

Appendix H - Additional Figures of DPM and Heavy Metal Modeling results

Additional figures in attached zipped folders are provided with spatial maps of annual average modeled concentrations and calculated cancer risks, in addition to the information presented in the main text of the report.

Spatial maps of annual average DPM modeled concentrations, including total and those from each category (on-road mobile, off-road, area, stationary/point) for each of the six air basins are provided in the attached zipped folder named 'conc_maps_dpm'.

Spatial maps of DPM cancer risks, including total and those from each category (on-road mobile, off-road, area, stationary/point) for each of the six air basins are provided in the attached zipped folder named 'risk_maps_dpm'.

Spatial maps of annual average modeled concentrations for each heavy metal species, including total and those from each category (on-road mobile, off-road, area, stationary/point) for each of the six air basins are provided in the attached zipped folder named 'conc_maps_metals'.

Spatial maps of cancer risks for each heavy metal species, including total and those from each category (on-road mobile, off-road, area, stationary/point) for each of the six air basins are provided in the attached zipped folder named 'risk_maps_metals'.
