

2025 Forestry Diesel Equipment Emission Inventory Update

July 2025

CALIFORNIA
AIR RESOURCES BOARD

Background

The California Air Resources Board (CARB) has released this 2025 Forestry Diesel Equipment Emission Inventory Update, which covers off-road diesel equipment used in forestry operations. This update uses the same input data and methodology as the 2021 Forestry Diesel Equipment Emission Inventory¹ and applies CARB's new 2025 Emission Factors² for oxides of nitrogen (NO_x), particulate matter (PM), hydrocarbon (HC), and carbon monoxide (CO).

The 2025 Emission Factor technical documentation includes all data sources and methodology describing the development of new load factors, new NO_x emissions for idle and non-idling engines, and new PM, HC, and CO emission factors.

Total fuel use per year remains unchanged from the previous inventory. However, this update does include the use of renewable diesel fuel, which provides reductions for NO_x, PM, and HC.

Updated Statewide Results

Figure 1, Figure 2, Figure 3, and Figure 4 display the updated emission results for the 2025 forestry inventory. The projected emissions are distinguished by engine tier and compared to the line indicating the 2021 inventory results.

Table 1 lists the updated Calendar Year 2020 NOx distribution by air district, as compared to Table 8 in the 2021 Forestry Inventory documentation³. This updated percentage of NOx distribution is nearly identical to what was previously reported.
