Michael Walker, CEO
STAX Engineering, Inc.
65 Pine Avenue, Suite 943
Long Beach, California 90802
m.walker@staxengineering.com

Dear Michael Walker:

California Air Resources Board (CARB) staff have reviewed STAX Engineering's (STAX) Test Plan for the mobile water-based Xcraft system (Xcraft-1 with Xbox 1-1 and Xbox 1-2) to treat emissions from tanker vessel auxiliary engines.

On July 7, 2024, STAX submitted a Test Plan to obtain approval for the barge-based Xcraft-1 (Xbox 1-1 and Xbox 1-2) system to be used as a CARB Approved Emissions Control Strategy (CAECS) for compliance with the 2020 Control Measure for Ocean-Going Vessels At Berth (2020 At Berth Regulation). CARB staff reviewed the Test Plan and provided verbal comments to STAX on July 15, 2024, August 12, 2024, August 26, 2024, and December 16, 2024, and written comments on October 2, 2024, and October 17, 2024. To address CARB staff's comments, STAX staff revised and resubmitted the Test Plan on July 30, 2024, August 30, 2024, September 18, 2024, October 10, 2024, October 24, 2024, and again on December 18, 2024 (Version 7).

Stipulations for CARB Approval of STAX's Request

Based on CARB staff's review, and pursuant to Health and Safety Code section 93130.5(f) of the 2020 At Berth Regulation (title 17 Cal. Code Regs. §§ 93130 *et seq.*), STAX's Test Plan (Version 7) is hereby approved in accordance with testing requirements under the 2020 At Berth Regulation and the CARB Recommended Emissions Testing Guidelines for Ocean Going Vessels.

CARB approval is based on the system description, design, and operational procedures outlined in the approved Test Plan (Version 7). No changes or modifications are permitted to the Xcraft-1 (Xbox 1-1 and Xbox 1-2) system without prior CARB approval. In order to receive Executive Order (EO) approval to treat emissions from tanker vessel auxiliary engines, STAX will need to complete all testing outlined in their Test Plan (Version 7) and provide all reports generated from these tests.

The application requirements that STAX must meet to submit test results are outlined in section 93130.5 of the 2020 At Berth Regulation. Per section 93130.5(i) of the 2020 At Berth Regulation, if testing deviates from the approved Test Plan (Version 7) without prior CARB

approval, the Executive Officer may deem the application incomplete or disapprove the application. An example of deviating from the Test Plan includes conducting testing on additional vessel visits beyond those approved in the Test Plan and claiming such visits qualify for the research exception set forth in section 93130.8(d) or 93130.10(e) of the 2020 At Berth Regulation. CARB reserves the right to request the results of any testing conducted beyond the testing described in the approved Test Plan (Version 7).

To complete the testing outlined in the Test Plan, a total of eight vessel visits that coincide with the tests specified in the approved Test Plan (Version 7) may count as a compliant visit under the research exceptions in section 93130.8(d) or 93130.10(e) of the 2020 At Berth Regulation; however, these sections only apply to testing identified in the Test Plan (Version 7) and conducted after the date of this letter when the Request was approved. All testing must adhere to the system description, design, and operational procedures outlined in the approved Test Plan (Version 7).

STAX is responsible for tracking the usage of the eight approved vessel visits that may utilize the research exception, and STAX must provide a copy of the approved Test Plan (Version 7) to each vessel participating in the research. STAX is also responsible for communicating with the vessel operator to ensure the operator knows what tests are being performed during the visit and which number out of the eight approved visits the vessel is participating in. As noted above, any tests completed in excess of those approved in the Request would not be eligible for the research exception to compliance with the 2020 At Berth Regulation set forth in section 93130.8(d) or 93130.10(e). If more than eight vessel visits are needed to complete all the testing outlined in the approved Test Plan (Version 7), STAX must seek additional approval from CARB.

The terminal operator, vessel operator, and CAECS operator (STAX) all must report research exception visits to CARB.

- Within seven (7) days after vessel departure, the CAECS operator (STAX) must report the research exception visit to CARB via email at shorepower@arb.ca.gov. In the report, STAX must include:
 - the vessel type, name, and IMO number,
 - name of the test plan and date of CARB approval,
 - what tests were performed during the visit,
 - the number of approved research exceptions used, and
 - how many research exceptions remain available.
- Before vessel arrival, terminal operators must confirm and record a visit's research exception status with CARB, and follow all other requirements in Section 93130.10(e).
- Within 30 days of vessel departure, the vessel operator must report the research exception visit to CARB in the vessel visit report, and follow all other requirements in Section 93130.8(d).

The Executive Officer may deem the application incomplete or disapprove the application if STAX fails to report the use of a research exception for testing within seven days of the vessel's departure.

If you have any questions, please contact Angela Csondes, Manager, Marine Strategies Section, at angela.csondes@arb.ca.gov.
