

The following individuals electronically signed a petition at <http://www.thepetitionsite.com/1/Californian-Climate-Rights>

Text of the petition:

Stop global warming
*** Help create a future where the climate is stable**
*** Inspire the U.S. and the world with a solution that works**

Let the California Air Resources Board and California Legislature know that you support Cap-and-Dividend, where polluters pay, clean energy becomes competitive, and dividends protect the poor and middle-income families from rising energy prices.

Order	Date	First Name	Last Name	City	State/Province	Country	Why is this issue important to you?	If w p l i n m
1	67	4/21/2008	Kathryn	Ackland	Sebastopol	California	United States	
2	7	3/13/2008	Rafael	Aguilera	Sacramento	California	United States	
3	8	3/13/2008	Rafael	Aguilera	Sacramento	California	United States	
4	61	4/20/2008	Jeff	Aitken	San Francisco	California	United States	This proposal is at the cutting edge of innovation - a solution that creates the correct incentives for lasting behavior change for the better, and the opportunity of a new economy in California.
5	98	4/22/2008	Margaret	Alexander	Healdsburg	California	United States	We have to care enough about the consequences of climate change to adapt our market system so that it supports our common goals. I support Cap-and-Dividend programs and legislation. Please make this happen. <input type="checkbox"/>
6	213	9/4/2008	Caroline	Alioto	San Rafael	California	United States	Meg Alexander
7	149	5/23/2008	Nabeel	Al-Shamma	Healdsburg	California	United States	
8	116	5/1/2008	John	Andrews	San Carlos	California	United States	
9	185	6/27/2008	Suzy	Babcock	Sebastopol	California	United States	
10	202	7/6/2008	Dinah	Bachrach	Santa Rosa	California	United States	
11	64	4/21/2008	Barbara	Baer	Forestville	California	United States	As Michael Pollan wrote recently in NYT, we have about 8 years to drastically cut our carbon footprint, must start now. Barbara Baer

12	41	3/21/2008	Raymond	Baltar	Sonoma	California	United States	Cap and Dividend is the best plan I have come across to reduce GHG's while sharing the cost burden we all must bear to achieve necessary goals. It fairly considers environmental, social justice and economic factors and the world it envisions and would create is the kind I want to live in, and pass on to my son and grandchildren.
13	103	4/22/2008	Ken	Barham	Santa Rosa	California	United States	This bill will hopefully allow greater protections for the little guy in the future decisions over who pays for protections of climate change.
14	97	4/22/2008	Valerie	Barrett	Huntington Beach	California	United States	Health and environmental.
15	177	6/24/2008	Jan	Beaulyn	Sebastopol	California	United States	Global Climate Protection is one of the, if not THE, most important challenge facing the world presently.
16	152	5/23/2008	Uma	Bingham	Eureka	California	United States	I see this as the best current solution to our worsening climate overload. As a mother and grandmother and as a nurse I take my responsibility seriously to support change from our current headlong dive into irreversible climate damage.
17	153	5/23/2008	Steve	Birdlebough	Santa Rosa	California	United States	The cap and dividend concept will generate public support for climate protection, by giving citizens an immediate financial stake in solving the problem. It will also provide an important example for the national progrma to reduce greenhouse gas
18	71	4/21/2008	Eros	Blankenbecler	Santa Rosa	California	United States	
19	136	5/21/2008	jody	bolton	walnut Creek	California	United States	I have children, I breathe, I read and learn. ☐ I care about my home and the homes of all beings. I like to drink clean water, I don't want to spend billions to protect SFO and OAK from rising water.☐ ☐
20	16	3/14/2008	Jason	Bowman	Placerville	California	United States	Please act - after much study , this seems the best approach,
21	163	5/27/2008	Lee	Brewster	Sebastopol	California	United States	Please implement these policies for reducing CO2 emissions-- ASAP!!
22	77	4/21/2008	Renata	Brillinger	Occidental	California	United States	

