

SB 905 Community Listening Sessions

Join us to learn about California's carbon management efforts to advance climate goals and share your feedback.

State agencies want to meet with communities to share plans related to carbon removal and hear your thoughts and questions about this important tool to address climate change. The [Carbon Capture, Removal, Utilization, and Storage Program](#), created by Senate Bill 905, focuses on safely capturing and storing carbon pollution to help California reduce climate pollution. Each meeting will start with an open house where you can explore easy-to-understand [materials](#) and speak with staff from multiple State agencies. Agencies will give short presentations, and then you can share comments, experiences and ideas. Your input will help guide California's approach to carbon management.
