

VIABLE MITIGATION STRATEGIES FOR ENTERIC METHANE

Alexander N. Hristov

**Department of Animal Science, The Pennsylvania State
University**

**Workshop on Methane, Dairies and Livestock, and Renewable Natural Gas
in California; April 29, 2022**

Methane emissions in ruminants

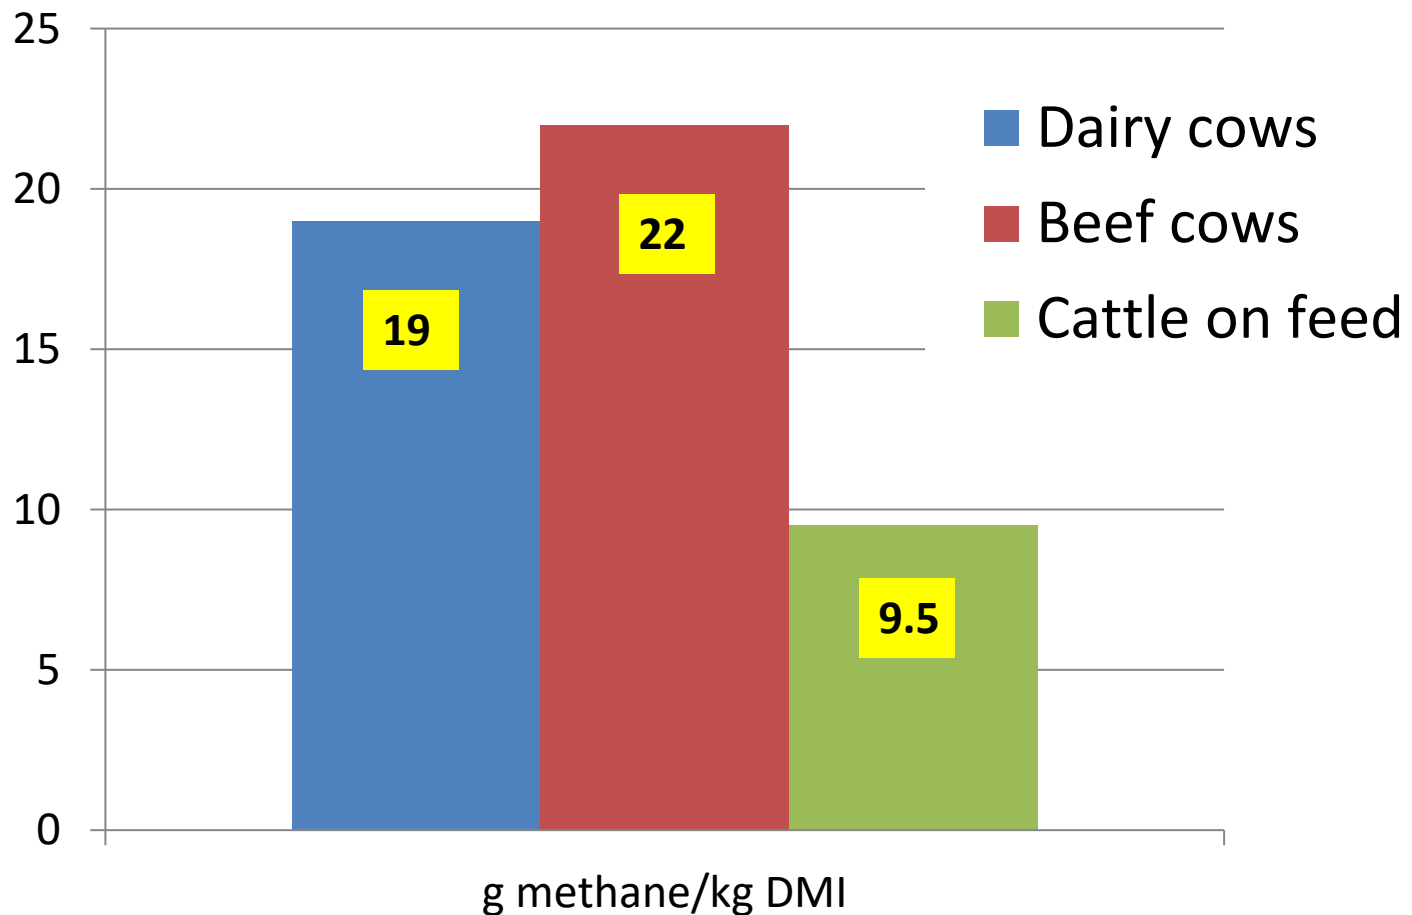

In dairy systems: probably close to half/half
In beef systems: the majority is enteric emissions

Methanobrevibacter

More forage = more enteric methane

more grain and fat = less methane

Enteric methane mitigation strategies

- **Nutritional strategies**

- Improving forage quality
- Feeding concentrates
- Lipids
- Nitrates
- Ionophores
- Tannins & saponins
- Methane inhibitors
- Seaweeds
- Precision feeding

With all these, well-designed and executed, independent research trials are needed to prove efficacy!

- **Management strategies**

- Immunization against methanogens
- Manipulation of the rumen microbiome
- Animal genetics, selecting for low-methane emission