								Addressing climate change is important to me because I have four grandchildren and there are 100's of millions more children just like them that are going to have a horrible world to live in if we don't do something very dramatic very soon and I am deeply ashamed for the selfish way my generation and others have lived to create this situation.
23	100	4/22/2008	Demaris	Brinton	Healdsburg	California	United States	
24	112	4/25/2008	Susan	Briski	Santa Rosa	California	United States	
25	215	9/9/2008	Patricia	Britton	Rohnert Park	California	United States	Patricia C Britton
26	118	5/2/2008	Tara	Brown	Sebastopol	California	United States	I believe this is one of the most important issues of our time and this feels like a good approach to deal with one aspect of it.
27	79	4/21/2008	Theresa	Bruton	Santa Rosa	California	United States	
28	140	5/22/2008	Anne	Buffington	Guerneville	California	United States	I do not want to see the poor suffer at the long hands of the rich. Given the chance we are all capable of many things--please don't let these people die because of your selfishness.
29	130	5/11/2008	Andrew	Bunnell	Graton	California	United States	This is clearly the most important issue of theses times!!!!
30	18	3/14/2008	John	Canfield	San Carlos	California	United States	We all have the right to a world free of climate change, and we all equally should receive compensation whenever fossil fuels are consumed. By setting the compensation level high enough, we can send a strong economic signal toward conservation and alternative energy and avert climate disaster.
31	208	7/18/2008	Marilyn	Cannon	Forestville	California	United States	We need to act now to protect our planet's biological species from massive disruption due to the effects of global climate change. Capping greenhouse gases is imperative.
32	183	6/25/2008	Barbara	Cates	Healdsburg	California	United States	This issue is important to me because I love our planet and all of nature upon it. I also love the idea of the public getting some benefit out of the polluters instead of the other way around - for a change!
33	206	7/15/2008	Jasmin	Cerda	Santa Rosa	California	United States	I am passionate about saving this wonderful planet and want to do everything in my power to ensure its continued existence. This is a necessary action!

								The current budget crisis emphasizes that we need to build our economy and green technology is a great way to do. We can fix our state's economic whoas and heal our ecology at the same time! This is a way to do it, so let's build it from here!
34	70	4/21/2008	Allyson	Chipchase	Santa Rosa	California	United States	
35	159	5/26/2008	Martin	Cibulka	Santa Rosa	California	United States	
36	194	6/29/2008	Marguerite	Clair	Santa Rosa	California	United States	
37	72	4/21/2008	Chris	Cone	Cotati	California	United States	California has a chance to be a leader in creating a real economy that includes the costs of carbon emissions and the benefits of renewable energy. I support AB32 and the efforts to set a new, higher standard for carbon capping. Let's show the world how it should be done!
38	124	5/8/2008	Caitlin	Cornwall	Sonoma	California	United States	This is the best way to achieve equitable, efficient gains in climate protection.
39	128	5/10/2008	katherine	crawford	San Rafael	California	United States	
40	181	6/25/2008	Steve	Cutcomb	Mountain View	California	United States	I urge you to deice soon and take action to involve industry and communities in a concrete plan to start reducing human-originated greenhouse gas emissions. We may not have a pretty world for the next 30-50 years, but we can still make it better for our great grandchildren (at least leave them SOMETHING nicer).
41	170	6/17/2008	Sue	D	Campbell	California	United States	
42	178	6/24/2008	patricia	Damery	napa	California	United States	Global Climate Protection is the most important issue we are facing.
43	187	6/29/2008	Shellee	Davis	Cotati	California	United States	Global Warming is a life or death issue for all of us and must be corrected NOW before it is too late. Polluters who are willing to jeopardize life on Earth for profit seem to only change when there is a significant financial impact on them, so we need to make the financial consequences clear before the environmental consequences kills us all.
44	85	4/21/2008	Jennifer	Dawes	Rohnert Park	California	United States	
45	40	3/21/2008	Gladwyn	d'Souza	Belmont	California	United States	The government cannot rent out the capability to impose cancer and asthma into our lungs. The government has to protect citizens and shift the liability to toxin producers.
46	106	4/22/2008	Jasper	Eiler	Berkeley	California	United States	

