calderas de Combustible Sólido, Generadores de Vapor, y Calentadores de Proceso\)](#)

El propósito de la Regla 4352 es limitar las emisiones de NOx y CO de cualquier caldera, generador de vapor o calentador de proceso apoderado por combustible sólido. Las enmiendas más recientes, en diciembre de 2011, fortalecieron la regla al reducir los límites de emisiones de NOx para las instalaciones de biomasa y para las instalaciones de residuos sólidos municipales y para todas las demás unidades apoderadas por combustible sólido. Las instalaciones con calderas de combustible sólido, como las instalaciones de biomasa, están sujetas a estrictas disposiciones de cumplimiento, que incluyen los requisitos anuales de pruebas en las fuentes y las inspecciones anuales.

Además de los requisitos de la Regla 4352, las instalaciones de biomasa también están sujetas a las regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)

 - 453/R-94-022 (Documento de Técnicas de Control Alternativo – Emisiones de NOx de Calderas Industriales/Comerciales/Institucionales)
 - 453/R-94-023 (Documento de Técnicas de Control Alternativo – Emisiones de NOx de Calderas de Utilidad)

Las instalaciones de biomasa también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada – Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)
- [40 CFR 64 – Monitoreo de Aseguramiento de Cumplimiento](#)

Las instalaciones de biomasa en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Operaciones de Recubrimiento de Carrocerías

Las operaciones de recubrimiento de carrocerías en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4612 \(Operaciones de Recubrimiento de Vehículos Motorizados y Equipos Móviles\)](#)

El propósito de la Regla 4612 es limitar las emisiones de VOC de los recubrimientos de vehículos motorizados, equipos móviles y partes y componentes asociados, y la limpieza, almacenamiento y desecho de disolventes orgánicos asociados. Esta regla se aplica a cualquier persona que suministre, venda, ofrezca para la venta, fabrique o distribuya cualquier recubrimiento automotriz para su uso dentro del Distrito, así como cualquier persona que use, aplique o solicite el uso o aplicación de cualquier recubrimiento automotriz dentro del Distrito. Las instalaciones que realizan operaciones de recubrimiento de carrocerías están sujetas a estrictas disposiciones de cumplimiento, incluyendo inspecciones anuales.

Además de los requisitos de la Regla 4612, las operaciones de recubrimiento de carrocerías también pueden estar sujetas a regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)
 - 40 CFR 60 Subparte MM (Estándares de Rendimiento para Operaciones de Recubrimiento de Superficie de Automóviles y Camiones de Servicio Ligero)

 - 450/2-77-008 (Control de Emisiones de Orgánicos Volátiles de Fuentes Estacionarias Existentes – Volumen II: Recubrimiento de la Superficie de Latas, Bobinas, Papel, Telas, Automóviles y Camiones de Servicio Ligero)
 - 453/R-08-006 (Guías de Técnicas de Control para Recubrimiento de Automóviles y Camiones de Servicio Ligero)
- EPA – Tecnología de Control Alternativo (ACT, por sus siglas en inglés)
 - EPA-453/R-94-017 (Documento de Técnicas de Control Alternativo – Recubrimiento de Superficies de Piezas de Plástico para Máquinas de Automotriz/Transporte y Negocios)

Las operaciones de recubrimiento de carrocería también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#) – si usa calentador de cabina
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#) – si usa calentador de cabina

Las operaciones de recubrimiento de carrocería en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y que cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Terminales Gasoductos

Las terminales gasoductos en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4623 \(Almacenamiento de Líquidos Orgánicos\)](#) y [Regla 4624 \(Carga de Líquido Orgánico\)](#)

El propósito de la Regla 4623 es limitar las emisiones de VOC del almacenamiento de líquidos orgánicos. Esta regla se aplica a cualquier tanque con una capacidad de 1,100 galones o más en el que se coloca, retiene o almacena cualquier líquido orgánico. El propósito de la Regla 4624 es limitar las emisiones de VOC provenientes de la transferencia de líquidos orgánicos. Esta regla se aplica a las instalaciones de transferencia de líquidos orgánicos. Las instalaciones que almacenan o transfieren líquidos orgánicos, como los terminales gasoductos, están sujetas a estrictas disposiciones de cumplimiento, que incluyen requisitos trimestrales de inspección de fugas e inspecciones anuales.

Además de los requisitos de la Regla 4623 y la Regla 4624, las terminales gasoductos también pueden estar sujetas a regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)

 - 453/R-94-001 (Documento de Técnicas de Control Alternativo para Almacenamiento de Líquidos Orgánicos Volátiles en Tanques de Techo Fijo y Flotante)

Las terminales gasoductos generalmente tienen equipos auxiliares que también están sujetos a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)

Las terminales gasoductos en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Plantas de Procesamiento de Animales

Las plantas de procesamiento de animales en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4104 \(Reducción de la Materia Animal\)](#)

El propósito de la Regla 4104 es limitar los contaminantes del aire de las operaciones de la fuente utilizadas para la reducción de la materia animal al requerir que los gases, vapores y residuos de gas atrapado del proceso se incineren a temperaturas no inferiores a 1200 grados Fahrenheit o procesado de manera igualmente efectiva. Las instalaciones que realizan operaciones de procesamiento de animales están sujetas a estrictas disposiciones de cumplimiento, incluidos los requisitos de pruebas de fuente anuales y las inspecciones anuales.

Las operaciones procesamiento de animales también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)

Estas instalaciones generalmente utilizan vapor de una caldera (de combustión indirecta) o un secador rotatorio (de combustión directa) para sus operaciones, lo que genera emisiones de NOx de estas unidades de combustión; estas unidades de combustión están reguladas por otras reglas del Distrito. Las operaciones de procesamiento de animales en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Operaciones de Fabricación de Barcos de Fibra de Vidrio

Las operaciones de fabricación de barcos de fibra de vidrio en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4684 \(Operaciones de Resina de Poliéster\)](#)

El objetivo de la Regla 4684 es limitar las emisiones de VOC de las operaciones de resina de poliéster comercial e industrial, las operaciones de fabricación de barcos de fibra de vidrio, la limpieza con solventes orgánicos y el almacenamiento y eliminación de todos los solventes y materiales solventes de desecho asociados con dichas operaciones. Las instalaciones que realizan operaciones de fabricación de barcos de fibra de vidrio están sujetas a estrictas disposiciones de cumplimiento, incluyendo inspecciones anuales.

Además de los requisitos de la Regla 4684, las operaciones de fabricación de barcos de fibra de vidrio también están sujetas a las regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)
 - 40 CFR Parte 61 Subparte VVVV (Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos para la Fabricación de Barcos)

 - 453/R-08-004 (Técnica de Control para Materiales de Fabricación de Barcos de Fibra de Vidrio)

Las operaciones de fabricación de barcos de fibra de vidrio también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)

Las operaciones de fabricación de barcos de fibra de vidrio en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Operaciones de Fabricación de Bombas Agrícolas

Las operaciones de fabricación de bombas agrícolas en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4603 \(Recubrimiento de Superficies de Piezas y Productos de Metal, Piezas y Productos de Plástico y Barcos de Recreo\)](#)

El propósito de la Regla 4603 es limitar las emisiones de VOC del recubrimiento de la superficie de partes o productos metálicos, partes o productos electrodomésticos grandes, muebles metálicos, piezas y productos de plástico y barcos de recreo, y a la limpieza con disolventes orgánicos y al almacenamiento y desecho de todos los disolventes y residuos de materiales solventes asociados con dichos recubrimientos. Las instalaciones que realizan operaciones de fabricación de bombas agrícolas están sujetas a estrictas disposiciones de cumplimiento, incluidas inspecciones anuales.

Además de los requisitos de la Regla 4603, las operaciones de fabricación de bombas agrícolas también están sujetas a regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)

- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4202 \(Materia Particulada - Tasa de Emisión\)](#)

Las operaciones de fabricación de bombas agrícolas en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Operaciones de Petróleo y Gas

Las Operaciones de Petróleo y Gas en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) Reglas:
 - [Regla 2260 \(Requisitos de Registro para Equipos Sujetos a la Regulación de Petróleo y Gas de California\)](#)
 - [Regla 4311 \(Llamaradas\)](#)
 - [Regla 4401 \(Pozos de Producción de Petróleo Crudo Mejorados con Vapor\)](#)
 - [Regla 4402 \(Sumideros de Producción de Petróleo Crudo\)](#)
 - [Regla 4404 \(Estación de Prueba de Petróleo Pesado - Condado de Kern\)](#)
 - [Regla 4407 \(Ventilaciones de Pozos de Combustión In Situ\)](#)
 - [Regla 4408 \(Sistemas de Deshidratación de Glicol\)](#)
 - [Regla 4409 \(Componentes en Instalaciones de Producción de Petróleo Crudo Ligero, Instalaciones de Procesamiento de Gas Natural e Instalaciones de Procesamiento de Gas Natural\)](#)
 - [Regla 4453 \(Dispositivos o Sistemas de Producción de Vacío de Refinería\)](#)
 - [Regla 4454 \(Proceso de Refinamiento de la Unidad de Refinería\)](#)
 - [Regla 4455 \(Componentes en Refinerías de Petróleo, Instalaciones de Procesamiento de Líquidos de Gas y Plantas Químicas\)](#)
 - [Regla 4623 \(Almacenamiento de Líquidos Orgánicos\)](#)
 - [Regla 4624 \(Carga de Líquido Orgánico\)](#)

El propósito de la Regla 2260 es proporcionar un proceso de registro que cumpla con los requisitos de la Regulación de Petróleo y Gas de California, que limita las emisiones de metano y las fugas de los equipos utilizados en la industria del petróleo y el gas.

El propósito de la Regla 4311 es establecer requisitos de quema y reducir las emisiones de VOC, NOx y SOx de operaciones que involucren el uso de llamaradas.

El propósito de la Regla 4401 es limitar las emisiones de VOC de los pozos de producción de petróleo crudo enriquecido con vapor y las tuberías relacionadas. Estas operaciones están sujetas a estrictos controles de emisión y detección de fugas y requisitos de reparación.

El propósito de la Regla 4402 es limitar las emisiones de VOC de los sumideros utilizados para almacenar petróleo crudo y el agua producida en las operaciones de producción de petróleo crudo.

El propósito de la Regla 4404 es limitar las emisiones de VOC de la operación de las estaciones de prueba de petróleo pesado, es decir, una configuración del tanque utilizada para medir y recolectar petróleo crudo de pozos individuales.

El propósito de la Regla 4407 es limitar las emisiones de VOC de los pozos de combustión in situ y las tuberías relacionadas. Este proceso ya no es utilizado en gran medida por las compañías de producción de petróleo en el Distrito. Estas operaciones están sujetas a estrictos controles de emisión y detección de fugas y requisitos de reparación.

El propósito de la Regla 4408 es limitar las emisiones de VOC del sistema de deshidratación de glicol; un proceso en que se elimina vapor de agua del gas producido.

El propósito de la Regla 4409 es limitar las emisiones de VOC de los componentes con fugas en las instalaciones de producción de petróleo crudo ligero, las instalaciones de producción de gas natural y las instalaciones de procesamiento de gas natural.

El propósito de la Regla 4453 es limitar las emisiones de VOC de los dispositivos o sistemas que producen vacío en las refinerías al exigir que los gases de estos sistemas sean recolectados y controlados.

El propósito de la Regla 4454 es limitar las emisiones de VOC resultantes de la purga, reparación, limpieza o de otra manera abrir o liberar la presión de un buque de la refinería durante un giro de la unidad de proceso, es decir, dejar el equipo fuera de servicio para su mantenimiento.

El propósito de la Regla 4455 es limitar las emisiones de VOC de los componentes con fugas en las refinerías de petróleo, las instalaciones de procesamiento de líquidos de gas y las plantas químicas.

El propósito de la Regla 4623 es limitar las emisiones de VOC del almacenamiento de líquidos orgánicos, incluyendo petróleo crudo.

El propósito de la Regla 4624 es limitar las emisiones de VOC a la transferencia de líquidos orgánicos.

Además de los requisitos anteriores del Distrito, las operaciones de petróleo y gas también están sujetas a las regulaciones Federales, que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Sin embargo, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)

Las operaciones de petróleo y gas en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Operaciones de Vertederos

Las Operaciones de Vertederos en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4642 \(Vertederos de Residuos Sólidos\)](#) y [Regla 4311 \(Llamaradas\)](#)

El propósito de la Regla 4642 es limitar las emisiones de VOC de los vertederos de residuos sólidos. Las disposiciones de esta regla se aplican a cualquier sitio de eliminación de residuos sólidos con un sistema de recolección de gas y/o dispositivo de control en funcionamiento, o en mantenimiento o reparación. El propósito de la Regla 4311 es establecer requisitos de quema y reducir las emisiones de VOC, NOx y SOx de operaciones que involucren el uso de llamaradas. La quema es un proceso de oxidación a alta temperatura que se utiliza para quemar componentes combustibles, principalmente hidrocarburos, de gases residuales de operaciones industriales, con el fin de controlar las emisiones y como dispositivo de seguridad. Las operaciones de vertederos están sujetas a estrictas disposiciones de cumplimiento, incluyendo las pruebas de superficie e inspecciones anuales.

Además de los requisitos de la Regla 4642 y la Regla 4311, las operaciones de vertederos también están sujetas a las regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Sin embargo, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)
 - 40 CFR 60 Subparte CC (Guía de Emisión y Tiempos de Cumplimiento para Vertederos de Residuos Sólidos Municipales)
- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)
 - 40 CFR 63 Subparte AAAA (Estándares Nacionales de Emisiones para Contaminantes del Aire Peligrosos de Vertederos de Residuos Sólidos Municipales)

Las operaciones de vertederos también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 2520 \(Permisos Operativos Federales Obligatorios\)](#)

Las operaciones de vertederos en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Equipos Industriales Generales (Calderas de más de 5 MMBtu/hr)

Las calderas de más de 5 MMBtu/hr en el Valle de San Joaquín están sujetas a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4306](#) y [Regla 4320 \(Calderas, Calentadores de Proceso y Generadores de Vapor de más de 5 MMBtu/hr\)](#)

Las calderas se usan para producir agua caliente o generar vapor y se usan en muchas industrias diferentes en todo el Distrito. El propósito de estas reglas es limitar las emisiones de NO_x, monóxido de carbono (CO) y partículas (PM) de las calderas, los generadores de vapor y los calentadores de proceso de este rango. Las calderas están sujetas a estrictas disposiciones de cumplimiento, incluyendo las pruebas de fuente e inspecciones anuales.

Además de los requisitos de la Regla 4306 y la Regla 4320, las calderas también están sujetas a las regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)
 - 40 CFR 60 Subparte D (Estándares de Rendimiento para Generadores de Vapor Apoderados con Combustibles Fósiles para los Cuales se Inició la Construcción después del 17 de agosto de 1971)
 - 40 CFR 60 Subparte Db (Estándares de Rendimiento para Unidades de Generación de Vapor Industriales-Comerciales-Institucionales)
 - 40 CFR 60 Subparte Dc (Estándares de Rendimiento para Unidades de Generación de Vapor Industriales-Comerciales-Institucionales Pequeñas)
- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)
 - 40 CFR 63 Subparte DDDDD (NESHAP para Fuentes Principales: Calderas Industriales, Comerciales e Institucionales y Calentadores de Procesos)
- EPA – Tecnología de Control Alternativo (ACT, por sus siglas en inglés)
 - 453/R-93-022 (Documento de Técnicas de Control Alternativo - Emisiones de NO_x de Calderas Industriales/Comerciales/Institucionales)
 - 453/R-93-023 (Documento de Técnicas de Control Alternativo - Emisiones de NO_x de Calderas de Utilidad)
 - 453/R-93-034 (Documento de Técnicas de Control Alternativo - Emisiones de NO_x de los Calentadores de Proceso)

Las calderas también están sujetas a otras normas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)

Las calderas en el Valle también están sujetas a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Vea Apéndice A)

Equipos Industriales Generales (Motores de Combustión Interna (IC))

Los Motores de Combustión Interna en el Valle de San Joaquín están sujetos a las siguientes medidas reglamentarias:

- SJVAPCD (Distrito) [Regla 4702 \(Motores de Combustión Interna\)](#)

Los motores IC se utilizan para producir energía mecánica o generar electricidad al apoderar un generador y se usan en muchas industrias diferentes en todo el Distrito. El propósito de esta regla es limitar las emisiones de NO_x, CO, VOC y SO_x de cualquier motor de combustión interna (IC) con una potencia de 25 caballos de fuerza (bhp) o más. Los motores IC están sujetos a estrictas disposiciones de cumplimiento, incluyendo las pruebas de origen y las inspecciones anuales.

Además de los requisitos de la Regla 4702, los motores IC también están sujetos a las regulaciones Federales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones Federales.

- [Regla del Distrito 4001 \(Estándares de Rendimiento de Fuentes Nuevas\)](#)
 - 40 CFR 60 Subparte IIII (Estándares de Rendimiento para Motores de Combustión Interna Estacionarios de Encendido por Compresión)
 - 40 CFR 60 Subparte JJJJ (Estándares de Rendimiento para Motores de Combustión Interna con Encendido por Chispa)
- [Regla del Distrito 4002 \(Estándares Nacionales de Emisiones de Contaminantes del Aire Peligrosos\)](#)
 - 40 CFR 63 Subparte ZZZZ (NESHAP para Motores Estacionarios de Combustión Interna Recíproca)
- EPA – Tecnología de Control Alternativo (ACT, por sus siglas en inglés)
 - 453/R-93-032 (Documento de Técnicas de Control Alternativo - Emisiones de NO_x de Motores de Combustión Interna Recíprocos Estacionarios)

Los motores de IC también están sujetos a las regulaciones estatales que requieren tipos específicos de instalaciones nuevas, modificadas y reconstruidas para reducir directamente las emisiones de criterios y/o contaminantes tóxicos del aire. Aun así, las reglas prohibitorias del Distrito son típicamente más estrictas que las regulaciones estatales.

- Medidas de Control de Tóxicos en el Aire (ATCM, por sus siglas en inglés)
 - 17 CCR 93114 (ATCM para Reducir las Emisiones de Partículas de los Motores Apoderados con Combustible Diésel – Reglas para Combustible Diésel No Vehicular)
 - 17 CCR 93115 (ATCM para Motores de Ignición de Compresión Estacionarios)

Los motores IC también están sujetos a otras reglas y regulaciones aplicables y deben demostrar el cumplimiento continuo de estos requisitos adicionales.

- [Regla del Distrito 4101 \(Emisiones Visibles\)](#)
- [Regla del Distrito 4201 \(Materia Particulada - Concentración\)](#)
- [Regla del Distrito 4301 \(Equipo de Quema de Combustible\)](#)
- [Regla del Distrito 4801 \(Compuestos de Azufre\)](#)
- [Regla del Distrito 1080 \(Monitoreo de la Pila\)](#)
- [Regla del Distrito 1081 \(Muestreo de Fuentes\)](#)

Los motores IC en el Valle también están sujetos a otras regulaciones de aplicación general, asegurando que estas operaciones hayan instalado las tecnologías de control más estrictas posibles y cumplan con los otros requisitos estrictos de estas reglas. (Ver Apéndice A)

Programas de Cumplimiento

Programas de Cumplimiento

El Departamento de Cumplimiento del Distrito realiza una serie completa de actividades relacionadas con la aplicación y la asistencia de cumplimiento para garantizar el cumplimiento de las reglas y reglamentos del Distrito, estatales y federales. Los objetivos del programa para el Departamento de Cumplimiento se establecen en las leyes federales y estatales y en los planes de logro de la calidad del aire del Distrito. Para cumplir con estos objetivos del programa, el personal del Distrito realiza inspecciones en aproximadamente 9,200 instalaciones permitidas, responde a aproximadamente 3,000 quejas públicas cada año, investiga descompostura de equipos en las instalaciones y verifica reducciones de emisiones en miles de lugares donde se han implementado proyectos de incentivos para la reducción de emisiones. Cuando se descubren violaciones, se emiten Avisos para Cumplir por infracciones menores por primera vez. Los Avisos de Violación, que generalmente conllevan una multa monetaria, se emiten por infracciones más graves, generalmente basadas en las emisiones, así como repetidas infracciones menores.

Las funciones principales del Departamento de Cumplimiento del Distrito son las siguientes:

Inspecciones de Fuentes Estacionarias

El Distrito realiza miles de inspecciones exhaustivas en los sitios cada año para garantizar el cumplimiento de los requisitos del Distrito. Las inspecciones son vitales para asegurar que las reducciones de emisiones requeridas en las reglas, regulaciones y permisos se logren en la práctica. Con muy pocas excepciones, todas las inspecciones se realizan sin previo aviso porque es importante observar como las instalaciones normalmente funcionan para determinar con mayor eficacia el cumplimiento.

Investigaciones de Quejas

El Distrito recibe miles de quejas cada año por las cuales se da prioridad a las respuestas e investigaciones oportunas de las supuestas fuentes de incumplimiento. Los inspectores están de guardia las 24 horas del día y utilizan el correo de voz y los sistemas automatizados para facilitar la respuesta oportuna a las quejas con el fin de abatir las posibles molestias públicas y otras infracciones en progreso. Con esta misma idea, el Distrito ha desarrollado herramientas en línea para permitir la emisión fácil de quejas, incluyendo videos y fotografías, en línea y a través de aplicaciones para smartphone. El Distrito proporciona una línea telefónica bilingüe (español-inglés) de quejas y también tiene la capacidad de utilizar los servicios de traducción para garantizar que todas las comunidades y grupos dentro del Valle reciban el servicio adecuado.

Quema al Aire Libre

La quema al aire libre está estrictamente regulada por las reglas del Distrito 4103 (Quema al Aire Libre) y 4106 (Quema Prescrita y Quema para Reducción de Riesgo). El Distrito lleva a cabo miles de inspecciones cada año para garantizar el cumplimiento de los permisos y planes para las operaciones agrícolas, las agencias de administración de tierras y las residencias. Además, el personal de inspección del Distrito realiza la vigilancia de rutina en todo el Valle para hacer cumplir las reglas de quema ilegal, que incluyen, entre otras, la quema de basura residencial ilegal.

Chimeneas y Calefactores de Leña

El Distrito tiene un programa de cumplimiento robusto para garantizar el cumplimiento de la Regla del Distrito 4901 (Chimeneas de Leña y Calefactores de Leña). El Distrito asigna inspectores para llevar a cabo la vigilancia proactiva de los vecindarios en los condados con reducciones de quema de leña declaradas y responde a las quejas del público con respecto a la posible quema ilegal en chimeneas. El Distrito también realiza

rutinariamente la vigilancia los fines de semana, días festivos y noches durante la temporada de invierno, cuando las restricciones obligatorias están vigentes.

Regulaciones del Polvo Fugitivo

Las inspecciones se llevan a cabo de forma rutinaria en fuentes potenciales de polvo fugitivo al aire libre, como las operaciones de construcción y movimiento de tierras, carreteras sin pavimentar y áreas de tráfico, pilas de almacenamiento de material a granel, áreas abiertas y operaciones agrícolas. Durante estas inspecciones, el Distrito garantiza el cumplimiento de las medidas del plan de mitigación de polvo, los estándares de emisión de polvo visibles y los requisitos de estabilización de la superficie.

Pruebas de Emisiones y Monitoreo

Los inspectores de Distrito supervisan miles de pruebas de fuentes de tercera parte realizadas en las instalaciones con el fin de medir los contaminantes del aire y demostrar el cumplimiento de los límites de emisión permitidos. El Distrito también utiliza su propia fuente de pruebas y analizadores de gases de escape portátiles para evaluar las emisiones de los motores, calderas y otros dispositivos de combustión para garantizar que estén funcionando de acuerdo con las especificaciones y cumplan con todos los requisitos.

Inspecciones del Programa de Incentivos para la Reducción de Emisiones

Para asegurarse de que los proyectos de reducción de emisiones financiados por los programas de incentivos del Distrito sean reales y permanentes, el Distrito supervisa la ejecución del contrato o de los beneficiarios de incentivos antes y después del proyecto. Se llevan a cabo miles de inspecciones para verificar que el equipo sea apropiadamente controlado o reemplazado y que sea mantenido adecuadamente. Además, el Distrito también realiza inspecciones para verificar que los equipos más antiguos hayan sido destruidos cuando sea necesario como parte del contrato del incentivo.

Asistencia de Cumplimiento

El programa de Asistencia de Cumplimiento del Distrito enfatiza un enfoque educativo para ayudar a las empresas y residentes de Valle a cumplir con una variedad de regulaciones de contaminación del aire. Los negocios y los residentes de todo el Valle reciben asistencia individualizada, boletines de asistencia de cumplimiento, cursos de capacitación educativa y programas de certificación para ayudarles a comprender y cumplir con las normas y regulaciones del Distrito, estatales y federales.

Cumplimiento de la Junta de Recursos del Aire de California (CARB, por sus siglas en inglés)

CARB inspecciona una variedad de fuentes para verificar que cumplan con las regulaciones estatales de la calidad del aire. Para obtener más información sobre la política y los programas de cumplimiento de CARB, visite el sitio web de Programas de Cumplimiento de CARB: <https://www.arb.ca.gov/enf/enf.htm>

APÉNDICE A

Regla del Distrito 2201, Revisión de Fuentes Estacionarias Nuevas y Modificadas

[Regla del Distrito 2201, Revisión de Fuentes Estacionarias Nuevas y Modificadas](#), se aplica a todas las fuentes estacionarias nuevas y todas las modificaciones a las fuentes estacionarias existentes que están sujetas a los requisitos de permisos del Distrito. Bajo la Regla 2201, las instalaciones nuevas o las instalaciones que modifican el equipo deben obtener un permiso de Autoridad para Construir (ATC, por sus siglas en inglés) antes de la construcción, y están sujetas a requisitos estrictos, incluyendo:

- **Mejor Tecnología de Control Disponible (BACT, por sus siglas en inglés)**
- **Revisión de Gestión de Riesgos (RMR, por sus siglas en inglés)**
- **Mejor Tecnología de Control Disponible Tóxica (T-BACT, por sus siglas en inglés)**
- **Análisis de Calidad del Aire Ambiental (AAQA, por sus siglas en inglés)**

Mejor Tecnología de Control Disponible (BACT): Para cada unidad de emisiones (equipo específico) que tiene el potencial de emitir más del umbral de 2 lb/día de BACT, el Distrito requiere el uso de la mejor tecnología disponible de control de contaminación del aire que se usa comúnmente para controlar las emisiones de equipos de tipo similar. El Distrito también está realizando un análisis para determinar si, basados en los criterios específicos, las tecnologías más limpias que no se utilizan comúnmente para este tipo de equipo podrían utilizarse para reducir aún más las emisiones del equipo propuesto. Este requisito muy estricto garantiza que se utilice la técnica de control de la contaminación del aire más efectiva, lo que reduce la exposición del público a los contaminantes del aire y a los contaminantes tóxicos del aire.

Revisión de Gestión de Riesgos (RMR): Como lo exigen los [Códigos de Salud y Seguridad de California 41700](#) y la [Regla 4102 \(Molestias\)](#), el Distrito realiza RMRs para garantizar que la exposición pública a contaminantes tóxicos del aire de los proyectos requeridos de obtener un ATC sea menos que significativa. Se utilizan modelos de computadora muy complejos y los supuestos más conservadores para evaluar el impacto máximo del proyecto en la salud de los residentes. Los proyectos que resultan en un riesgo de salud significativo estimado para el público no son aprobados.

Mejor Tecnología de Control Disponible Tóxica (T-BACT): Cuando T-BACT se activa bajo un análisis de Revisión de Gestión de Riesgos (RMR), el Distrito realiza un análisis T-BACT para garantizar que se utilice la técnica de control más estricta que reduzca la exposición pública a contaminantes tóxicos del aire. Se requiere T-BACT para las unidades que emiten emisiones tóxicas al aire que dan un resultado de riesgo de cáncer de más de uno en un millón, y proyectos que podrían tener un impacto significativo en las residencias o negocios cercanos. Los proyectos que resultan en un riesgo de salud significativo estimado para el público no son aprobados.

Análisis de Calidad del Aire Ambiental (AAQA): La Agencia de Protección Ambiental de los Estados Unidos (EPA) y la Junta de Recursos del Aire de California (CARB) han establecido Estándares Nacionales de Calidad del Aire Ambiental (NAAQS) y Estándares de Calidad del Aire Ambiental de California (CAAQS), respectivamente, para numerosos contaminantes. Bajo la Regla 2201, el Distrito realiza AAQAs para garantizar que las emisiones relacionadas con el proyecto causen o empeoren una violación de la regla estatal o nacional de calidad del aire ambiental. Este análisis asegura que la exposición pública a ciertos criterios contaminantes del aire es menor que la concentración máxima permitida en el aire exterior sin daños al público.

AB 2588 (Ley de Información y Evaluación de Zonas Conflictivas de Toxicidad en el Aire)

La implementación del Distrito de [AB 2588](#), Ley de Información y Evaluación de "Zonas Conflictivas" de los Tóxicos del Aire de California, ha resultado en reducciones dramáticas en las emisiones de tóxicos del aire de fuentes existentes en el Valle de San Joaquín. Bajo esta ley de derecho a saber, el Distrito ha trabajado con 5,700 instalaciones del Valle para cuantificar las emisiones de tóxicos del aire, determinar el riesgo para la salud causado por esas emisiones, informar

sobre las emisiones y cualquier riesgo significativo a través de informes públicos escritos y reuniones públicas en los vecindarios, y pasos para reducir tales riesgos. Como resultado de estos esfuerzos, y las reducciones posteriores en los tóxicos del aire, desde 2007 no ha habido instalaciones en el Valle que representen un riesgo significativo para ningún residente del Valle bajo el programa de "Zonas Conflictas".

Ley de Calidad Ambiental de California (CEQA, por sus siglas en inglés)

CEQA es la ley estatal que requiere que los impactos ambientales se evalúen en los proyectos y se divulguen al público, y también requiere que los impactos significativos se mitiguen a un nivel menos que significativo cuando sea posible. A través de la implementación de CEQA, el Distrito revisa cuidadosamente las propuestas de proyectos de los desarrolladores de terrenos, los permisos de fuentes estacionarias nuevas y los planes y reglas de cumplimiento para cumplir con los requisitos de CEQA.

Shafter Community Steering Committee Charter

1. Committee Objectives

The Shafter Community Steering Committee is a special committee that will be responsible for advising the San Joaquin Valley Air District's development of the Community Air Monitoring Plan (Monitoring Plan) and Community Emission Reduction Program (CERP) under AB 617¹.

Committee objectives include identifying areas of concern regarding air pollution sources that impact the Community, looking within the Community Boundaries and within reasonable distances outside of the Community Boundaries², and potential emission reductions and air quality improvements available, as a part of the development of committee recommendations to the District for their use in constructing the CERP and Air Quality Monitoring Plan for the Community. In examining sources determined to impact the community, the committee may also examine the impacts of those sources on residents and businesses near such sources, even when those residents and businesses are outside of the community boundaries, to the extent allowable and feasible under AB 617 and CARB's Blueprint. Committee objectives include identifying sensitive receptor sites, and reviewing existing available information on air quality to provide strategic input towards Monitoring Plan and CERP development. Committee objectives also include disseminating and soliciting information to and from community stakeholders that each committee member represents. The goal is for the Monitoring Plan to be adopted by the San Joaquin Valley Air District by July 2019 and the CERP by October 2019. Upon adoption of the CERP, the steering committee may continue to meet as needed to support and provide guidance on implementation, and develop progress reports.

2. Roles and Responsibilities

Community Steering Committee Members

The Steering Committee will consist of community stakeholders, the majority of which must be community residents. See Attachment A, *AB 617 Community Steering Committee Selection Criteria*, for more details on Steering Committee membership requirements.

To inform their role of advising the District in its development of the CERP, the Committee members will be responsible for discussing a variety of topics including:

¹ Assembly Bill 617 (Chapter 136, Statutes of 2017) is a state-mandated program that uses a community-based approach to monitor and reduce local air pollution in communities around the state that continue to experience disproportionate impacts from air pollution.

² The committee discussed a radius of 7 miles from the center of Shafter as the nominal limit for this examination.

- community issues and contributing sources to develop a shared understanding of the community’s air pollution challenge;
- who has responsibility and authority to address those issues;
- proposed strategies for the community emissions reduction programs;
- mechanisms for engaging with other agencies;
- approaches for additional community outreach;
- other topics of interest to the committee.

The committee will discuss the major elements of the CERP as they are developed including:

- community engagement;
- the community profile and technical assessment;
- targets and strategies; the enforcement plan; and metrics to track progress.

Government official committee members serve as full participants in the committee, except that they serve in an advisory role, not a voting role, in final consensus building and decision making processes. Residents must hold the majority of decision making positions on the Committee.

Member Participation

Steering committee members (or designated alternates) are expected to attend all committee meetings, in their entirety, throughout the course of the year prior to the CERP adoption.

If the primary member is unable to attend, the designated alternate on the steering committee roster may attend in their absence and deliberate on the primary member’s behalf. The primary member is responsible for working with the District ensuring that the alternate is kept informed of the committee’s process.

To encourage active participation, if a primary member or their alternate has not attended three consecutive steering committee meetings, their membership may be revoked.

Facilitator

A professional and impartial facilitator will be used for moderating the steering committee meetings and for helping the committee reach consensus on issues.

3. Standard Committee Meeting Procedures

Deliberation and Consensus

A professional and impartial facilitator(s) will be employed to support the steering committee in the overall organization, order and focus of the meeting, resolve conflicts and help reach consensus to ensure the goals and objectives of this charter are met. Achieving full consensus of the steering committee may not always be possible. However, reasonable efforts will be

made to capture all of the perspectives that were expressed in meeting minutes, committee documents, and related reports, including the final CERP.

Open Meetings

All meetings are open to the general public and will provide a formal opportunity for members of the community to provide their perspective on the development of the Monitoring Plan and CERP. Stakeholder input is welcome and encouraged.

Meeting Schedule and Agendas

Upon consensus agreement of the committee, meeting schedules may be adjusted with adequate advance notice. Agendas and agenda topics will be informed by committee input, developed by the Air District, and will include the time, date, duration, location and topics to be discussed.

Subcommittees

Members who wish to be further involved may choose to participate in ad-hoc sub-committees when and if they are needed and established, to discuss topics that can subsequently feed the full committee's discussions. Subcommittees will meet as necessary, and report back their findings and/or recommendations at the next full steering committee.

4. Accessibility/Accommodation

The steering committee meetings and other events associated with the committee must be held at facilities that can accommodate members covered by the Americans with Disabilities Act. Language interpretation services will be provided in Spanish at all meetings, and as needed in other languages with a minimum 48-hour advance request.

5. Website

A website will be developed and maintained by the Air District, with input by the committee, to provide information to the community on the Steering Committee actions and development of the Monitoring Plan and CERP.

Attachment A

AB 617 Community Steering Committee Selection Criteria San Joaquin Valley Air Pollution Control District

The District is seeking to provide opportunity for AB 617 Steering Committee participation to all applicants as feasible. With that in mind, a large committee is preferable to eliminating applicants while continuing to seek the balanced perspectives provided by the following criteria:

1. The majority of committee membership must be residents of the defined community.
2. The core of the steering committee should directly represent the residents and businesses in the community.
3. Additional committee members may include representatives from local community-based environmental justice organizations, city and county planning agencies, transportation agencies, health departments, and schools.
4. Only one steering committee member will be allowed from each organization address, to avoid loading the committee with a single perspective. The District will make an effort to select the first application received from a given affiliation. The selected steering committee member can speak for all applicants with same affiliation.
 - a. Applicants with same affiliation may volunteer a specific committee member from amongst themselves, and the District will make the adjustment to the committee membership list.
 - b. For continuity purposes, this committee member substitution may only occur once for a given affiliation.
5. Members may assign one alternate member that can sit in their place on the committee, if, for some reason, the main member cannot attend a meeting.
 - a. The alternate must be officially assigned as the member's sole alternate on the District's committee membership list.
 - b. The alternate must meet the same membership criteria as the main member, and must submit a committee membership application.
 - c. Main member will be responsible for keeping the alternate informed of committee activities and discussions so that continuous progress is possible without significant rehashing of previously discussed topics.
6. Applicants without valid affiliation are excluded from committee membership consideration, but will be invited to attend the committee meetings to provide input as members of the public:
 - a. Applicants who claimed residence affiliation only, but whose residence is not within community boundaries.
 - b. Business entities or associations without office address within community boundaries.
7. Government officials/agencies are entities that can take action, and are encouraged to participate. Government officials serve as full participants in the committee, except that they serve in an advisory role in final consensus building and decision making processes.

Attachment B Participation Agreement

By signing below, I agree to abide by all conditions of the Shafter Community Steering Committee Charter. I also agree to the following principles, goals and expected conduct to demonstrate how agencies, communities and other stakeholders working in concert can achieve meaningful improvements in air quality in the Shafter Community:

- **Adopt and support the principles of ensuring improved air quality in Shafter:**
 - Our goal is to identify and remedy local air pollution impacts and associated health risk exposures to people who live, work and play in and around Shafter. We are committed to working collectively and cooperatively with all stakeholders within the community—local residents, businesses and organizations, youth groups, schools, local, regional and State governments, health agencies and faith-based organizations—to ensure all represented parties and interested members of the public are heard.
- **Provide strategic guidance, vision, and oversight** including:
 - Informing the development of the Monitoring Plan and CERP for the community of Shafter
 - Using data to inform strategy development analysis
 - Tracking progress of the work using agreed-upon indicators at Steering Committee and subcommittee levels
 - Identifying fair, effective and feasible goals to bring about reduced health risk in Shafter
- **Provide leadership and accountability** by:
 - Identifying obstacles to achieving the goal and develop solutions to overcome them
 - Considering how my own organization or those in my network can align to the common goals and principles of the Steering Committee
 - Serving as a vocal champion of the collective effort in the Steering Committee
 - To work towards consensus while recognizing that not everyone will agree on every issue and to resolve conflicts in a positive, swift and constructive manner
- **Play an active role** by:
 - Actively participating in the regularly scheduled meetings
 - Reviewing available materials prior to meetings and coming prepared for engaged discussion, active listening, and respectful dialogue
 - Committing to monthly Steering Committee meetings and a few hours of preparation in between

Comunidad de Shafter

Carta Estatutaria del Comité Directivo

1. Objetivos del Comité

El Comité Directivo Comunitario de Shafter es un comité especial que será responsable de aconsejar el desarrollo del Plan de Monitoreo del Aire de la Comunidad (Plan de Monitoreo) y el Programa de Reducción de Emisiones de la Comunidad (CERP, por sus siglas en inglés) del Distrito del Aire del Valle de San Joaquín, bajo AB 617¹.

Los objetivos del comité incluyen la identificación de áreas de preocupación con relación a las fuentes de contaminación del aire que afectan a la Comunidad, buscando dentro de los Límites de la Comunidad y dentro de distancias razonables fuera de los Límites de la Comunidad², y posibles reducciones de emisiones y mejoras de la calidad del aire disponibles, como parte del desarrollo de las recomendaciones del comité al Distrito para su uso en la construcción de CERP y el Plan de Monitoreo de Calidad del Aire para la Comunidad. Al examinar las fuentes determinadas que impactan a la comunidad, el comité también puede examinar los impactos de esas fuentes en los residentes y negocios cerca de dichas fuentes, incluso cuando esos residentes y negocios están fuera de los límites de la comunidad, en la medida en que sea posible y factible según AB 617 y El Plan de CARB. Los objetivos del comité incluyen identificar los sitios de receptores sensibles, y la revisión de la información disponible existente sobre la calidad del aire para proporcionar aporte estratégico para el Plan de Monitoreo y el desarrollo de CERP. Los objetivos del comité también incluyen la difusión y solicitud de información ha y de las partes interesadas de la comunidad que representa cada miembro del comité. El objetivo es que el Plan de Monitoreo sea implementado por el Distrito del Aire del Valle de San Joaquín antes de julio de 2019 y que la Mesa Directiva del Distrito del Aire adopte el CERP antes de octubre de 2019. Después de la adopción del CERP, el Comité Directivo puede continuar reuniéndose como necesario para apoyar y proporcionar orientación sobre la implementación y desarrollar informes de progreso.

2. Funciones y Responsabilidades

Miembros del Comité Directivo Comunitario

El Comité Directivo estará compuesto por partes interesadas de la comunidad, la mayoría de las cuales deben ser residentes de la comunidad. Consulte el Anexo A, *Criterios de Selección del Comité Directivo Comunitario AB 617*, para obtener más detalles sobre los requisitos de membresía del Comité Directivo.

¹ La Ley de la Asamblea 617 (AB 617) (Capítulo 136, Estatutos de 2017) es un programa obligatorio por el estado que utiliza un enfoque basado en la comunidad para monitorear y reducir la contaminación del aire local en las comunidades de todo el estado que continúan sufriendo impactos desproporcionados de la contaminación del aire.

² El comité discutió un radio de 7 millas desde el centro de Shafter como el límite nominal para esta examinación.

Para informar su función de aconsejar al Distrito en su desarrollo del CERP, los miembros del Comité serán responsables de discutir una variedad de temas que incluyen:

- problemas de la comunidad y fuentes de contribución para desarrollar un entendimiento compartido del desafío de la contaminación del aire de la comunidad;
- quién tiene la responsabilidad y la autoridad para abordar esas cuestiones;
- estrategias propuestas para los programas comunitarios de reducción de emisiones;
- mecanismos para colaborar con otras agencias;
- enfoques para un alcance comunitario adicional;
- Otros temas de interés para el comité.

El comité discutirá los elementos principales del CERP a medida que se desarrollen, incluyendo:

- involucramiento de la comunidad;
- el perfil de la comunidad y la evaluación técnica;
- objetivos y estrategias; el plan de ejecución y métricas para monitorear el progreso.

Los miembros oficiales de gobierno del comité sirven como participantes de pleno derecho en el comité, excepto que cumplen una función de asesoría, no una función de voto, en los procesos finales de creación de consenso y toma de decisiones. Los residentes deben ocupar la mayoría de los puestos de decisión en el Comité.

Participación de los Miembros

Se espera que los miembros del comité directivo (o los suplentes designados) asistan a todas las reuniones del comité, en su totalidad, durante todo el año antes de la adopción del CERP.

Si el miembro principal no puede asistir, el suplente designado en la lista del comité directivo puede asistir en su ausencia y deliberar en nombre del miembro principal. El miembro principal es responsable de trabajar con el Distrito para garantizar que el suplente se mantenga informado del proceso del comité.

Para alentar la participación activa, si un miembro principal o su suplente no ha asistido a tres reuniones consecutivas del comité directivo, su membresía puede ser revocada.

Facilitador

Se utilizará un facilitador profesional e imparcial para moderar las reuniones del comité directivo y para ayudar al comité a alcanzar un consenso sobre los temas.

3. Procedimiento de Reuniones Comunes del Comité

Deliberación y Consenso

Se empleará un facilitador(es) profesional e imparcial para respaldar al comité directivo en la organización general, el orden y el enfoque de la reunión, resolver conflictos y ayudar a alcanzar

el consenso para asegurar que se cumplan las metas y los objetivos de esta Carta Estatutaria. Lograr el consenso total del comité directivo puede no ser siempre posible. Sin embargo, se harán esfuerzos razonables para capturar todas las perspectivas que se expresaron en actas de reuniones, documentos del comité e informes relacionados, incluyendo el CERP final.

Reuniones Abiertas

Todas las reuniones están abiertas al público en general y brindarán una oportunidad formal para que los miembros de la comunidad brinden su perspectiva sobre el desarrollo del Plan de Monitoreo y el CERP. Los comentarios de los interesados son bienvenidos y alentados.

Calendario de Reuniones y Agendas

Tras el consenso acuerdo del comité, los horarios de las reuniones pueden ajustarse con aviso previo adecuado. Las agendas y los temas de la agenda serán informados por los comentarios del comité, desarrollados por el Distrito del Aire, e incluirán la hora, la fecha, la duración, la ubicación y los temas que se discutirán.

Subcomités

Los miembros que deseen participar más pueden optar por participar en subcomités ad-hoc cuando sean necesarios y establecidos, para discutir temas que posteriormente puedan alimentar las discusiones del comité. Los subcomités se reunirán según sea necesario e informarán sobre sus hallazgos y/o recomendaciones al próximo comité directivo completo.

4. Accesibilidad/Acomodación

Las reuniones del comité directivo y otros eventos asociados con el comité deben llevarse a cabo en instalaciones que puedan acomodar a los miembros cubiertos por la Ley de Estadounidenses con Discapacidades. Los servicios de interpretación se brindarán en español en todas las reuniones y, según sea necesario, en otros idiomas con una solicitud con un mínimo de 48 horas de anticipación.

5. Sitio Web

El Distrito de Aire desarrollará y mantendrá un sitio web con aportes del comité para proporcionar información a la comunidad sobre las acciones del Comité Directivo y el desarrollo del Plan de Monitoreo y el CERP.

Anexo A

Criterios de Selección del Comité Directivo Comunitario AB 617 Distrito para el Control de Contaminación del Aire del Valle de San Joaquín

El Distrito está tratando de brindar la oportunidad de que todos los solicitantes participen en el Comité Directivo AB 617, según sea posible. Teniendo esto en cuenta, es preferible un comité grande que elimine a los solicitantes mientras se siguen buscando las perspectivas equilibradas proporcionadas por los siguientes criterios:

1. La mayoría de los miembros del comité deben ser residentes de la comunidad definida.
2. El núcleo del comité directivo debe representar directamente a los residentes y negocios en la comunidad.
3. Los miembros adicionales del comité pueden incluir representantes de organizaciones comunitarias locales de justicia ambiental, agencias de planificación de la ciudad y el condado, agencias de transporte, departamentos de salud y escuelas.
4. Solo se permitirá a un miembro del comité directivo de cada dirección de la organización, para evitar cargar el comité con una sola perspectiva. El Distrito hará un esfuerzo para seleccionar la primera solicitud recibida de una afiliación determinada. El miembro del comité directivo seleccionado puede hablar para todos los solicitantes con la misma afiliación.
 - a. Los solicitantes con la misma afiliación pueden designar un miembro del comité específico entre ellos, y el Distrito hará el ajuste a la lista de miembros del comité.
 - b. Para fines de continuidad, esta sustitución de miembros del comité solo puede ocurrir una vez para una afiliación determinada.
5. Los miembros pueden asignar un miembro alternativo que puede ocupar su lugar en el comité, si, por alguna razón, el miembro principal no puede asistir a una reunión.
 - a. El suplente debe ser asignado oficialmente como el único suplente del miembro en la lista de miembros del comité del Distrito.
 - b. El suplente debe cumplir con los mismos criterios de membresía que el miembro principal y debe someter una solicitud de membresía del comité.
 - c. El miembro principal será responsable de mantener al suplente informado de las actividades y discusiones del comité, de modo que el progreso continuo sea posible sin un cambio significativo de los temas discutidos previamente.
6. Los solicitantes sin afiliación válida están excluidos de la consideración de la membresía del comité, pero se les invitará a asistir a las reuniones del comité para brindar sus opiniones como miembros del público:
 - a. Solicitantes que reclamaron la afiliación de residencia solamente, pero cuya residencia no está dentro de los límites de la comunidad.
 - b. Entidades comerciales o asociaciones sin domicilio dentro de los límites de la comunidad.
7. Los funcionarios y agencias de gobierno son entidades que pueden tomar medidas y se les alienta participar. Los funcionarios del gobierno actúan como participantes de pleno derecho en el comité, excepto que cumplen una función de asesor en los procesos finales de creación de consenso y toma de decisiones.

Anexo B

Acuerdo de Participación Potencial

Al firmar a continuación, acepto cumplir con todas las condiciones de la Carta Estatutaria del Comité Directivo de Shafter. También estoy de acuerdo con los siguientes principios, objetivos y conducta esperada para demostrar cómo las agencias, comunidades y otras partes interesadas que trabajan en conjunto pueden lograr mejoras significativas en la calidad del aire en la comunidad de Shafter:

- **Adoptar y apoyar los principios para garantizar una mejor calidad del aire en Shafter:**
 - Nuestro objetivo es identificar y remediar los impactos de la contaminación del aire local y las exposiciones asociadas al riesgo de la salud de las personas que viven, trabajan y juegan en y alrededor de Shafter. Estamos comprometidos a trabajar de manera colectiva y cooperativa con todas las partes interesadas dentro de la comunidad: residentes locales, negocios/empresas y organizaciones, grupos de jóvenes, escuelas, gobiernos locales, regionales y estatales, agencias de salud y organizaciones religiosas para asegurar que todas las partes representadas y miembros interesados del público sean escuchados.
- **Proporcionar orientación estratégica, visión y supervisión, incluyendo:**
 - Informar el desarrollo del Plan de Monitoreo y el CERP para la comunidad de Shafter
 - Uso de datos para informar análisis de desarrollo de estrategias
 - Seguimiento de del progreso de trabajo utilizando indicadores acordados a nivel del Comité Directivo y subcomité
 - Identificar objetivos justos, efectivos y factibles para reducir el riesgo de salud en Shafter
- **Proporcionar liderazgo y responsabilidad por:**
 - Identificar obstáculos para alcanzar la meta y desarrollar soluciones para superarlos
 - Considerando como mi propia organización o las de mi red pueden alinearse con los objetivos y principios comunes del Comité Directivo
 - Servir como un campeón vocal del esfuerzo colectivo en el Comité Directivo
 - Trabajar hacia el consenso, reconocimiento que no todos estarán de acuerdo en cada tema y resolver los conflictos de manera positive, rápida y constructiva.
- **Jugar un papel activo al:**
 - Participar activamente en las reuniones programadas regularmente
 - Revisar los materiales disponibles antes de las reuniones y venir preparado para entablar una conversación, escuchar atentamente y el diálogo respetuoso
 - Comprometerse a las reuniones mensuales del Comité Directivo y unas pocas horas de preparación entremedio

Nombre en letra de molde: _____ Fecha: _____

2019 Shafter Community Steering Committee Calendar

Meet the second Monday of each month
Shafter Veteran's Hall | 309 California Ave.
See community.valleyair.org for latest information

February

- AB 617 Committee Deadlines/Calendar Review
- Air Monitoring Plan Requirements
- Committee Discussion of Community Air Monitoring needs

March

- Community Emission Reduction Program (CERP) Requirements
- Committee Discussion of CERP components, emission reduction concepts

April

- Review draft Air Monitoring Plan
- Introduce early draft of CERP components/outline

May

- Committee finalize input on Air Monitoring Plan

June

- Review/discuss District's initial draft of CERP measures/concepts

July

- July 1 Deadline – District must implement initial Air Monitoring Plan
- Committee input on CERP

August

- Committee finalize input on CERP
- District update on Air Quality Monitoring Plan implementation

September

- Committee prep for September 19 presentation of CERP to District Board
- September 19, District Governing Board must adopt CERP

October, and continuing

- October 1 Deadline – District Governing Board must forward CERP to CARB
- Committee input on, assistance with, implementation of CERP and Monitoring Plan

In addition to above meetings/main topics, may also consider potential need for additional agenda items and meetings:

- Discussion of Mobile Source Concerns and Opportunities (heavy duty trucks, passenger vehicles, locomotives)
- Discussion of Stationary Sources Concerns and Opportunities (oil and gas production, dairies, etc.)
- Community Clean Air Grant Opportunities (clean air vehicles, fireplaces, small businesses, clean green yard machine)
- Pesticides (Department of Pesticide Regulation)
- Community Development/Land Use (city/county)
- Saturday extended training sessions to provide more in-depth information on general air quality, health effects, and other subjects of interest to the Steering Committee

Calendario del Comité Directivo Comunitario 2019 de Shafter

Se reúne el segundo lunes de cada mes

Sala de Veteranos de Shafter | 309 California Ave.

Para más información visite community.valleyair.org

San Joaquin Valley
AIR POLLUTION CONTROL DISTRICT

Febrero

- Fechas Límite del Comité de AB 617/Revisión del Calendario
- Requisitos del Plan de Monitoreo del Aire
- Discusión del Comité de las necesidades de Monitoreo del Aire de la Comunidad

Marzo

- Requisitos del Programa de Reducción de Emisiones de la Comunidad (CERP, por sus siglas en inglés)
- Discusión del Comité de los componentes del CERP, conceptos de reducción de emisiones

Abril

- Revisión del borrador del Plan de Monitoreo del Aire
- Presentar el borrador inicial de los componentes/descripción del CERP

Mayo

- Comité finaliza el aporte sobre el Plan de Monitoreo del Aire

Junio

- Revisar/discutir el borrador inicial del Distrito de las medidas/conceptos del CERP

Julio

- 1º de julio Fecha Límite – El Distrito debe implementar el Plan de Monitoreo del Aire inicial
- Aporte del Comité sobre el CERP

Agosto

- Comité finaliza el aporte sobre el CERP
- Reporte del Distrito sobre la implementación del Plan de Monitoreo de la Calidad del Aire

Septiembre

- Preparación del Comité para la presentación del CERP el 19 de septiembre a la Mesa Directiva del Distrito
- 19 de septiembre, Mesa Directiva del Distrito debe adoptar el CERP

Octubre, y continuando

- 1º de octubre Fecha Límite – Mesa Directiva del Distrito debe enviar el CERP a CARB
- Aporte del Comité sobre, asistencia con, implementación del CERP y el Plan de Monitoreo

Además de las reuniones/temas principales mencionados arriba, también se puede considerar la necesidad potencial de temas para la agenda y reuniones adicionales:

- Discusión sobre Preocupaciones y Oportunidades de Fuentes Móviles (camiones pesados, vehículos de pasajeros, locomotoras)
- Discusión sobre las Preocupaciones y Oportunidades de Fuentes Estacionarias (producción de petróleo y gas, lecherías, etc.)
- Oportunidades de Subvenciones de Aire Limpio en la Comunidad (vehículos de aire limpio, chimeneas, pequeñas empresas, máquinas de jardinería menos contaminantes)
- Pesticidas (Departamento de Regulación de Pesticidas)
- Desarrollo Comunitario/Usos del Suelo (ciudad/condado)
- Sesiones de entrenamiento extendidas los sábados para brindar información más detallada sobre la calidad del aire en general, los efectos en la salud y otros temas de interés para el Comité Directivo

FREQUENTLY USED ACRONYMS

APCD - Air Pollution Control District

AQI - Air Quality Index

ARB - Air Resources Board

CAC - Citizens Advisory Committee

CCAA - California Clean Air Act

CEQA - California Environmental Quality Act

EPA - United States Environmental Protection Agency

ICE - Internal Combustion Engine

NAAQS - National Ambient Air Quality Standards

NO_x - Oxides of Nitrogen

NOV - Notice of Violation

O₃ - Ozone

PM - Particulate Matter

SIP - State Implementation Plan

tpd - Tons per Day

tpy - Tons per Year

VMT - Vehicle Miles Traveled

VOC - Volatile Organic Compound

GLOSSARY OF FREQUENTLY USED TERMS

carbon monoxide - a colorless, odorless gas emitted from combustion processes like mobile sources.

carpool - an arrangement between people to make a regular journey in a single vehicle, typically with each person taking turns to drive the others.

dry-seasoned wood - wood that has been dried to reduce the moisture content before its use.

emissions - substances, and especially pollutants, discharged into the air.

EPA - Environmental Protection Agency, federal agency in charge of creating and enforcing regulations to protect human health and the environment.

EPA certified device - wood heaters certified by the US EPA as meeting their emission standards.

exhaust - waste gases or air expelled from an engine, turbine, or other machine in the course of its operation.

idling - keep the engine of a vehicle running while parked.

inversion layer - a layer of the atmosphere in which there is a temperature inversion, with the layer tending to prevent the air below it from rising, thus trapping any pollutants that are present.

lead - it is a soft, malleable metal and is a chemical element in the carbon group.

manufactured wood logs - engineered wood made from the same hardwoods and softwood used to manufacture lumber.

nitrogen dioxide (NO₂) - it is one of a group of highly reactive gases known as “oxides of nitrogen” or “nitrogen oxides (NO_x).” NO₂ forms quickly from mobile and industrial sources and it contributes to the formation of ground-level ozone, and fine particle pollution.

nitrogen oxides (NO_x) - or “oxides of nitrogen” is a group of gases that are composed of nitrogen and oxygen. Two of the most common nitrogen oxides are nitric oxide (NO) and nitrogen dioxide (NO₂).

ozone (O₃) - ground level or “bad” ozone which is not emitted directly into the air, it is created by chemical reactions between oxides of nitrogen (NO_x) and volatile organic compounds (VOC) in the presence of sunlight.

particulate matter - also known as particle pollution or PM, is a complex mixture of extremely small particles and liquid droplets. Particle pollution is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles.

PM_{2.5} - is fine particulate matter 2.5 micrometers in diameter and smaller. These particles can be directly emitted from sources such as forest fires and wood-burning devices.

smog - fog or haze combined with smoke and other atmospheric pollutants.

sulfur dioxide - is a toxic gas with a strong, irritating smell. It is one of a group of highly reactive gases known as “oxides of sulfur.”

Volatile Organic Compounds (VOCs) - are a large group of carbon-based chemicals that easily become vapors or gases. They include both human-made and naturally occurring chemical compounds.

wood pellet - a small capsule compacted with sawdust and other lumber waste. Burned to create a source of heat for residential homes.

SIGLAS DE USO FRECUENTE (por sus siglas en inglés)

APCD - Distrito del Control de la Contaminación del Aire

AQI - Índice de Calidad del Aire

ARB - Junta de Recursos del Aire

CAC - Comité Asesor de Ciudadanos

CCAA - Ley de Aire Limpio de California

CEQA - Ley de Calidad Ambiental de California

EPA - Agencia de Protección Ambiental de los Estados Unidos

ICE - Motor de Combustión Interna

NAAQS - Estándares Nacionales de la Calidad del Aire Ambiental

NOx - Óxidos de Nitrógeno

NOV - Aviso de Violación

O3 - Ozono

PM - Materia Particulada (Partículas)

SIP - Plan de Implementación del Estado

tpd - Toneladas por Día

tpy - Toneladas por Año

VMT - Millas Recorridas por Vehículos

VOC - Compuesto orgánico volátil

GLOSARIO DE TÉRMINOS DE USO FRECUENTE

monóxido de carbono - un gas incoloro e inodoro emitido por los procesos de combustión, como las fuentes móviles.

compartir el viaje - un acuerdo entre varias personas para hacer un viaje regular en un solo vehículo, generalmente cada persona toma turnos para conducir a los otros.

leña seca - leña que se ha secado para reducir el contenido de humedad antes de su uso.

emisiones - materia, especialmente los contaminantes descargados en el aire.

EPA - La Agencia de Protección Ambiental, es una agencia federal a cargo de crear y ejecutar regulaciones para proteger la salud humana y el medio ambiente.

aparato certificado por la EPA - aparatos de leña certificados por la EPA de los Estados Unidos cumpliendo con los estándares de emisiones.

escape - gases residuales o aire expulsado de un motor, turbina u otra máquina en el curso de su funcionamiento.

ralentí - mantener el motor encendido mientras el vehículo está estacionado.

inversión térmica - una capa en la atmósfera en donde hay una inversión térmica, con la capa impidiendo que el aire por debajo se eleve, atrapando contaminantes que estén presente.

plomo - es un metal suave, maleable y es un elemento químico en el grupo de carbono.

leños prefabricados - leña fabricada con madera dura y madera blanda.

dióxido de nitrógeno (NO₂) - es uno del grupo de gases altamente reactivos conocidos como "óxidos de nitrógeno (NO_x)". NO₂ se forma rápidamente de fuentes móviles e industriales y contribuye a la formación del ozono al nivel del suelo, y contaminación de partículas finas.

óxidos de nitrógeno (NO_x) - es un grupo de gases compuestos de nitrógeno y oxígeno. Dos de los óxidos de nitrógeno más comunes son el óxido nítrico (NO) y el dióxido de nitrógeno (NO₂).

ozono (O₃) - el ozono al nivel del suelo u ozono "malo" que no se emite directamente al aire, se crea por reacciones químicas entre los óxidos de nitrógeno (NO_x) y los compuestos orgánicos volátiles (VOC) en presencia de la luz solar.

partículas - también conocidas como contaminación de partículas (PM), es una mezcla compleja de partículas extremadamente pequeñas y gotas de líquido. La contaminación de partículas está formada por varios componentes, incluyendo los ácidos (como nitratos y sulfatos), químicos orgánicos, metales y polvo.

PM_{2.5} - son partículas finas de 2.5 micrómetros de diámetro y más pequeñas. Estas partículas pueden ser emitidas directamente de fuentes tales como incendios forestales y la quema de leña.

smog - neblina o calina combinada con humo y otros contaminantes atmosféricos.

dióxido de azufre - es un gas tóxico con un olor fuerte e irritante. Es uno del grupo de gases altamente reactivos conocidos como "óxidos de azufre".

Compuestos orgánicos volátiles (VOCs) - son un grupo grande de químicos basados en carbono que fácilmente se convierten en vapores o gases. Incluyen compuestos químicos artificiales y naturales.

combustible granulado - cápsulas pequeñas compactadas con serrín y otros desechos de madera. Estas capsulas son quemadas en estufas de leña para calentar el hogar.

AB 617 Incentive Funding

- Year 1 – AB 134 (Early Action Funding – District Wide):
 - \$75 million
 - Current liquidation deadline: 6/30/2021
 - Proposed expenditure deadline extension: 6/30/2023
- Year 2 – SB 856 (SC Fresno/Shafter CERP Implementation):
 - \$59.7 million
 - Current liquidation deadline: 6/30/2022
 - Proposed expenditure deadline extension: 6/30/2024
- Year 3 – AB 74 (Stockton/Arvin-Lamont CERP Implementation):
 - \$53.9 million
 - Current liquidation deadline: 6/30/2025

Financiamiento de Incentivos de AB 617

- Año 1 – AB 134 (Financiamiento de Acción Temprana - Todo el Distrito):
 - \$75 millones
 - Fecha límite de liquidación actual: 6/30/2021
 - Extensión propuesta del plazo de gastos: 6/30/2023
- Año 2 – SB 856 (Implementación del CERP de Centro-Sur Fresno/Shafter):
 - \$59.7 millones
 - Fecha límite de liquidación actual: 6/30/2022
 - Extensión propuesta del plazo de gastos: 6/30/2024
- Año 3 – AB 74 (Implementación del CERP de Stockton/Arvin-Lamont):
 - \$53.9 millones
 - Fecha límite de liquidación actual: 6/30/2025

San Joaquin Valley Air Pollution Control District
Assembly Bill 617 Implementation Budget Expenditures (FY 2021/22)

The District fulfills its mandates under AB 617 with the Program Components and Major Activities summarized in the table below (forecasted budget expenditures fiscal year 2021/22).

Program Component	Major Activities	Allocation
Community Air Monitoring	<ul style="list-style-type: none"> • Collaborating with Community Steering Committees to identify sources and locations of air pollution concerns in the community and develop a Community Air Monitoring Plan based on this information to support the implementation of the Community Emissions Reduction Program • Purchase and maintenance of air monitoring equipment • Coordination with owners of property where equipment will be placed, including any necessary contracts/agreements for rights to access and infrastructure improvements needed to power and secure equipment • Collection of air pollution data for both short- and long-term air quality at the community level to assess progress towards improved air quality • Combining real-time air monitoring data and laboratory measurements to provide information the air pollution impact caused by emissions sources in selected communities • Providing real-time air quality data to inform community members of current conditions within the community and support exposure reduction strategies by informing community's daily activities and school programs, and protect children during school activities • Development and maintenance of AB 617 community specific air monitoring webpages with real-time air quality data, historical air quality data, and weekly and quarterly air monitoring updates 	\$3,005,356

San Joaquin Valley Air Pollution Control District
 Assembly Bill 617 Implementation Budget Expenditures (FY 2021/22)

Draft

<p>Community Emissions Reduction Programs</p>	<ul style="list-style-type: none"> • Working with the newest AB 617 selected community of Arvin/Lamont to develop a Community Emissions Reduction Program • Establish Community Steering Committees (CSC) in each of the selected AB 617 communities • Provide necessary training to CSC members their sources of air pollution in the community, including mobile and stationary source inventories • Work with the CSC to establish sources and locations of air pollution concerns and develop a suite of emissions and exposure reduction measures to address them • Compile the CSC recommended measures into a comprehensive Community Emissions Reduction Program (CERP) and present to District’s Governing Board for adoption, once adopted, forwarded to CARB’s Board for final approval • Work with the CSC to implement the numerous measures included in the adopted CERPs, including extensive discussions with the CSC regarding measure implementation, ongoing reporting of progress • Development of incentive project plans for a variety of incentive-based measures in accordance with Community Air Protection incentive guidelines to enable the District to make available AB 617 funding for community-driven clean air projects • Conducting significant regulatory work, with added focus on sources of concern in the communities • Conducting enhanced enforcement of local, District, and state regulations • Working extensively with CSC and partner agencies and organizations, such as CARB, State Department of Pesticide Regulation (DPR), City of Fresno, City of Shafter, City of Stockton, Councils of Governments (COGs), Office of Environmental Health Hazard Assessment (OEHHA), Pacific Gas and Electric, Grid Alternatives, Community Action Partnership 	<p>\$4,965,644</p>

Draft

<p>Emission Reporting Coordination</p>	<ul style="list-style-type: none"> • District conducts major work every year to update the criteria pollutant emissions inventory for all stationary sources and toxic pollutant inventory in accordance with the schedule established in the state’s Air Toxics Hot Spots regulation and under CARB’s new Criteria Air Pollutants and Toxic Air Contaminants Regulation (CTR) • Pursuant to CTR, significant new work will is required to outreach the new requirements and collect and validate additional information from existing and new source categories • Identify permitted facilities that are within the AB 617 communities • Geocoding permitted facilities (i.e. converting street addresses to coordinates and then verifying the locations) • Surveying District permitted facilities and processing the information submitted to the District • Working with facilities to ensure the information required has been received and complete • Processing inventory data including quality assurance of the final data before data are submitted to CARB • Compiling the emissions inventory data from the District’s databases for each permitted facilities within the selected communities • Interactive website mapping tools utilize the geocoding data and other spatially-based data to present the community-level emissions • Interactive maps indicate locations of sensitive receptors (schools, hospitals, care facilities) and locations to community emissions inventory 	<p>\$788,525</p>
<p>Total</p>		<p>\$12,667,728</p>

Distrito de Control de la Contaminación del Aire del Valle de San Joaquín
Gastos del Presupuesto de Implementación del Proyecto de Ley de la Asamblea
617 (Año Fiscal 2021/22)

El Distrito cumple con sus mandatos bajo AB 617 con los Componentes del Programa y las Actividades Principales resumidas en la tabla a continuación (gastos presupuestarios previstos para el año fiscal 2021/21).

Componente del Programa	Actividades Principales	Asignación
Monitoreo del Aire de la Comunidad	<ul style="list-style-type: none"> • Colaborar con los Comités Directivos de la Comunidad para identificar las fuentes y ubicaciones de los problemas de contaminación del aire en la comunidad y desarrollar un Plan de Monitoreo del Aire de la Comunidad basado en esta información para apoyar la implementación del Programa de Reducción de Emisiones de la Comunidad • Comprar y mantener el equipo de monitoreo del aire • Coordinación con los propietarios de la propiedad donde se colocará el equipo, incluyendo los contratos/acuerdos necesarios para los derechos de acceso y las mejoras de infraestructura necesarias para suministrar energía y asegurar el equipo • Recopilación de datos de contaminación del aire para la calidad del aire a corto y largo plazo a nivel de la comunidad para evaluar el progreso hacia una mejor calidad del aire • Combinar datos de monitoreo del aire en tiempo real y mediciones de laboratorio para proporcionar información sobre el impacto de la contaminación del aire causada por las fuentes de emisiones en comunidades seleccionadas • Proporcionar datos sobre la calidad del aire en tiempo real para informar a los miembros de la comunidad sobre las condiciones actuales dentro de la comunidad y apoyar las estrategias de reducción de la exposición al informar las actividades diarias de la comunidad y los programas escolares, y proteger a los niños durante las actividades escolares • Desarrollo y mantenimiento de páginas web de monitoreo de aire específicas de la comunidad AB 617 con datos de calidad del aire en tiempo real, datos históricos de calidad del aire y actualizaciones de monitoreo de aire semanales y trimestrales 	\$3,005,356

Borrador

<p>Programas Comunitarios de Reducción de Emisiones</p>	<ul style="list-style-type: none"> • Trabajar con la comunidad AB 617 más reciente seleccionada de Arvin/Lamont para desarrollar un Programa de Reducción de Emisiones Comunitarias • Establecer Comités Directivos Comunitarios (CSC, por sus siglas en inglés) en cada una de las comunidades AB 617 seleccionadas • Brindar la capacitación necesaria a los miembros del Comité Directivo sobre las fuentes de contaminación del aire en la comunidad, incluyendo los inventarios de fuentes móviles y estacionarias • Trabajar con el Comité Directivo para establecer las fuentes y ubicaciones de los problemas de contaminación del aire y desarrollar un conjunto de medidas de reducción de emisiones y exposición para abordarlos • Recopilar las medidas recomendadas por el Comité Directivo en un Programa de Reducción de Emisiones Comunitarias (CERP) integral y presentarlas a la Mesa Directiva del Distrito para su adopción, una vez adoptadas, remitidas a la Junta de CARB para su aprobación final • Trabajar con el Comité Directivo para implementar las numerosas medidas incluidas en el CERP adoptado, incluyendo discusiones extensas con el Comité Directivo con respecto a la implementación de la medida, e informes continuos del progreso • Desarrollo de planes de proyectos de incentivos para una variedad de medidas basadas en incentivos de acuerdo con las pautas de incentivos del Protección del Aire Comunitario para permitir que el Distrito ponga a disposición fondos AB 617 para proyectos de aire limpio impulsados por la comunidad • Llevar a cabo un trabajo regulatorio significativo, con un enfoque adicional en las fuentes de preocupación en las comunidades • Realización de un cumplimiento mejorado de las regulaciones locales, del Distrito y estatales • Trabajar extensamente con el Comité Directivo y agencias y organizaciones asociadas, como CARB, Departamento Estatal de Regulación de Pesticidas (DPR, por sus siglas en inglés), Ciudad de Fresno, Ciudad de Shafter, Ciudad de Stockton, Consejos de Gobiernos (COG, por sus siglas en inglés), Oficina de Evaluación de Riesgos para la Salud Ambiental (OEHHA, por sus siglas en inglés), Pacific Gas and Electric, Grid Alternatives, Community Action Partnership of Kern, Tree Fresno, Tree Foundation of Kern, el Puerto de Stockton, y otros sobre el desarrollo e implementación de medidas del CERP 	<p>\$4,965,644</p>

Meeting Highlights*
AB 617 Fresno Community Steering Committee Meeting #31
March 10, 2021 | 5:30 pm - 7:30 pm
Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Send feedback to the District on the vegetative barriers project plan for CARB
- Sign up for the Tree Fresno/CCEJN tree planting event if interested
- Email the District if interested in being a community co-host for a future CSC meeting
- Recommend tree-planting locations on My Social Pinpoint
- Send the vegetative barriers subcommittee suggestions for community outreach

Action items for San Joaquin Valley Air Pollution Control District (District):

- Post strategic planning session notes on AB 617 Fresno webpage
- Send a link to strategic planning notes when posted
- Ensure follow up and reporting on recommendations made during the annual planning session, including, but not limited to:
 - Follow up with Isabel re: incentives for lawn and garden equipment
 - Confirm the District can provide a CSC website training to Spanish-speaking CSC members
 - Confirm that any documents sent to CSC members match the presentations shown during CSC meetings
- Schedule next air filtration and school bus subcommittee meeting

Welcome and Introductions

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, District

Nayamin Martinez, Central California Environmental Justice Network, Community Co-host

Erica introduced herself and the ILG team, welcomed all participants and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda and Zoom controls.

Ryan welcomed the CSC and expressed excitement about the strategic planning process. Community co-host, Nayamin Martinez, urged the CSC members to take a more proactive approach to co-hosting the meetings and encouraged fellow CSC members to help design the meetings based on their priorities.

Annual Planning Topic #2: Reporting & Tracking

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica explained to the CSC that the planning topic for this meeting will center on reporting and tracking; what is working well and what suggestions the CSC has for improvement in 2021. Presentation highlights included:

- The Reporting & Tracking topic includes:
 - Reporting about subcommittee activities
 - Website updates
 - Reporting from other agencies (DPR, CARB, City of Fresno, etc.)
 - Reporting about air monitoring
 - Reporting about CERP implementation progress
- What is going well and what improvement is needed?

The CSC had a robust discussion about Reporting & Tracking. The comprehensive notes taken during the meeting are attached.

Comment: The CSC spent the last meeting discussing Administration and one recommendation was that the community co-host play a more active role in the meetings. How will that change moving forward?

ILG Response: The CSC can talk about that today and what that is going to look like. ILG and the District want to best integrate the CSC into the meetings, including the expertise, availability and interests of the co-host.

Comment from Spanish-speaker: I bought some machinery two months ago and was told I would be helped with the expenses, but no one has gotten in touch with me.

Co-host Response: The District will follow up with you.

Comment: Regarding enhanced enforcement, the District needs something that takes pictures at night when people are running their fireplaces.

District Response: The District has night vision cameras and that technology takes good images. During nighttime surveillance, the District sends staff out in pairs because of safety concerns, but COVID has posed a challenge to that. The District can also explore how surveillance is conducted post-COVID.

CARB Comment: CARB recognizes the gap in providing information to the CSC and plans to work with the District and CSC members on how to do a better job sharing information and being transparent.

Comment from Spanish-speaker: What happens with fines that the District issues?

District Response: When the District collects fines, the funds go into the various programs the District runs for air pollution reduction activities.

Erica asked the CSC a set of questions to prepare them for prioritizing CERP measures at the next meeting. The full list of suggestions is included in the planning session notes.

District Comment: The District needs the CSC to help prioritize which CERP measures are most important to the CSC. Lower priority doesn't mean a particular measure won't be worked on, but higher priority measures are the ones the CSC will constantly meet and talk about.

Co-host Comment: I agree. I think the CSC should go beyond discussing the measures. What we have heard is that the CSC wants a more prominent role in what is being worked on and

what projects are being sent to CARB. This process should be about action and what is most important to the community members.

Standing Updates

Monitoring Update:

Jon Klassen, Director of Air Quality Science and Planning, District

Jon gave an update on community air monitoring. Presentation highlights included:

- The District posted a report summarizing the third quarter 2020 air monitoring data to the AB 617 webpage in English and Spanish
- The District is summarizing and preparing a report with fourth quarter 2020 air monitoring data
- The Madison Elementary School site has been established
- The District is continuing work with Fresno Unified to get the last air monitor deployed to Edison High School
- The District is integrating community air monitoring data into RAAN

Truck Rerouting Subcommittee Update:

Scott Mozier, Public Works Director, City of Fresno

Scott gave an update on the truck rerouting subcommittee and the RFP. Presentation highlights included:

- Fresno City Council approved and authorized \$250,000 in Measure C funds to go toward the truck rerouting study
- The City of Fresno will provide the updated draft RFP with subcommittee feedback to the subcommittee next week
- District and City of Fresno staff are preparing the cost-sharing and reimbursement agreement

Vegetative Barriers Subcommittee:

Yesenia Venegas, CivicSpark Fellow

Yesenia updated the CSC on the vegetative barriers subcommittee. Presentation highlights included:

- Tree Fresno and CCEJN are hosting a tree planting Tree planting on March 20; CSC members can sign up on treefresno.org
- The [Social Pinpoint](#) site is ready to use for the CSC's and other community residents tree planting recommendations
- The subcommittee is looking for feedback on how to conduct outreach in the community

- The vegetative barriers project plan is almost ready for submittal to CARB; please provide feedback

CARB Update:

Brian Moore, Office of Community Air Protection, CARB

Brian gave the CARB agency update. Presentation highlights included:

- CARB will reach out to CSC members for feedback on the AB 617 community selection process
- CARB is looking for creative ways to get resources into communities that need them, but are not officially selected for AB 617
- CARB is tracking statewide efforts implemented in each community and is happy to update the CSC at a future meeting
- CARB can offer education for areas of interest to the CSC, beyond air monitoring

Wrap Up/Next Steps

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica thanked everyone for attending the meeting. Community co-host, Nayamin, thanked everyone for the great discussion and expressed enthusiasm for seeing her fellow CSC members co-host in the future.

Comment: When will the CSC get an update on school filtration and electric buses?

District Response: The District is in communication with Fresno Unified and Washington Unified. Both districts are identifying what air filtration systems are going to work well for them. An application from Fresno Unified for the school buses will be submitted in the near future.

Reminders

The next regularly scheduled CSC meeting is April 14 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comments

No public comment.

Annual Planning Notes – Reporting & Tracking

Reporting About Subcommittee Activities

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Urban greening, vegetative barriers and truck rerouting committees are working well – CSC should continue • Air monitoring subcommittee could use additional participation now that we have data rolling in; this may need to be made a higher priority in the main CSC discussion agendas • We should think about the best approach to linking data to enforceability • Ownership of the subcommittees by CSC members is working well, especially when the member has expertise • Really appreciate the work on the vegetative barriers subcommittee 	<ul style="list-style-type: none"> • As a small group, each CERP measure may need a subcommittee and/or additional CSC member engagement to cover all the necessary activities and updates • Some CSC members are feeling uninformed about the progress being made; CSC members would love to see more progress being made, or reported on • Can issues brought up in the committees be brought back to the larger CSC more often? • Stationary sources haven't been reported on in about a year; need more frequent updates • CSC agendas are often too tight to discuss all committee updates; a table or tracker on progress would help • Subcommittee meeting notes would be helpful • Consider appointing a chair position for each subcommittee that is responsible for reporting back at the CSC meetings in writing and verbally

Website Updates

Working Well	Suggestions for 2021
	<ul style="list-style-type: none"> • Members of the public may have difficulty finding information on the website • The web development team should adhere to the 3-click rule for ease of navigation • Air monitoring information should be easier to find for the general public, especially those stakeholders who are connected to the areas where the monitors are placed • The website still has some navigation challenges for the Spanish speaking

	<p>participants; see 3 click rule suggestion above</p> <ul style="list-style-type: none"> • Search terminology should be based on general public terminology, not technical terms • Would a CSC website training be helpful? Spanish speakers say yes
--	---

Reporting from Other Agencies

CARB, DPR, City of Fresno, etc.

Working Well	Suggestions for 2021
	<ul style="list-style-type: none"> • Monitoring for pesticides has not yet been addressed by DPR or the AD; periodic updates are appreciated, but often the reports the CSC receives are too minimal • Written summary from subcommittees and partner agencies may be helpful for more robust updates • Transparency is key; CSC wants to be at the table during the discussions with partner agencies to help make decisions, not just reported back to • More communication would be helpful • Clarify decision-making authority of the CSC with these partner agencies • City council is still uninformed about AB 617 – what kind of status report or orientation can the CSC or AD give to the City Council in advance of discussions about planning process changes? • Ask city about providing status report on canal and street cleaning

Reporting about Air Monitoring Reporting about the CERP Implementation Process Community Co-host Suggestions

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Monitor placement in schools is important and sends the right signal to the community about the importance of air quality 	<p>CERP Implementation</p> <ul style="list-style-type: none"> • Prefer to see milestones and a Gantt chart by month, as well as an

<ul style="list-style-type: none"> • Thanks to Maricela and the rest of the team for their help with social media updates • CSC members are enjoying the co-host process and opportunity 	<p>estimation of completion for major tasks</p> <p>Air Monitoring</p> <ul style="list-style-type: none"> • Technical support and subject matter expertise on air monitoring is important and should be maintained moving forward; include PM 2.5, dust, mold, genetics, etc. • CARB is interested in working more closely with the CSC to share and interpret data • CSC should schedule a separate meeting to discuss and take action on some of the air monitoring concerns <p>Co-Hosts</p> <ul style="list-style-type: none"> • More community co-host engagement in each meeting • Discuss co-host role at the agenda-setting/planning meetings and assign specific responsibilities • Determine the comfort level of each co-host with facilitation and technology
--	---

2021 Reporting & Tracking Goals

If we could *fast forward* to the end of 2021... What do you think **SUCCESS** would look like in this Reporting & Tracking category?

What data, reporting & status updates are the **MOST IMPORTANT** for the CSC to have in 2021?

Reporting & Tracking Goals
<ul style="list-style-type: none"> • Timeline on a calendar • Expenditures and milestones; task-oriented approach to CERP implementation and reporting • The committee isn't making clear decisions or seeing things happen as quickly as possible; give committee more opportunities to advise the AD and vote; make advisory role more clear and decision-making framework more consistent • Measurable milestones and reporting around air quality in the CERP strategies • Focus on trust building and relationship building; continue to discuss and disagree respectfully • Review the blueprint at least once a year to ensure we're operating within the committee structure and priorities

CERP Prioritization

In preparation for prioritizing the CERP measures at the next meeting, please answer these questions:

Questions	Suggestions/Comments
What type of written background information do you need to receive IN ADVANCE of the meetings to best prepare you for the discussion?	<ul style="list-style-type: none"> • CSC needs to understand the timelines for each measure • Clarify the air monitoring information and timeframes? • Understand what else is happening with the other measures; what activities impact implementation? • Need to see a Gantt chart with milestones, funding, MOUs, etc. • Clarity around monetary capital vs. human capital (enforcement) activities • More information on the ROAR program and where we have approvals to proceed Roles, responsibilities and plans for addressing land use discussions (in industrial zones)
Do you need a CERP refresher? Should the Air District provide a verbal recap of CERP strategies DURING the meeting?	<ul style="list-style-type: none"> • Some members implied that a short overview would be helpful
What level of detail do you need DURING the meeting?	<ul style="list-style-type: none"> • Not discussed
Would you be willing to answer a Doodle Poll about your CERP priorities?	<ul style="list-style-type: none"> • Yes
Would you be open to using other forms of polling technology DURING the meeting?	<ul style="list-style-type: none"> • Only if translation can be seamless and there is training offered

Other Notes

Suggestions for 2021
<ul style="list-style-type: none"> • <i>The “replace woodburning devices and enhanced enforcement items in the CERP” need more gas burning fireplaces registered</i>

- *Need quicker response from inspectors on enforcement*
- *Are there internet connected devices that would help with enforcement in the “check before you burn time”? (Ryan referenced night vision cameras and nighttime surveillance)*
- *The City councilmember meetings did not result in much action; we need their support to move forward*
- *Funding should be available to move forward with the projects; CSC would like to see more progress (AD responded about some progress, additional outreach, reasons for delay, etc.)*
- *Knowing what is in the queue and what has been submitted would be helpful for the CSC*
- *How does prioritization align with the resolution and submission of plans related to the CERP that the AD is sending to CARB?*
- *More buses are needed for the schools*
- *There are concerns about what happens to air quality when the kids return to school*
- *If we plant more trees, we’ll need to remove old logs and trim trees that are too large*
- *Old TVs and refrigerators are becoming more prevalent, oil discharge is polluting subsoil; we need to find a program to help with that effort*
- *We should mold CSC agendas to allow for more flexibility in the discussion and free-flowing conversation*
- *What is happening with the fines? (Ryan answered that they pay for air pollution reduction activities, including having enforcement of District regulations)*

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #31
10 de marzo de 2021 | 5:30 pm - 7:30 pm
Reunión de Zoom Virtual

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno (Comité):

- Enviar comentarios al Distrito sobre el plan del proyecto de barreras vegetativas para CARB
- Regístrese para el evento de plantación de árboles Tree Fresno/CCEJN si está interesado
- Enviar un correo electrónico al Distrito si está interesado en ser un coanfitrión de la comunidad para una futura reunión del Comité
- Recomendar ubicaciones para plantar árboles en My Social Pinpoint
- Enviar al subcomité de barreras vegetativas sugerencias para el alcance comunitario

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Publicar notas de la sesión de planificación estratégica en la página web AB 617 Fresno
- Enviar un enlace a las notas de planificación estratégica cuando se publiquen
- Garantizar el seguimiento y la presentación de informes sobre las recomendaciones realizadas durante la sesión de planificación anual, incluidas, entre otras:
 - Seguimiento con Isabel: incentivos para equipos de césped y jardín
 - Confirmar que el Distrito puede proporcionar capacitación del sitio web del Comité a los miembros de Comité hispanohablantes
 - Confirmar que todos los documentos enviados a los miembros del Comité coincidan con las presentaciones que se muestran durante las reuniones del Comité
- Programar la próxima reunión del subcomité de filtración de aire y autobuses escolares

Bienvenida e Introducciones

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)
Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle
Nayamin Martinez, Central California Environmental Justice Network, Coanfitriona de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los elementos de mantenimiento y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión y los controles de Zoom.

Ryan dio la bienvenida al Comité y expresó su entusiasmo por el proceso de planificación estratégica. La coanfitriona de la comunidad, Nayamin Martinez, instó a los miembros del

Comité a adoptar un enfoque más proactivo para ser coanfitriones de las reuniones y alentó a los demás miembros del Comité a ayudar a diseñar las reuniones según sus prioridades.

Tema de Planificación Anual # 2: Informes y Seguimiento

Erica Manuel, Facilitadora Y CEO/Directora Ejecutiva, ILG

Erica explicó al Comité que el tema de planificación de esta reunión se centrará en la presentación de informes y el seguimiento; qué está funcionando bien y qué sugerencias tiene el Comité para mejorar en 2021. Puntos importantes de la presentación:

- El tema Informes y Seguimiento incluye:
 - Informar sobre las actividades del subcomité
 - Actualizaciones del sitio web
 - Informes de otras agencias (DPR, CARB, Ciudad de Fresno, etc.)
 - Informar sobre el monitoreo del aire
 - Informar sobre el progreso de la implementación del CERP
- ¿Qué va bien y qué mejoras se necesitan?

El Comité tuvo una buena discusión sobre Informes y Seguimiento. Se adjuntan las notas detalladas tomadas durante la reunión.

Comentario: El Comité pasó la última reunión discutiendo la administración y una recomendación fue que el coanfitrión de la comunidad desempeñe un papel más activo en las reuniones. ¿Cómo cambiará eso en el futuro?

Respuesta de ILG: El Comité puede hablar sobre eso hoy y cómo será. ILG y el Distrito quieren integrar mejor al Comité en las reuniones, incluida la experiencia, la disponibilidad y los intereses del coanfitrión.

Comentario de hispanohablante: Compré maquinaria hace dos meses y me dijeron que me ayudarían con los gastos, pero nadie se ha puesto en contacto conmigo.

Respuesta de la Coanfitriona: El Distrito se pondrá en contacto con usted.

Comentario: Con respecto al cumplimiento mejorado, el Distrito necesita algo que tome fotografías por la noche cuando la gente está encendiendo sus chimeneas.

Respuesta del Distrito: El Distrito tiene cámaras de visión nocturna y esa tecnología toma buenas imágenes. Durante la vigilancia nocturna, el Distrito envía personal en parejas debido a preocupaciones de seguridad, pero COVID ha planteado un desafío a eso. El Distrito también puede explorar cómo se lleva a cabo la vigilancia después de COVID.

