Subject: Ryder System Inc: Electric Vehicle Total Cost to Transport Analysis

Comment:

The attached study was released last month and provides important data on the real world testing of 25 battery electric vehicles in California and Georgia. Ryder found that the current battery electric vehicle technology is significantly more expensive to own and operate. This is in contrast to the positive economics that the Board declared upon adoption of the Advanced Clean Fleets Regulation and the accompanying Total Cost of Ownership. The Board is requested to direct staff to review the Ryder study and return with an informational item on battery electric vehicle costs. Thank you.