47	76	4/21/2008	John	Essman	Healdsburg	California	United States	
48	87	4/21/2008	Christine	Evans	Sebastopol	California	United States	I appreciate the work of the Climate Protection Campaign. Polluters should pay.
49	95	4/22/2008	R. Alden	Feldon	Oakland	California	United States	Cap and share is an equitable solution to an important and complex problem.
50	137	5/21/2008	Tina	Fields	Sebastopol	California	United States	
51	156	5/23/2008	Marla	Fields	Novato	California	United States	The decisions we make today will have a tremendous impact on our children's generation. It is time for quick and decisive action.
52	108	4/23/2008	Josh	Fossgreen	Rohnert Park	California	United States	
53	145	5/22/2008	Bonny	Frick	Sebastopol	California	United States	Climate Change is the biggest threat to civilization as we know it. If we have any chance of making a change and tipping the scales in our favor, we must take action. What is more important than our planet? What are we without it?
54	52	4/10/2008	John	Garn	Graton	California	United States	It is important to make sure that we do not replicate Europe's experience by giving corporations free credits that they can trade in for money. It is important that the cost of climate change not be placed on the backs of the working class!!
55	162	5/27/2008	Barbara	Gerber	Occidental	California	United States	Major polluters must pay for their actions or for not taking action on the critical issue of climate protection. We must all act now, and cap-and-dividend is the fairest way to ensure action by major polluters while sharing what they pay for their sins with those who, because of their lower economic status pollute very little and who will need help with their energy bills and higher food costs as gas prices increase.
56	142	5/22/2008	Amie	Glass	Santa Rosa	California	United States	
57	104	4/22/2008	Ann	Glenn	Sebastopol	California	United States	Those companies who pollute need to pay for their mistakes. We want CLEAN energy!! The poor and middle-income folks need to be protected from rising energy costs.
58	17	3/14/2008	Paula	Goldman	Menlo Park	California	United States	
59	144	5/22/2008	Kathy	Goodacre	Santa Rosa	California	United States	Drastic measures need to be in place at all levels of government to ensure a healthy climate for my children and future generations.

60	51	4/9/2008	Doug	Grandt	Hayward	California	United States	It is natural to not want to rock the boat and to continue doing things the way they have always been done ... tradition ... inertia ... business as usual ... we can start later ... procrastination. It's too late for "later". Even the PUC and CEC are still operating in BAU mode by moving forward with natural gas-fired electrical generating plants in Hayward. Old technology should be replaced with new sustainable technology ... gas emits CO2 just like coal ... just slightly less ... and CO2 of any kind is part of the problem, not part of the solution. We need immediate moratoria not only on coal-fired plants without CCS, but all CO2-emitting plants. Read what Dr. James E Hansen has to say about coal and 350 ppm at www.columbia.edu/~jeh1 ... and write/call your Representative to support H.R. 5575 ... and visit www.wecansolveit.org for other things we can do.
61	135	5/19/2008	Natasha	Granoff	Santa Rosa	California	United States	We have to act now and act fast to affect a significant reduction in GHG emissions. Setting a cap and price on carbon as part of a broader reduction strategy, I believe, will move us in the right direction.
62	161	5/26/2008	Mia	Grifalconi	North Fork	California	United States	The quality of our air has a tremendous impact, directly and indirectly, upon our health. We MUST move in every way possible to improve its quality.
63	60	4/20/2008	Jessica	Guest	Santa Barbara	California	United States	This issue is incredibly important because if we don't act now how will our future generations cope with the awful environment that is left behind?
64	90	4/21/2008	Ann	Hancock	Graton	California	United States	It dictates our economic, social, and environmental future.
65	63	4/21/2008	Dian	Hardy	Sebastopol	California	United States	Now, this sounds fair: polluters pay, clean energy gets competitive and dividends protect the poor and middle-income families from rising energy prices. What's not to like! Thanks to Climate Protection Campaign for moving this excellent idea along.

66	190	6/29/2008	elizabeth	herron	Graton	California	United States	I urge you to select Cap Auction Dividend as the best plan to reduce GHG's in California. Auctioning the permits to emit will lead polluters to seek renewable energy far faster than Cap & Trade, which we know has not been as successful as hoped in Europe. The dividend provides equity otherwise lacking as our lower income families, usually the ones that live farthest from their jobs, are caught in the economic squeeze of rising fuel costs.
67	93	4/21/2008	Brian	Hines	Santa Rosa	California	United States	This issue is important to me because if we melt Greenland and it becomes green land again, the seas will rise about 16 feet according to the USGS. If we melt Antarctica the seas will rise over 200 feet. I have property at elevation 86 feet! Also, I like trout and salmon. Global warming is going to reduce their cold water habitat, change ocean conditions and further reduce wild Pacific salmonid populations in California.
68	110	4/24/2008	Michelle	Holmstedt	Santa Rosa	California	United States	Mercury contamination in "our" Bay!
69	119	5/5/2008	Lori	Houston	Santa Rosa	California	United States	The cap and dividend model is the most fair and sensible approach to achieving emissions reductions. It requires those entities that pollute the most to pay the most while also creating positive incentives to reduce emissions that individuals also benefit from. In the words of Peter Barnes: "It's simple, fair and market-based."
70	154	5/23/2008	C. J.	Hunnicutt	Sebastopol	California	United States	World health of plants and animals including humans, depends on AIR QUALITY. Air, even more than water, is something that goes all around our planet for everyone.
71	102	4/22/2008	Kristi	Hutchison	Fresno	California	United States	