Comentario de CARB: CARB reconoce la brecha en el suministro de información al Comité y planea trabajar con el Distrito y los miembros del Comité sobre cómo hacer un mejor trabajo compartiendo información y siendo transparente.

Comentario de hispanohablante: ¿Qué pasa con las multas que emite el Distrito?

Respuesta del Distrito: Cuando el Distrito recauda las multas, los fondos se destinan a los diversos programas que ejecuta el Distrito para actividades de reducción de la contaminación del aire.

Erica le hizo una serie de preguntas al Comité para prepararlos para priorizar las medidas del CERP en la próxima reunión. La lista completa de sugerencias se incluye en las notas de la sesión de planificación.

Comentario de Distrito: El Distrito necesita que el Comité ayude a priorizar qué medidas del CERP son más importantes para el Comité. Una prioridad más baja no significa que no se trabajará en una medida en particular, pero las medidas de mayor prioridad son las que el Comité se reunirá y hablará constantemente.

Comentario de la Coanfitriona: Estoy de acuerdo. Creo que el Comité debería ir más allá de discutir las medidas. Lo que hemos escuchado es que el Comité quiere un papel más destacado en lo que se está trabajando y en los proyectos que se envían a CARB. Este proceso debe tener que ver con la acción y lo que es más importante para los miembros de la comunidad.

Actualizaciones Permanentes

Actualización de Monitoreo:

Jon Klassen, Director de Ciencia y Planificación de la Calidad del Aire, Distrito

Jon dio una actualización sobre el monitoreo del aire de la comunidad. Puntos importantes de la presentación:

- El Distrito publicó un informe que resume los datos de monitoreo del aire del tercer trimestre de 2020 en la página web AB 617 en inglés y español
- El Distrito está resumiendo y preparando un informe con datos de monitoreo del aire del cuarto trimestre de 2020
- Se ha establecido el sitio de Madison Elementary
- El Distrito continúa trabajando con el Distrito Escolar Unificado de Fresno para implementar el último monitor de aire en Edison High School.
- El Distrito está integrando datos de monitoreo del aire de la comunidad en RAAN

Actualización del Subcomité de Desviación de Camiones:

Scott Mozier, Director de Obras Públicas, Ciudad de Fresno

Scott dio una actualización sobre el subcomité de desviación de camiones y la RFP. Puntos importantes de la presentación:

- El Ayuntamiento de Fresno aprobó y autorizó \$250,000 en fondos de la Medida C para destinarlos al estudio de desviación de los camiones
- La ciudad de Fresno proporcionará el borrador de RFP actualizado con comentarios del subcomité al subcomité la próxima semana.

- El personal del Distrito y la Ciudad de Fresno está preparando el acuerdo de reembolso y participación en los costos

Subcomité de Barreras Vegetativas:

Yesenia Venegas, CivicSpark Fellow

Yesenia actualizó al Comité sobre el subcomité de barreras vegetativas. Puntos importantes de la presentación:

- Tree Fresno y CCEJN están organizando una plantación de árboles el 20 de marzo; Los miembros de Comité pueden registrarse en treefresno.org
- El [sitio Social Pinpoint](#) está listo para usarse para las recomendaciones de plantación de árboles del Comité y otros residentes de la comunidad.
- El subcomité está buscando comentarios sobre cómo llevar a cabo actividades de alcance en la comunidad.
- El plan del proyecto de barreras vegetativas está casi listo para ser presentado a CARB; por favor envíe sus comentarios

Actualización CARB:

Brian Moore, Oficina de Protección del Aire de la Comunidad, CARB

Brian dio la actualización de la agencia CARB. Puntos importantes de la presentación:

- CARB se comunicará con los miembros de Comité para obtener comentarios sobre el proceso de selección de la comunidad AB 617
- CARB está buscando formas creativas de llevar recursos a las comunidades que los necesitan, pero no han sido seleccionados oficialmente para AB 617.
- CARB está rastreando los esfuerzos estatales implementados en cada comunidad y se complace en actualizar al Comité en una reunión futura
- CARB puede ofrecer educación para áreas de interés para el Comité, más allá del monitoreo del aire

Conclusión/Próximos pasos

Erica Manuel, Facilitadora Y CEO/Directora Ejecutiva, ILG

Erica agradeció a todos por asistir a la reunión. La coanfitriona de la comunidad, Nayamin, agradeció a todos por la gran discusión y expresó su entusiasmo de ver a sus compañeros miembros de Comité ser coanfitriones en el futuro.

Comentario: ¿Cuándo recibirá el Comité una actualización sobre la filtración escolar y los autobuses eléctricos?

Respuesta del Distrito: El Distrito está en comunicación con el Distrito Unificado de Fresno y el Distrito Unificado de Washington. Ambos distritos están identificando qué sistemas de filtración de aire funcionarán bien para ellos. Próximamente se presentará una solicitud del Distrito Escolar Unificado de Fresno para los autobuses escolares.

Recordatorios

La próxima reunión del Comité programada regularmente es el 14 de abril a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

South Central Fresno Agenda for Community Steering Committee Meeting #31

Wednesday, March 10, 2021 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>
Meeting ID: 982 5906 9963
Passcode: 617

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Erica Manuel, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Nayamin Martinez, Community Co-Host
- 5:40 p.m. 2021 Annual Planning Review**
Erica Manuel, Facilitator
- 5:50 p.m. Annual Planning #2: Reporting, Tracking, & How to Prioritize Strategies**
Discuss how to best continue reporting and tracking metrics in the Community Emissions Reduction Program, as well as next steps for prioritizing strategies for implementation
Erica Manuel, Facilitator
- 7:00 p.m. Standing Updates**
Monitoring Update
Other Subcommittee Updates
 - Truck Rerouting Subcommittee
 - Vegetative Barriers Subcommittee*Valley Air District Staff*
CARB Update
CARB Staff
- 7:20 p.m. Wrap Up/Next Steps**
Next CSC Meeting: April 14, 2021 via Zoom
Erica Manuel, Facilitator
- 7:25 p.m. Public Comment**

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #31

Miércoles, 10 de marzo de 2021 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>

ID de la Reunión: 982 5906 9963

Código de Acceso: 617

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-240-3210

Código de acceso: 2378691#

- 5:30 p.m. Bienvenida e Introducciones**
Erica Manuel, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Nayamin Martinez, Co-anfitrión Comunitario
- 5:40 p.m. Revisión de la Planificación Anual de 2021**
Erica Manuel, Facilitadora
- 5:50 p.m. Planificación Anual #2: Informes, Seguimiento y Como Priorizar Estratélicas**
Discutir la mejor manera de continuar informando e siguiendo métricas en el Programa de Reducción de Emisiones Comunitarias, así como los próximos pasos para priorizar las estrategias de implementación
Erica Manuel, Facilitadora
- 7:00 p.m. Actualizaciones Permanentes**
Actualización de Monitoreo del Aire
Otras Actualizaciones de los Subcomités
- Subcomité de Desviación de Camiones
 - Subcomité de Barreras Vegetativas
- Personal del Distrito del Aire del Valle*
Actualización de CARB
Personal de CARB
- 7:20 p.m. Concluir/Próximos Pasos**
Próxima reunión del Comité Directivo: 14 de abril de 2021 a través de Zoom
Erica Manuel, Facilitadora
- 7:25 p.m. Comentario Público**

2021 Reporting & Tracking Goals

Objetivos de Informes y Seguimiento de 2021

If we could *fast forward* to the end of 2021... What do you think **SUCCESS** would look like in this Reporting & Tracking category?

*Si pudiéramos avanzar rápidamente hasta finales de 2021... ¿Cómo cree que sería **ÉXITO** en esta categoría de Informes y Seguimiento?*

What data, reporting & status updates are **MOST IMPORTANT** for the CSC to have in 2021?

*¿Qué datos, informes y medición son los **MÁS IMPORTANTES** que debe lograr el Comité Directivo en 2021?*

Reporting & Tracking Goals

Objetivos de Informes y Seguimiento

CERP Prioritization

In preparation for prioritizing the CERP measures at the next meeting, please answer these questions:

Question	Suggestions/Comments
What type of written background information do you need to receive IN ADVANCE of the meetings to best prepare you for the discussion?	<ul style="list-style-type: none"> •
Do you need a CERP refresher? Should the Air District provide a verbal recap of CERP strategies DURING the meeting?	<ul style="list-style-type: none"> •
What level of detail do you need DURING the meeting?	<ul style="list-style-type: none"> •
Would you be willing to answer a Doodle Poll about your CERP priorities?	<ul style="list-style-type: none"> •
Would you be open to using other forms of polling technology DURING the meeting?	<ul style="list-style-type: none"> •

Priorización del CERP

En preparación para priorizar las medidas del CERP en la próxima reunión, por favor responda a estas preguntas:

Pregunta	Sugerencias/Comentarios
¿Qué tipo de información de antecedentes por escrito necesita recibir ANTES de las reuniones para prepararse mejor para la discusión?	•
¿Necesita un repaso del CERP? ¿Debería el Distrito del Aire proporcionar un resumen verbal de las estrategias del CERP DURANTE la reunión?	•
¿Qué nivel de detalle necesita DURANTE la reunión?	•
¿Estaría dispuesto a responder a una encuesta de Doodle sobre sus prioridades del CERP?	•
¿Estaría dispuesto a utilizar otras formas de tecnología de sondeo DURANTE la reunión?	•

Meeting Highlights*
AB 617 Fresno Community Steering Committee Meeting #30
February 10, 2021 | 5:30 pm - 7:30 pm
Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Send CARB a list of locations for future enforcement

Action items for San Joaquin Valley Air Pollution Control District (District):

- Confirm City of Fresno will provide the Truck Rerouting Study timeline to the CSC
- Provide a copy of the strategic planning slides to the CSC
- Ensure that public members get subcommittee meeting notifications if those meetings are open to the public

Welcome and Introductions

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, District
Community Co-host, Ed Ward, Fresno Community Member

Erica introduced herself and the ILG team, welcomed all participants and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda and Zoom controls.

Ryan welcomed the CSC to the first 2021 Annual Planning meeting and thanked them for the time and energy they have invested in AB 617. Community co-host, Ed Ward, expressed how amazed he was by the path the CSC has taken and said he is humbled and thankful to be a part of the group.

2021 Annual Planning Approach

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica summarized feedback received. She reported that the CSC agreed they want an aligned strategy for 2021 to ensure that the CERP and implementation tactics are clear. Erica previewed the 2021 planning process that would accomplish those goals. Presentation highlights included:

- Three main areas of discussion to cover:
 - Administration: meeting agendas, meeting times, structure, committees, etc.
 - Reporting & Tracking: materials and updates received from the Air District, from other agencies, from committees, etc.
 - CERP Strategies: prioritization and implementation
- Outcomes for the planning process should include refinement of administration items, agreement on reporting and tracking, agreement on approach for prioritizing CERP measures, a prioritized list of CERP measures for 2021, a list of other key activities to accomplish and clarity on metrics for success in 2021

Question: What is happening after today? Are we affirming we agree with this plan and then scheduling the first meeting?

ILG Response: Yes, and if you agree, we are starting today.

Question: Will you go in depth about the overarching goals of administration?

ILG Response: Yes, I will give you a download of what administration means to the planning committee and issues related to administration of the committee.

Comment: Without seeing anything in writing, I can't agree to the priorities today.

ILG Response: That's ok, we are doing live notes and real-time discussions. We will not make any decisions.

Annual Planning Topic #1: Goals & Administration

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica explained to the CSC that this first conversation will center on administration and what is working well and what suggestions they have for improvement in 2021. Presentation highlights included:

- The Administration topic includes:
 - CSC Meetings
 - Subcommittees
 - Notifications and Updates
 - Translation, Interpretation and Access
 - Membership
- What is going well and what improvement is needed?

The CSC had a robust discussion about Administration. The comprehensive notes taken during the meeting are attached.

Question: What does code of conduct mean?

ILG Response: It is an approach for how the CSC will operate and engage with one another.

CARB Comment: If anyone on the CSC has any questions about how CARB does things, such as staff, budget, etc., please contact us.

ILG Response: Thank you.

Erica asked the CSC to type their 2021 administration goals into the chat. Suggestions are captured under the complete chat log and included in the annual planning notes.

Standing Updates

Truck Rerouting Subcommittee Update:

Scott Mozier, Public Works Director, City of Fresno

Scott gave an update on the truck rerouting subcommittee and the RFP. Presentation highlights included:

- There is an agenda item for the March 4th City Council meeting where the Council is scheduled to approve a total of \$250,000 through Measure C funding and \$500,000 in AB 617 funds for the truck rerouting study
- The subcommittee has asked that the truck reroute RFP and consultant contract both be reviewed by the CSC before being made final
- RFP will go to subcommittee for approval in March and to the CSC for approval in April
- Full study to be completed Fall 2022

Question: I was under the assumption that we may not commit the entire \$500,000 to this truck study, so we have funds available to implement the possible changes identified from it.

City of Fresno Response: This decision would establish that \$750,000 is the maximum amount. There is still plenty of time in the RFP process to indicate a lower budget for the consultant. This is a very generous amount for a truck study.

Vegetative Barriers Subcommittee:

Nayamin Martinez, Fresno CSC Member

Nayamin updated the CSC on the Vegetative Barriers Subcommittee. Presentation highlights included:

- The subcommittee had a productive meeting where they identified partners
- There is already an opportunity to partner with Tree Fresno
- Tree planting is scheduled for early April; this would be a participatory process and the CSC can say which areas to prioritize to plant these trees

School Filtration and Bus Subcommittee:

Jaime Holt, Chief Communications Officer, District

Jaime gave a brief update on the School Filtration and Bus Subcommittee. Presentation highlights included:

- Subcommittee is in discussions with Fresno Unified for buses and the associated infrastructure
- Continuing to work on the application for air filtration
- The District received authorization from their board to start a new school air filtration program

CARB Update:

Brian Moore, Office of Community Air Protection, CARB

Brian gave the CARB agency update. Presentation highlights included:

- New management at CARB related to AB 617; Chanel Fletcher and Deldi Reyes. Their bios were hyperlinked in the chat
- February 25th board meeting will include selecting next year's AB 617 communities
- Blueprint guidance is currently being updated

Monitoring Update:

Chay Thao, Program Manager, District

Chay gave an update on community air monitoring. Presentation highlights included:

- Just placed PM2.5 monitor at Madison Elementary; should be on [website soon](#)
- One site left; Edison High School

Enforcement Updates

Jason Lawler, Manager, District

Justin Shields, Community Outreach and Enforcement, CARB

Jason and Justin updated the CSC on enforcement activities. Presentation highlights included:

- Residential wood burning enforcement: for first half of the wood burning season, the District responded to six public complaints, resulting in one violation. There were a total of 47 violations found within AB 617 community
- Illegal open burning enforcement: responded to 14 public complaints and surveillance; five violations issued
- Fugitive dust: completed inspections at 42 construction project sites
- Statewide anti-idling enforcement: no additional violations found from surveillance efforts during the second half of year
- Stationary source inspections: total of 141 inspections, 23 new violations (seven emissions-related)
- CARB staff was in South Central Fresno two days in 4th quarter of 2020. They performed 49 inspections on 45 heavy duty vehicles and issued three citations for non-compliant TRUs
- Inspected two pieces of off-road equipment and found them to be in compliance
- While in the field, CARB staff performed roaming idling investigations on areas the community has expressed concerns of; all were in compliance

Comment: I called in a complaint and the AD didn't respond quickly.

District Response: That information was forwarded on to our Compliance Director so they can find out why that happened. We will reach out to you soon.

Wrap Up/Next Steps

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica thanked everyone for attending and making the meeting productive. Community co-host, Ed, thanked everyone for participating and said he is humbled by the talent and concern for cleaning up the community. He encouraged the CSC participants to sit in on CARB's rail listening session in March because of the potential large emissions reductions rail has.

Reminders

The next regularly scheduled CSC meeting is March 10 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comments

Comment: I am not getting notifications about the air monitoring subcommittee and I want to know what I can do to help.

ILG: Thank you for that. We have captured that public members aren't getting notifications in the notes.

Comment: Someone should go around in the evenings to check for chimneys.

ILG Response: I believe the District does perform this, but we will reflect the request that it be enhanced.

Annual Planning Notes - Administration

CSC Meetings

Agendas, Topics, Time Allocations, Technology, Frequency, Structure, Engagement, Code of Conduct, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Prep meetings are good • Facilitation team is good on CSC meetings • CSC and meetings have helped connect regional businesses and community groups/stakeholders – we're making connections and improvements 	<ul style="list-style-type: none"> • Make more time for discussion in the agenda; allow for active listening and discussion among the CSC and the AD • Need clarity and agreement on direction for the CSC by the CSC • Minimize repeat requests to the AD; need better process for tracking CSC requests and making sure they are completed • Code of conduct in meeting is important; there should be a clear understanding that we should hear one another, listen to one another, but not always agree

	<ul style="list-style-type: none"> • AD should respond to resident concerns and make sure follow through happens in a timely manner • Meeting agendas are too full, packed; need fewer agenda items and more time for discussion • There doesn't appear to be much action or progress between meetings; how to remedy/improve this? • Give co-host a larger role in the meeting; give a section of the agenda to present • Clearly delineate action items after each meeting, make sure there is follow through • Need more accountability and transparency from the Air District and CARB; especially around requests made during and between meetings • Comment from CARB: Feel free to email CARB with any suggestions/questions • Need one dedicated Air District staff person who is the point person for everything; someone who can track requests, seek answers and make sure requests are completed • Need faster Air District response time to questions and requests from the CSC
--	---

Subcommittees

Topics, Meeting Frequency, Times, Outcomes, Structure, Engagement, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Subcommittee process is good, but could be better with some modifications 	<ul style="list-style-type: none"> • Subcommittee meetings may need additional structure and revision to better lift up community voices • Need more progress and action between meetings • We need to balance getting everyone's feedback with the desire for productivity and progress on the CERP • More subcommittees may be needed to make real progress on CERP • Consider selecting a passionate CSC member to be a facilitator or meeting host for the subcommittees • Move the subcommittee start times to the early evenings so more residents can participate; if this is done, limit to one hour

	<ul style="list-style-type: none"> • Need Gantt chart of the CERP that highlights what we're doing in each subcommittee and when we're doing it • Each subcommittee should include: a timeline of activities from conception to completion, budget by task, staff hours, funding allocations, task assignments, etc.
--	--

Notifications & Updates

Calls, e-Mails, Printed & Mailed Updates, Doodle Polls, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Doodle polls are working well • Gratitude and thanks to the Air District staff for dropping off printed packets when requested • Spanish speakers appreciate the printed copies of materials and being able to read everything in a larger font 	<ul style="list-style-type: none"> • Meeting information and background may be arriving too late; more advance notice needed for materials and updates • Public members are not getting agendas or meeting notifications for subcommittee meetings; they need this information and want to be able to support committee goals • Need better AD notification and more detection for fireplace smoke* • Need more information about air pollution levels and reductions shared with the CSC; also important for AD to share on Facebook so CSC members can share with their networks

Translation, Interpretation & Access

During Meetings, Outside Meetings, Technology, etc.

Working Well	Suggestions for 2021
--------------	----------------------

<ul style="list-style-type: none"> • Translation of documents has improved over time – definitely important and getting better • Real time translation via Zoom in writing and on screen = very good • Live interpretation = good; helps Spanish speakers participate in the meetings; actually better through Zoom than in-person 	
---	--

Membership

Committee Makeup, Residents, etc.

Working Well	Suggestions for 2021
	<ul style="list-style-type: none"> • Consider whether we need to recruit more residents; clarify the process for that and how that may work; possibly advertise for CSC vacancies/openings • Make concerted outreach to the Hmong community for possibly participation and membership • Need more accountability for meeting attendance; announce the number of CSC members vs. staff in each meeting • Provide CSC contact info for fellow members; establish parameters for contacting them • Question: Are the missing or inactive CSC members getting calls? • Question: How many CSC members have backups or alternates? • Question: Does the committee represent the different geographic areas within the boundary? Let's check and make sure it does.

2021 Administration Goals

If we could *fast forward* to the end of 2021... What do you think **SUCCESS** would look like in this Administration category?

What administration improvement or process is the **MOST IMPORTANT** for the CSC to accomplish in 2021?

Administration Goals
<ul style="list-style-type: none"> • Clean air that is free of asthma and contaminants; • To not have to drive out of the area to breathe fresh, clean air • Working more effectively so that this CERP implementation process moves along faster

- A road map of the strategies that residents want to prioritize, including revised funding and actionable plans on how we will get there and the responsible parties
- Land use policy changes
- A breakdown of the budget, how much we have spent, and how much we have for the rest of the strategies
- A CERP tracker that includes all priorities
- A crack down on unregistered fireplaces

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #30
10 de febrero de 2021 | 5:30 pm - 7:30 pm
Reunión de Zoom Virtual

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno (Comité):

- Enviar una lista de ubicaciones para el cumplimiento futuro a CARB

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Confirmar que la Ciudad de Fresno proporcione el cronograma del estudio de desviación de camiones al Comité Directivo
- Proporcionar una copia de las diapositivas de planificación estratégica al Comité Directivo
- Asegurarse de que los miembros del público reciban notificaciones de reuniones del subcomité si esas reuniones están abiertas al público

Bienvenida e Introducciones

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)
Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle
Coanfitrión de la Comunidad, Ed Ward, Miembro de la Comunidad de Fresno

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los elementos de mantenimiento y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión y los controles de Zoom.

Ryan dio la bienvenida al Comité Directivo a la primera reunión de Planificación Anual de 2021 y les agradeció el tiempo y la energía que han invertido en AB 617. El coanfitrión de la comunidad, Ed Ward, expresó lo asombrado que estaba por el camino que ha tomado el Comité Directivo y dijo que está humilde y agradecido de ser parte del grupo.

Enfoque de Planificación anual 2021

Erica Manuel, Facilitadora y CEO/Directora Ejecutiva, ILG

Erica resumió los comentarios recibidos. Informó que el Comité Directivo acordó que quieren una estrategia alineada para 2021 para garantizar que el CERP y las tácticas de implementación sean claras. Erica anticipó el proceso de planificación de 2021 que lograría esos objetivos. Puntos importantes de la presentación:

- Tres áreas principales de discusión para cubrir:
 - Administración: agendas de reuniones, horarios de reuniones, estructura, comités, etc.

- Informes y Seguimiento: materiales y actualizaciones recibidos del Distrito, de otras agencias, de comités, etc.
- Estrategias del CERP: priorización e implementación
- Los resultados del proceso de planificación deben incluir el refinamiento de los elementos de administración, un acuerdo sobre la presentación de informes y el seguimiento, un acuerdo sobre el enfoque para priorizar las medidas de CERP, una lista priorizada de medidas de CERP para 2021, una lista de otras actividades clave para lograr y claridad sobre las métricas para el éxito en 2021

Pregunta: ¿Qué pasa después de hoy? ¿Estamos afirmando que estamos de acuerdo con este plan y luego programamos la primera reunión?

Respuesta de ILG: Sí, y si estás de acuerdo, comenzamos hoy.

Pregunta: ¿Se profundizará en los objetivos generales de la administración?

Respuesta de ILG: Sí, le daré la información de lo que significa la administración para el comité de planificación y los asuntos relacionados con la administración del comité.

Comentario: Sin ver nada por escrito, no puedo aceptar las prioridades de hoy.

Respuesta de ILG: Está bien, estamos haciendo notas en vivo y discusiones en tiempo real. No tomaremos ninguna decisión.

Tema de Planificación Anual #1: Metas y Administración

Erica Manuel, Facilitadora Y CEO/Directora Ejecutiva, ILG

Erica explicó al Comité Directivo que esta primera conversación se centrará en la administración y lo que está funcionando bien y las sugerencias que tienen para mejorar en 2021. Puntos importantes de la presentación:

- El tema de Administración incluye:
 - Reuniones del Comité Directivo
 - Subcomités
 - Notificaciones y Actualizaciones
 - Traducción, Interpretación y Acceso
 - Membresía
- ¿Qué va bien y qué se necesita mejorar?

El Comité Directivo mantuvo un debate fuerte sobre la administración. Se adjuntan las notas detalladas tomadas durante la reunión.

Pregunta: ¿Qué significa código de conducta?

Respuesta de ILG: Es un enfoque de cómo el Comité Directivo operará y se relacionará entre sí mismos.

Comentario de CARB: Si alguien en el Comité Directivo tiene alguna pregunta sobre cómo CARB hace las cosas, como el personal, el presupuesto, etc., comuníquese con nosotros.

Respuesta de ILG: Gracias.

Erica le pidió al Comité Directivo que escribiera sus objetivos de administración para 2021 en el chat. Las sugerencias se capturan en el registro de chat completo y se incluyen en las notas de planificación anual.

Actualizaciones Permanentes

Actualización del Subcomité de Desviación de Camiones:

Scott Mozier, Director de PE, Ciudad de Fresno

Scott dio una actualización sobre el subcomité de desviación de camiones y la RFP. Puntos importantes de la presentación:

- Hay un tema en la agenda para la reunión del 4 de marzo del Concejo Municipal donde está programado que el Concejo apruebe un total de \$250,000 a través de fondos de la Medida C y \$500,000 en fondos AB 617 para el estudio de desviación de camiones.
- El subcomité ha pedido que el Comité Directivo revise la RFP de desviación de camiones y el contrato del consultor antes de ser definitivos.
- La RFP pasará al subcomité para su aprobación en marzo y al Comité Directivo para su aprobación en abril.
- El estudio completo se completará en el otoño de 2022

Pregunta: Supuse que no podríamos comprometer la totalidad de los \$500,000 para este estudio de camiones, por lo que tenemos fondos disponibles para implementar los posibles cambios identificados en él.

Respuesta de la Ciudad de Fresno: Esta decisión establecería que \$750,000 es la cantidad máxima. Todavía hay mucho tiempo en el proceso de RFP para indicar un presupuesto más bajo para el consultor. Esta es una cantidad muy generosa para un estudio de camiones.

Subcomité de Barreras Vegetativas:

Nayamin Martinez, Miembro del Comité Directivo de Fresno

Nayamin actualizó al Comité Directivo sobre el Subcomité de Barreras Vegetativas. Puntos importantes de la presentación:

- El subcomité tuvo una reunión productiva donde identificaron socios
- Ya existe la oportunidad de asociarse con Tree Fresno
- La plantación de árboles está programada para principios de abril; Este sería un proceso participativo y el Comité Directivo puede decir qué áreas priorizar para plantar estos árboles.

Subcomité de Filtración y Autobuses Escolares:

Jaime Holt, Directora de Comunicaciones, Distrito

Jaime dio una breve actualización sobre el Subcomité de Filtración Escolar y Autobuses. Puntos importantes de la presentación:

- El subcomité está en conversaciones con el Distrito Escolar Unificado de Fresno para los autobuses y la infraestructura asociada.
- Continuar trabajando en la aplicación de filtración de aire.
- El Distrito recibió autorización de su mesa directiva para iniciar un nuevo programa de filtración de aire en la escuela.

Actualización CARB:

Brian Moore, Oficina de Protección del Aire de la Comunidad, CARB

Brian dio la actualización de la agencia CARB. Puntos importantes de la presentación:

- Nueva administración en CARB relacionada con AB 617; Chanel Fletcher y Deldi Reyes. Los enlaces a sus biografías están en el chat.
- La reunión de la junta del 25 de febrero incluirá la selección de las comunidades AB 617 del próximo año.
- Las pautas se están actualizando actualmente

Actualización de Monitoreo:

Chay Thao, Gerente del Programa, Distrito

Chay dio una actualización sobre el monitoreo del aire de la comunidad. Puntos importantes de la presentación:

- Se acabo de colocar el monitor PM2.5 en Madison Elementary; debería estar en el [sitio web pronto](#)
- Queda un sitio; Edison High School

Actualizaciones de Cumplimiento

Jason Lawler, Gerente, Distrito

Justin Shields, Alcance y Cumplimiento de la Comunidad, CARB

Jason y Justin actualizaron el Comité Directivo sobre las actividades de aplicación. Puntos Importantes de la presentación:

- Cumplimiento de quema de leña residencial: durante la primera mitad de la temporada de quema de leña, el Distrito respondió a seis quejas públicas, lo que resultó en una infracción. Se encontraron un total de 47 infracciones dentro de la comunidad AB 617
- Cumplimiento de quema al aire libre ilegal: se respondieron 14 quejas públicas y vigilancia; cinco infracciones emitidas
- Polvo fugitivo: inspecciones completadas en 42 sitios de proyectos de construcción
- Cumplimiento estatal contra motores encendidos mientras estacionados: no se encontraron infracciones adicionales en los esfuerzos de vigilancia durante la segunda mitad del año

- Inspecciones de fuentes estacionarias: total de 141 inspecciones, 23 nuevas infracciones (siete relacionadas con emisiones)
- El personal de CARB estuvo en Centro-Sur Fresno dos días en el cuarto trimestre de 2020. Realizaron 49 inspecciones en 45 vehículos pesados y emitieron tres infracciones por TRU que no cumplían con las normas.
- Se inspeccionó dos piezas de equipo todoterreno y comprobó que estaban en cumplimiento
- Mientras estaba en el campo, el personal de CARB realizó investigaciones de motores encendidos mientras estacionados en áreas que la comunidad ha expresado preocupaciones; todos estaban en cumplimiento

Comentario: Llamé para presentar una queja y el Distrito no respondió rápidamente.

Respuesta del Distrito: Esa información se envió a nuestro Director de Cumplimiento para que puedan averiguar por qué sucedió eso. Pronto nos comunicaremos contigo.

Conclusión/Próximos Pasos

Erica Manuel, Facilitadora Y CEO/Directora Ejecutiva, ILG

Erica agradeció a todos por asistir y hacer que la reunión fuera productiva. El coanfitrión de la comunidad, Ed, agradeció a todos por participar y dijo que se siente honrado por el talento y la preocupación por limpiar la comunidad. Animó a los participantes de Comité Directivo a participar en escuchar la sesión de trenes de CARB en marzo debido a las posibles grandes reducciones de emisiones que tiene el ferrocarril.

Recordatorios

La próxima reunión del Comité programada regularmente es el 10 de marzo a través de Zoom. Todas las presentaciones, lo más destacado de las reuniones, las transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Comentarios Públicos

Comentario: No recibo notificaciones sobre el subcomité de monitoreo del aire y quiero saber qué puedo hacer para ayudar.

ILG: Gracias por eso. Hemos captado que los miembros públicos no reciben notificaciones en las notas.

Comentario: Alguien debería ir por las tardes para revisar chimeneas.

Respuesta de: Creo que el Distrito realiza esto, pero reflejaremos la solicitud de que se mejore.

Notas de Planificación Anual: Administración

Reuniones del Comité Directivo

Agendas, Temas, Asignaciones de Tiempo, Tecnología, Frecuencia, Estructura, Compromiso, Código de Conducta, etc.

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none">• Las reuniones de preparación son buenas• El equipo de facilitación es bueno en las reuniones del comité• Las reuniones del comité directivo han ayudado a conectar empresas regionales y grupos comunitarios/partes interesadas – estamos estableciendo conexiones y mejorando	<ul style="list-style-type: none">• Más tiempo para discusión en la agenda; escuchar activamente y la discusión entre el Comité y el Distrito del Aire• Se necesita claridad y acuerdo en la dirección para el comité del comité• Minimizar las solicitudes repetidas al Distrito del Aire; se necesita un mejor proceso para monitorear las solicitudes del Comité y asegurar que se completen• Código de conducta en la reunión es importante; debe haber un entendimiento claro de que debemos escucharnos unos a otros, pero no siempre estar de acuerdo• El Distrito debe responder a las inquietudes de los residentes y asegurarse de que el seguimiento se realice de manera oportuna• Las agendas de las reuniones están demasiado llenas; necesitan menos elementos en la agenda y más tiempo para la discusión• No parece haber mucha acción o progreso entre reuniones; ¿Cómo remediar/mejorar esto?• Dar al coanfitrión un papel más importante en la reunión; dar una sección de la agenda para presentar• Delinear claramente los elementos de acción después de cada reunión, asegúrese de que haya un seguimiento• Se necesita más responsabilidad y transparencia del Distrito del Aire y CARB; especialmente en torno a las solicitudes realizadas durante y entre reuniones• Comentario de CARB: no dude en enviar un correo electrónico a CARB con cualquier sugerencia/pregunta• Se necesita un miembro del personal dedicado del Distrito del Aire que sea la persona clave para todo; alguien que pueda recibir solicitudes, buscar respuestas y asegurarse de que las solicitudes se completen• Necesita un tiempo de respuesta más rápido del Distrito del Aire a las preguntas y solicitudes del Comité Directivo

Traducción, Interpretación y Acceso

Durante Reuniones, Reuniones Externas, Tecnología, etc..

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none"> • La traducción de documentos ha mejorado con el tiempo – definitivamente importante y mejorando • Traducción en tiempo real mediante Zoom en escritura y en línea = buena • Interpretación en vivo = buena; ayuda a los que hablamos español a participar en las reuniones; realmente mejor a través de Zoom que en persona 	

Membresía

Composición del Comité, Residentes, etc..

Funcionando Bien	Sugerencias para 2021
	<ul style="list-style-type: none"> • Considerar reclutar más residentes; aclarar el proceso para eso y cómo puede funcionar; posiblemente anunciar las posiciones vacantes/abiertas del Comité Directivo • Hacer un alcance concertado a la comunidad Hmong para una posible participación y membresía • Se necesita más responsabilidad en la asistencia de reuniones; anunciar el número de miembros del Comité Directivo frente al personal en cada reunión • Proporcionar información de contacto del Comité Directivo para otros miembros; establecer parámetros para contactarlos

- Pregunta: ¿Están recibiendo llamadas los miembros del Comité Directivo desaparecidos o inactivos?
- Pregunta: ¿Cuántos miembros del Comité Directivo tienen suplentes?
- Pregunta: ¿El comité representa las diferentes áreas geográficas dentro del límite?
Comprobemos y asegurémonos de que así sea.

Metas Administrativas de 2021

Si pudiéramos *avanzar rápidamente* hasta finales de 2021... ¿Cómo crees que sería el **ÉXITO** en esta categoría de Administración?

¿Qué mejora o proceso de administración es lo **MÁS IMPORTANTE** que debe lograr el Comité Directivo en 2021?

Metas Administrativas

- **Aire limpio libre de asma y contaminantes**
- **No tener que conducir fuera del área para respirar aire fresco y limpio**
- Trabajar de manera más eficaz para que este proceso de implementación del CERP avance más rápido
- Una hoja de ruta de las estrategias que los residentes quieren priorizar, incluyendo la financiación actualizada y los planes procesables sobre cómo llegaremos allí y las partes responsables
- Cambios en la política de uso del suelo
- Un análisis del presupuesto, cuánto hemos gastado y cuánto tenemos para el resto de las estrategias
- Un informe del CERP que incluye todas las prioridades
- Ponerse más estricto en las chimeneas no registradas

South Central Fresno Agenda for Community Steering Committee Meeting #30

Wednesday, February 10, 2021 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>

Meeting Highlights*
AB 617 Fresno Community Steering Committee Meeting #29
January 13, 2021 | 5:30 pm - 7:30 pm
Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Volunteer to be a community co-host at a future meeting

Action items for San Joaquin Valley Air Pollution Control District (District):

- Schedule planning meeting to strategize approach for CSC annual planning; send Doodle poll with additional meeting dates
- Provide the CSC with a wood burning report for the days that exceeded 35 micrograms per cubic meter
- Call CSC members who have not been participating to expand participation
- Schedule a meeting for CSC members, City of Fresno staff and City Council to discuss the truck rerouting study

Welcome and Introductions

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, District
Estela Ortega, City of Fresno, Community Co-host

Erica introduced herself and the ILG team, welcomed all participants and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda and Zoom controls.

Ryan welcomed the CSC back to the first meeting of the year. Community co-host, Estela, thanked the CSC for being present and stated that her goal is to lower contaminants and help improve the health of the community. Estela has lived in Fresno for over 20 years and joined the CSC because of her son's asthma.

Comment: I am excited that Estela is taking a lead in this. It is so nice to have the residents working at this. I am appreciative of your leadership and willingness to learn.

Options for 2021 Strategic Planning

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Erica introduced several options for a CSC annual planning process. Presentation highlights included:

- Three items need to be discussed as part of 2021 planning: Agenda items to discuss during 2021 CSC meetings, CERP measure prioritization and any other key activities

to accomplish this year along with metrics for success

- Two options for planning: discuss these topics at a future regularly scheduled CSC meeting or schedule an additional special CSC meeting

The CSC reached consensus that annual planning should be discussed at a separate meeting. The District agreed to send out a Doodle Poll with possible meeting dates.

Lawn & Garden Incentive Measures

Jeannine Tackett, Strategies and Incentives, District

Jaime Holt, Chief Communications Officer, District

Jeannine updated the CSC on lawn & garden incentive measures. Jaime highlighted outreach efforts and options for community participation. Presentation highlights included:

- There are two program options: replacement of an existing mower or purchase of a new mower (with no replacement requirement)
- The application is available online in both English and Spanish
- The program is open and available to residents now
- The District wants to ensure that people in the community that have lawns learn about this program

Comment: What happens if a resident wants to apply and doesn't have access to the internet? I encourage the District to reach out to Lilia, because she has a wonderful Facebook network.

District Response: Any residents without internet can call our offices and we will walk them through the process via phone and input the information for them.

Question: Is there a list of approved dismantlers?

District Response: Yes, that is on our website and we will drop that link in the chat.

Residential Wood Burning Enforcement and Grant Update

Jason Lawler, Manager, District

Jason updated the CSC on wood burning enforcement. Presentation highlights included:

- We are just over halfway through the wood burning season, which runs November-February
- Our commitment in the CERP is to do 4 hours of surveillance within the 617 community

- Since the beginning of November, we have done a total of 257 hours of surveillance and we have found 46 violations
- There are 418 registered wood burning devices within the City of Fresno

Question: Do you have any numbers on days of exceedance for the 35 micrograms per cubic meter?

District Response: We can definitely pull those numbers and have a summary at a future meeting.

District Response: Our Burn Cleaner program is open and exists for the purpose of providing funding to residents to replace existing fireplaces. Renters are eligible to participate as long as the property owner signs off. The application is available on our website or can be submitted via email.

Question from Spanish-speaker: Is the residential wood burning program only for chimneys or does it also include when people are outside using wood to warm themselves up or cook?

District Response : Our restrictions apply to the fireplace and outdoor wood burning. If someone is burning clean wood on a barbecue for cooking, that is ok.

Comment: The program needs to be more accessible. Special targeting has to be done to get residents in the 617 boundary to participate.

Question/Comment: Of the violations documented so far, how many of those within 617 boundary claimed that it was their only heat source? If you give a violation to someone who only has that heat source, are you also educating them at that moment and signing them up to make sure they are first in line for a registered device? With the incentive program, the end goal should still be phasing out wood burning, not just improvement to a better registered device.

District Response: We should have clarified that. In the 617 community, it is only for gas inserts. We will not pay for wood burning devices if people have the ability to put in a gas device.

Comment: I track RAAN for the sites that we have people working at my company. I noted today at 10:00 that multiple sites were all at four, which is pretty dirty. Those are higher numbers than I've seen for a while.

District Response: You are totally right, the District realizes it has been a really dirty week and it is the highest number we have seen in a while.

Comment: This program is amazing and seems to improve every year. For our communities, television and other media is not the best way to reach residents.

Response from ILG: Thanks for all the comments received so far. The District is taking notes on these suggestions for outreach and increasing participation.

Question: What is the outreach to the news media? What is the timeline for the 2021-22 fall campaign? What is the outreach to real estate agents?

District Response: We have a good relationship with the media. We generally begin planning the 2021-22 season around early summer. We are constantly looking to do more outreach to real estate agents. Before COVID, we went to their meetings regularly, but it has slowed down lately because of social distancing. Everything you mentioned is on our list and we are always looking to do more.

Public Comment: Natural gas isn't that much better. If everyone had gas stoves, wouldn't the neighborhood have NOX problems?

Response from ILG: That is a good technical question; I will ask the District staff answer that question in the chat.

CERP Tracker Review

Jessica Olsen, Program Manager, Air District

Jessica presented the updated CERP tracker. Presentation highlights included:

- The District heard a lot about the CSC wanting to see a document that highlighted where progress is being made and what the implementation plan is from year to year
- We are trying to find a balance that acknowledges all input we received; some CSC members want more detail while others prefer a document with less detail
- This new version of the CERP tracker has fewer words and more metrics
- The District included a quick way to display what the CSC has done to date
- The new 2021-2024 column has been added to identify planned funding and the number of units targeted for the remaining years

Comment: There is no start or end date for major milestones included. This does not include a Gantt chart. Will there be a proper Gantt chart incorporated into this document as we go into annual planning? I am not happy with this document in its current form and I don't think it reflects my feedback.

Standing Updates

Truck Rerouting Subcommittee Update:

Scott Mozier, PE Director, City of Fresno

Scott gave an update on the truck rerouting subcommittee and the RFP. Presentation highlights included:

- Subcommittee has been hard at work. There has been lots of good discussion about what the CSC wants included in the RFP

- There have been discussions about contracting directly with a university or public health department for the health elements of the RFP
- The subcommittee has requested that the RFP and the agreement between the city and the District be brought to the larger CSC for review
- We hope to get the RFP approved by the CSC in March and have a consultant selected and moving forward by July

Question: Can you discuss the status of the \$250,000 funding allocation from the city?

City of Fresno Response: The Fresno City Council amended the proposed budget from October, which included a \$250,000 allocation for the study. At the end of the budget process, the city budget was overextended by \$4 million. When the final budget was adopted, the line item for the truck re-route study was removed. The city doesn't have any additional cash to contribute to the effort at this time, though that could change mid-year.

City of Fresno Response: This was a difficult decision between funding parks, salaries, etc. With all of the budget motions exceeding \$4 million, some of the items had to go and this happened to be one. We did accept the \$250,000 cash allotment from the District and are very grateful.

Comment: I am concerned that the CSC is fronting 50% of the funding. I am disappointed in the city. I would love to hear from some members of the City Council on this.

Comment: The communities, businesses, areas, and individuals who have influence get their projects and priorities into the budget. I will not accept a budget shortfall and want this CSC not to accept it either.

Comment: I want to refer to an email that the city was included on about the money that was supposed to be allocated to the truck reroute. In that email, the funds were confirmed and adopted by City Council. If there were amendments to the budget, the CSC should have been notified.

City of Fresno Response: I agree it is a confusing process. That budget motion did pass. The mayor's initial budget was balanced, but by the time the council was done passing budget motions, that number was \$4 million more than available funds. The final motion that council adopted did not have the additional funds from the city for the study.

Comment: The city is negligent in updating their truck routes. If there was an issue with the budget being over by \$4 million and the truck reroute study money was set aside, that was the city's opportunity to bring that to the CSC. We are going into an RFP process and need to know how much money we have.

Summary Comments from ILG: The CSC is incredibly concerned about the loss of city funding for the truck reroute study. To keep moving forward, the CSC would like a meeting scheduled with the city staff and City Council members at an upcoming truck reroute subcommittee meeting. As a reminder, the District has indicated that additional funds could

be made available through the CERP to fund the study at a higher level if additional city funds do not materialize.

Wrap Up/Next Steps

Erica Manuel, Facilitator, ILG

Erica thanked everyone for attending and making the meeting productive. Community co-host, Estela, thanked everyone for being at the meeting and letting her express herself.

Reminders

Next regularly scheduled CSC meeting is Feb. 10 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #29
13 de enero de 2021 | 5:30 pm - 7:30 pm
Reunión de Zoom Virtual

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno (Comité):

- Ofrecerse como voluntario para ser un coanfitrión de la comunidad en una reunión futura

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Programar una reunión de planificación para diseñar una estrategia para la planificación anual del Comité Directivo; enviar encuesta de Doodle con fechas de reuniones adicionales
- Proporcionar al Comité Directivo un informe de quema de leña para los días que excedieron los 35 microgramos por metro cúbico.
- Llamar a los miembros del Comité Directivo que no han estado participando para ampliar la participación
- Programar una reunión para los miembros de Comité Directivo, el personal de la Ciudad de Fresno y el Concejo Municipal para discutir el estudio de desviación de camiones

Bienvenida e Introducciones

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)
Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle
Estela Ortega, City of Fresno, Coanfitriona del Comité Directivo de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los elementos de mantenimiento y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión y los controles de Zoom.

Ryan dio la bienvenida al Comité Directivo a la primera reunión del año. La coanfitriona de la comunidad, Estela, agradeció al Comité Directivo por estar presente y dijo que su objetivo es reducir los contaminantes y ayudar a mejorar la salud de la comunidad. Estela ha vivido en Fresno durante más de 20 años y se unió al Comité Directivo debido al asma de su hijo.

Comentario: Estoy emocionado de que Estela esté liderando esto. Es muy bueno tener a los residentes trabajando en esto. Agradezco su liderazgo y su voluntad de aprender.

Opciones para la Planificación Estratégica 2021

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Erica presentó varias opciones para un proceso de planificación anual del Comité Directivo. Puntos importantes de la presentación:

- Se deben discutir tres artículos como parte de la planificación de 2021: los artículos de la agenda para debatir durante las reuniones del Comité Directivo de 2021, la priorización de la medida del CERP y cualquier otra actividad clave para lograr este año junto con las métricas de éxito
- Dos opciones para la planificación: discutir estos temas en una futura reunión del Comité Directivo programada regularmente o programe una reunión especial adicional del Comité Directivo.

El Comité Directivo llegó a un consenso de que la planificación anual debería discutirse en una reunión separada. El Distrito acordó enviar una encuesta Doodle con posibles fechas para la reunión.

Medidas de Incentivo para Césped y Jardín

Jeannine Tackett, Estrategias e Incentivos, Distrito

Jaime Holt, Directora de Comunicaciones, Distrito

Jeannine actualizó el Comité Directivo sobre medidas de incentivos para césped y jardín. Jaime destacó los esfuerzos de alcance y las opciones para la participación comunitaria. Puntos importantes de la presentación:

- Hay dos opciones del programa: reemplazo de una cortadora de césped existente o compra de una cortadora de césped nueva (sin requisito de reemplazo)
- La solicitud está disponible en línea tanto en inglés como en español.
- El programa está abierto y disponible para los residentes ahora.
- El Distrito quiere asegurarse de que las personas de la comunidad que tienen césped aprendan sobre este programa.

Comentario: ¿Qué sucede si un residente desea presentar una solicitud y no tiene acceso a Internet? Animo al Distrito a que se comunique con Lilia, porque tiene una maravillosa red de Facebook.

Respuesta del Distrito: Cualquier residente que no tenga Internet puede llamar a nuestras oficinas y nosotros lo guiaremos a través del proceso por teléfono e ingresaremos su información.

Pregunta: ¿Existe una lista de desmanteladores aprobados?

Respuesta del Distrito: Sí, eso está en nuestro sitio web y agregaremos ese enlace en el chat.

Actualización de Incentivos y Cumplimiento de la Quema de Leña Residencial

Jason Lawler, Gerente, Distrito

Jason actualizó al Comité Directivo sobre el cumplimiento de la quema de leña. Puntos importantes de la presentación:

- Estamos a poco más de la mitad de la temporada de quema de leña, que se extiende de noviembre a febrero.
- Nuestro compromiso en el CERP es hacer 4 horas de vigilancia dentro de la comunidad 617
- Desde principios de noviembre, hemos realizado un total de 257 horas de vigilancia y hemos encontrado 46 infracciones.
- Hay 418 aparatos de quema de leña registrados dentro de la ciudad de Fresno

Pregunta: ¿Tiene algún número de días donde se sobrepasó los 35 microgramos por metro cúbico?

Respuesta del Distrito: Definitivamente podemos juntar esos números y tener un resumen en una reunión futura.

Respuesta del Distrito: Nuestro programa Burn Cleaner está abierto y existe con el propósito de proporcionar fondos a los residentes para reemplazar las chimeneas existentes. Los inquilinos son elegibles para participar siempre y cuando el dueño de la propiedad lo firme. La solicitud está disponible en nuestro sitio web o puede enviarse por correo electrónico.

Pregunta de un hispanohablante: ¿El programa residencial de quema de leña es solo para chimeneas o también incluye cuando las personas están afuera usando leña para calentarse o cocinar?

Respuesta del Distrito: Nuestras restricciones se aplican a la chimenea y la quema de leña al aire libre. Si alguien está quemando leña en una parrilla para cocinar, está bien.

Comentario: El programa debe ser más accesible. Se debe hacer una focalización especial para que los residentes en el límite 617 participen.

Pregunta/Comentario: De las infracciones documentadas hasta ahora, ¿cuántas de las que se encuentran dentro del límite 617 afirmaron que era su única fuente de calor? Si se le da una infracción a alguien que solo tiene esa fuente de calor, ¿también los están educando en ese momento y registrándolo para asegurarse de que sea el primero en la fila para obtener un aparato registrado? Con el programa de incentivos, el objetivo final debería seguir siendo la eliminación gradual de la quema de leña, no solo el reemplazo con aparato mejor registrado.

Respuesta del Distrito: Deberíamos haberlo aclarado. En la comunidad 617, es solo para insertos de gas. No pagaremos para aparatos de combustión de leña si las personas tienen la capacidad de instalar un aparato de gas.

Comentario: Yo uso RAAN para los sitios en los que tenemos personas trabajando en mi empresa. Noté hoy a las 10:00 que varios sitios estaban todos en el cuatro, lo cual es bastante sucio. Esos son números más altos de los que he visto en un tiempo.

Respuesta del Distrito: Tienes toda la razón, el Distrito se da cuenta de que ha sido una semana muy sucia y es el número más alto que hemos visto en mucho tiempo.

Comentario: Este programa es asombroso y parece mejorar cada año. Para nuestras comunidades, la televisión y otros medios no son la mejor manera de llegar a los residentes.

Respuesta de ILG: Gracias por todos los comentarios recibidos hasta el momento. El Distrito está tomando notas sobre estas sugerencias para el alcance y el aumento de la participación.

Pregunta: ¿Cuál es el alcance a los medios de comunicación? ¿Cuál es el cronograma de la campaña de otoño 2021-22? ¿Cuál es el alcance a los agentes inmobiliarios?

Respuesta del Distrito: Tenemos una buena relación con los medios. Por lo general, comenzamos a planificar la temporada 2021-22 a principios del verano. Constantemente buscamos hacer más contacto con los agentes inmobiliarios. Antes de COVID, íbamos a sus reuniones con regularidad, pero últimamente se han disminuido debido al distanciamiento social. Todo lo que mencionaste está en nuestra lista y siempre estamos buscando hacer más.

Comentario Público: El gas natural no es mucho mejor. Si todos tuvieran estufas de gas, ¿no tendría el vecindario problemas de NOX?

Respuesta de ILG: Esa es una buena pregunta técnica; Le pediré al personal del Distrito que responda esa pregunta en el chat.

Revisión del Informe de Medidas del CERP

Jessica Olsen, Gerente del Programa, Distrito del Aire

Jessica presentó el informe de medidas de CERP actualizado. Puntos importantes de la presentación:

- El Distrito escuchó mucho sobre el Comité Directivo que quería ver un documento que resaltara dónde se está progresando y cuál es el plan de implementación de un año a otro.
- Estamos tratando de encontrar un equilibrio que reconozca todos los comentarios que recibimos; algunos miembros del Comité Directivo quieren más detalles mientras que otros prefieren un documento con menos detalles
- Esta nueva versión del informe de medidas del CERP tiene menos palabras y más métricas
- El Distrito incluyó una forma rápida de mostrar lo que el Comité Directivo ha hecho hasta la fecha.

- Se ha agregado la nueva columna 2021-2024 para identificar la financiación planificada y el número de unidades previstas para los años restantes.

Comentario: No se incluye una fecha de inicio ni de finalización para las metas principales. Esto no incluye un diagrama de Gantt. ¿Se incorporará un diagrama de Gantt adecuado en este documento a medida que avancemos en la planificación anual? No estoy satisfecho con este documento en su forma actual y no creo que refleje mis comentarios.

Actualizaciones Permanentes

Actualización del Subcomité de la Desviación de Camiones:

Scott Mozier, Director de PE, Ciudad de Fresno

Scott dio una actualización sobre el subcomité de desviación de camiones y la RFP. Puntos importantes de la presentación:

- El subcomité ha estado trabajando duro. Ha habido un buen debate sobre lo que el Comité Directivo quiere que se incluya en la RFP.
- Ha habido discusiones sobre la contratación directa con una universidad o departamento de salud pública para los elementos de salud de la RFP.
- El subcomité ha solicitado que la RFP y el acuerdo entre la ciudad y el Distrito se presenten al Comité Directivo más grande para su revisión.
- Esperamos obtener la RFP aprobada por el Comité Directivo en marzo y tener un consultor seleccionado y avanzar en julio.

Pregunta: ¿Puede discutir el estado de la asignación de fondos de \$250,000 de la ciudad?

Respuesta de la Ciudad de Fresno: El Concilio de Fresno enmendó el presupuesto propuesto de octubre, que incluía una asignación de \$250,000 para el estudio. Al final del proceso presupuestario, el presupuesto de la ciudad se sobrepasó en \$4 millones. Cuando se adoptó el presupuesto final, se eliminó la partida para el estudio de desviación de camiones. La ciudad no tiene dinero en efectivo adicional para contribuir al esfuerzo en este momento, aunque eso podría cambiar a mediados de año.

Respuesta de la Ciudad de Fresno: Esta fue una decisión difícil entre financiar parques, salarios, etc. Con todas las mociones presupuestarias que excedían los \$4 millones, algunos de los artículos tenían que desaparecer y este resultó ser uno. Aceptamos la asignación en efectivo de \$250,000 del Distrito y estamos muy agradecidos.

Comentario: Me preocupa que el Comité Directivo esté al frente del 50% de la financiación. Estoy decepcionado con la ciudad. Me encantaría escuchar a algunos miembros del concilio sobre esto.

Comentario: Las comunidades, negocios, áreas e individuos que tienen influencia incluyen sus proyectos y prioridades en el presupuesto. No aceptaré un déficit presupuestario y quiero que este Comité Directivo tampoco lo acepte.

Comentario: Quiero referirme a un correo electrónico en el que se incluyó a la ciudad sobre el dinero que se suponía que debía asignarse al desvío de camiones. En ese correo electrónico, los fondos fueron confirmados y adoptados por el Concilio. Si hubo enmiendas al presupuesto, el Comité Directivo debería haber sido notificado.

Respuesta de la Ciudad de Fresno: Estoy de acuerdo en que es un proceso confuso. Esa moción presupuestaria pasó. El presupuesto inicial del alcalde estaba equilibrado, pero cuando el consejo terminó de aprobar las mociones presupuestarias, ese número era \$4 millones más que los fondos disponibles. La moción final que adoptó el consejo no tenía los fondos adicionales de la ciudad para el estudio.

Comentario: La ciudad es negligente al actualizar las rutas de sus camiones. Si había un problema con el presupuesto de más de \$4 millones y el dinero del estudio de desviación de camiones fue apartado, esa era la oportunidad de la ciudad de llevarlo al Comité Directivo. Estamos entrando en un proceso de RFP y necesitamos saber cuánto dinero tenemos.

Comentarios Resumidos de ILG: El Comité Directivo está increíblemente preocupado por la pérdida de fondos de la ciudad para el estudio de desviación de camiones. Para seguir avanzando, al Comité Directivo le gustaría programar una reunión con el personal de la ciudad y los miembros del Concejo Municipal en una próxima reunión del subcomité de desviación de camiones. Como recordatorio, el Distrito ha indicado que se podrían poner a disposición fondos adicionales a través del CERP para financiar el estudio a un nivel superior si no se materializan fondos adicionales de la ciudad.

Conclusión/Próximos Pasos

Erica Manuel, Facilitadora, ILG

Erica agradeció a todos por asistir y hacer que la reunión fuera productiva. La coanfitriona de la comunidad, Estela, agradeció a todos por estar en la reunión y dejarla expresarse.

Recordatorios

La próxima reunión del Comité Directivo programada regularmente es el 10 de febrero a través de Zoom. Todas las presentaciones, los puntos importantes, las transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Erica Manuel, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Estela Ortega, Community Co-Host
- 5:45 p.m. Options for 2021 Strategic Planning**
CSC decision on proposal for holding a CSC strategic planning session
Erica Manuel, Facilitator
- 6:05 p.m. Lawn & Garden Incentive Measures**
Discuss plans for outreach to promote community participation in the Lawn and Garden Incentive measures in the CERP.
Valley Air District Staff
- 6:20 p.m. Residential Wood Burning Enforcement and Grant Update**
Update on implementation of the grant and enforcement measures
Valley Air District Staff
- 6:35 p.m. CERP Tracker Review**
Update on implementation of measures adopted in the CERP and review of [tracker](#)
Valley Air District Staff
- 7:10 p.m. Standing Updates**
Truck Rerouting Subcommittee
City of Fresno
Other Subcommittee Updates (*as needed*)
School Filtration/Bus, Vegetative Barriers, & Monitoring
Valley Air District Staff
- 7:25 p.m. Wrap Up/Next Steps**
Next CSC Meeting: February 10, 2021 via Zoom

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #29

Miércoles, 13 de enero de 2021 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>

Meeting ID: 982 5906 9963

Passcode: 617

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-240-3210

Código de acceso: 2378691#

- 5:30 p.m. Bienvenida e Introducciones**
Erica Manuel, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Estela Ortega, Co-anfitriona Comunitaria
- 5:45 p.m. Opciones para la Planificación Estratégica de 2021**
Decisión del Comité Directivo sobre la propuesta de realizar una sesión de planificación estratégica
Erica Manuel, Facilitadora
- 6:05 p.m. Medidas de Incentivo para Césped y Jardín**
Discutir planes de alcance para promover la participación de la comunidad en las medidas de incentivos para césped y jardín en el CERP.
Personal del Distrito del Aire del Valle
- 6:20 p.m. Actualización de Subvenciones y Cumplimiento de la Quema de Leña Residencial**
Actualización sobre la implementación de la subvención y las medidas de cumplimiento
Personal del Distrito del Aire del Valle
- 6:35 p.m. Repaso del Reporte de Medidas del CERP**
Actualización sobre implementación de medidas adoptadas en el CERP y revisión del [reporte de medidas](#)
- 7:10 p.m. Actualizaciones Permanentes**
Subcomité de Desviación de Camiones
Ciudad de Fresno
Otras Actualizaciones de los Subcomités (según sea necesario)
Filtración de Escuelas/Autobuses, Barreras Vegetativas y Monitoreo del Aire
Personal del Distrito del Aire del Valle
- 7:25 p.m. Concluir/Próximos Pasos**
Próxima reunión del Comité Directivo: 10 de febrero de 2021 a través de Zoom
Erica Manuel, Facilitadora

Meeting Highlights*
AB 617 Fresno Community Steering Committee Meeting #28
December 9, 2020, 5:30 pm - 7:30 pm
Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Submit additional agenda items for the next air monitoring subcommittee meeting
- Volunteer to be a community co-host at a future CSC meeting
- Submit names of small businesses that may be interested in City of Fresno loans
- Submit comments on the Regional Transportation Plan to City of Fresno

Action items for the San Joaquin Valley Air Pollution Control District (District):

- Track AB 841 and share key milestones and updates with the CSC when necessary
- Distribute hard copies of the CERP at-a-glance
- Focus next CSC meeting agenda on reviewing visualization improvements made to the CERP tracker and discussing CERP priorities; incorporate a budget update if possible
- Reschedule lawn & garden incentive agenda item
- Include more detailed reports of air monitoring results, such as names and levels of contaminants
- Share comparative data from stationary monitors to regulatory monitors so CSC can see the difference

Welcome and Introductions:

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, the District

Gregory Barfield, Scott Mozier and Lupe Perez, City of Fresno, CSC Community Co-hosts

Erica introduced herself and the ILG team, welcomed all participants and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda and Zoom controls.

Ryan welcomed the CSC, expressed excitement about the meeting and obtaining additional feedback from the CSC about ways to improve the AB 617 implementation process. He turned it over to Gregory Barfield, Scott Mozier, and Lupe Perez, from the City of Fresno for co-host remarks.

Updates included:

- The City of Fresno has four protected bike lane corridors that are already funded, undergoing design and will be built in 2021
- The City is implementing active transportation improvements in late 2021-2022
- The City will install no idling signs to target some of the hot spots of concern already noted by the CSC
- The City is busy disbursing grants to small businesses
- Loans are available for businesses to access
- The first two battery powered electric buses are coming in February and nine more will be approved at the next City Council meeting
- The City is working on the Regional Transportation Plan and encourages comments from the CSC
- The City will have a new mayor on Jan. 5

- Greg will transition to Assistant City Manager in January
- There are lots of leadership and administrative transitions currently taking place at the City

Standing Updates

Truck Rerouting Subcommittee Update:

Scott Mozier, PE Director, City of Fresno

Scott gave an update on the truck rerouting subcommittee and the RFP. Presentation highlights included:

- A subsection of the truck rerouting subcommittee has volunteered join a working group to work with the city on specific refinements to the RFP
- The city received good input on language revisions for the RFP
- The city is working through how best to address the health impacts element of the study
- The study is well funded and the CSC will be pleased with the work
- Next step is to meet with working group on Friday 12/11 to wordsmith and get consensus
- The city expects to look at proposal responses in the Spring

Question: Are there any documents we need to read before the meeting on Friday?

City of Fresno Response: Not in advance of the meeting, but we will have specific sections and topics that we will go through during the meeting. We are hoping for substantial feedback.

Comment from Spanish-speaker: I am thankful to the District because I saw three vehicles in my area enforcing in my community.

ILG Response: It's always great to hear that progress is being made.

Comment: As we talk about truck rerouting, it brings up the question regarding the MOU. We need the MOU between the City and the District to be developed as soon as possible.

City of Fresno Response: Because our leadership transition is still in progress, this is an item that will need to be discussed after January 5. A realistic timeframe is likely of late January-early February for beginning the conversations.

Comment: We understand that transitions take time. But we expect to receive the names of key stakeholders at the City once you know them in January. In addition to the city staff who leads the various departments that might need to be involved, I think it's important that the staff of the council members who are part of the AB 617 area are also engaged.

ILG Response: The CSC is very excited at the possibility of having this MOU and there is interest in making sure that momentum is maintained despite the transition.

City of Fresno Response: It is my responsibility to bring this forth to the City Manager and I am committed to doing that (Gregory Barfield).

District Response: Over the last month, we have reached out to the City and reinforced the CSC's interest in participating in a robust dialogue and MOU development. We have already begun sharing ideas about possible topics that can be part of an MOU and we are looking forward to working with the City soon to move this item forward. The City indicated the best time to have these discussions is after the transition.

School Filtration and Bus Subcommittee:

Nayamin Martinez, CSC member

Ivanka Saunders, CSC member

Crystal Yunker, Strategies & Incentives, the District

Jeannine Tackett, Senior Air Quality Specialist, the District

Nayamin and Ivanka provided an update on an ad hoc meeting they participated in. District staff updated the CSC on the school filtration and bus subcommittee. Presentation highlights included:

- Met with Fresno Unified to ensure they are committed to the buses
- Fresno Unified's main concern is infrastructure; the CSC may need to plan for solutions to this issue (i.e. should we decrease the amount of buses, so there's funding available for infrastructure?)
- We plan to continue discussions with residents about where charging stations should be placed
- We requested data on asthma rates to more strategically prioritize schools in the district
- Fresno Unified is conducting a study for their existing charging needs and believe only minor modifications need to be made to service incoming buses
- Fresno Unified has been actively assessing their systems at various schools and meeting with multiple manufacturers to see what devices are available, what site location needs exist and what works best with existing systems
- The District is exploring what other types of devices can be added to existing systems to help improve filtration
- AB 841 has been approved and is in process; this will provide additional funds to help schools reopen safely and a portion can be used to upgrade and repair existing HVAC systems

CARB Comment: I have talked to our electric bus staff at CARB. If anyone on the CSC wants the CARB perspective, please email and we can set up a call.

ILG Response: Thank you. I think some CSC members will take you up on that offer and will look for your contact information in the chat.

Question: With a new federal administration coming in, does anybody know if there is going to be any money given to the schools to upgrade their filtration systems? If so, do you think that money could help those schools by providing the funding match necessary to upgrade those systems?

City of Fresno Response: A lot of what is happening right now at the federal level is just to keep the government afloat. When the Biden administration completes its transition, they will start to roll out other resources that may be useful.

Question: Where is AB 841 in the legislative process and will you let us know when we should write a letter of support?

District Response: Yes, absolutely. The way the bill is written, the money will be handled through the utility companies and we should see those application processes starting around March 2021. We can definitely try to track the time frames and provide updates when necessary.

Vegetative Barriers Subcommittee:

Jaime Holt, Chief Communications Officer, the District

Jaime gave an update on the new vegetative barriers subcommittee. Presentation highlights included:

- On behalf of the CSC, Nayamin applied for two full-time AmeriCorps climate change fellows
- The fellows can help implement CERP measures related to urban greening and vegetative barriers

- The District is reaching out to Caltrans, the City of Fresno, the County of Fresno, Tree Fresno, the Department of Conservation, Fresno State and others to find out what is already being done and make that available in a concise list for the CSC

Comment: Thank you for your efforts to provide some extra help. It's outstanding.

Air Monitoring Update:

Chay Thao, Program Manager, the District

Chay provided an update on continued community air monitoring. Presentation highlights included:

- Out of ten sites, there are only two left; Madison Elementary and Edison High School
- The District is working to make it easier to obtain van data by putting it into an interactive map on the webpage
- As requested by CSC, the District is integrating community air monitoring into the existing regulatory monitors that are part of RAAN
- At the upcoming air monitoring subcommittee, the District will provide a summary of completed air monitoring updates, what is left, and what we've learned; feedback is encouraged

Comment: The CSC would like to see more details on the toxic air contaminants, such as the names of the contaminants and what those levels have been.

District Response: The District will include that.

Comment: I would like to see all the raw data unfiltered in an excel spreadsheet.

District Response: We will provide that to you.

Comment: The City of Fresno needs to get the PM 2.5 numbers along Interstate 99 because you are building that hotel for the homeless.

City of Fresno Response: We will take that into consideration. Thank you.

Question: Would it be too problematic for you to compare that data in the different stationary monitors to the regulatory monitors so the CSC can see if there are any spots with significant differences?

District Response: Yes, in our quarterly report, we compare them. We will put that together for you all to see.

CERP Tracker Review:

Jaime Holt, Chief Communications Officer, the District

Jaime presented two CERP tracking documents to the CSC. Presentation highlights included:

- The District recently created a new document related to the CERP
- The document is a snapshot of the CERP; it is a simplified overview (at-a-glance CERP) that has been posted on the website and can be shared externally with the general public
- The comprehensive tracker is still missing a key element, which is an easy way to see progress; the District wants CSC input before refining that document
- The tracker can link to other documents

- The District wants to communicate enough information to the CSC so members are informed but not overwhelmed

Comment: The at-a-glance CERP is missing a chart with the major bullet points about AB 617, including the start and end dates of the project and key milestones through the years. You should also add a thermometer of the allocation by fiscal year for this entire program, so you can denote the different projects that start within that year. The larger handout is definitely confusing. To better revise that document, I recommend a Gantt chart with every project listed, then you can hyperlink each of those line items and note progress made during each cycle.

ILG Response: Thank you. I see the District is taking copious notes on these suggestions.

Comment: The CERP at-a-glance is a good effort to describe the CERP. On the larger document, it needs timelines, it needs to be brief with fewer words and it needs to list how much money the District is investing in each of those rows of projects.

ILG Response: Thank you.

Comment: I want to uplift the residents and would like to hear what measures need to be worked on next and what they want to prioritize moving into January.

ILG Response: Thanks for that comment. I welcome any resident comments at any time during this meeting.

Comment: I think the prioritization discussion deserves to be focused on a whole meeting.

ILG Response: We hear you and appreciate that comment. Our initial thought was we would discuss the outline of the tracker so we can move into that discussion of priorities at a subsequent meeting.

District Response: Thank you. We definitely hear what you are saying. This agenda item was more focused on how we can make this tracker easier for members to use as a tool. We have already received a lot of feedback and differing opinions on how it can be presented, so if we can have more discussion on what the group as a whole desires, we can design this with the majority of the group in mind.

Comment: When will we have a deep dive into the CERP priorities? I'd like to see the MOU, the land issues, the enforcement and jurisdiction issues discussed and prioritized as soon as possible.

Comment: I keep hearing that this document should provide accountability and transparency. The thing that undermines trust is the lack of accountability and the repetition of trying to get information which is withheld. This document needs to house all relevant information and hyperlink to the health outcomes and data.

ILG Response: Thank you.

ILG Response: To paraphrase the CSC comments received so far in this meeting about the current version of the CERP tracker, the District needs to tighten the language, remove redundancy, and make the content shorter but more relevant. The District will work to fix the visuals and format, but the CSC recommends adding columns, the budget, and implementation/status report. What we are hearing is this is the number one priority. We do not want to have this conversation again, and the CSC wants to see progress on this tracker. We also heard that the CSC wants to move into the strategy and prioritization discussions. The District will ensure that an upcoming meeting agenda focuses on strategic implementation and alignment, with resident priorities in mind.

District Response: Thanks, everyone. It is always tough to hear that things aren't perfect. We want a perfect process for all of you and we are committed to finding ways to make your time productive and well spent. We don't want to come back with something that is still not right. If there are a few

CSC members open to working with the District to make sure we are capturing what you want, then we can come back to the next meeting and have something more meaningful.

Comment: I think the design is least important. We should get everything else in order first.

Comment: I think both parts are connected. It is important to know how much progress we have made and what things we need to prioritize moving forward, from the residents' perspective. That is more important than formatting, but it is connected.

ILG Response: I think what we've heard is that the design will be refined between now and the next meeting and that prioritization and strategy will be discussed at the next meeting. The question is how to integrate this visualization conversation.

Comment: There is strength in simplicity, but I believe there needs to be reasonable understanding of outcomes and progress. One of the outcomes we hope to achieve is reduction of wood burning in our impacted area. How would it look for us to be successful with our wood burning piece? We have to determine what success looks like so that as we move these charts forward, we can evaluate progress. I am not sure we always know what's going on as a committee, necessarily.

ILG Response: Thanks. I'm hearing CSC members say that the snapshot and the full tracker should include the progress we are making at key milestones.

Comment: I wanted to flag one of your comments centered on how we segment the document in terms of ensuring the District provides enough information for everyone related to the CERP goals. Different stakeholders have had different priorities. I think it would be a value add if the CSC had a summary detailing where the District is related to each of the different CERP goals. That would help us in our decision-making process as we approach January.

ILG Response: Thank you. We have reached consensus via verbal comments and chat comments that we need to discuss this at the next meeting.

Wrap Up/Next Steps:

Erica Manuel, Facilitator, ILG

Erica thanked everyone for attending and the CSC for the honest dialogue.

Question: Can we please add a budget update to next month's agenda?

ILG Response: Thank you. We can ask the District to add that to list of agenda items for next month.

Comment: I wanted to congratulate Commissioner Randolph who was just appointed to CARB. We are excited about the leaders the Governor is appointing to the Board.

District Response: Thank you! We agree. Dr. Pacheco-Warner will also be a representative from San Joaquin to the CARB Board as well.

Ryan wished the CSC happy holidays and thanked them for their flexibility, honesty and input, and for continuing to work with the District. The City of Fresno thanked the CSC for allowing them to join in the process and co-host the meeting.

Reminders:

Next regularly scheduled CSC meeting is Jan. 13 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comment:

No public comment.

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #28
9 de diciembre de 2020, 5:30 pm - 7:30 pm
Reunión de Zoom Virtual

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno:

- Enviar puntos adicionales de la agenda para la próxima reunión del subcomité de monitoreo del aire.
- Ofrecerse como voluntario para ser un coanfitrión de la comunidad en una futura reunión de Comité Directivo
- Enviar nombres de pequeñas empresas que puedan estar interesadas en préstamos de la Ciudad de Fresno
- Enviar sus comentarios sobre el Plan de Transporte Regional a la Ciudad de Fresno

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Seguir AB 841 y compartir puntos clave y actualizaciones con el Comité Directivo cuando sea necesario
- Distribuir copias impresas del CERP de un vistazo
- Enfocar la agenda de la próxima reunión del Comité Directivo en revisar las mejoras de visualización realizadas en el informe de medidas del CERP y discutir las prioridades CERP; incorporar una actualización de presupuesto si es posible
- Reprogramar el artículo de la agenda de incentivos para césped y jardín
- Incluir informes más detallados de los resultados del monitoreo del aire, como nombres y niveles de contaminantes.
- Compartir datos comparativos de monitores estacionarios a monitores regulatorios para que Comité Directivo pueda ver la diferencia

Bienvenida e Introducciones:

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle

Gregory Barfield, Scott Mozier y Lupe Perez, Ciudad de Fresno, Coanfitriones del Comité Directivo de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los elementos de mantenimiento y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión y los controles de Zoom.

Ryan dio la bienvenida al Comité Directivo, expresó su entusiasmo por la reunión y obtuvo comentarios adicionales del Comité Directivo sobre las formas de mejorar el proceso de implementación de AB 617. Se lo entregó a Gregory Barfield, Scott Mozier y Lupe Perez, de la ciudad de Fresno, para los comentarios de coanfitrión. Actualizaciones incluidas:

- La Ciudad de Fresno tiene cuatro carriles de bicicletas protegidos que ya están financiados, en proceso de diseño y se construirán en 2021
- La Ciudad está implementando mejoras activas en el transporte a fines de 2021-2022
- La Ciudad instalará letreros de "Apague el motor mientras estacionados" para apuntar a algunos de las zonas conflictivas de preocupación ya señalados por el Comité Directivo
- La Ciudad está ocupada desembolsando subvenciones a pequeños negocios

- Los préstamos están disponibles para que los negocios lo puedan acceder
- Los dos primeros autobuses eléctricos de batería llegarán en febrero y nueve más serán aprobados en la próxima reunión del Ayuntamiento
- La Ciudad está trabajando en el Plan de Transporte Regional y alienta los comentarios del Comité Directivo
- La Ciudad tendrá un nuevo alcalde el 5 de enero
- Greg pasará a ser Asistente del Administrador de la Ciudad en enero
- Actualmente se están llevando a cabo muchas transiciones administrativas y de liderazgo en la Ciudad

Actualizaciones Permanentes

Actualización del Subcomité de Desviación de Camiones:

Scott Mozier, Director PE, Ciudad de Fresno

Scott dio una actualización sobre el subcomité de desviación de camiones y la RFP. Puntos importantes de la presentación:

- Una subsección del subcomité de desviación de camiones se ha ofrecido a unirse voluntariamente a un grupo de trabajo para trabajar con la ciudad en mejoras específicas a la RFP
- La ciudad recibió una buena información sobre las revisiones del lenguaje para la RFP
- La ciudad está trabajando en la mejor manera de abordar el elemento de impacto en la salud del estudio
- El estudio está bien financiado y el Comité Directivo estará satisfecho con el trabajo
- El siguiente paso es reunirse con el grupo de trabajo el viernes 12/11 para escribir y obtener un consenso
- La ciudad espera ver las respuestas a las propuestas en la primavera

Pregunta: ¿Hay algún documento que debamos leer antes de la reunión del viernes?

Respuesta de la Ciudad de Fresno: No antes de la reunión, pero tendremos secciones y temas específicos que abordaremos durante la reunión. Esperamos comentarios sustanciales.

Comentario de un hispanohablante: Estoy agradecido con el Distrito porque vi tres vehículos en mi área haciendo cumplimiento en mi comunidad.

Respuesta de ILG: Siempre es bueno saber que se está haciendo progreso.

Comentario: Cuando hablamos de desvío de camiones, surge la pregunta sobre el MOU. Necesitamos que el Memorando de Entendimiento entre la Ciudad y el Distrito se desarrolle lo antes posible.

Respuesta de la Ciudad de Fresno: Debido a que nuestra transición de liderazgo aún está en progreso, este es un tema que deberá discutirse después del 5 de enero. Es probable que haya un plazo realista de finales de enero a principios de febrero para comenzar las conversaciones.

Comentario: Entendemos que las transiciones toman tiempo. Pero esperamos recibir los nombres de las partes interesadas clave en la Ciudad una vez que los conozca en enero. Además del personal de la ciudad que dirige los diversos departamentos que podrían necesitar participar, creo que es importante que el personal de los miembros del consejo que forman parte del área AB 617 también esté comprometido.

Respuesta de ILG: El Comité Directivo está muy entusiasmado con la posibilidad de tener este MOU y hay interés en asegurarse de que se mantenga el impulso a pesar de la transición.

Respuesta de la Ciudad de Fresno: Es mi responsabilidad comunicarle esto al administrador de la ciudad y estoy comprometido a hacerlo (Gregory Barfield).

Respuesta del Distrito: Durante el último mes, nos comunicamos con la Ciudad y reforzamos el interés de la Comité Directivo en participar en un diálogo y en el desarrollo de un memorando de entendimiento. Ya hemos comenzado a compartir ideas sobre posibles temas que pueden ser parte de un MOU y esperamos trabajar pronto con la Ciudad para avanzar en este tema. La Ciudad indicó que el mejor momento para tener estas discusiones es después de la transición.

Subcomité de Filtración y Autobuses Escolares:

Nayamin Martinez, miembro del Comité Directivo

Ivanka Saunders, miembro del Comité Directivo

Crystal Yunker, Estrategias e Incentivos, el Distrito

Jeannine Tackett, Especialista en Calidad del Aire, el Distrito

Nayamin e Ivanka proporcionaron una actualización sobre una reunión ad hoc en la que participaron. El personal del Distrito actualizó al Comité Directivo sobre el subcomité de filtración escolar y autobuses. Puntos importantes de la presentación:

- Se reunió con el Distrito Escolar Unificado de Fresno para asegurar que están comprometidos con los autobuses
- La principal preocupación del Distrito Escolar Unificado de Fresno es la infraestructura; Es posible que el Comité Directivo necesite planificar soluciones a este problema (es decir, ¿deberíamos reducir la cantidad de autobuses para que haya fondos disponibles para la infraestructura?)
- Planeamos continuar las discusiones con los residentes sobre dónde deben ubicarse las estaciones de carga
- Solicitamos datos sobre las tasas de asma para priorizar de manera más estratégica las escuelas del distrito
- El Distrito Unificado de Fresno está llevando a cabo un estudio para sus necesidades de carga existentes y cree que solo se necesitan modificaciones menores para dar servicio a los autobuses entrantes
- El Distrito Escolar Unificado de Fresno ha estado evaluando activamente sus sistemas en varias escuelas y se ha reunido con varios fabricantes para ver qué aparatos están disponibles, qué necesidades de ubicación existen y qué funciona mejor con los sistemas existentes
- El Distrito está explorando qué otros tipos de aparatos se pueden agregar a los sistemas existentes para ayudar a mejorar la filtración
- AB 841 ha sido aprobado y está en proceso; Esto proporcionará fondos adicionales para ayudar a las escuelas a reabrir de manera segura y una parte se puede utilizar para actualizar y reparar los sistemas de HVAC existentes.

Comentario de CARB: He hablado con nuestro personal de autobuses eléctricos en CARB. Si alguien en el Comité Directivo quiere la perspectiva de CARB, envíe un correo electrónico y podemos programar una llamada.

Respuesta de ILG: Gracias. Creo que algunos miembros de Comité Directivo aceptarán esa oferta y buscarán su información de contacto en el chat.

Pregunta: Con la llegada de una nueva administración federal, ¿alguien sabe si se les dará dinero a las escuelas para actualizar sus sistemas de filtración? Si es así, ¿cree que el dinero podría ayudar a esas escuelas al proporcionar los fondos necesarios para actualizar esos sistemas?

Respuesta de la Ciudad de Fresno: Mucho de lo que está sucediendo ahora mismo a nivel federal es solo para mantener al gobierno a flote. Cuando la administración de Biden complete su transición, comenzarán a implementar otros recursos que pueden ser útiles.

Pregunta: ¿Dónde está AB 841 en el proceso legislativo? ¿Nos hará saber cuándo debemos escribir una carta de apoyo?

Respuesta del Distrito: Si, absolutamente. Según la forma en que se redacta la factura, el dinero se manejará a través de las empresas de servicios públicos y deberíamos ver esos procesos de solicitud a partir de marzo de 2021. Definitivamente podemos intentar seguir los plazos y proporcionar actualizaciones cuando sea necesario.

Subcomité de Barreras Vegetativas:

Jaime Holt, Director de Comunicaciones, el Distrito

Jaime dio una actualización sobre el nuevo subcomité de barreras vegetativas. Puntos importantes de la presentación:

- En nombre del Comité Directivo, Nayamin solicitó dos becarios de cambio climático de tiempo completo de AmeriCorps
- Los becarios pueden ayudar a implementar medidas CERP relacionadas con la ecologización urbana y las barreras vegetativas.
- El Distrito se está contactado con Caltrans, la Ciudad de Fresno, el Condado de Fresno, Tree Fresno, el Departamento de Conservación, el Estado de Fresno y otros para averiguar lo que ya se está haciendo y ponerlo a disposición en una lista concisa para el Comité Directivo.

Comentario: Gracias por sus esfuerzos para brindar ayuda adicional. Es sobresaliente.

Actualización de Monitoreo del Aire:

Chay Thao, Gerente de Programa, el Distrito

Chay proporcionó una actualización sobre el monitoreo continuo del aire de la comunidad. Puntos importantes de la presentación:

- De diez sitios, solo quedan dos; Madison Elementary y Edison High School
- El Distrito está trabajando para facilitar la obtención de datos de camionetas colocándolos en un mapa interactivo en la página web
- Según lo solicitado por Comité Directivo, el Distrito está integrando el monitoreo del aire de la comunidad en los monitores regulatorios existentes que son parte de RAAN
- En el próximo subcomité de monitoreo del aire, el Distrito proporcionará un resumen de las actualizaciones de monitoreo del aire completadas, lo que queda y lo que hemos aprendido; se animan los comentarios

Comentario: El Comité Directivo quisiera ver más detalles sobre los contaminantes tóxicos del aire, como los nombres de los contaminantes y cuáles han sido esos niveles.

Respuesta del Distrito: El Distrito incluirá eso.

Comentario: Me gustaría ver todos los datos sin procesar sin filtrar en una hoja de cálculo de Excel.

Respuesta del Distrito: Nosotros te lo proporcionaremos.

Comentario: La ciudad de Fresno necesita obtener los números de PM 2.5 a lo largo de la Interestatal 99 porque está construyendo ese hotel para personas sin hogar.

Respuesta de la Ciudad de Fresno: Lo tendremos en cuenta. Gracias.

Pregunta: ¿Sería demasiado problemático para usted comparar esos datos en los diferentes monitores estacionarios con los monitores regulatorios para que el Comité Directivo pueda ver si hay puntos con diferencias significativas?

Respuesta del Distrito: Sí, en nuestro informe trimestral, los comparamos. Lo juntaremos para que todos lo vean.

Revisión del Informe de Medidas del CERP:

Jaime Holt, Director de Comunicaciones, el Distrito

Jaime presentó dos informes de medidas del CERP al Comité Directivo. Puntos importantes de la presentación:

- El Distrito creó recientemente un nuevo documento relacionado con el CERP
- El documento es una instantánea del CERP; Es una descripción general simplificada (CERP de un vistazo) que se ha publicado en el sitio web y se puede compartir externamente con el público en general.
- El informe de medidas completo todavía le falta un elemento clave, que es una manera fácil de ver el progreso; el Distrito quiere la opinión de Comité Directivo antes de refinar ese documento
- El informe puede tener enlaces a otros documentos
- El Distrito quiere comunicar suficiente información al Comité Directivo para que los miembros estén informados, pero no abrumados

Comentario: Al CERP de un vistazo le falta un cuadro con los puntos principales sobre AB 617, incluidas las fechas de inicio y finalización del proyecto y las metas clave a lo largo de los años. También deben agregar un termómetro de la asignación por año fiscal para todo este programa, para que puedas indicar los diferentes proyectos que se inician dentro de ese año. El folleto más grande es definitivamente confuso. Para revisar mejor ese documento, recomiendo un diagrama de Gantt con cada proyecto enumerado, luego puede hacer un hipervínculo a cada uno de esos elementos de línea y anotar el progreso realizado durante cada ciclo.

Respuesta de ILG: Gracias. Veo que el Distrito está tomando muchas notas sobre estas sugerencias.

Comentario: El CERP de un vistazo es un buen esfuerzo para describir el CERP. En el documento más grande, necesita líneas de tiempo, debe ser breve con menos palabras y debe enumerar cuánto dinero está invirtiendo el Distrito en cada una de esas filas de proyectos.

Respuesta de ILG: Gracias.

Comentario: Quiero animar a los residentes y me gustaría escuchar en qué medidas se deben trabajar a continuación y en qué quieren priorizar en enero.

Respuesta de ILG: Gracias por ese comentario. Agradezco cualquier comentario de los residentes en cualquier momento durante esta reunión.

Comentario: Creo que la discusión sobre la priorización merece centrarse en una reunión completa.

Respuesta de ILG: Lo escuchamos y agradecemos ese comentario. Nuestro pensamiento inicial fue que discutiríamos el esquema del informe de medidas para que podamos pasar a esa discusión de prioridades en una reunión posterior.

Respuesta del Distrito: Gracias. Definitivamente escuchamos lo que estás diciendo. Este artículo de la agenda se centró más en cómo podemos hacer que este informe de medidas sea más fácil de usar como herramienta para los miembros. Ya hemos recibido muchos comentarios y opiniones diferentes sobre cómo se puede presentar, por lo que si podemos tener más discusión sobre lo que desea el grupo en su conjunto, podemos diseñar esto teniendo en cuenta a la mayoría del grupo.

Comentario: ¿Cuándo profundizaremos en las prioridades de CERP? Me gustaría ver el memorando de entendimiento, los problemas de uso de suelo, los problemas de cumplimiento y jurisdicción discutidos y priorizados lo antes posible.

Comentario: Sigo escuchando que este documento debe brindar responsabilidad y transparencia. Lo que socava la confianza es la falta de responsabilidad y la repetición de intentar obtener información que se retiene. Este documento debe contener toda la información relevante y un enlace a los resultados y datos de salud.

Respuesta de ILG: Gracias.

Respuesta de IL: Parafraseando los comentarios del Comité Directivo recibidos hasta ahora en esta reunión sobre la versión actual del informe de medidas de CERP, el Distrito necesita ajustar el lenguaje, eliminar la redundancia y hacer que el contenido sea más corto, pero más relevante. El Distrito trabajará para arreglar las imágenes y el formato, pero el Comité Directivo recomienda agregar columnas, el presupuesto y el informe de implementación/estado. Lo que estamos escuchando es que esta es la prioridad número uno. No queremos volver a tener esta conversación y el Comité Directivo quiere ver el progreso en este informe de medidas. También escuchamos que el Comité Directivo quiere pasar a las discusiones de estrategia y priorización. El Distrito se asegurará de que la agenda de la próxima reunión se enfoque en la implementación y alineación estratégicas, teniendo en cuenta las prioridades de los residentes.