- Improving animal health
- Lifetime productivity
- **IMPROVING ANIMAL FEED EFFICIENCY AND PRODUCTIVITY**

A meta-analysis of mitigation strategies for enteric methane

	MITIGATION STRATEGY	POTENTIAL EMISSIONS REDUCTION				RELEVANT PRODUCTION SYSTEM		
Absolute & Product-Based Reductions	1 CH ₄ INHIBITORS	Daily CH ₄	-35%	CH ₄ IG	No Data			
		CH ₄ Y	-34%	CH ₄ IM	-32%			
	2 OILS & FATS	Daily CH ₄	-19%	CH ₄ IG	-22%			
		CH ₄ Y	-15%	CH ₄ IM	-12%			
	3 OILSEEDS	Daily CH ₄	-20%	CH ₄ IG	No Effect			
	CH ₄ Y	-14%	CH ₄ IM	-12%				
	4 ELECTRON SINKS	Daily CH ₄	-17%	CH ₄ IG	-12%			
	CH ₄ Y	-15%	CH ₄ IM	-13%				
	5 TANNIN-RICH FORAGES	Daily CH ₄	-12%	CH ₄ IG	No Data			
	CH ₄ Y	-10%	CH ₄ IM	-18%				
Product-Based Reductions	6 DECREASING DIETARY FORAGE-TO-CONCENTRATE RATIO			CH ₄ IG	-9%			
				CH ₄ IM	-9%			
	7 INCREASING FEEDING LEVEL			CH ₄ IG	No Data			
			CH ₄ IM	-17%				
8 DECREASING GRASS MATURITY			CH ₄ IG	No Data				
			CH ₄ IM	-13%				

