Slide 1 Title Slide

Good afternoon and welcome to the California Air Resources Board's (or CARB) webinar workshop on the proposed amendments to the area designations for state ambient air quality standards. My name is Jenette Kwong, and I will give the presentation today.

Slide 2 Logistics

Before we get started, there are a few logistical matters to address. The audio portion of this presentation is available over the Zoom website connection.

If audio fails during the presentation, please log off and try to reconnect. This should solve most problems. You can also email Theresa Najita at theresa.najita@arb.ca.gov.

Because we are using integrated audio, we will be muting everyone.

If you cannot see this presentation or lose connection with the webinar, this presentation (slides and text) will be placed on the [state area designations webpage - current activities](#) after this workshop is completed.

If you have questions or comments, please feel free to send them at any time through the webinar chat or questions box. We will go through them and respond at the end of the presentation so everyone can hear the answers.

If you have any questions or comments after the conclusion of this webinar, please feel free to contact us at the email addresses provided at the end of this presentation or through the [state area designations webpage](#). Thank you.

Slide 3 Presentation Outline

Today's presentation will include the basic area designation process, the criteria, and our proposed changes to the area designations for state standards. More detailed information regarding the process and the criteria can be found on our [website](#) and is always included in the most recent staff report.

Slide 4 CARB Designation Process

CARB sets state ambient air quality standards designed to protect public health.

In addition to adopting these state standards, CARB also adopts designation criteria, last updated in 2010. These criteria provide the basis for designating areas for the state standards. These designations are reviewed annually and indicate whether the state health-based standards are being met.

Slide 5 Data to Use

The data for making area designations comes from a statewide air monitoring network. We generally refer to these data as "data for record." Data for record must meet established

quality assurance procedures. Generally, these data are collected by CARB or the local districts. We can, however, use data from other sources if the requirements are met. The data must also represent the averaging time of the state standard and reflect both the location and time of the expected highest concentrations.

The period reviewed is the most recent three calendar years. This year's review is based on data from 2019 through 2021.

Slide 6 Exceedance vs. Violation

When making designations, it is important to distinguish between an exceedance and a violation of the air quality standard. An exceedance is any concentration higher than the level of the state standard. In contrast, a violation is an exceedance that has not been excluded as having been affected by a highly irregular or infrequent event. Not all exceedances are violations. For example, exceptional events, such as wildfire smoke impacts, or dust transported by high winds, might be exceedances that do not count as violations. The distinction between exceedances and violations is important when discussing designation categories.

Slide 7 Designation Categories

There are specific requirements for the designation categories. To be designated Nonattainment, data for an area must show one or more violations of the state standard during the last three years. Data for making this designation must be representative of the averaging time, but it is not necessary for the data to be complete. To be designated as attainment, an area must have data showing no violations of the state standard during the past three years. Data for making this designation must be both representative and complete.

As I mentioned, some high values may be excluded from the designation process and not considered violations. However, we can exclude values only if they qualify under the definitions contained in the criteria. Because some high values may be excluded, an attainment area may still show occasional values above the standard.

Data excluded as a State Exceptional Event is reflected in the designation category but not reflected in the designation value.

Finally, we designate areas as unclassified if they do not have sufficient data and are not likely to violate the state standards.

Slide 8 Designation Categories Nonattainment-Transitional

The nonattainment-transitional designation is a subset of the nonattainment category. The designation is given to areas with a few exceedances but progressing and getting close to attaining the state standard.

For Ozone, there must have been three or fewer exceedances during the last complete calendar year. In this sub-category, we look at all the measurements and do not exclude any of them. This includes recognized exceptional events.

Slide 9 Proposed 2022 State Area Designation Changes

As I mentioned, the proposed 2022 changes to the area designations are based on the most recent air quality data – data collected from 2019 through 2021. Area designation changes are proposed for two of the ten criteria pollutants. As displayed in the graphic, there are six areas with designation changes, five changes for Ozone, and one for PM_{2.5}.

Slide 10 Ozone Standard

The ozone designations are based on two standards – one for 8- hour ozone and one for 1-hour Ozone. Both these standards must be met for an area to be designated Attainment. This year, there are five ozone changes.

Slide 11 Proposed Ozone Change

The Lake Tahoe Air Basin is currently designated Attainment. Ozone exceptional events occurred in 2020 and 2021. Designation values do include the impact of exceptional events. But removing these exceedances would not keep them in their attainment category. Staff propose classifying this area as Nonattainment due to violations occurring during the past three years.

Slide 12 Proposed Ozone Change

Amador County in the Mountain Counties Air Basin is currently designated Nonattainment-Transitional. Staff propose classifying this area as Nonattainment due to violations occurring during the past three years.

Slide 13 Proposed Ozone Change

Tuolumne County in the Mountain Counties Air Basin is currently designated Nonattainment. Staff propose classifying this area as Nonattainment-Transitional due to three or fewer exceedances occurring in the past year.

Slide 14 Proposed Ozone Change

Shasta County in the Sacramento Valley Air Basin is currently designated Nonattainment-Transitional. Staff propose classifying this area as Nonattainment due to violations occurring during the past three years.

Slide 15 Proposed Ozone Change

Santa Barbara County in the Sacramento Valley Air Basin is currently designated Nonattainment. Staff propose classifying this area as Nonattainment-Transitional due to three or fewer exceedances occurring in the past year.

Slide 16 PM_{2.5} Standard

In contrast to Ozone, PM_{2.5} designations are based on one standard – an annual average. There is one proposed PM_{2.5} change.

Slide 17 Proposed PM_{2.5} Change

Feather River Air District, comprised of Sutter and Yuba Counties in the Sacramento Valley Air Basin, is currently designated Attainment. Staff propose classifying this area as Nonattainment. Although exceptional events occurred in 2021, removing these exceedances would not keep them in their attainment category.

Slide 18 What's Next?

So, what are our next steps?

The initial staff report, also known as the initial statement of reasons or ISOR, will be released tentatively on November 30th, and the 45-day comment period will begin tentatively on December 3rd.

The California Air Resources Board is currently scheduled to consider adopting these proposed changes at a public hearing on January 26, 2023.

Slide 19 Further Information

Additional information can be obtained from the [state area designations webpage](#). You can receive email updates by [subscribing](#) to our webpage.

You can also contact either myself Jenette Kwong or Theresa Najita if you have further questions or concerns.

Slide 20 Conclusion Slide

This concludes the presentation, and we can now answer any questions you might have. Please type your questions in the webinar chat or questions box or raise your hand, and we can call on you.