Respuesta del Distrito: Gracias a todos. Siempre es difícil escuchar que las cosas no son perfectas. Queremos un proceso perfecto para todos ustedes y estamos comprometidos a encontrar formas de hacer que su tiempo sea productivo y bien empleado. No queremos volver con algo que todavía no está bien. Si hay algunos miembros de Comité Directivo dispuestos a trabajar con el Distrito para asegurarse de que estamos capturando lo que desea, entonces podemos regresar a la próxima reunión y tener algo más significativo.

Comentario: Creo que el diseño es lo menos importante. Deberíamos poner todo lo demás en orden primero.

Comentario: Creo que ambas partes están conectadas. Es importante saber cuánto hemos avanzado y qué cosas debemos priorizar para avanzar, desde la perspectiva de los residentes. Eso es más importante que formatear, pero si está conectado.

Respuesta de ILG: Creo que lo que hemos escuchado es que el diseño se perfeccionará entre ahora y la próxima reunión y que la priorización y la estrategia se discutirán en la próxima reunión. La pregunta es cómo integrar esta conversación de visualización.

Comentario: Hay fuerza en la simplicidad, pero creo que debe haber una comprensión razonable de los resultados y el progreso. Uno de los resultados que esperamos lograr es la reducción de la quema de leña en nuestra zona afectada. ¿Cómo se vería para nosotros tener éxito con nuestra pieza de quemar leña? Tenemos que determinar cómo se ve el éxito para que, a medida que avanzamos en estos gráficos, podamos evaluar el progreso. No estoy seguro de que siempre sepamos lo que está sucediendo como comité, necesariamente.

Respuesta de ILG: Gracias. Escucho a los miembros de Comité Directivo decir que el CERP en un vistazo y el informe de medidas deben incluir el progreso que estamos logrando en las metas clave.

Comentario: Quería señalar uno de sus comentarios centrado en cómo segmentamos el documento en términos de garantizar que el Distrito proporcione suficiente información para todos los relacionados con las metas del CERP. Las diferentes partes interesadas han tenido diferentes prioridades. Creo que sería un valor agregado si el Comité Directivo tuviera un resumen detallando dónde se relaciona el Distrito con cada una de las diferentes metas del CERP. Eso nos ayudaría en nuestro proceso de toma de decisiones a medida que nos acercamos a enero.

Respuesta de ILG: Gracias. Hemos llegado a un consenso a través de comentarios verbales y comentarios de chat de que necesitamos discutir esto en la próxima reunión.

Concluir/Próximos Pasos:

Erica Manuel, Facilitadora, ILG

Erica agradeció a todos por asistir y al Comité Directivo por el diálogo honesto.

Pregunta: ¿Podemos agregar una actualización del presupuesto a la agenda del próximo mes?

ILG Response: Gracias. Podemos pedirle al Distrito que agregue eso a la lista de temas de la agenda para el próximo mes.

Comentario: Quería felicitar al Comisionado Randolph, quien acaba de ser designado para CARB. Estamos entusiasmados con los líderes que el Gobernador está nombrando para la Junta.

Respuesta del Distrito: ¡Gracias! Estamos de acuerdo. La Dr. Pacheco-Warner también será un representante de San Joaquín ante la Junta de CARB.

Ryan deseó felices fiestas a la Comité Directivo y les agradeció por su flexibilidad, honestidad y aportes, y por continuar trabajando con el Distrito. La ciudad de Fresno agradeció al Comité Directivo por permitirles unirse al proceso y ser coanfitriones de la reunión.

Recordatorios:

La próxima reunión del Comité Directivo programada regularmente es el 13 de enero a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Comentario Público:

No hay comentarios públicos.

South Central Fresno Agenda for Community Steering Committee Meeting #28

Wednesday, December 9, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>
Meeting ID: 982 5906 9963
Passcode: 617

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Erica Manuel, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
City of Fresno, Community Co-Host
- 5:45 p.m. Standing Updates**
Truck Rerouting Subcommittee
City of Fresno
School Filtration and Bus Subcommittee
Valley Air District Staff
Vegetative Barriers Subcommittee
Valley Air District Staff
Air Monitoring Update and Other District Updates
Valley Air District Staff
- 6:15 p.m. CERP Tracker Review**
Update on implementation of measures adopted in the CERP and review of [tracker](#)
- 7:15 p.m. Lawn & Garden Incentive Measures**
Discuss plans for outreach to promote community participation in the Lawn and Garden Incentive measures in the CERP.
Valley Air District Staff
- 7:25 p.m. Wrap Up/Next Steps**
Monitoring Subcommittee Meeting: Week of December 14, 2020 via Zoom
Next CSC Meeting: January 13, 2021 via Zoom
Erica Manuel, Facilitator

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #28

Miércoles, 9 de diciembre de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/98259069963?pwd=SVhCTmRRRjRBbkNZOTIRaWc4Y296QT09>

Meeting ID: 982 5906 9963

Passcode: 617

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-431-3632

Código de acceso: **9405600#**

- 5:30 p.m. Bienvenida e Introducciones**
Erica Manuel, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Ciudad de Fresno, Co-anfitrión Comunitario
- 5:45 p.m. Actualizaciones Permanentes**
Subcomité de Desviación de Camiones
Ciudad de Fresno
Subcomité de Autobuses y Filtración de Escuelas
Personal del Distrito del Aire del Valle
Subcomité de Barreras Vegetativas
Personal del Distrito del Aire del Valle
Actualización de Monitoreo del Aire y Otras Actualizaciones del Distrito
Personal del Distrito del Aire del Valle
- 6:15 p.m. Repaso del Reporte de Medidas del CERP**
Actualización sobre implementación de medidas adoptadas en el CERP y
revisión del [reporte de medidas](#)
- 7:15 p.m. Medidas de Incentivo para Césped y Jardín**
Discutir planes de alcance para promover la participación de la comunidad en
las medidas de incentivos para césped y jardín en el CERP.
Personal del Distrito del Aire del Valle
- 7:25 p.m. Concluir/Próximos Pasos**
Reunión del Subcomité de Monitoreo: Semana del 14 de diciembre de 2020 a
través de Zoom
Próxima reunión del Comité Directivo: 13 de enero de 2021 a través de Zoom
Erica Manuel, Facilitadora

Meeting Highlights*
AB 617 Fresno Community Steering Committee Meeting #27
November 10, 2020, 5:30 pm - 7:30 pm
Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Email the District if interested in being a community co-host
- Email the District to volunteer for the vegetative barriers and urban greening subcommittee

Action items for the San Joaquin Valley Air Pollution Control District (District):

- Determine how many Fresno Unified classrooms (with students) have evaporative coolers
- Explore the feasibility of adding the real-time air monitoring map to the main District's website
- Explore solutions for combining discussions about measures from the Shafter CERP that link to the Fresno CERP
- Discuss integrating pesticide monitoring with DPR and CARB and bring those discussions back to the CSC
- Include a larger review of the measures tracker on a CSC meeting agenda in the near future
- Explore new ways to visualize and present the measures tracker so it is more readable and easy to understand
- Send the truck map to the CSC
- Contact the City and request a representative to speak at a CSC meeting about Orange Avenue and the current truck routing problems and possible solutions

Welcome and Introductions:

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, the District
Nayamin Martinez, CSC Community Co-host

Erica introduced herself and the ILG team, welcomed all participants, and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda and Zoom controls.

Erica welcomed special guests Sandy Berg (CARB Board Member) and Dr. Alex Sherriffs (Board Member of the District and CARB). Ryan welcomed the CSC and passed it to Nayamin for community co-host remarks. Nayamin encouraged CSC members to co-host in the future and asked members to share why they are motivated to participate in the CSC.

Standing Updates

Truck Rerouting Subcommittee Update:

Andrew Benelli, Assistant Director/City Engineer, City of Fresno

Andrew gave an update on the truck rerouting study RFP. Presentation highlights:

- City of Fresno received a lot of comments from the CSC
- The city addressed those comments and modified the RFP to incorporate them

- The city will be meeting with the subcommittee to go through how to address each comment

Question: I volunteered to wordsmith the RFP. When will the CSC see some basic draft language of the changes before the December meeting? Will the draft language include the budget breakdown?

Answer: The city will send it out 7 to 10 days before the meeting, which is not yet scheduled. We may not include the budget because there is still work to do on the city's end with executing an agreement between the city and the District.

School Filtration and Bus Subcommittee:

Eric Payne, CSC member

Eric provided an update on the school filtration and bus subcommittee, which included a recently meeting with numerous school board trustees. Presentation highlights:

- Many schools in Fresno cannot place higher MERV filters in their sites, but they can circulate air through the filters more often
- Fresno Unified is at its highest MERV rating and has done an extensive assessment of all facilities
- The transportation director at the city provided a synopsis of Fresno's transition plan to electric buses
- CSC recommended re-allocating funding to cover the cost of charging stations if CARB allows it; CARB will provide guidance
- The District wants to work with Fresno Unified to determine the exact needs for each location and how the program can meet those needs for all the schools
- There is a follow up meeting to discuss electric buses and the infrastructure
- The District committed to a pilot program that is already up and running

Question: What about replacing filters in portables?

District Answer: If there is a portable that has a filter that can be replaced, it will be. Some of the portables are running on really old technology. In those cases, the District might install the standalone air filtration purifiers.

Question from Spanish-speaker: How many school buses will be changed out in Fresno?

District Answer: The CERP contains enough funding to replace 16 schools buses in South Central Fresno.

Comment: The whole idea that there are still portables in Fresno Unified with evaporative coolers is news to me and I would like to see an inventory of those. The mold risk from those is pretty high compared to a standard cooling system. The CSC needs to target funding to replace those.

District Response: Fresno Unified said there were only a limited number of evaporative coolers used in non-traditional classrooms and vocational rooms.

Question: What are the next steps for the subcommittee?

District Answer: The subcommittee got a firm commitment from the trustees and top staff that they want to do what the District is calling a pilot with Fresno Unified that will address some of the schools that are most at risk and get some electric school buses going. Grant staff is working to get the assessment done and design a program to meet those needs.

Comment from Spanish-speaker: The CSC needs to be able to put funding into the older schools so they can replace those filters.

District Response: Thank you.

Recent Community Air Monitoring Results:

Jon Klassen, Director of Strategies and Incentives, the District

Jon provided an update on recent community air monitoring. Presentation highlights:

- The District has formally executed the lease agreement for Madison Elementary School
- Staff is working with Fresno Unified to set up a location at Edison High School
- The air monitoring van has continued to take measurements around locations the CSC recommended
- The District is making progress on developing a real time air monitoring map
- Staff is taking steps toward integrating community air monitoring data into the RAAN system

Question: Has there been any progress made to make the air monitoring data more easily accessible? Why hasn't this data been incorporated in RAAN? Is there any baseline data that the District has captured with other monitors in the past so the CSC can see the trends?

District Answer: Accessibility of data is connected to numerous factors; the District is creating a map with air monitoring data in real time that should help address numerous issues

Question: Will the District be putting these monitors in the annual update to the monitoring plan for next year and adding them into the regulatory network?

District Answer: These networks are separate from the regulatory network, which are there for decades and capture long-term trends. The monitoring networks for AB 617 are a little more flexible and we are trying to isolate impacts of various sources in the area.

Comment: As the District integrates the data into the system, it needs to be user friendly.

District Response: We agree.

DPR Update:

Nan Singhasemanon, Assistant Director, Department of Pesticide Regulation (DPR)

Minh Pham, Air Program Manager, DPR

Nan gave an update on pesticide regulation. Minh gave an overview of the air program. Presentation highlights:

- DPR is on track to develop regulations next year in accordance with the toxic air contaminant process to reduce acute and chronic community exposure to telone
- DPR is evaluating alternative 1,3-D application methods that will reduce emissions
- DPR is developing a functional statewide pesticide application notification system
- The air program is responsible for assessing pesticide concentrations in the air
- Three pillars of monitoring: application site monitoring, seasonal studies, and long-term monitoring

Question: Why is Parlier included in the South Central Fresno pilot program?

DPR Answer: Parlier was one of the original sites DPR had for the telone study and is part of the ongoing 1,3-D pilot program. It is the area closest to Fresno where we are doing that pilot program.

Question: When the map of AB 617 was expanded to include parts of Southwest Fresno, there was a concern for residents about monitoring pesticides. How and when can DPR start monitoring for pesticides in the schools that belong to the South Central area?

DPR Answer: DPR doesn't know when, but would like to open up the conversation. Monitoring can be a broad spectrum. DPR can assist with gathering information for the CSC so we can get the ball rolling.

Question from Spanish-speaker: How much pollution from the industry and from vehicles has been reduced here in the community?

DPR Answer: On pesticides, there are regulations in place and DPR is monitoring progress and ensuring that all steps minimize pollution. That monitoring will determine if additional reductions are needed.

District Comment: Generally in the Central Valley, we have reduced pollution from stationary sources by 80%-90% and from mobile sources about 50%-60%, over the last 20-30 years.

Question: How does DPR shut down pesticide drift? At what point does DPR cite, charge or ban bad pesticide sites? Is there any policy for notification of chemicals to surrounding housing developments that adjoin farmland? Is there health data with regards to asthma or deaths caused by pesticide drift?

DPR Answer: When it comes to drift, both DPR's enforcement group and the county Ag commissioners' enforcement group are always available for any type of drift incidents. When it comes to pesticide use in California, we do quite a bit of work with buffer zones and setbacks. If someone is applying something onto a field, there is a buffer zone between the edge of that field and any exposure to anybody living near or around there. DPR's health and safety team collects data on illnesses. The Pesticide Illness Surveillance Program (PISP) has data available online. We also publish an annual report highlighting specific episodes and cases of specific illnesses.

Question: In our tracking for CERP measures, we talk about a DPR pilot mitigation program. Are you considering this program to be the foundation for the DPR pilot mitigation program mentioned in the CERP tracking progress? I was surprised to find out that DPR is working on AB 617 with Shafter when this Fresno CSC has asked about pesticide monitoring from the beginning. There may be information from Shafter that could be helpful to Fresno residents as well.

DPR Answer: DPR and District could have communicated better about the efforts being done in Shafter and how they relate back to Fresno. This is all part of the learning process and we will continue to improve.

Comment from Spanish-speaker: Please ensure we are able to notify the public, especially the workers in the fields who are impacted by the pesticides that spread in that community. On Chestnut Avenue, there is a school and they should be notified when pesticides are emitted in that area.

DPR Response: DPR's school regulations incorporate the aspect of notifications. There are occasional incidents with field workers and drift, but DPR tries to minimize those.

Question: When will the CSC get a status report on pesticide monitoring and if it will be incorporated more broadly in our community?

DPR Answer: The District will work with DPR and CARB to discuss options and bring those discussions back to the CSC.

Update on Incentive CERP Strategies and Outreach:

Todd DeYoung, Director of Strategies and Incentives, the District

Todd gave an update on incentive CERP strategies. Jaime briefly highlighted outreach progress. Presentation highlights:

- The District has tried to make the progress tracker more user-friendly
- Many of the recommended programs were not included when CARB was putting together the CAPP guidelines, which is a testament to the CSC's innovation
- Some programs require the District to get approval from CARB to spend AB 617 funding
- The District is working on those program plans so we can proceed with implementation
- The District is developing an outreach plan for the different strategies that are listed on the tracker
- There will be more information on the outreach plan in the coming months

Comment: This tracking plan reflects the core elements of the CSC's work. The tracker highlights all the measures we are covering. We agree that the outreach efforts need to include CSC members spreading the word to residents and the community so the District does not miss what the CSC intended for that measure. I would like to see a better review of this tracker on our next agenda so we can dig deeper into it and incorporate more feedback.

District Response: We can add this item to a future agenda

Comment: I would like to see the tracker broken down into an information sheet that is very simple and straight to the point. People should be able to read this in less than five minutes and understand it. The District should provide a Gantt chart of tasks and a timeline for implementation of the tasks.

District Response: That is great feedback. The District will see if there is a better way to present the information.

Question from Spanish-speaker: What is being done regarding the heavy duty trucks going through Orange Avenue?

District Answer: A couple of the measures touch on heavy duty trucks. The truck rerouting study has the potential to impact truck routes within the community. There are measures targeting reducing emissions from heavy duty trucks, replacing trucks, providing charging infrastructure, fueling infrastructure; this will all have an impact on truck emissions within the 617 community.

Question: At the last meeting, the District committed to addressing the issue on Orange Avenue with the heavy duty trucks. What progress has the District made with enforcing mobile source rules or truck routes on that street?

District Answer: At the last meeting, the City of Fresno shared the hotline to call in. The District can add the truck route on the AB 617 page so the CSC can understand where trucks can and can't be. The other piece will be the truck rerouting study.

Comment: The District should have someone from the city come talk about Orange Avenue and the current traffic and routing problems.

District Response: We will definitely reach out.

Final Draft of Annual Report

Ryan Hayashi, Deputy Air Pollution Control Officer, the District

Ryan reviewed the annual report with CSC comments incorporated. Presentation highlights:

- The District is starting the process for rule development this year and notices will be sent to CSC for participation in the development process

- Staff have almost fully deployed the air monitoring equipment that was part of the community air monitoring plan

Question: I thought the MOU between the District and different entities was part of the resolution that CARB approved when they approved our CERP? The CSC has not seen or heard that. Can you provide a status report?

District Answer: Absolutely. There will be a new administration in the City of Fresno and the District is excited to work with them. We know how important the MOU is to this CSC and staff is committed to working with the city and the CSC. The District will provide regularly updates on that.

Comment: The CSC should be allowed to review the progress report together with the District. If we do this at the same time, we can compare the individual points of action that we have or have not accomplished and compare it to the progress tracking report.

Response: We are happy to explore that approach as we move through the tracking process

Wrap Up/Next Steps:

Erica Manuel, Facilitator & CEO/Executive Director, ILG

Erica thanked everyone for participating in the meeting and turned it over to Sandy Berg and Dr. Alex Sherriffs for closing remarks. Both board members thanked the CSC for their commitment and the staff for their coordination efforts.

Erica thanked Nayamin for being the community co-host.

Reminders:

Next regularly scheduled CSC meeting is Dec. 9 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comment:

No public comment.

Puntos Importantes de la Reunión*

Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #27

10 de noviembre de 2020, 5:30 pm - 7:30 pm

Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno:

- Envíe un correo electrónico al Distrito si está interesado en ser un coanfitrión de la comunidad
- Envíe un correo electrónico al Distrito para ser voluntario del subcomité de barreras vegetativas y ecologización urbana

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito):

- Determinar cuántos salones del Distrito Escolar Unificado de Fresno (con estudiantes) tienen enfriadores evaporativos
- Explorar la viabilidad de agregar el mapa de monitoreo del aire en tiempo real al sitio web principal del Distrito
- Explorar soluciones para combinar discusiones sobre medidas del CERP de Shafter que relacionan con el CERP de Fresno
- Discutir la integración del monitoreo de pesticidas con DPR y CARB y traer esas discusiones de regreso al Comité Directivo
- Incluir una revisión más amplia del informe de medidas en la agenda de una reunión del Comité Directivo en un futuro próximo
- Explorar nuevas formas de visualizar y presentar el informe de medidas para que sea más legible y fácil de entender
- Enviar el mapa de camiones al Comité Directivo
- Ponerse en contacto con la Ciudad y solicitar a un representante que hable en una reunión de Comité Directivo sobre Orange Avenue y los problemas actuales de rutas de camiones y posibles soluciones

Bienvenida e Introducciones:

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle

Nayamin Martinez, Coanfitriona del Comité Directivo de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los elementos de mantenimiento y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión y los controles de Zoom.

Erica dio la bienvenida a los invitados especiales Sandy Berg (miembro de la junta directiva de CARB) y el Dr. Alex Sherriffs (miembro de la Mesa Directiva del Distrito y CARB). Ryan dio la bienvenida al Comité Directivo y se lo pasó a Nayamin para comentarios de coanfitrión de la comunidad. Nayamin animó a los miembros de Comité Directivo a ser coanfitriones en el futuro y les pidió a los miembros que compartieran por qué están motivados a participar en el Comité Directivo.

Actualizaciones Permanentes

Actualización del Subcomité de Desviación de Camiones:

Andrew Benelli, Subdirector/Ingeniero de la Ciudad, Ciudad de Fresno

Andrew dio una actualización sobre la RFP del estudio de desviación de camiones. Puntos importantes de la presentación:

- La Ciudad de Fresno recibió muchos comentarios del Comité Directivo
- La ciudad abordó esos comentarios y modificó la RFP para incorporarlos.
- La ciudad se reunirá con el subcomité para analizar cómo abordar cada comentario.

Pregunta: Me ofrecí como voluntario para redactar la RFP. ¿Cuándo verá el Comité Directivo algún texto preliminar básico de los cambios antes de la reunión de diciembre? ¿El borrador del lenguaje incluirá el análisis del presupuesto?

Respuesta: La ciudad lo enviará de 7 a 10 días antes de la reunión, que aún no está programada. Es posible que no incluyamos el presupuesto porque todavía hay trabajo por hacer por parte de la ciudad con la ejecución de un acuerdo entre la ciudad y el Distrito.

Subcomité de Autobuses y Filtración Escolar:

Eric Payne, Miembro del Comité Directivo

Eric proporcionó una actualización sobre el subcomité de autobuses y filtración escolar, que incluyó una reunión reciente con numerosos miembros de la junta escolar. Puntos importantes de la presentación:

- Muchas escuelas en Fresno no pueden colocar filtros MERV más altos en sus sitios, pero pueden hacer circular el aire a través de los filtros con más frecuencia
- El Distrito Unificado de Fresno se encuentra en su clasificación de MERV más alta y ha realizado una evaluación exhaustiva de todas las instalaciones
- El director de transporte de la ciudad proporcionó una sinopsis del plan de transición de Fresno a los autobuses eléctricos
- El Comité Directivo recomendó reasignar fondos para cubrir el costo de las estaciones de carga si CARB lo permite; CARB proporcionará orientación
- El Distrito quiere trabajar con el Distrito Escolar Unificado de Fresno para determinar las necesidades exactas para cada ubicación y cómo el programa puede satisfacer esas necesidades para todas las escuelas
- Hay una reunión de seguimiento para discutir los autobuses eléctricos y la infraestructura
- El Distrito se comprometió con un programa piloto que ya está en funcionamiento

Pregunta: ¿Qué pasa con el reemplazo de filtros en portátiles?

Respuesta del Distrito: Si hay un portátil que tiene un filtro que se puede reemplazar, lo será. Algunos de los portátiles funcionan con tecnología realmente antigua. En esos casos, el Distrito podría instalar purificadores de filtración de aire independientes.

Pregunta de un hispanohablante: ¿Cuántos autobuses escolares se cambiarán en Fresno?

Respuesta del Distrito: El CERP contiene fondos suficientes para reemplazar 16 autobuses escolares en Centro-Sur Fresno.

Comentario: La idea de que todavía hay portátiles en el Distrito Escolar Unificado de Fresno con enfriadores evaporativos es una novedad para mí y me gustaría ver un inventario de ellos. El riesgo de moho de estos es bastante alto en comparación con un sistema de enfriamiento estándar. El Comité Directivo necesita destinar fondos para reemplazar aquellos.

Respuesta del Distrito: El Distrito Escolar Unificado de Fresno dijo que solo se usaba un número limitado de enfriadores evaporativos en aulas no tradicionales y salas vocacionales.

Pregunta: ¿Cuáles son los próximos pasos para el subcomité?

Respuesta del Distrito: El subcomité obtuvo el firme compromiso de los fideicomisarios y el personal superior de que quieren hacer lo que el Distrito está llamando un piloto con el Distrito Escolar Unificado de Fresno que abordará algunas de las escuelas que están en mayor riesgo y pondrá en marcha algunos autobuses escolares eléctricos. El personal de la subvención está trabajando para realizar la evaluación y diseñar un programa para satisfacer esas necesidades.

Comentario de un hispanohablante: El Comité Directivo debe poder destinar fondos a las escuelas más antiguas para que puedan reemplazar esos filtros.

Respuesta del Distrito: Gracias.

Resultados Recientes del Monitoreo del Aire Comunitario:

Jon Klassen, Director de Estrategia e Incentivos, Distrito del Aire del Valle

Jon proporcionó una actualización sobre el monitoreo del aire de la comunidad reciente. Puntos importantes de la presentación:

- El Distrito ha ejecutado formalmente el contrato de arrendamiento de Madison Elementary
- El personal está trabajando con el Distrito Escolar Unificado de Fresno para establecer una ubicación en Edison High School
- La camioneta de monitoreo de aire ha continuado tomando medidas alrededor de los lugares que recomendó el Comité Directivo
- El Distrito está avanzando en el desarrollo de un mapa de monitoreo del aire en tiempo real
- El personal está tomando medidas para integrar los datos de monitoreo del aire de la comunidad en el sistema RAAN

Pregunta: ¿Se ha realizado algún progreso para que los datos de monitoreo del aire sean más accesibles? ¿Por qué no se han incorporado estos datos en RAAN? ¿Existe algún dato de referencia que el Distrito haya capturado con otros monitores en el pasado para que el Comité Directivo pueda ver las tendencias?

Respuesta del Distrito: La accesibilidad de los datos está relacionada con numerosos factores; el Distrito está creando un mapa con datos de monitoreo del aire en tiempo real que debería ayudar a abordar numerosos problemas.

Pregunta: ¿El Distrito pondrá estos monitores en la actualización anual del plan de monitoreo para el próximo año y los agregará a la red reguladora?

Respuesta del Distrito: Estas redes están separadas de la red reguladora, que están ahí durante décadas y capturan tendencias a largo plazo. Las redes de monitoreo para AB 617 son un poco más flexibles y estamos tratando de aislar los impactos de varias fuentes en el área.

Comentario: A medida que el distrito integra los datos en el sistema, debe ser fácil de usar.

Respuesta del Distrito: Nosotras estamos de acuerdo.

Actualización de DPR:

Nan Singhasemanon, Subdirector, Departamento de Regulación de Pesticidas (DPR)

Minh Pham, Gerente de Programa de Aire, DPR

Nan dio una actualización sobre la regulación de pesticidas. Minh dio una descripción general del programa de aire. Puntos importantes de la presentación:

- El DPR está en camino de desarrollar regulaciones el próximo año de acuerdo con el proceso de contaminantes tóxicos del aire para reducir la exposición comunitaria aguda y crónica al telone
- El DPR está evaluando métodos de aplicación alternativos de 1,3-D que reducirán las emisiones
- El DPR está desarrollando un sistema de notificación de aplicación de pesticidas funcional en todo el estado
- El programa de aire es responsable de evaluar las concentraciones de pesticidas en el aire
- Tres pilares de monitoreo: monitoreo del sitio de aplicación, estudios estacionales y monitoreo a largo plazo.

Pregunta: ¿Por qué Parlier está incluido en el programa piloto de Centro-Sur Fresno?

Respuesta del DPR: Parlier fue uno de los sitios originales que DPR tenía para el estudio de telone y es parte del programa piloto 1,3-D en curso. Es el área más cercana a Fresno donde estamos haciendo ese programa piloto.

Pregunta: Cuando se amplió el mapa de AB 617 para incluir partes del suroeste de Fresno, los residentes se preocuparon por el control de los pesticidas. ¿Cómo y cuándo puede el DPR comenzar a monitorear los pesticidas en las escuelas que pertenecen al área Centro-Sur?

Respuesta del DPR: El DPR no sabe cuándo, pero le gustaría iniciar la conversación. El seguimiento puede ser de amplio espectro. El DPR puede ayudar a recopilar información para el Comité Directivo para que podamos poner manos a la obra.

Pregunta de un hispanohablante: ¿Cuánta contaminación de la industria y de los vehículos se ha reducido aquí en la comunidad?

Respuesta del DPR: Sobre los pesticidas, existen regulaciones y el DPR está monitoreando el progreso y asegurando que todos los pasos minimicen la contaminación. Ese seguimiento determinará si se necesitan reducciones adicionales.

Respuesta del Distrito: Generalmente en el Valle Central, hemos reducido la contaminación de fuentes estacionarias en un 80% -90% y de fuentes móviles entre un 50% y un 60%, durante los últimos 20-30 años.

Pregunta: ¿Cómo detiene el DPR la deriva de pesticidas? ¿En qué momento el DPR cita, cobra o prohíbe los sitios con pesticidas defectuosos? ¿Existe alguna política para la notificación de productos químicos a los desarrollos de viviendas circundantes que colindan con tierras de cultivo? ¿Hay datos de salud con respecto al asma o las muertes causadas por la deriva de pesticidas?

Respuesta del DPR: Cuando se trata de deriva, tanto el grupo de cumplimiento del DPR como el grupo de cumplimiento de los comisionados agrícolas del condado siempre están disponibles para cualquier tipo de incidentes de deriva. Cuando se trata del uso de pesticidas en California, trabajamos bastante con zonas de amortiguamiento y retrocesos. Si alguien está aplicando algo en un campo, hay una zona de amortiguación entre el borde de ese campo y cualquier exposición a cualquier persona que viva cerca o alrededor de él. El equipo de salud y seguridad del DPR recopila datos sobre enfermedades. El Programa de Vigilancia de Enfermedades por Pesticidas (PISP) tiene

datos disponibles en línea. También publicamos un informe anual que destaca episodios específicos y casos de enfermedades específicas.

Pregunta: En nuestro informe de medidas CERP, hablamos de un programa piloto de mitigación del DPR. ¿Está considerando que este programa sea la base para el programa piloto de mitigación del DPR mencionado en el progreso del informe de medidas del CERP? Me sorprendió descubrir que el DPR está trabajando en AB 617 con Shafter cuando este Comité Directivo de Fresno preguntó sobre el monitoreo de pesticidas desde el principio. Puede haber información de Shafter que también podría ser útil para los residentes de Fresno.

Respuesta del DPR: El DPR y el Distrito podrían haberse comunicado mejor sobre los esfuerzos que se están realizando en Shafter y cómo se relacionan con Fresno. Todo esto es parte del proceso de aprendizaje y continuaremos mejorando.

Comentario de un hispanohablante: Asegúrese de que podamos notificar al público, especialmente a los trabajadores de los campos que se ven afectados por los pesticidas que se propagan en esa comunidad. En Chestnut Avenue, hay una escuela y deben ser notificados cuando se emiten pesticidas en esa área.

Respuesta del DPR: Las regulaciones escolares del DPR incorporan el aspecto de notificaciones. Hay incidentes ocasionales con los trabajadores de campo y la deriva, pero el DPR trata de minimizarlos.

Pregunta: ¿Cuándo obtendrá el Comité Directivo un informe de estado sobre el monitoreo de pesticidas y si se incorporará de manera más amplia en nuestra comunidad?

Respuesta del DPR: El Distrito trabajará con el DPR y CARB para discutir las opciones y traer esas discusiones de regreso al Comité Directivo.

Actualización Sobre las Estrategias y Alcance de Incentivos del CERP:

Todd DeYoung, Director de Estrategia e Incentivos, Distrito del Aire del Valle

Todd dio una actualización sobre las estrategias de incentivos del CERP. Jaime destacó brevemente el progreso de alcance. Puntos importantes de la presentación:

- El Distrito ha tratado de hacer que el progreso del informe de medidas sea más fácil de usar.
- Muchos de los programas recomendados no se incluyeron cuando CARB estaba elaborando las pautas de CAPP, lo cual es un testimonio de la innovación de Comité Directivo.
- Algunos programas requieren que el Distrito obtenga la aprobación de CARB para gastar los fondos AB 617
- El Distrito está trabajando en esos planes del programa para que podamos proceder con la implementación.
- El Distrito está desarrollando un plan de alcance para las diferentes estrategias que se enumeran en el informe de medidas
- Habrá más información sobre el plan de alcance en el próximo mes

Comentario: Este plan de informe de medidas refleja los elementos centrales del trabajo del Comité. El informe destaca todas las medidas que estamos cubriendo. Estamos de acuerdo en que los esfuerzos de alcance deben incluir a los miembros del Comité Directivo difundiendo el mensaje entre los residentes y la comunidad para que el Distrito no se pierda lo que el Comité Directivo pretendía para esa medida. Me gustaría ver una mejor revisión de este informe de medidas en nuestra próxima agenda para que podamos profundizar en él e incorporar más comentarios.

Respuesta del Distrito: Podemos agregar este tema a una agenda futura.

Comentario: Me gustaría ver el informe de medidas dividido en una hoja de información que sea muy simple y directa al grano. La gente debería poder leer esto en menos de cinco minutos y entenderlo. El Distrito debe proporcionar un diagrama de Gantt de tareas y un cronograma para la implementación de las tareas.

Respuesta del Distrito: Esa es un buen comentario. El Distrito verá si hay una mejor manera de presentar la información.

Pregunta de un hispanohablante: ¿Qué se está haciendo con respecto a los camiones pesados que pasan por Orange Avenue?

Respuesta del Distrito: Algunas de las medidas se refieren a camiones pesados. El estudio de desviación de camiones tiene el potencial de afectar las rutas de camiones dentro de la comunidad. Hay medidas destinadas a reducir las emisiones de los camiones pesados, reemplazar los camiones, proporcionar infraestructura de carga, infraestructura de combustible; Todo esto tendrá un impacto en las emisiones de camiones dentro de la comunidad 617.

Pregunta: En la última reunión, el Distrito se comprometió a abordar el problema en Orange Avenue con los camiones pesados. ¿Qué progreso ha logrado el Distrito en la aplicación de las reglas de fuentes móviles o rutas de camiones en esa calle?

Respuesta del Distrito: En la última reunión, la Ciudad de Fresno compartió la línea directa para llamar. El Distrito puede agregar la ruta de los camiones en la página AB 617 para que el Comité Directivo pueda entender dónde pueden estar y dónde no pueden estar los camiones. La otra pieza será el estudio de desviación de camiones.

Comentario: El Distrito debería tener a alguien de la ciudad que hable sobre Orange Avenue y los problemas actuales de tráfico y rutas.

Respuesta del Distrito: Definitivamente nos comunicaremos.

Borrador Final del Informe Anual

Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle

Ryan revisó el informe anual con los comentarios de Comité Directivo incorporados. Puntos importantes de la presentación:

- El Distrito está comenzando el proceso para el desarrollo de reglas este año y se enviarán avisos a Comité Directivo para participar en el proceso de desarrollo
- El personal ha desplegado casi por completo el equipo de monitoreo del aire que formaba parte del plan de monitoreo del aire de la comunidad

Pregunta: Pensé que el MOU entre el Distrito y diferentes entidades era parte de la resolución que CARB aprobó cuando aprobaron nuestro CERP. El Comité Directivo no ha visto ni oído eso. ¿Puede proporcionar un informe de estado?

Respuesta del Distrito: Absolutamente. Habrá una nueva administración en la Ciudad de Fresno y el Distrito está emocionado de trabajar con ellos. Sabemos lo importante que es el MOU para este Comité Directivo y el personal está comprometido a trabajar con la ciudad y el Comité Directivo. El Distrito proporcionará actualizaciones periódicas sobre ese.

Comentario: Se debe permitir que el Comité Directivo revise el informe de progreso junto con el Distrito. Si hacemos esto al mismo tiempo, podemos comparar los puntos de acción individuales que hemos logrado o no y compararlo con el progreso del informe de medidas.

Respuesta: Nos complace explorar ese enfoque a medida que avanzamos en el proceso de seguimiento.

Concluir/Próximos Pasos:

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, ILG

Erica agradeció a todos por participar en la reunión y se lo entregó a Sandy Berg y al Dr. Alex Sherriffs para los comentarios finales. Ambos consejeros agradecieron al Comité Directivo por su compromiso y al personal por sus esfuerzos de coordinación.

Erica agradeció a Nayamin por ser la co-anfitriona de la comunidad.

Recordatorios:

La próxima reunión del Comité Directivo programada regularmente es el 9 de diciembre a través de Zoom. Todas las presentaciones, lo más destacado de las reuniones, las transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

** Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Comentario Público:

No hay comentarios públicos.

South Central Fresno Agenda for Community Steering Committee Meeting #27

Tuesday, November 10, 2020 – 5:30 pm - 7:30 pm

Ambient Air Monitoring in California

Air Program | Environmental Monitoring Branch

October 14, 2020

South Central Fresno Community Steering Committee

1

Today's Agenda

October 14, 2020

- Background: What is the Air Program? 
- Why Do We Monitor? How Do We Monitor? 
- Where Are We Monitoring? Results, Reports, and Outreach 
- Questions Contact Information 

Background: What is the Air Program?

- ❖ As part of the Environmental Monitoring Branch at the Department of Pesticide Regulation (DPR), the Air Program is responsible for **assessing** pesticide concentrations in air and **mitigating** adverse risks associated with pesticide applications.
 - Collecting air monitoring data is needed for this goal
 - Air monitoring data is supplemented with computer modeling and other data to estimate concentrations and emissions

Background: What governs the Air Program?

- ❖ Key laws for Air Program:
 - California Food and Agricultural Code - Continuous evaluation
 - California Toxic Air Contaminant (TAC) Act
 - Requires DPR to assess and mitigate risks from air exposure
 - Requires ARB to monitor at DPR's request

Background: Why Do We Monitor?

Depending on the study, DPR performs air monitoring to:

- Identify pesticides in air
- Determine acute, sub-chronic, or annual concentrations
- Assess subchronic, chronic, and/or cumulative exposures
- Track trends in air concentrations over time
- Determine efficacy of mitigation measures
- Determine pesticide emission rate (flux)
- Validate and refine air computer models

How Does DPR Monitor For Pesticides in Air

Application-site
Monitoring

Seasonal
Monitoring

Long-term
Monitoring

How Does DPR Monitor For Pesticides in Air

Application-site Monitoring

- Monitoring occurs on or at the edge of the application field
- Monitoring occurs for several days after the application
- Data best used to estimate maximum exposures over hours or days

How Does DPR Monitor For Pesticides in Air

Seasonal Monitoring

- Monitoring is conducted in communities of higher pesticide use relative to other communities.
- 1-2 pesticides is conducted for the 8-12 week period that coordinates with the historical use season.
- Data best used to estimate maximum exposures over weeks or months

How Does DPR Monitor For Pesticides in Air

Long-term Monitoring

- Continuous weekly air sampling is performed in communities with high use of multiple pesticides
- Data best used to assess maximum exposures for multiple pesticides over years

Where Do We Monitor?

Long-Term Air Sampling Sites

Recent Seasonal Air Monitoring Sampling Sites

Monitoreo del Aire Ambiental en California

Programa de Aire | Rama de Monitoreo Ambiental

14 de octubre de 2020

Comité Directivo Comunitario de Centro-Sur Fresno

Agenda de Hoy

14 de octubre de 2020

Antecedentes:
¿Qué es el Programa de Aire?

¿Por Qué Monitoreamos?
¿Cómo Monitoreamos?

¿Dónde Estamos Monitoreando?
Resultados, Informes y Alcance

Preguntas
Información de Contacto

Antecedentes:

¿Qué es el Programa de Aire?

- ❖ Como parte de la Rama de Monitoreo Ambiental del Departamento de Regulación de Pesticidas (DPR, por sus siglas en inglés), el Programa de Aire es responsable de **evaluar** las concentraciones de pesticidas en el aire y **mitigar** los riesgos adversos asociados con las aplicaciones de pesticidas.
 - La recopilación de datos de monitoreo del aire es necesaria para este objetivo
 - Los datos de monitoreo del aire se complementan con modelos informáticos y otros datos para estimar concentraciones y emisiones

Antecedentes:

¿Qué rige el Programa de Aire?

- ❖ Leyes clave para el Programa de Aire:
 - Código de Alimentos y Agrícola de California - Evaluación continua
 - Ley de Contaminantes Tóxicos del Aire de California (TAC, por sus siglas en inglés)
 - Requiere que el DPR evalúe y mitigue los riesgos de la exposición al aire
 - Requiere que ARB monitoree a solicitud del DPR

Antecedentes:

¿Por Qué Monitoreamos?

Dependiendo del estudio, DPR realiza monitoreo del aire para:

- Identificar pesticidas en el aire
- Determinar concentraciones agudas, subcrónicas o anuales
- Evaluar exposiciones subcrónicas, crónicas y/o acumulativas
- Seguimiento de las tendencias en las concentraciones de aire a lo largo del tiempo
- Determinar la eficacia de las medidas de mitigación
- Determinar la tasa de emisión de pesticidas (flujo)
- Validar y refinar modelos de aire de computadoras

¿Cómo Monitorea el DPR Pesticidas en el Aire?

**Monitoreo del
Sitio de la
Aplicación**

**Monitoreo
Estacional**

**Monitoreo a
Largo Plazo**

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo del Sitio de la Aplicación

- El monitoreo se produce en o en el borde del campo de aplicación
- El seguimiento ocurre durante varios días después de la aplicación
- Los datos se utilizan mejor para estimar las exposiciones máximas durante horas o días

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo Estacional

- El monitoreo se realiza en comunidades de mayor uso de pesticidas en comparación con otras comunidades.
- Se llevan a cabo 1-2 pesticidas durante el período de 8-12 semanas que se coordina con la temporada de uso histórico.
- Los datos se utilizan mejor para estimar las exposiciones máximas durante semanas o meses.

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo a Largo Plazo

- El muestreo de aire semanal continuo se realiza en comunidades con un alto uso de múltiples pesticidas
- Los datos se utilizan mejor para evaluar las exposiciones máximas de múltiples pesticidas durante años

¿Dónde Monitoreamos?

Sitios de Muestreo de Aire a Largo Plazo

Sitios de Muestreo de Monitoreo de Aire Estacional Recientes

Resultados, Informes y Alcance

DPR pone a disposición al público todos los resultados del monitoreo del aire a través de:

Base de Datos de Monitoreo del Aire de Pesticidas del DPR (PAMR)

El Programa de Aire se compromete a proporcionar informes anuales que incluyen:

Monitoreo Anual de la Red de Monitoreo del Aire

Resultados y análisis de estudios individuales

Inventario anual de VOC

El Programa de Aire realiza regularmente:

Conferencias científicas

Talleres públicos

Reuniones comunitarias

Meeting Highlights*

AB 617 Fresno Community Steering Committee Meeting #26

October 14, 2020, 5:30 pm - 7:30 pm

Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Participate in the October 28 Truck Rerouting Subcommittee Meeting
- Provide feedback or comments about the Truck Rerouting Study RFP
- Contact the SJVAPCD with information about the best locations to focus enforcement measure inspections
- Contact CARB with any suggestions about where anti-idling signs should be placed
- Submit comments on the draft Annual Report by October 23
- Contact SJVAPCD if you need a printed copy of the draft Annual Report
- Submit recommendations for possible agenda items for future CSC meetings

Action items for San Joaquin Valley Air Pollution Control District (SJVAPCD):

- Re-send the Truck Rerouting Study RFP to those who did not receive it
- Send information about which CARB contacts are most appropriate for truck idling violations
- Finalize a one page document about what AB 617 is and distribute a community postcard about AB 617 air quality monitoring data
- Investigate the Orange Street idling issue and report back to the CSC
- Re-engage in discussions with CARB around the possibility of developing an MOU on enforcement
- Check the reporting hotline to ensure that proper protocols related to response time are being adhered to
- Explore viability of establishing a Vegetative Barriers subcommittee
- Confirm the November CSC meeting date and time

Welcome and Introductions

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Kimberly McCoy, CSC Community Co-host

Erica introduced herself and the ILG team, welcomed all participants and went over housekeeping items and translation services. The facilitation team provided an overview of the meeting agenda. Ryan thanked the CSC for attending and for continued support of the AB 617 program and moving the measures forward. Kimberly thanked everyone for allowing her to be the community co-host again and expressed excitement to hear all the updates and discussion.

Standing Updates: Truck Rerouting Subcommittee

Scott Mozier, Public Works Director, City of Fresno

Scott gave an update on the truck re-routing study RFP and feedback opportunities. Presentation highlights:

- The City of Fresno compiled a draft RFP that outlines the scope of services for the study, including traffic data, evaluating routes, looking at land uses, schools, city/county/Caltrans jurisdictions, truck origins and destinations, stakeholders, and subcommittee reports

- The CSC received the draft RFP document electronically on Monday, October 12
- Next steps are to convene the Truck Rerouting Subcommittee to provide detailed comments
- With regard to funding, there will need to be a cooperative agreement between SJVAPCD and the City of Fresno for this work to be completed
- The Truck Rerouting Subcommittee meeting is scheduled for October 28 and any CSC member is welcome to attend

SJVAPCD Comment: We are very fortunate because this was one of the first project plans we submitted to CARB to get the allowance to spend the incentive funding on this measure.

Question: Can you provide the financial breakdown of the 617 money that will fund this study versus budget allocated from the city?

Answer: The RFP draft does contain dollar amounts from AB 617. The city has budgeted numerous in-kind services and the hard cost of managing the consultant through that process, as well as oversight during study period itself.

Question: If I have not been part of the subcommittee, to whom do I send my comments on the RFP?

Answer: SJVAPCD is happy to collect the feedback from the CSC and then provide it to the City on your behalf.

Question: I attended the City's budget hearing this week. The City Council asked what portion of the Study budget of \$500,000 the city would be responsible for. My concern is that a Truck Reroute Study is already something the city is and should be responsible and accountable for through the Southwest Specific Plan. Based on that document, a Truck Reroute study was supposed to be initiated by 2018. There is overlap between the Southwest Specific Plan area and our 617 community. The AB 617 money related to the CERP funding is limited because of all of our measures, so we should ensure the CSC understands this. We should push the City to provide more than just in-kind donations. The CSC has requested a wide range of services be provided as part of this RFP. If the respondents review and the RFP and say they'll need more than \$500,000, will the city contribute additional funds? Where will additional funding come from to ensure this study meets its goals?

Answer: That is a great question. From the city budget perspective, there are additional dollars that are anticipated to be needed as part of this partnership with SJVAPCD. Our administration and city council will have to consider if and how to secure additional funding if it is needed. We all know these are very difficult times. The City is not undertaking new general fund requests. With regard to refining the scope of the study, that's exactly what the Truck Rerouting Subcommittee is for. While we could add a lot more to the study, if we can accomplish the goal of achieving truck rerouting in the community without spending as much and preserve more funding for other priorities the CSC has outlined, that would be a valid effort.

Question: At the City's budget meeting today, there were motions made in support of the planning department adding additional studies at \$525,000. With that in mind, you should go back and request a minimum of \$100,000 for this CSC effort in case there are additional expenses required to cover this study.

Answer: The City's budget process is not driven by the staff; it is actually driven by the Council members. So far, they have not elevated this Truck Rerouting Study as a top priority... If you have concerns about that prioritization, please reach out to the Council directly and they can provide staff approval.

Question: This issue was clearly discussed and made a priority by the community throughout discussion about the Southwest Specific Plan. It is unfortunate that it hasn't been prioritized from

the city's perspective. Given that the impact of continued exposure to PM 2.5, the health risks, the development of chronic lung disease and all of the issues that place black and brown communities at increased risk for poor COVID outcomes, is there a possibility of using CARES dollars to fund a legitimate study that accomplishes the health outcomes we're seeking?

Answer: Our City Council is responsible for determining where the CARES dollars are allocated. The CARES dollars are expiring December 30 and whatever the money is earmarked for must be fully delivered, installed and complete by that date. This type of Truck re-route study would not be able to meet that deadline. I think with SJVAPCD, AB 617 and the city's contribution, there are appropriate levels of funds to complete the study as proposed.

Standing Updates: School Filtration and Bus Subcommittee

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime provided an update on the School Filtration and Bus Subcommittee. Presentation highlights:

- SJVAPCD has been working to better understand school HVAC systems and some of the challenges and limitations
- There are lots of variations in what the different school sites can take on
- SJVAPCD is talking to the CARB grants team to better understand what the grants can fund and where there may be flexibility
- SJVAPCD staff is still working with CARB to make sure the grant application has as much flexibility as is allowable within the CARB guidelines to get these filters in as many schools as possible
- SJVAPCD is continuing to deploy electric school buses in CSC school districts that are not Fresno Unified and we are planning to have a conversation with Fresno Unified to get them on board as well
- There is a subcommittee meeting scheduled for October 26 with numerous school trustees and Fresno Unified staff already confirmed to attend

Question: Do you have an accurate inventory of what is currently at the schools?

Answer: We do have a decent inventory of what is at the non-Fresno Unified schools, but we are struggling to get that information from the Fresno Unified schools.

Standing Updates: Recent Community Air Monitoring Results

Chay Thao, Program Manager, Valley Air District

Chay provided an update on recent community air monitoring. Presentation highlights:

- The Central Unified School Board requested monitoring at Madison Elementary; that agreement has been signed
- SJVAPCD is working with Fresno Unified to get equipment at the Edison High School location
- SJVAPCD has finally installed the air monitoring at West Fresno Middle School; the CSC deserves recognition for the support of that location
- Staff is continuing to use the air monitoring van to respond to community concerns; we received a request to monitor high delivery van traffic near the Amazon delivery center and that data from September 16 is now on the website

Question: I was looking at the newsletters on the website and the data from a 24-hour period is an average. Is there any way to show the actual data by hour? That data would allow the community wants to plan their day based on the hourly spikes.

Answer: SJVAPCD has weekly reports that we publish but there is also real time monitoring data you can access with per hour information. The weekly data wasn't intended to show hourly spikes; instead the weekly data provides a general idea of where the weekly emissions are. The hourly data you're looking for is available on the website and provides a historical view as well.

Question: Someone who is not familiar with AB 617 probably doesn't know where to look for these monitors. Is there a way for any person, regardless of their involvement in AB 617, to have quick and easy access to the data from these monitors?

Answer: SJVAPCD has this on our to-do list; a one page document about what AB 617 is and a postcard for community members about how to check AB 617 air quality monitoring data. We appreciate you bringing this back to the top of our priority list.

Question: Why are these monitors not being connected to RAAN? There is so much work being done to get the word out on RAAN and it would make sense to merge that data.

Answer: Part of that is just a technology challenge that SJVAPCD is having. We are looking at the back-end architecture that the RAAN system is built on. We have struggled with reliability and we are looking to make RAAN much more reliable.

Comment: I live on Orange Street and see a lot of trucks driving through the street and I don't know why this is happening.

Answer: If they are driving through residential streets and not staying on truck routes, this is a very timely topic because we have both SJVAPCD enforcement and CARB enforcement available. If trucks aren't abiding by truck routes, that's potentially code enforcement.

CARB: CARB will be back in Fresno towards the end of the year and I just took note of Orange Street and will make sure we drive by there and see if those trucks are compliant.

Question: CARB, since you're located in Sacramento how do you handle requests that require immediate response? — Are you connected to the CHP? What is the fastest response when these violations are actually happening in real-time?

Answer: You are correct that because we are in Sacramento, it is hard for us to be present in Fresno all the time. If we go there and check regularly, it will deter negative behavior. Truckers tend to talk to each other, so if word travels that we are ticketing them the behavior may stop. It would be nice if CHP or the city could partner with us.

Answer: SJVAPCD will commit to sending the CSC a CARB contact list with the most appropriate contacts who can respond as quickly as possible.

Question: In the first part of the year, we talked in a CSC meeting about this exact problem. We will call Sacramento, someone will complain, but by the time CARB gets down here, they will be gone and nothing happens. At that time, we discussed the possibility of CARB and SJVAPCD entering into an MOU on enforcement. Did that happen? Could SJVAPCD actually send staff to do the investigation and write the citation?

Answer: SJVAPCD has the authority under the state regulation for the idling diesel trucks and school buses and to cite people not complying with the state regulations. There are other regulations under mobile that we do not have the authority over and would require a formal MOU. We will discuss streamlining these activities with CARB to see what is possible.

Answer: CARB can also conduct a desk audit to ensure compliance with our regulations, so even if we cannot be there physically, you can be the eyes and ears of the community.

Enforcement Update

Jason Lawler, Air Quality Compliance Manager, Valley Air District
Justin Shields, Air Pollution Specialist, CARB

Jason gave a brief update of enforcement measures implementation. Presentation highlights:

- There are six different enforcement measures in the CERP for the South Central Fresno community
- He provided an update on last season's work on enhanced enforcement of wood burning curtailments and asked for any feedback on additional areas and time of day since the season begins again on November 1st.
- District staff performed surveillance for illegal burning during the quarter and responded to 24 public complaints regarding open burning; all complaints were responded to. District investigations resulted in five open burning violations.
- SJVAPCD inspectors conducted targeted enforcement of fugitive dust at construction sites during the second and third quarters of 2020 and did not discover any violations of District rules. The District also requested any guidance and feedback on locations needing additional inspection
- SJVAPCD inspectors conducted targeted enforcement of statewide anti-idling regulation, focusing on areas identified by CSC members, during each of the first three quarters of 2020 and did not document any non-compliance.
- SJVAPCD has increased the frequency of inspections at permitted facilities that have had emissions violations within the last three years; to date, 23 enforcement actions have been taken as part of a compliance inspection
- SJVAPCD has developed a training outline to instruct gas station operators how to conduct self-inspections of vapor recovery systems, however, the District is evaluating how to perform the training while adhering to the federal, state, and local public health guidelines during the pandemic

Justin gave a CARB enforcement update. Presentation highlights:

- CARB has "no-idling" signs available that can be posted on public roads and act as a deterrent for heavy duty diesel trucks that are idling where they are not allowed
- Please reach out if you believe these signs would have an impact in the South Central Fresno community
- As CARB staff look for illegally idling trucks, the truck and bus regulation and transportation refrigeration unit regulation allows CARB to record license plate numbers and TRU identification numbers; CARB uses this information to conduct a desk audit to determine compliance
- CARB has a specific strategy in the enforcement plan section of the CERP; we will update our strategies based upon input from the community
- If an agency or community member would like to cooperate with CARB in further enhancing enforcement, please contact CARB
- CARB will be in Fresno before the end of 2020

Comment: There was a shop between H and Belmont that was burning something. South of Belmont Park, there were unsafe levels of PM 2.5 because of a fast food place.

CARB Response: These are great, thank you. We will report back to these during the public comment section.

Question: I dialed the reporting number at 1:00am this morning. What is the turnaround time to call somebody back? It has been almost twelve hours and nobody has called me back.

District Response: SJVAPCD has directed people to return calls immediately, even in the middle of the night. My expectation is that no matter what time it is, we are responding quickly. Jason is the Compliance Manager in this region and he will look into your issue and get back to you with a specific reason why that follow up did not happen.

Comment: I am definitely in favor of adding diesel enforcement sweeps to the CERP. I also think an MOU between SJVAPCD, CARB and perhaps the City of Fresno concerning mobile source enforcement could be really helpful in the CERP.

CARB Response: In the CERP, there is an expectation that SJVAPCD and CARB continue to do idling sweeps over the next five years—that's not going to change. Regarding collaboration, we should discuss interagency interactions. Any time we get a complaint referred to us, if it's not within our jurisdiction, we don't tell people that we won't enforce that. We research it, we find out the right agency and identify who that person can contact at the correct agency. It is important not to just leave things unaddressed. SJVAPCD is looking to change the perception of government and you have our commitment to always find out who the responsible agencies are, even if it's not us.

Discussion of Annual Report Feedback

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime reviewed the draft Annual Report and outlined the feedback process with the CSC. Presentation highlights:

- Comments are due October 23
- The report features tables that show exactly which strategies the CSC has chosen, the corresponding pages in the CERP, a description of the strategy and a status update

Comment from Spanish-speaker: The report looks fine, but I'd like to see more actions completed and promises kept that were made.

District Response: That is important and we want to keep our foot on the gas.

Comment: I have submitted a letter to SJVAPCD that includes some general concerns about resolution requirements that are still outstanding. We know there is a part that says under 617, CARB must develop a statewide reporting system for criteria and toxic conditions of stationary sources. We have had the conversation to add the awareness to land use decisions being enacted by the City Planning Commission. At a local air district level, being involved in that process and responding to those plans that do not contain the goals of emissions reductions is important. I would like to see those MOUs get developed and signed.

District Response: Thanks for that reminder. It will require a full partnership with active participation by all those jurisdictions to accomplish that.

Comment: There was an addendum added to the CERP related to public health issues. This presents an opportunity to expand the public health section of the report, because ultimately that is the real impact. This would allow us to connect this report and our monitoring to the health and well-being of the communities that are currently impacted. How do we improve the reporting aspect of all the monitoring so that communities actually have an understanding of what is happening?

District Response: SJVAPCD is actually thinking about how we can better gather some of this public health data and better communicate it. This is a priority and something we are hearing in the Stockton community as well. I do know that CARB is thinking of incorporating some of the health impact data as well.

Comment: I think the MOUs are overdue and we have not seen movement on that. I appreciate the City staff coming to CSC meetings and representing the city, but we need to take it to the next level and have those MOUs in place. In terms of health, I completely agree. Our response to addressing health impacts was just adding a document describing health impacts of air pollution; that document is not assessing how much we are moving the needle to improve the health of community residents. Can we ask the Asthma Collaborative to do some health assessments? I don't know if the health assessments need to be in this report, but we need to conduct them and report on them. Last, I have requested a subcommittee on vegetative barriers since we heard from Tree Fresno and we have not started that. There is a Climate Corp Program that helps the state pay for full-time fellows for nine months to work on strategies like the ones that we have incorporated into the CERP. Why aren't we taking advantage of these things?

District Response: Thank you. SJVAPCD is recording all the comments and requests related to this agenda item.

Wrap Up/Next Steps

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Erica thanked everyone for participating in a productive meeting and asked CSC members to suggest future agenda items, especially if there are deadlines associated with them. She asked residents that participate in the stipend program to contact ILG with any questions. Erica thanked Kimberly for being the Community Co-host and asked interested CSC members to volunteer to be one in the future. Kimberly thanked everyone for attending and all the participation on the Truck Rerouting Study. She urged SJVAPCD to consider the health and wellness component.

Erica ended with a Zoom poll for the rescheduled November CSC meeting.

Reminders

The next regularly scheduled CSC meeting conflicts with Veterans Day, so the new date will be either November 5 or November 10 via Zoom and will be confirmed via email. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Public Comment

No public comment.

Puntos Importantes de la Reunión*

Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #26

14 de octubre de 2020, 5:30 pm - 7:30 pm

Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno:

- Participar en la reunión del subcomité de desviación de camiones del 28 de octubre
- Proporcionar comentarios sobre la RFP del estudio de desviación de camiones
- Comuníquese con el Distrito del Aire con información sobre las mejores ubicaciones para enfocar las inspecciones de medidas de cumplimiento
- Comuníquese con CARB con cualquier sugerencia sobre dónde deben colocarse los letreros contra dejar el motor encendido
- Presentar comentarios sobre el borrador del Informe Anual antes del 23 de octubre
- Comuníquese con el Distrito del Aire si necesita una copia impresa del borrador del Informe Anual
- Presentar recomendaciones sobre posibles puntos de la agenda para futuras reuniones del Comité Directivo

Artículos de Acción para el Distrito del Aire:

- Vuelva a enviar la solicitud de propuesta del estudio de cambio de desviación de camiones a quienes no la recibieron
- Envíe información sobre qué contactos CARB son los más apropiados para infracciones de dejar el motor encendido de camiones
- Finalizar un documento de una página sobre lo que es AB 617 y distribuir una postal comunitaria sobre los datos de monitoreo de la calidad del aire de AB 617
- Investigar el problema de dejar el motor encendido en la Calle Orange e informar al Comité Directivo
- Volver a entablar conversaciones con CARB sobre la posibilidad de desarrollar un memorando de entendimiento sobre la aplicación
- Verifique la línea directa de informes para asegurarse de que se estén cumpliendo los protocolos adecuados relacionados con el tiempo de respuesta
- Explorar la viabilidad de establecer un subcomité de barreras vegetativas
- Confirme la fecha y hora de la reunión del Comité Directivo de noviembre

Bienvenida e Introducciones

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Ryan Hayashi, Oficial Adjunto, Distrito del Aire del Valle

Kimberly McCoy, Coanfitrión del Comité Directivo de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los logísticos y los servicios de traducción. El equipo de facilitación proporcionó una descripción general de la agenda de la reunión. Ryan agradeció al Comité Directivo por asistir y por su continuo apoyo al programa AB 617 y por hacer avanzar las medidas. Kimberly agradeció a todos por permitirle ser la coanfitriona de la comunidad nuevamente y expresó su entusiasmo por escuchar todas las actualizaciones y la discusión.

Actualizaciones Permanentes: Subcomité de Desviación de Camiones

Scott Mozier, Director de Obras Públicas, Ciudad de Fresno

Scott dio una actualización sobre la RFP del estudio de desviación de camiones y las oportunidades de comentarios. Puntos importantes de la presentación:

- La Ciudad de Fresno compiló un borrador de RFP que describe el alcance de los servicios para el estudio, incluyendo los datos de tráfico, la evaluación de rutas, los usos del suelo, las escuelas, las jurisdicciones de la ciudad/condado/Caltrans, los orígenes y destinos de los camiones, las partes interesadas e informes de subcomités
- El Comité Directivo recibió el borrador del documento RFP electrónicamente el lunes 12 de octubre
- Los próximos pasos son convocar al Subcomité de Desviación de Camiones para proporcionar comentarios detallados
- Con respecto al financiamiento, será necesario que haya un acuerdo de cooperación entre el Distrito y la Ciudad de Fresno para que se complete este trabajo
- La reunión del Subcomité de Desviación de Camiones está programada para el 28 de octubre y cualquier miembro del Comité Directivo puede asistir

Comentario del Distrito: Somos muy afortunados porque este fue uno de los primeros planes de proyecto que presentamos a CARB para obtener la asignación para gastar los fondos de incentivo en esta medida.

Pregunta: ¿Puede proporcionar el desglose financiero del dinero 617 que financiará este estudio en comparación con el presupuesto asignado por la ciudad?

Respuesta: El borrador de RFP contiene montos en dólares de AB 617. La ciudad ha presupuestado numerosos servicios en especie y el alto costo de administrar al consultor a través de ese proceso, así como la supervisión durante el período de estudio en sí.

Pregunta: Si no he formado parte del subcomité, ¿a quién le envió mis comentarios sobre la RFP?

Respuesta: El Distrito se complace en recopilar los comentarios del Comité Directivo y luego proporcionárselos a la Ciudad en su nombre.

Pregunta: Asistí a la audiencia de presupuesto de la Ciudad esta semana. El Consejo Municipal preguntó de qué parte del presupuesto del estudio de \$500,000 sería responsable la ciudad. Mi preocupación es que un estudio de desviación de camiones ya es algo que la ciudad es y debe ser responsable y de lo que debe rendir cuentas a través del Plan Específico del Suroeste. Según ese documento, se suponía que se iniciaría un estudio de desviación de camiones para 2018. Existe una superposición entre el área del Plan Específico del Suroeste y nuestra comunidad 617. El dinero de AB 617 relacionado con la financiación del CERP es limitado debido a todas nuestras medidas, por lo que debemos asegurarnos de que el Comité Directivo lo comprenda. Debemos presionar a la Ciudad para que proporcione algo más que donaciones en especie. El Comité Directivo ha solicitado que se proporcione una amplia gama de servicios como parte de esta RFP. Si los encuestados revisan la RFP y dicen que necesitarán más de \$500,000, ¿contribuirá la ciudad fondos adicionales? ¿De dónde vendrán los fondos adicionales para garantizar que este estudio cumpla con sus objetivos?

Respuesta: Esa es una gran pregunta. Desde la perspectiva del presupuesto de la ciudad, se prevé que se necesitarán dólares adicionales como parte de esta asociación con el Distrito. Nuestra administración y el consejo municipal de la ciudad tendrán que considerar si y cómo asegurar fondos adicionales si es necesario. Todos sabemos que estos son tiempos muy difíciles. La Ciudad no está realizando nuevas solicitudes de fondos generales. Con respecto a refinar el alcance del estudio, eso es exactamente para lo que está el Subcomité de Desviación de Camiones. Si bien

podríamos agregar mucho más al estudio, si podemos lograr el objetivo de lograr la desviación de los camiones en la comunidad sin gastar tanto y preservar más fondos para otras prioridades que el Comité Directivo ha señalado, sería un esfuerzo válido.

Pregunta: En la reunión de presupuesto de la Ciudad de hoy, se hicieron mociones en apoyo del departamento de planificación para agregar estudios adicionales por \$525,000. Con eso en mente, debe regresar y solicitar un mínimo de \$100,000 para este esfuerzo del Comité Directivo en caso de que se requieran gastos adicionales para cubrir este estudio.

Respuesta: El proceso presupuestario de la Ciudad no es impulsado por el personal; en realidad, es impulsado por los miembros del Consejo. Hasta ahora, no han elevado este Estudio de desviación de camiones como una prioridad máxima... Si tiene inquietudes sobre esa priorización, comuníquese directamente con el Consejo y ellos pueden proporcionar la aprobación del personal.

Pregunta: Este tema fue claramente discutido y priorizado por la comunidad durante la discusión sobre el Plan Específico de Suroeste. Es lamentable que no se le haya dado prioridad desde la perspectiva de la ciudad. Dado que el impacto de la exposición continua a PM 2.5, los riesgos para la salud, el desarrollo de enfermedad pulmonar crónica y todos los problemas que colocan a las comunidades desventajadas en mayor riesgo de resultados pobres acerca de COVID, ¿existe la posibilidad de utilizar los dólares de CARES para financiar un estudio legítimo que logre los resultados de salud que buscamos?

Respuesta: Nuestro Concejo Municipal es responsable de determinar dónde se asignan los dólares de CARES. Los dólares de CARES se vencen el 30 de diciembre y todo lo que se destina al dinero debe ser entregado, instalado y completo para esa fecha. Este tipo de estudio de desviación de camiones no podría cumplir con ese plazo. Creo que con el Distrito, AB 617 y la contribución de la ciudad, hay niveles apropiados de fondos para completar el estudio propuesto.

Actualizaciones Permanentes: Subcomité de Autobuses y Filtración de Escuelas

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime proporcionó una actualización sobre el Subcomité de Autobuses y Filtración Escolar. Puntos importantes de la presentación:

- El Distrito ha estado trabajando para comprender mejor los sistemas de HVAC de las escuelas y algunos de los desafíos y limitaciones
- Hay muchas variaciones en lo que pueden asumir los diferentes sitios escolares
- El Distrito está hablando con el equipo de subvenciones de CARB para comprender mejor qué pueden financiar las subvenciones y dónde puede haber flexibilidad
- El personal del Distrito todavía está trabajando con CARB para asegurarse de que la solicitud de subvención tenga tanta flexibilidad como sea posible dentro de las pautas de CARB para obtener estos filtros en tantas escuelas como sea posible
- El Distrito del Aire del Valle continúa implementando autobuses escolares eléctricos en los distritos escolares del Comité Directivo que no son del Distrito Escolar Unificado de Fresno y estamos planeando tener una conversación con el Distrito Escolar Unificado de Fresno para que también se sumen
- Hay una reunión del subcomité programada para el 26 de octubre con numerosos administradores escolares y personal del Distrito Escolar Unificado de Fresno ya confirmado para asistir

Pregunta: ¿Tiene un inventario preciso de lo que hay actualmente en las escuelas?

Respuesta: Tenemos un inventario decente de lo que hay en las escuelas que no pertenecen al Distrito Escolar Unificado de Fresno, pero estamos teniendo dificultad en obtener esa información de las escuelas del Distrito Unificado de Fresno.

Actualizaciones Permanentes: Resultados y Actualizaciones Recientes de Monitoreo del Aire de la Comunidad

Chay Thao, Gerente de Programas, Distrito del Aire del Valle

Chay proporcionó una actualización sobre el monitoreo reciente del aire de la comunidad. Puntos importantes de la presentación:

- La Mesa Directiva Escolar Unificada Central solicitó monitoreo en la Escuela Primaria Madison; ese acuerdo ha sido firmado
- El Distrito del Aire está trabajando con el Distrito Escolar Unificado de Fresno para obtener equipo en la ubicación de la Escuela Preparatoria Edison
- El Distrito del Aire finalmente ha instalado el monitoreo del aire en la Escuela Intermedia West Fresno; el Comité Directivo merece reconocimiento por el apoyo de esa ubicación
- El personal continúa usando la camioneta de monitoreo del aire para responder a las preocupaciones de la comunidad; recibimos una solicitud para monitorear el alto tráfico de camionetas de entrega cerca del centro de entrega de Amazon y esos datos del 16 de septiembre ahora están en el sitio web

Pregunta: Estaba mirando los boletines en el sitio web y los datos de un período de 24 horas son un promedio. ¿Hay alguna forma de mostrar los datos reales por hora? Esos datos permitirían que la comunidad quiera planificar su día en función de los picos por hora.

Respuesta: El Distrito del Aire tiene informes semanales que publicamos, pero también hay datos de monitoreo en tiempo real a los que puede acceder con información por hora. Los datos semanales no estaban destinados a mostrar picos por hora; en su lugar, los datos semanales proporcionan una idea general de dónde están las emisiones semanales. Los datos por hora que busca están disponibles en el sitio web y también proporcionan una vista histórica.

Pregunta: Alguien que no esté familiarizado con AB 617 probablemente no sepa dónde buscar estos monitores. ¿Existe alguna manera de que cualquier persona, independientemente de su participación en AB 617, tenga acceso rápido y fácil a los datos de estos monitores?

Respuesta: El Distrito del Aire tiene esto en nuestra lista de tareas pendientes; un documento de una página sobre lo que es AB 617 y una postal para los miembros de la comunidad sobre cómo verificar los datos de monitoreo de la calidad del aire de AB 617. Le agradecemos que vuelva a colocar esto en la parte superior de nuestra lista de prioridades.

Pregunta: ¿Por qué estos monitores no se conectan a RAAN? Se está haciendo mucho trabajo para hacer correr la voz sobre RAAN y tendría sentido fusionar esos datos.

Respuesta: Parte de eso es solo un desafío tecnológico que está teniendo el Distrito. Estamos analizando el soporte en la que se basa el sistema RAAN. Hemos luchado con la confiabilidad y buscamos hacer que RAAN sea mucho más confiable.

Comentario: Yo vivo en la Calle Orange y veo muchos camiones circulando por la calle y no sé por qué sucede esto.

Respuesta: Si están conduciendo por calles residenciales y no permanecen en las rutas de los camiones, este es un tema muy oportuno porque tenemos disponible tanto la aplicación de la ley del Distrito como la de la CARB. Si los camiones no cumplen con las rutas de los camiones, eso es potencialmente el cumplimiento del código.

CARB: CARB estará de regreso en Fresno hacia el final del año y acabo de tomar nota de la Calle Orange y me aseguraré de que pasemos por allí y veamos si esos camiones cumplen con las normas.

Pregunta: CARB, dado que se encuentra en Sacramento, ¿cómo maneja las solicitudes que requieren una respuesta inmediata? ¿Está conectado a la CHP? ¿Cuál es la respuesta más rápida cuando estas infracciones ocurren en tiempo real?

Respuesta: Tiene razón en que debido a que estamos en Sacramento, es difícil para nosotros estar presentes en Fresno todo el tiempo. Si vamos allí y lo comprobamos con regularidad, impediremos el comportamiento negativo. Los camioneros tienden a hablar entre ellos, por lo que si se corre la voz de que les estamos multando, el comportamiento puede detenerse. Sería bueno que CHP o la ciudad pudieran colaborar con nosotros.

Respuesta: El Distrito se comprometerá a enviar al Comité Directivo una lista de contactos de CARB con los contactos más apropiados que puedan responder lo más rápido posible.

Pregunta: En la primera parte del año, hablamos en una reunión del Comité Directivo sobre este problema exacto. Llamaremos a Sacramento, alguien se quejará, pero para cuando CARB llegue aquí, se habrán ido y no pasará nada. En ese momento, discutimos la posibilidad de que CARB y el Distrito firmen un MOU sobre el cumplimiento. ¿Sucedió eso? ¿Podría el Distrito del Aire enviar personal para hacer la investigación y escribir la citación?

Respuesta: El Distrito tiene la autoridad bajo la regulación estatal para los camiones diésel y autobuses escolares con motores encendidos mientras estacionados y para citar a las personas que no cumplen con las regulaciones estatales. Existen otras regulaciones relacionadas con los dispositivos móviles sobre las que no tenemos autoridad y que requerirían un memorando de entendimiento formal. Discutiremos la racionalización de estas actividades con CARB para ver qué es posible.

Respuesta: CARB también puede realizar una auditoría de escritorio para garantizar el cumplimiento de nuestras regulaciones, por lo que incluso si no podemos estar allí físicamente, ustedes pueden ser los ojos y los oídos de la comunidad.

Actualización de Cumplimiento

Jason Lawler, Gerente de Cumplimiento de la Calidad del Aire, Distrito del Aire del Valle

Justin Shields, Especialista de Contaminación del Aire, CARB

Jason dio una breve actualización de la implementación de las medidas de cumplimiento. Puntos importantes de la presentación:

- Hay seis medidas de cumplimiento diferentes en el CERP para la comunidad de Centro-Sur Fresno
- Proporcionó una actualización sobre el trabajo de la temporada pasada sobre la mejora de el cumplimiento de las restricciones de quema de leña y pidió comentarios sobre áreas adicionales y horas del día desde que la temporada comienza nuevamente el 1 de noviembre
- El personal del Distrito realizó la vigilancia de la quema ilegal durante el trimestre y respondió a 24 quejas públicas sobre la quema al aire libre; todas las quejas fueron respondidas. Las investigaciones del Distrito resultaron en cinco infracciones de quema al aire libre
- Los inspectores del Distrito del Aire llevaron a cabo un cumplimiento específico de polvo fugitivo en sitios de construcción durante el segundo y tercer trimestre de 2020 y no descubrieron ninguna infracción de las reglas del Distrito. El Distrito también solicitó orientación y comentarios sobre las ubicaciones que necesitan más inspecciones.

- Los inspectores del Distrito llevaron a cabo un cumplimiento específico de la regulación contra dejar el motor encendido mientras estacionados en todo el estado, enfocándose en áreas identificadas por los miembros del Comité Directivo, durante cada uno de los primeros tres trimestres de 2020 y no documentaron ningún incumplimiento.
- El Distrito del Aire ha aumentado la frecuencia de las inspecciones en las instalaciones permitidas que han tenido infracciones de emisiones en los últimos tres años; hasta la fecha, se han tomado 23 acciones de cumplimiento como parte de una inspección de cumplimiento
- El Distrito ha desarrollado un esquema de capacitación para instruir a los operadores de estaciones de servicio sobre cómo realizar autoinspecciones de los sistemas de recuperación de vapor; sin embargo, el Distrito está evaluando cómo realizar la capacitación mientras se adhiere a las pautas de salud pública federales, estatales y locales durante la pandemia

Justin dio una actualización del cumplimiento de CARB. Puntos importantes de la presentación:

- CARB tiene letreros de "no dejar el motor encendido" disponibles que se pueden colocar en las vías públicas y actúan como un disuasivo para los camiones diésel de servicio pesado que están con motores encendidos donde no están permitidos
- Comuníquese si cree que estos letreros tendrían un impacto en la comunidad de Centro-Sur Fresno
- A medida que el personal de CARB busca camiones con motores encendidos ilegalmente, la regulación de camiones y autobuses y la regulación de unidades de refrigeración de transporte permiten que CARB registre los números de placa y los números de identificación de TRU; CARB utiliza esta información para realizar una auditoría de escritorio para determinar el cumplimiento
- CARB tiene una estrategia específica en la sección del plan de cumplimiento del CERP; Actualizaremos nuestras estrategias en base a los comentarios de la comunidad
- Si una agencia o miembro de la comunidad quisiera cooperar con CARB para mejorar aún más el cumplimiento, comuníquese con CARB
- CARB estará en Fresno antes de finales de 2020

Comentario: Había una tienda entre la Calle H y la Belmont que estaba quemando algo. Al sur del Belmont Park, había niveles peligrosos de PM 2.5 debido a un lugar de comida rápida.

Respuesta de CARB: Excelente, gracias por los comentarios. Informaremos estos durante la sección de comentarios públicos.

Pregunta: Marqué el número de quejas a la 1:00 am esta mañana. ¿Cuál es el tiempo de respuesta para devolver la llamada a alguien? Han pasado casi doce horas y nadie me ha devuelto la llamada.

Respuesta del Distrito: El Distrito ha indicado a las personas que devuelvan las llamadas de inmediato, incluso en medio de la noche. Mi expectativa es que no importa qué hora sea, estamos respondiendo rápidamente. Jason es el Gerente de Cumplimiento en esta región y analizará su problema y se comunicará con usted con una razón específica por la que no se realizó ese seguimiento.

Comentario: Definitivamente estoy a favor de agregar barridos de cumplimiento de camiones diésel al CERP. También creo que un memorando de entendimiento entre el Distrito, CARB y quizás la Ciudad de Fresno sobre el cumplimiento de fuentes móviles podría ser realmente útil en el CERP.

Respuesta de CARB: En el CERP, existe la expectativa de que el Distrito y CARB continúen haciendo barridos de motores encendidos durante los próximos cinco años—eso no va a cambiar. Con respecto a la colaboración, deberíamos discutir las interacciones entre agencias. Cada vez que nos

remiten una queja, si no está dentro de nuestra jurisdicción, no le decimos a la gente que no la aplicaremos. Lo investigamos, encontramos la agencia correcta e identificamos a quién puede contactar esa persona en la agencia correcta. Es importante no dejar las cosas sin abordar. El Distrito busca cambiar la percepción del gobierno y usted tiene nuestro compromiso de averiguar siempre quiénes son las agencias responsables, incluso si no somos nosotros.

Discusión de los Comentarios del Reporte Anual

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime revisó el borrador del Informe Anual y describió el proceso de comentarios con el Comité Directivo. Puntos importantes de la presentación:

- Los comentarios deben presentarse antes del 23 de octubre
- El informe presenta tablas que muestran exactamente qué estrategias ha elegido el Comité Directivo, las páginas correspondientes en el CERP, una descripción de la estrategia y una actualización de estado

Comentario de un Hispanohablante: El informe se ve bien, pero me gustaría ver más acciones completadas y promesas cumplidas.

Respuesta del Distrito: Eso es importante y queremos mantener el pie en el acelerador.

Comentario: He enviado una carta al Distrito del Aire que incluye algunas preocupaciones generales sobre los requisitos de resolución que aún están pendientes. Sabemos que hay una parte que dice bajo 617, CARB debe desarrollar un sistema de reporte a nivel estatal para las condiciones de criterio y tóxicos de las fuentes estacionarias. Hemos tenido la conversación para agregar conciencia a las decisiones de uso del suelo que está siendo promulgada por la Comisión de Planificación de la Ciudad. A nivel del distrito de aire local, es importante participar en ese proceso y responder a aquellos planes que no contienen los objetivos de reducción de emisiones. Me gustaría que esos MOU se desarrollaran y se firmen.

Respuesta del Distrito: Gracias por ese recordatorio. Se requerirá una asociación plena con la participación activa de todas esas jurisdicciones para lograrlo.

Comentario: Se agregó un apéndice al CERP relacionado con cuestiones de salud pública. Esto presenta una oportunidad para ampliar la sección de salud pública del informe, porque en última instancia, ese es el impacto real. Esto nos permitiría conectar este informe y nuestro monitoreo con la salud y el bienestar de las comunidades que actualmente se ven afectadas. ¿Cómo mejoramos el aspecto de presentación de informes de todo el seguimiento para que las comunidades comprendan realmente lo que está sucediendo?

Respuesta del Distrito: El Distrito está pensando en cómo podemos recopilar mejor algunos de estos datos de salud pública y comunicarlos mejor. Esta es una prioridad y algo que también estamos escuchando en la comunidad de Stockton. Sé que CARB también está pensando en incorporar algunos de los datos sobre el impacto en la salud.

Comentario: Creo que los Memorandos de Entendimiento (MOU, por sus siglas en inglés) están atrasados y no hemos visto ningún movimiento al respecto. Aprecio que el personal de la Ciudad asista a las reuniones del Comité Directivo y represente a la ciudad, pero debemos llevarlo al siguiente nivel y tener esos MOU en su lugar. En términos de salud, estoy completamente de acuerdo. Nuestra respuesta para abordar los impactos en la salud fue simplemente agregar un documento que describe los impactos en la salud de la contaminación del aire; ese documento no está evaluando cuánto estamos moviendo la aguja para mejorar la salud de los residentes de la comunidad. ¿Podemos pedirle al *Asthma Collaborative* que haga algunas evaluaciones de salud? No

sé si las evaluaciones de salud deben estar en este informe, pero debemos realizarlas e informar sobre ellas. Por último, he solicitado un subcomité sobre barreras vegetativas desde que escuchamos de Tree Fresno y no lo hemos comenzado. Existe un Programa de Climate Corp que ayuda al estado a pagar a becarios de tiempo completo durante nueve meses para trabajar en estrategias como las que hemos incorporado al CERP. ¿Por qué no nos aprovechamos de estas cosas?

Respuesta del Distrito: Gracias. El Distrito está grabando todos los comentarios y solicitudes relacionados con este tema de la agenda.

Concluir/Próximos Pasos

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Erica agradeció a todos por participar en una reunión productiva y les pidió a los miembros del Comité Directivo que sugirieran temas futuros en la agenda, especialmente si hay fechas límite asociadas con ellos. Ella pidió a los residentes que participan en el programa de estipendios que se comuniquen con ILG si tienen alguna pregunta. Erica agradeció a Kimberly por ser la coanfitriona de la comunidad y pidió a los miembros del Comité Directivo interesados que se ofrezcan como voluntarios para ser uno en el futuro. Kimberly agradeció a todos por asistir y toda la participación en el Estudio de Desviación de Camiones. Alentó al Distrito del Aire a considerar el componente de salud y bienestar.

Erica terminó con una encuesta a través de Zoom para la reunión reprogramada del Comité Directivo de noviembre.

Recordatorios

La próxima reunión del Comité Directivo programada entra en conflicto con el Día de los Veteranos, por lo que la nueva fecha será el 5 de noviembre o el 10 de noviembre a través de Zoom y se confirmará por correo electrónico. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio de la reunión para repasar todos los detalles y comentarios de la reunión.*

South Central Fresno Agenda for Community Steering Committee Meeting #26

Wednesday, October 14, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/98259069963>
Meeting ID: 982 5906 9963

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Kimberly McCoy, Community Co-host
- 5:45 p.m. Standing Updates**
Truck Rerouting Subcommittee
School Filtration and Bus Subcommittee
Recent Community Air Monitoring Results and Updates
Valley Air District Staff
- 6:05 p.m. DPR Update**
DPR will share progress on Fresno CERP measure
Minh Pham, Supervisor Dept. Pesticide Regulation
- 6:20 p.m. Enforcement Update**
Discussion of District and CARB enforcement
Jacob Whitson, Director of Compliance, Valley Air District
Justin Shields, California Air Resources Board (CARB)
- 6:50 p.m. Discussion of Annual Report Feedback**
Review questions and comments from CSC regarding draft annual report to the community distributed last meeting.
Valley Air District Staff
- 7:25 p.m. Wrap Up/Next Steps**
Need to reschedule November CSC date due to Veterans Day
Upcoming agenda topic suggestions
Next Meeting: TBD via Zoom
Hanna Stelmakhovych, Facilitator

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #26

Miércoles 14 de octubre de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/98259069963>

Meeting ID: 982 5906 9963

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-240-3210

Código de acceso: 6559628#

- 5:30 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Kimberly McCoy, Co-anfitriona Comunitaria
- 5:45 p.m. Actualizaciones Permanentes**
Subcomité de Desviación de Camiones
Subcomité de Autobuses y Filtración de Escuelas
Resultados y Actualizaciones Recientes de Monitoreo del Aire de la Comunidad
Personal del Distrito del Aire del Valle
- 6:05 p.m. Actualización de DPR**
DPR compartirá el progreso en la medida del CERP de Fresno
Minh Pham, Supervisor, Departamento de Regulación de Pesticidas
- 6:20 p.m. Actualización de Cumplimiento**
Discusión del cumplimiento del Distrito y CARB
Jacob Whitson, Director de Cumplimiento, Distrito del Aire del Valle
Justin Shields, Junta de Recursos del Aire de California (CARB)
- 6:50 p.m. Discusión de los Comentarios del Reporte Anual**
Repasar las preguntas y comentarios del Comité Directivo sobre el primer borrador del reporte anual para la comunidad distribuido en la última reunión.
Personal del Distrito del Aire del Valle
- 7:25 p.m. Concluir/Próximos Pasos**
Es necesario reprogramar la fecha de la reunión de noviembre del Comité Directivo debido al Día de los Veteranos
Próximas sugerencias de temas para la agenda
Próxima Reunión: Por determinar a través de Zoom
Hanna Stelmakhovych, Facilitadora

Implementation of CERP Enforcement Measures in South Central Fresno Community

AB 617 Community Steering Committee Meeting
October 14, 2020

CERP Enforcement Measures in South Central Fresno Community

- RB.3 Enhanced Enforcement of Wood Burning Curtailments
- RB.5 Enhanced Enforcement to Reduce Illegal Burning of Residential Waste
- FD.1 Enhanced Enforcement of Regulation VIII Fugitive Dust Requirements
- HD.6 Enhanced Enforcement of Statewide Anti-Idling Regulation
- IS.4 Enhanced Inspection Frequency of Stationary Sources
- IS.5 Pilot Training Program for Conducting Self-Inspections at Gas Stations

Enhanced Enforcement of Wood Burning Curtailments

- Enforcement of residential wood burning curtailments in District Rule 4901 to limit localized PM 2.5 impacts
- Effective each year from November 1 – February 28/29
- Dedicated 4 hours of enforcement in the South Central Fresno Community on each declared curtailment day
- During 2019/2020 season
 - 23 public complaints responded to
 - 101 violations found
- CSC Feedback
 - Where and when should the District focus future enforcement?

2019/20 Residential Wood Burning Violations

Enhanced Enforcement to Reduce Illegal Burning of Residential Waste

- Enforcement of District Rule 4103 and CCR 93113 requirements to limit the potential for localized PM 2.5 and toxic impacts from illegal open burning of residential waste
- District inspectors conducted targeted enforcement efforts during each of the first three quarters of 2020
- During first half of 2020
 - 24 public complaints of open burning responded to
 - 5 open burning violations found
- CSC Feedback
 - Where and when should the District focus future enforcement?

Open Burning Violations (1st & 2nd Quarter 2020)

Enhanced Enforcement of Regulation VIII Fugitive Dust Requirements

- Enforcement of the District's Regulation VIII to limit the potential for localized PM 10 impacts associated with fugitive dust from construction/earthmoving activities, open areas, and unpaved roads.
- District inspectors conducted targeted enforcement efforts within the South Central Fresno community during the second and third quarters of 2020.
 - Site inspections at all construction projects with an active Dust Control Plan or Construction Notification on file.
 - Additional surveillance for other dust generating sites

Enhanced Enforcement of Statewide Anti-Idling Regulation

- District enforcement, in partnership with CARB, of the State anti-idling regulation for heavy-duty diesel trucks and busses to reduce localized PM 2.5 and toxic air quality impacts
- District inspectors have conducted targeted enforcement efforts during each of the first three quarters of 2020
- Primarily focused around industry with frequent truck traffic
- CSC Feedback
 - What are some additional idling “hot spots” where the District can focus future enforcement and compliance assistance efforts?
 - Are there certain times of day when idling tends to occur?