LEGEND

SYSTEM

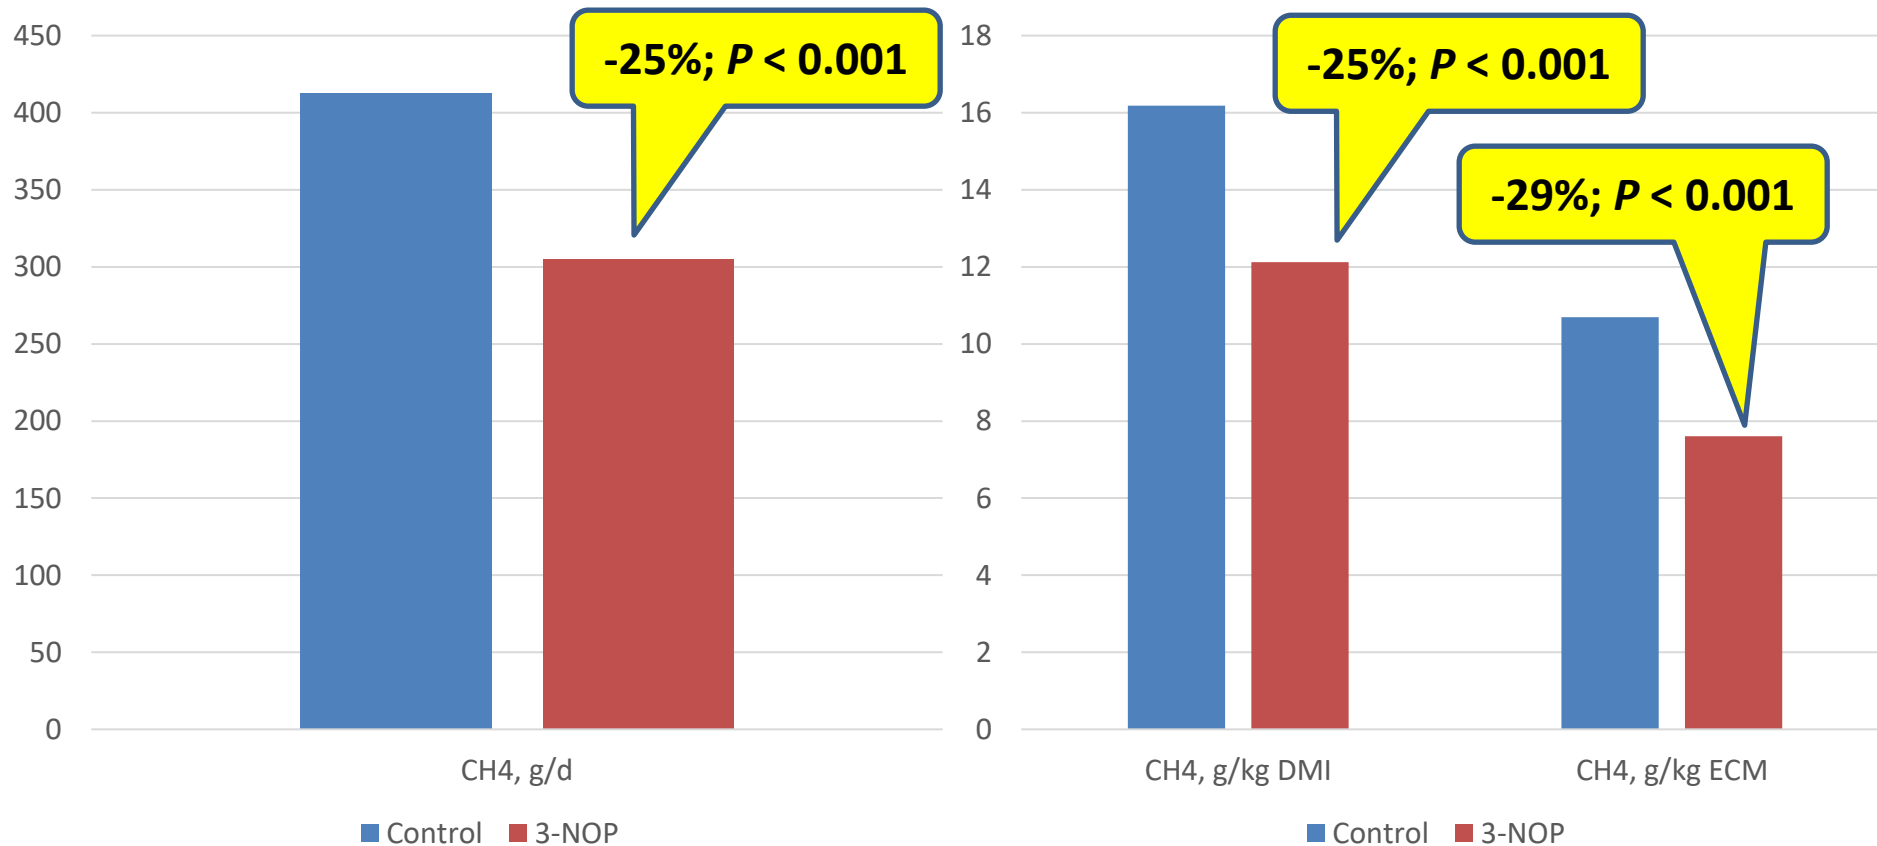

- CONFINED
- GRAZING

ANIMAL SPECIES

- CATTLE
- SHEEP
- SMALL RUMINANTS
- OTHER RUMINANTS

Milk fat percentage was increased ($P = 0.04$) by 0.19%-units; yield was increased ($P = 0.06$) by 90 g/d