								This is the best system proposed to address carbon reduction. It makes polluters pay, gives incentives to industry and business to become more efficient and less polluting, will initiate business opportunities to address carbon reduction, thus creating new technologies and jobs and uses fees collected to offset higher energy costs to Californians. In light of CARB's recent decisions on the ZEV mandate, which appears to be biased toward big business, I hope the board members will remember why it was created in the first place. Its purpose is to protect the air and resources of California's environment for Californians, not for industry and business. Listen to the people of California and heed their voice!
72	150	5/23/2008	Stanton	Ireland	Windsor	California	United States	
73	195	6/29/2008	Anna	Isakson	Sebastopol	California	United States	Please -help keep the air clean and make our world safe and sane. Thank you!
74	143	5/22/2008	Veronica	Jacobi	Santa Rosa	California	United States	This is very important to me as a Santa Rosa City Councilmember, and to my whole extended family of 5 California voters, and my many constituents, because we want to have a positive future and CHANGE IS NEEDED NOW!
75	101	4/22/2008	brook	jensen	berkeley	California	United States	
76	65	4/21/2008	Marie	Johantgen	Santa Rosa	California	United States	California should lead the way on energy reform.
77	89	4/21/2008	(The Rev.) Allan B.	Jones	Santa Rosa	California	United States	
78	196	6/29/2008	Heidi	Jones	Windsor	California	United States	The planets future is hanging in the balance. Anything that will encourage incentives to all major polluters makes sense.
79	120	5/6/2008	kris	jost	San Francisco	California	United States	The proposed Cap & Dividend measure is the most sensible and fair way to move California forward as a leader in the clean and renewable energy market. Please support this measure.
80	167	5/29/2008	S. L.	Juniper	Berkley	California	United States	If we don't do it, who will?
81	182	6/25/2008	Arlene	Kallen	Sebastopol	California	United States	
82	48	4/3/2008	Jessica	Kellett	San Diego	California	United States	

83	123	5/8/2008	patricia	kellett	tiburon	California	United States	Climate change and the run off of polluting garbage and water is harming our oceans. We need to protect our future from pollution that has caused a hole in the hemisphere and from the pollution that is killing our fish.
84	176	6/24/2008	Ingrid	Kelsey	Malibu	California	United States	If not now -- When?
85	174	6/24/2008	Jane	Kurtz	Graton	California	United States	
86	168	6/4/2008	Matthew	Lappé	San Francisco	California	United States	Cap and dividend is a fair, equitable, and transformative policy opportunity. If we in California are able to demonstrate its potential, it will increase the chances of it succeeding on the federal level.
87	125	5/8/2008	Thora	Lares	Cotati	California	United States	It's the only issue as far as I can see. Everything else is subsumed under this one. Even health care will become possible when the stranglehold of the big oil and war corporations lose some of their power.
88	15	3/14/2008	Candy	LeBlanc	Placerville	California	United States	
89	146	5/22/2008	Michael	Leifer	Fairfax	California	United States	The earth is definately heating up according to the US Consensus of Concerned Scientists and many other valid scientific organizations. This system of cap and Dividend seems like a very smart method of taxing those that are causing the problem. Please get behind passing this into a law for US Citizens and the world.
90	151	5/23/2008	Forrest	Lewis	North Fork	California	United States	
91	200	6/30/2008	Sandra	Lillie	Emerald Hills	California	United States	California has the opportunity to profoundly change the future of our planet with the implementation of a Cap-and-Dividend system. I entreat you to have the courage to make this choice, for all our sakes.
92	86	4/21/2008	Erika	Linn	Healdsburg	California	United States	