Enhanced Enforcement of Statewide Anti-Idling Regulation (cont'd)

South Central Fresno Idling Times

Enhanced Inspection Frequency of Permitted Stationary Sources

- To limit the potential for localized air quality impacts due to a failure to comply with emission standards established by District permits, rules, or regulations
- Increased frequency of inspections at each permitted facility within the South Central Fresno community that has had an emissions violation in the past three (3) years
- Those facilities are being inspected at least twice per year until four (4) consecutive inspections without an emission violation
- During the first half of 2020 (Jan – Jun)
 - 23 enforcement actions taken

Pilot Training Program for Conducting Self-Inspections at Gas Stations

- Providing hands-on training to gas station operators in the community to limit the potential for air quality impacts from vapor recovery defects at gasoline dispensing stations
- The District has developed a training outline for instructing gas station operators on conducting thorough self-inspections of the vapor recovery systems at their stations to aid in the identification and timely repair of vapor recovery system defects
- Hands-on training is currently on hold due to COVID-19 social distancing requirements

Response to Public Complaints in South Central Fresno Community

- Complaints can be reported to the District by:
 - Telephone: (800) 870-1037
 - The District website: www.valleyair.org
 - Through the District mobile app (Valley Air app)
- During the first half of 2020, the District responded to 64 public complaints in the South Central Fresno Community for open burning, residential wood burning, fugitive dust, odors, unpermitted equipment, and facility emissions

Implementación de Medidas de Cumplimiento del CERP en la Comunidad de Centro-Sur Fresno

Reunión del Comité Directivo de la Comunidad AB 617
14 de octubre de 2020

Medidas de Cumplimiento del CERP en la Comunidad de Centro-Sur Fresno

- RB.3 Cumplimiento Mejorado para las Reducciones de Quema de Leña
- RB.5 Cumplimiento Mejorado para Reducir la Quema Ilegal de Desechos Residenciales
- FD.1 Cumplimiento Mejorado de los Requisitos de Polvo Fugitivo de la Regulación VIII
- HD.6 Cumplimiento Mejorado para la Regulación Estatal Contra Motores Encendidos Mientras Estacionados
- IS.4 Frecuencia de Inspección Mejorada de Fuentes Estacionarias
- IS.5 Programa de Entrenamiento Piloto para la Realización de Autoinspecciones en Gasolineras

Cumplimiento Mejorado para las Reducciones de Quema de Leña

- Cumplimiento de restricciones de la quema de leña residencial en la Regla 4901 del Distrito para limitar los impactos localizados de PM 2.5
- Efectivo cada año del 1 de noviembre al 28/29 de febrero
- Se dedicaron 4 horas de cumplimiento en la comunidad de Centro-Sur Fresno en cada día de reducción declarado
- Durante la temporada 2019/2020
 - 23 quejas publicas respondidas
 - 101 infracciones encontradas
- Comentarios del Comité Directivo
 - ¿Dónde y cuándo debería el Distrito enfocar el cumplimiento en el futuro?

Infracciones de Quema de Leña Residencial 2019/20

Cumplimiento Mejorado para Reducir la Quema Ilegal de Desechos Residenciales

- Cumplimiento de los requisitos de la Regla 4103 del Distrito y CCR 93113 para limitar el potencial de PM 2.5 localizado e impactos tóxicos de la quema ilegal al aire libre de desechos residenciales
- Los inspectores de Distrito llevaron a cabo esfuerzos de cumplimiento específicos durante cada uno de los primeros tres trimestres de 2020
- Durante la primer mitad de 2020
 - 24 quejas públicas de quema al aire libre respondidas
 - 5 infracciones de quema al aire libre encontradas
- Comentarios del Comité Directivo
 - ¿Dónde y cuándo debería el Distrito enfocar el cumplimiento en el futuro?

Infracciones de Quema al Aire Libre (Primer y Segundo Trimestre de 2020)

Cumplimiento Mejorado de los Requisitos de Polvo Fugitivo de la Regulación

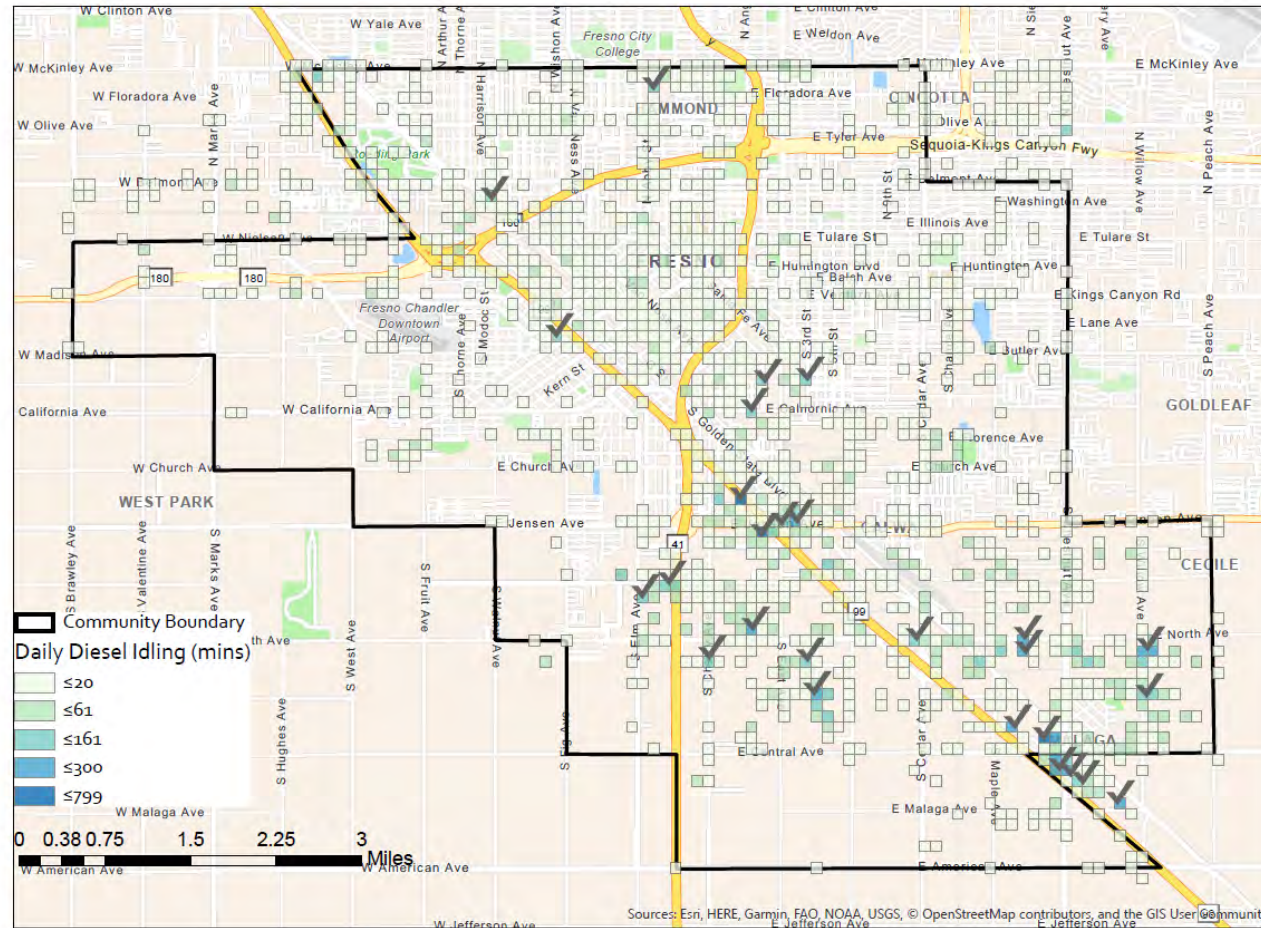

- Cumplimiento de la Regulación VIII del Distrito para limitar el potencial de impactos localizados de PM 10 asociados con polvo fugitivo de actividades de construcción/movimiento de tierra, áreas abiertas y caminos sin pavimentar
- Los inspectores del Distrito llevaron a cabo esfuerzos de cumplimiento específicos dentro de la comunidad de Centro-Sur Fresno durante el segundo y tercer trimestre de 2020
 - Inspecciones de sitio en todos los proyectos de construcción con un Plan de Control de Polvo activo o una Notificación de Construcción en el expediente
 - Vigilancia adicional para otros sitios que generan polvo

Cumplimiento Mejorado para la Regulación Estatal Contra Motores Encendidos Mientras Estacionados

- Cumplimiento del Distrito, en asociación con CARB, de la regulación estatal contra motores encendidos mientras estacionados para camiones y autobuses diésel de servicio pesado para reducir el PM 2.5 localizado y los impactos tóxicos en la calidad del aire
- Los inspectores de Distrito han realizado esfuerzos de cumplimiento específicos durante cada uno de los primeros tres trimestres de 2020
- Centrado principalmente en la industria con tráfico frecuente de camiones
- Comentarios de Comité Directivo
 - ¿Cuáles son algunos de las “zonas conflictivas” de motores encendidos mientras estacionados donde el Distrito puede enfocar los esfuerzos futuros de cumplimiento?
 - ¿Hay ciertos momentos del día en los que tiende a ocurrir los motores encendidos mientras estacionados?

Cumplimiento Mejorado para la Regulación Estatal Contra Motores Encendidos Mientras Estacionados (cont.)

South Central Fresno Idling Times

Frecuencia de Inspección Mejorada de Fuentes Estacionarias

- Limitar el potencial de impactos localizados en la calidad del aire debido al incumplimiento de los estándares de emisión establecidos por los permisos, reglas o regulaciones del Distrito
- Aumentar la frecuencia de inspecciones en cada instalación permitida dentro de la comunidad de Centro-Sur Fresno que ha tenido una infracción de emisiones en los últimos tres (3) años
- Esas instalaciones serán inspeccionadas al menos dos veces al año hasta que cuatro (4) inspecciones consecutivas no tengan ninguna infracción de emisiones
- Durante el primer semestre de 2020 (Enero – Junio)
 - 23 Acciones de Cumplimiento fueron tomadas

Programa de Entrenamiento Piloto para la Realización de Autoinspecciones en Gasolineras

- Brindar entrenamiento activo a los operadores de estaciones de servicio en la comunidad para limitar el potencial de impactos en la calidad del aire por defectos de recuperación de vapor en las estaciones de dispensación de gasolina
- El Distrito ha desarrollado un esquema de entrenamiento para instruir a los operadores de estaciones de servicio en la realización de autoinspecciones exhaustivas de los sistemas de recuperación de vapor en sus estaciones para ayudar en la identificación y reparación oportuna de los defectos del sistema de recuperación de vapor
- El entrenamiento activo está actualmente en espera debido a los requisitos de distanciamiento social de COVID-19

Respuesta a las Quejas Públicas en la Comunidad de Centro-Sur Fresno

- Las quejas se pueden reportar al Distrito por:
 - Teléfono: (800) 870-1037
 - El sitio web del Distrito: www.valleyair.org
 - A través de la aplicación móvil del Distrito (aplicación *Valley Air*)
- Durante la primera mitad de 2020, el Distrito respondió a 64 quejas públicas en la Comunidad de Centro-Sur Fresno por quema al aire libre, quema de leña residencial, polvo fugitivo, olores y equipo no permitido, y emisiones de las instalaciones

Ambient Air Monitoring in California

Air Program | Environmental Monitoring Branch

October 14, 2020

South Central Fresno Community Steering Committee

Today's Agenda

October 14, 2020

Background:
What is the Air Program?

Why Do We Monitor?
How Do We Monitor?

Where Are We Monitoring?
Results, Reports, and Outreach

Questions
Contact Information

Background:

What is the Air Program?

- ❖ As part of the Environmental Monitoring Branch at the Department of Pesticide Regulation (DPR), the Air Program is responsible for assessing pesticide concentrations in air and mitigating adverse risks associated with pesticide applications.
 - Collecting air monitoring data is needed for this goal
 - Air monitoring data is supplemented with computer modeling and other data to estimate concentrations and emissions

Background:

What governs the Air Program?

- ❖ Key laws for Air Program:
 - California Food and Agricultural Code - Continuous evaluation
 - California Toxic Air Contaminant (TAC) Act
 - Requires DPR to assess and mitigate risks from air exposure
 - Requires ARB to monitor at DPR's request

Background:

Why Do We Monitor?

Depending on the study, DPR performs air monitoring to:

- Identify pesticides in air
- Determine acute, sub-chronic, or annual concentrations
- Assess subchronic, chronic, and/or cumulative exposures
- Track trends in air concentrations over time
- Determine efficacy of mitigation measures
- Determine pesticide emission rate (flux)
- Validate and refine air computer models

How Does DPR Monitor For Pesticides in Air

**Application-site
Monitoring**

**Seasonal
Monitoring**

**Long-term
Monitoring**

How Does DPR Monitor For Pesticides in Air

Application-site Monitoring

- Monitoring occurs on or at the edge of the application field
- Monitoring occurs for several days after the application
- Data best used to estimate maximum exposures over hours or days

How Does DPR Monitor For Pesticides in Air

Seasonal Monitoring

- Monitoring is conducted in communities of higher pesticide use relative to other communities.
- 1-2 pesticides is conducted for the 8-12 week period that coordinates with the historical use season.
- Data best used to estimate maximum exposures over weeks or months

How Does DPR Monitor For Pesticides in Air

Long-term Monitoring

- Continuous weekly air sampling is performed in communities with high use of multiple pesticides
- Data best used to assess maximum exposures for multiple pesticides over years

Where Do We Monitor?

Long-Term Air Sampling Sites

- OP Monitoring Kern County
- OP Monitoring Fresno and Tulare Counties
- Mebr and Cplic Monitoring Siskiyou County
- MITC Monitoring Fresno County
- Cpic Monitoring Santa Barbara County
- OP Monitoring Imperial County

Recent Seasonal Air Monitoring Sampling Sites

Results, Reports, & Outreach

DPR's makes all air monitoring results available to the public via

DPR's Pesticide Air Monitoring Database (PAMR)

The Air Program's is committed to providing Annual Reports including:

Annual Air Monitoring Network Monitoring

Individual study results and analysis

Annual VOC Inventory

The Air Program regularly conducts:

Scientific conferences

Public workshops

Community meetings

Monitoreo del Aire Ambiental en California

Programa de Aire | Rama de Monitoreo Ambiental

14 de octubre de 2020

Comité Directivo Comunitario de Centro-Sur Fresno

Agenda de Hoy

14 de octubre de 2020

Antecedentes:
¿Qué es el Programa de Aire?

¿Por Qué Monitoreamos?
¿Cómo Monitoreamos?

¿Dónde Estamos Monitoreando?
Resultados, Informes y Alcance

Preguntas
Información de Contacto

Antecedentes:

¿Qué es el Programa de Aire?

- ❖ Como parte de la Rama de Monitoreo Ambiental del Departamento de Regulación de Pesticidas (DPR, por sus siglas en inglés), el Programa de Aire es responsable de **evaluar** las concentraciones de pesticidas en el aire y **mitigar** los riesgos adversos asociados con las aplicaciones de pesticidas.
 - La recopilación de datos de monitoreo del aire es necesaria para este objetivo
 - Los datos de monitoreo del aire se complementan con modelos informáticos y otros datos para estimar concentraciones y emisiones

Antecedentes:

¿Qué rige el Programa de Aire?

- ❖ Leyes clave para el Programa de Aire:
 - Código de Alimentos y Agrícola de California - Evaluación continua
 - Ley de Contaminantes Tóxicos del Aire de California (TAC, por sus siglas en inglés)
 - Requiere que el DPR evalúe y mitigue los riesgos de la exposición al aire
 - Requiere que ARB monitoree a solicitud del DPR

Antecedentes:

¿Por Qué Monitoreamos?

Dependiendo del estudio, DPR realiza monitoreo del aire para:

- Identificar pesticidas en el aire
- Determinar concentraciones agudas, subcrónicas o anuales
- Evaluar exposiciones subcrónicas, crónicas y/o acumulativas
- Seguimiento de las tendencias en las concentraciones de aire a lo largo del tiempo
- Determinar la eficacia de las medidas de mitigación
- Determinar la tasa de emisión de pesticidas (flujo)
- Validar y refinar modelos de aire de computadoras

¿Cómo Monitorea el DPR Pesticidas en el Aire?

**Monitoreo del
Sitio de la
Aplicación**

**Monitoreo
Estacional**

**Monitoreo a
Largo Plazo**

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo del Sitio de la Aplicación

- El monitoreo se produce en o en el borde del campo de aplicación
- El seguimiento ocurre durante varios días después de la aplicación
- Los datos se utilizan mejor para estimar las exposiciones máximas durante horas o días

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo Estacional

- El monitoreo se realiza en comunidades de mayor uso de pesticidas en comparación con otras comunidades.
- Se llevan a cabo 1-2 pesticidas durante el período de 8-12 semanas que se coordina con la temporada de uso histórico.
- Los datos se utilizan mejor para estimar las exposiciones máximas durante semanas o meses.

¿Cómo Monitorea el DPR Pesticidas en el Aire?

Monitoreo a Largo Plazo

- El muestreo de aire semanal continuo se realiza en comunidades con un alto uso de múltiples pesticidas
- Los datos se utilizan mejor para evaluar las exposiciones máximas de múltiples pesticidas durante años

¿Dónde
Monitoreamos?

Sitios de Muestreo de Aire a Largo Plazo

Sitios de Muestreo de Monitoreo de Aire Estacional Recientes

Resultados, Informes y Alcance

DPR pone a disposición al público todos los resultados del monitoreo del aire a través de:

Base de Datos de Monitoreo del Aire de Pesticidas del DPR (PAMR)

El Programa de Aire se compromete a proporcionar informes anuales que incluyen:

Monitoreo Anual de la Red de Monitoreo del Aire

Resultados y análisis de estudios individuales

Inventario anual de VOC

El Programa de Aire realiza regularmente:

Conferencias científicas

Talleres públicos

Reuniones comunitarias

Meeting Highlights*

AB 617 South Central Fresno Community Steering Committee Meeting #25

September 16, 2020, 5:30pm - 7:30pm

Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee (CSC):

- Email SJVAPCD if interested in joining the Truck Rerouting Subcommittee
- Contact Tree Fresno to join its committee on vegetative barriers
- Contact SJVAPCD with any future CSC meeting agenda suggestions
- Contact SJVAPCD to submit edits or provide feedback on the draft Annual Report
- Contact SJVAPCD to request a printed copy of the draft Annual Report

Action items for San Joaquin Valley Air Pollution Control District SJVAPCD):

- Email CSC the CARB enforcement report
- Email CSC the CARB Board Meeting agenda and links to watch the meeting

Welcome and Introductions:

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Ivanka Saunders, CSC Community Co-host

Erica introduced herself and the ILG team, welcomed all participants, and went over virtual housekeeping items, translation services, and the stipend process.

She then gave an overview of the meeting agenda and transitioned to Ivanka Saunders for co-host remarks. Ivanka introduced herself and her role in the CSC, thanked everyone for attending, and wished all attendees well.

Ryan thanked everyone for attending and Ivanka for co-hosting.

Truck Rerouting Subcommittee Update:

Scott Mozier, Public Works Director, City of Fresno

Scott gave an update on the truck re-routing study RFP and process. Presentation highlights:

- The city is preparing a draft RFP.
- The RFP will be provided to the Truck Rerouting Subcommittee with enough time to go through it in detail and provide feedback.
- The report is on schedule to be shared with the Subcommittee in September and the Subcommittee should have approximately 30 days or more to review.
- The city's soft match funds are still secure.

Comment: It is nice to see so many people from the Subcommittee on the phone tonight. The Subcommittee is open for people to join. At the meetings we conduct deep dives on individual measures.

Answer: That is a really good point. If your schedule allows, it would be great to have that participation.

Question: Is it possible to give feedback even if you are not in the subcommittee?

Answer: Yes, everyone should feel welcome to provide comments.

School Filtration and Bus Subcommittee Update:

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime provided an update on the School Filtration and Bus Subcommittee. Presentation highlights:

- SJVAPCD continues to work with CARB to find a way to be flexible with this program and meet the needs of the different schools.
- The HVAC assessment that all schools need to do in order to see what filters they need, should be able to be covered under the grant program, so schools will not have to pay out of pocket.
- Some companies have said that they can provide MERV filters at the levels we need them to be in the same kind of HVAC equipment where MERV 8 filters were operating before.
- SJVAPCD is looking at Butte County and Imperial County, as well as South Coast AQMD to see how they are running their programs.
- SJVAPCD has reached out to several trustees about the school buses and have heard back from one, who is happy to meet with us.

Question: The CSC has suggested several board members for the SJVAPCD to contact. Have you tried to approach the others? It might be better to meet with multiple people at once instead of one by one.

Answer: I have sent emails to those other trustees you recommended. If any CSC members have personal connections, let us know and we can reach out to them through you.

Question: Can the SJVAPCD provide the CSC with a list of possible funds specific to the air filtration? The deeper we investigate the cost of HVAC systems, the more we will know. I think there are other funds out there.

Answer: That's a good point and I think it's worthwhile to look into what additional means may be available for funding above and beyond the CAPP funding.

Question: Did you say there was a local vendor who can provide MERV 14 filters that can be changed out for the MERV 8 without having a negative impact on the airflow?

Answer: SJVAPCD has heard there are manufacturers that are claiming you can take a MERV 14 or MERV 16 and put it where the old MERV 8 was. We have put one on our building to see if it is working. It has been up for 14 days and is as black as black can be, which means it is working. SJVAPCD will continue to keep this committee in the loop.

Air Quality and Fire Season Update:

Jon Klassen, Director of Strategy & Incentives, Valley Air District

Jaime Holt, Chief Communications Officer, Valley Air District

Jon gave a brief update on recent air quality impacts from the wildfire season and Jaime updated the CSC on recent outreach activities. Presentation highlights:

- This year's wildfire season is unprecedented, with over 3.3 million acres burned statewide to date.
- The San Joaquin Valley is surrounded by fires to the north, south, east and west, so smoke continues to come into the Valley; a unique situation.

- California is also breaking records for the largest individual fires.
- Since the middle of August, the Valley has had a number of very unhealthy air days for PM 2.5.
- SJVAPCD has been focused on getting the word out through as many mediums as possible.
- Thank you to the CSC for re-tweeting and re-posting what SJVAPCD has posted on social media.
- SJVAPCD has done press conferences, interviews, social media, and press releases, all bilingually.
- SJVAPCD has seen a huge increase in use of our app.
- If you can get your hands on an N95 mask, you should.

Question: N95 masks are required to be provided by the employers for agricultural workers when the AQI is above 150. I have been talking with farm workers and they are not provided these masks. I recommend SJVAPCD partner with the Ag Commissioners because they receive N95 masks from the state and they then provide them to the growers. Secondly, if someone lives near Roosevelt High School and wants to see the readings on the PM 2.5 monitor, where can they go for that information?

Answer: That information is on the AB 617 website on your CSC page, under air monitoring. All the monitors are listed.

Comment: May I request outreach materials about AB 617 so the CSC can have some information to share with our fellow community members about where they can find these monitors on the website?

Comment: CARB had a study of indoor and outdoor measurements in some houses and we tried the DIY box filter and it really does work. If you make one, watch it for a while. Be cautious because they do work, but the device should be watched for the first few hours that you run it.

Answer: Thank you.

Comment: I think SJVAPCD should do an infomercial about the air quality and the risks of PM 2.5 with the local weather people and talk about why filters are important. Is there any talk about the PM 2.5 filters that you can actually put in your masks? They are not N95 masks, but they do stop some of the particulate matter.

Answer: Those are great ideas, thank you.

Comment: My company has been dealing with CalOSHA requirements and they are pretty clear—employers are required to provide N95-quality masks. Most agencies are trying to reserve those for emergency workers. We purchased some which are foreign knockoffs and the OSHA website did certify them.

Answer: Thank you.

Question: Is there any chance we could encourage logging to come back and get some responsible forest cleanup so we can avoid these fires next year?

Answer: I know there is a lot of conversations happening around the state about forest management.

Comment: It is frustrating to see the lack of management and accountability on the federal level. I am hoping SJVAPCD can work with CARB and there can be some improvements made.

Answer: Thank you.

Comment: In regards to box fans, the new ones today have safety features, so fire risks are much lower than if you use an older fan. Secondly, there are two websites that use the same monitors as Purple Air, but they have calibrated the data, so it is much closer to what SJVAPCD's are reading. One is fire.airnow.gov and run by EPA and the second one is SJVair.com. I recommend using either one of those sites to give you the best picture of local air quality.

Answer: Thank you! Please feel free to put those links in the chat.

Community Air Monitoring Results:

Chay Thao, Program Manager, Valley Air District

Chay gave a brief update about the community air monitoring results. Presentation highlights:

- SJVAPCD is working with Central Unified and installing equipment at Madison Elementary. We will continue to work on installing equipment at Edison High School.
- SJVAPCD has been using the air monitoring van to respond to community concerns. Once we have the data downloaded and ready, we can give everybody an update on that.
- The next quarterly report is close to being completed and it will be posted to the website soon.
- The West Fresno Elementary site is ready to go and they are eager to move forward.
- SJVAPCD is not giving up on the Orange Center site but they have not been getting much traction with the school leadership.
- With the CSC's support, SJVAPCD will proceed with placing a monitor at the West Fresno site immediately and then continue to try to get approval for a monitor at Orange Center.
- The CSC approved of this approach.

Question: In regards to the Belmont/Palm area, the monitor was only there for four hours and I would like to see SJVAPCD go back and stay longer. What is the likelihood of that being done at this time?

Answer: That is something that we will need feedback from the full CSC about. The CSC will need to decide if they want to divert the mobile van resources from locations the CSC had already agreed it wanted to monitor.

Vegetative Barriers and Urban Greening:

Mona Cummings, CEO, Tree Fresno

Mona gave a presentation with partners about next steps for vegetative barriers and urban greening measures. Presentation highlights:

- Fresno Trees is an environmental project in partnership with Sonoma Tech.
- The two organizations came together in 2016 to evaluate how well vegetative barriers, using trees and shrubs, protect people from exposure to air pollution downwind of major roads.
- Sonoma Tech will measure air quality of areas with and without near-road vegetation and Tree Fresno will plant more than 3,000 trees and model vegetation, which will quantify vegetative barrier benefits.
- In the Fresno area, between 5,000 and 18,000 heavy duty trucks travel daily on state highways.
- Tree Fresno will measure pollution at several locations within 150 meters of Fresno area highways.
- During the first quarter of the year, the partnership resulted in planting nearly 150 new trees along Highway 99.
- Suitable locations need to be approved by agencies responsible for those properties.
- Tree Fresno has a new partnership with the Fresno Metro Black Chamber of Commerce, which will address climate change impacts to disproportionately impacted communities of color.

Question: In the AB 617 report on page 10 it says that we are going to spend \$680,130 with Tree Fresno on a multi-year project aimed at evaluating trees. Am I perceiving this wrong or does the report need to be tweaked?

Answer: I think that is a refinement we need to make to the Annual Report giving more clarity about the program and funding we have approved.

Question: Do you have growers that are willing to bring tree seedlings to a place where you can plant them?

Answer: Typically, we are buying from local nurseries and they give us good prices. We are having discussions with the horticultural center at Fresno State about having the students start to propagate some trees for us.

Question: Is there a subcommittee devoted to this project? What is the process going to be for identifying locations for vegetative barriers—where is the community input going to come from?

Answer: We have just started building the vegetative barriers this year. There have been some pre-approved projects previously identified that might be good locations to put a vegetative barrier. It is a complex process. We have Sonoma Tech to make sure that if we build a barrier, it is not going to make the conditions actually more dangerous. We do need to create a committee that can submit ideas for where these barriers can go. I think there is a little bit of confusion about the funding source.

Answer: The program that is funding this project comes from state enforcement actions that result in fines that are paid. The state has a program that allow polluters who have to pay fines to put a portion of the fine money into mitigation projects that benefit the community where the violation occurred. The Tree Fresno project funding we're discussing now is from those fines, not from AB 617 or the SJVAPCD.

Answer: Tree Fresno will be convening its own subcommittee to move forward with this vegetative barriers project. CSC members are welcome to join this subcommittee, even though it is technically separate from the CSC's AB 617 work. The projects are complimentary.

Question: Has this CSC allocated funds to vegetative barriers through AB 617?

Answer: SJVAPCD is waiting for CAPP funding guidelines regarding how CAPP funding can be spent for this type of project. It is not a 100% done deal. Tree Fresno, ReLEAF CA, and possibly one other organization are listed as potential partners. But that has not yet been finalized.

Urban Greening & Regional Planning Efforts

Ivanka Saunders, Community Co-host, LCJA

Ivanka provided some updates on regional planning efforts and how they may align with the AB 617 work. Highlights of her presentation include:

- The City of Fresno is currently planning for the South Central Specific Plan.
- Even though our city may want to see this become the next economic growth area for the city, there are still community residents who live there. The region covers our 617 area; it's the same land mass.
- This CSC is trying to improve air quality and we have the city trying to make sure that this is the next facility industrial growth area, which could cause some of the biggest pollution in this area.
- Opposing efforts are working at the same time.
- As this community grows into an industrial area, part of being a good neighbor means we cannot continue to allow what has already happened to happen again. For example, we cannot allow an Ultra facility to be sited next to a playground. We don't want that bad planning to continue.
- We need to make sure there are mitigations -- not just trees -- as the single filter between somebody's home or sensitive receptors like daycares. We know that these areas are cancer hot spots.

- We need to make sure there is a coordinated planning process that takes place that incorporates everything the CSC has done..

Question: What happened with the MOUs that were part of the resolution that was passed in February?

Answer: We have heard the committee and understand that is a priority. We have had an initial discussion with the city on this and as it moves forward, we will have more communication with the CSC.

Draft Annual Report Review:

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime reviewed the draft Annual Report with the CSC. Presentation highlights:

- SJVAPCD has to submit a written report to CARB later this year; the CSC communicated that they wanted to be involved in the reporting process and provide input on the work that has been done.
- All documents are in both English and Spanish. Printed copies of the draft report were mailed to all Spanish speaking CSC members before the meeting.
- The report is the culmination of what the CSC has done since the CERP was adopted and is part of the annual report that is required of SJVAPCD to submit to CARB in December.
- The report is posted on the CSC community webpage.
There are numerous report sections, including community engagement, community emissions inventory and ongoing technical assessment, several pages on air monitoring, the different strategies in the CERP related to enforcement (where we are to date, what's been done), regulatory measures, toxics reports, BARCT, etc.
- The CSC does not need to provide edits right now. Just email SJVAPCD or call Jaime in the next few weeks to provide any suggested updates.

CARB: CARB will send our annual enforcement report in PDF to the CSC. In this report, you will find the inspections of heavy duty vehicles, what we did in 2019 and the compliance rates of different programs, as well as a map of where the inspections were performed. It will include strategy updates and the strategies that CARB committed to. The report lists the outreach and trainings that have been developed and the things being done to achieve the strategy updates.

Question: Who do I send my comments or concerns to?

Answer: Contact Jaime about edits to the draft annual report and she will coordinate.

Question: How do we know what SJVAPCD's report will be to CARB next week?

Answer: That is our next agenda item.

CARB: The CARB board meeting is scheduled for September 24. Links to the Board Meeting agenda and ways to watch it will be posted in the chat. CARB will also send the meeting details to SJVAPCD to distribute that information to the CSC. There are two agenda items before AB 617; one is on our toxics hot spots program, which you may want to listen to. The AB 617 item will not start until 4:00pm. Even if the first two agenda items end early, the CARB board is going to stop the meeting and wait until 4:00pm to start the AB 617 implementation update. The Annual Report that SJVAPCD is working on will not be covered at the CARB board meeting on 9/24.

Wrap Up/Next Steps:

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Erica thanked everyone for participating in a productive meeting and urged CSC members to suggest future agenda items they may want to discuss. She reminded the qualifying residents about the stipend program. Erica thanked the translators for providing verbal translation and chat translation throughout the meeting. Erica thanked Ivanka for being Community Co-host and asked CSC members to volunteer to be one in the future. Ivanka thanked Erica for keeping the CSC on task.

Public Comment:

Comment: We should have grant money for masks for people who bicycle to work or do not have any other transportation besides a bicycle.

Answer: Thank you. If we can address this at a future meeting, we will.

Puntos Importantes de la Reunión*

Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #25

16 de septiembre de 2020, 5:30pm - 7:30pm

Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad:

- Envíe un correo electrónico al Distrito si está interesado en ser parte del Subcomité de Desviación de Camiones
- Póngase en contacto con Tree Fresno para ser parte de su comité sobre barreras vegetativas
- Póngase en contacto con el Distrito con cualquier sugerencia de agenda de reuniones futuras del Comité
- Póngase en contacto con el Distrito para enviar modificaciones o proporcionar comentarios sobre el borrador del Informe Anual
- Comuníquese con el Distrito para solicitar una copia imprimida del borrador del Informe Anual

Artículos de Acción para el Distrito del Aire:

- Envíe por correo electrónico al Comité el informe de cumplimiento de CARB
- Envíe por correo electrónico al Comité la agenda de la reunión de la Junta de CARB y los enlaces para ver la reunión

Bienvenida e Introducciones

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Ryan Hayashi, Oficial Adjunto de Control de la Contaminación del Aire, Distrito del Aire del Valle

Ivanka Saunders, Coanfitrión del Comité Directivo de la Comunidad

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los detalles de la reunión virtual, los servicios de interpretación y el proceso del estipendio.

Luego dio una descripción general de la agenda de la reunión y pasó a Ivanka Saunders para los comentarios de coanfitrión. Ivanka se presentó a sí misma y su papel en el Comité, agradeció a todos por asistir y les deseó lo mejor a todos.

Ryan agradeció a todos por asistir e Ivanka por ser coanfitrión.

Actualización del Subcomité de Desviación de Camiones

Scott Mozier, Director de Obras Públicas, Ciudad de Fresno

Scott dio una actualización sobre el proceso y la RFP del estudio de desviación de camiones. Puntos importantes de la presentación:

- La ciudad está preparando un borrador de la RFP.
- La RFP se proporcionará al Subcomité de Desviación de Camiones con tiempo suficiente para revisarla en detalle y proporcionar comentarios.
- El informe está programado para ser compartido con el Subcomité en septiembre y el Subcomité debería tener aproximadamente 30 días o más para revisarlo.
- Los fondos de contribuciones indirectas complementarias de la Ciudad aún están seguros.

Comentario: Es bueno ver a tanta gente del Subcomité hablando por teléfono esta noche. El Subcomité está abierto para que la gente se una. En las reuniones realizamos inmersiones profundas en medidas individuales.

Respuesta: Ese es un buen punto. Si su horario lo permite, sería bien tener esa participación.

Pregunta: ¿Es posible dar comentarios incluso si no está en el subcomité?

Respuesta: Sí, todos deben sentirse bienvenidos a proporcionar comentarios.

Actualización del Subcomité de Autobuses y Filtración de Escuelas

Jaime Holt, Director de Comunicaciones, Distrito del Aire del Valle

Jaime proporcionó una actualización sobre el Subcomité de Autobuses y Filtración Escolar. Puntos importantes de la presentación:

- Distrito continúa trabajando con CARB para encontrar una manera de ser flexible con este programa y satisfacer las necesidades de las diferentes escuelas.
- La evaluación de HVAC que todas las escuelas deben realizar para ver qué filtros necesitan debería poder cubrirse con el programa de subvenciones, de modo que las escuelas no tengan que pagar de su bolsillo.
- Algunas empresas han dicho que pueden proporcionar filtros MERV a los niveles que necesitamos para que estén en el mismo tipo de equipo HVAC donde los filtros MERV 8 estaban funcionando antes.
- Distrito está analizando el Condado de Butte y el Condado de Imperial, así como el AQMD de la Costa Sur para ver cómo están ejecutando sus programas.
- Distrito se ha comunicado con varios administradores sobre los autobuses escolares y ha recibido respuesta de uno, que está feliz de reunirse con nosotros.

Pregunta: El Comité ha sugerido varios miembros de la Junta para que el Distrito se comunique. ¿Han intentado conectarse con los demás? Podría ser mejor reunirse con varias personas a la vez en lugar de una por una.

Respuesta: He enviado correos electrónicos a los otros fideicomisarios que recomendó. Si algún miembro del Comité tiene conexiones personales, avísenos y podemos comunicarnos con ellos a través de usted.

Pregunta: ¿Puede el Distrito proporcionar al Comité una lista de posibles fondos específicos para la filtración de aire? Cuanto más investiguemos el costo de los sistemas HVAC, más sabremos. Creo que hay otros fondos por ahí.

Respuesta: Ese es un buen punto y creo que vale la pena investigar qué medios adicionales pueden estar disponibles para la financiación más allá de la financiación de CAPP.

Pregunta: ¿Dijo que había un proveedor local que puede proporcionar filtros MERV 14 que se pueden cambiar por el MERV 8 sin tener un impacto negativo en el flujo de aire?

Respuesta: El Distrito ha escuchado que hay fabricantes que afirman que puede tomar un MERV 14 o MERV 16 y ponerlo donde estaba el antiguo MERV 8. Hemos puesto uno en nuestro edificio para ver si funciona. Ha estado funcionando durante 14 días y es tan negro como puede serlo, lo que significa que está funcionando. El Distrito continuará manteniendo informado a este comité.

Actualización de la Calidad del Aire y la Temporada de Incendios

Jon Klassen, Director de Estrategia e Incentivos, Distrito del Aire del Valle

Jaime Holt, Director de Comunicaciones, Distrito del Aire del Valle

Jon dio una breve actualización sobre los impactos recientes en la calidad del aire de la temporada de incendios forestales y Jaime actualizó al Comité sobre las actividades de alcance recientes. Puntos importantes de la presentación:

- La temporada de incendios forestales de este año no tiene precedentes, con más de 3.3 millones de acres quemados en todo el estado hasta la fecha.
- El Valle de San Joaquín está rodeado por incendios al norte, sur, este y oeste, por lo que el humo continúa entrando al Valle; una situación única.
- California también está batiendo récords de los incendios individuales más grandes.
- Desde mediados de agosto, el Valle ha tenido varios días de aire muy insalubre para PM2.5.
- Distrito se ha centrado en hacer correr la voz a través de tantos medios como sea posible.
- Gracias al Comité por retweet y publicar lo que el Distrito ha publicado en las redes sociales.
- Distrito ha realizado conferencias de prensa, entrevistas, redes sociales y comunicados de prensa, todos bilingües.
- Distrito ha experimentado un gran aumento en el uso de nuestra aplicación móvil.
- Si puede conseguir una máscara N95, debería hacerlo.

Pregunta: Los empleadores deben proporcionar máscaras N95 a los trabajadores agrícolas cuando el AQI es superior a 150. He estado hablando con trabajadores agrícolas y no se les han proporcionado estas máscaras. Recomiendo al Distrito asociarse con los Comisionados Agrícolas porque reciben máscaras N95 del estado y luego se las entregan a los agricultores. En segundo lugar, si alguien vive cerca de Roosevelt High School y desea ver las lecturas en el monitor PM2.5, ¿dónde puede obtener esa información?

Respuesta: Esa información está en el sitio web de AB 617 en su página del Comité, bajo Air Monitoring (monitoreo del aire). Se enumeran todos los monitores.

Comentario: ¿Puedo solicitar materiales de alcance sobre AB 617 para que el Comité pueda tener información para compartir con nuestros compañeros miembros de la comunidad sobre dónde pueden encontrar estos monitores en el sitio web?

Comentario: CARB hizo un estudio de medidas en interiores y exteriores en algunas casas y probamos el filtro de caja hecho en casa y realmente funciona. Si haces uno, míralo un rato. Tenga cuidado porque funcionan, pero el dispositivo debe vigilarse durante las primeras horas que lo ejecute.

Respuesta: Gracias.

Comentario: Creo que el Distrito debería hacer un infomercial sobre la calidad del aire y los riesgos de PM2.5 con la gente del clima local y hablar sobre por qué los filtros son importantes. ¿Se habla de los filtros PM2.5 que realmente puede poner en sus máscaras? No son máscaras N95, pero detienen parte del material particulado.

Respuesta: Esas son grandes ideas, gracias.

Comentario: Mi empresa se ha ocupado de los requisitos de CalOSHA y son bastante claros: los empleadores deben proporcionar máscaras de calidad N95. La mayoría de las agencias están tratando de reservarlas para los trabajadores de emergencia. Compramos algunos que son imitaciones extranjeras y el sitio web de OSHA los certificó.

Respuesta: Gracias.

Pregunta: ¿Existe alguna posibilidad de que podamos alentar a la explotación forestal a regresar y obtener una limpieza forestal responsable para evitar estos incendios el próximo año?

Respuesta: Sé que hay muchas conversaciones en todo el estado sobre el manejo forestal.

Comentario: Es frustrante ver la falta de gestión y rendición de cuentas a nivel federal. Espero que el Distrito pueda trabajar con CARB y que se puedan realizar algunas mejoras.

Respuesta: Gracias.

Comentario: En lo que respecta a los ventiladores de caja, los nuevos hoy tienen características de seguridad, por lo que los riesgos de incendio son mucho menores que si usas un ventilador más antiguo. En segundo lugar, hay dos sitios web que usan los mismos monitores que Purple Air, pero han calibrado los datos, por lo que están mucho más cerca de lo que están leyendo los del Distrito. Uno es fire.airnow.gov y administrado por la EPA y el segundo es SJVair.com. Recomiendo usar cualquiera de esos sitios para darle la mejor imagen de la calidad del aire local.

Respuesta: ¡Gracias! No dude en poner esos enlaces en el chat.

Resultados del Monitoreo de la Calidad del Aire de la Comunidad

Chay Thao, Gerente de Programas, Distrito del Aire del Valle

Chay dio una breve actualización sobre los resultados del monitoreo del aire de la comunidad. Puntos importantes de la presentación:

- Distrito está trabajando con Central Unified e instalando equipo en Madison Elementary. Continuaremos trabajando en la instalación de equipos en Edison High School.
- Distrito ha estado usando la camioneta de monitoreo de aire para responder a las preocupaciones de la comunidad. Una vez que tengamos los datos descargados y listos, podemos darles a todos una actualización al respecto.
- El próximo informe trimestral está a punto de completarse y pronto se publicará en el sitio web.
- El sitio de la West Fresno Elementary está listo para funcionar y están ansiosos por seguir adelante.
- Distrito no se da por vencido en el sitio de Orange Center, pero no ha recibido mucha tracción con el liderazgo escolar.
- Con el apoyo del Comité, el Distrito procederá a colocar un monitor en el sitio de West Fresno inmediatamente y luego continuará tratando de obtener la aprobación para un monitor en Orange Center.
- El Comité aprobó este enfoque.

Pregunta: En lo que respecta al área de Belmont/Palm, el monitor solo estuvo allí durante cuatro horas y me gustaría ver al Distrito regresar y quedarse más tiempo. ¿Cuál es la probabilidad de que se haga eso en este momento?

Respuesta: Eso es algo sobre lo que necesitaremos comentarios del Comité completo. El Comité deberá decidir si desea desviar los recursos de la camioneta móvil de ubicaciones que el Comité ya había acordado que quería monitorear.

Barreras Vegetativas y Ecologización Urbana

Mona Cummings, Directora Ejecutiva de Tree Fresno

Mona dio una presentación con los participantes sobre los próximos pasos para las barreras vegetativas y las medidas de ecologización urbana. Puntos importantes de la presentación:

- Fresno Trees es un proyecto ambiental en asociación con Sonoma Tech.
- Las dos organizaciones se unieron en 2016 para evaluar qué tan bien las barreras vegetativas, que utilizan árboles y arbustos, protegen a las personas de la exposición a la contaminación del aire a sotavento de las carreteras principales.

- Sonoma Tech medirá la calidad del aire de las áreas con y sin vegetación cercana a la carretera y Tree Fresno plantará más de 3,000 árboles y modelará la vegetación, lo que cuantificará los beneficios de la barrera vegetativa.
- En el área de Fresno, entre 5,000 y 18,000 camiones de servicio pesado viajan diariamente por las autopistas estatales.
- Tree Fresno medirá la contaminación en varios lugares dentro de los 150 metros de las autopistas del área de Fresno.
- Durante el primer trimestre del año, la asociación resultó en la plantación de casi 150 árboles nuevos a lo largo de la autopista 99.
- Las ubicaciones adecuadas deben ser aprobadas por las agencias responsables de esas propiedades.
- Tree Fresno tiene una nueva asociación con Fresno Metro Black Chamber of Commerce, que abordará los impactos del cambio climático en las comunidades de color afectadas de manera desproporcionada.

Pregunta: En el informe de AB 617 en la página 10 dice que vamos a gastar \$680,130 con Tree Fresno en un proyecto de varios años destinado a evaluar árboles. ¿Estoy percibiendo esto mal o es necesario modificar el informe?

Respuesta: Creo que es un refinamiento que debemos hacer en el Informe Anual para dar más claridad sobre el programa y la financiación que hemos aprobado.

Pregunta: ¿Tiene productores que estén dispuestos a llevar plántulas de árboles a un lugar donde pueda plantarlas?

Respuesta: Normalmente, compramos en viveros locales y nos dan buenos precios. Estamos teniendo conversaciones con el centro hortícola de Fresno State para que los estudiantes comiencen a propagar algunos árboles para nosotros.

Pregunta: ¿Existe un subcomité dedicado a este proyecto? ¿Cuál será el proceso para identificar las ubicaciones de las barreras vegetativas? ¿De dónde vendrán las aportaciones de la comunidad?

Respuesta: Este año recién comenzamos a construir las barreras vegetativas. Ha habido algunos proyectos previamente aprobados identificados previamente que podrían ser buenos lugares para colocar una barrera vegetativa. Es un proceso complejo. Contamos con Sonoma Tech para asegurarnos de que, si construimos una barrera, las condiciones no serán realmente más peligrosas. Necesitamos crear un comité que pueda presentar ideas sobre dónde pueden llegar estas barreras. Creo que hay un poco de confusión sobre la fuente de financiación.

Respuesta: El programa que está financiando este proyecto proviene de acciones de cumplimiento del estado que resultan en multas que se pagan. El estado tiene un programa que permite a los contaminadores que tienen que pagar multas poner una parte del dinero de la multa en proyectos de mitigación que benefician a la comunidad donde ocurrió la infracción. El financiamiento del proyecto Tree Fresno que estamos discutiendo ahora proviene de esas multas, no de AB 617 o el Distrito.

Respuesta: Tree Fresno convocará a su propio subcomité para seguir adelante con este proyecto de barreras vegetativas. Los miembros del Comité son bienvenidos a unirse a este subcomité, a pesar de que técnicamente está separado del trabajo AB 617 del Comité. Los proyectos son complementarios.

Pregunta: ¿Este Comité ha asignado fondos a barreras vegetativas a través de AB 617?

Respuesta: El Distrito está esperando las pautas de financiación de CAPP con respecto a cómo se pueden gastar los fondos de CAPP para este tipo de proyecto. No es un trato hecho al 100%. Tree Fresno, ReLEAF CA y posiblemente otra organización figuran como socios potenciales. Pero eso aún no se ha finalizado.

Ecologización Urbana y Esfuerzos de Planeamiento Regional

Ivanka Saunders, Coanfitrión de la Comunidad, LCJA

Ivanka proporcionó algunas actualizaciones sobre los esfuerzos de planeamiento regional y cómo pueden alinearse con el trabajo de AB 617. Puntos importantes de su presentación incluyen:

- La Ciudad de Fresno está planeando actualmente el Plan Específico de Centro Sur.
- Aunque nuestra ciudad quiera que esta se convierta en la próxima área de crecimiento económico para la ciudad, todavía hay residentes de la comunidad que viven allí. La región cubre nuestra área 617; es la misma masa de tierra.
- Este Comité está tratando de mejorar la calidad del aire y tenemos a la ciudad tratando de asegurarse de que esta sea la próxima área de crecimiento industrial de instalaciones, lo que podría causar una de las mayores contaminaciones en esta área.
- Los esfuerzos de la oposición están funcionando al mismo tiempo.
- A medida que esta comunidad se convierte en un área industrial, parte de ser un buen vecino significa que no podemos seguir permitiendo que lo que ya sucedió vuelva a suceder. Por ejemplo, no podemos permitir que una instalación Ultra se ubique junto a un patio de recreo. No queremos que continúe esa mala planificación.
- Necesitamos asegurarnos de que haya mitigaciones – no solo árboles – como el único filtro entre la casa de alguien o receptores sensibles como las guarderías. Sabemos que estas áreas son zonas conflictivas de cáncer.
- Necesitamos asegurarnos de que se lleve a cabo un proceso de planificación coordinado que incorpore todo lo que ha hecho el Comité.

Pregunta: ¿Qué pasó con los MOU que formaban parte de la resolución que se aprobó en febrero?

Respuesta: Hemos escuchado al comité y entendemos que es una prioridad. Hemos tenido una discusión inicial con la ciudad sobre esto y, a medida que avance, tendremos más comunicación con el Comité.

Revisión del Borrador del Reporte Anual:

Jaime Holt, Director de Comunicaciones, Distrito del Aire del Valle

Jaime revisó el borrador del Informe Anual con el Comité. Puntos importantes de la presentación:

- Distrito tiene que presentar un informe escrito a CARB a finales de este año; el Comité comunicó que deseaba participar en el proceso de presentación de informes y proporcionar información sobre el trabajo que se ha realizado.
- Todos los documentos están en inglés y español. Se enviaron copias imprimidas del borrador del informe a todos los miembros del Comité de habla hispana antes de la reunión.
- El informe es la culminación de lo que ha hecho el Comité desde que se adoptó el CERP y es parte del informe anual que se requiere que el Distrito presente a CARB en diciembre.
- El informe se publica en la página web de la comunidad del Comité.
- Hay numerosas secciones de informes, que incluyen participación de la comunidad, inventario de emisiones de la comunidad y evaluación técnica continua, varias páginas sobre monitoreo del aire, las diferentes estrategias en el CERP relacionadas con el cumplimiento (dónde estamos hasta la fecha, qué se ha hecho), medidas regulatorias, informes de tóxicos, BARCT, etc.
- El Comité no necesita proporcionar modificaciones en este momento. Simplemente envíe un correo electrónico al Distrito o llame a Jaime en las próximas semanas para proporcionar las actualizaciones sugeridas.

CARB: CARB enviará nuestro informe anual de cumplimiento en PDF al Comité. En este informe encontrarás las inspecciones de vehículos pesados, lo que hicimos en 2019 y las tasas de cumplimiento de diferentes programas, así como un mapa de dónde se realizaron las inspecciones. Incluirá actualizaciones de estrategia y las estrategias con las que CARB se comprometió. El informe enumera el alcance y las capacitaciones que se han desarrollado y las cosas que se están haciendo para lograr las actualizaciones de la estrategia.

Pregunta: ¿A quién le envió mis comentarios o inquietudes?

Respuesta: Comuníquese con Jaime sobre las modificaciones al borrador del informe anual y ella se coordinará.

Pregunta: ¿Cómo sabemos cuál será el informe del Distrito para CARB la próxima semana?

Respuesta: Ese es nuestro próximo punto de la agenda.

CARB: La reunión de la junta de CARB está programada para el 24 de septiembre. Los enlaces a la agenda de la reunión de la Junta y las formas de verla se publicarán en el chat. CARB también enviará los detalles de la reunión al Distrito para distribuir esa información al Comité. Hay dos puntos de la agenda antes de AB 617; uno está en nuestro programa de zonas conflictivas de tóxicos, que es posible que desee escuchar. El artículo AB 617 no comenzará hasta las 4:00 pm. Incluso si los dos primeros puntos de la agenda terminan antes de tiempo, la junta de CARB detendrá la reunión y esperará hasta las 4:00 pm para iniciar la actualización de la implementación de la AB 617. El Informe Anual en el que está trabajando el Distrito no será cubierto en la reunión de la Junta de CARB el 9/24.

Concluir/Próximos Pasos:

Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)

Erica agradeció a todos por participar en una reunión productiva e instó a los miembros del Comité a sugerir futuros temas de la agenda que tal vez deseen dirigir. Les recordó a los residentes calificados sobre el programa de estipendios. Erica agradeció a los intérpretes por brindar interpretación y traducción por chat durante la reunión. Erica agradeció a Ivanka por ser la coanfitriona de la comunidad y pidió a los miembros del Comité que se ofrezcan como voluntarios para ser uno en el futuro. Ivanka agradeció a Erica por mantener al Comité enfocado.

Comentario Público:

Comentario: Deberíamos tener una subvención de dinero para máscaras para las personas que van en bicicleta al trabajo o que no tienen otro medio de transporte además de una bicicleta.

Respuesta: Gracias. Si podemos dirigir esto en una reunión futura, lo haremos.

South Central Fresno

Agenda for Community Steering Committee Meeting #25

Wednesday, September 16, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/97810161329>

Meeting ID: 978 1016 1329

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Ivanka Sanders, LCJA, Community Co-host
- 5:45 p.m. Standing Updates**
Truck Rerouting Subcommittee
School Filtration and Bus Subcommittee
Recent Community Air Monitoring Results and Updates
Valley Air District Staff
- 6:05 p.m. Vegetative Barriers and Urban Greening**
Discussion with Tree Fresno partners about path forward for vegetative barrier and urban greening measures
Mona Cummings, Tree Fresno
Discussion with Ivanka Sanders about vegetative barriers as part of Fresno regional planning efforts
Ivanka Sanders, LCJA, Community Co-host
- 6:55 p.m. Draft Annual Report Review**
Discussion with CSC, District, and CARB about the first draft of the annual report to the community. Soliciting feedback on how to best communicate progress moving forward.
Valley Air District Staff
- 7:25 p.m. Wrap Up/Next Steps**
Discussion of September 24, 2020 CARB Board Update
Upcoming agenda topic suggestions
Next Meeting: Wednesday, October 14 via Zoom
Hanna Stelmakhovych, Facilitator

Learn more: community.valleyair.org

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #25

Miércoles 16 de septiembre de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/97810161329>

Meeting ID: 978 1016 1329

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-431-3632

Código de acceso: 8097028

- 5:30 p.m. Bienvenida e Introducciones**
Hanna Stelmakhovych, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Ivanka Sanders, LCJA, Co-anfitriona Comunitaria
- 5:45 p.m. Actualizaciones Permanentes**
Subcomité de Desviación de Camiones
Subcomité de Autobuses y Filtración de Escuelas
Resultados y Actualizaciones Recientes de Monitoreo del Aire de la Comunidad
Personal del Distrito del Aire del Valle
- 6:05 p.m. Barreras Vegetativas y Ecologización Urbana**
Discusión con los socios de Tree Fresno sobre el camino a seguir para las barreras vegetativas y las medidas de ecologización urbana
Mona Cummings, Tree Fresno
Discusión con Ivanka Sanders sobre las barreras vegetativas como parte de los esfuerzos de planificación regional de Fresno
Ivanka Sanders, LCJA, Co-anfitriona Comunitaria
- 6:55 p.m. Revisión del Borrador del Reporte Anual**
Discusión con el Comité Directivo, el Distrito y CARB sobre el primer borrador del reporte anual para la comunidad. Solicitar comentarios sobre cómo comunicar mejor el progreso en el futuro
Personal del Distrito del Aire del Valle
- 7:25 p.m. Concluir/Próximos Pasos**
Discusión de la Actualización de la Mesa Directiva de CARB del 24 de septiembre de 2020
Próximas sugerencias de temas para la agenda
Próxima Reunión: miércoles 14 de octubre a través de Zoom
Hanna Stelmakhovych, Facilitadora

Meeting Highlights*

AB 617 Fresno Community Steering Committee Meeting #24

August 12, 2020, 5:30 pm - 7:30 pm

Virtual Zoom Meeting

Action items for the Fresno Community Steering Committee:

- CSC members should email SJVAPCD staff if interested in being a community co-host for a future meeting
- CSC members should provide feedback on any sites where SJVAPCD should consider placing air monitoring equipment

Action items for San Joaquin Valley Air Pollution Control District:

- SJVAPCD will bring the topic of electrifying school buses back to the school bus subcommittee
- SJVAPCD will share the draft annual report for CARB prior to the September CSC meeting
- SJVAPCD will request a DPR update at a future CSC meeting
- SJVAPCD will reschedule the September CSC meeting because it coincides with the Transformative Climate Communities (TCC) meeting
- SJVAPCD should consider reviewing the Resolution to ensure that all elements are being addressed by the CSC
- SJVAPCD will research the Centennial Highway Project as a potential vegetative barriers example

Welcome and Introductions

Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)

Ed Ward, Community Co-host

Erica introduced herself and the ILG team, welcomed all participants, and went over Zoom etiquette and translation services.

She then gave an overview of the meeting agenda and transitioned to Ed Ward for co-host remarks. Ed thanked SJVAPCD for the opportunity to co-host and pointed out that the agenda was developed with CSC input.

Stipends for Community Steering Committee Resident Members

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Ryan gave an update on stipends for Fresno CSC resident members. Presentation highlights:

- The Air District has found a path to provide stipends to resident members of the CSC
- Stipends will include a \$75 reimbursement per full CSC meeting for up to 15 CSC meetings per year, which is equivalent to \$1,125 per calendar year
- Subcommittee meetings do not qualify for reimbursement
- Stipends are subject to the availability of AB 617 funding on an annual basis
- ILG will provide the stipends, which will be retroactive to January 2020
- There will be an application required to receive the stipends
- Stipends can be expected within 30 days of the CSC meeting

- To qualify for a stipend, a resident member must be present for 75% of the CSC meeting or 90 minutes of a 2 hour meeting
- If a primary member was unable to attend a meeting and an alternate served in their stead, the alternate member qualifies for a stipend for that meeting
- SJVAPCD will get approval from their Board on August 20

Question: I am listed as somebody from the business area, but I am a consultant and have not been able to receive any sort of revenue from consulting because of COVID. Is there any way I am eligible for a stipend because I have lost a year and a half of income?

Answer: Unfortunately, the stipend program follows the recommendation by the California Air Resources Board (CARB), which states that only resident members qualify to receive stipends and these recommendations received support from the statewide AB 617 consultation working group.

Question: Have you thought about having a stipend for the subcommittee meetings so residents have an incentive to participate more?

Answer: The District is following the CARB guidance only recommends stipends for community steering committee meetings, not subcommittees.

Technology Solutions Update

Kevin Hamilton, Central California Asthma Collaborative (CCAC)

Kevin described technological challenges some resident CSC members may face in participating in virtual meetings. CCAC is working with the SJVAPCD to offer CSC members assistance with any technological challenges to ensure all residents on the CSC can fully participate in all meetings. If there are any residents who do not have access to Wi-Fi or a free telephone connection, they can let Heather Heinks (SJVAPCD) or Kevin Hamilton know and they can provide Wi-Fi-enabled tablets.

Question: Will this be extended to the other communities in AB 617?

Answer: Yes, the District partnered with another community based organization to provide internet service and technology needed to be able to participate.

Truck Rerouting Subcommittee Update

Andrew Benelli, City of Fresno

Andrew gave an update on the truck re-routing study. Presentation highlights:

- The City of Fresno is doing a study of the current truck routes and looking at alternative truck routes throughout the whole city and part of the county
- The City is sharing the cost with SJVAPCD and hiring a consultant to do the truck route study
- The City is preparing an RFP to send out to consultants that are qualified to do this kind of work; there are firms that specialize in this, so the City expects to receive strong proposals

Question: Are you sharing the RFP with the committee before it goes out?

Answer: Yes. The RFP is being routed internally for additional comments, then it will be sent to the subcommittee.

Question: Will the study take into consideration the new interchanges at North Avenue, Central Avenue, and American Avenue, and identify how much the traffic will increase on the existing truck routes once those interchanges are developed?

Answer: The City has been working with Caltrans on designs for new interchanges. There is not currently any funding available for construction. Central Avenue has been dropped from the list.

Caltrans has developed several different alternatives and will be looking at increases in traffic from the current development and undeveloped lands as well.

Question: Will the RFP be looking at American Avenue from the scope of being in the sphere of influence? Will the RFP be looking at the 10 and 20-year build out in life cycle? Does the RFP include greenways?

Answer: Some of the existing truck routes in the county may be re-routed, so we are asking respondents to include county areas that are influenced by truck traffic. Yes, the RFP will look at the 20-year build out. Looking at greenways is something that could be considered. The current draft version does not ask for that in the scope of work, but that comment can be incorporated after CSC review.

Question: You mentioned you would consider including accident history. Will you be providing public health data that addresses the cumulative pollution burden that would be a public health concern for wherever you recommend rerouting trucks?

Answer: That was discussed at the subcommittee meeting and the City agrees it is important. We do not know if the prime consultant will have that specific background so the selected firm may need a sub-consultant to do that type of work. It is included in the RFP and we are eager to see what kind of proposals are received and what the cost will be.

Question: When is the draft RFP going to be out?

Answer: We plan to have it to the subcommittee within 30 days. We would like to release it to the consultants within 60 days, but that depends on how many comments we receive from this group.

Comment: If the consultant we are hiring to do the truck rerouting study doesn't have the skill set to provide public health data, we may want to explore hiring another consultant because it's very important that public health is connected to this.

Answer: The City agrees.

Comment: There is a piece of software being used by Fresno COG as part of the Regional Transportation Plan (RTP) process right now that may align with what the city needs. It is used by transportation planners across the state for health indicators and is accepted by Caltrans.

School Filtration and Bus Subcommittee Update

Jaime Holt, Chief Communications Officer, Valley Air District

Jaime gave an update on the school filtration and bus subcommittee. Presentation highlights:

- There is a second subcommittee meeting for August 25 at 4:00pm
- After conducting research, we have developed a survey for schools, which includes the number of air conditioning units at each school, the age and location of the air conditioning units, the manufacturer model, the size of the filter, the MERV ratings, how many filters each unit requires, and current maintenance schedule
- SJVAPCD is conducting direct outreach to get some of the schools to come to the subcommittee meeting on August 25
- The grants team is going to mock up an application for this program that can be shared with the CSC based on the CARB guidelines for how the funding can be applied to school filtration systems
- There will be a discussion at the subcommittee meeting about when and where to best reach out to school boards or trustees

Question: You mentioned the source of funding would be grants. Does any of this work fall under the CARES Act? Is there a plan to look at how this might affect students? In preparation for when they return to schools, looking at the ventilation system seems like it might be consistent with the CARES funding.

Answer: In some cases, the CARB funding pays for 100% of these filters. In those instances where schools can't easily plug into the grant program, we absolutely can look at alternative paths to help them.

Question: Filters are not the same as systems. Do we have enough AB617 funding to cover a certain amount of necessary HVAC replacement or upgrades or is it just enough for filters?

Answer: It depends. For schools that can't use the filters, the next step is to get standalone units in the classrooms. The budgeted amount is \$1.5 million and that is enough to cover 55 schools. We anticipated doing primarily filter replacements.

Comment: The schools typically have an annual maintenance plan. Getting that information should be easy once you get to the right person. I like the comment about CARES funding and how we can leverage these 617 funds in conjunction with CARES to get everyone up and running.

Question: What would it take to eliminate the cause of the bad air quality in schools where they wouldn't need to have the filtration systems? Is that impossible? Rather than filter the air, is it possible to eliminate the cause of the air?

Answer: You just outlined the main purpose of AB617. As we work to get reductions, we also want to start protecting people. That is why our CERP has a parallel process of mitigation and emissions reductions.

Question from Spanish-speaker: Why haven't we talked about the buses? It is on the agenda and we seem to be moving on to the next item.

Answer: There hasn't been as much movement in Fresno, but we are looking to bring that back to the subcommittee because we would love to see the electrification of buses here.

Community Air Monitoring Results and Update

Jon Klassen, Director of Air Quality Science and Planning, Valley Air District

Jon gave a brief overview of the recent air monitoring results. Presentation highlights:

- Since our last meeting, there has been lots of activity and SJVAPCD has put up new air monitoring sites
- The Fresno AB617 portal has information on the new sites and what is happening day-by-day
- Malaga Elementary will be our most comprehensive monitoring site
- Weekly air monitoring updates are available on the webpage
- The entire network is nearly deployed for South Central Fresno

Question: The speciation work being done at Malaga cannot be displayed in real time like PM data. Is that data displayed on the webpage? How often are the results going to be updated? Also, one of the things we have asked about was pesticides. That was never addressed. Is it possible to add some monitoring for pesticides?

Answer: For the PM2.5 and VOC speciation, because that data requires laboratory analysis, when we get the reports back from the lab, we will work on compiling that data and we plan to put it in the quarterly reports that the District will providing an update to the committee. For pesticide work, we

are working on having the Department of Pesticide Regulation (DPR) give an update to this committee on the work they are doing across California and in the Valley. We can talk with them about air monitoring and pesticides in the areas and make a request to speak.

Question: Could we put an air monitoring site at Amazon or one of those locations that is not too far from the school district to get information on pollution?

Answer: We have reached out to some of those facilities. We haven't had a lot of luck, but would love to hear your thoughts on different locations near Orange Center that could work.

Question: I found a resident willing to let the Air District use her property near H and Belmont to measure the air quality in the area. Was that done?

Answer: We will check. There has been a lot of monitoring in that area with the van, but we can certainly go to that location and take some measurements near that area.

Comment: Right now, the South Central Specific Plan, which is in this 617 area, is being looked at closely by the Mayor. Can we say that with new development, if you fall into the overlays, we require there to be air monitors as part of the development agreement?

Measures Tracker Update

Jessica Olsen, Program Manager, Valley Air District

Todd Payne, Community Action Partnership of Kern (CPAK)

Jessica gave a brief update on the tracking of individual measures in the CERP. Presentation highlights:

- The tracker is on the Fresno AB 617 webpage in Spanish and English
- Every measure is listed by measure type, measure number and description, the details as written in the CERP, and detailed status updates
- SJVAPCD is committed to tracking the status of every single measure as well as the progress being made with CARB on funding discussions
- The funding associated with specific measures is subject to Community Air Protection Program (CAPP) guidelines
- Your CERP includes many different measures that are not included in those guidelines, so CARB has been working on guidelines to allow for funding the community air protection funds, called Chapter 6
- The first measure we are taking through this process is the truck re-routing study; we submitted that project in June and are working with CARB to get it approved
- There are a dozen other CERP measures that project plans are being prepared for now
- SJVAPCD will notify the CSC and post those project plans on the webpage once they are submitted to CARB in draft form and we will be inviting comments

Comment: I would love to see this information in a Gantt chart format.

Answer: Thank you, that's great feedback. We will continue to develop this and make it user-friendly.

Question: Are these updates the main status update that we're going to be presenting to CARB? If so, is that including the information about the resolution update?

Answer: You helped us transition nicely to the next part of this agenda, which is an update from CARB on progress tracking and the update to the board.

CARB: CARB is working on a tracking type tool as well. Within your emission reduction program, there are statewide CARB-based measures, as well as measures specific to your CERP, so we will track this and listen to feedback. Our board is looking forward to an update on the seven first-year communities that have CERPs. In September, there are two CARB board hearings; the one on the 24th will have the update topic. We will reach out to CSC members and we are already talking with the SJVAPCD about the format of the board update on the 24th and what information, if any, is needed.

Comment: One of the things I think will be critical for our success in the summaries is having a clearly defined way that we're going to present. We want to make sure that it's done right and everyone has their voice heard.

Answer: Thank you. In October, there will be a more comprehensive draft report generated by SJVAPCD on the status of each of the communities. The September CARB meeting is really a touch base on the status of where things are, but there will be later opportunities to collaborate on the written report.

Question: We have discussed a template so that all air districts have this model to follow. What is the status of that?

Answer: CARB has been working with the districts on data exchange templates and once we finalize it, it will be posted. It will be a consistent template across the communities to compare and contrast.

Comment: The truck idling in Malaga is bad at night when drivers are idling in their trucks. Sometimes the wind is going towards the communities and the air quality is above 100.

Answer: A lot of the air quality work we will be doing in Malaga will help discern what is going on in that area.

Wrap Up/Next Steps

*Erica Manuel, Facilitator & CEO/Executive Director, Institute for Local Government (ILG)
Ed Ward, Community Co-host*

Erica thanked everybody for participating in a productive meeting and asked CSC members to suggest future agenda items. Ed thanked everyone and mentioned being particularly interested in vegetative barriers as a continued topic for discussion.

Comment: I want the CSC to have the opportunity to review what the resolution said from February because some of the resolutions were important priorities of the community that leading up to the approval of the CERP weren't included.

Answer: Thank you. That is something that we are looking to put together.

Question: Can the SJVAPCD staff to look up Centennial Highway Project in Bakersfield and explore how they did their greening and tree planting?

Public Comment:

There were no public comments via Facebook.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*

Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #24

*12 de agosto de 2020, 5:30 pm - 7:30 pm
Reunión Virtual por Zoom*

Artículos de Acción para el Comité Directivo de la Comunidad de Fresno:

- Los miembros del Comité Directivo deben enviar un correo electrónico al personal de Distrito del Aire si están interesados en ser coanfitriones de la comunidad para una reunión futura
- Los miembros del Comité Directivo deben proporcionar comentarios sobre cualquier sitio donde el Distrito del Aire deba considerar colocar equipos de monitoreo de aire

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín:

- Distrito traerá el tema de la electrificación de los autobuses escolares al subcomité de autobuses escolares
- Distrito compartirá el borrador del informe anual para CARB antes de la reunión del Comité Directivo de septiembre
- Distrito solicitará una actualización del DPR en una futura reunión del Comité Directivo
- Distrito reprogramará la reunión del Comité Directivo de septiembre porque coincide con la reunión de Comunidades Climáticas Transformadoras (TCC)
- Distrito debe considerar revisar la Resolución para asegurarse de que todos los elementos estén siendo abordados por el Comité Directivo
- Distrito investigará el Proyecto de la Carretera Centennial como un ejemplo potencial de barreras vegetativas

Bienvenida e Introducciones

*Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)
Ed Ward, Co-anfitrión de la Comunidad*

Erica se presentó a sí misma y al equipo de ILG, dio la bienvenida a todos los participantes y repasó los servicios de etiqueta y traducción de Zoom.

Luego dio una descripción general de la agenda de la reunión y pasó a Ed Ward para los comentarios de coanfitrión. Ed agradeció al Distrito por la oportunidad de ser coanfitrión y señaló que la agenda se desarrolló con las aportaciones del Comité Directivo.

Estipendios para Miembros Residentes del Comité Directivo de la Comunidad

Ryan Hayashi, Director Adjunto de Control de la Contaminación del Aire, Distrito del Aire del Valle

Ryan dio una actualización sobre los estipendios para los miembros residentes del Comité Directivo de Fresno. Puntos importantes de la presentación:

- El Distrito ha encontrado una manera para proporcionar estipendios a los miembros residentes del Comité Directivo
- Los estipendios incluirán un reembolso de \$75 por reunión completa del Comité Directivo para hasta 15 reuniones de Comité Directivo por año, lo que equivale a \$1,125 por año calendario
- Las reuniones del subcomité no califican para reembolso

- Los estipendios están sujetos a la disponibilidad de fondos AB 617 sobre una base anual
- ILG proporcionará los estipendios, que serán retroactivos a enero de 2020
- Se requerirá una solicitud para recibir los estipendios
- Se pueden esperar estipendios dentro de los 30 días posteriores a la reunión del Comité Directivo
- Para calificar para un estipendio, un miembro residente debe estar presente durante el 75% de la reunión del Comité Directivo o 90 minutos de una reunión de 2 horas
- Si un miembro principal no pudo asistir a una reunión y un suplente sirvió en su lugar, el miembro suplente califica para un estipendio para esa reunión
- Distrito obtendrá la aprobación de la Mesa Directiva el 20 de agosto

Pregunta: Estoy listado como alguien del área de negocios, pero soy consultor y no he podido recibir ningún tipo de ingresos por consultoría debido a COVID. ¿Hay alguna forma de que sea elegible para un estipendio porque he perdido un año y medio de ingresos?

Respuesta: Desafortunadamente, el programa de estipendios sigue la recomendación por la Junta de Recursos del Aire de California (CARB), que establece que solo los miembros residentes califican para recibir estipendios y estas recomendaciones recibieron el apoyo del grupo de trabajo de consultación AB 617 en todo el estado.

Pregunta: ¿Han pensado en tener un estipendio para las reuniones del subcomité para que los residentes tengan un incentivo para participar más?

Respuesta: El Distrito está siguiendo el guía de CARB, solo recomienda estipendios para las reuniones del comité directivo de la comunidad, no subcomités.

Actualización de Soluciones Tecnológicas

Kevin Hamilton, Central California Asthma Collaborative (CCAC)

Kevin describió los desafíos tecnológicos que pueden enfrentar algunos miembros residentes del Comité Directivo al participar en reuniones virtuales. CCAC está trabajando con el Distrito para ofrecer asistencia a los miembros del Comité Directivo con cualquier desafío tecnológico para garantizar que todos los residentes del Comité Directivo puedan participar plenamente en todas las reuniones. Si hay residentes que no tienen acceso a Wi-Fi o una conexión telefónica gratuita, pueden informar a Heather Heinks (Distrito) o Kevin Hamilton y pueden proporcionar tabletas con Wi-Fi.

Pregunta: ¿Se extenderá esto a las otras comunidades en AB 617?

Respuesta: Sí, el Distrito se asoció con otra organización comunitaria para proporcionar el servicio de Internet y la tecnología necesarios para poder participar.

Actualización del Subcomité de Desviación de Camiones

Andrew Benelli, Ciudad de Fresno

Andrew dio una actualización sobre el estudio de desviación de camiones. Puntos importantes de la presentación:

- La Ciudad de Fresno está haciendo un estudio de desviación de camiones actual y está buscando rutas alternativas de camiones en toda la ciudad y parte del condado
- La Ciudad está compartiendo el costo con el Distrito y contratando a un consultor para hacer el estudio de la ruta de los camiones

- La Ciudad está preparando una Solicitud de Propuesta (RFP, por sus siglas en inglés) para enviar a consultores que estén calificados para hacer este tipo de trabajo; hay agencias que se especializan en esto, por lo que la Ciudad espera recibir propuestas sólidas

Pregunta: ¿Están compartiendo la RFP con el comité antes de que se publique?

Respuesta: Sí. La RFP se está pasando internamente para comentarios adicionales, luego se enviará al subcomité.

Pregunta: ¿El estudio tomará en consideración los nuevos intercambios en North Avenue, Central Avenue y American Avenue? ¿E identificará cuánto aumentará el tráfico en las rutas de camiones existentes una vez que se desarrollen esos intercambios?

Respuesta: La Ciudad ha estado trabajando con Caltrans en diseños para nuevos intercambios. Actualmente no hay ningún financiamiento disponible para la construcción. Central Avenue ha sido eliminada de la lista. Caltrans ha desarrollado varias alternativas diferentes y también buscará aumentos en el tráfico del desarrollo actual y de las tierras no desarrolladas.

Pregunta: ¿La RFP considerará American Avenue desde el ámbito de estar en la esfera de influencia? ¿La RFP considerará la construcción de 10 y 20 años en el ciclo de vida? ¿La RFP incluye vías verdes?

Respuesta: Algunas de las rutas de camiones existentes en el condado pueden cambiarse de ruta, por lo que les pedimos a los encuestados que incluyan las áreas del condado que están influenciadas por el tráfico de camiones. Sí, la RFP considerará la construcción de 20 años. Mirar las vías verdes es algo que se podría considerar. La versión actual del borrador no pide eso en el alcance del trabajo, pero ese comentario puede incorporarse después de la revisión del Comité Directivo.

Pregunta: Mencionó que consideraría incluir el historial de accidentes. ¿Proporcionará datos de salud pública que aborden la carga acumulada de contaminación que sería un problema de salud pública para donde recomiende cambiar la ruta de los camiones?

Respuesta: Eso se discutió en la reunión del subcomité y la Ciudad está de acuerdo en que es importante. No sabemos si el consultor principal tendrá esa experiencia específica, por lo que la empresa seleccionada puede necesitar un subconsultor para realizar ese tipo de trabajo. Está incluido en la RFP y estamos ansiosos por ver qué tipo de propuestas se reciben y cuál será el costo.

Pregunta: ¿Cuándo se publicará el borrador de la RFP?

Respuesta: Planeamos enviarlo al subcomité dentro de los 30 días. Nos gustaría comunicárselo a los consultores en un plazo de 60 días, pero eso depende de cuántos comentarios recibamos de este grupo.

Comentario: Si el consultor que estamos contratando para realizar el estudio de desviación de camiones no tiene el conjunto de habilidades para proporcionar datos de salud pública, es posible que deseemos contratar a otro consultor porque es muy importante que la salud pública esté relacionada con esto.

Respuesta: La Ciudad está de acuerdo.

Comentario: Hay una pieza de software que está utilizando Fresno COG como parte del proceso del Plan de Transporte Regional (RTP, por sus siglas en inglés) en este momento que puede alinearse con las necesidades de la ciudad. Es utilizado por planificadores de transporte en todo el estado para indicadores de salud y es aceptado por Caltrans.

Actualización del Subcomité de Filtración Escolar y Autobuses

Jaime Holt, Directora de Comunicaciones, Distrito del Aire del Valle

Jaime dio una actualización sobre el subcomité de filtración y autobuses escolares. Puntos importantes de la presentación:

- Hay una segunda reunión del subcomité para el 25 de agosto a las 4:00pm
- Después de realizar la investigación, hemos desarrollado una encuesta para escuelas, que incluye el número de unidades de aire acondicionado en cada escuela, la edad y ubicación de las unidades de aire acondicionado, el modelo del fabricante, el tamaño del filtro, las calificaciones MERV, cuántos filtros que requiere cada unidad y programa de mantenimiento actual
- Distrito está llevando a cabo un acercamiento directo para que algunas de las escuelas asistan a la reunión del subcomité el 25 de agosto
- El equipo de subvenciones creará una solicitud para este programa que se puede compartir con el Comité según las pautas de CARB sobre cómo se pueden aplicar los fondos a los sistemas de filtración de las escuelas
- Habrá una discusión en la reunión del subcomité sobre cuándo y dónde comunicarse mejor con las juntas escolares o los fideicomisarios

Pregunta: Mencionaste que la fuente de financiación serían las subvenciones. ¿Algo de este trabajo cae bajo la Ley CARES? ¿Existe un plan para ver cómo esto podría afectar a los estudiantes? En preparación para cuando regresen a las escuelas, mirar el sistema de ventilación parece que podría ser consistente con la financiación de CARES.

Respuesta: En algunos casos, la financiación de CARB paga el 100% de estos filtros. En aquellos casos en los que las escuelas no pueden conectarse fácilmente al programa de subvenciones, podemos buscar caminos alternativos para ayudarlos.

Pregunta: Los filtros no son lo mismo que los sistemas. ¿Tenemos suficiente financiamiento AB617 para cubrir una cierta cantidad de reemplazo o actualizaciones necesarias de HVAC o es suficiente para los filtros?

Respuesta: Depende. Para las escuelas que no pueden usar los filtros, el siguiente paso es obtener unidades independientes en los salones de clases. La cantidad presupuestada es de \$1.5 millones y es suficiente para cubrir 55 escuelas. Anticipamos hacer principalmente reemplazos de filtros.

Comentario: Las escuelas suelen tener un plan de mantenimiento anual. Obtener esa información debería ser fácil una vez que llegue a la persona adecuada. Me gusta el comentario sobre el financiamiento de CARES y cómo podemos aprovechar estos fondos 617 junto con CARES para que todos estén en funcionamiento.

Pregunta: ¿Qué se necesitaría para eliminar la causa de la mala calidad del aire en las escuelas donde no necesitarían tener los sistemas de filtración? ¿Es eso imposible? En lugar de filtrar el aire, ¿es posible eliminar la causa del aire?

Respuesta: Acaba de describir el propósito principal de AB617. Mientras trabajamos para conseguir reducciones, también queremos empezar a proteger a las personas. Es por eso que nuestro CERP tiene un proceso paralelo de mitigación y reducción de emisiones.

Pregunta en español: ¿Por qué no hemos hablado de los autobuses? Está en la agenda y parece que estamos pasando al siguiente tema.

Respuesta: No ha habido tanto movimiento en Fresno, pero estamos buscando traer eso de vuelta al subcomité porque nos encantaría ver la electrificación de los autobuses aquí.

Resultados y Actualización del Monitoreo del Aire de la Comunidad

Jon Klassen, Director de Ciencia y Planificación de la Calidad del Aire, Distrito del Aire del Valle

Jon dio una breve descripción de los resultados recientes del monitoreo del aire. Puntos importantes de la presentación:

- Desde nuestra última reunión, ha habido mucha actividad y el Distrito ha instalado nuevos sitios de monitoreo del aire
- El portal AB617 de Fresno tiene información sobre los nuevos sitios y lo que sucede día a día.
- La Escuela Primaria Málaga será nuestro sitio de monitoreo más completo
- Las actualizaciones semanales de monitoreo del aire están disponibles en la página web
- Toda la red está casi desplegada para Centro-Sur Fresno

Pregunta: El trabajo de especiación que se está realizando en Málaga no se puede mostrar en tiempo real como datos de PM. ¿Se muestran esos datos en la página web? ¿Con qué frecuencia se actualizarán los resultados? Además, una de las cosas que hemos preguntado fueron los pesticidas. Eso nunca fue abordado. ¿Es posible agregar algún control de pesticidas?

Respuesta: Para la especiación de PM2.5 y VOC, debido a que esos datos requieren análisis de laboratorio, cuando obtengamos los informes del laboratorio, trabajaremos en la compilación de esos datos y planeamos incluirlos en los informes trimestrales que el Distrito proporcionará una actualización al comité. Para el trabajo con pesticidas, estamos trabajando para que el Departamento de Regulación de Pesticidas (DPR) dé una actualización a este comité sobre el trabajo que están haciendo en California y en el Valle. Podemos hablar con ellos sobre el monitoreo del aire y los pesticidas en las áreas y hacer una solicitud para hablar.

Pregunta: ¿Podríamos poner un sitio de monitoreo del aire en Amazon o en uno de esos lugares que no está demasiado lejos del distrito escolar para obtener información sobre la contaminación?

Respuesta: Nos hemos comunicado con algunas de esas instalaciones. No hemos tenido mucha suerte, pero nos encantaría conocer su opinión sobre diferentes ubicaciones cerca de Orange Center que podrían funcionar.

Pregunta: Encontré a un residente que estaba dispuesta a permitir que el Distrito usara su propiedad cerca de H y Belmont para medir la calidad del aire en el área. ¿Eso fue hecho?

Respuesta: Comprobaremos. Ha habido mucho monitoreo en esa área con la camioneta, pero ciertamente podemos ir a esa ubicación y tomar algunas medidas cerca de esa área.

Comentario: En este momento, el Alcalde está analizando de cerca el Plan Específico de Centro-Sur Fresno, que se encuentra en esta área 617. ¿Podemos decir que, con el nuevo desarrollo, si cae en las superposiciones, requerimos que haya monitores de aire como parte del acuerdo de desarrollo?

Actualización de las Medidas

Jessica Olsen, Gerente del Programa, Distrito del Aire del Valle

Todd Payne, Community Action Partnership of Kern (CPAK)

Jessica dio una breve actualización sobre el seguimiento de las medidas individuales en el CERP. Puntos importantes de la presentación:

- El documento que muestra el progreso de las medidas está en la página web AB617 de Fresno en español e inglés
- Cada medida se enumera por tipo de medida, número de medida y descripción, los detalles tal como están escritos en el CERP y actualizaciones de estado detalladas
- Distrito se compromete a monitorear el estado de cada medida, así como el progreso realizado con CARB en las discusiones de financiamiento
- La financiación asociada a medidas específicas está sujeta a las pautas del Programa Comunitario de Protección del Aire (CAPP)
- Su CERP incluye muchas medidas diferentes que no están incluidas en esas pautas, por lo que CARB ha estado trabajando en pautas para permitir el financiamiento de los fondos comunitarios de protección del aire, llamado Capítulo 6
- La primera medida que estamos tomando a través de este proceso es el estudio de desviación de camiones; presentamos ese proyecto en junio y estamos trabajando con CARB para que se apruebe
- Hay una docena de otras medidas del CERP para las que se están preparando planes de proyecto por ahora
- Distrito notificará al Comité Directivo y publicará esos planes de proyecto en la página web una vez que se envíen a CARB en forma de borrador y estaremos invitando comentarios

Comentario: Me encantaría ver esta información en formato de diagrama de Gantt.

Respuesta: Gracias, son excelentes comentarios. Continuaremos desarrollándolo y haciéndolo fácil de usar.

Pregunta: ¿Son estas actualizaciones la actualización de estado principal que presentaremos a CARB? Si es así, ¿eso incluye la información sobre la actualización de la resolución?

Respuesta: Nos ayudó a hacer una buena transición a la siguiente parte de esta agenda, que es una actualización de CARB sobre el seguimiento del progreso y la actualización del tablero.

CARB: CARB también está trabajando en una herramienta de seguimiento. Dentro de su programa de reducción de emisiones, existen medidas estatales basadas en CARB, así como medidas específicas para su CERP, por lo que realizaremos un seguimiento de esto y escucharemos los comentarios. Nuestra junta está esperando una actualización sobre las siete comunidades de primer año que tienen un CERP. En septiembre, hay dos audiencias de la junta de CARB; el del día 24 tendrá el tema de actualización. Nos comunicaremos con los miembros de Comité Directivo y ya estamos hablando con el Distrito sobre el formato de la actualización de la junta el día 24 y qué información, si la hubiera, se necesita.

Comentario: Una de las cosas que creo que será fundamental para nuestro éxito en los resúmenes es tener una forma claramente definida en la que vamos a presentar. Queremos asegurarnos de que se haga bien y de que todos hagan oír su voz.

Respuesta: Gracias. En octubre, habrá un informe preliminar más completo generado por el Distrito sobre el estado de cada una de las comunidades. La reunión de CARB de septiembre es realmente una base de contacto sobre el estado de dónde están las cosas, pero habrá oportunidades posteriores para colaborar en el informe escrito.

Pregunta: Hemos discutido un patrón para que todos los distritos de aire tengan este modelo a seguir. ¿Cuál es el estado de eso?

Respuesta: CARB ha estado trabajando con los distritos en los patrones de intercambio de datos y una vez que lo finalizemos, se publicará. Será una plantilla consistente en todas las comunidades para comparar y contrastar.

Comentario: Los camiones encendidos mientras estacionados en Málaga es peor por la noche cuando los conductores están al estacionados con el motor encendido en sus camiones. A veces el viento va hacia las comunidades y la calidad del aire es superior a 100.

Respuesta: Gran parte del trabajo de calidad del aire que haremos en Málaga ayudará a discernir lo que está sucediendo en esa zona.

Concluir/Próximos Pasos

*Erica Manuel, Facilitadora & CEO/Directora Ejecutiva, Institute for Local Government (ILG)
Ed Ward, Coanfitrión de la Comunidad*

Erica agradeció a todos por participar en una reunión productiva y pidió a los miembros del Comité que sugirieran temas futuros en la agenda. Ed agradeció a todos y mencionó estar particularmente interesado en las barreras vegetativas como un tema continuo de discusión.