Meta-analysis of Penn State's 3-NOP data with dairy cows

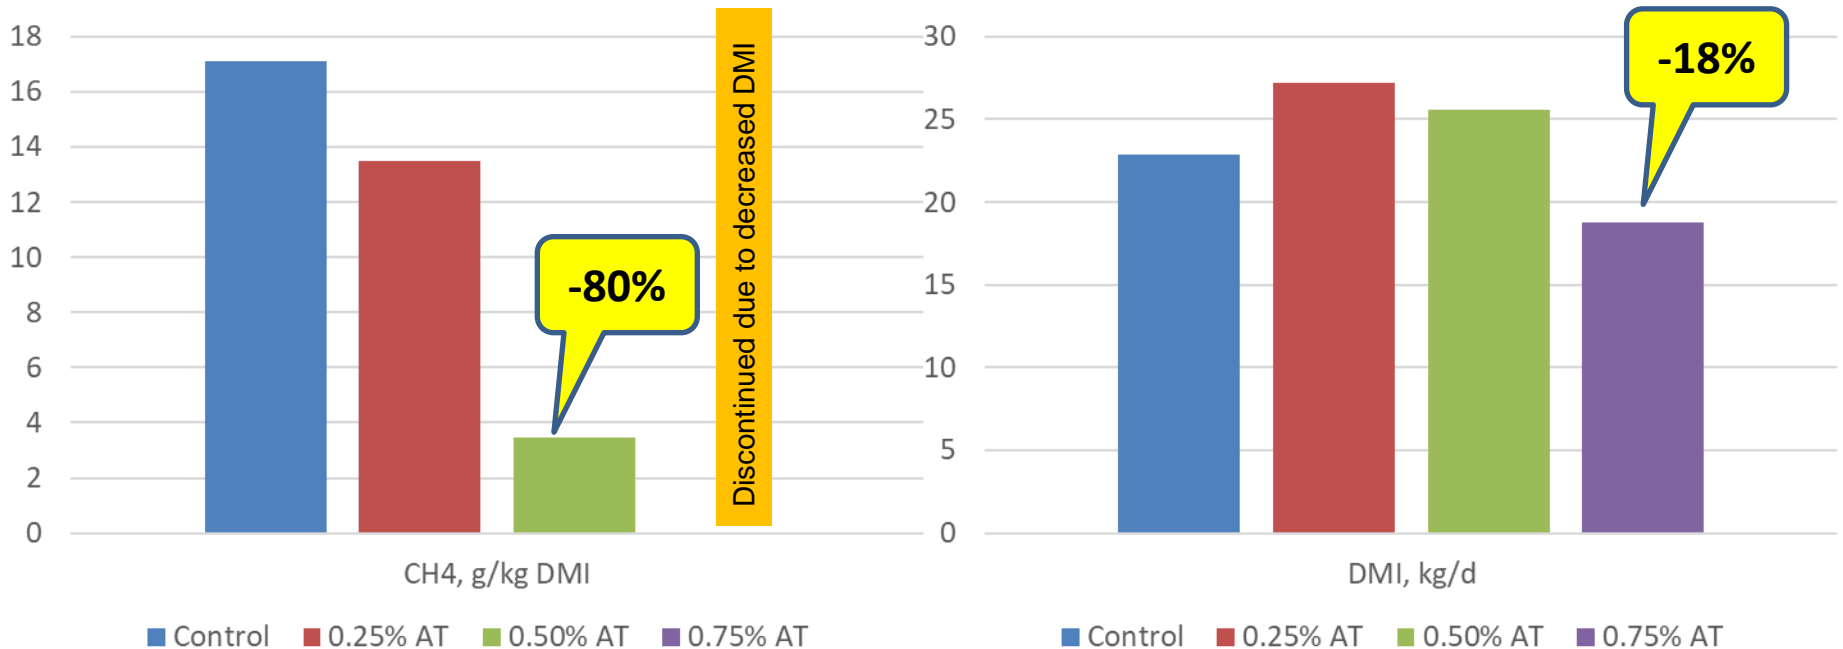

Large reduction in methane emission with *Asparagopsis taxiformis* in dairy cows

Asparagopsis taxiformis (source: Penn State)

Stefenoni et al., 2021

Similar results at UC Davis with *A. armata*

Many unanswered questions...

