## Low Carbon Fuel Standard Virtual Community Meetings

The California Air Resources Board (CARB or Board) invites community members and interested stakeholders to participate in virtual community meetings to hear an overview of California's Low Carbon Fuel Standard (LCFS) program and provide input on potential future LCFS changes with CARB staff. The LCFS regulation reduces greenhouse gas emissions from transportation fuels used in California and is an important tool in California's fight against climate change. CARB staff will be holding two virtual community meetings on Zoom, with the same content shared at each. Staff will begin with an overview presentation, including material presented at previous LCFS workshops, and will then make themselves available for questions and comments from the attendees. The goal of the workshops is to hear from community members interested in how the LCFS works and how to improve the LCFS in the future.

Workshop materials will be posted to the [LCFS Meetings and Workshops](#) webpage by noon on Monday, May 1<sup>st</sup>.

### Session 1:

Date: May 2, 2023  
Time: 6:00 p.m. – 8:00 p.m. PST  
Location: Virtual on Zoom

## Background

CARB first adopted the LCFS regulation in 2009 and began implementation in 2011. The Board adopted amendments in 2011, readopted the regulation in 2015, and adopted amendments in 2018 and 2019. The regulation requires the reduction of the carbon intensity of California's transportation fuels by 20 percent from 2010 levels by 2030. The regulation is one of the measures adopted by CARB, pursuant to Health and Safety Code Sections 38500-38599 (AB 32) to reduce California's greenhouse gas emissions and advance the State's climate goals. It is designed to help clean the air, protect the environment, and drive the development of clean, low-carbon fuels.

### Clearing California Skies for Over 50 Years

CARB is the lead agency for California's fight against climate change, and oversees all air pollution control efforts in the state to attain and maintain health-based air quality standards.