Comentario: Quiero que el Comité tenga la oportunidad de revisar lo que dice la resolución de febrero porque algunas de las resoluciones eran prioridades importantes de la comunidad que no se incluyeron antes de la aprobación del CERP.

Respuesta: Gracias. Eso es algo que estamos buscando crear.

Pregunta: ¿Puede el personal del Distrito buscar el Proyecto de Carretera Centennial en Bakersfield y explorar cómo hicieron su ecologización y plantación de árboles?

Comentario Público:

No hubo comentarios públicos a través de Facebook.

**Consulte el audio completo de la reunión para revisar los detalles y comentarios completos de la reunión.*

San Joaquin Valley
AIR POLLUTION CONTROL DISTRICT

South Central Fresno

Agenda for Community Steering Committee Meeting #24

Wednesday, August 12, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/91178981371>

Meeting ID: 911 7898 1371

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Ed Ward, Community Co-host
- 5:45 p.m. Stipends for Community Steering Committee Resident Members**
Ryan Hayashi, Valley Air District
- 6:00 p.m. Standing Updates**
Truck Rerouting Subcommittee
School Filtration and Bus Subcommittee
Recent Community Air Monitoring Results and Updates
Valley Air District Staff
- 6:30 p.m. Measures Tracker**
Discussion with CSC, District, and CARB about tracking ongoing measure development and implementation. Soliciting feedback on how to best jointly communicate progress to CARB in September.
Valley Air District Staff
CARB Staff
- 7:20 p.m. Wrap Up/Next Steps**
Discussion of September CARB Board Update
Upcoming agenda topic suggestions: Vegetative Barriers Further Discussion
Next Meeting: Wednesday, September 9 via Zoom
Hanna Stelmakhovych, Facilitator

Learn more: community.valleyair.org

Centro-Sur Fresno

Agenda para el Comité Directivo Comunitario Reunión #24

Miércoles 12 de agosto de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/91178981371>

Meeting ID: 911 7898 1371

Para participar **solamente por teléfono** en Español:

Llamada gratuita: 888-431-3632

Código de acceso: 1237790

- 5:30 p.m. Bienvenida, Introducciones**
Hanna Stelmakhovych, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Ed Ward, Co-anfitrión comunitario
- 5:45 p.m. Estipendios para Miembros Residentes del Comité Directivo de la Comunidad**
Ryan Hayashi, Distrito del Aire del Valle
- 6:00 p.m. Actualizaciones Permanentes**
Subcomité de la Desviación de Camiones
Subcomité de Filtración y Autobuses Escolares
Resultados y Actualizaciones Recientes de Monitoreo del Aire Comunitario
Personal del Distrito del Aire del Valle
- 6:30 p.m. Reporte de Medidas**
Discusión con CSC, Distrito y CARB sobre el seguimiento del desarrollo e implementación de medidas en curso. Solicitando comentarios sobre la mejor manera de comunicar conjuntamente el progreso.
Personal del Distrito del Aire del Valle
Personal de CARB
- 7:20 p.m. Concluir/Próximos Pasos**
Discusión de Actualización de la Mesa de CARB de septiembre
Sugerencias para los próximos de temas de la agenda: Discusión Adicional sobre las Barreras Vegetativas
Próxima Reunión: miércoles, 9 de septiembre por Zoom
Hanna Stelmakhovych, Facilitadora

Aprende más: community.valleyair.org

Meeting Highlights*
AB 617 South Central Fresno Community Steering Committee Meeting #23
July 8, 2020 5:30pm-7:30pm
Zoom Virtual Meeting

Action items for the Community Steering Committee:

- Contact the Air District if interested in being a community co-host for future meetings

Action items for San Joaquin Valley Air Pollution Control District:

- Forward all notifications on the rulemaking process
- Bring an air filtration survey to a future meeting
- Add stipend updates and calendars to future standing meeting agendas
- Loop back with CARB incentive folks and provide more information on what additional opportunities may be available for efficient but non-electric buses.

Welcome and Introductions

Hanna Stelmakhovych, Facilitator, Institute for Local Government (ILG)
Erica Manuel, Facilitator, Institute for Local Government (ILG)
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Eric Payne, Community Co-host

Hanna welcomed CSC participants, members of the public, Air District staff and CARB staff. She introduced herself and the ILG team and gave Zoom instructions. The facilitators provided Spanish translation instructions, Zoom controls and meeting etiquette. Ryan thanked everybody for attending and explained that the Air District is looking forward to everyone participating in this process and assisting with agenda development moving forward. Eric thanked the Air District staff for all their work to set up the meeting.

Question: Two agenda items I would like to add to this agenda are an update on the stipends and time to discuss calendars, specifically the dissemination of information regarding calendars for the different meetings.

Answer: Today's agenda includes a standing agenda item to hear updates from the partner agencies. We will cover some of the suggestions later. At the end of each meeting, we also ask participants to share suggestions for the future agenda items.

Regulatory Development and Discussion

Jessica Coria, Program Manager, Valley Air District
Arnaud Marjollet, Director of Permit Services, Valley Air District
Cassandra Lopina, Manager, Technology Assessment Section, CARB
Hanjiro Ambrose, Office of Community Air Protection, CARB

Jessica highlighted the ongoing work of the Air District, reviewed district rules for reducing emissions in South Central Fresno, the PM2.5 Plan review, BARCT review, and toxics assessment. Presentation highlights:

- The Air District has programs that have reduced emissions by over 90% since the 1980s.
- Mobile sources make up the majority of community air pollution emissions and health risks in the community.

- Rules require that technology be developed to meet the stringent limits in the rules.
- In 2018 a new PM2.5 Plan for Valley was adopted to further reduce emissions throughout the Valley, includes comprehensive mobile and stationary source measures.
- We have committed to launching the public process, adopting the rule amendments, and implementation, which were all identified in the PM2.5 Plan.
- Amendments made in 2019 to the wood burning fireplaces and heaters (4901), and regulatory and public engagement process currently in process for flares (4311), boilers, steam generators, and process heaters (4306 and 4320), internal combustion engines (4702), and under-fired charbroilers at commercial restaurants (4692).
- Let us know if you know of a restaurant that is getting smoke complaints or might be interested in participating in the Restaurant Charbroiler Technology Advancement Program.
- Best Available Retrofit Control Technology (BARCT) is an air emission limit for existing sources and is maximum degree of reduction achievable taking into account environmental, energy, and economic impacts.
- AB 617 requires expedited BARCT and implementation for facilities subject to CARB's CAP and Trade program.
- Under AB 617, all districts are required to adopt a BARCT schedule and the District adopted theirs in December 2018.
- 109 facilities in our District are subject to Cap and Trade; you can look at them to determine which rules are applying to those 109 facilities.
- 19 rules of the 32 were already found to meet BARCT; 13 others are subject to review.
- By combining Rules 4409-4624, the District is not only meeting the schedule, but will be ahead of the schedule.
- The CSC will receive a notification about all upcoming workshops and the District will engage the public in order to receive comments about the BARCT analysis.
- Public participation is extremely important and the CSC will have the opportunity to provide feedback and comments. The District offered separate ad hoc or subcommittee to work with the CSC and to take feedback on the rule development participation.
- AB 2588 Air Toxics "hot spots" mandates quantifying and assessing health risks and notifying residents.
- The District is in the process of reassessing all facilities in the Valley and has expedited the reassessment for facilities located within the South Central Fresno boundary.
- The Valley Air District is the furthest along in the process in California.
- So far no facilities have been deemed a significant risk for this community and we are continuing to move forward.
- Community involvement is very important in all of these processes.

Question: Under Rule 4692, what is the measure of success during the COVID shutdown? How can this program be effective if there are multiple shutdowns and the restaurants can't afford to upgrade?

Answer: For charbroiling, that is a great question, but it's going to be something we need to work through. We are currently looking at emissions from commercial charbroiling and how to reduce

them because we have seen they are a large part of emissions inventory throughout the Valley. We are also working on better understanding the emissions inventory -how COVID has impacted the measurements. In 2018, we put a requirement in our rule that restaurants had to send in information about the types and amounts of meat cooked on underfired charbroilers. We have been able to use that survey data and update the inventory based on that information. Economic feasibility of those controls will be a big topic of conversation because they are expensive.

Question: Under AB 2588, you spoke about commenting on the project. At what point in your review process do you look at projects for the cumulative impact to the community?

Answer: It happens during the CEQA process that takes place prior to issuing the Authority to Construct Permit. The lead agency addresses comments on the health risk assessment and community impacts. Other agencies comment. The District can be the lead or the permitting agency during the CEQA process for a particular project.

Question: When thinking about the CEQA processing or facility risk assessments, my concern is that we're thinking per project and per facility. We know that 617 was allotted to South Central Fresno because we are already overburdened. How can we be proactive and not reactive with the City of Fresno as they try to continue the industrial development within the already overdeveloped area? There are projects in the pipeline that the city is using to continue attracting the Amazons and Ultas. What are we doing proactively besides reacting to CEQA comments? We live in a city that is trying to do the exact opposite of what we're trying to achieve.

Answer: We as a District are in discussions about all those development projects. We are a responsible agency, behind the lead agency. In the CERP, there are a lot of measures that are designed to improve the community at the very early stage, including in CEQA. We take this very seriously. The District took a very active role in engaging the City of Fresno using CERP measures to comment on the General Plan update. We just commented on a warehouse project and how they can reroute potential traffic. I am limited in my power to require the city to use these solutions but we do present them. We have authority over air quality and we use that authority as much as we can. We engage with the city to enhance those relationships and comment at the early stages of development and planning.

Question: I want to narrow our focus on the community at hand and not the rules across the entire Valley. Specifically, I want to focus on the facilities in South Fresno that we know are emitting more than their neighbor facilities. Are there any reviews or audits that have been undertaken related to the biomass incinerator or the glass manufacturing plant? Do the rules related to the petroleum storage tanks apply to the petroleum terminal in South Fresno?

Answer: On toxics, the glass manufacturing and biomass incinerator are both required to do source testing. The three components required for testing are arsenic, lead, and chromium. In addition, we came up with a list of 20 additional components to be tested to ensure that it's comprehensive. We asked the facility to expedite the source test. The process is as follows. We get the scope of those emissions, then the facility presents a plan on how they will reduce those emissions, then the facility will submit a report, then we will proceed with the assessment. We are currently working with Santa Fe Pacific Petroleum, and approved their plan. We are at the reporting stage for that effort. If you're asking whether Kinder Morgan or SFPP are subject to our part of the analysis, the answer is yes.

Question: The rules are not very strict because the level of contamination is very high. If we have so many stringent rules, why do we still have so much pollution?

Answer: The majority of air pollution we are seeing in the community come from mobile sources and CARB will be doing a presentation on regulatory efforts in regards to those sources.

Comment: On AB 2588, I hope they'll make extra considerations for the facilities that are currently complying with the District's rules. If you are going to increase the stringency, you should also make some economic considerations, especially for facilities similar to ours who have just put in equipment to meet stringent regulations.

Chat Question: I wonder if you can just remove the fireplace, without replacing with "clean burning" fireplace.

Chat Answer: You can remove your old wood burning stove without requiring a replacement.

Chat Comment: This process that is being described is NEW. All other projects that city has approved that have devastated South Central Fresno did not benefit from this type of intervention from the Air District. The Menu of RULE STRINGENCY. What options does it include?

Chat Answer: Here is the rule stringency pulldown and direct link to tool:

<https://ww2.arb.ca.gov/current-air-district-rules>

Hanjiro and Cassie presented on CARB rules updates and the AB 617 technology clearinghouse.

Presentation highlights:

- The CERP identified several statewide regulatory strategies that could be used to address the key emissions priorities of the community.
- CARB is currently tracking 14 programs that are reflected in the Fresno CERP.
- CARB has continued to take actions to develop key programs and achieve regulatory goals, such as the adoption of advanced clean truck regulations; these are part of a portfolio of measures we expect to deliver some improvements to emissions reductions.
- Heavy duty engines and emissions are a major concern identified by the community.
- The transportation refrigeration unit regulation will reduce the use of fossil power refrigeration on trucks that idle; heavy duty inspection and maintenance will try to identify non-compliant vehicles.
- Regarding light duty vehicles, there have been challenges, but we are working on cleaner passenger vehicle standards and advanced clean car standards.
- We will be holding workshops this fall on advanced clean car measures if you would like to stay informed about that process.
- CARB staff is developing a suite of options to reduce emissions from rail and locomotives.
- CARB is working to update the short-lived climate pollutants standards and bring those to the board.
- Final rules for CARB are sent to the EPA for approval or waiver, just like the final SIP rules on the District side.
- Final rules will be added to the rules tool.
- The Air District rules tool will be expanded to include CARB rules—this is a live tool that can be filtered by stringency, pollutant, rule type, etc.
- Every district has different words that they use for different rules. For that reason, we are expanding the technology so we can tag those different rules to ensure they are similar across the state, despite the naming convention.

- We are working to add limits to the rules to clearly convey what the limits are and what the rules are applicable to.

Question: Would this tool allow us to compare rules from district to district?

Answer: Right now it would be more of a manual comparison where you can search for a rule type; you can use the filter to see if there have been any amendments made. We want to make sure before we put all the information out there that we have the right approach.

Chat Question: These rules are already mandated by the SIPs. What additional attention (and most importantly) resources and enforcement will be added inside the CERP area?

Chat Answer: In the CERP, there are several measures that include enhanced enforcement of District Rules, which are being fully implemented, including additional inspections of facilities with emissions violations, enhanced enforcement of the wood burning heater curtailment regulation, fugitive dust at construction sites, and illegal burning. As part of the annual reporting process, we will also work with the AD to provide information on the status of each of the rules that are in the CERP.

Question: We will watch this website be developed with great interest, and it would be great to know whether or not we will eventually be able to compare these rules head to head. This idea of us hunting through rules of numerous air districts is crazy.

Answer: Absolutely—getting to that point is going to take some time, but we are doing our best to get there.

Chat Question: Trucks are very important to clean the air. But school buses can be 8 times more harmful than trucks. I'm in a rural district so electric buses don't have the range per charge that we need. What can be done for small rural school districts with older buses?

Chat Answer: There are several CARB funding opportunities for clean school buses. Here's a link: <https://ww2.arb.ca.gov/our-work/programs/school-buses/funding-clean-school-buses>. School buses should be 100% compliant with Best Available Control Technology. If you know of some old dirty school buses, please contact CARB with some vehicle information like a license plate and report it here: https://ssl.arb.ca.gov/sslapp/truckstop/complaint_form.php

Chat Question: I have seen that page many times. Unfortunately, with the exception of the CEC and Carl Moyer (I thought Carl Moyer was tapped out) all of the grants apply to electric school buses only. The CEC grant provided just over 50% funding for alternative fuel buses. So is there anything that you can do to not punish small rural schools that can't use electric buses?

Chat Answer: We can certainly loop back with CARB incentive folks and provide you a bit more information on what additional opportunities may be available. Thanks.

Chat Comment: Everyone at the District talked a lot about the very strict rules to clean the air but I don't see a change. We need more urgent change.

Updates from Other Agency Partners

Andrew Benelli, City of Fresno

Braden Duran, Fresno Council of Governments (COG)

Brian Moore, CARB

Jaime Holt, Chief Communication Officer, Valley Air District

Agency Update Summary:

- Andrew briefly discussed plans for the truck study. The city will prepare an RFP and submit it to the CSC's truck re-routing subcommittee for comments. The city will need to receive all comments by Monday, August 17. They plan to issue the RFP and a proposed timeline to a wide range of consultants that have experience with truck routing. A separate subcommittee of people will review the RFP responses and short list the consultants. They will then conduct interviews with the top two or three firms. The city will make a selection and seek contract approval from city council. Then the consultant will begin the study. The city intends to have lots of community engagement. The city (or the selected consultant) may hire a sub-contracted consultant with specific experience with engagement and public meetings.
- Fresno COG has officially launched the 2022 Regional Transportation Plan (RTP). The development process will continue until mid-2022 at which time the COG will seek approval. The RTP is the policy guidance for transportation in Fresno for the next twenty years. The COG has launched a new website, planfresno.com, which will be the main source of information on public engagement related to RTP going forward. The COG welcomes any comments.
- Brian reported on an upcoming workshop on the transportation refrigeration unit regulation. CARB is in the process of updating the blueprint, which will be a two-step process. CARB hopes to receive public comments on the blueprint this summer.
- Jaime shared the School Air Filtration and School Bus Replacement Subcommittee updates and thanked members for participating in the kick off meeting. There is a need to better understand the inventory at various schools, site needs and the costs associated with improvements.

Chat Comment: I did an inventory of air conditioners in the West Fresno Region. Only 8% of our a/c units can handle a filter above MERV 2. I am under the impression that none of our units can handle MERV 14 filters. I don't know what AB 617 can do to help the #8 worst census area (according to the 2018 SB535 report) where our schools are located.

Chat Comment: The District is working on a paper survey and will share more questions about the air filtration in the following weeks.

Chat Question: Can the City of Fresno and CARB use the Fresno Rerouting Study to further identify Heavy Duty truck mobile sources? Can the Fresno Truck Study be used to identify idle truck routes for the best pollution and health effects? Can the City of Fresno Truck Study identify each level of further commercial development and related traffic impacts on receptors in area? Lastly can City of Fresno Truck Study identify what level of development would reach and exceed a level of unhealthy traffic and set a cap on the level of industrial development in area?

Vegetative Barriers Update

Mona Cummings, Tree Fresno (TF)

Mona presented on the Fresno Trees partnership and project. Presentation highlights:

- Tree Fresno is committed to transforming the San Joaquin Valley with trees, greenways, and beautiful landscapes.
- The organization has planted about 50,000 trees since 1985.

- In 2016, Sonoma Technology and TF came together to evaluate how well vegetative barriers, using trees and shrubs, protect people from exposure downwind of major roads.
- CARB approved TF project as a supplemental environmental project (SEP).
- Our SEP is called the Fresno Trees Project.
- Fresno Trees tasks Sonoma Technology with measuring air quality in areas with or without near road vegetation and tasks TF with planting more than 3,000 trees and model vegetation.
- Vegetative barriers can reduce particulate concentration levels downwind of major roads. As air passes through the barrier, the vegetation can filter or remove airborne particles and it can force traffic related pollution to flow up and over the barrier, lofting it higher into the air and giving it time to disperse.
- Fresno has between 5,000-18,000 heavy duty trucks traveling daily. Given the understanding of near road problems, TF will measure the pollution at locations within 150 meters of Fresno-area highways and adjacent to heavily traveled traffic ways.
- TF choose large canopy and hearty tree species that can withstand drought and have minimal maintenance.
- Suitable locations need to be approved by agencies in charge of those properties.
- A second vegetative barrier was completed in Fowler.
- A third project was completed at the convergence of Highway 99 and California Street in Fresno and required partnership with Caltrans.
- TF is excited about a new partnership with the Fresno Metro Black Chamber of Commerce, which was initiated to address climate change impacts that disproportionately impact disadvantaged communities of color, through a comprehensive community-led process.
- CARB has agreed to fund outreach, education and community engagement throughout this project.

Question: A Fresno resident asked for trees, but got declined because Tree Fresno didn't have funds. A resident does live in the qualified area.

Answer: Funds are targeted at specific locations, so it could be that the address didn't qualify. Please call back and talk to Mona. Tree Fresno can accommodate inquiries in Spanish language.

Question: At an Air District board meeting, I suggested looking at the Centennial projects through Caltrans in Bakersfield—what happened to that? Are you or have you looked at the Centennial project?

Answer: We have trees for free to give away through a grant from CalFire, so I haven't looked at that specific project, but I applaud it. Irrigation needs to be in place.

Question: What's the process for securing trees if you already have a project and committed funding?

Answer: It depends on the location and guaranteed irrigation. We do have funding to distribute trees, so please contact me directly.

Chat Question: Is the air quality testing being done by Fresno Trees available for our committee?

Chat Question: What about the trees that have been torn down? The stumps were left there and they look very ugly.

Chat Comment: Now that we know more about the opportunities with Tree Fresno, we will send an email to the committee to assess how we want to be involved! Tehipite Middle School is in the boundary, but we likely have other places where we want to place trees. Please think about those places.

Program Updates

Jessica Olsen, Program Manager, Valley Air District
Vernon Hughes, CARB

- SJVAPCD has an upcoming commitment to update CARB's board on the process of AB 617, so we are updating our website with a comprehensive tracker to help. We will send it out to this CSC and solicit feedback. The tool will track how far we've come and where we still have to go.
- CARB is continuing to work on the stipend issue. CARB is working to find the mechanism and process for issuing stipends and then identify the funding source. The funding mechanism being discussed is about a competitive bid contract or modifications to existing grants; this would only work if the grant has an existing stipend clause that can be modified.

Comment: The Air Districts in the Imperial Valley and the Bay Area provided stipend funding out of implementation funds. SJVAPCD can follow similar model.

Chat Comment: Well you shouldn't wait so long, all the other residents from other areas are already receiving it. We have been volunteers for a very long time and it's very unfair.

Chat Comment: I concur. Stipends are petty cash compared to the Air District budget. Furthermore, money is being saved now that our meetings are online.

Chat Question: CARB also committed to updating the AB 617 CAPP Blueprint by Fall of 2020. How can the CSC provide input to that process?

Chat Answer: The Blueprint will be updated with the Blueprint Advisory, which should be done before the end of this year, after an extensive community review process.

Wrap Up/Next Steps

Hanna Stelmakhovich, Facilitator, Institute for Local Government (ILG)
Eric Payne, Community co-host

Hanna asked that committee members enter their name in the chat box or email the Air District to be a future community co-host. Also please continue to suggest future agenda items.

Ed Ward raised his Zoom hand and volunteered to be community co-host.

Eric thanked the CSC for participating in the call and the Air District staff in front of and behind the camera for coordinating the meeting.

Public Comment:

There were no public comments.

Reminders:

The next meeting is Wednesday, August 12 via Zoom. All the presentations, meetings highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to full meeting audio to review the complete details and comments from the meeting.*

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #23
8 de julio de 2020, 5:30pm-7:30pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad:

- Comuníquese con el Distrito del Aire si está interesado en ser coanfitrión de la comunidad para reuniones futuras

Artículos de Acción para el Distrito de Control de la Contaminación del Aire del Valle de San Joaquín:

- Reenviar todas las notificaciones sobre el proceso de elaboración de reglas
- Llevar una encuesta de filtración de aire a una reunión futura
- Agregar actualizaciones de estipendios y calendarios para futuras agendas de reuniones permanentes
- Conectar con el personal de incentivos de CARB y brindar más información sobre las oportunidades adicionales que pueden estar disponibles para autobuses eficientes, pero no eléctricos.

Bienvenida e Introducciones

Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)

Erica Manuel, Facilitadora, Institute for Local Government (ILG)

Ryan Hayashi, Director Adjunto de Control de la Contaminación del Aire, Distrito del Aire del Valle

Eric Payne, Co-anfitrión de la Comunidad

Hanna dio la bienvenida a los participantes del Comité Directivo, miembros del público, personal del Distrito del Aire y CARB. Se presentó a sí misma y al equipo de ILG y dio instrucciones de Zoom. Los facilitadores proporcionaron instrucciones de traducción en español, controles de Zoom y etiqueta de la reunión. Ryan agradeció a todos por asistir y explicó que el Distrito del Aire espera que todos participen en este proceso y ayuden con el desarrollo de la agenda en el futuro. Eric agradeció al personal del Distrito del Aire por todo su trabajo para organizar la reunión.

Pregunta: Dos artículos de la agenda que me gustaría agregar a esta agenda son una actualización sobre los estipendios y el tiempo para discutir los calendarios, específicamente la difusión de información sobre los calendarios de las diferentes reuniones.

Respuesta: La agenda de hoy incluye un artículo permanente de la agenda para escuchar las actualizaciones de las agencias asociadas. Cubriremos algunas de las sugerencias más adelante. Al final de cada reunión, también pedimos a los participantes que compartan sugerencias para los futuros temas de la agenda.

Discusión y Desarrollo Regulatorio

Jessica Coria, Gerente del Programa, Distrito del Aire del Valle

Arnaud Marjollet, Director de Servicios de Permisos, Distrito del Aire del Valle

Cassandra Lopina, Gerente, Sección de Evaluación de Tecnología, CARB

Hanjiro Ambrose, Oficina de Protección de Aire de la Comunidad, CARB

Jessica destacó el trabajo en curso del Distrito del Aire, revisó las reglas del Distrito para reducir las emisiones en Centro-Sur Fresno, la revisión del Plan de PM2.5, la revisión BARCT y la evaluación de tóxicos. Puntos importantes de la presentación:

- El Distrito del Aire tiene programas que han reducido las emisiones en más del 90% desde la década de 1980.
- Las fuentes móviles constituyen la mayoría de las emisiones de contaminación del aire de la comunidad y los riesgos para la salud en la comunidad.
- Las reglas requieren que la tecnología se desarrolle para cumplir con los estrictos límites de las reglas.
- En 2018, se adoptó un nuevo Plan de PM2.5 para el Valle para reducir aún más las emisiones en todo el Valle, que incluye medidas integrales de fuentes móviles y estacionarias.
- Nos hemos comprometido a lanzar el proceso público, adoptar las enmiendas a la regla y la implementación, todas ellas identificadas en el Plan PM2.5.
- Enmiendas hechas en 2019 a las chimeneas y calentadores de leña (4901), y el proceso regulatorio y participación pública actualmente en proceso para llamaradas (4311), calderas, generadores de vapor y calentadores de proceso (4306 y 4320), motores de combustión interna (4702) y parrillas de fuego abajo en restaurantes comerciales (4692).
- Háganos saber si sabe de un restaurante que esté recibiendo quejas por humo o que pueda estar interesado en participar en el Programa de Avance de Tecnología de Parrilla de Restaurante.
- La mejor tecnología de Control Modificada Disponible (BARCT) es un límite de emisión de aire para las fuentes existentes y es el grado máximo de reducción que se puede lograr teniendo en cuenta los impactos ambientales, energéticos y económicos.
- AB 617 requiere BARCT acelerado y la implementación para instalaciones sujetas al programa de CAP and Trade de CARB.
- Bajo AB 617, todos los distritos deben adoptar un horario BARCT y el Distrito adoptó el suyo en diciembre de 2018.
- 109 instalaciones en nuestro Distrito están sujetas a Cap and Trade; puede mirarlos para determinar qué reglas se aplican a esas 109 instalaciones.
- Ya se encontraron 19 reglas de las 32 que cumplen con BARCT; Otros 13 están sujetos a revisión.
- Al combinar las Reglas 4409-4624, el Distrito no solo está cumpliendo con el cronograma, sino que se adelantará al cronograma.
- El Comité Directivo recibirá una notificación sobre todos los próximos talleres y el Distrito involucrará al público para recibir comentarios sobre el análisis BARCT.
- La participación pública es extremadamente importante y el Comité Directivo tendrá la oportunidad de brindar retroalimentación y comentarios. El Distrito ofreció un subcomité ad hoc por separado para trabajar con el Comité Directivo y recibir comentarios sobre la participación en el desarrollo de reglas.
- AB 2588 Toxico del Aire “zonas conflictivas” exige cuantificar y evaluar los riesgos para la salud y notificar a los residentes.

- El Distrito está en proceso de reevaluar todas las instalaciones en el Valle y ha acelerado la reevaluación de las instalaciones ubicadas dentro de los límites de Centro-Sur Fresno.
- El Distrito del Aire del Valle es el más avanzado del proceso en California.
- Hasta ahora, ninguna instalación se ha considerado un riesgo significativo para esta comunidad y seguimos avanzando.
- La participación de la comunidad es muy importante en todos estos procesos.

Pregunta: Según la Regla 4692, ¿cuál es la medida de éxito durante el cierre de COVID? ¿Cómo puede ser eficaz este programa si hay varios cierres y los restaurantes no pueden permitirse actualizar?

Respuesta: Para parrillas comerciales, esa es una gran pregunta, pero será algo en lo que debemos trabajar. Actualmente estamos analizando las emisiones del asado a la parrilla comercial y cómo reducirlas porque hemos visto que son una gran parte del inventario de emisiones en todo el Valle. También estamos trabajando para comprender mejor el inventario de emisiones: cómo COVID ha impactado las mediciones. En 2018, establecimos un requisito en nuestra regla de que los restaurantes debían enviar información sobre los tipos y cantidades de carne cocinada en parrillas de fuego abajo. Hemos podido utilizar los datos de la encuesta y actualizar el inventario en función de esa información. La viabilidad económica de esos controles será un gran tema de conversación porque son costosos.

Pregunta: Bajo AB 2588, habló sobre comentar sobre el proyecto. ¿En qué punto de su proceso de revisión considera los proyectos para el impacto acumulativo en la comunidad?

Respuesta: Ocurre durante el proceso de CEQA que tiene lugar antes de emitir el Permiso de Autoridad para Construir. La agencia líder aborda los comentarios sobre la evaluación de riesgos para la salud y los impactos en la comunidad. Comentarios de otras agencias. El Distrito puede ser el líder o la agencia de permisos durante el proceso de CEQA para un proyecto en particular.

Pregunta: Cuando pienso en el procesamiento de CEQA o en las evaluaciones de riesgos de las instalaciones, mi preocupación es que estamos pensando por proyecto y por instalación. Sabemos que 617 se asignó a Centro-Sur Fresno porque ya estamos sobrecargados. ¿Cómo podemos ser proactivos y no reactivos con la Ciudad de Fresno mientras intentan continuar el desarrollo industrial dentro del área ya sobre desarrollada? Hay proyectos en trámite que la ciudad está utilizando para seguir atrayendo a los Amazons y Ultas. ¿Qué estamos haciendo de manera proactiva además de reaccionar a los comentarios de CEQA? Vivimos en una ciudad que intenta hacer exactamente lo contrario de lo que intentamos lograr.

Respuesta: Nosotros, como Distrito, estamos en discusiones sobre todos esos proyectos de desarrollo. Somos una agencia responsable, detrás de la agencia líder. En el CERP, hay muchas medidas que están diseñadas para mejorar la comunidad en una etapa muy temprana, incluso en CEQA. Tomamos esto muy seriamente. El Distrito tomó un papel muy activo al involucrar a la Ciudad de Fresno usando las medidas del CERP para comentar sobre la actualización del Plan General. Acabamos de comentar sobre un proyecto de almacén y cómo pueden desviar el tráfico potencial. Estoy limitado en mi poder para exigir que la ciudad use estas soluciones, pero las presentamos. Tenemos autoridad sobre la calidad del aire y usamos esa autoridad tanto como podemos. Nos comprometemos con la ciudad para mejorar esas relaciones y comentamos en las primeras etapas de desarrollo y planificación.

Pregunta: Quiero limitar nuestro enfoque en la comunidad en cuestión y no en las reglas en todo el Valle. Específicamente, quiero centrarme en las instalaciones en el sur de Fresno que sabemos que están emitiendo más que las instalaciones vecinas. ¿Se han realizado revisiones o auditorías relacionadas con el incinerador de biomasa o la planta de fabricación de vidrio? ¿Se aplican las

reglas relacionadas con los tanques de almacenamiento de petróleo a la terminal de petróleo en el Sur de Fresno?

Respuesta: En el caso de los tóxicos, la fabricación de vidrio y el incinerador de biomasa deben realizar pruebas de origen. Los tres componentes necesarios para las pruebas son arsénico, plomo y cromo. Además, creamos una lista de 20 componentes adicionales que se deben probar para garantizar que sea completa. Le pedimos a la instalación que agilizará la prueba de la fuente. El proceso es el siguiente. Obtenemos el alcance de esas emisiones, luego la instalación presenta un plan sobre cómo reducirán esas emisiones, luego la instalación presentará un informe y luego procederemos con la evaluación. Actualmente estamos trabajando con Santa Fe Pacific Petroleum y aprobamos su plan. Estamos en la etapa de presentación de informes para ese esfuerzo. Si pregunta si Kinder Morgan o SFPP están sujetos a nuestra parte del análisis, la respuesta es sí.

Pregunta: Las reglas no son muy estrictas porque el nivel de contaminación es muy alto. Si tenemos tantas reglas estrictas, ¿por qué todavía tenemos tanta contaminación?

Respuesta: La mayor parte de la contaminación del aire que estamos viendo en la comunidad proviene de fuentes móviles y CARB hará una presentación sobre los esfuerzos regulatorios con respecto a esas fuentes.

Comentario: En AB 2588, espero que hagan consideraciones adicionales para las instalaciones que actualmente cumplen con las reglas del Distrito. Si va a aumentar el rigor, también debe hacer algunas consideraciones económicas, especialmente para instalaciones similares a la nuestra que acaban de instalar equipos para cumplir con las estrictas regulaciones.

Pregunta por chat: ¿Sí se puede remover la chimenea sin reemplazarla con una chimenea de "menos contaminante"?

Respuesta por chat: Puede remover su estufa de leña antigua sin necesidad de reemplazarla.

Comentario por chat: Este proceso que se describe es NUEVO. Todos los demás proyectos aprobados por la ciudad que han devastado el Centro-Sur Fresno no se beneficiaron de este tipo de intervención del Distrito del Aire. El menú de RIGUROSIDAD DE RELGAS. ¿Qué opciones incluye?

Respuesta por chat: Aquí está el menú desplegable de rigurosidad de la regla y el enlace directo a la herramienta: <https://ww2.arb.ca.gov/current-air-district-rules>

Hanjiro y Cassie presentaron las actualizaciones de las reglas de CARB y la base de datos de tecnología AB 617.

Puntos importantes de la presentación:

- El CERP identificó varias estrategias regulatorias a nivel estatal que podrían usarse para abordar las prioridades clave de emisiones de la comunidad.
- CARB actualmente está rastreando 14 programas que se reflejan en el CERP de Fresno.
- CARB ha continuado tomando acciones para desarrollar programas clave y lograr objetivos regulatorios, como la adopción de regulaciones avanzadas para camiones limpios; Estos son parte de una cartera de medidas que esperamos brindar algunas mejoras a la reducción de emisiones.
- Los motores de servicio pesado y las emisiones son una de las principales preocupaciones identificadas por la comunidad.
- La regulación de la unidad de refrigeración de transporte reducirá el uso de refrigeración de energía fósil en los camiones que estén estacionados con el motor encendido; La inspección

y el mantenimiento de servicio pesado intentarán identificar los vehículos que no cumplan con las normas.

- Con respecto a los vehículos ligeros, ha habido desafíos, pero estamos trabajando en estándares más limpios para vehículos de pasajeros y estándares avanzados para automóviles limpios.
- Realizaremos talleres este otoño sobre medidas avanzadas de automóviles limpios si desea mantenerse informado sobre ese proceso.
- El personal de CARB está desarrollando un conjunto de opciones para reducir las emisiones de ferrocarriles y locomotoras.
- CARB está trabajando para actualizar los estándares de contaminantes climáticos de vida corta y llevarlos a la junta.
- Las reglas finales para CARB se envían a la EPA para su aprobación o exención, al igual que las reglas finales de SIP del lado del Distrito.
- Las reglas finales se agregarán a la herramienta de reglas.
- La herramienta de reglas del Distrito del Aire se ampliará para incluir reglas de CARB; esta es una herramienta en vivo que se puede filtrar por rigor, contaminante, tipo de regla, etc.
- Cada distrito tiene diferentes palabras que usan para diferentes reglas. Por esa razón, estamos expandiendo la tecnología para que podamos etiquetar esas diferentes reglas para asegurarnos de que sean similares en todo el estado, a pesar de la convención de nomenclatura.
- Estamos trabajando para agregar límites a las reglas para transmitir claramente cuáles son los límites y a qué se aplican las reglas.

Pregunta: ¿Esta herramienta nos permitirá comparar las reglas de un distrito a otro?

Respuesta: En este momento, sería más una comparación manual en la que puede buscar un tipo de regla; puede utilizar el filtro para ver si se han realizado modificaciones. Queremos asegurarnos antes de publicar toda la información de que tenemos el enfoque correcto.

Pregunta por chat: Estas reglas ya están impuestas por los SIP. ¿Qué atención adicional (y lo más importante) recursos y cumplimiento se agregarán dentro del área de CERP?

Respuesta por chat: En el CERP, hay varias medidas que incluyen un cumplimiento mejorado de las Reglas del Distrito, que se están implementando por completo, incluidas inspecciones adicionales de instalaciones con violaciones de emisiones, un cumplimiento mejorado para la regulación de reducción de calentadores de leña, polvo fugitivo en sitios de construcción y quema ilegal. Como parte del proceso de reporte anual, también trabajaremos con el Distrito del Aire para brindar información sobre el estado de cada una de las reglas que se encuentran en el CERP.

Pregunta: Observaremos el desarrollo de este sitio web con gran interés, y sería bueno saber si eventualmente podremos comparar estas reglas cara a cara. Esta idea de que cecemos a través de las reglas de numerosos distritos aéreos es una locura.

Respuesta: Absolutamente, llegar a ese punto llevará algún tiempo, pero estamos haciendo todo lo posible para llegar allí.

Pregunta por chat: Los camiones son muy importantes para limpiar el aire. Pero los autobuses escolares pueden ser 8 veces más dañinos que los camiones. Estoy en un distrito rural, por lo que

los autobuses eléctricos no tienen el rango de carga que necesitamos. ¿Qué se puede hacer para los distritos escolares rurales pequeños con autobuses más antiguos?

Respuesta por chat: Hay varias oportunidades de financiación de CARB para autobuses escolares limpios. Aquí hay un enlace: <https://ww2.arb.ca.gov/our-work/programs/school-buses/funding-clean-school-buses>. Los autobuses escolares deben cumplir al 100% con la mejor tecnología de control disponible. Si conoce algunos autobuses escolares antiguos y sucios, comuníquese con CARB con información del vehículo, como una placa, e infórmelo aquí: https://ssl.arb.ca.gov/sslapp/truckstop/complaint_form.php

Pregunta por chat: He visto esa página muchas veces. Desafortunadamente, con la excepción de CEC y Carl Moyer (pensé que Carl Moyer fue eliminado), todas las subvenciones se aplican solo a los autobuses escolares eléctricos. La subvención de la CEC proporcionó un poco más del 50% de financiamiento para autobuses de combustible alternativo. Entonces, ¿hay algo que pueda hacer para no castigar a las pequeñas escuelas rurales que no pueden usar autobuses eléctricos?

Respuesta por chat: Ciertamente, podemos retroceder con el personal de incentivos de CARB y brindarle un poco más de información sobre las oportunidades adicionales que pueden estar disponibles. Gracias.

Comentario por chat: Todos en el Distrito hablaron mucho sobre las reglas muy estrictas para limpiar el aire, pero no veo ningún cambio. Necesitamos un cambio más urgente.

Actualizaciones de Otras Agencias Asociadas

Andrew Benelli, Ciudad de Fresno

Braden Duran, Consejo de Gobiernos de Fresno (COG)

Brian Moore, CARB

Jaime Holt, Directora de Comunicación, Distrito del Aire del Valle

Resumen de Actualización de la Agencia:

- Andrew discutió brevemente los planes para el estudio del camión. La ciudad preparará una RFP y la enviará al subcomité de desviación de camiones del CSC para comentarios. La ciudad necesitará recibir todos los comentarios antes del lunes 17 de agosto. Ellos planean emitir el RFP y un cronograma propuesto a una amplia gama de consultores que tienen experiencia en rutas de camiones. Un subcomité separado de personas revisará las respuestas del RFP y hará una lista corta de los consultores. Luego, realizarán entrevistas con las dos o tres empresas principales. La ciudad hará una selección y buscará la aprobación del contrato por parte del ayuntamiento. Luego, el consultor comenzará el estudio. La ciudad tiene la intención de tener mucho compromiso con la comunidad. La ciudad (o el consultor seleccionado) puede contratar a un consultor subcontratado con experiencia específica en participación y reuniones públicas.
- Fresno COG ha lanzado oficialmente el Plan de Transporte Regional de 2022 (RTP). El proceso de desarrollo continuará hasta mediados de 2022, momento en el que el COG buscará la aprobación. El RTP es la guía de políticas para el transporte en Fresno durante los próximos veinte años. El COG ha lanzado un nuevo sitio web, planfresno.com, que será la principal fuente de información sobre la participación pública relacionada con RTP en el futuro. El COG agradece cualquier comentario.

- Brian informó sobre un próximo taller sobre la regulación de unidades de refrigeración para transporte. CARB está en proceso de actualizar el plan, que será un proceso de dos pasos. CARB espera recibir comentarios públicos sobre el plan este verano.
- Jaime compartió las actualizaciones del Subcomité de Filtración de Aire Escolar y Reemplazo de Autobuses Escolares y agradeció a los miembros por participar en la reunión inicial. Es necesario comprender mejor el inventario en varias escuelas, las necesidades del sitio y los costos asociados con las mejoras.

Comentario por chat: Hice un inventario de acondicionadores de aire en la región de West Fresno. Solo el 8% de nuestras unidades de aire acondicionado pueden manejar un filtro más alto de MERV 2. Tengo la impresión de que ninguna de nuestras unidades puede manejar filtros MERV 14. No sé qué puede hacer AB 617 para ayudar a la octava peor área del censo (según el informe SB535 de 2018) donde se encuentran nuestras escuelas.

Comentario por chat: El Distrito está trabajando en una encuesta en papel y compartirá más preguntas sobre la filtración de aire en las próximas semanas.

Pregunta por chat: ¿Pueden la ciudad de Fresno y CARB utilizar el Estudio de Desviación de Fresno para identificar más a fondo las fuentes móviles de camiones de servicio pesado? ¿Se puede utilizar el Estudio de Camiones de Fresno para identificar rutas de camiones estacionados con el motor encendido para obtener los mejores efectos de contaminación y salud? ¿Puede el Estudio de Camiones de la Ciudad de Fresno identificar cada nivel de desarrollo comercial adicional y los impactos relacionados con el tráfico en los receptores en el área? Por último, ¿puede el Estudio de Camiones de la Ciudad de Fresno identificar qué nivel de desarrollo alcanzaría y superaría un nivel de tráfico insalubre y establecer un límite en el nivel de desarrollo industrial en el área?

Actualización de Barreras Vegetativas

Mona Cummings, Tree Fresno (TF)

Mona hizo una presentación sobre la asociación y el proyecto de Fresno Trees. Puntos importantes de la presentación:

- Tree Fresno se compromete a transformar el Valle de San Joaquín con árboles, vías verdes y hermosos paisajes.
- La organización ha plantado unos 50,000 árboles desde 1985.
- En 2016, Sonoma Technology y TF se unieron para evaluar qué tan bien las barreras vegetativas, utilizando árboles y arbustos, protegen a las personas de la exposición a sotavento de las carreteras principales.
- CARB aprobó el proyecto TF como un proyecto ambiental complementario (SEP).
- Nuestro SEP se llama Proyecto Fresno Trees.
- Fresno Trees asigna a Sonoma Technology la medición de la calidad del aire en áreas con o sin vegetación cercana a la carretera y asigna a TF la plantación de más de 3,000 árboles y vegetación modelo.
- Las barreras vegetativas pueden reducir los niveles de concentración de partículas a favor del viento de las carreteras principales. A medida que el aire pasa a través de la barrera, la vegetación puede filtrar o eliminar las partículas transportadas por el aire y puede forzar a

que la contaminación relacionada con el tráfico fluya hacia arriba y sobre la barrera, elevándola hacia el aire y dándole tiempo para dispersarse.

- Fresno tiene entre 5,000 y 18,000 camiones de servicio pesado que viajan diariamente. Dado el conocimiento de los problemas de las carreteras cercanas, TF medirá la contaminación en ubicaciones dentro de los 150 metros de las carreteras del área de Fresno y adyacentes a vías de tráfico muy transitadas.
- TF elija especies de árboles de copa grande y abundantes que puedan soportar la sequía y tengan un mantenimiento mínimo.
- Las ubicaciones adecuadas deben ser aprobadas por las agencias a cargo de esas propiedades.
- Se completó una segunda barrera vegetativa en Fowler.
- Se completó un tercer proyecto en la convergencia de la autopista 99 y California Street en Fresno y requirió una asociación con Caltrans.
- TF está entusiasmado con una nueva asociación con el Fresno Metro Black Chamber of Commerce, que se inició para abordar los impactos del cambio climático que impactan desproporcionadamente a las comunidades de color desfavorecidas, a través de un proceso integral dirigido por la comunidad.
- CARB ha acordado financiar actividades de alcance, educación y participación comunitaria a lo largo de este proyecto.

Pregunta: Un residente de Fresno pidió árboles, pero fue rechazado porque Tree Fresno no tenía fondos. Un residente vive en el área calificada.

Respuesta: Los fondos están destinados a ubicaciones específicas, por lo que es posible que la dirección no califique. Vuelva a llamar y hable con Mona. Tree Fresno puede atender consultas en idioma español.

Pregunta: En una reunión de la junta del Distrito del Aire, sugerí mirar los proyectos del Centenario a través de Caltrans en Bakersfield. ¿Qué pasó con eso? ¿Estás o has mirado el proyecto Centennial?

Respuesta: Tenemos árboles gratis para regalar a través de una subvención de CalFire, así que no he mirado ese proyecto específico, pero lo aplaudo. El riego debe estar en su lugar.

Pregunta: ¿Cuál es el proceso para asegurar árboles si ya tiene un proyecto y ha comprometido fondos?

Respuesta: Depende de la ubicación y del riego garantizado. Tenemos fondos para distribuir árboles, así que contácteme directamente.

Pregunta por chat: ¿Están disponibles para nuestro comité las pruebas de calidad del aire que realiza Fresno Trees?

Pregunta por chat: ¿Qué pasa con los árboles que han sido derribados? Los muñones se quedaron ahí y se ven muy feos.

Comentario por chat: Ahora que sabemos más sobre las oportunidades con Tree Fresno, enviaremos un correo electrónico al comité para evaluar cómo queremos participar. La escuela secundaria Tehipite está en el límite, pero es probable que tengamos otros lugares donde queramos colocar árboles. Por favor piensa en esos lugares.

Actualizaciones del Programa

*Jessica Olsen, Gerente del Programa, Distrito del Aire del Valle
Vernon Hughes, CARB*

- SJVAPCD tiene el próximo compromiso de actualizar la junta de CARB sobre el proceso de AB 617, por lo que estamos actualizando nuestro sitio web con un rastreador completo para ayudar. Lo enviaremos a este Comité Directivo y solicitaremos comentarios. La herramienta hará un seguimiento de lo lejos que hemos llegado y hacia dónde nos queda por llegar.
- CARB continúa trabajando en el tema de los estipendios. CARB está trabajando para encontrar el mecanismo y el proceso para emitir estipendios y luego identificar la fuente de financiamiento. El mecanismo de financiamiento que se está discutiendo es sobre un contrato de oferta competitiva o modificaciones a las subvenciones existentes; esto solo funcionaría si la subvención tiene una cláusula de estipendio existente que se puede modificar.

Comentario: Los distritos de aire en el Valle Imperial y el Área de la Bahía proporcionaron fondos de estipendio de los fondos de implementación. SJVAPCD puede seguir un modelo similar.

Comentario por chat: Bueno, no deberías esperar tanto, todos los demás residentes de otras áreas ya lo están recibiendo. Hemos sido voluntarios durante mucho tiempo y es muy injusto.

Comentario por chat: Estoy de acuerdo. Los estipendios son caja chica en comparación con el presupuesto del Distrito de Aire. Además, se está ahorrando dinero ahora que nuestras reuniones están en línea.

Pregunta por chat: CARB también se comprometió a actualizar el Plan AB 617 CAPP para el otoño de 2020. ¿Cómo puede el Comité Directivo aportar información a ese proceso?

Respuesta por chat: El Proyecto se actualizará con el Asesoramiento de Proyectos, que debe realizarse antes de finales de este año, después de un extenso proceso de revisión de la comunidad.

Concluir/Próximos Pasos

*Hanna Stelmakhovych, Facilitadora, Institute for Local Government (ILG)
Eric Payne, Co-anfitrión de la Comunidad*

Hanna pidió que los miembros del comité ingresen su nombre en la ventana de chat o envíen un correo electrónico al Distrito de Aire para ser un futuro coanfitrión de la comunidad. También continúe sugiriendo temas futuros de la agenda.

Ed Ward levantó la mano de Zoom y se ofreció como coanfitrión de la comunidad.

Eric agradeció al Comité Directivo por participar en la llamada y al personal del Distrito del Aire delante y detrás de la cámara por coordinar la reunión.

Comentario Público:

No hubo comentarios públicos.

Recordatorios:

La próxima reunión es el miércoles 12 de agosto a través de Zoom. Todas las presentaciones, puntos importantes de las reuniones, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio completo de la reunión para revisar los detalles y comentarios completos de la reunión.*

Agenda for South Central Fresno Community Steering Committee Meeting #23

Wednesday, July 8, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/99444523803>

Meeting ID: **994 4452 3803**

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Hanna Stelmakhovych, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Eric Payne, Community Co-host
- 5:45 p.m. Regulatory Development and Discussion**
Discussion of District and CARB regulatory development
Valley Air District Staff
California Air Resources Board (CARB) Staff
- 6:45 p.m. Updates from other Agency Partners**
City of Fresno
Fresno Council of Governments
CARB
- 7:00 p.m. Vegetative Barriers**
Discussion with Tree Fresno about potential for partnership and Community Steering Committee feedback on vegetative barriers in AB 617 Boundary. If the committee is interested, can be discussed in more detail at August meeting.
Tree Fresno
- 7:20 p.m. Wrap Up/Next Steps**
Discussion of September CARB Board Update
Upcoming agenda topic suggestions
Next Meeting: Wednesday, August 12 via Zoom
Hanna Stelmakhovych, Facilitator

Learn more: community.valleyair.org

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #23

Miércoles 8 de julio de 2020 – 5:30 pm a 7:30 pm

Zoom Meeting: <https://zoom.us/j/99444523803>
Meeting ID: **994 4452 3803**

Teleconferencia: 888-431-3632 (Llamada gratuita)
Código de acceso: 7168480

- 5:30 p.m. Bienvenida, Introducciones**
Hanna Stelmakhovych, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Eric Payne, Coanfitrión de la Comunidad
- 5:45 p.m. Desarrollo Regulatorio y Discusión**
Discusión del desarrollo regulatorio del Distrito del Aire y CARB
Personal del Distrito del Aire
Personal de la Junta de Recursos del Aire (CARB)
- 6:45 p.m. Actualizaciones de otras Agencias Asociadas**
Ciudad de Fresno
Consejo de Gobiernos de Fresno
CARB
- 7:00 p.m. Barreras Vegetativas**
Discusión con Tree Fresno sobre el potencial para la asociación y comentarios del Comité Directivo sobre las barreras vegetativas en el límite de AB 617. Si el comité está interesado, se puede discutir en más detalle en la reunión de agosto.
Tree Fresno
- 7:20 p.m. Concluir/Próximos Pasos**
Discusión de la Actualización de la Mesa de CARB de septiembre
Sugerencias de temas para la próxima reunión
Próxima Reunión: 12 de agosto de 2020: Llamada por Zoom
Hanna Stelmakhovych, Facilitadora

District Rule Making Processes & Rule Development Update

South Central Fresno
Community Steering Committee Meeting

July 8, 2020

Ongoing Review of Stationary Source Emissions

- To improve air quality, District continually reviews and updates stationary source regulations
 - Emissions reduced by over 90% since 1980s
 - Approved by CARB/EPA as “Most Stringent Measures”, “Best Available Retrofit Control Technology”, and other standards
 - Enforced through permits, emissions testing, ongoing inspections
- While mobile sources now make up majority of community air pollution and health risk, District committed to ongoing rigorous review of stationary source regulations to further reduce emissions in community
 - New *2018 PM2.5 Plan* for Valley
 - Expedited BARCT review under AB 617
 - AB 2588 Toxics Hot Spots facility risk evaluations

District Rules Reducing Emissions in SC Fresno

- Rule 1070 (Inspections)
- Rule 1080 (Stack Monitoring)
- Rule 1081 (Source Sampling)
- Rule 1160 (Emission Statements)
- Rule 2010 (Permits Required)
- Rule 2040 (Applications)
- Rule 2080 Conditional Approval)
- Rule 2201 (New and Modified Stationary Source Review Rule)
- Rule 2520 (Federally Mandated Operating Permits)
- Rule 2530 (Federally Enforceable Potential to Emit)
- Rule 4001 (New Source Performance Standards)
- Rule 4002 (National Emission Standards for Hazardous Air Pollutants)
- Rule 4101 (Visible Emissions)
- Rule 4102 (Nuisance)
- Rule 4201 (Particulate Matter Concentration)
- Rule 4202 (Incinerator Burning)
- Rule 4301 (Fuel Burning Equipment)
- Rule 4305 (Boilers, Steam Generators, and Process Heaters - Phase 2)
- Rule 4306 (Boilers, Steam Generators, and Process Heaters - Phase 3)
- Rule 4307 (Boilers, Steam Generators, and Process Heaters – 2.0 MMBtu/hr to 5.0 MMBtu/hr)
- Rule 4309 (Dryers, Dehydrators, and Ovens)
- Rule 4320 (Advanced Emission Reduction Options for Boilers, Steam Generators, and Process Heaters Greater Than 5.0 MMBtu/hr)
- Rule 4352 (Solid Fuel Fired Boilers, Steam Generators, and Process Heaters)
- Rule 4354 (Glass Melting Furnaces)
- Rule 4455 (Components at Petroleum Refineries, Gas Liquids Processing Facilities, and Chemical Plants)
- Rule 4601 (Architectural Coatings)
- Rule 4602 (Motor Vehicles Assembly Coatings)
- Rule 4603 (Surface Coating of Metal Products, and Pleasure Crafts)
- Rule 4606 (Wood Products and Flat Wood Paneling Products Coating Operations)
- Rule 4607 (Graphic Arts and Paper, Film, Foil, and Fabric Coatings)
- Rule 4612 (Motor Vehicle and Mobile Equipment Coating Operations)
- Rule 4621 (Gasoline Transfer Into Stationary Storage Containers, Delivery Vessels, and Bulk Plants)
- Rule 4622 (Gasoline Transfer Into Motor Vehicle Fuel Tanks)
- Rule 4623 (Storage of Organic Liquids)
- Rule 4624 (Transfer of Organic Liquid)
- Rule 4642 (Solid Waste Disposal Sites)
- Rule 4653 (Adhesives and Sealants)
- Rule 4661 (Organic Solvents)
- Rule 4684 (Polyester Resin Operations)
- Rule 4692 (Commercial Charbroiling)
- Rule 4701 (Internal Combustion Engines - Phase 1)
- Rule 4702 (Internal Combustion Engines)
- Rule 4703 (Stationary Gas Turbines)
- Rule 4801 (Sulfur Compounds)
- Rule 4901 (Wood Burning Heaters and Wood Burning Furnaces)
- Rule 7011 (Chromium Plating and Chromic Acid Anodizing Facilities)
- Rule 7012 (Hexavalent Chromium – Cooling Towers)
- Rule 8011 (General Requirements)
- Rule 8021 (Contraction, Demolition Excavation, Extraction, and Other Earthmoving Activities)
- Rule 8031 (Bulk Materials)
- Rule 8041 (Carryout and Trackout)
- Rule 8051 (Open Areas)
- Rule 8061 (Paved and Unpaved Roads)
- Rule 8071 (Unpaved Vehicle/Equipment Traffic Areas)

Update on Stationary Source Review for 2020 – 2018 PM2.5 Plan

- New 2018 PM2.5 Plan builds on existing air quality rules to further reduce emissions throughout the Valley
 - Comprehensive mobile and stationary source measures
- District moving forward with public engagement efforts for *2018 PM2.5 Plan* regulatory measures scheduled for consideration in 2020 timeframe
 - Existing rules currently reduce emissions by over 80-90%
 - Evaluating feasibility, cost-effectiveness, and socioeconomic impacts through public engagement process
 - Community input and involvement important

Update on Stationary Source Review for 2020 – 2018 PM2.5 Plan

Rule	Stationary/Area Source Category	Rule Development Status
4901	Wood burning fireplaces and heaters	<i>Completed: Adopted/enforced in 2019/20 winter season</i>
4311	Flares	Regulatory and public engagement process currently in progress – amendments scheduled for consideration in 2020
4306	Boilers, steam generators, and process heaters	
4702	Internal combustion engines	
4692	Under-fired charbroilers at commercial restaurants	

Update on Stationary Source Review for 2020 – AB 617 BARCT Review

- Best Available Retrofit Control Technology (BARCT) is an air emission limit for existing sources and is maximum degree of reduction achievable, taking into account environmental, energy and economic impacts
- AB 617 requires expedited BARCT review and implementation schedule for facilities in CARB's Cap and Trade Program
 - District adopted schedule in December 2018
 - 109 facilities in San Joaquin Valley subject to expedited BARCT review
 - 2 facilities in AB 617 South Fresno community
 - 19 rules already found to meet BARCT
 - 13 rules scheduled for additional review and rulemaking in 2020-2022 timeframe as necessary

Update on Stationary Source Review for 2020 – AB 617 BARCT Review

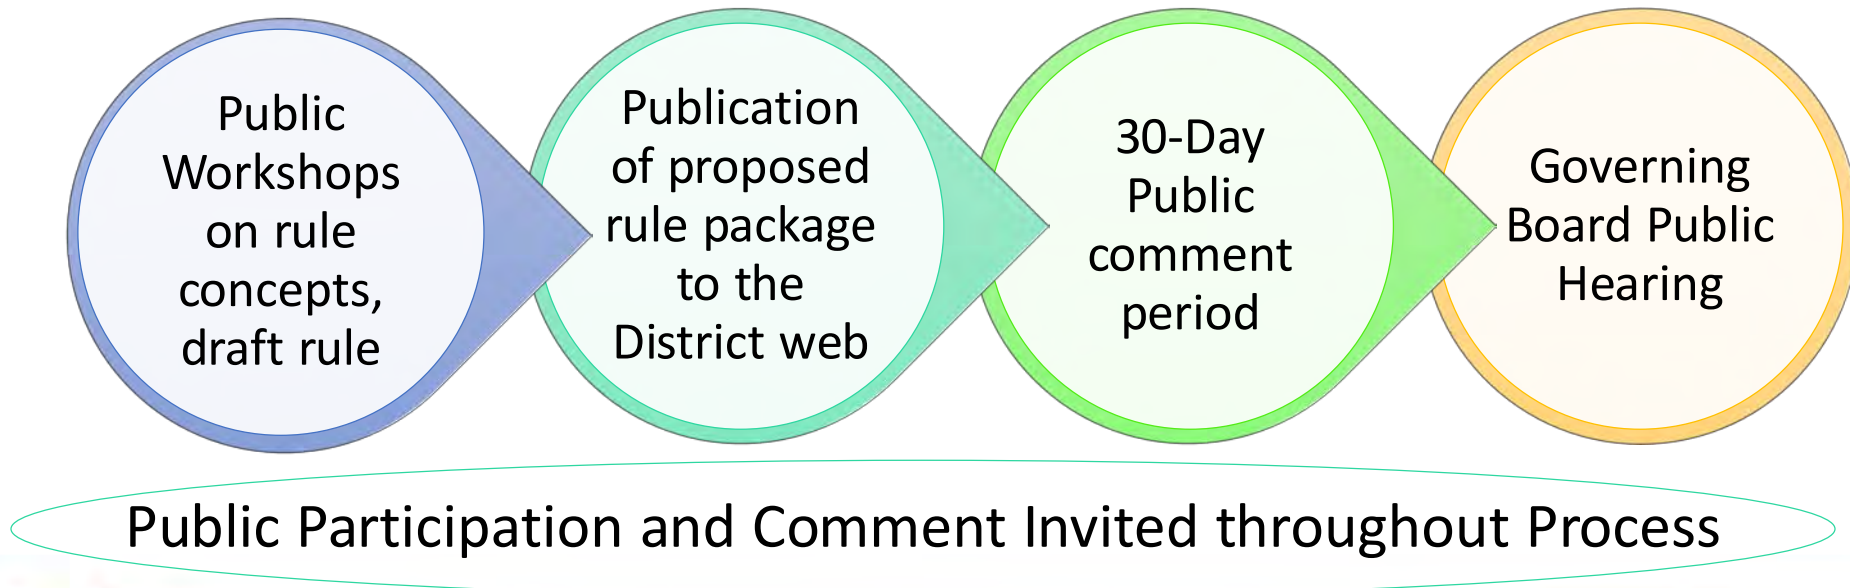

Rule	Stationary Source Category	BARCT Status
4454	<i>Refinery Process Unit Turnaround</i>	<i>Meets BARCT</i>
4641	<i>Cutback, Slow Cure, And Emulsified Asphalt, Paving And Maintenance Operation</i>	<i>Meets BARCT</i>
4104	<i>Reduction of Animal Matter</i>	<i>Meets BARCT</i>
4409	Components at Light Crude Oil Production Facilities, Natural Gas Production Facilities, and Natural Gas Processing Facilities	Rule development public process to evaluate/implement additional BARCT requirements commencing 2020
4455	Components at Petroleum Refineries, Gas Liquids Processing Facilities, and Chemical Plants	
4623	Storage of Organic Liquids	
4624	Transfer of Organic Liquid	

Update on Stationary Source Review for 2020 – AB 617 BARCT Review

Rule	Stationary Source Category	BARCT Determination Status
4702	Internal Combustion Engines (VOC only)	BARCT evaluation in progress and scheduled for 2020 completion
4694	Wine Fermentation and Storage Tanks	BARCT evaluation in progress and scheduled for 2020 completion
4603	Surface Coating of Metal Parts and Products, Plastic Parts and Products, and Pleasure Crafts	BARCT evaluation in progress and scheduled for 2020 completion
4601	Architectural Coatings	BARCT evaluation in progress and scheduled for 2020 completion

District Rule Making Process

- District rules developed through transparent public process, with emphasis placed on providing opportunities for public engagement and feedback through workshops and comment periods
- Updates provided to Governing Board, Citizens Advisory Committee and Environmental Justice Advisory Group
- Evening workshops held, interpretation services available

Update on Facility Risk Assessment under AB 2588

- District's integrated air toxics program fulfills the state AB 2588 California's Air Toxics "Hot Spots" mandates
 - Quantifying and assessing localized health risk
 - Notifying affected residents, and
 - Reducing risk from facilities with high risk caused by air toxic emissions
- AB 2588 has resulted in major reductions in emissions of air toxics from stationary sources in Valley
- District reassessing all Valley facilities under AB 2588
 - Incorporate latest OEHHA risk assessment guidance changes
 - Toxics emission inventory plan and report, source testing
 - Risk assessment
 - Expedited reassessment for facilities located within South Central Fresno

Community Steering Committee Involvement

- Public workshops will be held in upcoming months for rulemaking projects - community engagement is essential to success
 - Next workshops scheduled in July (Zoom format)
- District staff will continue to work with the South Central Fresno Community Steering Committee to:
 - Provide periodic community updates on implementation progress
 - Providing updates on regulatory process and opportunities for providing community input
- In addition to CSC information, notification of upcoming public meetings for these rules and others is available through the District's email notification system at: <http://lists.valleyair.org/mailman/listinfo>

Procesos Reglamentarios del Distrito y Actualización de Desarrollo de Reglas

Centro-Sur Fresno
Reunión del Comité Directivo Comunitario

8 de julio de 2020

Revisión Continua de las Emisiones de Fuentes Estacionarias

- Para mejorar la calidad del aire, el Distrito revisa y actualiza continuamente las regulaciones de fuentes estacionarias
 - Emisiones reducidas más del 90% desde 1980s
 - Aprobado por CARB/EPA como "Medidas Más Estrictas", "Mejor Tecnología de Control de Modificación Disponible" y otros estándares
 - Aplicado a través de permisos, pruebas de emisiones, inspecciones continuas
- Aunque las fuentes móviles ahora constituyen la mayoría de la contaminación del aire y el riesgo para la salud de la comunidad, el Distrito se comprometió a realizar una revisión rigurosa continua de las regulaciones de fuentes estacionarias para reducir aún más las emisiones en la comunidad
 - Nuevo *Plan de PM2.5 2018* para el Valle
 - Revisión acelerada de BARCT bajo AB 617
 - AB 2588 Evaluaciones de Riesgo de Instalaciones de Zonas Conflictivas de Tóxicos

Reglas del Distrito que Reducen Emisiones en SC Fresno

- Rule 1070 (Inspections)
- Rule 1080 (Stack Monitoring)
- Rule 1081 (Source Sampling)
- Rule 1160 (Emission Statements)
- Rule 2010 (Permits Required)
- Rule 2040 (Applications)
- Rule 2080 Conditional Approval)
- Rule 2201 (New and Modified Stationary Source Review Rule)
- Rule 2520 (Federally Mandated Operating Permits)
- Rule 2530 (Federally Enforceable Potential to Emit)
- Rule 4001 (New Source Performance Standards)
- Rule 4002 (National Emission Standards for Hazardous Air Pollutants)
- Rule 4101 (Visible Emissions)
- Rule 4102 (Nuisance)
- Rule 4201 (Particulate Matter Concentration)
- Rule 4202 (Incinerator Burning)
- Rule 4301 (Fuel Burning Equipment)
- Rule 4305 (Boilers, Steam Generators, and Process Heaters - Phase 2)
- Rule 4306 (Boilers, Steam Generators, and Process Heaters - Phase 3)
- Rule 4307 (Boilers, Steam Generators, and Process Heaters – 2.0 MMBtu/hr to 5.0 MMBtu/hr)
- Rule 4309 (Dryers, Dehydrators, and Ovens)
- Rule 4320 (Advanced Emission Reduction Options for Boilers, Steam Generators, and Process Heaters Greater Than 5.0 MMBtu/hr)
- Rule 4352 (Solid Fuel Fired Boilers, Steam Generators, and Process Heaters)
- Rule 4354 (Glass Melting Furnaces)
- Rule 4455 (Components at Petroleum Refineries, Gas Liquids Processing Facilities, and Chemical Plants)
- Rule 4601 (Architectural Coatings)
- Rule 4602 (Motor Vehicles Assembly Coatings)
- Rule 4603 (Surface Coating of Metal Products, and Pleasure Crafts)
- Rule 4606 (Wood Products and Flat Wood Paneling Products Coating Operations)
- Rule 4607 (Graphic Arts and Paper, Film, Foil, and Fabric Coatings)
- Rule 4612 (Motor Vehicle and Mobile Equipment Coating Operations)
- Rule 4621 (Gasoline Transfer Into Stationary Storage Containers, Delivery Vessels, and Bulk Plants)
- Rule 4622 (Gasoline Transfer Into Motor Vehicle Fuel Tanks)
- Rule 4623 (Storage of Organic Liquids)
- Rule 4624 (Transfer of Organic Liquid)
- Rule 4642 (Solid Waste Disposal Sites)
- Rule 4653 (Adhesives and Sealants)
- Rule 4661 (Organic Solvents)
- Rule 4684 (Polyester Resin Operations)
- Rule 4692 (Commercial Charbroiling)
- Rule 4701 (Internal Combustion Engines - Phase 1)
- Rule 4702 (Internal Combustion Engines)
- Rule 4703 (Stationary Gas Turbines)
- Rule 4801 (Sulfur Compounds)
- Rule 4901 (Wood Burning Heaters and Wood Burning Furnaces)
- Rule 7011 (Chromium Plating and Chromic Acid Anodizing Facilities)
- Rule 7012 (Hexavalent Chromium – Cooling Towers)
- Rule 8011 (General Requirements)
- Rule 8021 (Contraction, Demolition Excavation, Extraction, and Other Earthmoving Activities)
- Rule 8031 (Bulk Materials)
- Rule 8041 (Carryout and Trackout)
- Rule 8051 (Open Areas)
- Rule 8061 (Paved and Unpaved Roads)
- Rule 8071 (Unpaved Vehicle/Equipment Traffic Areas)

Actualización Sobre la Revisión de Fuentes Estacionarias para 2020 - Plan PM2.5 de 2018

- El nuevo Plan PM2.5 2018 se basa en las reglas de calidad del aire existentes para reducir aún más las emisiones en todo el Valle
 - Medida integral de fuentes móviles y estacionarias
- El Distrito avanza con los esfuerzos de participación pública para las medidas regulatorias del Plan de PM2.5 2018 programadas para su consideración en 2020
 - Las reglas existentes actualmente reducen las emisiones en más de 80-90%
 - Evaluar la viabilidad, la rentabilidad y los impactos socioeconómicos a través del proceso de participación pública
 - El aporte y la participación de la comunidad son importantes

Actualización Sobre la Revisión de Fuentes Estacionarias para 2020 - Plan PM2.5 de 2018

Regla	Categoría de Fuente Estacionaria/Área	Estado de Desarrollo de Reglas
4901	<i>Chimeneas y estufas de leña</i>	<i>Completado: Adoptado / aplicado en la temporada de invierno 2019/20</i>
4311	Llamaradas	Proceso reglamentario y de participación pública actualmente en curso: enmiendas programadas para su consideración en 2020
4306	Calderas, generadores de vapor, y calentadores de proceso	
4702	Motores de Combustión Interna	
4692	Parrillas a fuego abajo en restaurantes comerciales	

Actualización Sobre la Revisión de Fuente Estacionaria para 2020 - Revisión AB 617 BARCT

- La Mejor Tecnología de Control de Modificación disponible (BARCT, por sus siglas en inglés) es un límite de emisión de aire para las fuentes existentes y es el máximo grado de reducción alcanzable, teniendo en cuenta los impactos ambientales, energéticos y económicos
- El AB 617 requiere una revisión acelerada de BARCT y un cronograma de implementación para las instalaciones del Programa de Cap and Trade de CARB
 - Calendario adoptado por el Distrito en Diciembre de 2018
 - 109 instalaciones en el Valle de San Joaquín sujetas a revisión acelerada de BARCT
 - 2 instalaciones en la Comunidad AB 617 de Centro-Sur Fresno
 - 19 reglas ya cumplen con BARCT
 - 13 reglas programadas para revisión adicional y reglamentación en el período 2020-2022 según sea necesario

Actualización Sobre la Revisión de Fuente Estacionaria para 2020 - Revisión AB 617 BARCT

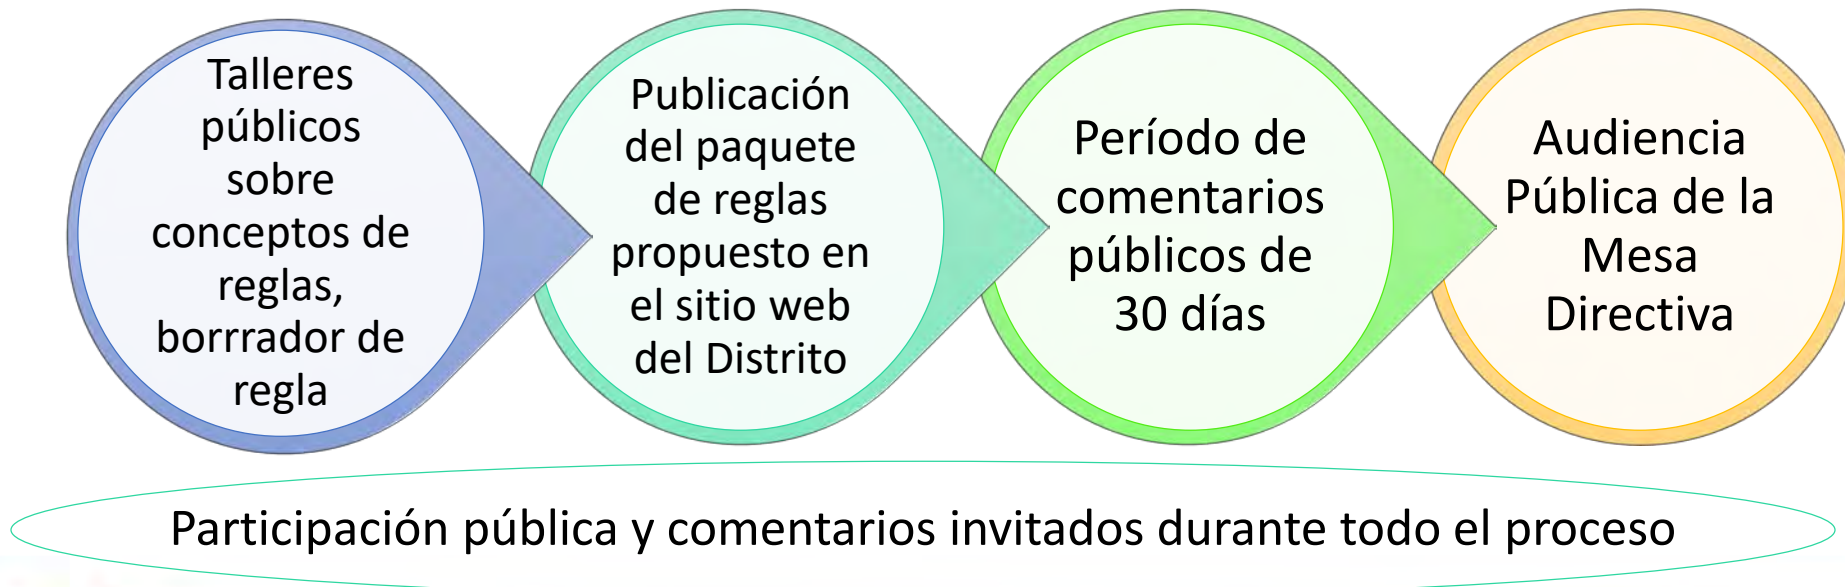

Regla	Categoría de Fuente Estacionaria	Estado de BARCT
4454	Plazo de Entrega Unidad de Proceso de Refinería	<i>Cumple con BARCT</i>
4641	Reducción, curado lento y asfalto emulsionado, pavimentación y operación de mantenimiento	<i>Cumple con BARCT</i>
4104	Reducción de materia de animales	<i>Cumple con BARCT</i>
4409	Componentes en instalaciones de producción de petróleo crudo ligero, instalaciones de producción de gas natural e instalaciones de procesamiento de gas natural	Proceso público de desarrollo de reglas para evaluar/implementar requisitos BARCT adicionales a partir de 2020
4455	Componentes en refinerías de petróleo, instalaciones de procesamiento de líquidos de gas y plantas químicas	
4623	Almacenamiento de líquidos orgánicos	
4624	Transferencia de liquido orgánico	

Actualización Sobre la Revisión de Fuente Estacionaria para 2020 - Revisión AB 617 BARCT

Regla	Categoría de Fuente Estacionaria	Estado de BARCT
4702	Motores de combustión interna (solo VOC)	Evaluación de BARCT en progreso y previsto para ser completado en 2020
4694	Fermentación de vino y tanques de almacenamiento	Proceso público de desarrollo de reglas para evaluar / implementar requisitos BARCT adicionales a partir de 2020
4603	Recubrimiento superficial de piezas y productos metálicos, piezas y productos plásticos, y embarcaciones de recreo	Proceso público de desarrollo de reglas para evaluar / implementar requisitos BARCT adicionales a partir de 2020
4601	Revestimientos arquitectónicos	Proceso público de desarrollo de reglas para evaluar / implementar requisitos BARCT adicionales a partir de 2020

Proceso Reglamentario de Reglas del Distrito

- Reglas del Distrito desarrolladas a través de un proceso público transparente, con énfasis en proporcionar oportunidades para la participación pública y comentarios a través de talleres y períodos de comentarios
- Actualizaciones proporcionadas mensualmente al Citizens Advisory Committee y al Environmental Justice Advisory Group
- Talleres en las tardes, servicios de interpretación disponibles

Actualización Sobre la Evaluación de Riesgos de Instalaciones Bajo AB 2588

- El programa integrado de tóxicos del aire del Distrito cumple con los Mandatos de las "Zonas Conflictivas" de los Tóxicos del Aire AB 2588 de California
 - Cuantificar y evaluar el riesgo de salud localizado
 - Notificar a los residentes afectados, y
 - Reducción del riesgo de las instalaciones con alto riesgo causado por emisiones tóxicas al aire
- AB 2588 ha resultado en reducciones importantes en las emisiones de tóxicos del aire de fuentes estacionarias en el Valle
- El Distrito esta reevaluando todas las instalaciones del Valle bajo AB 2588
 - Incorporar los últimos cambios de orientación de evaluación de riesgos de OEHHA
 - Reporte y plan de inventario de emisiones tóxicas, pruebas de origen
 - Evaluación de riesgos
 - Reevaluación acelerada de las instalaciones ubicadas dentro de Centro-Sur Fresno

Participación del Comité Directivo Comunitario

- Se realizarán talleres públicos en los próximos meses para proyectos de reglamentación: la participación de la comunidad es esencial para el éxito
 - Próximos talleres programados en julio (Formato de Zoom)
- El personal del Distrito continuará trabajando con el Comité Directivo de la Comunidad de Centro-Sur Fresno para:
 - Proporcionar actualizaciones periódicas de la comunidad sobre el progreso de la implementación
 - Proporcionar actualizaciones sobre el proceso regulatorio y oportunidades para proporcionar aportes de la comunidad
- Además de la información del Comité Directivo de la Comunidad, la notificación de las próximas reuniones públicas para estas reglas y otras está disponible a través del sistema de notificación por correo electrónico del Distrito en:

<http://lists.valleyair.org/mailman/listinfo>

South Fresno CSC

CARB Updates

JULY 2020

CARB Statewide Measures Update

CARB Regulation	Outreach Events	Non-Regulatory Documents Released	Regulation Type	Latest Activities
Advanced Clean Trucks	13	4	Emissions Reduction	Approved at final Board hearing 6/2020
Transport Refrigeration Unit Regulation	8	1	Emissions Reduction	Public comment closed 4/2020. Expected adoption in 2021
Heavy-Duty Inspection & Maintenance	6		Compliance	Public workshop in Sacramento 2/2020
Development of Regulation to Reduce Emissions from Locomotives and Railyards	2	1	Emissions Reduction	Workshops in South Coast fall 2019. Locomotive inventory is being updated. Webinar planned for fall 2020. Board presentation fall 2021
Small Off-Road Engines	1	1	Emissions Reduction	Public workshop 6/2020
Advanced Clean Fleet	1		Emissions Reduction	Public workshop in Diamond Bar 2/2020
Cargo Handling Equipment Regulation to Transition to Zero-Emissions		1	Emissions Reduction	Expected Board consideration in 2022
Chrome Plating Control Measure Amendments		1	Compliance	Survey completed. Working group to start fall 2020. ATCM update at 9/2020 CARB Board hearing
Real Emissions Assessment Logging System		1	Administrative Update	Adopted 11/2018. Implementation begins with model year 2022 heavy duty engines
Composite Wood Products Control Measure Amendments			Emissions Reduction	Webinar on 3/2020. Update to ATCM at 9/2020 CARB Board meeting. Flooring study for fall 2020
Commercial Cooking Suggested Control Measure			Compliance	Discussions planned for 2020
Short-Lived Climate Pollutant Reduction Strategy - Oil and Gas Systems			Compliance	Final strategy released 2017. Currently covered by Cap and Trade program
Advanced Clean Cars 2			Emissions Reduction	Workshop and informational item on 5/2019. Workshops planned for fall 2020. Presentation to board late 2021
Catalytic Converter Theft Reduction			Compliance	Staff discussions planned for potential new regulation

Meeting Highlights*
AB 617 South Central Fresno Community Steering Committee Meeting #22
June 8, 2020, 5:30 pm - 7:30 pm
Zoom Virtual Meeting

Action items/reminders for the South Central Fresno Community Steering Committee (Committee):

- Continue to inform the San Joaquin Valley Air Pollution Control District (Valley Air District) about:
 - Locations where the Committee has observed residential burning and illegal idling;
 - Locations where the Valley Air District should focus future enforcement efforts; and
 - Construction/earthmoving sites or areas of concern.
- To file an air pollution related complaint, contact:
 - The Valley Air District: Call 1-800-870-1037; go online: <https://www.valleyair.org/complaints>
- The air monitoring updates and air quality data (including historical data) are available at:
 - Valley Air District website: <http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>
 - CARB website: <https://aqview.arb.ca.gov/data.html>
- Reply to the Valley Air District's email if interested in volunteering on the Truck Rerouting Subcommittee and/or the School Buses/Air Filtration Subcommittee.
- Offer the Valley Air District any suggestions for ways to move forward with the Orange Center School site, given the recent school board decision not to use the school as a monitoring site.

Action items/reminders for the Valley Air District:

- Circle back with the Committee about the reporting timeframe for the pilot training program.
- Verify that the enforcement locations of the State's heavy-duty vehicle anti-idling regulation include illegal idling locations identified by the Committee during the development of the Community Emission Reduction Program (CERP).
- Consider placing an air pollution monitoring van around the Roeding Park area.
- Follow up with the Committee members about opportunities to volunteer on two subcommittees: Truck Rerouting Subcommittee and Electric School Buses/Air Filtration.
- Share the summary of the toxic air contaminant analysis with the Committee and highlight potential data concerns.
- Identify additional opportunities for Valley Air District staff and interpreters to practice Zoom and/or the Language Line with the Spanish speaking Committee members to resolve technical difficulties and troubleshoot issues before the next Committee meeting.

- For any future presentations that include monitoring data, differentiate between data gathered pre, during, and post-COVID-19.

Welcome and Introductions

Christal Love Lazard, Facilitator, Institute for Local Government (ILG)

Hanna Stelmakhovych, Facilitator, ILG

Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District

Kimberly McCoy, Community Co-host

Christal welcomed the Committee members and the public and introduced the ILG team: Hanna Stelmakhovych, facilitator; Erica Manuel, executive director and co-facilitator; and Kim Danko, co-facilitator. Hanna provided Zoom and translation instructions, reminded participants about the meeting being recorded and live-streamed via social media, and went over the agenda items. Christal conducted the roll call.

Ryan welcomed participants and thanked Kimberly McCoy for working with the Valley Air District to prepare the agenda.

Kimberly welcomed everyone, expressed gratitude for their attendance and articulated her hope that the meeting agenda reflected comments received by the Committee and covered topics that were important to the Committee.

Enforcement Measures Update

Jake Felton, Director of Compliance, Valley Air District

Justin Shields, California Air Resources Board (CARB)

The Valley Air District and CARB staff led the discussion about the implementation of CERP enforcement measures and the process of filing an environmental complaint. Presentations highlights:

- The Valley Air District performs a full suite of enforcement and compliance assurance/assistance activities.
- In addition to existing inspections, surveillance and complaint responses, the Valley Air District conducted targeted surveillance and inspection within the South Central Fresno community to limit the potential for localized air quality impacts:
 - Wood burning fireplace and wood burning heaters curtailments – at least four hours of surveillance on each declared curtailment day for the next five winter seasons;
 - Illegal open burning of residential waste – at least once per quarter for the next five years;
 - Enhanced inspection frequency of permitted sources – facilities that have received an emission violation over the past three years will be inspected at least twice per calendar year for the next five years;
 - Fugitive dust from construction/earthmoving activities – at least one targeted enforcement effort during the second and the third quarter for the next five years; and
 - Enhanced enforcement of the State's heavy-duty vehicle anti-idling regulation – at least once per quarter for the next five years.

- The Valley Air District developed a pilot training program to train gas station operators on conducting more thorough self-inspections of their vapor recovery systems. While the training program has been developed, the COVID-19 pandemic has delayed providing the training.
- When reporting an air pollution complaint, residents should be as descriptive as possible, including all pertinent details about what, where, when, who, and why.
- To report a complaint, contact:
 - The Valley Air District: Call 1-800-870-1037 or go online: <https://www.valleyair.org/complaints>
 - CARB/CalEPA: Call 1-800-END-SMOG or go online: <https://calepa.ca.gov/enforcement/complaints/>
- Contact the Valley Air District if the complaint requires an immediate response.

Question: How and how often will the Valley Air District share data from the GDF pilot program with the Committee?

Answer: The Valley Air District will keep track of the training locations. The reporting timeframe is TBD.

Question: What is the post-training follow up with the gas stations on their self-inspection efforts?

Answer: The Valley Air District will continue to conduct regular inspections of all gas stations, which includes review of records of equipment inspection.

Question: On the Fireplace and Open Burning Violations map from the slides, what are the household demographics? How do the household demographics determine the marketing of replacing old fireplaces?

Answer: We do not have this information at the moment.

Comment: On the Fireplace and Open Burning Violations map from the slides, please label the icons and include dates.

Question: Are trainings and self-inspections part of 'self-certification at the local level' process?

Answer: The self-inspections are additional steps to the existing regulatory testing already mandated by the State and the Valley Air District.

Question: In the past, Committee members gave several recommendations on where to pinpoint illegal idling enforcement measures. Has the Valley Air District incorporated this information?

Answer: Yes. In the breakout sessions, please let us know where these locations are so that we can verify these sites in the upcoming investigation next quarter and include them in the ongoing investigations in the next five years.

Chat Question: Does CARB regulate forklifts? What if forklifts operate outside of a facility (on the road) and cause a lot of traffic? Who regulates that?

Chat Answer: Forklifts are mobile sources and may be subject to one of several CARB regulations (generally the large spark-ignition regulation).

Chat Answer: Here is the Large Spark Engine link for forklifts: <https://ww2.arb.ca.gov/our-work/programs/large-spark-ignition-lsi-engine-fleet-requirements-regulation/about>. Generally, CARB regulates forklifts through a regulation called the Off-Road Large Spark Ignition Engine Fleet Requirements. If there is an area where you see a lot of forklifts operating, please let us know. If we

do not regulate it, we can figure out who to send it to.

Chat Question: Can CARB fine a private car that is idling?

Chat Answer: Gas vehicles have no idling restrictions.

Breakout Groups

Participants were moved into five breakout groups where they discussed how the Valley Air District can best implement the enforcement measures and explored answers to the following questions:

- Are there particular locations where the Committee has observed illegal idling and residential burning?
- Where should the Valley Air District focus future enforcement efforts?
- Are illegal idling and residential burning more prevalent at particular times of day?

Report out:

- Group 1 discussed the need to have more community education and outreach about legal vs. illegal burning as well as types of equipment that can be reported as idling equipment.
- Group 2 focused on the need to differentiate between pre- and post- COVID-19 enforcement data. The group also discussed the Roeding Park area as a high air pollution area (especially the off-ramp on Highway 99 and Belmont Ave). Other comments included a suggestion to look at the truck counts and enforcing idling rules around Producers Dairy. In the area west of the railroad track and Belmont Ave, heading towards the cemetery, there are a lot of industry-related activities as well as possible pollution sources related to the homeless community, such as fires.
- Group 3 discussed causes of increased big rig idling in Southwest Fresno, including
 - An increased number of trucks waiting to go to the distribution centers;
 - Local truckers coming home from their breaks from the long hauls and
 - Increased idling during hot summer months to maintain cool cabin temperature.

The group also talked about the need for more water tanks at the construction sites as well as the need for more community education about old chimney replacement. During fall months, there is a need to better promote burning day notices and educational information about illegal burning because this is when the community notices the highest instances of illegal burning and agricultural burning.

- Group 4 discussed previous enforcement measures and asked whether there is a subsequent follow up with already filed claims. The group talked about idling locations and the need to educate residents about the process of recognizing and reporting environmental violations to the government.
- Group 5 talked about the need to keep monitoring the Orange Elementary School District, providing more idling education to the community, and paying close attention to Southwest Fresno, particularly around the new college construction site.

