

2025 In-Use Off-Road Diesel Emission Inventory Update

July 2025

Background

The California Air Resources Board (CARB) is updating the emission inventory for the In-Use Off-Road Diesel equipment category, which covers off-road equipment in construction, mining, industrial, oil drilling and similar industries. This update focuses solely on applying CARB's new 2025 Emission Factors¹ for nitrous oxides (NO_x), particulate matter (PM), hydrocarbons (HC), and carbon monoxide (CO).

The 2025 Emission Factor technical documentation, linked above, includes all data sources and methodology describing the development of new load factors, new NO_x emissions for idle and non-idling engines, and new PM, HC, and CO emission factors. There were no changes to the previous emission inventory, released in 2022², to population, fuel consumption, regulatory behavior, or forecasted growth.

Updated Statewide Results

Figure 1, Figure 2, Figure 3, and Figure 4 display the updated emission results for the 2025 in-use off-road emission inventory. The projected emissions are distinguished by engine tier and compared to the line indicating the 2022 inventory results. Overall, the results are similar to the previous inventory for most pollutants except for NO_x, which is substantially higher in 2030 and beyond. This is due to the update in emission factors showing off-road engines at low loads produce higher rates of NO_x than previously estimated, as described in the emission factor documentation.