								To me it is almost a moral issue. We started with this beautiful, pristine planet, incredibly endowed with spectacular diversity in both life forms and inanimate, glorious natural scenery and geographical wonders, and over time, we've been mindlessly proceeding to deplete, degrade, pollute and otherwise devastate these finite resources, with very little thought as to the legacy we're leaving behind for the future generations. It's "high time" we woke up and put our considerable, collective and creative brainpower and technological resources to work toward reversing that short-sighted trend which would have such dire consequences for our children's children, not to mention the innocent collateral animal species!
93	210	8/1/2008	Kaye	Love	Freestone	California	United States	
94	117	5/1/2008	Bruce	Macpherson	Santa Rosa	California	United States	It's environmentally and economically sensible -- win-win.
95	75	4/21/2008	Connie	Madden	Petaluma	California	United States	I understand Jerry Brown says we need to turn GHG around in FOUR years - not 20 or 30 - so we need to run fast just to stay in place! Thank goodness for people actually working on this terrific task!
96	203	7/8/2008	Matt	Maguire	Petaluma	California	United States	Cap & Trade is at best a temporary interim step. Cap Auction Dividend is a far more efficient tool for stopping our world from being irreparably damaged in the next decade, should we be so lucky to have that much time.
97	165	5/28/2008	Joy	Marschall	Wawona	California	United States	It is imperative that we act now to stop global warming with this strong legislation.
98	198	6/29/2008	Stacee	Mason	San Jose	California	United States	
99	188	6/29/2008	Robert	Matteson	Los Angeles	California	United States	For the sake of future generations
100	148	5/23/2008	L.	Mazzarella	Sebastopol	California	United States	
101	189	6/29/2008	Sherry	McAdam	San Francisco	California	United States	Taking actions to prevent further global warming is essential to preserve the future of the earth; its flora and fauna, oceans, and all creatures, including our children and future generations.
102	132	5/12/2008	Damien	McAnany	Sebastopol	California	United States	This issue is enormously important. We must show our moral integrity by pushing the envelope of leadership.

103	179	6/24/2008	Phyllis	Meshulam	Sebastopol	California	United States	A one-of-a-kind planet calibrated to sustain life under conditions evolved over billions of years....we've got to use our intelligence to undo some of our unwitting damage....
104	84	4/21/2008	Lou	Miller	Rohnert Park	California	United States	
105	155	5/23/2008	Asher	Miller	Santa Rosa	California	United States	Most California's know understand that it is in our vital interest to take aggressive action to address climate change. A Cap & Dividend system is by far a better approach than Cap & Trade because it helps ensure that all of us have an equity stake in what is our collective resource--the air we breathe. A Cap & Dividend approach also does more to address those hit hardest by global climate change and other societal challenges--those with the fewest resources to adapt to increasingly challenging circumstances.
106	172	6/23/2008	Kirsten	Miller	Santa Rosa	California	United States	
107	134	5/15/2008	Eric	Moes	Santa Rosa	California	United States	There is no reason we can't have clean energy now. It's all about having the political will. We are way behind the curve. We need to wake up and smell the coffee...and hopefully that coffee will be brewed with 100% renewable energy!
108	29	3/15/2008	Anthony	Montapert	N Hollywood	California	United States	
109	69	4/21/2008	John	Morrison	Santa Rosa	California	United States	Because I live on the planet with political systems basing their total control on petroleum profit which effects,civil rights, food chains, distribution of wealth and health of the planet and future generations. This is one step of 10,000 to move towards responsibility of change.
110	192	6/29/2008	linda	murazzo	rohnert park	California	United States	
111	193	6/29/2008	A.A.	Nagy	Cotati	California	United States	

