Reshaping the Central Valley

At Native American Energy Services Company (NESCO), we partnered closely with Tule River Economic Development Corporation (TREDC) to deliver the first fully integrated clean energy and zero-emission transportation ecosystem by a tribe in California's Central Valley—and the only tribal-led effort of its kind in the region. As the renewable energy developer, we designed, engineered, and constructed first-class clean energy infrastructure by strategically stacking multiple clean energy and workforce development grants to deploy the Valley's first tribal-led heavy-duty EV fast-charging hub, integrated with ground-mount solar, solar carports, and medium-duty EV charging at the Eagle Feather Trading Post sites in Tipton and Avenal. This collaboration demonstrates how tribal leadership and NESCO's development, engineering, and construction expertise are reshaping the Central Valley—reducing emissions, strengthening energy resilience, creating workforce pathways, and establishing a scalable, replicable model for tribal-led clean energy development across California and the United States.

WATTS THE RUSH?

Ancestors Didn't Wait for Perfect Conditions

Tribal grant funding is increasingly competitive and operates on strict timelines, readiness criteria, and first-mover advantages tied to shovel-ready projects. Delays in decision-making often result in missed funding cycles, reduced scoring due to lack of demonstrated capacity, or loss of funds to applicants with mature plans and governance alignment. Acting early is not optional—it is a technical requirement for securing capital that directly impacts long-term economic stability, infrastructure resilience, and self-determination.