Question: Can the community follow up with CARB and the Valley Air District about the status of an environmental complaint?

Answer: CARB follows up with individuals who made complaints before heading to the site. Each complaint has a tracking number for the complainant to follow up.

Chat Comment: This is the link to CARB's Truck Stop website that provides information and resources (including factsheets) on our diesel truck regulations:

<https://ww3.arb.ca.gov/msprog/truckstop/truckstop.htm>

Chat Comment: Trucks and buses with clean idle certified stickers can idle for more than 5 minutes in unrestricted areas, but are still *not* allowed to idle in restricted areas such as schools, hospitals, and senior centers.

Chat Comment: Here is some information on alternative technologies to ensure cab comfort in trucks during the hot weather: <https://ww3.arb.ca.gov/msprog/cabcomfort/cabcomfort.htm>

Chat Comment: Trains do not have a California idling limit.

Chat Comment: Here is the emission reduction concept page for Trains/Railyards:

<https://ww2.arb.ca.gov/our-work/programs/reducing-rail-emissions-california/concepts-reduce-emissions-locomotives-and>

Chat Comment: The drayage/railyard truck rule directed at heavy-duty trucks going in and out of the facility: <https://ww2.arb.ca.gov/our-work/programs/drayage-trucks-seaports-railyards>

Chat Comment: <https://ww2.arb.ca.gov/railyard-compliance>

Incentives Update

Brian Dodds, Program Manager, Valley Air District

Brian shared an update on CERP incentive measures and the Community Air Protection funding guidelines.

- The incentive measures have to meet CARB approved guidelines (new and existing) that fund community air protection projects.
- Most of the CERP measures will require approval from CARB before the Valley Air District can start implementing them. Meanwhile, the Valley Air District continues working on other priorities identified by the Committee, including truck rerouting measure. The school bus replacement and the air filtration measures do not have to go through CARB approval, but there are several implementation challenges that the Valley Air District and the Committee need to work through.
- Brian asked for volunteers for the school bus replacement and air filtration measures subcommittees. Several Committee members raised their hands, including Kimberly McCoy, Ivanka Sanders, Tim Tyner, Kevin Hamilton, Nayamin Martinez, Gregory Barfield, Ed Ward, Eric Payne, Oralia Maceda, Lisa Flores, Lupe Perez, and Larry Taylor.

Comment: Please check with Committee members who were not able to attend/fully participate to see if they would like to be on the subcommittee.

Question: How could the State budget revision impact the implementation of the incentive strategies?

Answer: The Valley Air District has sufficient resources to keep moving forward this fiscal year. The Valley Air District will inform the Committee if there is a budget or resource issue in the future.

Air Monitoring Update

Brad Dawson, Supervising Air Quality Instrument Specialist, Valley Air District

Brad provided an update on the Valley Air District's air monitoring work.

- The Valley Air District deployed two more real-time PM 2.5 air monitors and broke ground at Malaga Elementary School.
- The Valley Air District is still working on the Edison High School and Madison Elementary School sites.
- The Orange Center School Board voted not to place the equipment at their site. The Valley Air District staff hope that the Committee can provide suggestions on how to move forward with the Orange Center School site.
- The Valley Air District website will list newly updated air monitoring sites as well as quarterly air monitoring reports. Community can access additional information as follows:
 - Air monitoring updates and data on the Valley Air District website: <http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>
 - Historical air quality data on CARB website: <https://aqview.arb.ca.gov/data.html>

Chat Comment: CARB is working on updating the web interface, but if you want to locate data from traditional regulatory monitors, it can be found here: <https://www.arb.ca.gov/aqmis2/aqdselect.php>. Feel free to email questions to brian.moore@arb.ca.gov.

Question: What is the status of the toxic air contaminant analysis? Please share the report and flag relevant issues that the community should be aware of.

Answer: The Valley Air District gathers samples of 68 different compounds. The data will be posted on the website. At the moment, there are no red flags.

Question: Please clarify “new air monitoring sites.”

Answer: The Heaton Elementary and Yosemite Middle School sites are live. The Valley Air District electricians broke ground at the Malaga Elementary School but the installation is not yet complete.

Question: Could the Valley Air District get on the agenda for the Orange Center School Board meeting and perhaps invite some of the Committee members to attend and co-present?

Answer: The Valley Air District staff attended the school board meeting in September 2019 and met independently with parents. The initial progress included mapping out the location and discussing electrical needs. The Valley Air District staff continues to work with the school and is mindful of the decision its Board has made.

Question: Can the Community Air Monitoring report account for potentially skewed outcomes by the Governor’s shelter-in-place order? Could you add clarification to the report stating that data was collected during COVID-19 months?

Answer: It is noted. Thank you.

Comment: The process of electrifying the City of Fresno's bus fleet is challenging. Let the Committee members know how you would like us to help the Valley Air District with this process.

Wrap up/Next Steps

Hanna Stelmakhovich, Facilitator, ILG

Hanna asked Committee members to submit July and August agenda topics via the chatbox, by emailing the Valley Air District, or by replying to the June meeting follow up email.

Christal Love Lazard, one of ILG's facilitators, announced that she would be joining CARB's Environmental Justice Unit but that ILG will continue to facilitate these discussions on behalf of the Valley Air District and the community.

Chat Question/Comment from the Valley Air District Staff: Are there any volunteers for the Truck Rerouting Subcommittee? Those who are interested in the Truck Rerouting Subcommittee, type in the chatbox or email AB617@valleyair.org

Chat Answer: Lupe Perez, Eric Payne, Lisa Flores, Ivanka Sanders, and Kimberly McCoy expressed interest in serving on the subcommittee.

Comment: A committee member requested that a future agenda item provide an update on Committee stipends.

Answer: CARB is working on the general stipend guidance for all AB 617 committees and the Air District or CARB will provide an update as soon as one is available.

Hanna asked for volunteers to co-host the next meeting. Ed Ward and Eric Payne volunteered to be future community co-hosts.

Comment: Please ensure that Spanish speaking participants can fully participate without technical glitches.

Answer: The Valley Air District looks forward to resolving technical difficulties, including setting up an additional practice meeting with Spanish speaking Committee members to troubleshoot any issues.

Question: Once we transition back to in-person meetings, will Zoom continue to be an option for those who cannot attend/not comfortable attending?

Answer: Safety is the Valley Air District's priority. The Valley Air District staff will explore all possible participation options for this relatively large group.

Next Meeting: Wednesday, July 8 via Zoom

All the presentations, meeting highlights, transcripts and the Zoom meeting recording will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Puntos Importantes de la Reunión*
Comité Directivo de la Comunidad AB 617 de Centro-Sur Fresno Reunión #22
8 de junio de 2020, 5:30 pm - 7:30 pm
Reunión Virtual a través de Zoom

Puntos de Acción/recordatorios para el Comité Directivo de la Comunidad de Centro-Sur Fresno (Comité):

- Continuar informando al Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito del Aire del Valle) sobre:
 - Lugares donde el Comité ha observado incendios residenciales y el dejar el motor encendido ilegal;
 - Lugares en los que el Distrito del Aire del Valle debería concentrar los esfuerzos futuros de cumplimiento; y
 - Sitios de construcción/movimiento de tierras o áreas de interés.

- Para presentar una queja relacionada con la contaminación del aire, comuníquese con:
 - El Distrito del Aire del Valle: Llame 1-800-870-1037; o en línea: <https://www.valleyair.org/complaints>

- Las actualizaciones de monitoreo del aire y los datos de calidad del aire (incluyendo los datos históricos) están disponibles en:
 - Sitio web del Distrito del Aire del Valle: <http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>
 - Sitio web de CARB: <https://aqview.arb.ca.gov/data.html>

- Responda al correo electrónico del Distrito del Aire del Valle si está interesado en ser voluntario en el Subcomité de Desviación de Ruta de Camiones y/o en el Subcomité de Autobuses Escolares/Filtración de Aire.

- Ofrecer al Distrito del Aire del Valle cualquier sugerencia sobre formas de avanzar con el sitio de la escuela Orange Center, dada la reciente decisión de la Mesa Directiva de no usar la escuela como un sitio de monitoreo.

Puntos de acción/recordatorios para el Distrito del Aire del Valle:

- Comuníquese con el Comité sobre el plazo de informes para el programa piloto de capacitación.

- Verificar que las ubicaciones de cumplimiento de la regulación Estatal contra dejar el motor encendido de vehículos de servicio pesado incluyen lugares ilegales identificados por el Comité durante el desarrollo del Programa de Reducción de Emisiones Comunitarias (CERP)

- Considere colocar una camioneta de monitoreo de contaminación del aire alrededor del área de Roeding Park.

- Dar seguimiento a los miembros del Comité sobre las oportunidades de ser voluntario en dos subcomités: Subcomité de Desviación de Ruta de Camiones y Autobuses Escolares Eléctricos/Filtración de Aire.

- Comparta el resumen del análisis de contaminantes tóxicos del aire con el Comité y destaque las posibles preocupaciones sobre los datos.
- Identificar oportunidades adicionales para que el personal y los intérpretes del Distrito del Aire del Valle practique Zoom y/o Language Line con los miembros del Comité de habla hispana para resolver dificultades técnicas y solucionar problemas antes de la próxima reunión del Comité.
- Para presentaciones futuras que incluyan datos de monitoreo, diferencia entre los datos recopilados antes, durante y después de COVID-19.

Bienvenida e Introducciones

Christal Love Lazard, Facilitadora, Institute for Local Government (ILG)

Hanna Stelmakhovych, Facilitadora, ILG

Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle

Kimberly McCoy, Coanfitrión de la Comunidad

Christal dio la bienvenida a los miembros del Comité y al público y presentó al equipo de ILG: Hanna Stelmakhovych, facilitadora; Erica Manuel, directora ejecutiva y co-facilitadora; y Kim Danko, co-facilitador. Hanna proporcionó las instrucciones de traducción y Zoom, recordó a los participantes sobre la grabación y transmisión en vivo de la reunión a través de las redes sociales, y repasó los puntos de la agenda. Christal pasó lista.

Ryan dio la bienvenida a los participantes y agradeció a Kimberly McCoy por trabajar con el Distrito del Aire del Valle para preparar la agenda.

Kimberly dio la bienvenida a todos, expresó su gratitud por su asistencia y expresó su esperanza de que la agenda de la reunión reflejara los comentarios recibidos por el Comité y cubriera temas que eran importantes para el Comité.

Actualización de las Medidas de Cumplimiento

Jake Felton, Director de Cumplimiento, Distrito del Aire del Valle

Justin Shields, Junta de Recursos del Aire de California (CARB, por sus siglas en inglés)

El personal del Distrito del Aire del Valle y CARB dirigió la discusión sobre la implementación de las medidas de cumplimiento del CERP y el proceso de presentación de una queja ambiental. Puntos importantes de las presentaciones:

- El Distrito del Aire del Valle lleva a cabo un conjunto completo de actividades de asistencia y garantía de cumplimiento.
- Además de las inspecciones existentes, la vigilancia y las respuestas a las quejas, el Distrito del Aire del Valle llevó a cabo una vigilancia e inspecciones específicas dentro de la comunidad de Centro-Sur Fresno para limitar el potencial de impactos localizados en la calidad del aire:
 - En días con restricciones del uso de chimeneas de leña y de los calentadores de leña – al menos cuatro horas de vigilancia en cada día declarado de restricción durante las próximas cinco temporadas de invierno;
 - Quema ilegal al aire libre de desechos residenciales – al menos una vez por trimestre durante los próximos cinco años;

- Mayor frecuencia de inspección de las fuentes permitidas – las instalaciones que hayan recibido una infracción de emisiones durante los últimos tres años serán inspeccionadas al menos dos veces por año calendario durante los próximos cinco años;
 - Polvo fugitivo de las actividades de construcción/movimiento de tierras – al menos un esfuerzo de cumplimiento específico durante el segundo y tercer trimestre durante los próximos cinco años; y
 - Mejora del cumplimiento de la regulación estatal contra dejar el motor encendido de vehículos de servicio pesado – al menos una vez por trimestre durante los próximos cinco años.
- El Distrito del Aire del Valle desarrolló un programa piloto de capacitación para capacitar a los operadores de estaciones de servicio en la realización de autoinspecciones más exhaustivas de sus sistemas de recuperación de vapor. Aunque ya está desarrollado el programa de capacitación, la pandemia de COVID-19 ha retrasado la capacitación.
 - Al reportar una queja por contaminación del aire, los residentes deben ser lo más descriptivos posible, incluyendo todos los detalles pertinentes sobre qué, dónde, cuándo, quién y por qué.
 - Para reportar una queja, comuníquese al:
 - Distrito del Aire del Valle: Llame al 1-800-870-1037 o en línea: <https://www.valleyair.org/complaints>
 - CARB/CalEPA: Llame al 1-800-END-SMOG o en línea: <https://calepa.ca.gov/enforcement/complaints/>
 - Comuníquese con el Distrito del Aire del Valle si la queja requiere una respuesta inmediata.

Pregunta: ¿Cómo y con qué frecuencia el Distrito del Aire del Valle compartirá datos del programa piloto de GDF con el Comité?

Respuesta: El Distrito del Aire del Valle hará un seguimiento de los lugares de entrenamiento. El plazo de presentación de informes es por determinar.

Pregunta: ¿Cuál es el seguimiento posterior a la capacitación con las estaciones de servicio en sus esfuerzos de autoinspección?

Respuesta: El Distrito del Aire del Valle continuará realizando inspecciones regulares de todas las estaciones de servicio, lo que incluye la revisión de los registros de inspección de equipos.

Pregunta: En el mapa de Violaciones de Chimeneas y Quema al Aire Libre de la presentación, ¿cuáles son los datos demográficos de los hogares? ¿Cómo determinan los datos demográficos del hogar el marketing del remplazo de chimeneas antiguas?

Respuesta: No tenemos esta información por el momento.

Comentario: En el mapa de Violaciones de Chimeneas y Quema al Aire Libre de la presentación, etiquete los íconos e incluya las fechas.

Pregunta: ¿Son las capacitaciones y las autoinspecciones parte del proceso de ‘autocertificación a nivel local’?

Respuesta: Las autoinspecciones son pasos adicionales a las pruebas reglamentarias existentes ya exigidas por el Estado y el Distrito del Aire del Valle.

Pregunta: En el pasado, los miembros del Comité dieron varias recomendaciones sobre dónde identificar las medidas de ejecución ilegales en dejar el motor encendido. ¿El Distrito del Aire del Valle ha incorporado esta información?

Respuesta: Sí. En las sesiones grupales, háganos saber dónde están estas ubicaciones para que podamos verificar estos sitios en la próxima investigación del próximo trimestre e incluirlos en las investigaciones en curso en los próximos cinco años.

Pregunta por Chat: ¿CARB regula los montacargas? ¿Qué pasa si los montacargas operan fuera de una instalación (en la carretera) y causan mucho tráfico? ¿Quién regula eso?

Respuesta por Chat: Los montacargas son fuentes móviles y pueden estar sujetos a una de varias regulaciones de CARB (generalmente la regulación de encendido por chispa grande).

Respuesta por Chat: Aquí está el enlace Large Spark Engine para montacargas:

<https://ww2.arb.ca.gov/our-work/programs/large-spark-ignition-lsi-engine-fleet-requirements-regulation/about>. Generalmente, CARB regula los montacargas a través de un reglamento llamado Requisitos para Flotas de Ignición de Chispa Grande de Todo Terreno. Si hay un área donde ve muchos montacargas en funcionamiento, háganoslo saber. Si no lo regulamos, podemos averiguar a quién enviarlo.

Pregunta por Chat: ¿Puede CARB multar a un automóvil privado que deja el motor encendido?

Respuesta por Chat: Los vehículos de gasolina no tienen restricciones de dejar el motor encendido.

Discusiones en Grupos

Los participantes se dividieron en cinco grupos de trabajo en los que analizaron cómo el Distrito del Aire del Valle puede implementar mejor las medidas de cumplimiento y exploraron las respuestas a las siguientes preguntas:

- ¿Hay lugares en particular donde el Comité ha observado quemas residenciales o áreas donde dejan el motor encendido ilegales?
- ¿Dónde debería enfocar el Distrito del Aire del Valle los esfuerzos futuros de cumplimiento?
- ¿Son más frecuentes las quemas residenciales y el dejar el motor encendido ilegal en determinados momentos del día?

Informe:

- El Grupo 1 discutió la necesidad de tener más educación y alcance comunitaria sobre la quema legal vs. ilegal, así como sobre los tipos de equipos que pueden reportarse como equipos inactivos (dejar el motor encendido).
- El Grupo 2 se centró en la necesidad de diferenciar entre los datos anteriores y posteriores a COVID-19 sobre el cumplimiento. El grupo también discutió el área de Roeding Park como un área de alta contaminación del aire (especialmente la rampa de salida en la autopista 99 y Belmont Ave). Otros comentarios incluyeron una sugerencia para observar el conteo de camiones y hacer cumplir las reglas de inactividad (dejar los motores encendidos) en Producers Dairy. En el área al oeste de la vía del tren y Belmont Ave, en dirección al cementerio, hay muchas actividades relacionadas con la industria, así como posibles fuentes de contaminación relacionadas con la comunidad de personas sin hogar, como incendios.

- El Grupo 3 discutió las causas del aumento de dejar el motor encendido de camiones de servicio pesado en el suroeste de Fresno, incluyendo
 - Un mayor número de camiones esperando para ir a los centros de distribución;
 - Camioneros locales que regresan a casa después de sus descansos de los trayectos largos y
 - Un aumento en dejar el motor encendido durante los calurosos meses de verano para mantener la temperatura fresca de la cabina.

El grupo también habló sobre la necesidad de más tanques de agua en los sitios de construcción, así como la necesidad de más educación comunitaria sobre el reemplazo de chimeneas antiguas. Durante los meses de otoño, existe la necesidad de promover mejor los avisos de los días de quema e información educativa sobre las quemas ilegales porque es cuando la comunidad nota los casos más altos de quema ilegal y agrícola.

- El Grupo 4 discutió las medidas de cumplimiento anteriores y preguntó si hay un seguimiento posterior con las reclamaciones ya presentadas. El grupo habló sobre los lugares inactivos y la necesidad de educar a los residentes sobre el proceso de reconocimiento y denuncia de violaciones ambientales al gobierno.
- El Grupo 5 habló sobre la necesidad de seguir monitoreando el Distrito Escolar de Orange Elementary, brindando más educación sobre dejar el motor encendido a la comunidad y prestando mucha atención al suroeste de Fresno, particularmente alrededor del sitio de construcción de la nueva universidad.

Pregunta: ¿Puede la comunidad hacer un seguimiento con CARB y el Distrito del Aire del Valle sobre el estado de una queja ambiental?

Respuesta: CARB realiza un seguimiento a las personas que presentaron quejas antes de dirigirse al sitio. Cada queja tiene un número de seguimiento para que el denunciante dé seguimiento.

Comentario por Chat: Este es el enlace al sitio web del Truck Stop de CARB que proporciona información y recursos (incluyendo hojas de datos) sobre nuestras regulaciones de camiones diésel: <https://ww3.arb.ca.gov/msprog/truckstop/truckstop.htm>

Comentario por Chat: Los camiones y autobuses con calcomanías certificadas de inactividad limpias pueden dejar el motor encendido durante más de 5 minutos en áreas no restringidas, pero aún *no* se les permite estar con el motor encendido en áreas restringidas como escuelas, hospitales y centros para personas mayores.

Comentario por Chat: Aquí hay información sobre tecnologías alternativas para garantizar la comodidad de la cabina de los camiones durante el clima cálido:

<https://ww3.arb.ca.gov/msprog/cabcomfort/cabcomfort.htm>

Comentario por Chat: Los trenes no tienen límite de inactividad en California.

Comentario por Chat: Aquí está la página del concepto de reducción de emisiones para trenes/ferrocarriles: <https://ww2.arb.ca.gov/our-work/programs/reducing-rail-emissions-california/concepts-reduce-emissions-locomotives-and>

Comentario por Chat: La regla de los camiones de carretaje/ferrocarril dirigida a los camiones de servicio pesado que entran y salen de las instalaciones: <https://ww2.arb.ca.gov/our-work/programs/drayage-trucks-seaports-railyards>

Comentario por Chat: <https://ww2.arb.ca.gov/railyard-compliance>

Actualización de Incentivos

Brian Dodds, Gerente del Programa, Distrito del Aire del Valle

Brian compartió una actualización sobre las medidas de incentivo del CERP y las pautas de financiación de Protección del Aire Comunitario.

- Las medidas de incentivo deben cumplir con las pautas aprobadas por CARB (nuevas y existentes) que financian proyectos comunitarios de protección del aire.
- La mayoría de las medidas del CERP requerirán la aprobación de CARB antes de que el Distrito del Aire del Valle pueda comenzar a implementarlas. Mientras tanto, el Distrito del Aire del Valle continúa trabajando en otras prioridades identificadas por el Comité, incluyendo la medida de desviación de camiones. El reemplazo de autobuses escolares y las medidas de filtración de aire no tienen que pasar por la aprobación de CARB, pero hay varios desafíos de implementación que el Distrito del Aire del Valle y el Comité deben superar.
- Brian pidió por voluntarios para los subcomités de las medidas de filtración de aire y reemplazo de autobuses escolares. Varios miembros del Comité levantaron la mano, incluyendo Kimberly McCoy, Ivanka Sanders, Tim Tyner, Kevin Hamilton, Nayamin Martinez, Gregory Barfield, Ed Ward, Eric Payne, Oralia Maceda, Lisa Flores, Lupe Perez y Larry Taylor.

Comentario: Consulte con los miembros del Comité que no pudieron asistir/participar plenamente para ver si les gustaría estar en el subcomité.

Pregunta: ¿Cómo podría afectar la revisión del presupuesto Estatal a la implementación de las estrategias de incentivos?

Respuesta: El Distrito del Aire del Valle tiene suficientes recursos para seguir avanzando este año fiscal. El Distrito del Aire del Valle informará al Comité si hay un problema de presupuesto o recursos en el futuro.

Actualización de Monitoreo del Aire

Brad Dawson, Especialista Supervisor en Instrumentos de Calidad del Aire, Distrito del Aire del Valle

Brad proporcionó una actualización sobre el trabajo de monitoreo del aire del Distrito del Aire del Valle.

- El Distrito del Aire del Valle desplegó dos monitores de aire de PM 2.5 más en tiempo real y comenzó la construcción de la Escuela Primaria de Málaga.
- El Distrito del Aire del Valle todavía está trabajando en los sitios de la Escuela Preparatoria Edison y la Escuela Primaria Madison.
- La Junta Escolar del Orange Center votó por no colocar el equipo en su sitio. El personal del Distrito del Aire del Valle espera que el Comité pueda brindar sugerencias sobre cómo avanzar con el sitio de la Escuela Orange Center.
- El sitio web del Distrito del Aire del Valle enumerará los sitios de monitoreo del aire recientemente actualizados, así como los informes de monitoreo del aire trimestrales. La comunidad puede acceder a información adicional de la siguiente manera:
 - Actualizaciones y datos de monitoreo del aire en el sitio web del Distrito de Aire del Valle: <http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>
 - Datos históricos de calidad del aire en el sitio web de CARB:

<https://aqview.arb.ca.gov/data.html>

Comentario por Chat: CARB está trabajando para actualizar la interfaz web, pero si desea ubicar datos de monitores regulatorios tradicionales, puede encontrarlos aquí: <https://www.arb.ca.gov/aqmis2/aqdselect.php>. No dude en enviar preguntas por correo electrónico a brian.moore@arb.ca.gov.

Pregunta: ¿Cuál es el estado del análisis de contaminantes del aire tóxicos? Comparta el informe y marque los problemas relevantes que la comunidad debería conocer.

Respuesta: El Distrito del Aire del Valle reúne muestras de 68 compuestos diferentes. Los datos se publicarán en el sitio web. Por el momento, no hay banderas rojas.

Pregunta: Aclare "nuevos sitios de monitoreo del aire".

Respuesta: Los sitios de la Escuela Primaria Heaton y la Escuela Intermedia Yosemite están activos. Los electricistas del Distrito del Aire del Valle iniciaron la construcción en la Escuela Primaria de Málaga, pero la instalación aún no está completa.

Pregunta: ¿Podría el Distrito del Aire del Valle estar en la agenda de la reunión de la Junta Escolar del Centro de Orange y quizás invitar a algunos de los miembros del Comité a asistir y co-presentar?

Respuesta: El personal del Distrito del Aire del Valle asistió a la reunión de la junta escolar en septiembre de 2019 y se reunió de forma independiente con los padres. El progreso inicial incluyó mapear la ubicación y discutir las necesidades eléctricas. El personal del Distrito del Aire del Valle continúa trabajando con la escuela y está consciente de la decisión que ha tomado la Junta.

Pregunta: ¿Puede el informe de Monitoreo del Aire de la Comunidad dar cuenta de los resultados potencialmente sesgados por la orden quedarse en casa del gobernador? ¿Podría agregar una aclaración al informe que indique que los datos se recopilaban durante los meses de COVID-19?

Respuesta: Se anota. Gracias.

Comentario: El proceso de electrificar la flota de autobuses de la Ciudad de Fresno es un desafío. Hágalos saber a los miembros del Comité cómo le gustaría que ayudemos al Distrito del Aire del Valle con este proceso.

Concluir/Próximos Pasos

Hanna Stelmakhovich, Facilitadora, ILG

Hanna pidió a los miembros del Comité que envíen los temas de la agenda de julio y agosto a través de la caja de chat, enviando un correo electrónico al Distrito del Aire del Valle o respondiendo al correo electrónico de seguimiento de la reunión de junio.

Christal Love Lazard, una de las facilitadoras de ILG, anunció que se uniría a la Unidad de Justicia Ambiental de CARB, pero que ILG continuará facilitando estas discusiones en nombre del Distrito del Aire del Valle y la comunidad.

Pregunta/Comentario por Chat del personal del Distrito del Aire del Valle: ¿Hay voluntarios para el Subcomité de Desviación de Camiones? Aquellos que estén interesados en el Subcomité de Desviación de Camiones, escriba en la caja de chat o envíe un correo electrónico a AB617@valleyair.org

Respuesta por Chat: Lupe Perez, Eric Payne, Lisa Flores, Ivanka Sanders, y Kimberly McCoy expresaron interés en formar parte del subcomité.

Comentario: Un miembro del comité solicitó que un tema futuro de la agenda proporcione una actualización sobre los estipendios del Comité.

Respuesta: CARB está trabajando en la guía de estipendios generales para todos los comités bajo AB 617 y el Distrito del Aire o CARB proporcionará una actualización tan pronto como esté disponible.

Hanna pidió voluntarios para ser coanfitriones de la próxima reunión. Ed Ward y Eric Payne se ofrecieron como voluntarios para ser futuros coanfitriones de la comunidad.

Pregunta: Asegúrese de que los participantes de habla hispana puedan participar plenamente sin problemas técnicos.

Respuesta: El Distrito del Aire del Valle espera resolver las dificultades técnicas, incluyendo la organización de una reunión de práctica adicional con los miembros del Comité de habla hispana para solucionar cualquier problema.

Pregunta: Una vez que regresemos a las reuniones en persona, ¿Zoom seguirá siendo una opción para aquellos que no pueden asistir o no se sienten cómodos asistiendo?

Respuesta: La seguridad es la prioridad del Distrito del Aire del Valle. El personal del Distrito del Aire del Valle explorará todas las opciones de participación posibles para este grupo relativamente grande.

Próxima Reunión: miércoles, 8 de julio a través de Zoom

Todas las presentaciones, puntos importantes de la reunión, transcripciones y la grabación de la reunión de Zoom se publicarán en línea.

**Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

South Central Fresno

Agenda for Community Steering Committee Meeting #22

Monday, June 8, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/94219167693>

Meeting ID: **942 1916 7693**

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Christal Love Lazard, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Kimberly McCoy, Community Co-host
- 5:45 p.m. Enforcement Measures Update**
Discussion of District and CARB enforcement measure implementation, including requesting feedback on upcoming enforcement activities and discussion on how to file a complaint
Jake Felton, Director of Compliance, Valley Air District
Justin Shields, California Air Resources Board (CARB)
- Breakout Groups**
- 6:45 p.m. Incentives Update**
Update on CERP incentives measures, Community Air Protection funding guidelines, solicit feedback on measures for schools (school bus replacement and air filtration)
Valley Air District Staff
- 7:05 p.m. Air Monitoring Update**
Update on District recent data analysis and placing air monitoring equipment at schools (seeking possible alternative locations in the nearby areas)
Brad Dawson, Supervising Air Quality Instrument Specialist, Valley Air District
- 7:20 p.m. Wrap Up/Next Steps**
Any more volunteers for Truck Rerouting Subcommittee?
July and August agenda topics discussion
Next Meeting: Wednesday, July 8 via Zoom
Christal Love Lazard, Facilitator, Institute for Local Government

Learn more: community.valleyair.org

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #22

Lunes, 8 de junio de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/94219167693>

Meeting ID: **942 1916 7693**

Teleconferencia sin Zoom, solamente por teléfono: 888-240-3210, Código de acceso 322140

- 5:30 p.m. Bienvenida, Introducciones**
Christal Love Lazard, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Kimberly McCoy, Coanfitrión de la Comunidad
- 5:45 p.m. Actualización de las Medidas de Cumplimiento**
Discusión de la implementación de la medida de cumplimiento del Distrito y CARB, incluyendo la solicitud de comentarios sobre las próximas actividades de cumplimiento y discusión sobre cómo presentar una queja
Jake Felton, Director de Cumplimiento, Distrito del Aire del Valle
Justin Shields, Junta de Recursos del Aire de California
- Discusiones en Grupos**
- 6:45 p.m. Actualización de Incentivos**
Actualización sobre las medidas de incentivos del CERP, las pautas de financiación de Protección del Aire Comunitarios, solicitar comentarios sobre las medidas para las escuelas (reemplazo de autobuses escolares y filtración de aire)
Personal del Distrito del Aire del Valle
- 7:05 p.m. Actualización de Monitoreo de Aire**
Actualización sobre análisis de datos recientes del Distrito y la ubicación del equipo de monitoreo del aire en las escuelas (buscando posibles ubicaciones alternativas en las áreas cercanas)
Brad Dawson, Especialista de Instrumentos de la Calidad del Aire, Distrito del Aire
- 7:20 p.m. Concluir/Próximos Pasos**
¿Hay más voluntarios para el Subcomité de cambio de ruta de camiones?
Discusión de los temas de la agenda de julio y agosto
Próxima Reunión: miércoles, 8 de julio por Zoom
Christal Love Lazard, Facilitadora, Institute for Local Government

Aprende más: community.valleyair.org

Implementation of CERP Enforcement Measures in South Central Fresno Community

AB 617 Community Steering Committee Meeting
June 8, 2020

Enforcement Program

- The District performs a full suite of enforcement and compliance assurance/assistance activities:
 - Inspections (routine and start-up) of both permitted and unpermitted sources
 - Equipment breakdown investigations
 - Source test observations
 - District-conducted monitoring and source testing
 - Complaint investigations

Enforcement Program (cont'd)

- Inspections and investigations are conducted to determine compliance with a multitude of health-protective local, state (ARB), and federal (EPA) air quality regulations targeting both criteria and toxic pollutants. These include:
 - District rules and additional permit requirements, including New Source Review and Prevention of Significant Deterioration requirements
 - ARB's Airborne Toxic Control Measures
 - ARB's greenhouse gas regulations affecting landfills; oil and gas production, processing, transmission, and storage facilities; and refrigeration systems
 - Federal New Source Performance Standards, National Emission Standards for Hazardous Air Pollutants, and Maximum Available Control Technology standards

Elements of Enforcement Program

- Inspections and investigations of permitted sources
 - Advanced detection and monitoring equipment, CEMS
- Investigations of public complaints
- Enforcement of residential wood burning curtailments
- Enforcement of open burning prohibitions
- Conservation Management Practices program
- Fugitive dust program
- Portable equipment registration/inspection program
- Enforcement of federal asbestos standard
- Gasoline dispensing facility program
- Enforcement of consumer product and point-of-sale regulations
- Commercial diesel idling enforcement
- Indirect Source Review enforcement

Enhanced Enforcement of District Rule 4901 (Wood Burning Fireplace and Wood Burning Heaters) Curtailments

- To limit the potential for localized PM2.5 impacts associated with the failure to comply with mandatory episodic wood burning curtailments, District staff will conduct at least four (4) hours of surveillance within the South Central Fresno community on each declared curtailment day for the next five (5) winter seasons to enhance the enforcement of District Rule 4901. The District will work with the Community Steering Committee to focus surveillance efforts in areas where wood burning is more prevalent.

Enhanced Enforcement of District Rule 4103 (Open Burning)

- To limit the potential for localized PM2.5 and toxic impacts associated with the illegal open burning of residential waste, District will conduct targeted surveillance efforts within the South Central Fresno community. Building on the District's existing surveillance and complaint response efforts, the District will conduct additional targeted surveillance efforts in South Central Fresno community at least once per quarter for the next 5 years. The District will work with the Community Steering Committee to focus surveillance efforts in areas where illegal residential open burning has historically occurred.

Enhanced Enforcement of District Rule 4103 (Open Burning) (cont'd)

- Feedback?
 - Are there particular locations where CSC has observed residential burning?
 - Where should District focus future enforcement efforts?
 - Is open burning more prevalent at particular times of day?

Fireplace and Open Burning Violations

Enhanced Inspection Frequency of Permitted Sources

- To limit the potential for localized air quality impacts associated with the failure to comply with emissions standards established by District permit, rule, or regulation, the District will increase the frequency of inspection at each facility that has had an emission violation over the past three (3) years. These facilities will be inspected at least twice per calendar year for the next five (5) years or until the facility has 4 consecutive inspections without an emission violation, whichever occurs first.

Enhanced Enforcement of Fugitive Dust Requirements

- To limit the potential for localized air quality impacts associated with fugitive dust from construction/earthmoving activities and open areas subject to District Regulation VIII, the District will conduct targeted surveillance efforts within the South Central Fresno community. Building on the District's existing surveillance and complaint response efforts, the District will conduct at least one targeted enforcement effort within the South Central Fresno community during both the 2nd and 3rd quarter for the next five (5) years.

Enhanced Enforcement of Fugitive Dust Requirements (cont'd)

- Inspections of sites subject to Dust Control Plan and Construction Notification requirements in District's fugitive dust regulation
- Investigations of construction sites without a plan/notification on file
- Feedback
 - Any construction/earthmoving sites or areas of concern to CSC?

Pilot Training Program for Conducting Self-Inspections at Gas Stations

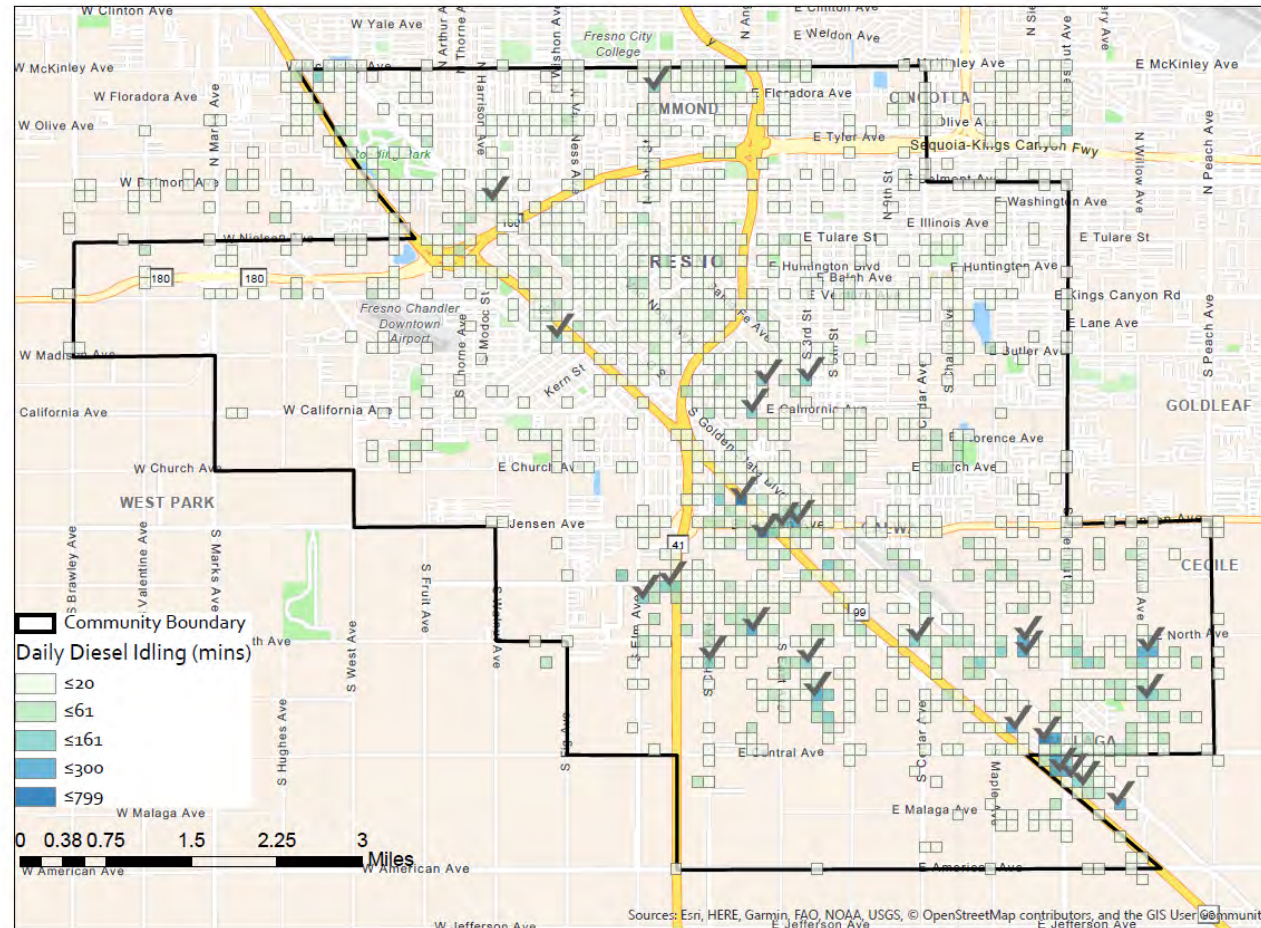

- To limit the potential for air quality impacts associated with vapor recovery defects at gasoline dispensing stations, the District will develop a pilot training program to instruct gas station operators on conducting thorough self-inspections of the vapor recovery systems at their stations to aid in the identification and timely repair of vapor recovery system defects. The District will provide this hands-on training to each gas station operator in the community.

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation

- To limit the potential for localized PM2.5 and toxic air quality impacts associated with failure to comply with the state's heavy-duty vehicle anti-idling regulation, the District will partner with CARB to conduct additional targeted anti-idling enforcement efforts in South Central Fresno community at least once per quarter for the next 5 years. The District and CARB will work with the Community Steering Committee to identify heavy-duty vehicle idling “hot spots,” especially those near schools, to aid in focusing the enforcement efforts.

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation (cont'd)

South Central Fresno Idling Times

Enhanced Enforcement of the State's Heavy-Duty Vehicle Anti-Idling Regulation (cont'd)

- Feedback?
 - Are there particular locations where CSC has observed illegal idling?
 - Where should District focus future enforcement efforts?
 - Is idling more prevalent at particular times of day?

Implementación de Medidas de Cumplimiento del CERP en la Comunidad de Centro-Sur Fresno

Reunión del Comité Directivo de la Comunidad AB 617
8 de junio de 2020

Programa de Cumplimiento

- El Distrito realiza un conjunto completo de actividades de aseguramiento/asistencia de cumplimiento:
 - Inspecciones (rutina y inicio) de fuentes permitidas y no permitidas
 - Investigaciones de equipos descompuestos
 - Observaciones de prueba de fuente
 - Monitoreo conducido por el Distrito y pruebas de fuente
 - Investigaciones de quejas

Programa de Cumplimiento *(cont)*

- Se llevan a cabo inspecciones e investigaciones para determinar el cumplimiento de una multitud de regulaciones protectoras de la salud de calidad del aire locales, estatales (ARB) y federales (EPA) que se enfocan tanto en los criterios como en los contaminantes tóxicos. Éstas incluyen:
 - Reglas y requisitos de permisos adicionales del Distrito, incluyendo los requisitos de Revisión de Nueva Fuente y Prevención de Deterioro Significativo
 - Medidas de Control de Tóxicos en el Aire de ARB
 - Las regulaciones de gases de efecto invernadero de ARB que afectan los vertederos; instalaciones de producción de petróleo y gas, procesamiento, transmisión y almacenamiento; y sistemas de refrigeración
 - Estándares Federales de Desempeño de Nuevas Fuentes, Estándares Nacionales de Emisión para Contaminantes Peligrosos del Aire y Estándares Máximos de Tecnología de Control Disponible

Elementos del Programa de Cumplimiento

- Inspecciones e investigaciones de fuentes permitidas
 - Equipos avanzados de detección y monitoreo, CEMS
- Investigaciones de quejas públicas
- Cumplimiento de restricciones de quema de leña residencial
- Cumplimiento de prohibiciones de quema al aire libre
- Programa de Prácticas de Manejo de Conservación
- Programa de polvo fugitivo
- Programa de registro/inspección de equipos portátiles
- Cumplimiento del estándar federal de asbestos
- Programa de dispensación de gasolina
- Cumplimiento de regulaciones sobre productos de consumo y puntos de venta.
- Cumplimiento de motores diesel comerciales estacionados con el motor encendido
- Cumplimiento de revisión de fuentes indirectas

Mejora de Cumplimiento de Restricciones la Regla 4901 del Distrito (chimeneas de leña y calentadores de leña)

- Para limitar el potencial de impactos localizados de PM2.5 asociados con el incumplimiento de las restricciones obligatorias episódicas para la quema de leña, el personal del Distrito llevará a cabo al menos cuatro (4) horas de vigilancia dentro de la comunidad de Centro-Sur Fresno en cada día de restricción declarado para las próximas cinco (5) temporadas de invierno para mejorar el cumplimiento de la Regla 4901 del Distrito. El Distrito trabajará con el Comité Directivo de la Comunidad para enfocar los esfuerzos de vigilancia en áreas donde la quema de leña es más frecuente.

Mejora de Cumplimiento de la Regla 4103 del Distrito (quemada al aire libre)

- Para limitar el potencial de PM2.5 localizado y los impactos tóxicos asociados con la quemada ilegal al aire libre de residuos residenciales, el Distrito realizará esfuerzos de vigilancia específicos dentro de la comunidad de Centro-Sur Fresno. Sobre la base de los esfuerzos existentes de vigilancia y respuesta de quejas del Distrito, el Distrito llevará a cabo esfuerzos de vigilancia específicos adicionales en la comunidad de Centro-Sur Fresno al menos una vez por trimestre durante los próximos 5 años. El Distrito trabajará con el Comité Directivo de la Comunidad para enfocar los esfuerzos de vigilancia en áreas donde históricamente se han hecho quemadas residenciales ilegales al aire libre.

Mejora de Cumplimiento de la Regla 4103 del Distrito (quemada al aire libre) *(cont)*

- ¿Comentarios?
 - ¿Hay lugares particulares donde el Comité Directivo ha observado quemadas residenciales?
 - ¿Dónde debe enfocarse el Distrito para los esfuerzos futuros de cumplimiento?
 - ¿La quemada al aire libre es más frecuente en horas particulares del día?

Violaciones de Chimenea y Quema al Aire Libre

Frecuencia de Inspección Mejorada de Fuentes Permitidas

- Para limitar el potencial de impactos localizados en la calidad del aire asociados con el incumplimiento de los estándares de emisiones establecidos por el permiso, la regla o la regulación del Distrito, el Distrito aumentará la frecuencia de la inspección en cada instalación que haya tenido una violación de emisiones en los últimos tres (3) años. Estas instalaciones serán inspeccionadas al menos dos veces por año calendario durante los próximos cinco (5) años o hasta que la instalación tenga 4 inspecciones consecutivas sin una violación de emisiones, lo que ocurra primero.

Mejora de Cumplimiento de los Requisitos de Polvo Fugitivo

- Para limitar el potencial de impactos localizados en la calidad del aire asociados con el polvo fugitivo de las actividades de construcción/movimiento de tierras y áreas abiertas sujetas a la Regulación VIII del Distrito, el Distrito realizará esfuerzos de vigilancia específicos dentro de la comunidad de Centro-Sur Fresno. Sobre la base de los esfuerzos existentes de vigilancia y respuesta de quejas del Distrito, el Distrito llevará a cabo al menos un esfuerzo de cumplimiento específico dentro de la comunidad de Centro-Sur Fresno durante el segundo y tercer trimestre durante los próximos cinco (5) años.

Mejora de Cumplimiento de los Requisitos de Polvo Fugitivo (cont)

- Inspecciones de sitios sujetos al Plan de Control de Polvo y requisitos de Notificación de Construcción en la regulación de polvo fugitivo del Distrito
- Investigaciones de sitios de construcción sin un plan/notificación en el archivo
- Comentarios
 - ¿Algún sitio de construcción/movimiento de tierras o áreas de interés para el Comité Directivo?

Programa Piloto de Capacitación para Realizar Autoinspecciones en Gasolineras

- Para limitar el potencial de impactos en la calidad del aire asociados con defectos de recuperación de vapor en estaciones dispensadoras de gasolina, el Distrito desarrollará un programa piloto de capacitación para instruir a los operadores de estaciones de servicio sobre la realización de autoinspecciones exhaustivas de los sistemas de recuperación de vapor en sus estaciones para ayudar en la identificación y reparación oportuna de defectos del sistema de recuperación de vapor. El Distrito proporcionará esta capacitación práctica a cada operador de estación de servicio en la comunidad.

Mejora de Cumplimiento de la Regulación Estatal Contra Dejar el Motor Encendido para Vehículos de Servicio Pesado

- Para limitar el potencial de PM2.5 localizado y los impactos tóxicos a la calidad del aire asociados con el incumplimiento de la regulación estatal contra el dejar el motor encendido de vehículos de servicio pesado, el Distrito se asociará con CARB para llevar a cabo esfuerzos adicionales de cumplimiento de la ley contra el dejar el motor encendido en la comunidad de Centro-Sur Fresno al menos una vez por trimestre durante los próximos 5 años. El Distrito y CARB trabajarán con el Comité Directivo para identificar las “zonas conflictivas” donde dejan el motor encendidos de vehículos de servicio pesado, especialmente aquellos cerca de las escuelas, para ayudar a enfocar los esfuerzos de cumplimiento.

What air pollution issues do you see around YOUR community?

What can we all do about these concerns?

Reporting Environmental Complaints

Remember the Ws:

- ✓ WHAT is your complaint about?
- ✓ WHERE does it occur?
- ✓ WHEN does it occur? Is it ongoing?
- ✓ WHO is the potential source?
- ✓ WHY should you complain?

It's okay to complain if it's simply a nuisance

CalEPA Complaint Form

The screenshot displays the 'Details' step of the CalEPA Complaint Form. At the top, a progress bar shows four stages: 'Start' (active), 'Details', 'Complete', and 'Confirmation'. Below the progress bar, the 'Language Preference/Preferencia de Idioma' is set to 'English'. A checkbox labeled 'SELECT AN IMAGE TO REPORT A PROBLEM' is checked. The main section, titled 'More than one may be selected', contains five image selection options: 'Air' (checked), 'Water', 'Toxic Substances', 'Pesticides', and 'Solid Waste'. Each option includes a representative image and a help icon. Below the image selection, there are three checkboxes: 'IS THIS AN EMERGENCY?' (checked), 'ARE YOU REPORTING WATER WASTE?' (checked), and 'IS THIS REGARDING PROPOSITION 65?' (checked). A 'Complaint Details' button with a right-pointing arrow is located at the bottom right of the form.

Do you wish to receive further updates regarding this complaint?

Role of the Inspector

1. A district inspector will be assigned the complaint.
2. The inspector will contact the reporting party to obtain additional information and to let them know that the complaint was received.
3. The inspector will investigate the complaint.
4. The inspector will take appropriate action if required for complaint resolution.
5. The inspector will follow-up with the reporting party and inform them of the resolution.

After the Complaint

What happens next at the air district or state level?

Complaints do not always get resolved following the initial investigation, so it is important to:

1. Continue to file complaints when it reoccurs.
2. Be patient, not everything can be fixed immediately.

2019 in Comparison

2020 1st Quarter Idling Sweep

- CARB staff participated in Idling sweeps with the District.
- CARB looked at:
 - 37 vehicles within the boundary
 - 3 Transportation Refrigeration Units
 - 4 Pieces of Off-Road equipment

Resulting from the sweep, CARB staff are looking to launch investigations into two companies. No idling violations were discovered during the sweep.

Thank you for helping protect Californians
by improving our air quality!

¿Desea recibir más actualizaciones sobre esta queja?

Responsabilidad del Inspector

1. A un inspector del distrito se le asignará la queja
2. El inspector se pondrá en contacto con el/la informante para obtener información adicional y para hacerles saber que la queja fue recibida.
3. El inspector investigará la queja.
4. El inspector tomará las medidas apropiadas si es necesario para la resolución de quejas.
5. El inspector hará un seguimiento con el/la informante y le informará de la resolución.

Después de la Queja

¿Qué sucede después a nivel del distrito del aire o estatal?

Las quejas no siempre se resuelven después de la investigación inicial, por lo que es importante:

Continúe presentando quejas cuando vuelva a ocurrir.

Sea paciente, no todo se puede arreglar de inmediato.

2019 en Comparación

2020 1er trimestre barrido de motores encendidos

- El personal de CARB participó en barridos de motores encendidos con el Distrito.
- CARB miró:
 - 37 vehículos dentro del límite
 - 3 unidades de refrigeración de transporte
 - 4 unidades de equipo fuera de carretera

Como resultado del barrido, el personal de CARB está buscando iniciar investigaciones sobre dos compañías. No se descubrieron violaciones de motores encendidos durante el barrido.

¡Gracias por ayudar a proteger a los californianos mejorando nuestra calidad del aire!

South Central Fresno AB 617 Community Air Monitoring Update

Community Steering Committee Meeting
June 8, 2020

Ongoing Community Air Monitoring

- District continuing to conduct localized air monitoring in South Central Fresno community
- Working to deploy additional air monitoring platforms across the community, according to Community Steering Committee recommended network design
 - Due to challenges in working with school districts, considering alternative locations near schools to place air monitoring equipment
- Air monitoring van actively being used to regularly monitor pollutants in areas of interest of the community and near recommended site locations for network design
- Intensive PM_{2.5} and VOC speciation sampling and laboratory analysis being conducted since late 2019

Community Air Monitoring Network Design

Community Air Monitoring Platforms

Community Air Monitoring Platforms (cont'd)

Community Air Monitoring Platforms (cont'd)

Online Sites in South Central Fresno

Real-Time PM2.5

- Bitwise South Stadium
- Roosevelt High School
- Fresno-Foundry (near-road site)

VOC and PM2.5 Speciation

- Fresno-Foundry
- Measurements to continue here until Malaga Elementary trailer is in place (soon)

Mobile Air Monitoring Van

- Regular measurements in community designated areas of interest and in community selected locations

Pending Sites in South Central Fresno

Real-Time PM2.5

- **Heaton Elementary & Yosemite Middle School:** Waiting on Fresno Unified, working on alternative locations
- **Madison Elementary:** Waiting on Central Unified, working on alternative locations

Compact Multi-Pollutant Air Monitoring System

- **Orange Center School:** School Board voted against placing equipment at this site, working on alternative locations
- **Edison High School:** Waiting on Fresno Unified, working on alternative locations
- Compact system being operated at Fresno-Foundry in the interim

Air Monitoring Trailer

- **Malaga Elementary:** Approved by Fowler Unified in February 2020, completing electrical work, then trailer will be installed

Daily Average PM2.5 Data Comparison January 1, 2020 – March 31, 2020

Comparison of Average PM2.5

January 1 – March 31, 2020

Site	Average PM2.5 Concentration ($\mu\text{g}/\text{m}^3$)
Fresno-Garland	13.1
Fresno-Roosevelt	13.7
Fresno-Bitwise	12.5
Fresno-Foundry*	14.7

*Microscale site located adjacent to Highway 99

Mobile Air Monitoring Van Activities

Site A: Parking lot on east corner of Tulare and 'R' Street

Site B: Parking lot on south east corner of East Butler Ave and South Cedar Ave

Site C: Parking lot on southwest corner of East California Ave and South Van Ness Ave

Site D: On 2nd Street south of intersection with Jensen Ave

Site E: Parking lot on southeast corner of E Jensen Ave and S Cedar Ave

Site F: Unpaved lot on southwest corner of E North Ave and S Cherry Ave

Mobile Air Monitoring Van Activities (cont'd)

- Short-term measurements taken in multiple locations on various days in January 2020
- The concentrations of pollutants measured for all locations were minimal during this period:
 - PM2.5 did not exceed 16.6 $\mu\text{g}/\text{m}^3$, below the federal 24-hr PM2.5 standard of 35 $\mu\text{g}/\text{m}^3$
 - Ozone did not exceed 53 ppb, below the federal 8-hr ozone standard of 70 ppb
 - CO did not exceed 0.59 ppm, below the federal 1-hr CO standard of 35 ppmv
 - NO2 did not exceed 52 ppb, below the federal 1-hr NO2 standard of 100 ppb
 - SO2 did not exceed 0.9 ppb, below the federal 1-hr SO2 standard of 75 ppb
 - VOC analyzers did not detect any measurable benzene, toluene, ethylbenzene, or xylene (BTEX) emissions at selected locations during this monitoring period
 - BTEX is a good indicator of VOC concentrations as a whole

Mobile Air Monitoring Van Activities (cont'd)

- Multiple hour measurements taken at single locations in March 2020
 - Collected data allowed for better comparison with federal air quality standards
 - District focusing these efforts in areas identified in the Community Air Monitoring Plan
- Example: March 19 measurements near Edison High School

PM2.5 Speciation Analysis

Fresno-Foundry Site (November 2019 – March 2020)

VOC Speciation Analysis

- VOC measurements and speciation laboratory analysis being conducted at Fresno-Foundry site since December 2019
- Laboratory analysis isolates concentrations of 68 VOC species
 - Results show trace or no detections of most VOC species
 - Focusing results on which species were detected in laboratory analysis

Detected VOC Species

Availability of Collected Community Air Quality Data

- CARB continuing to develop statewide air quality data portal (AQview) to display and provide community air monitoring data from selected AB 617 communities
 - AQview website located at: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Air quality data from Valley AB 617 communities now available at this website
 - Monthly data will continue to be made available as air monitoring campaign continues
- Real-time community air monitoring data available on District AB 617 webpage at: <http://community.valleyair.org/community-air-monitoring>

Development and Availability of Ongoing Reports

- District will be developing comprehensive quarterly reports summarizing air monitoring data collected
 - Quarterly reports will be posted to District AB 617 webpage
- Detailed reports of laboratory PM_{2.5} and VOC speciation analysis also to be posted on District AB 617 webpage
- Report summarizing collected air monitoring data from February 2019 through March 2020 is available at:
<http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>

Comments/Questions?

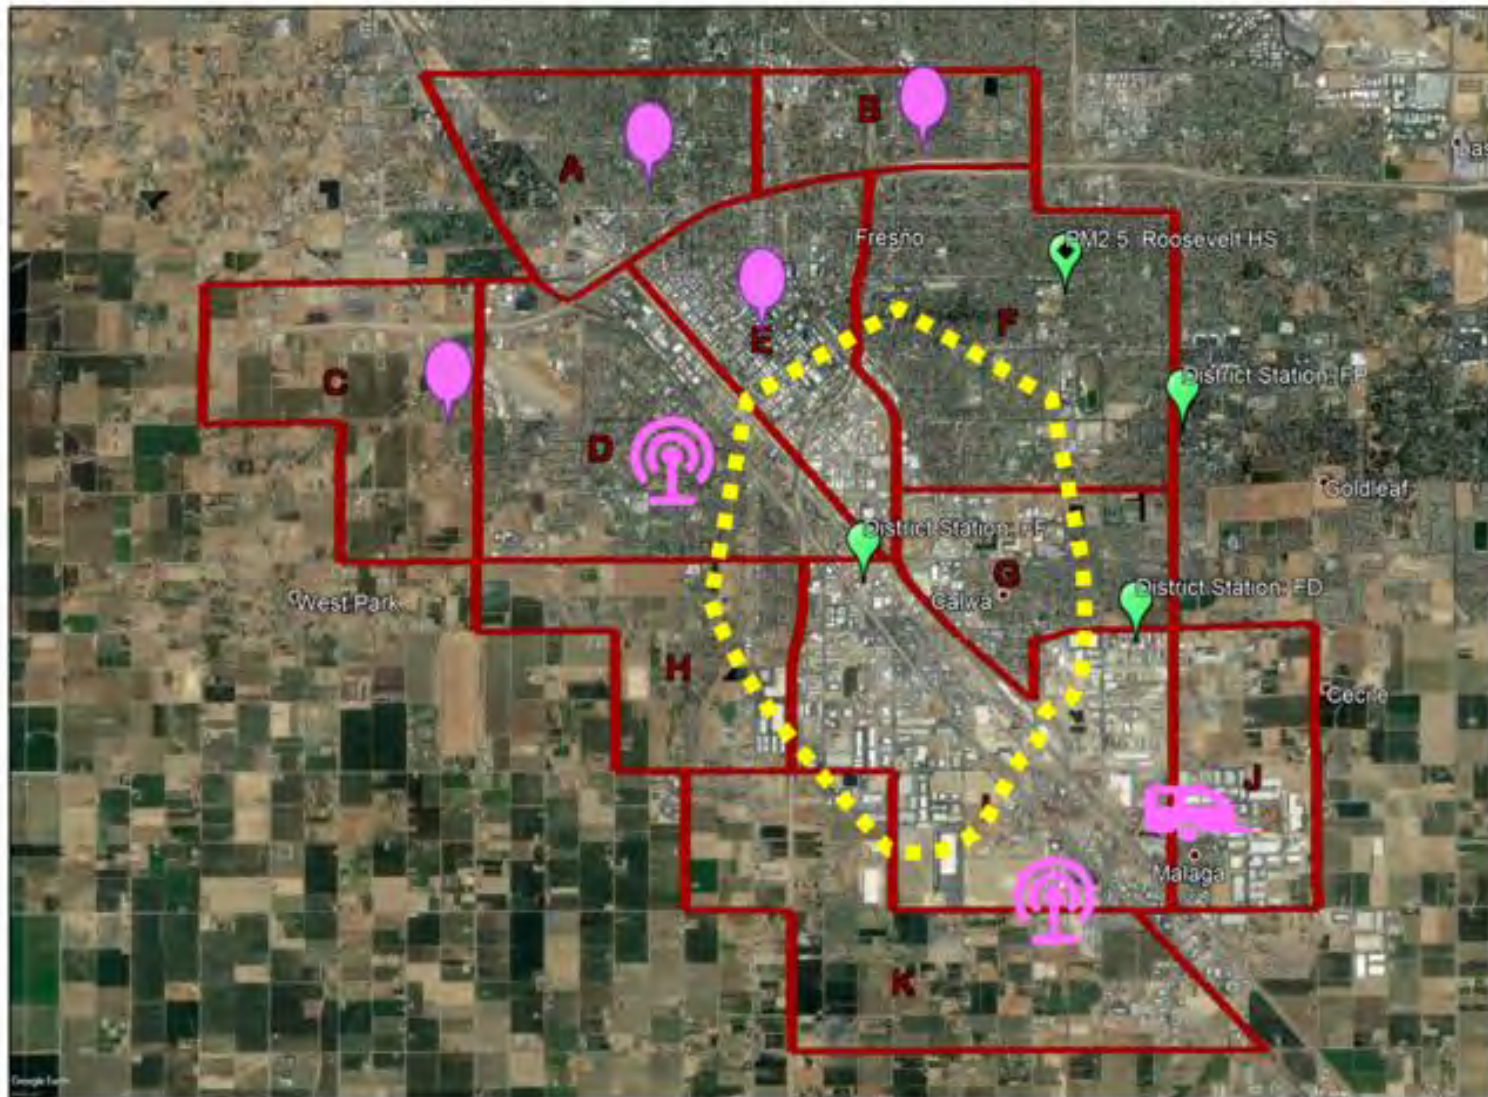

Actualización de Monitoreo del Aire de la Comunidad AB 617 de Centro-Sur Fresno

Reunión del Comité Directivo Comunitario
8 de junio de 2020

Monitoreo Continuo del Aire Comunitario

- El Distrito continúa realizando monitoreo de aire localizado en la comunidad de Centro-Sur Fresno
- Trabajando para desplegar plataformas de monitoreo de aire adicionales en toda la comunidad, de acuerdo con el diseño de red recomendado por el Comité Directivo de la Comunidad
 - Debido a los desafíos trabajando con distritos escolares, estamos considerando ubicaciones alternativas cerca de las escuelas para colocar equipos de monitoreo de aire
- Camioneta de monitoreo de aire se esta usando activamente para monitorear regularmente los contaminantes en áreas de interés de la comunidad y cerca de las ubicaciones recomendadas para el diseño de la red
- Pruebas intensivas de especiación de PM2.5 y VOC y análisis de laboratorio se han llevado a cabo desde los fines de 2019

Diseño del Sistema de Monitoreo del Aire Comunitario

-  **PM2.5 Independiente**
-  **Sistema Compacto de Monitoreo del Aire**
-  **Remolque**
-  **Camioneta de Monitoreo Móvil**
 - Conducir en horario regular a través de todo el límite durante todo el año
 - Responder a las preocupaciones de la comunidad
-  **Ruta de enfoque recomendada**
 - Ruta de enfoque recomendada

Plataformas de Monitoreo del Aire Comunitario

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Sitios en Línea en Centro-Sur Fresno

PM2.5 en Tiempo Real

- Bitwise South Stadium
- Roosevelt High School
- Fresno-Foundry (sitio cerca de carretera)

Especiación de VOC y PM2.5

- Fresno-Foundry
- Las medidas continuarán aquí hasta que el remolque de la escuela Malaga Elementary esté en su lugar

Camioneta de Monitoreo del Aire Móvil

- Medidas regulares en áreas de interés designadas por la comunidad y en ubicaciones seleccionadas por la comunidad

Sitios Pendientes en Centro-Sur Fresno

PM2.5 en Tiempo Real

- **Heaton Elementary & Yosemite Middle School:** Esperando en el Distrito Escolar de Fresno, trabajando en ubicaciones alternativas
- **Madison Elementary:** Esperando en el Distrito Escolar de Central, trabajando en ubicaciones alternativas

Sistema Compacto de Monitoreo del Aire Multi-Contaminante

- **Orange Center School:** La Junta Escolar votó en contra de colocar equipos en este sitio, trabajando en ubicaciones alternativas
- **Edison High School:** Esperando en el Distrito Escolar de Fresno, trabajando en ubicaciones alternativas
- Sistema compacto esta operando en Fresno-Foundry por el momento

Remolque de Monitoreo del Aire

- **Malaga Elementary:** Aprobado por el Distrito Escolar de Fowler en febrero de 2020, completando el trabajo eléctrico, luego se instalará el remolque

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de corto plazo tomadas en múltiples ubicaciones en varios días en enero de 2020
- Las concentraciones de contaminantes medidas para todas las ubicaciones estuvieron por debajo de los estándares federales durante este período:
 - PM2.5 no excedió 16.6 $\mu\text{g}/\text{m}^3$, debajo del estándar federal PM2.5 de 24-hr de 35 $\mu\text{g}/\text{m}^3$
 - Ozono no excedió 53 ppb, debajo del estándar federal de ozono de 8-hr de 70 ppb
 - CO no excedió 0.59 ppm, debajo del estándar federal de CO de 1-hr CO de 35 ppmv
 - NO2 no excedió 52 ppb, debajo del estándar federal de NO2 de 1-hr de 100 ppb
 - SO2 no excedió 0.9 ppb, debajo del estándar federal de SO2 de 1-hr SO2 de 75 ppb
 - Los analizadores de VOC no detectaron emisiones mensurables de benceno, tolueno, etilbenceno o xileno (BTEX) en ubicaciones seleccionadas durante este período de monitoreo
 - BTEX es un buen indicador de las concentraciones de VOC en su totalidad

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de varias horas tomadas en ubicaciones individuales en marzo de 2020
 - Los datos recopilados permitieron una mejor comparación con los estándares federales de calidad del aire
 - Distrito enfocando estos esfuerzos en áreas identificadas en el Plan Comunitario de Monitoreo del Aire
- Ejemplo: medidas del 19 de marzo cerca de la Edison High School

Análisis de Especiación de PM2.5

Sitio de Fresno-Foundry (noviembre 2019 – marzo 2020)

Análisis de Especiación de VOC

- Las medidas de VOC y el análisis de laboratorio de especiación se han llevado a cabo en el sitio de Fresno-Foundry desde diciembre 2019
- El análisis de laboratorio aísla las concentraciones de 68 especies de VOC
 - Los resultados muestran trazas o no detecciones de la mayoría de las especies de VOC
 - Enfocando resultados sobre qué especies fueron detectadas en análisis de laboratorio

Especies de VOC Detectadas

Disponibilidad de Datos Recopilados de la Calidad del Aire de la Comunidad

- CARB continúa desarrollando un portal de datos de calidad del aire en todo el estado (AQview) para mostrar y proporcionar datos de monitoreo del aire comunitario de las comunidades AB 617
 - Sitio web de AQview ubicado en: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Los datos de calidad del aire de las comunidades AB 617 del Valle ahora están disponibles en este sitio web
 - Los datos mensuales continuarán disponibles a medida que continúe la campaña de monitoreo del aire
- Datos de monitoreo de aire comunitario en tiempo real disponibles en la página web del Distrito AB 617 en: <http://community.valleyair.org/community-air-monitoring>

Desarrollo y Disponibilidad de Reportes Continuos

- Distrito en el proceso de entregar un informe trimestral completo que resume los datos de monitoreo del aire recopilados
 - Los informes trimestrales se publicarán en la página web del Distrito AB 617
- Los informes detallados del análisis de especiación de PM2.5 y VOC de laboratorio también se publicarán en la página web del Distrito AB 617
- El informe que resume los datos recopilados de monitoreo del aire desde febrero de 2019 hasta marzo de 2020 está disponible en :

<http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>

Comentarios/¿Preguntas?

South Central Fresno AB 617 Community Steering Committee Meeting #21

May 13, 2020 – 5:30 pm - 7:30 pm
Zoom Virtual Meeting

Action items for South Central Fresno Community Steering Committee:

- Please share suggestions about future agenda items with the Valley Air District.
- Please share suggestions and ideas about committee member outreach and recruitment with the Valley Air District.
- Start thinking about the list of problematic areas associated with truck traffic routes and help come up with the solutions.
- Sign up for the Fresno Energy Program (by September) by visiting www.fresnoenergyprogram.com
- Please spread the word about the Fresno Energy Program via social media, word of mouth, and via referrals (receive \$20 bonus for referral).
- If anybody needs Lupe's number to file smoke reports, you can request the number to be able to call direct.

Action items for the Valley Air District:

- Look into the Heavy Duty Truck Rerouting Study subcommittee and the composition of the Study consultant selection committee.
- Post the schedule of future meetings online and share a hard copy with members when requested.
- Post online meeting materials in advance and share hard copies with those who need them in advance.
- Continue to find ways for the Spanish-speaking participants to follow and view presentation materials during Zoom meetings most effectively.
- Connect Isabel Vargas with the appropriate agency (so she can report a vehicle in her neighborhood that has been emitting high levels of pollution).
- As feasible, circle back with Ed Ward about the history of air toxics reductions AB2588.
- Connect with Kimberly McCoy, who volunteered to be the co-host for the June meeting.

Welcome and Introductions

Christal Love-Lazard, Facilitator, Institute for Local Government

Ryan Hayashi, Deputy Air Pollution Control Officer, San Joaquin Valley Air Pollution Control District (Valley Air District)

Janet Gardner, Community Co-host

Christal welcomed the South Central Fresno Community Steering Committee (CSC) members and the public, provided Zoom and translation instructions, reminded participants that the meeting was being recorded and live streamed, and went over the agenda items. She announced that the CSC will discuss future agenda items at the end of this, and all future meetings.

Ryan welcomed participants and thanked them for being flexible as the Valley Air District and the CSC move forward with the implementation of the Community Emission Reduction Program (CERP) during Covid-19.

Janet thanked everyone for staying focused on improving air quality and relationships.

Comment: Please send the hard copy of the meeting schedules in advance as well as hard copies of materials and presentations a day or two in advance.

California Air Resources Board (CARB) Hearing Resolution Discussion of CARB's final resolution from February 13, 2020 CERP adoption hearing and next steps

Vernon Hughes, CARB

Vernon shared that the CARB hearing resolution is posted on the website:

<http://community.valleyair.org/selected-communities/south-central-fresno/steering-committee-documents/> The resolution that went to the CARB Board hearing on February 13 included staff recommendations. The CARB Board passed it with edits and modifications following the Board discussion on February 13, 2020.

Question: CARB passed several resolutions on February 13. What is the timeline for rules and regulations? Does CARB have any recommendations on where the CSC should start?

Answer: It is up to the CSC and the Valley Air District to identify the implementation priorities.

Question: What are the edits and modifications?

Answer: Some high-level changes include a truck routing study, MOU with the City of Fresno on stationary sources review, reporting timeline and format.

Question: Could you go into more detail on the resolution since it has been several months? I hope that we will spend more time talking about truck rerouting, freight handbook, rules and regulations (to address community concerns, for example. idling), reporting and the role of the CSC in the reporting process.

Answer: The Valley Air District will provide more updates in the next meetings about these and other topics if there is an interest.

Heavy Duty Truck Rerouting Study Update

Scott Mozier, Public Works Director, City of Fresno

Scott provided an update on the Valley Air District and City of Fresno (City) coordination on the CERP measure to conduct a heavy-duty truck rerouting study (study) in the AB 617 community. Christal asked the participants to hold their questions until the end. Presentation highlights:

- Heavy-duty truck rerouting is a high priority for the community, as identified during the AB 617 process and previous city work. The adopted CERP provides an opportunity to implement related measures. The goal is to reroute trucks from specific corridors, especially around vulnerable populations.
- Established in 2005, the city ordinance regulates current heavy-duty truck routes. The process of changing heavy-duty truck routes includes a study preparation, environmental assessment, map development and ordinance change.
- The City will manage the study and its elements: community engagement, traffic counts (an in-kind service provided by the City), the preview of existing road conditions, changes to truck routes and CEQA analysis.
- The next steps are to finalize the funding plan (the consultant cost and project management require additional funding), prepare collaborative agreements, select consultants, engage the community and prepare the study.

Chat Question: La presentacion sera en ingles solamente,?

Chat Answer: la presentacion en la pantalla esta en ingles, pero esta disponible en linea

<http://community.valleyair.org/selected-communities/south-central-fresno/steering-committee-meetings/>

Chat Comment: For future meetings, Spanish residents need to be told to get the Spanish materials ahead of time not on the spot. As it is, we are struggling to get everyone to know how to operate this platform, let alone open a different tab to see the Spanish documents.

Chat Answer: Very good point. We will make sure to get those materials to them in advance.

Chat Comment: Por favor si para la proxima lo publican en espanol.

Chat Answer: Para la proxima reunion voy a proporcionar los documentos en espanol antes de tiempo

Question: What is the implementation timeline?

Answer: It will take several months for the cooperative agreement between the City and the Valley Air District, about three months to select a consultant (in the meantime, the City can start to conduct traffic studies) and about 10-12 months for engagement, the study, and ordinance change.

Question: What is the timeline for the collaborative agreement? Who will start the process, the City or the Valley Air District?

Answer: The City will look to the Valley Air District for the collaborative agreement. The City is eager to get started.

Answer: The Valley Air District hears that this is a priority for the committee. A series of conversations with the City already took place. The Valley Air District will try to move forward as quickly as possible.

Question: Thank you for keeping this issue moving. The community is frustrated because of all the pain and suffering of our people. Systemic discrimination and design made our neighborhoods more polluted. More people are dying of asthma. Why does this truck rerouting presentation not acknowledge that?

Answer: This perspective is incredibly important. In the upcoming community engagement process for the rerouting study, there will be an opportunity to share and address these critically important issues.

Comment: As we proceed with the study, we need to add a social/environmental justice angle, discussion about community health information, and impacts of road sharing with residents and pedestrians.

Question: What is the total cost of the study? Will the number of trucks change post COVID-19? Will the committee have input on the consultant firm selection and their service agreement to ensure that community needs will be addressed in this process? What about the Environmental Impact Report and the relinquishment of H Street? Will that be included in the study?

Answer: The cost will vary between \$200,000 - \$300,000 based on the study components. The higher cost comes with tradeoffs. We can be creative in utilizing existing data from the City's Active Transportation Plan that already provides sidewalk analysis. During a shelter-in-place, we see a 40% decrease in passenger traffic and a 10% decrease in commercial traffic. Future numbers will depend on various factors. The City and the Valley Air District have not discussed the composition of the consultant selection committee. We can have a conversation about that. The timeframe for the Environmental Impact Report has not been released. The study will note the Environmental Impact Report and H Street closure project.

Question: What is the City's plan for authentic community engagement? Will the City be holding virtual meetings if there is a second outbreak of COVID-19?

Answer: Community engagement is a major component of the study. The idea is to do something similar to AB 617 and South Central Fresno engagement with targeted outreach, translation,

materials, etc.

Question: Are you engaging the Councilmembers representing the areas of the study?

Answer: Yes, we will include Councilmembers and their chief of staff.

Chat Question: What factors will determine the recommendations for changing the truck routes?

Chat Question: What funding is available for the potential sources of study in addition to AB 617?

Chat Comment: I agree. Public health data needs to be included in determining how changes are prioritized.

Comment: Can the Valley Air District send out the interest form after this meeting to determine who would like to be on this subcommittee.

Chat comments: I agree. A subcommittee is needed.

Answer: The Valley Air District is supportive of a subcommittee and can look into it.

Verbally and via the chat box, the CSC members suggested spending more time discussing the study. They also suggested building in more time for dialog in future meeting agendas. The Air District committed to ensuring a better meeting balance between 'informational' presentations and CSC discussions. The facilitator asked the group to decide whether they preferred to move onto the next agenda items presented by the Valley Air District or postpone them until a future meeting. The CSC members voted to postpone the Air Monitoring Update and Incentives Update items.

Question: Will the CSC be able to participate in the consultant interviews and have a say in the selection?

Answer: The City has not discussed the consultant selection process or various aspects of the process, such as funding, cooperation agreement process, etc.

Chat Comment: I think CSC members should participate in the RFP process.

Chat Comment: Yes, Steering Committee members should be given the right to participate in that committee.

Chat Comment: The scope and process discussion needs to happen. It needs to be directed by the CSC members and residents. The City and the Valley Air District should not be having private conversations about cost, scope and process.

Chat Answer: We appreciate the concern that "The City and The Valley Air District should not be having private conversations about cost, scope and process." However, the two agencies need to prepare and obtain respective Board approvals for a cooperative agreement between the agencies. Working consistently with the expressed desires of the Steering Committee, the agencies need to work out agreement language and have the respective legal counsel's review.

Question: The traffic count study needs to be transparent. Since the City funds it, how do we ensure the accuracy and impartiality of the results? Why is the City and not a consultant doing traffic counts? I was told that the cost of the study would be closer to \$500,000.

Answer: The City's in-kind services include traffic counters and data sharing. The price of the study can vary. With \$300,000 price tag, we are trying to achieve the same community benefits at a lower cost and free up money for other priorities laid out by the CSC.

Comment: As we talk about numbers and cost, let us pause and think about the cost of lives, the

pain and suffering of the community while these industrial processes are going on. We see trucks take the same short routes to get products to manufacturers more efficiently. Thank you Scott and the City for willingness to do the study and change the ordinance.

Comment: Please listen to the community and have the community involved in choosing the consultant. With the economy potentially tanking and traffic numbers going down, how does the study plan to ensure the analysis of commercial and residential traffic for the robust economy scenarios? Can you prioritize looking at the environmental justice elements and community issues such as sidewalks and health concerns if we have the second shelter-in-place declared later in 2020?

Answer: One possible outcome is to delay the study while the economy recovers. Pedestrian safety, connectivity and bottlenecks are important issues to the City. The Active Transportation Plan reflects these issues. Alternative components of the study are part of broader discussions as we have to understand better types of components and their overall consistency with the study's scope and CERP. While funding is committed, there are two things to keep in mind. CARB needs to approve the projects before receiving funding applications. The Valley Air District's Governing Board also has to approve the funding.

Answer: We can look at the available surrogate sources of VMT data. The available and historical data can help the City, committee and the Valley Air District to decide on the timing of the study.

Chat Comment: here again is the notice for the CARB webinar that will be go over the AB 617 CAP incentive funding guidelines. <https://content.govdelivery.com/accounts/CARB/bulletins/286832c>

Comment: Health issues of the residents living along these heavy-duty truck routes are of great concern to this committee.

Comment: There are opportunities to leverage some of the ongoing collaborations along that corridor. For example, the City and Caltrans are working to resurface Jensen Street.

Question: My neighbor was burning something over the weekend. We filed a complaint with the City but did not hear back.

Answer: The Valley Air District will send down an inspector to look at your area.

Chat Answer: If anybody would like Lupe's number to file reports, request it from the Air District and you will be able to call directly.

Comment: The CSC and the public have to participate in the study, have a seat at the table and have a discussion with the City. Community voices need to be heard, taken into consideration and valued.

Answer: There will be numerous public meetings and participation opportunities.

Comment: There are several factors to consider:

1. The closure of American Avenue for the high-speed rail project puts the added burden to other streets, Jensen and North Avenue, for example. Trucks drive on streets not designed for trucks.
2. Caltrans will be doing an interchange improvement project. Without City planning to widen the streets, it is going to complicate the traffic in those areas. Maybe we can get a list from the community about these problematic areas and help come with the solutions.

Chat Comment: Regarding the timeline to complete the study, to recap:

- We need a minimum of two months for the City/Valley Air District agreement to be developed and approved;
- Three months to hire the consultant team;
- 10-12 months to complete the study;

- Culminating in a new truck ordinance adopted by the Fresno City Council. (1-1/2 years away). Regarding factors to be considered in changing the truck routes, the study would consider community input/concerns (noise, air emissions, safety, and compatibility with land uses) but also the ability of the new proposed truck route to handle both the type and volume of traffic. Community input on the new route and other stakeholder input will be critical (schools, Fresno County, businesses and so forth). In terms of other funding sources, the City of Fresno has offered in-kind services through Traffic Operations field staff (estimated at \$66,000 in staff hours). The Valley Air District is also looking into other funding sources.

Chat Comment: I would like a history of air toxics reductions AB2588 and would like CARB to do a review of the scope of the AB617 Blue Print.

Energy Efficiency Program Update on Fresno Energy Program from Olivine, Inc. and details on resident incentives to participate

Laura, Policy Advisor for Disadvantaged Communities, Olivine

Laura presented information about the pilot energy demand response study and its companion, the Fresno Energy Program in South Central Fresno. This study seeks to identify participation potential, the reduction in energy consumption and targeted messaging. The findings will inform future program designs. Presentation highlights:

- Participation benefits: receive payments for energy reduction, save energy, learn about other public programs. Earn up to a \$170 cash reward by saving energy, participating in energy-saving events and making referrals.
- To participate, residents need to live in eight qualified zip codes (available on the website), have access to the internet, have access to the PG&E account and have no other enrolments in similar demand response programs. Participate by downloading the App or via the website. Enrolment is extended until September. Visit www.fresnoenergyprogram.com to sign up.

Comment: Energy efficiency is one of the CERP strategies and is very high on the prioritization list. Digital visa cards arrive within 48 hours after signing up.

Question: CSC member can reach out to 800 people about this program. Does the digital platform have a blind-friendly design? What about people who have no access to the internet?

Answer: Unfortunately, it does not have a blind-friendly design. As for internet access, participants have to be able to receive emails to participate. They can use public computers to log in.

Question: What about language access?

Answer: We have customer support in Spanish over the phone and via email.

Wrap up/Next Steps Meeting time poll Next Meeting: Wednesday, June 10 via Zoom

Christal Love Lazard, Facilitator, Institute for Local Government

Please let the Valley Air District know what future agenda items you would like to see on future meeting agendas.

The Valley Air District staff provided a steering committee membership update. There are 44 members; there is a need for five more residents. Valley Air District staff will be using social media, phone calls, emails and faith-based partner outreach to recruit more residents. CSC members are asked to share additional outreach suggestions.

Question: Is there a minimum age limit to participate in the CSC?

Answer: Teenagers are fine. Parents will have to approve the participation for those under 18.

CARB staff provided an update about the CSC stipends. CARB is working with the Valley Air District and Environmental Justice Consultation group on drafting the stipend guidelines.

Comment: Please share the list of the meeting dates in a hard copy form with the CSC members who request it. Please share the hard copy of handouts at least 2-3 days before the meeting. The stipend needs to be retroactive.

Answer: The second Wednesday of the month is a set CSC meeting date. The June meeting date conflicts with the Fresno Transformative Climate Communities meeting date. The staff will doodle CSC members about a potential new June date and will post the schedule on the Air District website.

Comment: Spanish documents are hard to open and to view on a separate screen.

Question: Even though we can share agenda items for future meetings, can we still review and set them at the beginning of each meeting?

Answer: Vetting the agenda at the beginning of meetings is logistically tricky to do. There is a lot of work that goes into preparing the agenda, meeting materials, finding the right speakers, and preparing the Spanish translation. We are committed to continuing to work with the community co-host to develop monthly agendas. Please let the Air District know what agenda items you would like to see in future meetings.

Chat Comment: Next Agenda Items: Rules and Regulations Updates, Stipends, Update on Truck Reroute subcommittee, Update on Air Monitoring (FUSD/Orange Center schools), continuation of postpone items from tonight

Kimberly McCoy volunteered to co-host the June meeting.

Comment: When we are back to in-person meetings, some people cannot attend unless there is a vaccine.

Committee members participated in the poll to identify preferred meeting times:

- 5:30pm-7:30pm – 7 votes
- 3:00pm-5:00pm – 5 votes
- 4:30pm-6:30pm – 4 votes.

Next Meeting: TBD by CSC input

All the presentations, Zoom meeting recording, meetings highlights and transcripts will be posted online.

**Refer to meeting audio to review the full details and comments from the meeting.*

Centro-Sur Fresno

Comité Directivo Comunitario AB 617 Reunión #21

13 de mayo de 2020 – 5:30 pm - 7:30 pm
Reunión Virtual por Zoom

Artículos de Acción para el Comité Directivo de la Comunidad de Centro-Sur Fresno:

- Por favor de compartir sus sugerencias sobre futuros temas de la agenda con el Distrito del Valle del Aire.
- Por favor de compartir sugerencias e ideas sobre el alcance y alistamiento de miembros del comité con el Distrito del Aire del Valle.
- Comience a pensar en la lista de áreas problemáticas asociadas con las rutas de tráfico de camiones y ayude a encontrar las soluciones.
- Regístrese en el Programa Fresno Energy (para septiembre) visitando www.fresnoenergyprogram.com
- Por favor, pase la voz sobre el Programa de Energía de Fresno a través de las redes sociales, boca a boca y a través de referencias (reciba un bono de \$20 por referencia).
- Si alguien necesita el número de Lupe para reportar humo en la comunidad, puede solicitar el número para poder llamar directamente.

Artículos de Acción para el Distrito del Aire del Valle:

- Examinar un subcomité del Estudio de Desviación de Camiones de Servicio Pesado y la composición del comité de selección de consultores del Estudio.
- Publicar el calendario de futuras reuniones en línea y compartir una copia en papel con los miembros cuando se le solicite.
- Publicar los materiales de las reuniones en línea con anticipación y compartir copias en papel con aquellos que los necesitan con anticipación.
- Continuar buscando formas para que los participantes de habla hispana sigan y vean los materiales de presentación durante las reuniones de Zoom de manera más efectiva.
- Conectar a Isabel Vargas con la agencia correspondiente (para que pueda reportar un vehículo en su vecindario que ha estado emitiendo altos niveles de contaminación).
- Como sea posible, volver a hablar con Ed Ward sobre la historia de las reducciones de tóxicos en el aire AB2588.
- Conectarse con Kimberly McCoy, quien se ofreció como voluntaria para ser la coanfitriona de la reunión de junio.

Bienvenida y Presentaciones

Christal Love-Lazard, Facilitadora, Institute for Local Government

Ryan Hayashi, Director Adjunto, Distrito para el Control de la Contaminación del Aire del Valle de San Joaquín (Distrito del Aire del Valle)

Janet Gardner, Coanfitrión de la Comunidad

Christal dio la bienvenida a los miembros del Comité Directivo de la Comunidad de Centro-Sur Fresno (CSC) y al público, proporcionó instrucciones de Zoom y interpretación, recordó a los participantes que la reunión se está grabando y transmitido en vivo, y repasó los temas de la agenda. Anunció que el CSC discutirá los temas futuros de la agenda al final de este, y todas las reuniones futuras.

Ryan dio la bienvenida a los participantes y les agradeció por ser flexibles a medida que el Distrito del Valle del Aire y el CSC avanzan con la implementación del Programa de Reducción de Emisiones Comunitarias (CERP) durante Covid-19.

Janet agradeció a todos por mantenerse enfocados en mejorar la calidad del aire y las relaciones.

Comentario: Por favor envíe la copia en papel de los horarios de las reuniones con anticipación, así como copias en papel de los materiales y las presentaciones con uno o dos días de anticipación.

Discusión de la Resolución de la Audiencia de la Junta de Recursos del Aire de California (CARB) de la resolución final de la Audiencia de Adopción de CARB del CERP y próximos pasos del 13 de febrero de 2020

Vernon Hughes, CARB

Vernon compartió que la resolución de la audiencia CARB está publicada en el sitio web: <http://community.valleyair.org/selected-communities/south-central-fresno/steering-committee-documents/> La resolución que fue a la audiencia de la Junta de CARB el 13 de febrero incluyó recomendaciones del personal. La Junta de CARB lo aprobó con cambios y modificaciones después de la discusión de la Junta el 13 de febrero de 2020.

Pregunta: CARB aprobó varias resoluciones el 13 de febrero. ¿Cuál es el cronograma para las normas y reglamentos? ¿CARB tiene alguna recomendación sobre dónde debe comenzar el CSC?

Respuesta: Depende en el CSC y el Distrito del Aire del Valle para identificar las prioridades de implementación.

Pregunta: ¿Cuáles son las ediciones y modificaciones?

Respuesta: Algunos cambios de alto nivel incluyen un estudio de desviación de camiones, un MOU con la Ciudad de Fresno sobre revisión de fuentes estacionarias, cronograma y formato de reportes.

Pregunta: ¿Podrían entrar en más detalles sobre la resolución ya que han pasado varios meses?