								Because a liveable planet should be a demand.I had one solution to sovling global warming ban disposable diapers 1 million trees are used every year to make these diapers. switch to a cloth diaper save the trees and fight climate change at the same time.Disposable diapers are a human activity that contributes to climate change we must put a ban on them.	b tl d
112	114	4/29/2008	monica	p	pinon hills	California	United States		
113	42	3/22/2008	Candace	Penner	Yuba City	California	United States		
114	54	4/11/2008	matthew	perry	Berkeley	California	United States	The survival of our state ecosystem	
115	57	4/13/2008	Mary Elizabeth	Perry	Pasadena	California	United States	As a grandmother of 6 young people, and the teacher of thousands of others, I cannot in good conscience sit by while our administration does nothing to let us try to protect our Earth as well as we can from all the bad policies that have contributed to its sorry state.	
116	58	4/14/2008	Ralph	Perry	Los Angeles	California	United States	Anyone who has his or her eyes open and cannot see the devastating consequences of Climate change has to be blind. This is a critical issue. People talk about saving the polar bear, but it is probably already too late for that wonderful animal.	
117	160	5/26/2008	Marcia	Perry	Monterey	California	United States	It is about the future of the planet and our children, their children, etc. It is only responsible thing to do.	
118	131	5/11/2008	myra	polikoff	Graton	California	United States	Protecting the earth, in particular impacting positively the global climate crisis, is of paramount importance to me. Please take all action possible to work towards solutions to this critical problem.	
119	122	5/8/2008	Susan	Pringle-Cohan	Occidental	California	United States	Because it's time that the major polluters pay and that incentives be established in law that motivate people to change!	
120	80	4/21/2008	Linda	Proulx	Santa Rosa	California	United States	We will only be able to reduce our carbon footprint when businesses, government, NGOs and citizens actually have to pay for the true cost of polluting. Cap-and-dividend moves us in the direction of accountability.	

121	99	4/22/2008	Stephanie	Puentes	Santa Rosa	California	United States	The divide between the "haves" and the "have nevers" is wide and growing in the U.S. Let's not make it worse with the impact of climate change being borne only by the working class and economically disadvantaged in our country.
122	205	7/14/2008	Jenna	Rackerby	Santa Rosa	California	United States	Why isn't this issue important to you, we should be asking the people. This is our planet and we only get one shot. I want to do my best as the next generation to step up and do my part.
123	30	3/15/2008	Sam	Rankin	san luis obispo	California	United States	
124	180	6/24/2008	lilith	rogers	sebastopol	California	United States	I have four young grandchildren. I want them to live in a world that is in better shape than it is now.
125	138	5/22/2008	Dan	Rosenberg	North Fork	California	United States	The evidence of global warming seems indisputable. The benefits of action will be to stem the adverse effects but also to make people more conscious of energy usage and pollution. It will also create large numbers of high paying jobs and spur a new industry and innovation. The Cap and dividend is the most fair and effective system i have seen anyone propose.
126	11	3/13/2008	Michael	Sandler	Marina del Rey	California	United States	Check out related websites: www.carbonshare.org and www.climatedividends.org .
127	141	5/22/2008	keith	Sauer	North Fork	California	United States	
128	66	4/21/2008	Jacqueline M.	Scheibel	Santa Rosa,	California	United States	This past year, we have had opportunity to visit both the antarctic and above the arctic circle. Global warming is real and we MUST do all possible to reverse the current action which, if not altered, will devastate our planet. In fact, it may already be too late! We are all accountable! One of my action options is at the polls. I will act! Jacqueline scheibel
129	139	5/22/2008	Gregory	Schneider	Occidental	California	United States	This issue is critically important to the people of the world.
130	78	4/21/2008	Karen	Schuppert	Napa	California	United States	Thank you for protecting our planet so that future generations can live a healthful existence.

131	133	5/13/2008	Kathleen	Shaffer	sebastopol	California	United States	We are very late coming to the realization that we mus change our lifestyles and save our planet.
132	96	4/22/2008	Greg	Sharpe	Sebastopol	California	United States	
133	111	4/24/2008	Valerie	Sherron	Santa Rosa	California	United States	
134	68	4/21/2008	Patty	Sherwood	Santa Rosa	California	United States	
135	55	4/11/2008	Will	Shonbrun	Sonoma	California	United States	
136	164	5/27/2008	Julie	Sicaud	Sebastopol	California	United States	Plant, animals and humans all face a dire future if we don't act now, aggressively to reduce greenhouse gases and find clean energy sources. Cap and Divide is an important step in the right direction.
137	73	4/21/2008	Susan	Silverman	Santa Rosa	California	United States	When polluters pay, pollution becomes important to them, too.
138	211	8/26/2008	William	Simon	Santa Rosa	California	United States	I am aware of the importance of protecting the environment.
139	127	5/10/2008	Dwight	Sims	Sebastopol	California	United States	We need incentives to change our destructive habits and to stop the degradation of the air we breathe!
140	82	4/21/2008	Betty	Smith	SantaRosa	California	United States	
141	121	5/8/2008	Mike	Stokes	Ville Grande	California	United States	The climate is owned by all the citizens of the Earth including duture generations that can not vote on how we use it. We need this system to insure that well connected wealthy investors do not control the fate of life on earth but that we the masses do.
142	197	6/29/2008	Autumn	Summers	Sebastopol	California	United States	
143	91	4/21/2008	Lisa	Taner	Foster City	California	United States	No relationship works when one party takes and never gives. We need to give back to planet Earth before this relationship fails!!! It's time to stop thinking selfishly and taking our planet for granted.
144	173	6/24/2008	Robert W.	Thomas	Oakland	California	United States	
145	115	4/30/2008	Neva	Turer	Santa Rosa	California	United States	
146	171	6/19/2008	Abigail	Van Alyn	Berkeley	California	United States	Since so far the Federal Government has failed to take strong leadership on climate change, it is up to the States, and especially to giant polluter California, to take the initiative on this make-or-break issue. Please enact this sensible, balanced plan, and help establish a model for others to follow.

