Sharon Lim
Tesoro Refining & Marketing Company LLC
150 Solano Way
Martinez, California 94553
SYLim@Marathonpetroleum.com

Dear Sharon Lim:

On November 30, 2021, Tesoro Refining & Marketing Company LLC (TRMC) submitted an application (Application) for Innovative Concepts as potential compliance pathways for meeting the requirements of the 2020 Control Measure for Ocean-Going Vessels At Berth (2020 Regulation or Control Measure) pursuant to California Code of Regulations, title 17, section 93130.17. The Application specified in this letter pertains to terminals at Northern California Ports operated by Tesoro including the Amorco and Avon terminals.

On July 14, 2022, California Air Resources Board (CARB) staff notified TRMC by letter that the Application was not complete as it did not contain the minimum information required for Innovative Concept applications as described in section 93130.17(b)(1). CARB's letter requested TRMC to resubmit a revised, completed Application addressing the missing information by August 19, 2022. CARB received and is now responding to TRMC's revised application (Revised Application) that responded to CARB's letter on August 19, 2022.

The Revised Application includes the following 10 sub-concepts as potential compliance pathways:

#	Sub-Concept
1	Pre-compliance emissions for tankers at the Amorco and Avon terminals
2*	Emissions reductions utilizing shore-side infrastructure to reduce tanker vessel discharge emissions
3	Pre-compliance emissions for tankers at all Northern California Ports other than Amorco or Avon
4	Pre-compliance emissions for ro-ro vessels at Northern California Ports
5	Capture and control systems for bulk liquid barges
6	Capture and control systems for bulk and general cargo vessels
7	Capture and control systems for container ships at-anchor
8	Minimizing emissions control connect and disconnect times
9	Vessel speed reduction
10	Use capture and control systems to exceed the requirements of the rule

*Based on the information to be provided from TRMC, sub-concept 2 may require California Environmental Quality Act (CEQA) approval.

Based on CARB staff's evaluation of TRMC's Revised Application, the Application is incomplete for sub-concepts 1, 3 through 7, and 9 and ineligible for consideration for sub-concepts 2, 8, and 10.

Innovative Concept Proposals for Sub-concepts 2, 8, and 10:

Sub-concept 2 (identified as 3.2 in the original Application) outlines a plan to utilize and install new infrastructure at TRMC terminals to reduce emissions from tanker vessels which visit them. The sub-concept specifically refers to the installation of shoreside pumps for transferring product. Sub-concept 2 does not meet the requirements as described in section 93130.17 (a)(6) because shoreside pumps may be considered "business as usual". The use of shoreside pumps is considered a standard business practice that is commonly used for the unloading of cargo from tanker vessels. CARB cannot approve TRMC's application for sub-concept 2 for emissions reductions using shoreside infrastructure to reduce tanker vessel discharge emissions.

Concepts 8 and 10 (identified as 3.8 and 3.10, respectively, in the original Application) do not meet the requirements as described in section 93130.17 (a)(6) and are considered "business as usual." The emission reductions outlined in concepts 8 and 10 result in a compliant vessel visit using a CARB Approved Emission Control Strategy (CAECS). There are time requirements and emission requirements associated with the minimum qualifications with using a CAECS for compliance. Exceeding the minimum qualifications ensures the visit is compliant, and these reductions cannot be applied to an Innovative Concept. Therefore, CARB cannot approve TRMC's application for sub-concepts 8 and 10 for minimizing emissions control connect and disconnect times and using capture and control systems to exceed the requirements as Innovative Concepts.

Innovative Concept Proposals Sub-concepts 1, 3 through 7, and 9:

The remaining proposals of TRMC's Revised Application use a combination of wind power, solar power, and other energy saving methods to further reduce the in-port power loads, thus lowering the fuel consumption of the auxiliary engines and boilers and their associated emissions. CARB acknowledges TRMC's response to the public comments regarding this Innovative Concept. The response provided additional information and clarification that was missing in the original Application as identified in our July 14, 2022, letter and has been helpful in our evaluation of this concept. However, even with the additional information from your response for CARB, there is still missing information that is required to be able to complete the evaluation.