Espero que pasemos más tiempo hablando sobre la desviación de camiones, el manual de transporte de carga, las reglas y reglamentos (para abordar las preocupaciones de la comunidad, por ejemplo, el dejar el motor encendido mientras esta estacionado), los reportes y el papel del CSC en el proceso de reportes.

Respuesta: El Distrito del Aire del Valle proporcionará más actualizaciones en las próximas reuniones sobre estos y otros temas si hay interés.

Actualización del Estudio de Desviación de Camiones de Servicio Pesado

Scott Mozier, Director de Obras Públicas, Ciudad de Fresno

Scott proporcionó una actualización sobre la coordinación del Distrito del Aire del Valle y la Ciudad de Fresno (Ciudad) sobre la medida del CERP para llevar a cabo un estudio (estudio) de desviación de camiones de servicio pesado en la comunidad AB 617. Christal pidió a los participantes que mantuvieran sus preguntas hasta el final. Puntos importantes de la presentación:

- La desviación de camiones pesados es una alta prioridad para la comunidad, como se identificó durante el proceso de AB 617 y el trabajo previo de la ciudad. El CERP adoptado brinda la oportunidad de implementar medidas relacionadas. El objetivo es redirigir la ruta de camiones de corredores específicos, especialmente alrededor de poblaciones vulnerables.
- Establecida en 2005, la ordenanza municipal regula las rutas actuales de camiones de servicio pesado. El proceso de cambiar las rutas de camiones pesados incluye una preparación de estudio, evaluación ambiental, desarrollo de mapas y cambio de ordenanzas.
- La Ciudad administrará el estudio y sus elementos: participación de la comunidad, conteos de tráfico (un servicio proporcionado por la Ciudad), la vista previa de las condiciones

- existentes de la carretera, cambios en las rutas de camiones y análisis CEQA.
- Los siguientes pasos son finalizar el plan de financiación (el costo del consultor y la gestión del proyecto requieren financiación adicional), preparar acuerdos de colaboración, seleccionar consultores, involucrar a la comunidad y preparar el estudio.

Pregunta por Chat: ¿La presentación será en inglés solamente?

Respuesta por Chat: La presentación en la pantalla está en inglés, pero está disponible en línea <http://community.valleyair.org/selected-communities/south-central-fresno/steering-committee-meetings/>

Comentario por Chat: Para futuras reuniones, a los residentes españoles se les debe pedir que obtengan los materiales en español con anticipación y no en el acto. Tal como están las cosas, estamos luchando para que todos sepan cómo operar esta plataforma, y mucho menos abrir otra página diferente para ver los documentos en español.

Respuesta por Chat: Muy buen punto. Nos aseguraremos de llevarles esos materiales por adelantado.

Comentario por Chat: Por favor si para la próxima lo publican en español.

Respuesta por Chat: Para la próxima reunión voy a proporcionar los documentos en español antes de tiempo.

Pregunta: ¿Cuál es el cronograma de implementación?

Respuesta: El acuerdo de cooperación entre la Ciudad y el Distrito del Aire del Valle tomará varios meses, aproximadamente tres meses para seleccionar un consultor (mientras tanto, la Ciudad puede comenzar a realizar estudios de tráfico) y aproximadamente 10-12 meses para la participación, el estudio y cambio de ordenanza.

Pregunta: ¿Cuál es el cronograma para el acuerdo de colaboración? ¿Quién comenzará el proceso, la Ciudad o el Distrito del Aire del Valle?

Respuesta: La Ciudad buscará en el Distrito del Aire del Valle el acuerdo de colaboración. La ciudad está ansiosa por comenzar.

Respuesta: El Distrito del Aire del Valle oye que esta es una prioridad para el comité. Ya se llevó a cabo una serie de conversaciones con la ciudad. El Distrito del Aire del Valle intentará avanzar lo más rápido posible.

Pregunta: Gracias por mantener este problema en movimiento. La comunidad está frustrada por todo el dolor y el sufrimiento de nuestra gente. La discriminación sistémica y el diseño hicieron que nuestros vecindarios estuvieran más contaminados. Más personas mueren de asma. ¿Por qué esta presentación de desviación de camiones no reconoce eso?

Respuesta: Esta perspectiva es increíblemente importante. En el próximo proceso de participación de la comunidad para el estudio de desviación, habrá una oportunidad de compartir y abordar estos temas de importancia crítica.

Comentario: A medida que avanzamos con el estudio, necesitamos agregar un ángulo de justicia social/ambiental, discusión sobre la información de salud de la comunidad e impactos del intercambio de carreteras con residentes y peatones.

Pregunta: ¿Cuál es el costo total del estudio? ¿Cambiará el número de camiones después de COVID-19? ¿Tendrá el comité información sobre la selección de la empresa consultora y su acuerdo de servicio para garantizar que las necesidades de la comunidad se aborden en este proceso? ¿Qué pasa con el Informe de Impacto Ambiental y la renuncia de H Street? ¿Se incluirá eso en el estudio?

Respuesta: El costo variará entre \$200,000 y \$300,000 según los componentes del estudio. El mayor costo viene con compensaciones. Podemos ser creativos al utilizar los datos existentes del Plan de Transporte Activo de la Ciudad que ya proporciona análisis de aceras. Durante un refugio en el lugar, vemos una disminución del 40% en el tráfico de pasajeros y una disminución del 10% en el tráfico comercial. Los números futuros dependerán de varios factores. La Ciudad y el Distrito del Aire del Valle no han discutido la composición del comité de selección de consultores. Podemos tener una conversión al respecto. El plazo para el Informe de Impacto Ambiental no se ha publicado. El estudio tomará nota del Informe de Impacto Ambiental y el proyecto de cierre de la calle H.

Pregunta: ¿Cuál es el plan de la Ciudad para una auténtica participación comunitaria? ¿La Ciudad llevara a cabo reuniones virtuales si hay un segundo brote de COVID-19?

Respuesta: La participación de la comunidad es un componente importante del estudio. La idea es hacer algo similar al compromiso de AB 617 y participación de Centro-Sur Fresno con alcance específico, traducción, materiales, etc.

Pregunta: ¿Está involucrando a los miembros del Consejo que representan las áreas del estudio?

Respuesta: Sí, incluiremos miembros del Consejo y su jefe de personal.

Pregunta por Chat: ¿Qué factores determinarán las recomendaciones para cambiar las rutas de los camiones?

Pregunta por Chat: ¿Qué fondos están disponibles para las posibles fuentes de estudio además del AB 617?

Comentario por Chat: Estoy de acuerdo. Los datos de salud pública deben incluirse para determinar cómo se priorizan los cambios.

Comentario: ¿Puede el Distrito del Aire del Valle enviar el formulario de interés después de esta reunión para determinar quién le gustaría estar en este subcomité?

Comentario por Chat: Estoy de acuerdo. Se necesita un subcomité.

Respuesta: El Distrito del Aire del Valle apoya a un subcomité y puede investigarlo.

Verbalmente y a través del cuadro de chat, los miembros de CSC sugirieron pasar más tiempo discutiendo el estudio. También sugirieron construir más tiempo para el diálogo en futuras agendas de reuniones. El Distrito del Aire se comprometió a garantizar un mejor equilibrio entre las reuniones "informativas" y las discusiones de CSC. La facilitadora le pidió al grupo que decidiera si preferían pasar a los siguientes puntos del orden del día presentados por el Distrito del Aire del Valle o posponerlos hasta una reunión futura. Los miembros del CSC votaron para posponer la actualización de monitoreo del aire y la actualización de incentivos.

Pregunta: ¿Podrá el CSC participar en las entrevistas con los consultores y opinar en la selección?

Respuesta: La Ciudad no ha discutido el proceso de selección de consultores o varios aspectos del proceso, como la financiación, el proceso de acuerdos de cooperación, etc..

Comentario por Chat: Creo que los miembros de CSC deberían participar en el proceso de RFP.

Comentario por Chat: Sí, los miembros del Comité Directivo deberían tener derecho a participar en ese comité.

Comentario por Chat: La discusión sobre el alcance y el proceso debe ocurrir. Debe ser dirigido por los miembros y residentes de CSC. La Ciudad y el Distrito del Aire del Valle no deberían tener

conversaciones privadas sobre el costo, el alcance y el proceso.

Respuesta por Chat: Apreciamos la preocupación de que "La Ciudad y el Distrito del Aire del Valle no deberían tener conversaciones privadas sobre el costo, el alcance y el proceso". Sin embargo, las dos agencias necesitan preparar y obtener las aprobaciones respectivas de las Mesas Directivas para un acuerdo de cooperación entre las agencias. Trabajando de manera consistente con los deseos expresados del Comité Directivo, las agencias necesitan elaborar un lenguaje de acuerdo y tener la revisión del asesor legal respectivo.

Pregunta: El estudio de conteo de tráfico debe ser transparente. Dado que la Ciudad lo financia, ¿cómo aseguramos la precisión e imparcialidad de los resultados? ¿Por qué la ciudad y no un consultor hace recuentos de tráfico? Me dijeron que el costo del estudio estaría más cerca de \$500,000.

Respuesta: Los servicios proporcionados por la Ciudad incluyen contadores de tráfico e intercambio de datos. El precio del estudio puede variar. Con un precio de \$300,000, estamos tratando de lograr los mismos beneficios para la comunidad a un costo menor y liberar dinero para otras prioridades establecidas por el CSC.

Comentario: Mientras hablamos de números y costos, detengámonos y pensemos en el costo de las vidas, el dolor y el sufrimiento de la comunidad mientras estos procesos industriales continúan. Vemos que los camiones toman las mismas rutas cortas para llevar los productos a los fabricantes de manera más eficiente. Gracias, Scott y la Ciudad, por estar dispuestos a hacer el estudio y cambiar la ordenanza.

Comentario: Por favor escuchen a la comunidad y hagan que la comunidad participe en la elección del consultor. Con la economía potencialmente hundiéndose y disminuyendo el número de tráfico, ¿cómo planea el estudio garantizar el análisis del tráfico comercial y residencial para los escenarios de economía robusta? ¿Puede priorizar al mirar los elementos de justicia ambiental y los problemas de la comunidad como las aceras y las preocupaciones de salud si tenemos un segundo refugio en el lugar declarado más adelante en 2020?

Respuesta: Un posible resultado es retrasar el estudio mientras la economía se recupera. La seguridad de los peatones, la conectividad y los cuellos de botella son asuntos importantes para la Ciudad. El Plan de transporte activo refleja estos problemas. Los componentes alternativos del estudio son parte de debates más amplios, ya que tenemos que comprender mejores tipos de componentes y su coherencia general con el alcance del estudio y el CERP. Si bien la financiación está comprometida, hay dos cosas a tener en cuenta. CARB necesita aprobar los proyectos antes de recibir solicitudes de financiación. La Mesa Directiva del Distrito del Valle del Aire también tienen que aprobar la financiación.

Respuesta: Podemos ver las fuentes sustitutivas disponibles de datos VMT. Los datos disponibles e históricos pueden ayudar a la Ciudad, al comité y al Distrito del Aire del Valle a decidir el momento del estudio.

Comentario por Chat: aquí nuevamente está el aviso para el seminario web de CARB que repasará las pautas de financiamiento de incentivos AB 617 CAP.

<https://content.govdelivery.com/accounts/CARB/bulletins/286832c>

Comentario: Los problemas de salud de los residentes que viven a lo largo de estas rutas de camiones de servicio pesado son motivo de gran preocupación para este comité.

Comentario: Hay oportunidades para aprovechar algunas de las colaboraciones en curso a lo largo de ese corredor. Por ejemplo, la ciudad y Caltrans están trabajando para repavimentar la calle Jensen.

Pregunta: Mi vecino estaba quemando algo durante el fin de semana. Presentamos una queja ante la Ciudad, pero no recibimos respuesta.

Respuesta: El Distrito del Aire del Valle enviará un inspector para observar su área.

Respuesta por Chat: Si alguien desea el número de Lupe para someter reportes, solicítelo al Distrito del Aire y podrá llamar directamente.

Comentario: El CSC y el público deben participar en el estudio, sentarse en la mesa y conversar con la Ciudad. Las voces de la comunidad deben ser escuchadas, tomadas en consideración y valoradas.

Respuesta: Habrá numerosas reuniones públicas y oportunidades de participación.

Comentario: Hay varios factores a considerar:

1. El cierre de American Avenue para el proyecto de tren de alta velocidad supone una carga adicional para otras calles, Jensen y North Avenue, por ejemplo. Los camiones conducen en calles no diseñadas para camiones.
2. Caltrans estará haciendo un proyecto de mejora de intercambio. Sin que la Ciudad planee ensanchar las calles, va a complicar el tráfico en esas áreas. Tal vez podamos obtener una lista de la comunidad sobre estas áreas problemáticas y ayudar a llegar con las soluciones.

Comentario por Chat: En cuanto al cronograma para completar el estudio, para recapitular:

- Necesitamos un mínimo de dos meses para que el acuerdo la Ciudad/Distrito del Aire del Valle se desarrolle y apruebe;
- Tres meses para contratar al equipo consultor;
- 10-12 meses para completar el estudio;
- Culminando con una nueva ordenanza sobre camiones adoptada por el Ayuntamiento de Fresno. (1-1 / 2 años de distancia).

Con respecto a los factores que se deben considerar al cambiar las rutas de los camiones, el estudio consideraría los comentarios/inquietudes de la comunidad (ruido, emisiones a la atmósfera, seguridad y compatibilidad con los usos del suelo), pero también la capacidad de la nueva ruta propuesta para manejar el tipo y el volumen de tráfico. Los aportes de la comunidad sobre la nueva ruta y otros aportes de los interesados serán críticos (escuelas, condado de Fresno, empresas, etc.). En términos de otras fuentes de financiamiento, la Ciudad de Fresno ha ofrecido servicios a través del personal de campo de Operaciones de Tráfico (estimando \$66,000 en horas de personal). El Distrito del Aire del Valle también está buscando otras fuentes de financiación.

Comentario por Chat: Me gustaría tener un historial de reducción de tóxicos en el aire AB2588 y quisiera que CARB haga una revisión del alcance del Plan AB 617.

Actualización del Programa de Eficiencia Energética sobre el Programa de Energía Fresno de Olivine, Inc. y detalles sobre incentivos para residentes para participar

Laura, Asesora de Políticas para Comunidades Desfavorecidas, Olivine

Laura presentó información sobre el estudio piloto de respuesta a la demanda de energía y su acompañante, el Programa de Energía de Fresno en Centro-Sur Fresno. Este estudio busca identificar el potencial de participación, la reducción en el consumo de energía y la mensajería dirigida. Los resultados informarán los futuros diseños de programas. Puntos importantes de la presentación:

- Beneficios de participación: reciba pagos por reducción de energía, ahorre energía, conozca otros programas públicos. Gane hasta \$170 en efectivo al ahorrar energía, participar en eventos de ahorro de energía y hacer referencias.

- Para participar, los residentes deben vivir en ocho códigos postales calificados (disponibles en el sitio web), tener acceso a Internet, tener acceso a la cuenta de PG&E y no tener otras inscripciones en programas similares de respuesta a la demanda. Participe descargando la aplicación o a través del sitio web. La inscripción se extiende hasta septiembre. Visite www.fresnoenergyprogram.com para registrarse.

Comentario: La eficiencia energética es una de las estrategias del CERP y ocupa un lugar alto en la lista de priorización. Las tarjetas de visa digitales llegan dentro de las 48 horas después de registrarse.

Pregunta: El miembro del CSC puede comunicarse con 800 personas sobre este programa. ¿La plataforma digital tiene un diseño amigable para los ciegos? ¿Qué pasa con las personas que no tienen acceso a Internet?

Respuesta: Desafortunadamente, no tiene un diseño amigable para los ciegos. En cuanto al acceso a internet, los participantes deben poder recibir correos electrónicos para participar. Pueden usar computadoras públicas para iniciar sesión.

Pregunta: ¿Qué pasa con el acceso al idioma?

Respuesta: Tenemos atención al cliente en español por teléfono y por correo electrónico.

Concluir/Próximos pasos Encuesta de tiempo de la reunión

Próxima Reunión: Miércoles 10 de junio a través de Zoom

Christal Love Lazard, Facilitadora, Institute for Local Government

Por favor informe al Distrito del Aire del Valle qué elementos de la agenda futura le gustaría ver en las agendas de reuniones futuras.

El personal del Distrito del Aire del Valle proporcionó una actualización de membresía del comité directivo. Hay 44 miembros; Se necesitan cinco residentes más. El personal del Distrito utilizará las redes sociales, las llamadas telefónicas, los correos electrónicos y el contacto con socios religiosos para alistar a más residentes. Se les pide a los miembros de CSC que compartan sugerencias de alcance adicionales.

Pregunta: ¿Existe un límite de edad mínima para participar en el CSC?

Respuesta: Los adolescentes están bien. Los padres deberán aprobar la participación de menores de 18 años.

El personal de CARB proporcionó una actualización sobre los estipendios de CSC. CARB está trabajando con el Distrito del Aire del Valle y el grupo de Consulta de Justicia Ambiental sobre la redacción de las directrices de estipendio.

Comentario: Por favor comparta la lista de las fechas de la reunión en papel con los miembros del CSC que lo soliciten. Comparta los folletos en papel al menos 2-3 días antes de la reunión. El estipendio debe ser retroactivo.

Respuesta: El segundo miércoles del mes es una fecha fija para la reunión de CSC. La fecha de la reunión de junio entra en conflicto con la fecha de la reunión de Fresno Transformative Climate Communities. El personal informará a los miembros del CSC sobre una posible nueva fecha de junio y publicará el horario en el sitio web del Distrito del Aire.

Comentario: Los documentos en español son difíciles de abrir y ver en una pantalla separada.

Pregunta: Aunque podemos compartir los temas de la agenda para futuras reuniones, ¿podemos revisarlos y establecerlos al comienzo de cada reunión?

Respuesta: Examinar la agenda al comienzo de las reuniones es logísticamente difícil de hacer. Se necesita mucho trabajo para preparar la agenda, reunir materiales, encontrar los oradores adecuados y preparar la traducción al español. Estamos comprometidos a continuar trabajando con el coanfitrión de la comunidad para desarrollar agendas mensuales. Por favor informe al Distrito del Aire qué elementos de la agenda le gustaría ver en futuras reuniones.

Comentario por Chat: Próximos puntos del orden del día: Actualizaciones de Reglas y Reglamentos, Estipendios, Actualización sobre el Subcomité de Desviación de Camiones, Actualización sobre Monitoreo del Aire (escuelas del FUSD/Orange Center), continuación de posponer elementos desde esta noche

Kimberly McCoy se ofreció como co-anfitriona de la reunión de junio.

Comentario: Cuando volvemos a las reuniones en persona, algunas personas no pueden asistir a menos que haya una vacuna.

Los miembros del comité participaron en la encuesta para identificar los horarios de reunión preferidos:

- 5:30pm-7:30pm – 7 votos
- 3:00pm-5:00pm – 5 votos
- 4:30pm-6:30pm – 4 votos

Próxima Reunión: Por determinar con el aporte del Comité

Todas las presentaciones, grabación de la reunión por Zoom, puntos interesantes y transcripciones se publicarán en línea.

**Consulte el audio de la reunión para revisar todos los detalles y comentarios de la reunión.*

Agenda for South Central Fresno Community Steering Committee Meeting #21

Wednesday, May 13, 2020 – 5:30 pm - 7:30 pm

Zoom Meeting: <https://zoom.us/j/912784440>

Meeting ID: 912 784 440

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Christal Love-Lazard, Facilitator, Institute for Local Government
Ryan Hayashi, Deputy Air Pollution Control Officer, Valley Air District
Janet Gardner, Community Co-host
- 5:40 p.m. CARB Hearing Resolution**
Discussion of CARB's final resolution from Feb 13, 2020 CERP adoption hearing and next steps
Vernon Hughes, California Air Resources Board (CARB)
- 5:50 p.m. Heavy Duty Truck Rerouting Study Update**
Update and discussion on District and City of Fresno coordination on the CERP measure to conduct a truck rerouting study in the AB 617 community
Scott Mozier, Public Works Director, City of Fresno
- 6:15 p.m. Air Monitoring Update**
Update on District monitoring placement and recent data analysis
Brad Dawson, Supervising Air Quality Instrument Specialist, Valley Air District
- 6:35 p.m. Incentives Update**
Update on CERP incentives measures discussed on March 11 (school buses, heavy-duty trucks, funding guidelines) and solicit feedback on school air filtration measure
Valley Air District Staff
- 6:55 p.m. Energy Efficiency Program**
Update on Fresno Energy Program from Olivine, Inc. and details on resident incentives to participate
Laura Mameesh, Policy Advisor for Disadvantaged Communities, Olivine
- 7:15 p.m. Wrap Up/Next Steps**
Meeting time poll
Next Meeting: Wednesday, June 10 via Zoom
Christal Love Lazard, Facilitator, Institute for Local Government

Learn more: community.valleyair.org

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #21

Miércoles 13 de mayo de 2020 – 5:30 pm a 7:30 pm

Reunión por Zoom: <https://zoom.us/j/912784440>

Meeting ID: 912 784 440

Teleconferencia: **888 788 0099 US** (Llamada gratuita)

- 5:30 p.m. Bienvenida, Introducciones**
Christal Love Lazard, Facilitadora, Institute for Local Government
Ryan Hayashi, Director Adjunto, Distrito del Aire del Valle
Janet Gardner, Coanfitrión de la Comunidad
- 5:40 p.m. Resolución de la Audiencia de CARB**
Discusión de la resolución final de CARB de la audiencia de adopción del CERP del 13 de febrero de 2020 y los próximos pasos
Vernon Hughes, Junta de Recursos del Aire de California (CARB)
- 5:50 p.m. Actualización del Estudio de Desviación de Camiones de Servicio Pesado**
Actualización y discusión sobre la coordinación del Distrito y la Ciudad de Fresno sobre la medida del CERP para llevar a cabo un estudio de desviación de camiones en la comunidad AB 617
Scott Mozier, Director de Obras Públicas, Ciudad de Fresno
- 6:15 p.m. Actualización de Monitoreo del Aire**
Actualización sobre la ubicación de equipo de monitoreo del Distrito y análisis de datos recientes
Brad Dawson, Especialista Supervisor de Instrumentos de Calidad del Aire, Distrito del Aire del Valle
- 6:35 p.m. Actualización de Incentivos**
Actualización sobre las medidas de incentivos del CERP discutidas el 11 de marzo (autobuses escolares, camiones de servicio pesado, pautas de financiación) y solicitar comentarios sobre la medida de filtración de aire escolar
Personal del Distrito del Aire del Valle
- 6:55 p.m. Programa de Eficiencia Energética**
Actualización sobre el Fresno Energy Program de Olivine, Inc. y detalles sobre incentivos para residentes para participar
Laura Mameesh, Asesora de Políticas para Comunidades Desfavorecidas, Olivine
- 7:15 p.m. Concluir/Próximos Pasos**
Encuesta del Horario de Reunión
Próxima Reunión: miércoles, 10 de junio por Zoom
Christal Love Lazard, Facilitadora, Institute for Local Government

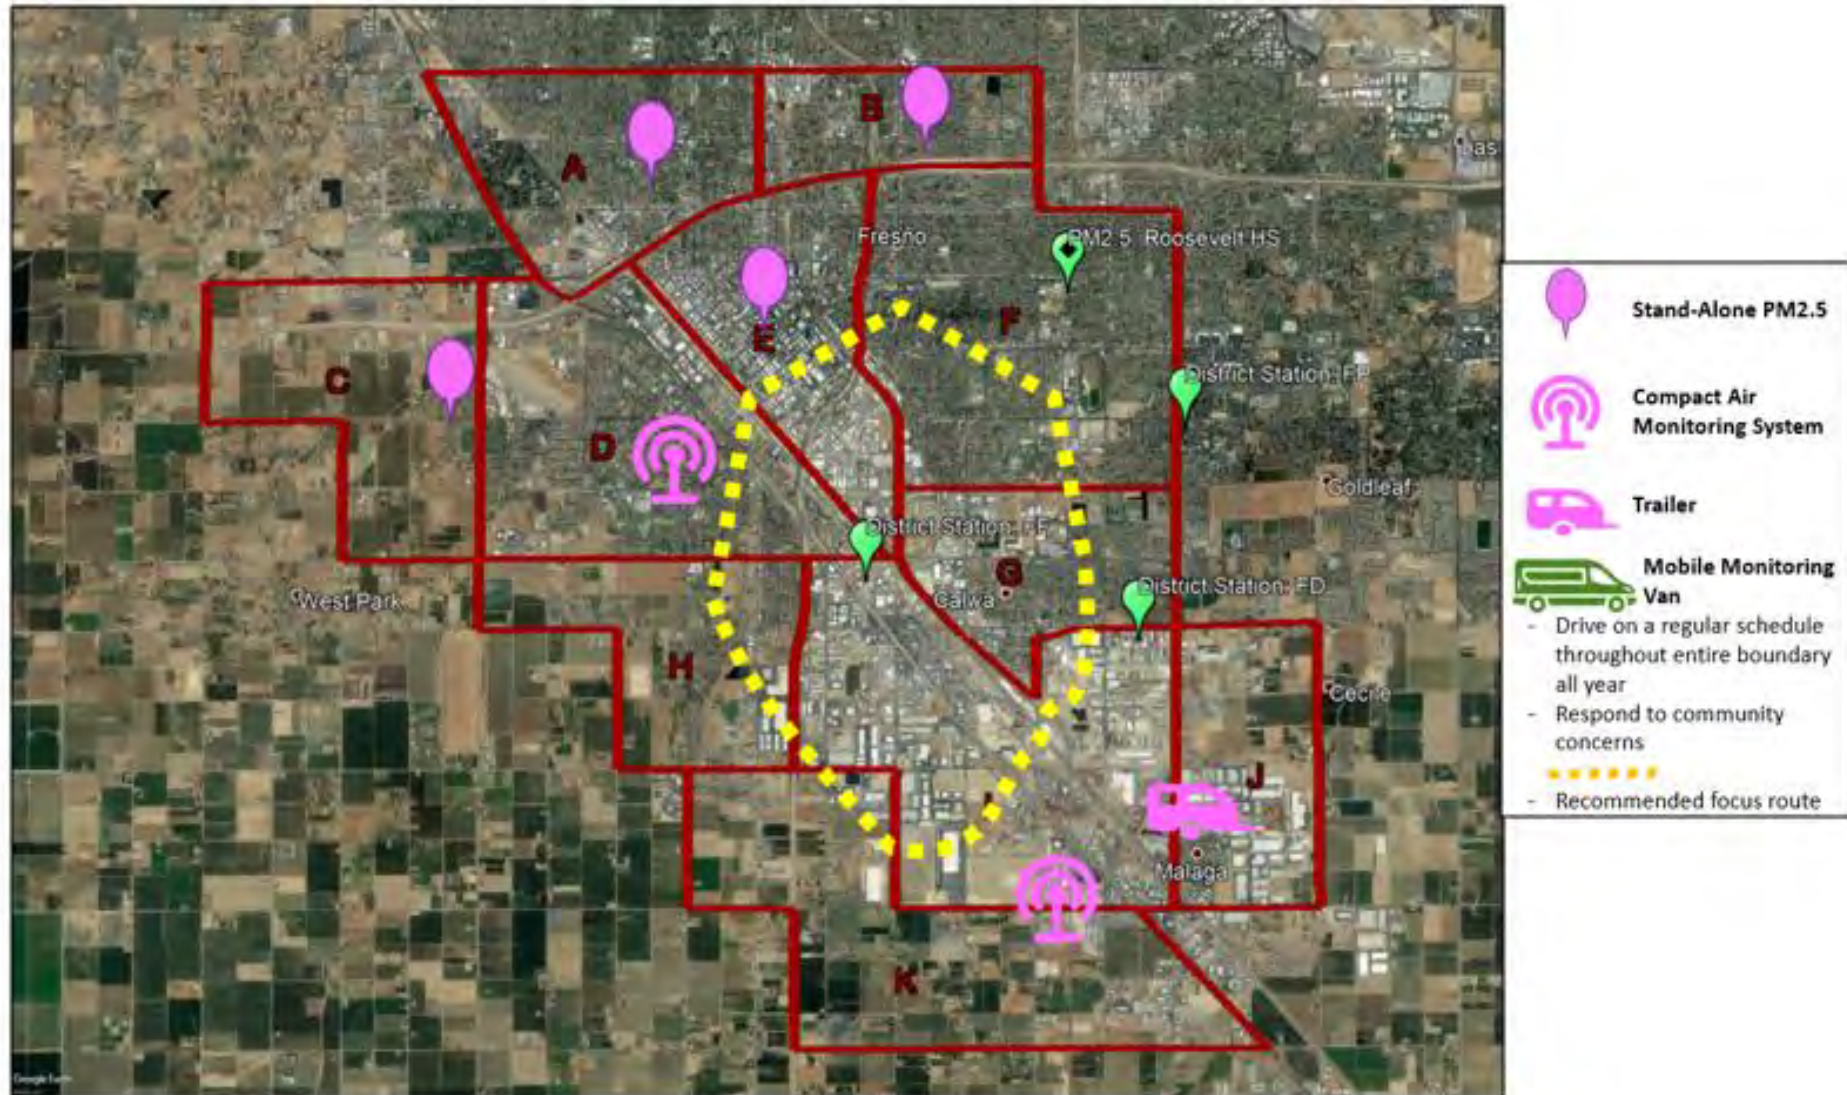

South Central Fresno AB 617 Community Air Monitoring Update

Community Steering Committee Meeting
May 13, 2020

Ongoing Community Air Monitoring

- District continuing to conduct localized air monitoring in South Central Fresno community
- Working to deploy additional air monitoring platforms across the community, according to Community Steering Committee recommended network design
 - Due to challenges in working with school districts, finding alternative locations near schools to place air monitoring equipment
- Air monitoring van actively being used to regularly monitor pollutants in areas of interest of the community and near recommended site locations for network design
- Intensive PM_{2.5} and VOC speciation sampling and laboratory analysis being conducted since late 2019

Community Air Monitoring Network Design

Community Air Monitoring Platforms

Community Air Monitoring Platforms (cont'd)

Community Air Monitoring Platforms (cont'd)

Online Sites in South Central Fresno

Real-Time PM2.5

- Bitwise South Stadium
- Roosevelt High School
- Fresno-Foundry (near-road site)

VOC and PM2.5 Speciation

- Fresno-Foundry
- Measurements to continue here until Malaga Elementary trailer is in place (soon)

Mobile Air Monitoring Van

- Regular measurements in community designated areas of interest and in community selected locations

Pending Sites in South Central Fresno

Real-Time PM2.5

- **Heaton Elementary & Yosemite Middle School:** Waiting on Fresno Unified, working on alternative locations
- **Madison Elementary:** Waiting on Central Unified, working on alternative locations

Compact Multi-Pollutant Air Monitoring System

- **Orange Center School:** School Board voted against placing equipment at this site, working on alternative locations
- **Edison High School:** Waiting on Fresno Unified, working on alternative locations
- Compact system being operated at Fresno-Foundry in the interim

Air Monitoring Trailer

- **Malaga Elementary:** Approved by Fowler Unified in February 2020, completing electrical work, then trailer will be installed

Daily Average PM2.5 Data Comparison January 1, 2020 – March 31, 2020

Comparison of Average PM2.5

January 1 – March 31, 2020

Site	Average PM2.5 Concentration ($\mu\text{g}/\text{m}^3$)
Fresno-Garland	13.1
Fresno-Roosevelt	13.7
Fresno-Bitwise	12.5
Fresno-Foundry*	14.7

*Site measures roadway pollution, does not represent ambient conditions

Mobile Air Monitoring Van Activities

Site A: Parking lot on east corner of Tulare and 'R' Street

Site B: Parking lot on south east corner of East Butler Ave and South Cedar Ave

Site C: Parking lot on southwest corner of East California Ave and South Van Ness Ave

Site D: On 2nd Street south of intersection with Jensen Ave

Site E: Parking lot on southeast corner of E Jensen Ave and S Cedar Ave

Site F: Unpaved lot on southwest corner of E North Ave and S Cherry Ave

Mobile Air Monitoring Van Activities (cont'd)

- Short-term measurements taken in multiple locations on various days in January 2020
- The concentrations of pollutants measured for all locations were minimal during this period:
 - Ozone did not exceed 53 ppb, below the federal 8-hr ozone standard of 70 ppb
 - CO did not exceed 0.59 ppm, below the federal 1-hr CO standard of 35 ppmv
 - NO₂ did not exceed 52 ppb, below the federal 1-hr NO₂ standard of 100 ppb
 - SO₂ did not exceed 0.9 ppb, below the federal 1-hr SO₂ standard of 75 ppb
 - VOC analyzers did not detect any measurable benzene, toluene, ethylbenzene, or xylene (BTEX) emissions at selected locations during this monitoring period
 - BTEX is a good indicator of VOC concentrations as a whole

Mobile Air Monitoring Van Activities (cont'd)

- Multiple hour measurements taken at single locations in March 2020
 - Collected data allowed for better comparison with federal air quality standards
 - District focusing these efforts in areas identified in the Community Air Monitoring Plan
- Example: March 19 measurements near Edison High School

PM2.5 Speciation Analysis

Fresno-Foundry Site (November 2019 – March 2020)

VOC Speciation Analysis

- VOC measurements and speciation laboratory analysis being conducted at Fresno-Foundry site since December 2019
- Laboratory analysis isolates concentrations of 68 VOC species
 - Results show trace or no detections of most VOC species
 - Focusing results on which species were detected in laboratory analysis

Detected VOC Species

Availability of Collected Community Air Quality Data

- CARB continuing to develop statewide air quality data portal (AQview) to display and provide community air monitoring data from selected AB 617 communities
 - AQview website located at: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Air quality data from Valley AB 617 communities now available at this website
 - Monthly data will continue to be made available as air monitoring campaign continues
- Real-time community air monitoring data available on District AB 617 webpage at: <http://community.valleyair.org/community-air-monitoring>

Development and Availability of Ongoing Reports

- District will be developing comprehensive quarterly reports summarizing air monitoring data collected
 - Quarterly reports will be posted to District AB 617 webpage
- Detailed reports of laboratory PM_{2.5} and VOC speciation analysis also to be posted on District AB 617 webpage
- Report summarizing collected air monitoring data from February 2019 through March 2020 will be available at:
<http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>

Comments/Questions?

Actualización de Monitoreo del Aire de la Comunidad AB 617 de Centro-Sur Fresno

Reunión del Comité Directivo Comunitario
13 de mayo de 2020

Monitoreo Continuo del Aire Comunitario

- El Distrito continúa el monitoreo del aire localizado en la comunidad de Centro-Sur Fresno
- Trabajando para desplegar plataformas de monitoreo del aire adicionales en toda la comunidad, de acuerdo con el diseño del sistema recomendado por el Comité Directivo de la Comunidad
 - Debido a los desafíos en el trabajo con los distritos escolares, buscando ubicaciones alternativas cerca de las escuelas para colocar equipos de monitoreo del aire
- La camioneta de monitoreo del aire se usa activamente para monitorear contaminantes en áreas de interés de la comunidad y cerca de las ubicaciones recomendadas para el diseño del sistema
- Pruebas intensivas de especiación de PM2.5 y VOC y análisis de laboratorio se han llevado a cabo desde los fines de 2019

Diseño del Sistema de Monitoreo del Aire Comunitario

Plataformas de Monitoreo del Aire Comunitario

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Plataformas de Monitoreo del Aire Comunitario *(cont.)*

Sitios en Línea en Centro-Sur Fresno

PM2.5 en Tiempo Real

- Estadio Sur de Bitwise
- Escuela Roosevelt High
- Fresno-Foundry (sitio cerca de la carretera)

Especiación de VOC y PM2.5

- Fresno-Foundry
- Las medidas continuarán aquí hasta que el trailer de Málaga Elementary esté en su lugar (pronto)

Camioneta de Monitoreo del Aire Móvil

- Medidas regulares en áreas de interés designadas por la comunidad y en ubicaciones seleccionadas por la comunidad

Sitios pendientes en Centro-Sur Fresno

PM2.5 en Tiempo Real

- **Heaton Elementary y Yosemite Middle School:** Esperando en Fresno Unified, trabajando en ubicaciones alternativas
- **Madison Elementary:** Esperando en Central Unified, trabajando en ubicaciones alternativas

Sistema Compacto de Monitoreo del Aire Multi-Contaminante

- **Orange Center School:** La Junta Escolar votó en contra de colocar equipos en este sitio, trabajando en ubicaciones alternativas
- **Edison High School:** Esperando en Fresno Unified, trabajando en ubicaciones alternativas
- Sistema compacto operando en Fresno-Foundry mientras tanto

Remolque de Monitoreo del Aire

- **Malaga Elementary:** Aprobado por Fowler Unified en febrero de 2020, completando el trabajo eléctrico, luego se instalará el remolque

Comparación del Promedio Diario de Datos de PM2.5 1 de enero de 2020 - 31 de marzo de 2020

Comparación de Promedio de PM 2.5

1 de enero - 31 de marzo de 2020

Sitio	Concentración de Promedio de PM2.5 ($\mu\text{g}/\text{m}^3$)
Fresno-Garland	13.1
Fresno-Roosevelt	13.7
Fresno-Bitwise	12.5
Fresno-Foundry*	14.7

* El sitio mide la contaminación del camino, no representa las condiciones ambientales

Actividades de Camioneta de Monitoreo del Aire Móvil

Sitio A: Estacionamiento en la esquina este de Tulare y la calle 'R'

Sitio B: Estacionamiento en la esquina sureste de East Butler Ave y South Cedar Ave

Sitio C: Estacionamiento en la esquina suroeste de East California Ave y South Van Ness Ave

Sitio D: En 2nd Street al sur de la intersección con Jensen Ave

Sitio E: Estacionamiento en la esquina sureste de E Jensen Ave y S Cedar Ave

Sitio F: Lote sin pavimentar en la esquina suroeste de E North Ave y S Cherry Ave

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de corto plazo tomadas en múltiples ubicaciones en varios días en enero de 2020
- Las concentraciones de contaminantes medidas para todos los lugares fueron mínimas durante este período:
 - Ozono no excedió 53 ppb, debajo del estándar federal de ozono de 8-hr de 70 ppb
 - CO no excedió 0.59 ppm, debajo del estándar federal de CO de 1-hr de 35 ppm
 - NO₂ no excedió 52 ppb, debajo del estándar federal de NO₂ de 1-hr de 100 ppb
 - SO₂ no excedió 0.9 ppb, debajo del estándar federal de SO₂ de 1-hr de 75 ppb
 - Los analizadores de VOC no detectaron emisiones de BTEX medibles en ubicaciones seleccionadas durante este período de monitoreo
 - BTEX es un buen indicador de las concentraciones de VOC en su totalidad

Actividades de Camioneta de Monitoreo del Aire Móvil (cont)

- Medidas de varias horas tomadas en ubicaciones individuales en marzo de 2020
 - Los datos recopilados permitieron una mejor comparación con los estándares federales de calidad del aire
 - Distrito enfocando estos esfuerzos en áreas identificadas en el Plan Comunitario de Monitoreo del Aire
- Ejemplo: medidas del 19 de marzo cerca de Edison High School

Análisis de Especiación de PM2.5

Sitio de Fresno-Foundry (noviembre 2019 – marzo 2020)

Análisis de Especiación de VOC

- Las medidas de VOC y el análisis de laboratorio de especiación se han llevado a cabo en el sitio de Fresno-Foundry desde diciembre 2019
- El análisis de laboratorio aísla las concentraciones de 68 especies de VOC
 - Los resultados muestran trazas o no detecciones de la mayoría de las especies de VOC
 - Enfocando resultados sobre qué especies fueron detectadas en análisis de laboratorio

Especies de VOC Detectadas

Disponibilidad de Datos Recopilados de la Calidad del Aire de la Comunidad

- CARB está desarrollando un portal de datos de calidad del aire en todo el estado (AQview) para mostrar y proporcionar datos de monitoreo del aire de la comunidad de comunidades AB 617 seleccionadas
 - Sitio web AQview: <https://ww2.arb.ca.gov/es/community-air-quality-portal>
 - Los datos de calidad del aire de las comunidades AB 617 del Valle ya están disponibles en este sitio web
 - Los datos mensuales continuarán disponibles a medida que continúe la campaña de monitoreo del aire
- Datos de monitoreo del aire comunitario en tiempo real disponibles en la página web del Distrito AB 617 en:
<http://community.valleyair.org/community-air-monitoring>

Desarrollo y Disponibilidad de Informes Continuos

- El Distrito desarrollará reportes trimestrales completos cuales resumerán los datos de monitoreo del aire recopilados
 - Los informes trimestrales se publicarán en la página web del Distrito AB 617
- Los reportes detallados del análisis de especiación de PM2.5 y VOC de laboratorio también se publicarán en la página web del Distrito AB 617
- El reporte que resume los datos recopilados de monitoreo del aire desde febrero de 2019 hasta marzo de 2020 estará disponible en: <http://community.valleyair.org/selected-communities/south-central-fresno/air-monitoring/>

Comentarios/¿Preguntas?

Presented by

City of Fresno, Public Works Department

Scott Mozier, PE, TE, Public Works Director

**Truck Re-Routing Study
AB617 Steering Committee
Update – May 13, 2020**

Community Priority Re-Routing of Large Trucks

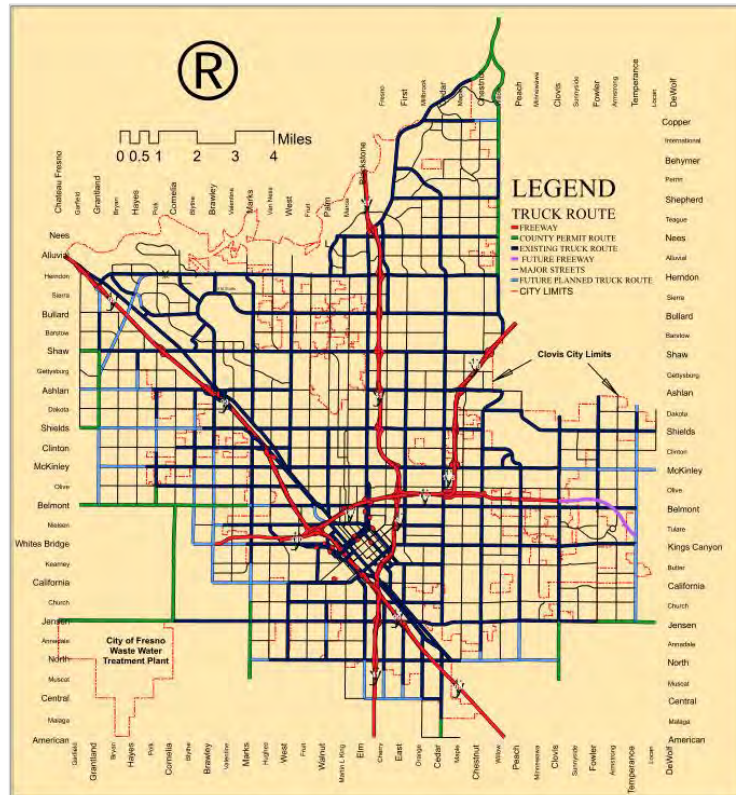

- Identified as community priority through AB617 process
- Included in adopted Community Emission Reduction Plan (CERP)
- Re-route trucks away from certain corridors

Truck Re-Routing Study

Current City of Fresno Map (Ordinance)

CITY OF FRESNO Designated Truck Routes

Note: Commercial vehicles exceeding twelve thousand (12,000) pounds maximum gross weight are restricted to designated truck routes. Certain exceptions may be permitted pursuant to California Vehicle Code sec. 35701 and Fresno Municipal Code Section 10-1303. Call 559-621-8683 or 559-621-8600 for additional information.

Effective September 25, 2005

Truck Re-Routing Study

Changing Truck Routes – the Process

- Preparation of a study by a professional transportation consulting firm
 - Community & Stakeholder Engagement
 - Analysis
 - Recommendations
- CEQA Environmental Document
- Amended Ordinance and Truck Route Map to be adopted by Fresno City Council

Truck Re-Routing Study

Components

- Management of study by City of Fresno
- Community & stakeholder engagement
 - Residents
 - Businesses
 - Public agencies
- Collection of traffic counts
- Review of existing roadway conditions
- Potential changes to existing truck routes
- Elimination of truck routes
- Proposed new routes
- CEQA analysis

Truck Re-Routing Study

Funding

- City of Fresno proposes to provide the traffic counts as an in-kind service (\$66,000 value)
- Funding needed for consultant costs, project management & contract administration (Air District/AB617, other funding sources?)

Truck Re-Routing Study

Next Steps

- Finalize funding plan
- SJVAPCD and City of Fresno to develop a cooperative agreement for Board/City Council approval
- Consultant selection process & contract approval (12 weeks)
- Traffic counts – potentially in August if “normal” conditions have resumed
- Community engagement and preparation of truck re-routing study (10-12 months from notice to proceed to selected consultant)

Questions

Presentado por

Ciudad de Fresno, Departamento de Obras Públicas

Scott Mozier, PE, TE, Director de Obras Públicas

Estudio de Cambio de Ruta de Camiones

Comité Directivo AB617

Actualización – 13 de mayo de 2020

Prioridad Comunitaria

Cambio de Ruta de Camiones

- Identificado como prioridad de la comunidad a través del proceso AB617
- Incluido en el Plan de Reducción de Emisiones de la Comunidad adoptado (CERP)
- Desviar los camiones lejos de ciertos corredores

Estudio de Cambio de Ruta de Camiones

Cambio de rutas de camiones – el Proceso

- Preparación de un estudio por una empresa consultora de transporte profesional
 - Compromiso de la Comunidad y las Partes Interesadas
 - Análisis
 - Recomendaciones
- Documento Ambiental de CEQA
- Ordenanza modificada y mapa de ruta de camiones que será adoptado por el Concejo Municipal de Fresno

Estudio de Cambio de Ruta de Camiones

Componentes

- Gestión del Estudio por la Ciudad de Fresno
- Compromiso de la Comunidad y las Partes Interesadas
 - Residentes
 - Negocios
 - Agencias Públicas
- Colección de conteos de tráfico
- Revisión de las condiciones de la carretera existente
- Posibles cambios en las rutas de camiones existentes
- Eliminación de rutas de camiones
- Nuevas rutas propuestas
- Análisis CEQA

Estudio de Cambio de Ruta de Camiones Financiamiento

- La Ciudad de Fresno propone proporcionar los recuentos de tráfico como un servicio en especie (valor de \$66,000)
- Financiamiento necesario para costos de consultores, gestión de proyectos y administración de contratos (Distrito del Aire/ AB617, ¿otras fuentes de financiamiento?)

Estudio de Cambio de Ruta de Camiones

Próximos Pasos

- Finalizar plan de financiación
- SJVAPCD y la Ciudad de Fresno desarrollarán un acuerdo cooperativo para la aprobación de la Mesa Directiva/Consejo Municipal
- Proceso de selección de consultores y aprobación del contrato (12 semanas)
- Recuentos de tráfico: potencialmente en agosto si se han reanudado las condiciones "normales"
- Participación de la comunidad y preparación del estudio de cambio de ruta de camiones (10-12 meses desde la notificación para proceder al consultor seleccionado)

Preguntas

The Olivine Community: Fresno Energy Program

Sponsored by PG&E

Public Utilities Commission Orders Pilots

Problem: High polluting gas peaker plants are disproportionately located in or near disadvantaged communities (DACs). These gas peaker plants are operated when demand for energy is high, typically in the summer and evening hours.

Demand response (DR), a form of renewable energy, can be used to reduce demand on these gas peaker plants, leading not only to air quality improvements but other monetary and non-monetary benefits to residents.

Decision: Conduct a study in each of the 3 IOU territories located in DACs to examine potential for participation in demand response programs by residents.

Program Area- South-Central Fresno

- Census tracts within the AB617 boundary score in the top 5% of DACs in California.

	PG&E Pilot Zip Codes
	AB 617 Regional Outline
	SB-535 DACs

Goals of the Fresno Energy Program

- **Ability and Willingness of residents to participate**
 - What is the current level of awareness of DR program availability
 - Level of understanding of how DR programs create value for customers and the community?
 - What is the current level of interest in participating in demand response programs?
- **Energy Use**
 - How do the different households use energy in their homes?
 - How well can households respond to and participate in DR programs?
- **Outreach**
 - What are the best methods to reach different types of Fresno households (Inc. hard to reach customers)
- **Messaging**
 - What kind of messaging resonate best with Fresno households?
- **Benefits**
 - What kinds of DR incentives and program offerings will be of greatest value to Fresno households and benefit them the most?

Results will be used to inform future program design including possible expansion of the program in the Fresno area.

What is the Olivine Community?

An innovative platform for aggregation of energy resources to provide grid services and decarbonize our environment.

Working Together | Equity | Impact local environment | Reduce energy costs & Earn Money

Current Programs:

- Fresno Energy Program: Sponsored by PG&E
- Power Response Program: Clean Power Alliance (CPA). In Los Angeles and Ventura Counties
- Lancaster Green District
- Richmond Advanced Energy
- Sonoma GridSavvy: Sonoma and Mendocino County

What are the benefits of participation?

Benefits for you and your family:

- Earn Money
- Reduce your energy costs
- Opportunity to earn free Smart Thermostats and learn about other programs.

Benefits for your community:

- Reduce pollution by reducing energy demand during peak times
- Reduce greenhouse gas emissions & fight Climate Change
- Engage with your community
- Answer our surveys and contribute to develop future programs

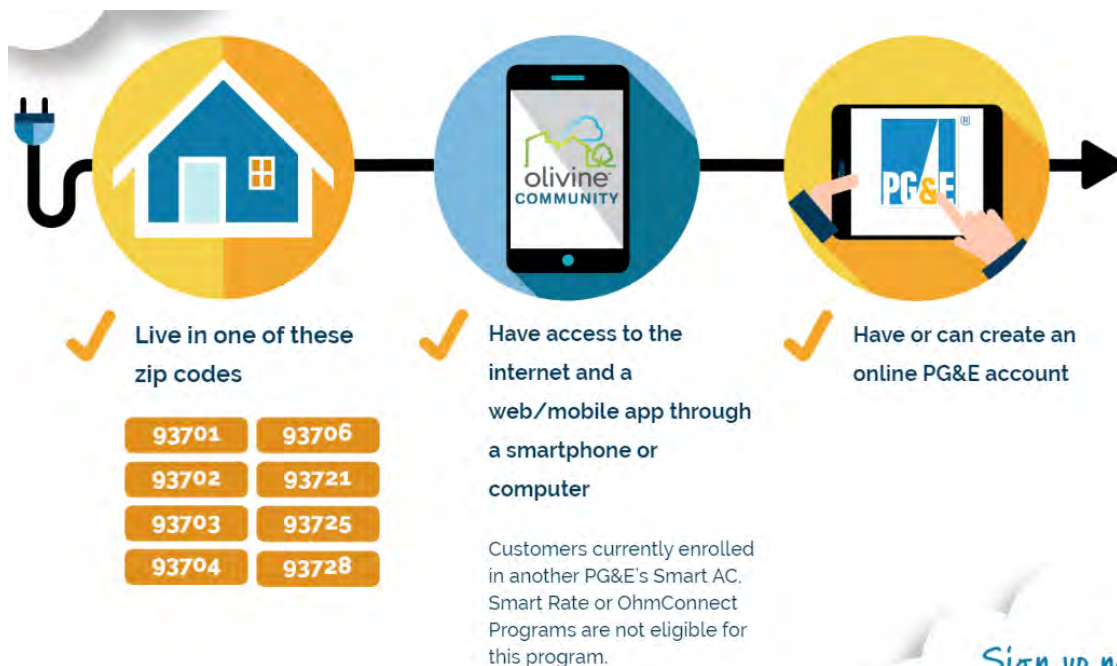

How are rewards earned?

\$20 Referral Bonus Reward (Limit 10/household)

Who can enroll?

- You are **eligible** if :
 - You live in one of these **zip codes** – 93701, 93702, 93703, 93704, 93706, 93721, 93725, 93728
 - Have access to the internet and a web/mobile app through a smartphone or computer
 - Have or can create an online PG&E account
 - Are not enrolled in another Demand Response (DR) program

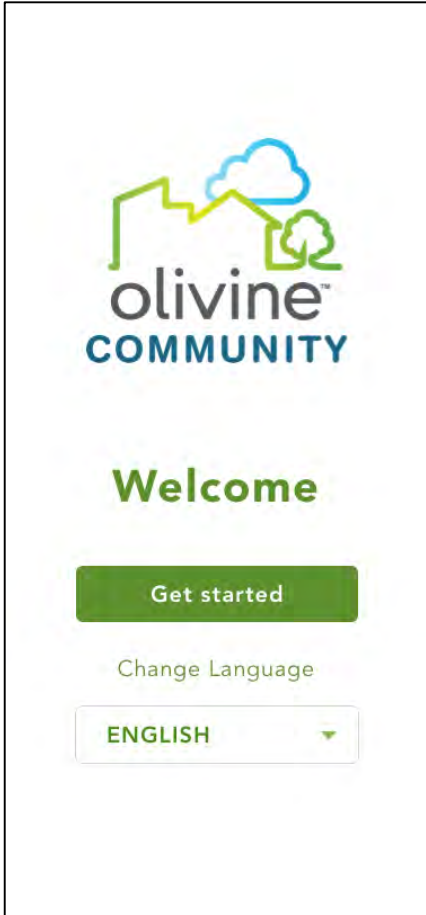

Sign up now!
Enrollment ends
6/30/2020.

What does this program not do?

- X** Change your home electricity service, provider, or rates
- X** Increase your electric bill
- X** Require you to buy anything in order to participate
- X** Commit you to reducing your home electricity use when asked
- X** Make your information public or available to businesses

PG&E™ refers to Pacific Gas and Electric Company, a subsidiary of PG&E Corporation. The Fresno Energy Program is funded by California utility customers under the auspices of the California Public Utilities Commission (CPUC)

The Fresno Energy Program is an offering of the Olivine Community™ model – An inclusive platform that empowers everyone to be a part of a clean energy future for our planet. To learn more about Olivine, please visit www.olivineinc.com

La Comunidad de Olivine: Programa de Energía de Fresno

Patrocinado por PG&E

Comisión de Servicios Públicos Ordena Pilotos

Problema: Las plantas pico de gases altamente contaminantes están ubicadas de manera desproporcionada en o cerca de las comunidades desfavorecidas (DACs, por sus siglas en inglés). Estas plantas pico de gas se operan cuando la demanda de energía es alta, generalmente en las horas de verano y por la tarde.

La Respuesta de Demanda (Demand Response, DR, por sus siglas en inglés) una forma de energía renovable, se puede utilizar para reducir la demanda en estas plantas de gas pico, lo que conduce no solo a mejoras en la calidad del aire, sino a otros beneficios monetarios y no monetarios para los residentes.

Decisión: Realizar un estudio en cada uno de los 3 territorios de IOU ubicados en DACs para examinar el potencial de participación de los residentes en los programas de respuesta a la demanda.

Área de Programa- Centro-Sur Fresno

- Zonas censales dentro del límite de AB617 marcan en el 5% superior de los DAC en California.

	PG&E Pilot Zip Codes

Objetivos del Programa de Energía de Fresno

- **Capacidad y Disposición** de residentes para participar
 - ¿Cuál es el nivel actual de conocimiento de la disponibilidad del programa DR?
 - ¿Nivel de comprensión de cómo los programas de DR crean valor para los clientes y la comunidad?
 - ¿Cuál es el nivel actual de interés en participar en programas de respuesta a la demanda?
- **Uso de Energía**
 - ¿Cómo utilizan los diferentes hogares la energía en sus hogares?
 - ¿Qué tan bien pueden responder y participar los hogares en los programas de DR?
- **Alcance**
 - ¿Cuáles son los mejores métodos para llegar a los diferentes tipos de hogares de Fresno? (Incluyendo clientes difíciles de alcanzar)
- **Mensaje**
 - ¿Qué tipo de mensajes resuenan mejor con los hogares de Fresno?
- **Beneficios**
 - ¿Qué tipos de incentivos y ofertas de programas de DR serán de mayor valor para los hogares de Fresno y los beneficiarán más?

Los resultados se utilizarán para informar el diseño futuro del programa, incluyendo la posible expansión del programa en el área de Fresno.

¿Qué es Olivine Community?

Una plataforma innovadora para la agregación de recursos energéticos para proporcionar servicios de red y descarbonizar nuestro medio ambiente.

Trabajando Juntos | Equidad | Impacto en el medio ambiente local | Reducir los costos de energía & Ganar Dinero

Programas:

- Fresno Energy Program: Sponsored by PG&E
- Power Response Program: Clean Power Alliance (CPA). En los condados de Los Angeles y Ventura.
- Lancaster Green District
- Richmond Advanced Energy
- Sonoma GridSavvy: Sonoma and Mendocino County

¿Cuales son los beneficios de participar?

Beneficios para usted y su familia:

- Ganar dinero
- Reducir sus costos de energía
- Oportunidad de ganar Termostatos Inteligentes gratis y conocer otros programas.

Beneficios para su comunidad:

- Reducir la contaminación al reducir la demanda de energía durante las horas pico
- Reducir las emisiones de gases de efecto invernadero y combata el Cambio Climático
- Interactuar con su comunidad
- Responda a nuestras encuestas y contribuya a desarrollar futuros programas

¿Cómo se ganan las recompensas?

Recompensa de Bonificación de Referencia de \$20 (Límite 10/hogar)

¿Quién puede inscribirse?

- Usted es **elegible** si:
 - Vive en uno de estos **códigos postales** – 93701, 93702, 93703, 93704, 93706, 93721, 93725, 93728
 - Tiene acceso al internet mediante un teléfono inteligente o computadora
 - Tiene o puede crear una cuenta en línea de PG&E
 - No está inscrito en otro programa de Respuesta a la Demanda (DR, por sus siglas en ingles)

¡Es gratuito!
Sin compromiso.
¡Inscríbase ahora!

¿Cumple con todos los requisitos?

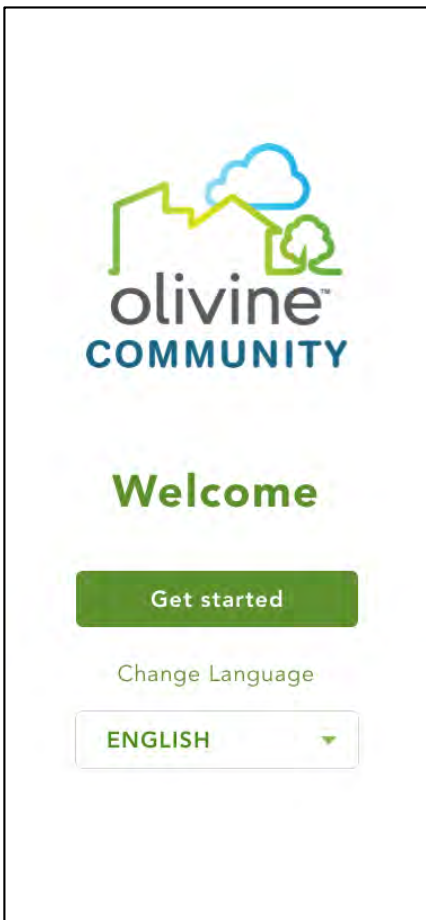

Oportunidad
por tiempo
limitado.

¿Qué no hace este programa?

- X** Cambiar el servicio, el proveedor o las tarifas de electricidad de su hogar
- X** Aumenta su factura de electricidad
- X** Requerirle que compre algo para participar
- X** Comprometerse a reducir el uso de electricidad de su hogar cuando se le solicite
- X** Haga su información pública o disponible a empresas

Agenda for South Central Fresno Community Steering Committee Meeting #20

Wednesday, April 29, 2020 – 5:30 pm to 6:30 pm

Zoom Meeting: <https://zoom.us/j/179511678>
Meeting ID: **179 511 678**

Teleconference Dial In: **888 788 0099 US** (Toll-free)

- 5:30 p.m. Welcome, Introductions**
Christal Love Lazard, Institute for Local Government, Facilitator
Ryan Hayashi, Valley Air District
- 5:40 p.m. Zoom How-To**
Review of Zoom tools, proper use, and virtual meeting etiquette
Christal Love Lazard, Facilitator
- 6:15 p.m. District Online Resources**
Walk through the various resources and tools available online at
community.valleyair.org
Jessica Olsen, Valley Air District
- 6:25 p.m. Wrap Up/Next Steps**
Next Meeting May 13, 2020: Zoom Call

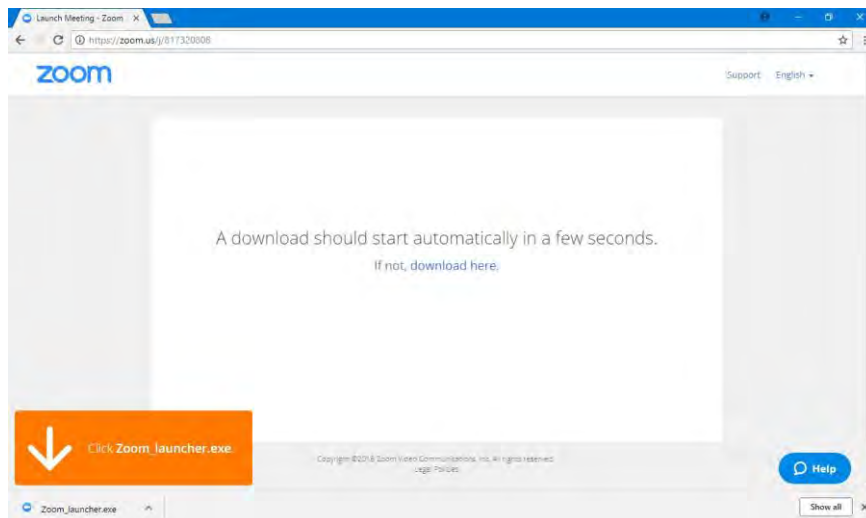

ZOOM INSTRUCTIONS FOR AB 617 PARTICIPANTS

Before a Zoom meeting:

1. You will need a computer, tablet, or smartphone with a speaker or headphones. You will have the opportunity to check your audio and video immediately upon joining a meeting.
2. You will receive an email inviting you to participate in a Zoom meeting from the Valley Air District. The notification will include a link to **Join Zoom**. If you are unable to join using either a computer, tablet or smartphone, you can still listen to the meeting .via phone using the call in number and 9-digit meeting ID provided.

Joining Zoom meeting from your computer:

5-10 min before start time of your meeting, click on the link in your invitation. You *may* be instructed to download the Zoom application.

Once the Zoom app is installed, you should see this window pop up. Click on Zoom Meetings and then on the **Open Link** button.

Zoom app may ask for your name. The text entered in this box will be your name in the participant list and will appear under your web cam video. Click the **Join Meeting** button after you have typed your name.

Your Zoom video:

You have an opportunity to join with or without video.

Your Zoom Audio:

Please choose how you would like to like to hear and to talk to the other participants in the Zoom meeting. You have two audio options: join audio by computer or join audio by phone.

You have an opportunity to test your audio by clicking on “Test Computer Audio.” Once you are satisfied that your audio works, click on “Join audio by computer.”

OR To join via telephone:

1. On your phone, dial the teleconferencing number provided in your invitation.
2. Enter the **Meeting ID number** (also provided in your invitation) when prompted using your touch-tone keypad.
3. If you have already joined the meeting via computer, please enter your **Participant ID** associated with your Zoom participation. *(Picture is an example of what you will see on the screen. Your numbers will be different).*

To minimize the potential echo during the meeting, please pick one audio option – Phone or Computer Audio.

Switching between computer and phone audio:

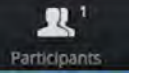

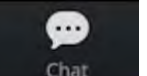

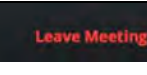

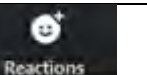

If you need to switch between computer and phone audio, click the bottom left corner arrow on your screen and select **Join Phone Audio** in the pop up menu. Follow the instructions below.

Exploring Participant Controls on the bottom of your screen:

	Once your audio is working, you will see a different icon: a microphone. You can click on this icon to Mute and Unmute yourself.
--	--

 <p>Start Video</p>	<p>Click on this icon to start your video. If this is the first time you are using Zoom, you will be asked to allow Zoom to use your camera. Click Allow.</p>
 <p>Invite</p>	<p>This icon allows you to invite other people to join the meeting.</p>
 <p>Participants</p>	<p>This icon tells you how many people are currently in the meeting. View Participant list – opens a pop-out screen that includes a “Raise Hand” icon that you may use to raise a virtual hand.</p>
 <p>Share Screen</p>	<p>If the host of the meeting allows it, you can share your screen by clicking the Share Screen icon. This means that the other participants will be able to see your desktop or the application you want to share.</p>
 <p>Chat</p>	<p>Click on this icon to access the chat window and chat with other participants. You can send a message to the entire group or to an individual user. Please be aware that even a private chat may end up in a public record of the zoom meeting. As you already do when face-to-face, show respect to others when using the chat box.</p>
 <p>Leave Meeting</p>	<p>Click here to leave the meeting when it is over or if you need leave the meeting early while it continues for the other participants.</p>
 <p>Reactions</p>	<p>Zoom offers to reactions to provide nonverbal feedback. Click the type of reaction you would like to send: clapping hands or thumbs up. The reaction will display for 5 seconds.</p>

Joining Zoom meeting from tablet or phone:

1. Make sure you have downloaded the Zoom app on your smartphone. You can download it just like you would download any other app: from the App Store or Google Play Store (Android).
2. Tap either **Personal Link Name** or **Join with a meeting ID** and enter your information. Then tap Join.
3. To join the meeting, you will be asked to enter Your Name and then tap Continue.

4. Select **Join with Video**
5. Confirm your audio preferences. IF you have strong internet connection, there is no reason not to use Internet Audio
6. Note the icons at the bottom are the same.

General Meeting Best Practices when participating in a Zoom Meeting

These will be refined as we all learn how to have effective AB 617 virtual meetings together

- The host will mute all participants during presentations to reduce background noise.
- Check your internet speed. If you are using free wifi you may need to keep your camera off to improve sound and/or image quality.
- Turn your camera on and have your camera at eye level.
- Stay muted unless you are talking to reduce background noise.
- Use chat box to submit comments / questions.
- To vote, use the vote button on the bottom of the screen.
- Make sure you sit in a well-lit and quiet place.
- Be mindful of what is going on behind you. Think about having solid wall behind you or turning on the virtual background.

If you have any questions regarding Zoom and/or are experiencing technical difficulties, please contact Heather Heinks at (559) 230-5898 or (559)994-7591 for assistance.

Agenda para el Comité Directivo Comunitario de Centro-Sur Fresno Reunión #20

Miércoles, 29 de abril de 2020 – 5:30 pm a 6:30 pm

Reunión por Zoom: <https://zoom.us/j/179511678>

Meeting ID: **179 511 678**

Teleconferencia de la interpretación en Español:
(888) 240-3210, Código de acceso **2730346**

- 5:30 p.m. Bienvenida, Introducciones**
Christal Love Lazard, Facilitadora, Institute for Local Government
Ryan Hayashi, Distrito del Aire del Valle
- 5:40 p.m. Guía Básica para Zoom**
Repaso de las herramientas, el uso apropiado, y la etiqueta de reuniones virtuales en Zoom
Christal Love Lazard, Facilitadora
- 6:15 p.m. Recursos En Línea del Distrito**
Hablar sobre los diversos mapas, documentos, recursos, y herramientas disponible en línea en community.valleyair.org
Jessica Olsen, Distrito del Aire del Valle
- 6:25 p.m. Concluir/Próximos Pasos**
Próxima Reunión 13 de mayo de 2020: Llamada por Zoom

Aprende más: community.valleyair.org

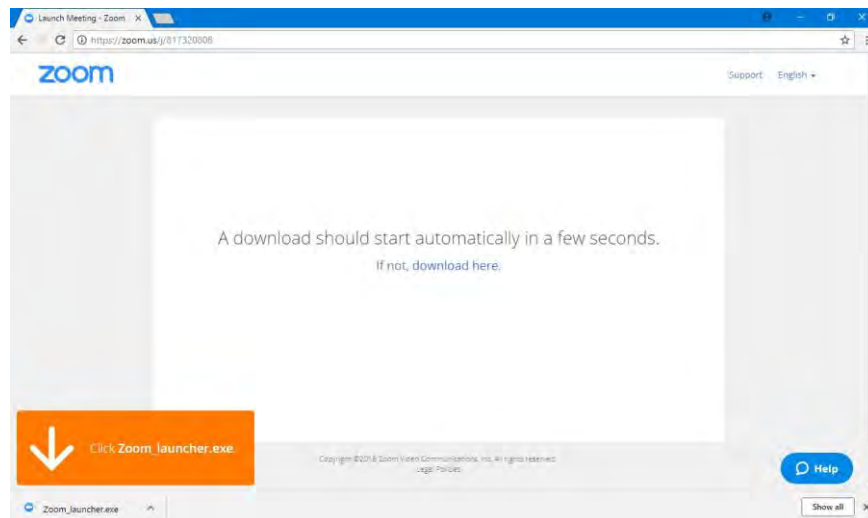

INSTRUCCIONES DE ZOOM PARA PARTICIPANTES DE AB 617

Antes de una reunión por Zoom:

1. Necesitará una computadora, tableta o teléfono inteligente con una bocina o audífonos. Tendrá una oportunidad de verificar su audio y video inmediatamente después de unirse a una reunión.
2. Recibirá un correo electrónico invitándole a participar en una reunión del Distrito del Aire del Valle. La notificación incluirá un enlace para unirse a Zoom (**Join Zoom**). Si no puede unirse usando una computadora, tableta o teléfono inteligente, aún puede escuchar la reunión a través del teléfono usando el número de llamada y la identificación de la reunión de 9 dígitos.

Unirse a la reunión por Zoom desde su computadora:

5-10 minutos antes de la hora de inicio de su reunión, haga clic en el enlace de su invitación. Es **posible** que le indique que descargue la aplicación Zoom.

Una vez que la aplicación Zoom está instalada, debería de ver esta ventana emergente. Haga clic en Zoom Meetings y luego en el botón **Open Link**.

La aplicación Zoom puede preguntar por su nombre. El texto ingresado en este cuadro será su nombre en la lista de participantes y aparecerá debajo de su video de cámara web. Haga clic en el botón **Join Meeting** después de haber escrito su nombre.

Su video de Zoom:

Tiene la oportunidad de unirse con o sin video.

Su audio de Zoom:

Elija cómo le gustaría escuchar y hablar con los demás participantes en la reunión de Zoom. Tiene dos opciones de audio: unir por **audio by computer (audio por computadora)** o unir por **audio by phone (audio por teléfono)**.

Tiene la oportunidad de probar su audio haciendo clic en **“Test Computer Audio.”** Una vez que esté satisfecho de que su audio funciona, haga clic en **“Join audio by computer.”**

○ Para unirse por teléfono:

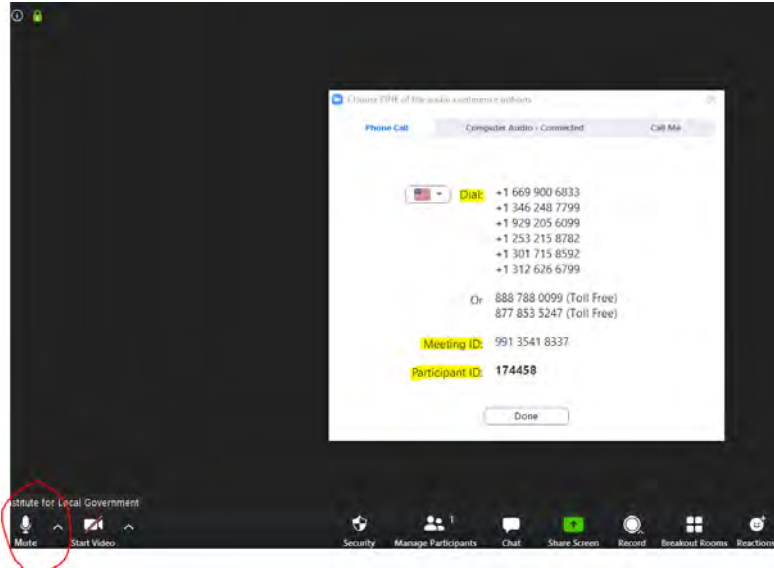

1. En su teléfono, marque el número de teleconferencia proporcionado en su invitación.
2. Ingrese el número de **Meeting ID** (también incluido en su invitación) cuando se le solicite en su teclado.
3. Si ya se unió a la reunión por computadora, ingrese el **Participant ID** asociada con su participación de Zoom. (La imagen es un ejemplo de lo que verá en la pantalla. Sus números serán diferentes).

Para minimizar el eco potencial durante la reunión, elija una opción de audio – Audio por Computadora o Teléfono.

Cambiar entre la computadora y el audio del teléfono:

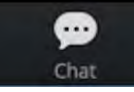

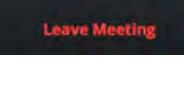

Si necesita cambiar entre la computadora y el audio del teléfono, haga clic en la flecha de la esquina inferior izquierda de la pantalla y seleccione **Join Phone Audio** en el menú emergente. Siga las instrucciones debajo.

Explorando los Controles de los Participantes en la parte inferior de la pantalla:

	Una vez que su audio esté funcionando, verá un icono diferente: un micrófono. Puede hacer clic en este icono para Silenciar y Activar el sonido.
---	--

	<p>Haga clic en este icono para comenzar su video. Si es la primera vez que usa Zoom, se le pedirá que permita que Zoom use su cámara. Haz clic en Allow.</p>
	<p>Este icono le permite invitar a otras personas a unirse a la reunión.</p>
	<p>Este icono le indica cuántas personas hay actualmente en la reunión. Ver lista de participantes/View Participant List – abre una pantalla emergente que incluye un icono de "Levantar mano/Raise Hand" que puede usar para levantar una mano virtual.</p>
	<p>Si el anfitrión de la reunión lo permite, puede compartir su pantalla haciendo clic en el icono Share Screen. Esto significa que los demás participantes podrán ver de escritorio o la aplicación que desea compartir.</p>
	<p>Haga clic en este icono para acceder a la ventana de chat y chatear con otros participantes. Puede enviar un mensaje a todo el grupo o a un usuario individual. Tenga en cuenta que incluso un chat privado puede terminar en un registro público de la reunión de zoom. Como ya lo hace cuando está cara a cara, muestre respeto a los demás cuando use el chat.</p>
	<p>Haga clic aquí para dejar la reunión cuando termine o si necesita dejarla temprano mientras continúa para los demás participantes.</p>
	<p>Zoom ofrece reacciones para proporcionar comentarios no verbales. Haga clic en el tipo de reacción que le gustaría enviar: aplaudir o levantar el pulgar. La reacción se mostrará durante 5 segundos.</p>

Unirse a la reunión de Zoom desde tableta o teléfono:

1. Asegúrese de haber descargado la aplicación Zoom en su teléfono inteligente. Puede descargarlo como lo haría con cualquier otra aplicación: desde App Store o Google Play Store (Android).
2. Toque **Personal Link Name** o **Join with a meeting ID** e ingrese su información. Luego toque Join.
3. Para unirse a la reunión, se le pedirá que ingrese Su nombre y luego toque Continue.

4. Seleccione **Join with Video**
5. Confirme sus preferencias de audio. Si tiene una buena conexión al internet, no hay razón para no usar Internet Audio
6. Tenga en cuenta que los iconos en la parte inferior son los mismos.

Mejores Prácticas de Reuniones Generales al participar en una Reunión de Zoom

Estos serán refinados a medida que todos aprendamos cómo tener reuniones virtuales de AB 617 efectivas

- El anfitrión silenciará a todos los participantes durante las presentaciones para reducir el ruido de fondo.
- Verifique su velocidad de internet. Si está utilizando wifi gratuito, es posible que deba mantener su cámara apagada para mejorar la calidad del sonido y/o la imagen.
- Prenda su cámara y manténgala al nivel de los ojos.
- Permanezca en silencio a menos que esté hablando para reducir el ruido de fondo.
- Use el chat para enviar comentarios/preguntas.

- Para votar, use el botón votar en la parte inferior de la pantalla.
- Asegúrese de sentarse en un lugar bien iluminado y tranquilo.
- Sea consciente de lo que sucede detrás de usted. Piense en tener una pared sólida detrás de usted o activar el fondo virtual.

Si tiene alguna pregunta sobre Zoom y/o tiene dificultades técnicas, comuníquese con Heather Heinks al (559) 230-5898 o (559) 994-7591 para obtener ayuda.

CSC Meetings

Agendas, Topics, Time Allocations, Technology, Frequency, Structure, Engagement, Code of Conduct, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> • Prep meetings are good • Facilitation team is good on CSC meetings • CSC and meetings have helped connect regional businesses and community groups/stakeholders – we’re making connections and improvements 	<ul style="list-style-type: none"> • Make more time for discussion in the agenda; allow for active listening and discussion among the CSC and the AD • Need clarity and agreement on direction for the CSC by the CSC • Minimize repeat requests to the AD; need better process for tracking CSC requests and making sure they are completed • Code of conduct in meeting is important; there should be a clear understanding that we should hear one another, listen to one another, but not always agree • AD should respond to resident concerns and make sure follow through happens in a timely manner • Meeting agendas are too full, packed; need fewer agenda items and more time for discussion • There doesn’t appear to be much action or progress between meetings; how to remedy/improve this? • Give co-host a larger role in the meeting; give a section of the agenda to present • Clearly delineate action items after each meeting, make sure there is follow through • Need more accountability and transparency from the Air District and CARB; especially around requests made during and between meetings • Comment from CARB: Feel free to email CARB with any suggestions/questions • Need one dedicated Air District staff person who is the point person for everything; someone who can track requests, seek answers and make sure requests are completed • Need faster Air District response time to questions and requests from the CSC

Subcommittees

Topics, Meeting Frequency, Times, Outcomes, Structure, Engagement, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> Subcommittee process is good, but could be better with some modifications 	<ul style="list-style-type: none"> Subcommittee meetings may need additional structure and revision to better lift up community voices Need more progress and action between meetings We need to balance getting everyone's feedback with the desire for productivity and progress on the CERP More subcommittees may be needed to make real progress on CERP Consider selecting a passionate CSC member to be a facilitator or meeting host for the subcommittees Move the subcommittee start times to the early evenings so more residents can participate; if this is done, limit to one hour Need Gantt chart of the CERP that highlights what we're doing in each subcommittee and when we're doing it Each subcommittee should include: a timeline of activities from conception to completion, budget by task, staff hours, funding allocations, task assignments, etc.

Notifications & Updates

Calls, e-Mails, Printed & Mailed Updates, Doodle Polls, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none">• Doodle polls are working well• Gratitude and thanks to the Air District staff for dropping off printed packets when requested• Spanish speakers appreciate the printed copies of materials and being able to read everything in a larger font	<ul style="list-style-type: none">• Meeting information and background may be arriving too late; more advance notice needed for materials and updates• Public members are not getting agendas or meeting notifications for subcommittee meetings; they need this information and want to be able to support committee goals• Need better AD notification and more detection for fireplace smoke*• Need more information about air pollution levels and reductions shared with the CSC; also important for AD to share on Facebook so CSC members can share with their networks

Translation, Interpretation & Access

During Meetings, Outside Meetings, Technology, etc.

Working Well	Suggestions for 2021
<ul style="list-style-type: none">• Translation of documents has improved over time – definitely important and getting better• Real time translation via Zoom in writing and on screen = very good• Live interpretation = good; helps Spanish speakers participate in the meetings; actually better through Zoom than in-person	

Membership

Committee Makeup, Residents, etc.

Working Well	Suggestions for 2021
	<ul style="list-style-type: none"> • Consider whether we need to recruit more residents; clarify the process for that and how that may work; possibly advertise for CSC vacancies/openings • Make concerted outreach to the Hmong community for possibly participation and membership • Need more accountability for meeting attendance; announce the number of CSC members vs. staff in each meeting • Provide CSC contact info for fellow members; establish parameters for contacting them • Question: Are the missing or inactive CSC members getting calls? • Question: How many CSC members have backups or alternates? • Question: Does the committee represent the different geographic areas within the boundary? Let's check and make sure it does.

2021 Administration Goals

If we could *fast forward* to the end of 2021... What do you think **SUCCESS** would look like in this Administration category?

What administration improvement or process is the **MOST IMPORTANT** for the CSC to accomplish in 2021?

Administration Goals

- **Clean air that is free of asthma and contaminants;**
- **To not have to drive out of the area to breathe fresh, clean air**
- Working more effectively so that this CERP implementation process moves along faster
- A road map of the strategies that residents want to prioritize, including revised funding and actionable plans on how we will get there and the responsible parties
- Land use policy changes
- A breakdown of the budget, how much we have spent, and how much we have for the rest of the strategies
- A CERP tracker that includes all priorities
- A crack down on unregistered fireplaces

Reuniones del Comité Directivo

Agendas, Temas, Asignaciones de Tiempo, Tecnología, Frecuencia, Estructura, Compromiso, Código de Conducta, etc.

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none"> Las reuniones de preparación son buenas El equipo de facilitación es bueno en las reuniones del comité Las reuniones del comité directivo han ayudado a conectar empresas regionales y grupos comunitarios/partes interesadas – estamos estableciendo conexiones y mejorando 	<ul style="list-style-type: none"> Más tiempo para discusión en la agenda; escuchar activamente y la discusión entre el Comité y el Distrito del Aire Se necesita claridad y acuerdo en la dirección para el comité del comité Minimizar las solicitudes repetidas al Distrito del Aire; se necesita un mejor proceso para monitorear las solicitudes del Comité y asegurar que se completen Código de conducta en la reunión es importante; debe haber un entendimiento claro de que debemos escucharnos unos a otros, pero no siempre estar de acuerdo El Distrito debe responder a las inquietudes de los residentes y asegurarse de que el seguimiento se realice de manera oportuna Las agendas de las reuniones están demasiado llenas; necesitan menos elementos en la agenda y más tiempo para la discusión No parece haber mucha acción o progreso entre reuniones; ¿Cómo remediar/mejorar esto? Dar al coanfitrión un papel más importante en la reunión; dar una sección de la agenda para presentar Delinear claramente los elementos de acción después de cada reunión, asegúrese de que haya un seguimiento Se necesita más responsabilidad y transparencia del Distrito del Aire y CARB; especialmente en torno a las solicitudes realizadas durante y entre reuniones Comentario de CARB: no dude en enviar un correo electrónico a CARB con cualquier sugerencia/pregunta Se necesita un miembro del personal dedicado del Distrito del Aire que sea la persona clave para todo; alguien que pueda recibir solicitudes, buscar respuestas y asegurarse de que las solicitudes se completen Necesita un tiempo de respuesta más rápido del Distrito del Aire a las preguntas y solicitudes del Comité Directivo

Subcomités

Temas, Frecuencia de Reuniones, Horarios, Resultados, Estructura, Compromiso, etc.

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none"> El proceso de los subcomités es bueno, pero podría funcionar mejor con algunas modificaciones 	<ul style="list-style-type: none"> Las reuniones del subcomité pueden necesitar una revisión adicional de la estructura para levantar las voces de la comunidad Se necesita más progreso y acción entre reuniones Se necesita equilibrar los comentarios de todos con el deseo de productividad y progreso en el CERP Es posible que se necesiten más subcomités para lograr un progreso real en el CERP Consideren la posibilidad de seleccionar un miembro apasionado del Comité Directivo para que sea un facilitador o anfitrión de la reunión de los subcomités Mover las horas de inicio del subcomité a las primeras horas de la noche para que puedan participar más residentes; si se hace esto, limite a una hora Necesitamos un diagrama de Gantt del CERP que resalte lo que estamos haciendo en cada subcomité y cuándo lo estamos haciendo Cada subcomité debe incluir: un cronograma de actividades desde la concepción hasta la finalización, presupuesto por tarea, horas del personal, asignaciones de fondos, asignaciones de tareas, etc.

Notificaciones y Actualizaciones

Llamadas, Correos Electrónicos, Actualizaciones Impresas y Enviadas por Correo, Encuestas por Doodle, etc.

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none">• Las encuestas de Doodle están funcionando bien• Gratitud y agradecimiento al personal del Distrito del Aire por entregar los paquetes impresos cuando se le solicitó• Los hispanohablantes aprecian las copias impresas de los materiales y poder leer todo en una tipografía más grande	<ul style="list-style-type: none">• La información de la reunión y los antecedentes pueden llegar demasiado tarde; aviso con mayor antelación para materiales y actualizaciones• los miembros del público no están recibiendo agendas o notificaciones de reuniones para el subcomité; necesitan esta información y quieren poder apoyar los objetivos del comité• Se necesita una mejor notificación del Distrito del Aire y más detección de humo de chimenea*• Se necesita más información sobre los niveles de contaminación del aire y las reducciones compartidas con el Comité Directivo; también es importante que el Distrito del Aire lo comparta en Facebook para que los miembros del Comité Directivo puedan compartir con sus redes

Traducción, Interpretación y Acceso

Durante Reuniones, Reuniones Externas, Tecnología, etc.

Funcionando Bien	Sugerencias para 2021
<ul style="list-style-type: none">• La traducción de documentos ha mejorado con el tiempo – definitivamente importante y mejorando• Traducción en tiempo real mediante Zoom en escritura y en línea = buena• Interpretación en vivo = buena; ayuda a los que hablamos español a participar en las reuniones; realmente mejor a través de Zoom que en persona	

Membresía

Composición del Comité, Residentes, etc.

Funcionando Bien	Sugerencias para 2021
	<ul style="list-style-type: none"> • Considerar reclutar más residentes; aclarar el proceso para eso y cómo puede funcionar; posiblemente anunciar las posiciones vacantes/abiertas del Comité Directivo • Hacer un alcance concertado a la comunidad Hmong para una posible participación y membresía • Se necesita más responsabilidad en la asistencia de reuniones; anunciar el número de miembros del Comité Directivo frente al personal en cada reunión • Proporcionar información de contacto del Comité Directivo para otros miembros; establecer parámetros para contactarlos • Pregunta: ¿Están recibiendo llamadas los miembros del Comité Directivo desaparecidos o inactivos? • Pregunta: ¿Cuántos miembros del Comité Directivo tienen suplentes? • Pregunta: ¿El comité representa las diferentes áreas geográficas dentro del límite? Comprobemos y asegurémonos de que así sea.

Metas Administrativas de 2021

Si pudiéramos *avanzar rápidamente* hasta finales de 2021... ¿Cómo crees que sería el **ÉXITO** en esta categoría de Administración?

¿Qué mejora o proceso de administración es lo **MÁS IMPORTANTE** que debe lograr el Comité Directivo en 2021?