- How are **bromoforms** affected by:
 - Harvest, sunlight, transportation, processing & storage
- **Aquaculture production**
- Rumen adaptation
- Doses/practicality
- **Feasibility**
- **Long-term production effects**
- **Milk quality – I, Br**
- Consumer acceptance

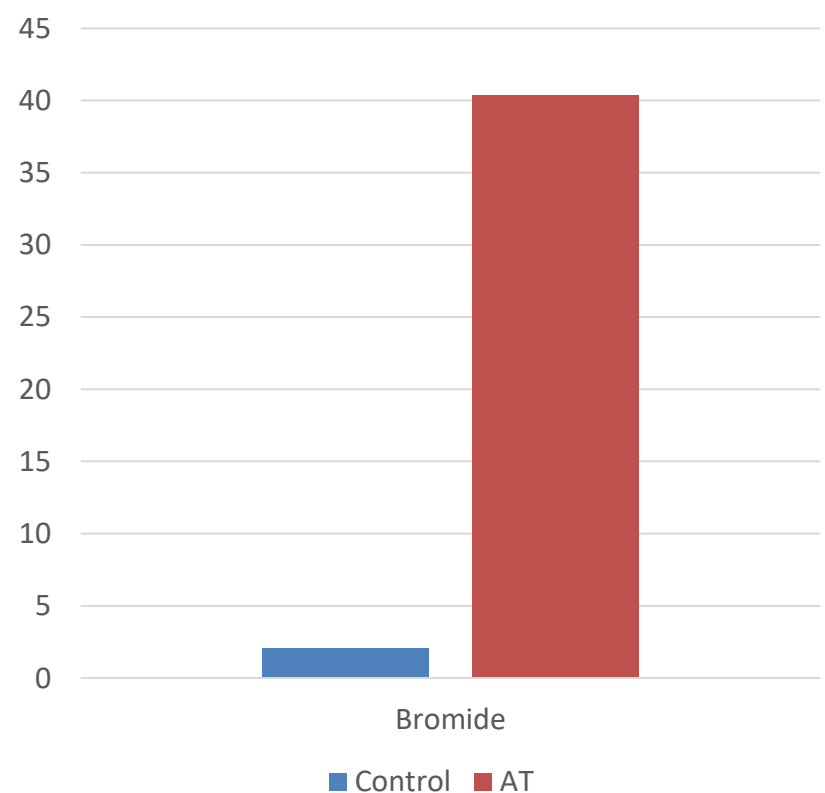

Asparagopsis taxiformis (source: Wikipedia)