147	169	6/9/2008	Carol	Vanek	Sebastopol	California	United States	We need to get very serious about climate change. Polluters need to pay for the damage they're creating and the Poor and middle income families need to be protected from having to pay increasing energy prices.
148	184	6/26/2008	Bill	Vartnaw	Petaluma	California	United States	This is important because the issue has been completely down-played by the current administration in favor of the big corporation's profits. This philosophical stance has played out consciously in our society since the Reagan administration. It doesn't work. The society has consistently become poorer in these years. I don't want a diluted solution that does not address the problem, we need to make changes. This is the place to start.
149	6	3/13/2008	Barry	Vesser	Occidental	California	United States	Climate dividends are an equitable way of insuring that the burden of climate protection does not fall primarily on the middle class and low income people.
150	53	4/11/2008	Richard	Walker	Sebastopol	California	United States	I have been tracking the global climate change literature and media reporting since 1988. We needed to act 20 years ago on this. It is a matter of the future of our quality of life on this planet. Let's move NOW to create new economies that are sustainable and are near-zero in pollution. We need to create market and legislative incentives to foster this. Let's hope it's not too late.
151	74	4/21/2008	Tim	Walsh	Los Angeles	California	United States	There must be a responsibility for businesses and industries to account for the downstream costs for goods and energy production.
152	166	5/29/2008	Jisho	Warner	Sebastopol	California	United States	Please take this critical step toward protecting the Earth for all beings, now and into the future.
153	191	6/29/2008	Patricia	Waters	Cotati	California	United States	We must find a way to limit pollution AND not pass the cost on to the consumer. Right now WE are the ones paying for the polluters. This seems like a plan that puts the priorities in the right place.
154	94	4/22/2008	Ken	Wells	Santa Rosa	California	United States	This approach to using economic tools to reduce CO2 emissions is very effective and the most equitable for those that would be most impacted by higher energy costs.

155	83	4/21/2008	Carey Caccavo	Wheaton	Sebastopol	California	United States	
								I will do everything that I can to make a smaller impact on our globe. And if I can do that with my meager middle-class income - then it's time that the big time polluters and corporations start putting a significant amount of work and resources toward the same goal. Our planet is exponentially getting warmer - and without drastic change, there will be drastic consequences.
156	126	5/9/2008	Carrie	Whittier	Healdsburg	California	United States	
157	157	5/25/2008	Victoria	Wikle	Villa Grande	California	United States	
158	81	4/21/2008	Cathy	Wild	Penngrove	California	United States	It only makes sense that polluters pay! Don't you agree?
159	88	4/21/2008	Lavern	Wilson	American Canyon	California	United States	
								Global warming will cause untold hardship for wildlife, plants and humans. The snow pack in the Sierra Nevada mountains, which provides water for our farms and citizens, will eventually disappear. Our beautiful state with it forests and farmlands will be forever changed. We need to act now if we are to avoid the worse of the climate change.
160	129	5/10/2008	Anne	Wolf	santa rosa	California	United States	
161	92	4/21/2008	Tasha	Wright	Santa Rosa	California	United States	
162	175	6/24/2008	Anne Marie	Wyllie	Santa Rosa	California	United States	
163	1	3/12/2008	Liz	Yager	Graton	California	United States	
164	147	5/22/2008	Paula	Zerzan	Sonoma	California	United States