Metas Administrativas

- **Aire limpio libre de asma y contaminantes**
- **No tener que conducir fuera del área para respirar aire fresco y limpio**
- Trabajar de manera más eficaz para que este proceso de implementación del CERP avance más rápido
- Una hoja de ruta de las estrategias que los residentes quieren priorizar, incluyendo la financiación actualizada y los planes procesables sobre cómo llegaremos allí y las partes responsables
- Cambios en la política de uso del suelo
- Un análisis del presupuesto, cuánto hemos gastado y cuánto tenemos para el resto de las estrategias
- Un informe del CERP que incluye todas las prioridades
- Ponerse más estricto en las chimeneas no registradas

Reporting About Subcommittee Activities

Working Well	Suggestions for 2021
<ul style="list-style-type: none">- Urban greening, vegetative barriers and truck rerouting committees are working well – CSC should continue- Air monitoring subcommittee could use additional participation now that we have data rolling in; this may need to be made a higher priority in the main CSC discussion agendas- We should think about the best approach to linking data to enforceability- Ownership of the subcommittees by CSC members is working well, especially when the member has expertise- Really appreciate the work on the vegetative barriers subcommittee	<ul style="list-style-type: none">- As a small group, each CERP measure may need a subcommittee and/or additional CSC member engagement to cover all the necessary activities and updates- Some CSC members are feeling uninformed about the progress being made; CSC members would love to see more progress being made, or reported on- Can issues brought up in the committees be brought back to the larger CSC more often?- Stationary sources haven't been reported on in about a year; need more frequent updates- CSC agendas are often too tight to discuss all committee updates; a table or tracker on progress would help- Subcommittee meeting notes would be helpful- Consider appointing a chair position for each subcommittee that is responsible for reporting back at the CSC meetings in writing and verbally

Website Updates

Working Well	Suggestions for 2021
	<ul style="list-style-type: none">• Members of the public may have difficulty finding information on the website• The web development team should adhere to the 3-click rule for ease of navigation• Air monitoring information should be easier to find for the general public, especially those stakeholders who are connected to the areas where the monitors are placed• The website still has some navigation challenges for the Spanish speaking participants; see 3 click rule suggestion above• Search terminology should be based on general public terminology, not technical terms• Would a CSC website training be helpful? Spanish speakers say yes

Reporting from Other Agencies

CARB, DPR, City of Fresno, etc.

Working Well	Suggestions for 2021
	<ul style="list-style-type: none"> • Monitoring for pesticides has not yet been addressed by DPR or the AD; periodic updates are appreciated, but often the reports the CSC receives are too minimal • Written summary from subcommittees and partner agencies may be helpful for more robust updates • Transparency is key; CSC wants to be at the table during the discussions with partner agencies to help make decisions, not just reported back to • More communication would be helpful • Clarify decision-making authority of the CSC with these partner agencies • City council is still uninformed about AB 617 – what kind of status report or orientation can the CSC or AD give to the City Council in advance of discussions about planning process changes? • Ask city about providing status report on canal and street cleaning

Reporting about Air Monitoring Reporting about the CERP Implementation Process Community Co-host Suggestions

Working Well	Suggestions for 2021
<ul style="list-style-type: none"> Monitor placement in schools is important and sends the right signal to the community about the importance of air quality Thanks to Maricela and the rest of the team for their help with social media updates CSC members are enjoying the co-host process and opportunity 	<p>CERP Implementation</p> <ul style="list-style-type: none"> Prefer to see milestones and a Gantt chart by month, as well as an estimation of completion for major tasks <p>Air Monitoring</p> <ul style="list-style-type: none"> Technical support and subject matter expertise on air monitoring is important and should be maintained moving forward; include PM 2.5, dust, mold, genetics, etc. CARB is interested in working more closely with the CSC to share and interpret data CSC should schedule a separate meeting to discuss and take action on some of the air monitoring concerns <p>Co-Hosts</p> <ul style="list-style-type: none"> More community co-host engagement in each meeting Discuss co-host role at the agenda-setting/planning meetings and assign specific responsibilities Determine the comfort level of each co-host with facilitation and technology

2021 Reporting & Tracking Goals

If we could *fast forward* to the end of 2021... What do you think **SUCCESS** would look like in this Reporting & Tracking category?

What data, reporting & status updates are **MOST IMPORTANT** for the CSC to have in 2021?

Reporting & Tracking Goals

- Timeline on a calendar
- Expenditures and milestones; task-oriented approach to CERP implementation and reporting
- The committee isn't making clear decisions or seeing things happen as quickly as possible; give committee more opportunities to advise the AD and vote; make advisory role more clear and decision-making framework more consistent
- Measurable milestones and reporting around air quality in the CERP strategies
- Focus on trust building and relationship building; continue to discuss and disagree respectfully
- Review the blueprint at least once a year to ensure we're operating within the committee structure and priorities

CERP Prioritization

In preparation for prioritizing the CERP measures at the next meeting, please answer these questions:

Question	Suggestions/Comments
<p>What type of written background information do you need to receive IN ADVANCE of the meetings to best prepare you for the discussion?</p>	<ul style="list-style-type: none"> • CSC needs to understand the timelines for each measure • Clarify the air monitoring information and timeframes? • Understand what else is happening with the other measures; what activities impact implementation? • Need to see a Gantt chart with milestones, funding, MOUs, etc. • Clarity around monetary capital vs. human capital (enforcement) activities • More information on the ROAR program and where we have approvals to proceed • Roles, responsibilities and plans for addressing land use discussions (in industrial zones)
<p>Do you need a CERP refresher? Should the Air District provide a verbal recap of CERP strategies DURING the meeting?</p>	<ul style="list-style-type: none"> • Some members implied that a short overview would be helpful.
<p>What level of detail do you need DURING the meeting?</p>	<ul style="list-style-type: none"> • Not discussed
<p>Would you be willing to answer a Doodle Poll about your CERP priorities?</p>	<ul style="list-style-type: none"> • Yes
<p>Would you be open to using other forms of polling technology DURING the meeting?</p>	<ul style="list-style-type: none"> • Only if translation can be seamless and there is training offered

Other Notes

Suggestions for 2021

- *The “replace woodburning devices and enhanced enforcement items in the CERP” need more gas burning fireplaces registered*
- *Need quicker response from inspectors on enforcement*
- *Are there internet connected devices that would help with enforcement in the “check before you burn time”? (Ryan referenced night vision cameras and nighttime surveillance)*
- *The City councilmember meetings did not result in much action; we need their support to move forward*
- *Funding should be available to move forward with the projects; CSC would like to see more progress (AD responded about some progress, additional outreach, reasons for delay, etc.)*
- *Knowing what is in the queue and what has been submitted would be helpful for the CSC*
- *How does prioritization align with the resolution and submission of plans related to the CERP that the AD is sending to CARB?*
- *More buses are needed for the schools*
- *There are concerns about what happens to air quality when the kids return to school*
- *If we plant more trees, we’ll need to remove old logs and trim trees that are too large*
- *Old TVs and refrigerators are becoming more prevalent, oil discharge is polluting subsoil; we need to find a program to help with that effort*
- *We should mold CSC agendas to allow for more flexibility in the discussion and free-flowing conversation*
- *What is happening with the fines? (Ryan answered that they pay for air pollution reduction activities, including having enforcement of District regulations)*

Informes Sobre las Actividades del Subcomité

Trabajando Bien	Sugerencias para 2021
<ul style="list-style-type: none"> - Los subcomités de Ecologización Urbana, Barreras Vegetativas y desviación de camiones están trabajando bien – continúen - El subcomité de monitoreo del aire podría usar participación adicional ahora que tenemos datos; es posible que deba ser una prioridad más alta en las agendas de discusión del comité - Deberíamos pensar en el mejor enfoque para vincular los datos con el cumplimiento - La responsabilidad de los subcomités por parte de los miembros del comité está funcionando bien, especialmente cuando el miembro tiene experiencia - Realmente aprecio el trabajo en el subcomité de barreras vegetativas 	<ul style="list-style-type: none"> - Como grupo pequeño, cada medida del CERP puede necesitar un subcomité y/o participación adicional de miembros del Comité para cubrir todas las actividades y actualizaciones necesarias - Algunos miembros del comité se sienten desinformados sobre el progreso; me encantaría ver más progresos realizados o informados - ¿Se pueden traer los problemas que surgen en los subcomités al comité más grande con más frecuencia? - No se ha informado sobre fuentes estacionarias en aproximadamente un año; necesita actualizaciones más frecuentes - Agendas del Comité muchas de las veces están muy llenas para hablar sobre todos los temas; una tabla o informe en el progreso sería una gran ayuda - Notas de las reuniones de los subcomités nos ayudarían; - Considerar poner una persona responsable/tipo presidente para cada subcomité que es responsable para reportar para tras al comité por escrito y verbalmente

Actualizaciones del Sitio Web

Trabajando Bien	Sugerencias para 2021
	<ul style="list-style-type: none">• Miembros del público tienen dificultad encontrando información en el sitio web• El equipo del desarrollo del web debería adherirse a la regla de los 3 clics para facilitar la navegación• La información de monitoreo del aire debería ser más fácil de encontrar para el público en general, especialmente para las partes interesadas que participan en las áreas donde se ubican los monitores• El sitio web todavía tiene retos de navegación para los participantes que hablan español; ve la regla de los 3 clics mencionado arriba• La terminología de búsqueda debe basarse en la terminología del público en general, no términos técnicos• ¿Un entrenamiento al Comité acerca del sitio web les ayudaría? Hispanohablantes dicen que si

Informes de Otras Agencias

CARB, DPR, Ciudad de Fresno, etc.

Trabajando Bien	Sugerencias para 2021
	<ul style="list-style-type: none">• No hemos escuchado de DPR o del Distrito acerca del monitoreo de pesticidas; se agradecen las actualizaciones periódicas, pero a menudo son mínimas• El resumen escrito de los subcomités y las agencias asociadas puede ser útil para obtener actualizaciones más sólidas• La transparencia es clave; el comité quiere estar en la mesa durante las discusiones con las agencias asociadas para ayudar a tomar decisiones, no solo recibir la información• Más comunicación sería útil• Aclarar la autoridad de toma de decisiones del comité con las agencias asociadas• El Concilio aún no está informado sobre ab 617- ¿Qué tipo de informe de estado u orientación puede el comité o distrito antes de la discusión sobre cambios en el proceso de planificación• Preguntarle a la ciudad acerca del estado de los canales y el barrido de las calles

Informes sobre el Monitoreo del Aire, Proceso de Implementación del CERP, y Sugerencias para el Coanfitrión de la Comunidad

Trabajando Bien	Sugerencias para 2021
<ul style="list-style-type: none"> • Los monitores en las escuelas es importante y envía la señal correcta a la comunidad sobre la importancia de la calidad del aire • Gracias a Maricela y el resto del equipo del Distrito con su ayuda con mensajes en las redes sociales • Los miembros del Comité les gusta el proceso y oportunidad de los coanfitriones 	<p>Implementación del CERP</p> <ul style="list-style-type: none"> • Prefiera ver los hitos y el gráfico de gannt por mes; así como la estimación de la finalización de las tareas principales <p>Monitoreo del Aire</p> <ul style="list-style-type: none"> • El apoyo técnico y la experiencia en la materia sobre el monitoreo del aire son importantes y deben mantenerse en el futuro; PM2.5, polvo, moho, genética • CARB interesado en trabajando más en conjunto con el comité para compartir e interpretar los datos • Reunión separada para hablar y tomar acción en las inquietudes del monitoreo del aire <p>Coanfitrión</p> <ul style="list-style-type: none"> • Más participación de los coanfitriones de la comunidad en cada reunión • Hablar sobre el rol de coanfitrión en las reuniones de planificación y asignar responsabilidades • Determinar el nivel de comodidad de cada coanfitrión con facilitación y tecnología

Objetivos de Informes y Seguimiento de 2021

Si pudiéramos *avanzar rápidamente* hasta finales de 2021... ¿Cómo cree que sería **ÉXITO** en esta categoría de Informes y Seguimiento?

¿Qué datos, informes y medición son los **MÁS IMPORTANTES** que debe lograr el Comité Directivo en 2021?

Objetivos de Informes y Seguimiento

- Cronograma en un calendario
- Gastos e hitos; enfoque orientado a base de tareas
- El comité no toma decisiones claras ni ve que suceden cosas; darles más oportunidades para avisar al distrito y votar; hacer más clara la función de asesoramiento y más coherente el marco de toma de decisiones
- Hitos medibles e informes sobre la calidad del aire en las estrategias del CERP
- Centrarse en la construcción de confianza, construcción de relaciones; revisar el plan al menos una vez al año para asegurarnos de que estamos operando dentro de la estructura y las prioridades del comité
- Revise el marco al menos una vez al año

Priorización del CERP

En preparación para priorizar las medidas del CERP en la próxima reunión, por favor responda a estas preguntas:

Pregunta	Sugerencias/Comentarios
¿Qué tipo de información de antecedentes por escrito necesita recibir ANTES de las reuniones para prepararse mejor para la discusión?	<ul style="list-style-type: none"> • El comité necesita comprender el cronograma para cada medida • ¿La información de monitoreo del aire y los plazos son claros para el comité? • Que está pasando con las otras medidas; ¿que impacta la implementación? • Diagrama Gannt, hitos, financiación, MOU's, etc. • Capital monetario vs. Capital humano (cumplimiento) • Más información acerca del programa ROAR y donde tenemos aprobación para continuar • Discusiones acerca del uso del suelo, los roles, responsabilidad y planes para abordar (en zonas industriales)
¿Necesita un repaso del CERP? ¿Debería el Distrito del Aire proporcionar un resumen verbal de las estrategias del CERP DURANTE la reunión?	<ul style="list-style-type: none"> • Unos miembros implicaron que un repaso corto les ayudaría
¿Qué nivel de detalle necesita DURANTE la reunión?	<ul style="list-style-type: none"> • No discutido.
¿Estaría dispuesto a responder a una encuesta de Doodle sobre sus prioridades del CERP?	<ul style="list-style-type: none"> • Sí
¿Estaría dispuesto a utilizar otras formas de tecnología de sondeo DURANTE la reunión?	<ul style="list-style-type: none"> • Solamente si hubiera interpretación y hubiera entrenamiento

Otras Notas

Sugerencias para 2021

- *Reemplazar dispositivos que queman leña y cumplimiento mejorado en el CERP – necesita más chimeneas registradas*
- *Respuesta más rápida de los inspectores de cumplimiento*
- *¿Hay aplicaciones conectadas a internet que ayudarían hacer cumplir con la regla de Confirma Antes de Quemar?
(Ryan hizo referencia a las cámaras de visión nocturna y la vigilancia nocturna)*
- *Las reuniones con los miembros del Concilio no resultan en acciones; necesitamos su apoyo para mover adelante*
- *Incentivos deben ser disponibles para seguir adelante con los proyectos; los miembros del comité quieren ver más progreso (el Distrito del aire respondió acerca del progreso, alcance adicional, razones por retrasos, etc.)*
- *Sería útil al Comité saber qué hay en la línea y qué se ha enviado*
- *¿Cómo la priorización alinea con la resolución y la sumisión de los planes relacionados al CERP que el Distrito está enviando a CARB?*
- *Se necesitan más autobuses en las escuelas*
- *Calidad del aire está bien en este momento porque los niños no van a la escuela; pero que va pasar cuando regresen*
- *Si plantamos más árboles, necesitamos que remover los antiguos o los pedazos que quedan*
- *Los viejos televisores y refrigeradores son cada vez más frecuentes, la descarga de petróleo contamina el subsuelo; necesitamos encontrar un programa que nos ayude con ese esfuerzo*
- *Deberíamos moldear las agendas del comité para permitir flexibilidad en la discusión y conversación fluida*
- *¿Qué pasa con las multas que se reciben? (Ryan respondió que pagan por las actividades de reducción de la contaminación del aire, incluyendo el cumplimiento de las regulaciones del Distrito)*

AB 617 Fresno CERP At-A-Glance

On the following pages you will find the top air quality concerns as identified by the South Central Fresno Community Steering Committee and the strategies developed to address those concerns. Please refer to the full CERP document to fully understand the community, the steering committee, the air quality challenges, the CERP strategies and other issues. This document is simply a very small snapshot of the larger document.

Trucks & Trains

Truck rerouting

Encourage clean fueling infrastructure

Replace old diesel locomotives with cleaner ones

Replace trucks with zero and near zero emission trucks

Replace old diesel train equipment with cleaner equipment

Reduce idling of trucks by providing charging infrastructure

More enforcement of anti-idling

Promote the use of biodiesel and renewable diesel fuels

Replace old school buses with zero and near zero emission buses

High Polluting & Idling Cars

Host events to repair old high polluting cars

Reduce cars idling through education

Replace old cars with electric or hybrid electric cars

Train electrical vehicle mechanics

Residential Burning

Replace old fireplaces and wood burning devices with cleaner devices

Reduce trash burning through enforcement

More enforcement of "No Burn" days

Reduce trash burning through education

Agricultural Operations

Replace open burning with clean alternatives

Reduce exposure to pesticides

Land-Use/Industrial Development

Encourage things that reduce the need for cars

Work with the city, county and community on land use issues

Educate the public on land use tools

Industrial Processes

Reduce emissions from industries through regulations

Reduce emissions from industries through new incentives

Increase inspections at industries

Self-inspections at gas stations

Install More Solar

Reduce Emissions from Restaurant Cooking

Dust and Roads

Trees and Lawns

Schools

Indoor Air Quality

Outreach

AB 617 CERP de Centro-Sur Fresno de un Vistazo

En las siguientes páginas encontrará las principales preocupaciones sobre la calidad del aire identificadas por el Comité Directivo de la Comunidad de Centro-Sur Fresno y las estrategias desarrolladas para abordar esas preocupaciones. Consulte el documento completo del CERP para comprender completamente la comunidad, el comité directivo, los desafíos de la calidad del aire, las estrategias del CERP y otros temas. Este documento es simplemente una pequeña imagen del documento más grande.

Camiones y Trenes

Desviación de camiones

Reemplazar camiones con camiones de cero o casi cero emisiones

Reducir camiones con motores encendidos mientras estacionados al proveer infraestructura de carga

Incentivar una infraestructura de combustible limpio

Más cumplimiento de motores encendidos mientras estacionados

Reemplazar los autobuses escolares antiguos con autobuses de cero o casi cero emisiones

Reemplazar las locomotoras diésel antiguas con otras más limpias

Reemplazar equipos antiguos de trenes con equipo más nuevo

Promover el uso de biodiésel y combustibles diésel renovables

Autos Altamente Contaminantes y Motores Encendidos Mientras Estacionados

Organizar eventos para reparar autos antiguos altamente contaminantes

Reemplazar autos antiguos con autos eléctricos o híbridos

Entrenar mecánicos sobre vehículos eléctricos

Reducir los vehículos con motores encendidos mientras estacionados a través de la educación

Quema Residencial

Reemplazar las chimeneas antiguas y los aparatos de leña con aparatos más limpios

Más cumplimiento en los días de "No Quemar"

Reducir la quema de basura a través de la educación

Reducir la quema de basura a través del cumplimiento

Operaciones Agrícolas

Reemplazar la quema al aire libre con alternativas limpias

Reducir la exposición a pesticidas

Desarrollo de Uso de Suelo/Industria

Alentar cosas que reduzcan la necesidades de automóviles

Trabajar con la ciudad, el condado y la comunidad en cuestiones de uso de suelo

Educar al público sobre las herramientas de uso de suelo

Procesos Industriales

Reducir las emisiones de las industrias a través de regulaciones

Reducir las emisiones de las industrias mediante nuevos incentivos

Aumentar las inspecciones en las industrias

Autoinspecciones en gasolineras

Instalar Más Solar

Reducir las Emisiones de la Cocina en Restaurantes

Polvo y Carreteras

Reducir el polvo en la comunidad a través del cumplimiento

Aumentar el barrido de calles

Alentar las mejoras en la pavimentación de carreteras

Árboles y Césped

Reemplazar el equipo antiguo y contaminante para el cuidado de césped residencial

Reemplazar el equipo antiguo y contaminante para el cuidado de césped comercial

Instalar barreras vegetativas

Plantar más árboles

Escuelas

Mejorar la filtración de aire en las escuelas

Aumentar la participación escolar en el programa "Healthy Air Living Schools"

Calidad del Aire Interior

Promover programas de climatización para hogares

Alcance

Educar al público sobre la calidad del aire

Educar al público sobre cómo pueden protegerse de la mala calidad del aire

Trabajar con la comunidad para traer más fondos de calidad del aire a la comunidad

AB 617 Community Participants Needed

Through implementation of the new AB 617 Community Air Protection Program, new resources have been committed to the Valley to reduce air pollution, improve quality of life, and help the region meet its clean air mandates. The California Air Resources Board (CARB) announced the selection of South Central Fresno (including Calwa and Malaga) and the City of Shafter as the first Valley communities to receive additional resources under AB 617.

The Valley Air District is now establishing a steering committee for each of those communities and is seeking involvement from interested residents, businesses and other members of the community to help the District understand the specific needs of each community and develop effective clean air strategies.

The basic role of the Steering Committee will include:

- Work with the District to establish a Steering Committee Charter
- Help the District understand community concerns, including socioeconomic burdens, location of sensitive receptors, etc.
- Identification of local mobile and stationary sources
- Assist in developing any community monitoring plan necessary to determine whether local sources are impacting community air quality
- Assist in developing community-specific steering committee webpage
- Assist with the public engagement process
- Assist in identifying and evaluating emission reduction opportunities, including socioeconomic considerations of actions identified

Membership

- The core of the steering committee should directly represent the residents and businesses in the community.
- Additional committee members may include representatives from city and county planning agencies, transportation agencies, health departments, faith-based groups, and schools.
- All interested stakeholders not appointed to the steering committee will be encouraged to participate at all public meetings.
- To ensure that the community steering committee focuses on the needs of the residents, a majority of the members must be community residents.

If you are interested in becoming a member of the Steering Committee for your community, please complete and return the application below as soon as possible. You will then be contacted about upcoming meetings and the Community Steering Committee membership selection process.

If you have questions about the process, please email AB617@valleyair.org or call 559-230-6000.

Application on following page

Information provided by you on this application (including contact or other personal information) is a public record and may be released in response to a California Public Records Act request. Names of all applicants will be posted on the District's AB 617 webpage.

AB 617 South Central Fresno Steering Committee Membership

State of California
AIR RESOURCES BOARD

AB 617 Community Air Protection Program –
Community Emissions Reduction Program for South Central Fresno

Resolution 20-07

February 13, 2020

Agenda Item No.: 20-3-2

WHEREAS, sections 39600 and 39601 of the Health and Safety Code authorize the California Air Resources Board (CARB or Board) to adopt standards, rules and regulations and to do such acts as may be necessary for the proper execution of the powers and duties granted to and imposed upon the Board by law;

WHEREAS, California's air quality programs have led to significant public health improvements; however, certain communities continue to experience environmental and health inequities from air pollution;

WHEREAS, many of these communities are affected by multiple stationary, area, and mobile sources of air pollution and suffer disproportionate health impacts;

WHEREAS, the high cumulative exposure burdens in these communities are a public health concern, contributing to health conditions such as cardiorespiratory disease, increased cancer risk, and an increased risk of premature death;

WHEREAS, expedited emission reductions of toxic air contaminants and criteria air pollutants in communities with high cumulative exposure burdens are critical to reduce these disproportionate health impacts;

WHEREAS, Assembly Bill (AB) 617 (C. Garcia, Statutes of 2017, chapter 136) added sections 39607.1, 40920.8, 42411, 42705.5, 44391.2 and amended sections 40920.6, 42400, 42402 in the Health and Safety Code, requiring a new community-focused program to address criteria air pollutants and toxic air contaminants;

WHEREAS, AB 617 is a significant step in transforming California's air quality programs to address air pollution disparities at the neighborhood level;

WHEREAS, the legislature has demonstrated an ongoing commitment to improving air quality in California's most burdened communities through the allocation of nearly \$750 million to CARB, with subsequent distribution to local air districts, as "Community Air Protection" funds to reduce exposure in highly impacted communities;

WHEREAS, statute required CARB by October 1, 2018, to engage stakeholders through a robust public process to set overall Program requirements to reduce toxic air contaminant and criteria air pollutant emissions in communities with high cumulative exposure, and select initial communities with high cumulative exposure burdens for the deployment of community air monitoring systems and/or the development of community emissions reduction programs;

WHEREAS, on September 27, 2018 CARB approved the *Community Air Protection Blueprint: For Selecting Communities, Preparing Community Emissions Reduction Programs, Identifying Statewide Strategies, and Conducting Community Air Monitoring* (Blueprint), which described criteria for the development of community emissions reduction programs by air districts, in conformance with the requirements of AB 617, and determined that the Blueprint and online Resource Center met statutory requirements for CARB to develop a monitoring plan and state strategy;

WHEREAS, statute requires that community emissions reduction programs be consistent with the state strategy;

WHEREAS on September 27, 2018 CARB selected the community of South Central Fresno to develop a community emissions reduction program as one of ten initial communities;

WHEREAS, the San Joaquin Valley Air Pollution Control District (District) convened a steering committee comprised of South Central Fresno community residents, non-profit organizations, businesses, and local government representatives and developed a community emissions reduction program to improve air quality in South Central Fresno, titled "South Central Fresno Community Emissions Reduction Program" (Program), included as Attachment A;

WHEREAS, the District conducted a public process to develop the Program over the course of a year including a series of 19 public meetings, including community steering committee meetings and workshops;

WHEREAS, the District Governing Board approved the Program on September 19, 2019 and submitted it to CARB on September 30, 2019;

WHEREAS, CARB staff hosted a community meeting, coinciding with a community steering committee meeting, on November 13, 2019 to hear directly from the community steering committee and the public on the Program;

WHEREAS, local decisions that determine land use and traffic patterns impact exposure to air pollution, and in many impacted communities throughout the State, including South Central Fresno, the proximity of emissions sources to nearby sensitive receptors like schools, homes, and day care centers exacerbates the cumulative exposure burden;

WHEREAS, historic land use decisions have created disproportionate impacts in many communities throughout the State;

WHEREAS, the State has emphasized the importance of incorporating environmental justice into city and county planning to address existing and new environmental injustice through the passage of Senate Bill 1000 (Levy, Chapter 587, Statutes of 2016), requiring general plans to include environmental justice elements and policies, and the Governor's Office of Planning and Research's General Plan Guidelines;

WHEREAS, CARB staff reviewed the Program to determine whether it meets the criteria established in the Blueprint and considered the perspectives of the community steering committee members in developing recommendations to the Board;

WHEREAS, CARB staff have identified key strengths of the Program to highlight for future communities as well as specific aspects of the Program that will need further definition to support successful implementation in the areas of reduction strategies and process;

WHEREAS, aspects of the Program may change over implementation, including implementation timeframes, technical information, and strategy prioritization;

WHEREAS, staff has proposed that CARB approve the South Central Fresno community emissions reduction program and direct CARB staff to work with the District to take additional actions to strengthen implementation as set forth in Attachment B: the South Central Fresno Community Emissions Reduction Program Staff Report (Staff Report), released to the public on January 24, 2019;

WHEREAS, the District should continue to work with the community steering committee and CARB to expeditiously implement the Program, including measurable progress on the additional actions set forth in Attachment B prior to the first annual reporting due October 1, 2020;

WHEREAS, ongoing adjustments to provide mechanisms for enhanced collaboration with the community steering committee in the development of agendas and co-leadership in the running of meetings is providing for more active community participation and improved decision-making process and should be continued;

WHEREAS, CARB's regulatory program that involves the adoption, approval, amendment, or repeal of standards, rules, regulations, or plans has been certified by the Secretary for Natural Resources under Public Resources Code section 21080.5 of the California Environmental Quality Act (CEQA; Title 14, California Code of Regulations, section 15251 (d)), and CARB conducts its CEQA review according to this certified program (Title 17, California Code of Regulations, sections 60000-60008);

WHEREAS, staff has determined that the Proposed Project is exempt from CEQA under the following exemptions: (1) Title 14, California Code of Regulations, section 15061 ("Common Sense Exemption") as it can be seen with certainty and supported by

the record evidence that there is no possibility that the activity in question may have a significant effect on the environment; (2) Title 14 California Code of Regulations, section 15308 ("Class 8" exemption: Actions Taken by Regulatory Agencies for Protection of the Environment) because the record evidence shows that the Proposed Project will enhance the environment by better protecting the public from health impacts associated with exposure to air pollution within the project area, the Proposed Project includes procedures for protection of the environment and the Proposed Project does not relax any applicable standards; (3) Title 14, California Code of Regulations, section 15306 ("Class 6" exemption: Information Collection) because the record evidence shows that many of the Proposed Project's implementing measures involve outreach and data collection from various parties to better hone particular efforts from implementing agencies in reducing localized pollution levels which may lead to actions by those agencies; and (4) Title 14 California Code of Regulations, section 15321 ("Class 21" exemption: Enforcement Actions by Regulatory Agencies) because the record evidence shows that the Proposed Project incorporates actions by implementing agencies to enforce permits from the districts or other entitlements for use issued, adopted or prescribed by applicable regulatory agencies or enforcement of laws, general rules, standards, objectives administered or adopted by regulatory agencies identified as implementing agencies in the Proposed Project.

Board Findings

WHEREAS, in consideration of the applicable statutory and Blueprint requirements, written and oral testimony provided by community members, the District, and other stakeholders, the Board finds that:

- the Program is a community emissions reduction program pursuant to AB 617;
- the Program was developed with the community steering committee in an open public process, in consultation with affected parties, through numerous public workshops, individual meetings, and other outreach efforts, and these efforts are expected to continue;
- the Program addresses key elements required in statute and the Blueprint and will benefit from additional actions to support successful implementation in the areas of reduction strategies and process;
- the Program is exempt from CEQA under Title 14, California Code of Regulations, sections 15061, 15306, 15308 and 15321 for the reasons stated herein.

NOW, THEREFORE, BE IT RESOLVED that the Board hereby approves the Program as set forth in Attachment A pursuant to additional direction to CARB staff and the District subject to the following actions taking place as set out in this Resolution:

- CARB staff works with the District and the community steering committee to take the additional actions to strengthen implementation as defined in the Staff Report in Attachment B on pages 8, 9, and 10 and as modified by this Resolution, to do the following:
 1. Include a process for making adjustments to incentive measure funding amounts based on ongoing discussions and recommendations from the

community steering committee, and continue engaging the committee on prioritization of incentive measures and project selection. This should include the District seeking co-funding for the truck re-routing strategy, with full funding provided by the District if sufficient co-funding is not identified.

2. Develop and provide specific criteria for project funding amounts and project selection, and clarify in the “Metrics to Track Progress” the process for adjusting allocations when projects are undersubscribed or oversubscribed.
 3. Update the emissions reduction targets as new information becomes available for the regulatory and other strategies that do not yet have defined benefits where quantification is feasible.
 4. Conduct a review of stationary source rules applicable to sources in the community and discuss current permitting and rule-making processes, as well as next steps in a transparent and expeditious manner with the community steering committee members by the end of 2020.
 5. Continue to strengthen the working relationship with the agencies that have land use and transportation authority in South Central Fresno to address community steering committee concerns, including seeking to establish a Memorandum of Understanding or other appropriate mechanisms with these agencies, including the City and County of Fresno, to address air quality impacts and concerns. To support these efforts, CARB staff will continue to move forward on development of the Freight Handbook and CARB and the District commit to work with the community steering committee to advance implementation of the best practices discussed in Tables 5 and 6 of the Freight Handbook Concept Paper.
 6. Continue to improve communication between the District and the community steering committee by developing clear objectives, setting mutually agreed upon deadlines, and providing information and feedback within defined timeframes, including the time needed for translation of materials into Spanish.
 7. Define a process for continued discussion of any additional community steering committee strategy ideas that are not currently included in the Program, and potential mechanisms for updates through the annual progress reports.
 8. Include the community steering committee in the agenda setting process, while continuing the rotation of community steering committee members as meeting co-hosts, so that members can continue to actively participate in meeting development and management.
- Identify the specific implementation steps and milestones for each of the strategies in the Program.
 - CARB staff, the District, and the community steering committee report back to the Board semi-annually or as directed by the Board, on implementation of these actions.

BE IT FURTHER RESOLVED that the Board directs the District to submit annual reports to CARB by October 1 of each year beginning in 2020, developed in accordance with the Blueprint requirements, and including updates on the implementation of the Program and measurable progress made regarding the additional actions required in this Resolution. The report should be developed in collaboration with the community steering committee with steering committee input documented in the report.

BE IT FURTHER RESOLVED that CARB will develop a template for reporting back on implementation of the Program, which shall also include any additional strategies that have been identified. The template will include items included in the Blueprint requirements for annual reports, along with other specific actions called for in the Resolution.

BE IT FURTHER RESOLVED that the Board affirms the existing authority of CARB staff to review and interpret aspects of the community emissions reduction programs and delegates to the Executive Officer, or his or her designee, the authority to approve District changes to the Program, in a manner compliant with CEQA, that he or she deems necessary to enable effective implementation of the Program, provided that such changes are consistent with statute and the goals established by the Board. Staff shall identify those changes when the Board receives an update on the annual report on the Program.

I hereby certify that the above is a true and correct copy of Resolution 20-7 as adopted by the California Air Resources Board.

Estado de California
Consejo de Recursos del Aire de California

AB 617 Programa de Protección del Aire en la Comunidad –
Programa de Reducción de Emisiones en la Comunidad de Centro
Sur Fresno

Resolución 20-07

13 de febrero de 2020

Número de Artículo de la Agenda.: 20-3-2

CONSIDERANDO QUE, las secciones 39600 y 39601 del Código de Salud y Seguridad autorizan a el Consejo de Recursos del Aire de California (CARB o Consejo) a adoptar normas, reglas y regulaciones y a realizar los actos que sean necesarios para la ejecución adecuada de los poderes y deberes otorgados e impuestos sobre el Consejo por ley;

CONSIDERANDO QUE, los programas de calidad del aire de California han llevado a mejoras significativas en la salud pública; sin embargo, ciertas comunidades continúan experimentando inequidades ambientales y de salud por la contaminación del aire;

CONSIDERANDO QUE, muchas de estas comunidades son afectadas por múltiples fuentes estacionarias, de área y móviles de contaminación del aire y sufren impactos desproporcionados en la salud;

CONSIDERANDO QUE, las altas cargas de exposición acumulada en estas comunidades son un problema de salud pública, ya que contribuyen a afecciones de salud como enfermedades cardiorrespiratorias, un mayor riesgo de cáncer y un mayor riesgo de muerte prematura;

CONSIDERANDO QUE, las reducciones expeditas de emisiones de contaminantes atmosféricos tóxicos y contaminantes atmosféricos de criterio en comunidades con altas cargas de exposición acumulativa son críticas para reducir estos impactos desproporcionados en la salud;

CONSIDERANDO QUE, el proyecto de ley de la Asamblea (AB) 617 (C. García, Estatutos de 2017, capítulo 136) agregó las secciones 39607.1, 40920.8, 42411, 42705.5, 44391.2 y modificó las secciones 40920.6, 42400, 42402 en el Código de Salud y Seguridad, que requieren un nuevo programa centrado en la comunidad para abordar criterios contaminantes del aire y contaminantes tóxicos del aire;

CONSIDERANDO QUE, AB 617 es un paso significativo en la transformación de los programas de calidad del aire de California para abordar las disparidades de contaminación del aire a nivel de vecindario;

CONSIDERANDO QUE,
la legislatura ha demostrado un compromiso continuo para mejorar la calidad del aire en las comunidades más agobiadas de California a través de la asignación de casi \$750 millones a CARB, con distribución posterior a los distritos aéreos locales, como

fondos de "Protección del Aire en la Comunidad" para reducir la exposición en comunidades altamente impactadas;

CONSIDERANDO QUE, el estatuto exigía a CARB antes del 1 de octubre de 2018, involucrar a las partes interesadas a través de un proceso público sólido para establecer los requisitos generales del Programa para reducir las emisiones contaminantes tóxicas del aire y los emisiones de los criterios contaminantes del aire en comunidades con alta exposición acumulativa, y seleccionar comunidades iniciales con altas cargas de exposición acumulativa para el despliegue de sistemas de monitoreo del aire en la comunidad y / o el desarrollo de programas de reducción de emisiones en la comunidad;

CONSIDERANDO QUE, el 27 de septiembre de 2018, CARB aprobó el *Plan Marco de la Protección del Aire en la Comunidad: Para Seleccionar a las Comunidades, Preparar los Programas de Reducción de Emisiones en las Comunidades, Identificar las Estrategias Estatales y Monitorear el Aire de las Comunidades* (Plan Marco), que describe los criterios para el desarrollo de programas de reducción de emisiones en la comunidad por distritos de aire, de conformidad con los requisitos de AB 617, y determinó que el Plan Marco y el Centro de Recursos en línea cumplieron con los requisitos legales para que CARB desarrolle un plan de monitoreo y una estrategia estatal;

CONSIDERANDO QUE, el estatuto requiere que los programas de reducción de emisiones en la comunidad sean consistentes con la estrategia estatal;

CONSIDERANDO QUE el 27 de septiembre de 2018, CARB seleccionó a la comunidad de Centro Sur Fresno para desarrollar un programa de reducción de emisiones en la comunidad como una de las diez comunidades iniciales;

CONSIDERANDO QUE El Distrito de Control de la Contaminación del Aire del Valle de San Joaquín (Distrito) convocó a un comité directivo compuesto por residentes de la comunidad del Centro Sur Fresno, organizaciones sin fines de lucro, empresas y representantes del gobierno local y desarrolló un programa de reducción de emisiones en la comunidad para mejorar la calidad del aire en Centro Sur Fresno, titulado "Programa de reducción de emisiones en la Comunidad de Centro Sur Fresno" (Programa), incluido como Anexo A;

CONSIDERANDO QUE, el Distrito llevó a cabo un proceso público para desarrollar el Programa en el transcurso de un año, que incluyó una serie de 19 reuniones públicas, incluidas reuniones y talleres del comité directivo de la comunidad;

CONSIDERANDO QUE, el Consejo de Gobierno del Distrito aprobó el Programa el 19 de septiembre de 2019 y lo presentó a CARB el 30 de septiembre de 2019;

CONSIDERANDO QUE, el personal de CARB organizó una reunión comunitaria, coincidiendo con una reunión del comité directivo de la comunidad, el 13 de noviembre de 2019 para escuchar directamente del comité directivo de la comunidad y del público sobre el Programa.;

CONSIDERANDO QUE, las decisiones locales que determinan el uso del terreno y los patrones de tráfico impactan la exposición a la contaminación del aire, y en

muchas comunidades afectadas en todo el estado, incluido el Centro Sur Fresno, la proximidad de las fuentes de emisiones a receptores sensibles cercanos como escuelas, hogares y guarderías exacerba la carga de exposición acumulativa;

CONSIDERANDO QUE, las decisiones históricas sobre el uso del terreno han creado impactos desproporcionados en muchas comunidades en todo el estado;

CONSIDERANDO QUE, el Estado ha enfatizado la importancia de incorporar la justicia ambiental en la planificación de la ciudad y el condado para abordar la injusticia ambiental existente y nueva a través de la aprobación del Proyecto de Ley 1000 del Senado (Levy, Capítulo 587, Estatutos de 2016), que requiere planes generales para incluir elementos y políticas de justicia ambiental y las Directrices del Plan General de la Oficina de Planificación e Investigación del Gobernador;

CONSIDERANDO QUE, el personal de CARB revisó el Programa para determinar si cumple con los criterios establecidos en el Plan y consideró las perspectivas de los miembros del comité directivo de la comunidad al desarrollar recomendaciones para el Consejo;

CONSIDERANDO QUE, el personal de CARB ha identificado las fortalezas clave del Programa para resaltar para las comunidades futuras, así como los aspectos específicos del Programa que necesitarán una definición adicional para apoyar la implementación exitosa en las áreas de estrategias de reducción y proceso;

CONSIDERANDO QUE, los aspectos del Programa pueden cambiar con respecto a la implementación, incluidos los plazos de implementación, la información técnica y la priorización de la estrategia;

CONSIDERANDO QUE, el personal ha propuesto que CARB apruebe el programa de reducción de emisiones en la comunidad de Centro Sur Fresno y dirija al personal de CARB a trabajar con el Distrito para tomar medidas adicionales para fortalecer la implementación como se establece en el Anexo B: Informe del Personal del Programa de Reducción de Emisiones en la Comunidad de Centro Sur Fresno (Informe del Personal), lanzado al público el 24 de enero de 2019;

CONSIDERANDO QUE, El Distrito debe continuar trabajando con el comité directivo de la comunidad y CARB para implementar rápidamente el Programa, incluido el progreso medible en las acciones adicionales establecidas en el Anexo B antes del primer informe anual que vence el 1 de octubre de 2020;

CONSIDERANDO QUE, los ajustes continuos para proporcionar mecanismos para una mejor colaboración con el comité directivo de la comunidad en el desarrollo de agendas y co-liderazgo en la ejecución de las reuniones están proporcionando una participación comunitaria más activa y un mejor proceso de toma de decisiones y deben continuar;

CONSIDERANDO QUE, el programa regulatorio de CARB que involucra la adopción, aprobación, enmienda o derogación de estándares, reglas, regulaciones o planes ha sido certificado por el Secretario de Recursos Naturales bajo la sección 21080.5 del Código de Recursos Públicos de la Ley de Calidad Ambiental de California (CEQA; Título 14, Código de Regulaciones de California, sección 15251

(d)), y CARB realiza su revisión CEQA de acuerdo con este programa certificado (Título 17, Código de Regulaciones de California, secciones 60000-60008);

CONSIDERANDO QUE, el personal ha determinado que el Proyecto Propuesto está exento de CEQA bajo las siguientes exenciones: (1) Título 14, Código de Regulaciones de California, sección 15061 ("Exención de sentido común") como se puede ver con certeza y respaldado por la evidencia de que no hay posibilidad de que la actividad en cuestión pueda tener un efecto significativo en el medio ambiente; (2) Título 14 del Código de Regulaciones de California, sección 15308 (exención de "Clase 8": Acciones tomadas por agencias reguladoras para la protección del medio ambiente) porque la evidencia del registro muestra que el Proyecto Propuesto mejorará el medio ambiente al proteger mejor al público de los impactos en la salud asociados con exposición a la contaminación del aire dentro del área del proyecto, el Proyecto Propuesto incluye procedimientos para la protección del medio ambiente y el Proyecto Propuesto no relaja ninguna norma aplicable; (3) Título 14, Código de Regulaciones de California, sección 15306 (exención de "Clase 6": Recolección de información) porque la evidencia del registro muestra que muchas de las medidas de implementación del Proyecto Propuesto incluyen divulgación y recopilación de datos de varias partes para perfeccionar mejor los esfuerzos particulares de las agencias implementadoras en reducir los niveles de contaminación localizados que pueden conducir a acciones de esas agencias; y (4) Título 14 del Código de Regulaciones de California, sección 15321 (exención "Clase 21": Acciones de cumplimiento por parte de agencias reguladoras) porque la evidencia de registro muestra que el Proyecto Propuesto incorpora acciones de agencias implementadoras para hacer cumplir los permisos de los distritos u otros derechos de uso emitidos, adoptados o prescrito por las agencias reguladoras aplicables o la aplicación de las leyes, normas generales, estándares, objetivos administrados o adoptados por las agencias reguladoras identificadas como agencias implementadoras en el Proyecto Propuesto.

Resultados del Consejo

CONSIDERANDO QUE, en consideración de los requisitos legales y del Plan Marco aplicable, el testimonio escrito y oral proporcionado por miembros de la comunidad, el Distrito y otras partes interesadas, el Consejo considera que:

- el Programa es un programa de reducción de emisiones en la comunidad de conformidad con AB 617;
- el Programa se desarrolló con el comité directivo de la comunidad en un proceso público abierto, en consulta con las partes afectadas, a través de numerosos talleres públicos, reuniones individuales y otros esfuerzos de divulgación, y se espera que estos esfuerzos continúen;
- el Programa aborda los elementos clave requeridos en el estatuto y el Plan y se beneficiará de acciones adicionales para apoyar la implementación exitosa en las áreas de estrategias de reducción y proceso;
- el Programa está exento de CEQA bajo el Título 14, Código de Regulaciones de California, secciones 15061, 15306, 15308 y 15321 por las razones establecidas en este documento.

AHORA, POR LO TANTO, SE RESUELVA que el Consejo aquí aprueba el Programa como se establece en el Anexo A de conformidad con las instrucciones adicionales para el personal de CARB y el Distrito sujeto a las siguientes acciones que tienen

lugar como se establece en esta Resolución:

- El personal de CARB trabaja con el Distrito y el comité directivo de la comunidad para tomar medidas adicionales para fortalecer la implementación como se define en el Informe del Personal en el Anexo B en las páginas 8, 9 y 10 y según lo modificado por esta Resolución, para hacer lo siguiente:
 1. Incluir un proceso para hacer ajustes a los montos de financiamiento de las medidas de incentivos basados en las discusiones y recomendaciones continuas del comité directivo de la comunidad, y continúe involucrando al comité en la priorización de las medidas de incentivos y la selección de proyectos. Esto debe incluir que el Distrito busque cofinanciación para la estrategia de cambio de ruta de camiones, con una financiación total proporcionada por el Distrito si no se identifica la cofinanciación suficiente.
 2. Desarrollar y proporcionar criterios específicos para los montos de financiamiento del proyecto y la selección del proyecto, y aclare en las “Métricas para realizar un seguimiento del progreso” el proceso para ajustar las asignaciones cuando los proyectos tienen una baja o excesiva suscripción.
 3. Actualizar los objetivos de reducción de emisiones a medida que haya nueva información disponible para las estrategias regulatorias y otras que aún no tienen beneficios definidos donde la cuantificación es factible.
 4. Lleve a cabo una revisión de las reglas de fuentes estacionarias aplicables a las fuentes en la comunidad y discuta los procesos actuales de permisos y elaboración de reglas, así como los próximos pasos de manera transparente y expedita con los miembros del comité directivo de la comunidad para fines de 2020.
 5. Continuar fortaleciendo la relación de trabajo con las agencias que tienen autoridad de uso del terreno y transporte en Centro Sur Fresno para abordar las inquietudes del comité directivo de la comunidad, incluida la búsqueda de establecer un Memorando de Entendimiento u otros mecanismos apropiados con estas agencias, incluyendo la Ciudad y el Condado de Fresno, para abordar los problemas e inquietudes de la calidad del aire. Para apoyar estos esfuerzos, el personal de CARB continuará avanzando en el desarrollo del Manual de Carga y CARB y el Distrito se comprometen a trabajar con el comité directivo de la comunidad para avanzar en la implementación de las mejores prácticas discutidas en las Tablas 5 y 6 del Documento Conceptual del Manual de Carga
 6. Continuar mejorando la comunicación entre el Distrito y el comité directivo de la comunidad mediante el desarrollo de objetivos claros, estableciendo plazos acordados mutuamente y proporcionando información y comentarios dentro de plazos definidos, incluido el tiempo necesario para la traducción de materiales al español.
 7. Definir un proceso para la discusión continua de cualquier idea adicional de estrategia del comité directivo de la comunidad que no esté actualmente incluida en el Programa, y posibles mecanismos para actualizaciones a través de los informes anuales de progreso.
 8. Incluya al comité directivo de la comunidad en el proceso de establecimiento de la agenda, mientras continúa la rotación de los

miembros del comité directivo de la comunidad como coanfitriones de la reunión, para que los miembros puedan continuar participando activamente en el desarrollo y gestión de reuniones.

- Identificar los pasos específicos de implementación y los hitos para cada una de las estrategias en el Programa
- El personal de CARB, el Distrito y el comité directivo de la comunidad informan al Consejo semestralmente, o según lo indique el Consejo, sobre la implementación de estas acciones.

SE RESUELVE ADEMÁS que el Consejo ordena al Distrito que presente informes anuales a CARB antes del 1 de octubre de cada año a partir de 2020, desarrollado de acuerdo con los requisitos del Plan Marco e incluyendo actualizaciones sobre la implementación del Programa y el progreso medible realizado con respecto a las acciones adicionales requeridas en esta Resolución. El informe debe desarrollarse en colaboración con el comité directivo de la comunidad con los aportes del comité directivo documentados en el informe.

SE RESUELVE ADEMÁS que CARB desarrollará un modelo para informar sobre la implementación del Programa, que también incluirá cualquier estrategia adicional que se haya identificado. El modelo incluirá elementos incluidos en los requisitos del Plan Marco para informes anuales, junto con otras acciones específicas requeridas en la Resolución.

SE RESUELVE ADEMÁS que el Consejo afirma la autoridad existente del personal de CARB para revisar e interpretar aspectos de los programas de reducción de emisiones en la comunidad y delega al Oficial Ejecutivo, o su designado, la autoridad para aprobar los cambios del Distrito al Programa, de una manera que cumpla con CEQA , que él o ella considere necesario para permitir la implementación efectiva del Programa, siempre que dichos cambios sean consistentes con el estatuto y las metas establecidas por el Consejo. El personal identificará esos cambios cuando el Consejo reciba una actualización del informe anual sobre el Programa.

Por la presente certifico que lo anterior es una copia verdadera y correcta de la Resolución 20-7 adoptada por el Consejo de Recursos del Aire de California.

<http://community.valleyair.org/media/1516/01finalscfresnocerp-9-19-19.pdf>
- Anexo B:** *Informe del Personal del Programa de Reducción de Emisiones en la Comunidad de Centro Sur Fresno*

***El Anexo A NO se adjunta a la resolución propuesta; simplemente se describe en esta página.**

A General Framework for Thinking about Air Monitoring

Some possible objectives of air monitoring:

- To determine where and when emissions are occurring.
- To determine which sources are primarily responsible for the air pollution.
- To track the progress of the Community Emissions Reduction Programs.
- To support public health research.
- To provide real-time air quality information so that community members can make informed choices and change their behavior to reduce exposure.
- To launch community awareness campaigns.
- To create a new regulatory system of air monitors (i.e. to produce data that could be used by local, state, and federal agencies to enforce regulations).
- *Other key objectives?*

Some critical questions to ask regarding air monitoring and air monitoring systems:

- What will be the duration of air monitoring? How long will the monitor be up and running? What goals or purpose does this decision support?
- What are the specific time periods that should be monitored (i.e. specific seasons, day vs. night, after certain events or scenarios occur, etc.).
- What data already exists and how is it being used?
- Where should monitoring take place? What areas have been ground-truthed? What are the areas of greatest concern?
- Where are sensitive populations located? How should that inform the air monitoring?
- What should the data produced by the monitoring system be used for? And how should it be shared with the public?
- How will the community be involved in the actual implementation of air monitoring?
- *Other key questions?*

Pollutants	Example Sources	Platform			
		Trailer (x1)	Van (x1)	Compact System (x2)	Stand Alone PM2.5 (x4)

Meteorology		X	X	X	

Glossary

PM2.5	Particulate Matter of 2.5 microns or less
Black Carbon	Primarily from diesel particulate matter
NO, NO2, NOx	Oxides of Nitrogen (precursor to PM2.5, Ozone)
CO	Carobon Monoxide
Ozone	Regional, formed from VOC and NOx
SO2, H2S	Sulfur Dioxide, Hydrogen Sulfide
VOC (BTEX)	Volitile Organic Compounds (Benzene, Toluene, Ethylene, Xylene)
VOC Auto GC/MS	Other non BTEX Volitile Organic Compounds
Toxics	Many different compounds that can cause harmful health effects
Meteorology	Wind speed, wind direction, temperature, humidity

Current Air Monitoring Sites

Air Monitoring Site	Pollutants Measured
Fresno-Pacific (FP)	PM2.5 (filter-based)
Fresno-Foundry (FF)	NO2, Meteorology (+ real-time PM2.5 and CO in 2019)
Fresno-Drummond (FD)	Ozone, NO/NO2/NOx, PM10 (filter-based), Meteorology

Community Air Monitoring Network Design Worksheet

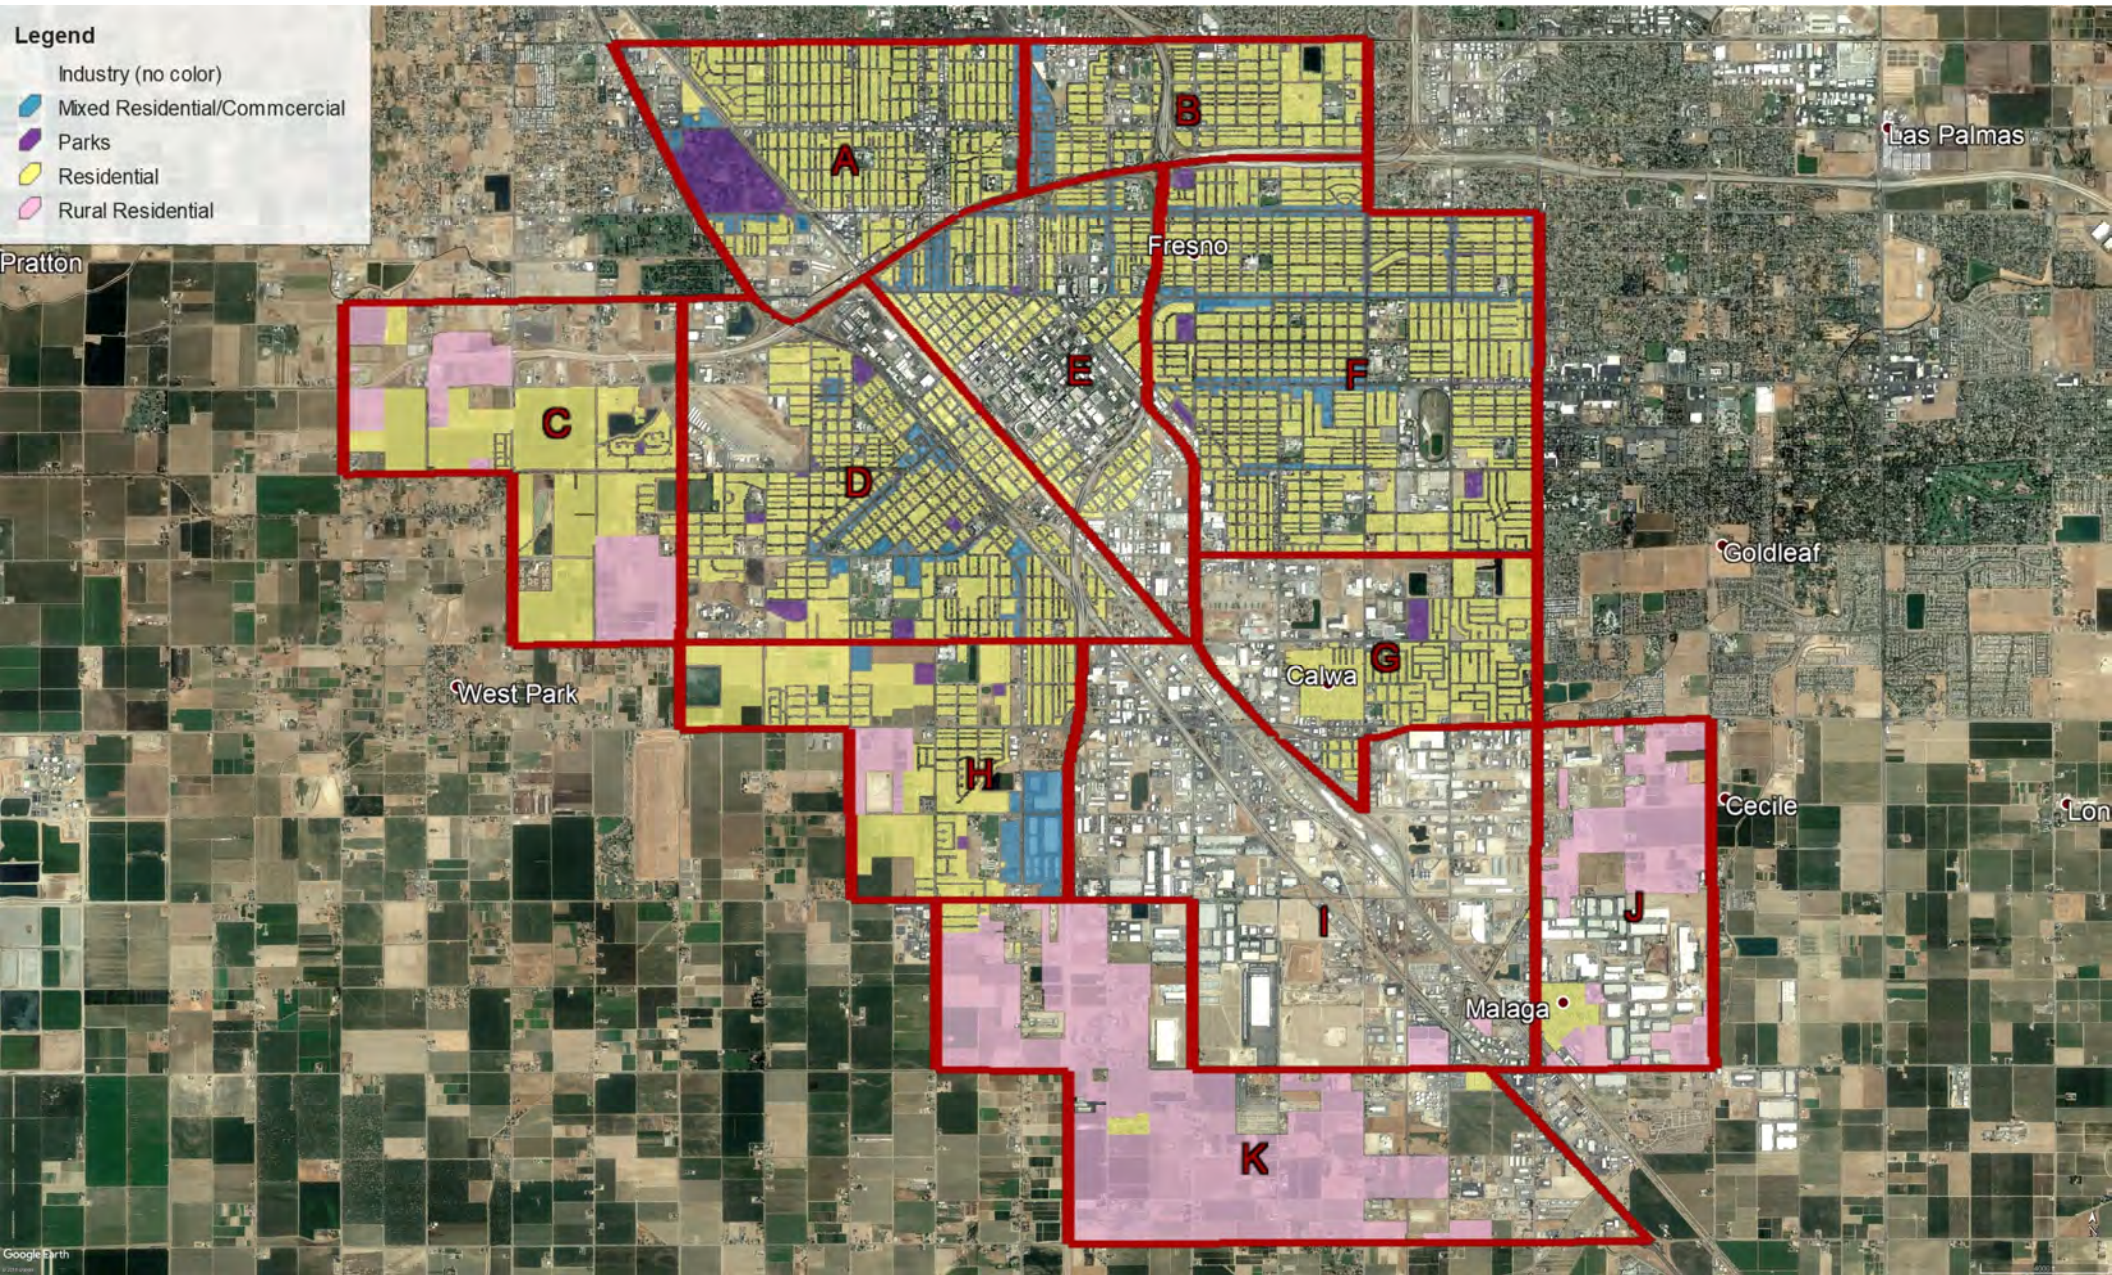

Full-sized Trailer = select top 2 air monitoring zones as your highest priority areas

Compact System = select top 3 air monitoring zones as your highest priority areas

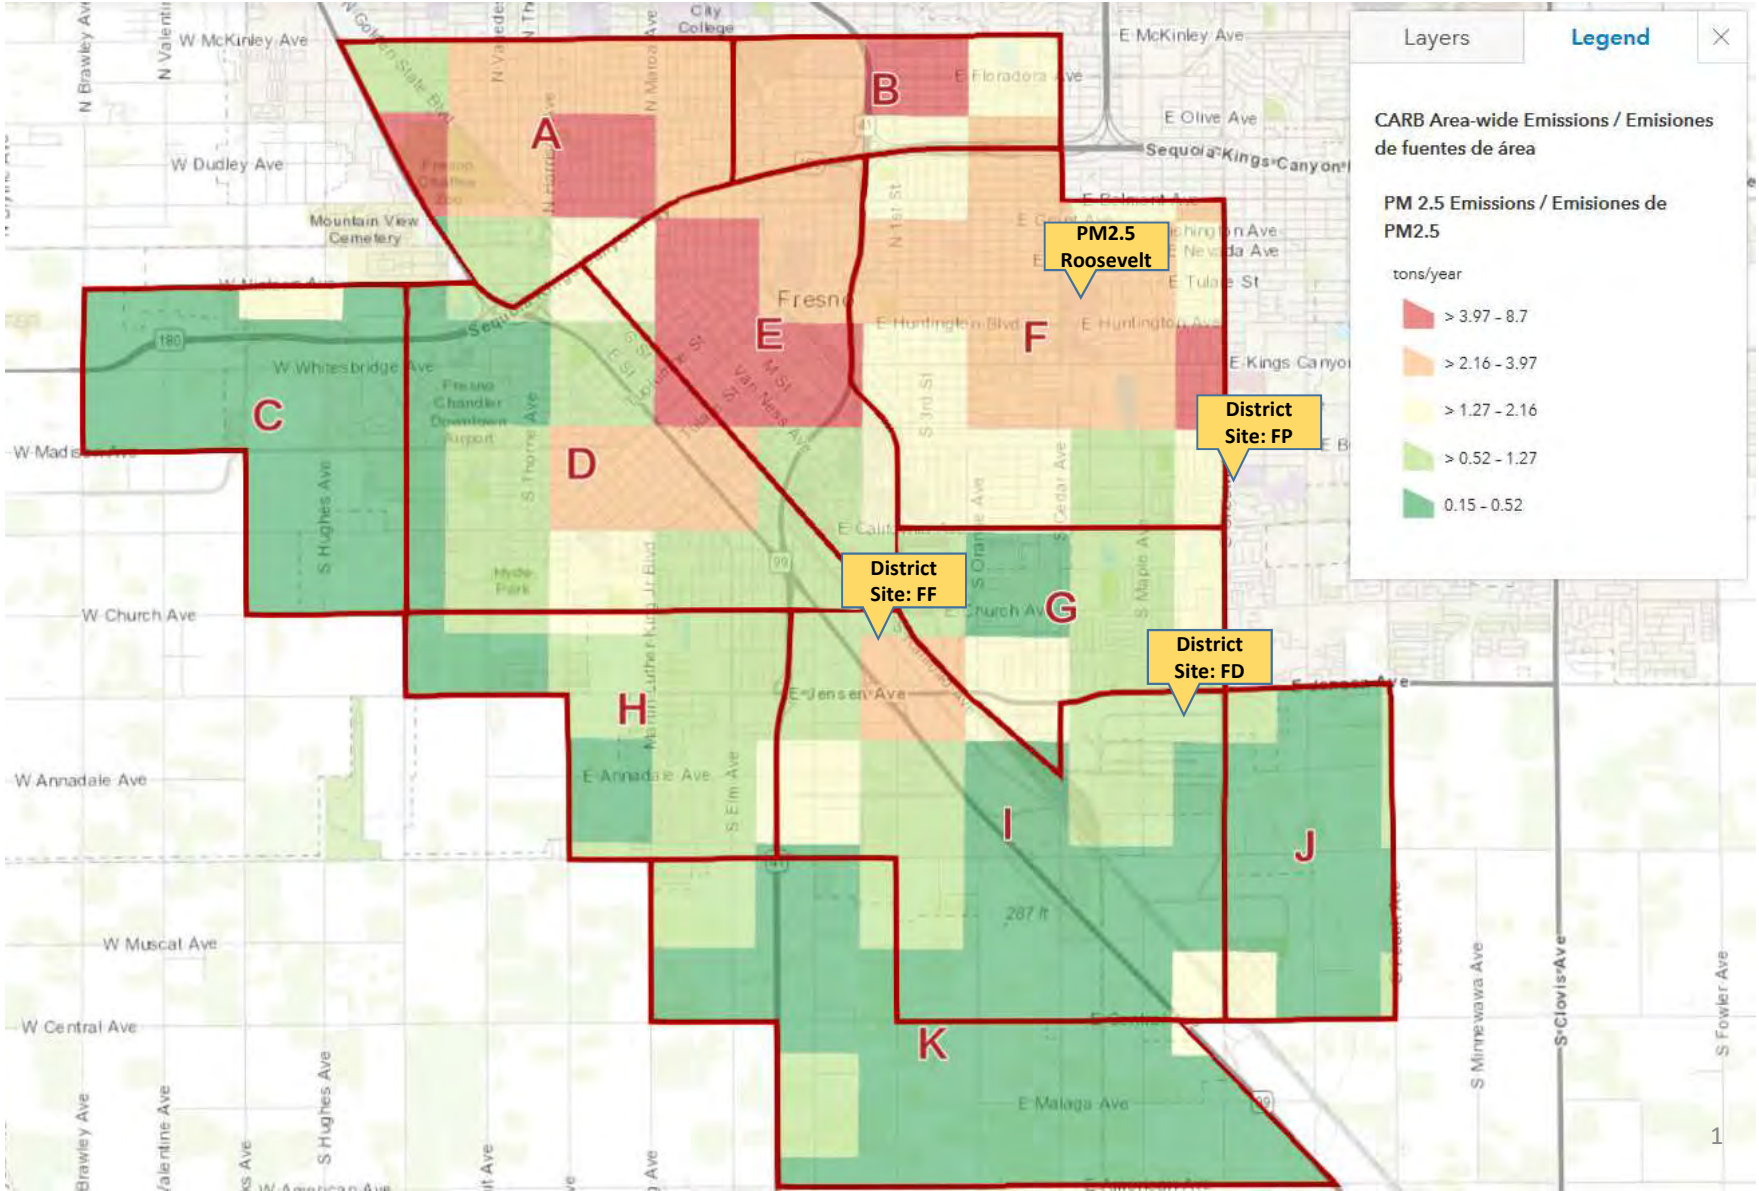

PM2.5 Stand Alone = select 4 air monitoring zones as your highest priority areas

Community Air Monitoring Zone	Full-Sized Trailer Priority (select 2)	Compact System (select 3)	PM2.5 Stand Alone (select 4)	Other (explain pollutant, type of monitor, reason)

Sensitive Receptors
Receptores Sensibles

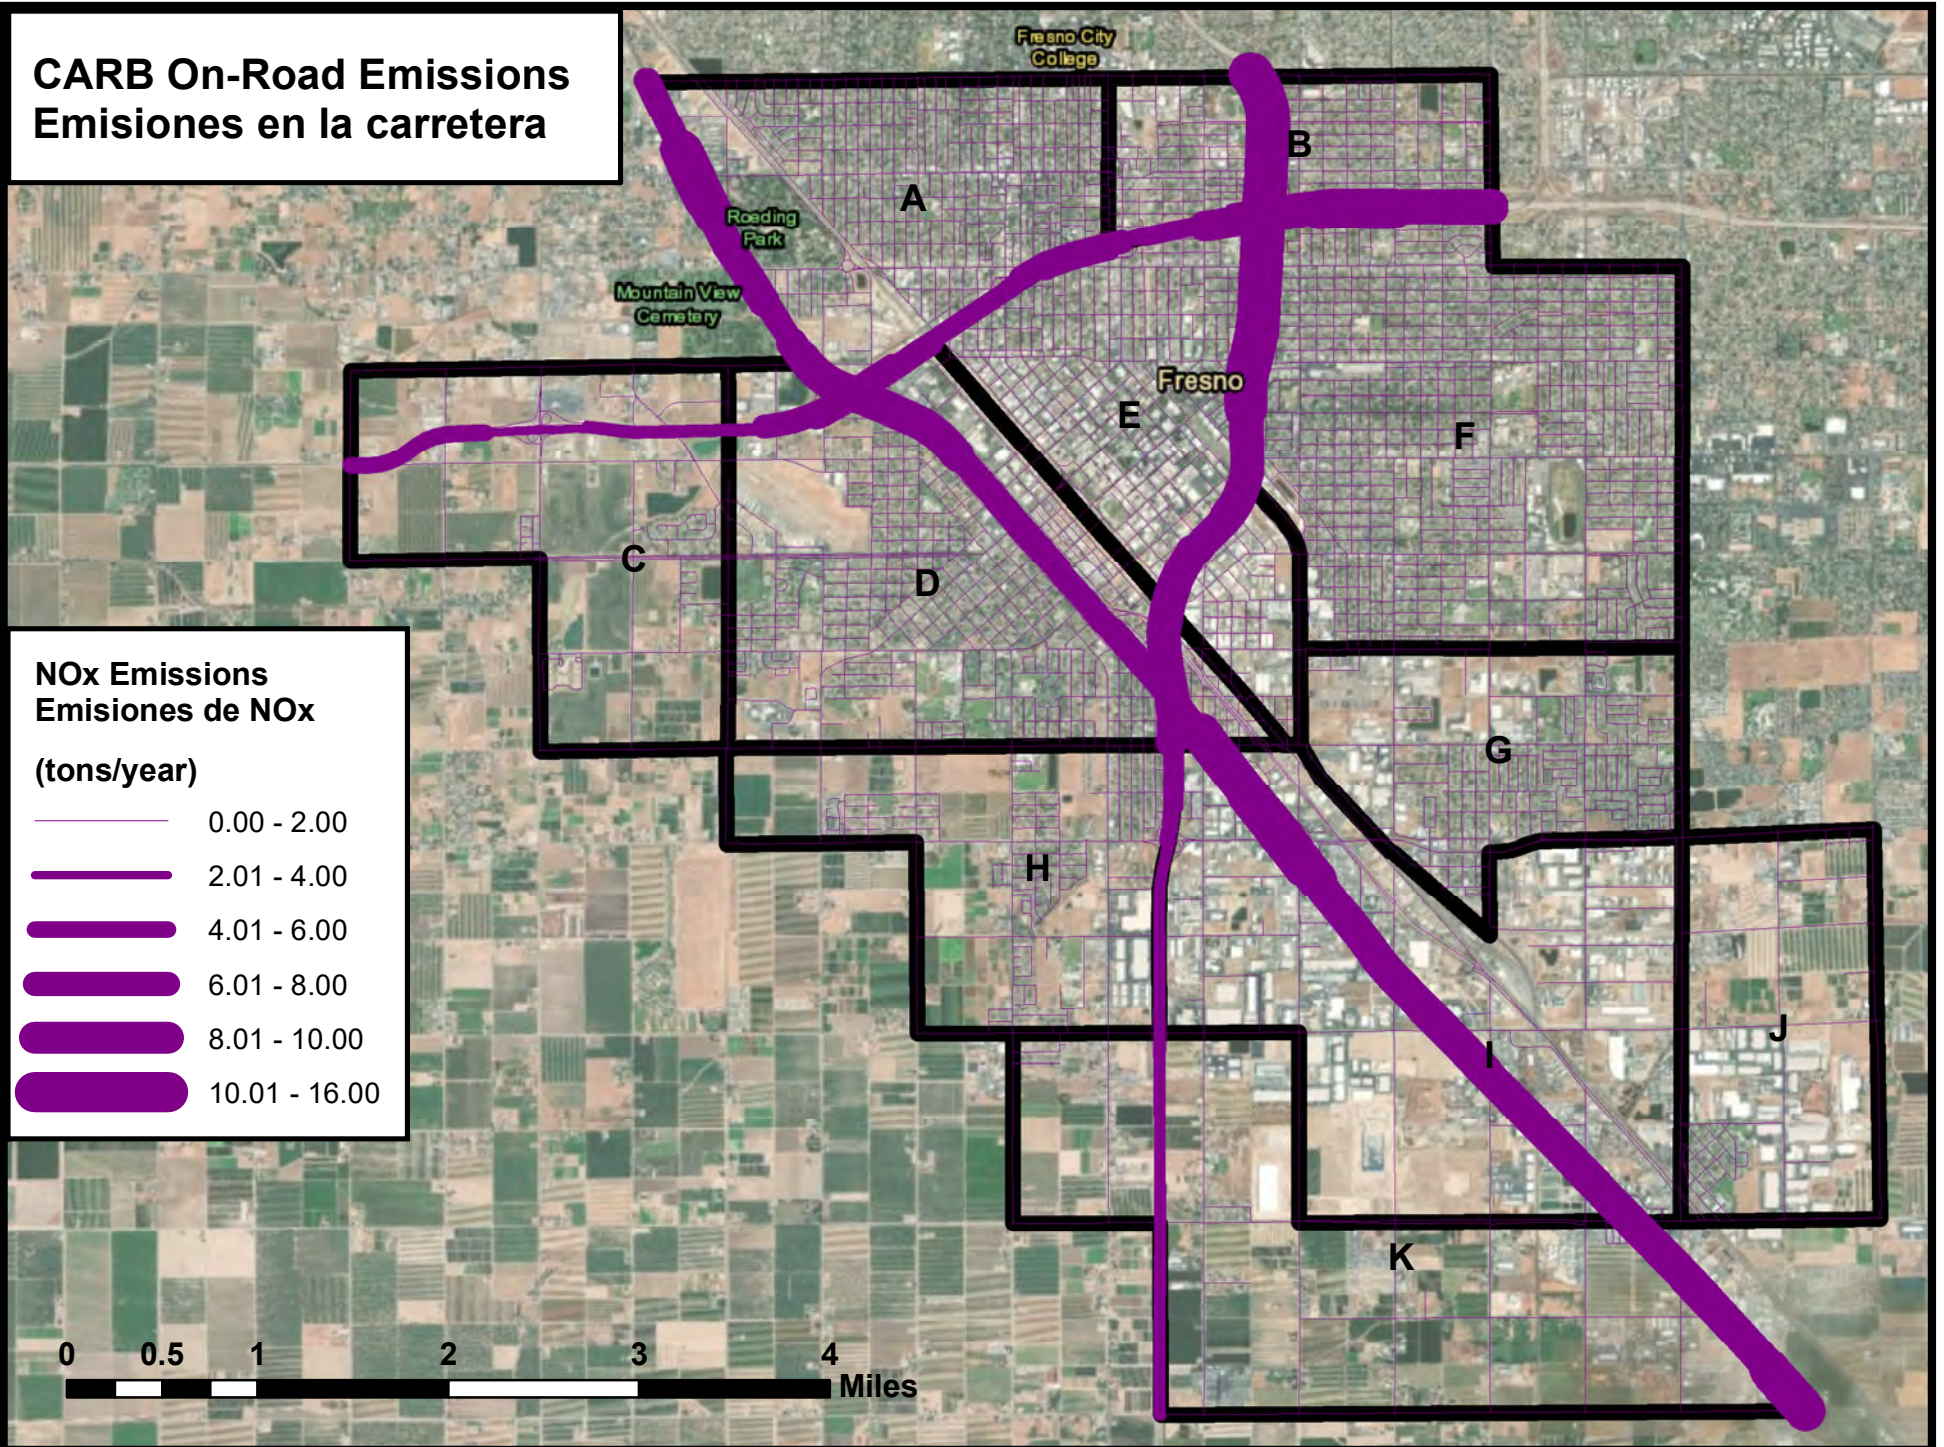

Current Monitors
Monitores Actuales

Wind Rose: how wind speed and direction are distributed at a given location for a certain time period.
Spoke Color: wind speed
Spoke Length: how often wind blows TO that direction

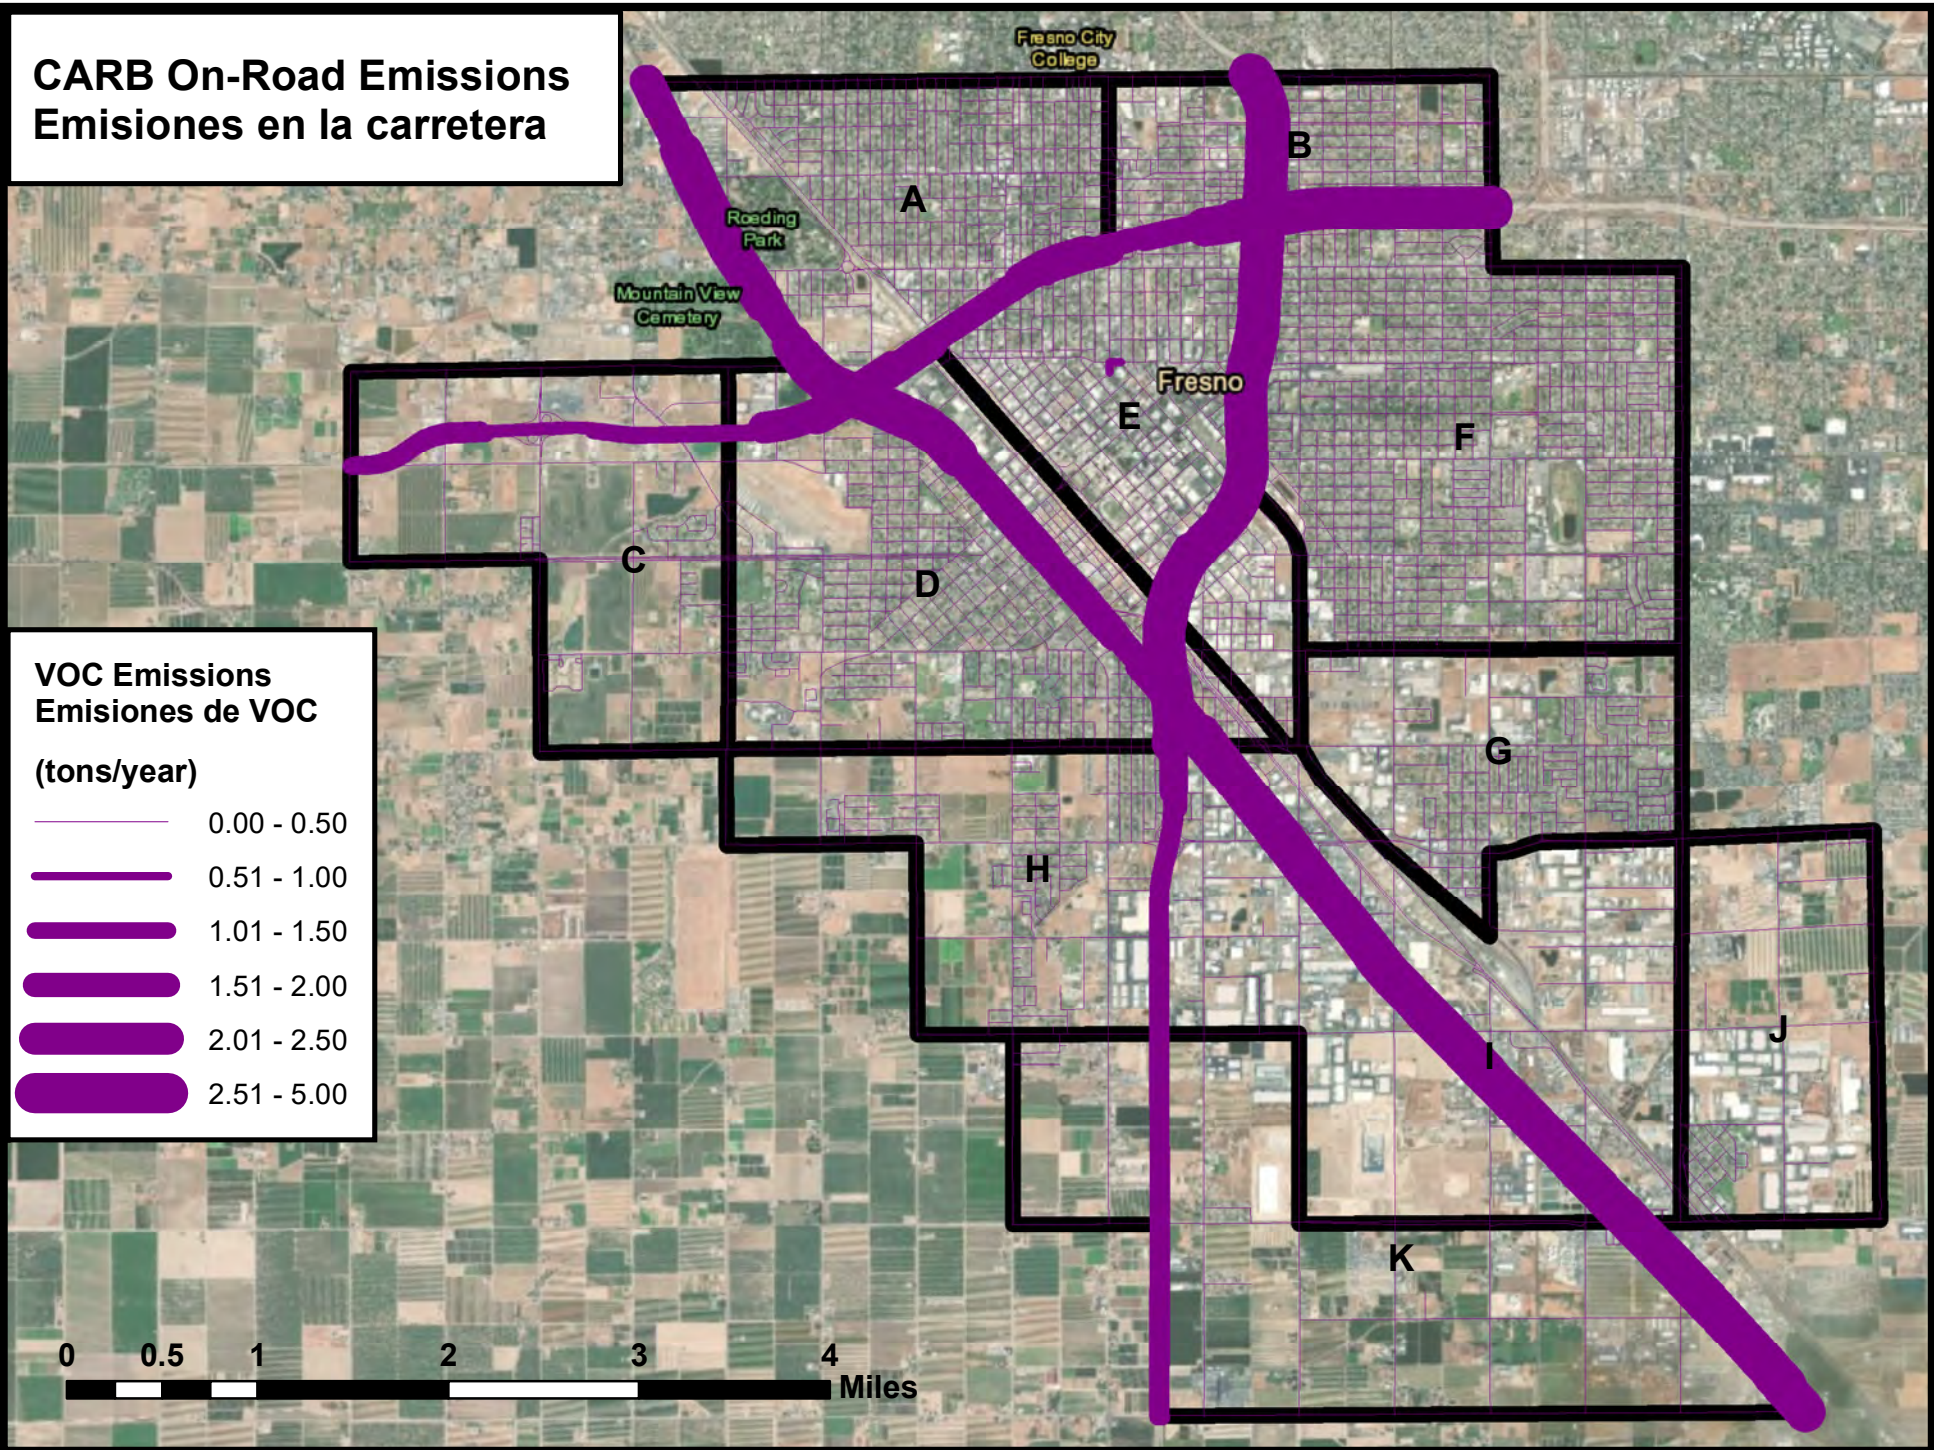

CARB On-Road Emissions Emisiones en la carretera

CARB On-Road Emissions Emisiones en la carretera

CARB On-Road Emissions
Emisiones en la carretera

Types of Area Emissions Sources
COOKING
PAVED ROAD DUST
RESIDENTIAL FUEL COMBUSTION
CONSTRUCTION AND DEMOLITION
FUGITIVE WINDBLOWN DUST
SERVICE AND COMMERCIAL
MANAGED BURNING AND DISPOSAL
FIRES
FARMING OPERATIONS
MANUFACTURING AND INDUSTRIAL
UNPAVED ROAD DUST

Types of Off-Road Mobile Sources
CONSTRUCTION AND MINING EQUIPMENT
INDUSTRIAL EQUIPMENT
LOCOMOTIVES - SWITCHING
COMMERCIAL
LOCOMOTIVES - ROAD HAULING
TRANSPORT REFRIGERATION UNITS
LAWN AND GARDEN (COMMERCIAL)
AGRICULTURAL EQUIPMENT
LAWN AND GARDEN (RESIDENTIAL)

Types of On-Road Mobile Sources
HEAVY-DUTY TRUCKS
SCHOOL BUSES
MEDIUM-DUTY TRUCKS
LIGHT-DUTY TRUCKS
PASSENGER VEHICLES
MOTOCYCLES
TRANSIT BUSES

Important Note: Mass emissions of air toxics, as represented below, should not be used to make conclusions about a facility's impacts on an individual's health. Effects on an individual's health depends upon a number of factors, including the concentration of toxics in the air, the potency (toxicity) of the chemical, and the length of exposure. In addition to the mass emissions of air toxics represented below, the concentration of toxics in the air at a specific location is also dependent on other factors such as, but not limited to, how the pollutant is emitted (stack height and direction, exit velocity and temperature of emissions), wind direction and speed, and distance to the receptor location.

The District is currently implementing a multi-year process under AB 2588 (Air Toxics "Hot Spots" Information and Assessment Act) to update this information and determine each facility's air toxics information and potential impact on the community, including performing complex dispersion modeling and health risk assessment of those facilities with the potential to create a health risk. The final phase of this process will be initiated in 2020. Updated air toxics information will be added to the District's AB 617 website as available: <http://community.valleyair.org/>

The information presented below addresses facility emissions only; however, a community may also be impacted by other types of sources such as mobile sources and dispersed areawide sources. These will be addressed in future enhancements to information available on the District's AB 617 website: <http://community.valleyair.org/>

The air toxics information presented below has been extracted from the State's CEIDARS database, available at: <https://www.arb.ca.gov/app/emsinv/facinfo/facinfo.php>