The reporting and recordkeeping are critical elements of the application where CARB requires additional information. For sub-concepts 1, 3-7, and 9, TRMC provided examples of the calculations for emissions reductions; however, CARB additionally requests the annual reporting methodology for all sub-concepts, preferably on a spreadsheet, including the information that will be tracked and reported for compliance with the annual reporting required in Section 93130.17 (d)(2) for the listing of emissions reductions that were achieved with the Innovative Concept. Specifically, provide a clear listing of inputs for what

information TRMC will be keeping as records and how those records will be used **Provide a clear methodology for tracking of emission credit generation and usage, including tracking of when credits were generated, used, or expired, as described in section 93130.17 (a)(10), and whether they were achieved through an early reduction as described in section 93130.17 (a)(11).** The methodology described in the application must be clear and demonstrate what annual reporting per section 93130.17 (d)(2) will entail and what information will be provided, with functionality, so CARB can track reductions for compliance. For further explanation about the missing or incomplete information CARB is specifically requesting, please see Attachment A.

Section 93130.17 (b)(5) of the 2020 Regulation allows TRMC to respond within 30 days of this letter and provide the information that CARB staff outlined in Attachment A, Tesoro Martinez, Innovative Concept Evaluation. Once we receive your response, we can proceed with the evaluation of your Application according to section 93130.17 (b)(3). We look forward to your response by November 27, 2024. Section 93130.17(b)(5) of the Regulation provides the Application will be denied if CARB does not receive an updated application that includes the specified information within 30 days.

If you have any additional questions or would like to further discuss the content of this letter and Attachment A, please contact Samuel Bailey, Air Pollution Specialist, Marine Strategies Section, at samuel.bailey@arb.ca.gov or Angela Csondes, Manager, Marine Strategies Section, at angela.csondes@arb.ca.gov. If you would like to discuss CARB staff's feedback via conference call or a virtual meeting, we would be happy to accommodate that.

Sincerely,

Bonnie Soriano, Chief, Freight Activity Branch, Transportation and Toxics Division

Attachment A

Tesoro - Martinez, Innovative Concept Evaluation

The California Air Resources Board's (CARB) Control Measure for Ocean-Going Vessels At Berth (2020 Regulation or Control Measure) section 93130.17 provides that applications for Innovative Concepts must contain, at a minimum, the specific information detailed under section 93130.17. Your revised application submitted on August 19, 2022 (Application), did not contain the minimum information identified by the 2020 Regulation. In Table 2 below, CARB Staff has outlined the specific areas required by the 2020 Regulation which are missing or incomplete in the Application for the sub-concepts listed in Table 1.

In general, applications for Innovative Concepts must contain any information necessary to demonstrate that the proposed Innovative Concept will "reduce NOx¹, PM 2.5², and ROG³ emissions equivalent to or greater than the level that would have been achieved by the Control Measure, while not increasing GHG⁴," (See section 93130.17 (a)(2)). To establish equivalency, the Application should provide three main components for each of the outlined sub-concepts:

1. Baseline Emissions Estimates per section 93130.17 (b)(1)(C): "Estimate of the vessel emissions planned to be covered under the Innovative Concept for each pollutant NOx, PM 2.5, and ROG by multiplying the emission factor for a pollutant found in section 93130.5(d) of this Control Measure by the expected number of vessel visits, average visit duration, and expected power used during an average visit."
2. An estimate of reductions that would be achieved under direct compliance with the regulation, in absence of any Innovative Concept (generally referred to as Direct Compliance Estimates).
3. An estimate of reductions achieved by the proposed Innovative Concept (generally referred to as Innovative Concept Estimates).

See Items 2, 13, and 19 in Table 2 below for more details. These estimates must identify any assumptions such as activity, emission factors, energy consumed by the Innovative Concept, and provide estimates for NOx, PM 2.5, and ROG reductions. Please provide an Excel spreadsheet that provides these estimates for each sub-concept.

¹ Nitrogen oxides

² Fine particulate matter that are 2.5 microns or less in diameter

³ Reactive organic gas

⁴ Greenhouse gas

ATTACHMENT A

Table 1: Tesoro Martinez Sub-Concepts

#	Concept
1	Pre-Compliance capture and control systems (CCS) for Tankers (Amorco and Avon)
2	Emissions reductions utilizing shore-side infrastructure to reduce tanker vessel discharge emissions
3	Pre-Compliance emissions for tankers at all Northern California Ports other than Amorco or Avon
4	Pre-Compliance emissions for ro-ro vessels at Northern California Ports
5	CCS for bulk liquid barges
6	CCS for bulk and general cargo vessels
7	CCS for container ships at-anchor
8	Minimizing emissions control connect and disconnect times
9	Vessel Speed Reduction
10	Use CCS to exceed the requirements of the rule