Milk quality

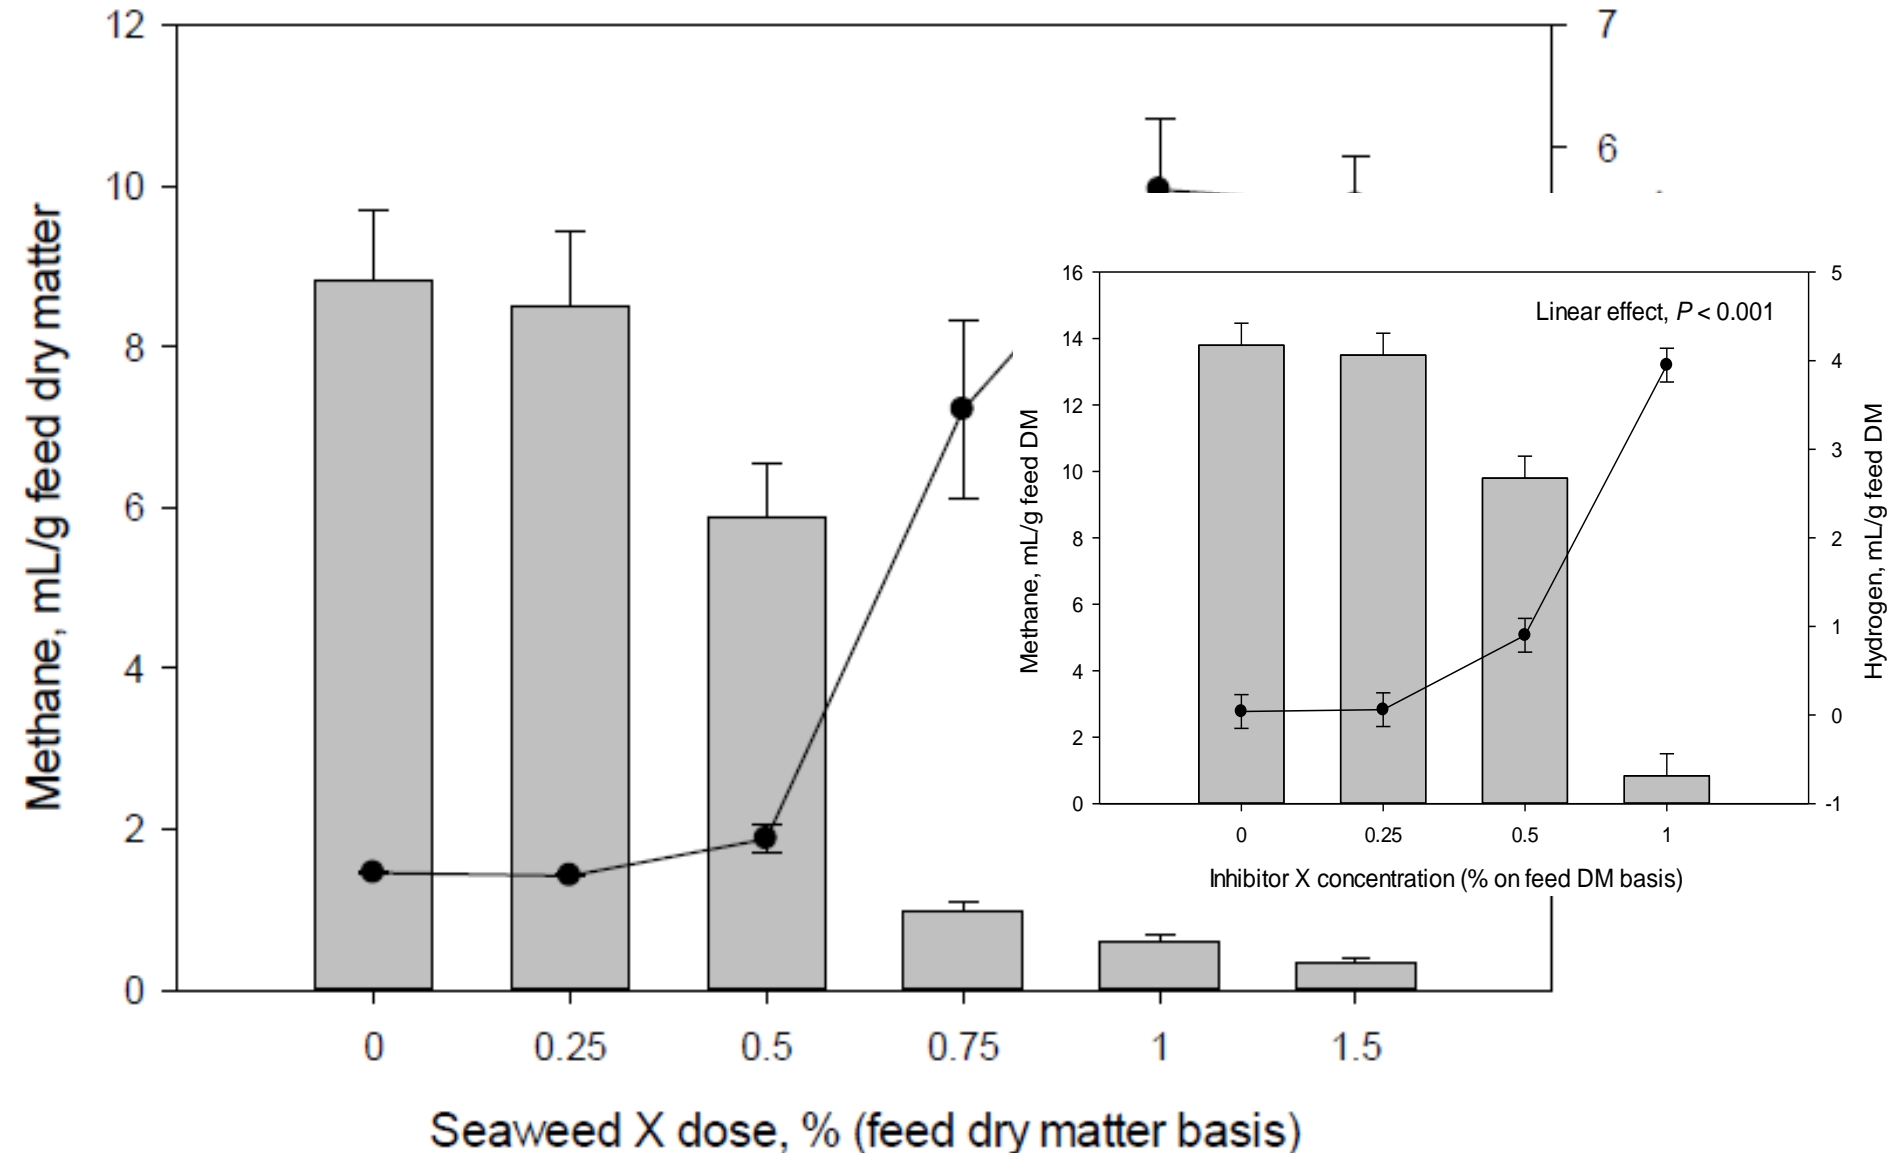

Milk iodine, ng/mL

Milk bromide, mg/L

Efficacy of new inhibitors or non-bromoform

Cannot be recommended until **independent research is available to verify claims**. The effect, if any, is unlikely to exceed 10%.

Plant extracts

- Numerous experiments
- Many in vitro, not followed up by animal trials
- Several commercial products:
 - **Mootral** (garlic/citrus extract) – one study with beef cattle showed 23% reduction in CH₄ yield at the end of the experiment (12 wks)
 - **Agolin** (a blend of essential oils) – a meta-analysis showed an overall 2% decrease in CH₄ yield and 13% beyond 28 d of treatment
 - **AVT** (capsicum & botanicals) – 5% decrease in CH₄ yield
 - Adaptation may be needed to show effects

Take-home message

- Only 2 strategies have a pronounced mitigation effect on enteric methane – **need long-term, full lactation studies**
 - **3-Nitrooxypropanol (Bovaer)**, *Asparagopsis* spp.
- Oils can decrease methane by up to 20%
- Nitrates are also effective (15-19% decrease)
- Tannins may be effective, but more research is needed
- Combining mitigation practices may deliver an **estimated 40% reduction**
- So far, no evidence of any other feed additives with a consistent mitigation effect of over 10%
- Major constraints going forward:
 - Production responses to effective methane mitigants (co-benefits)
 - Practicality with some of the effective additives
 - Long-term effects and consistent responses with various diets are largely unknown
 - Delivery in grazing systems is challenging
