Attached please find a letter from the CRHMFA Homebuyers Fund (CHF) regarding a proposal for energy retrofit funding through the AB 32 Cap-and-Trade Auction Proceeds Investment Plan. We sent this letter unofficially yesterday, and would ask that you consider our letter as you move forward with the Plan. If you have any questions on the content of the letter or would like to discuss further, please contact Greg Norton, Executive Director, at (916) 447-4806 or gnorton@rcrcnet.org. If you have any questions regarding the transmission of this document, please contact me.

Subject: Cap and Trade Program

Comment:

I am pleased that sustainable agriculture practices are included in the draft cap-and-trade investment plan. Investments in the state's existing land resources programs will provide climate and other environmental and health benefits. Additional investments in research, technical assistance and incentives will encourage farming practices that reduce greenhouse gas emissions, sequester carbon and help growers adapt to climate change. I also support investments in farmland protection, particularly if prioritizing farmland that supports smart growth.

Thank you,
Liya Schwartzman

Subject: Comments re: Cap and Trade

Comment:

As you are well aware this State not only produces 2/3rds of the worlds food and fiber, but it also consumes much of what it produces. Regulations and Governments that do not balance the weight of "big government" vs. "private enterprise" soon will send a weight shift of global proportions that will change our way of life forever if they are not careful. As a small family farmer trying to develop a 60 acre lemon grove I can assure you that the burden and weight of the government upon us is so massive that we just do not see any safe standard for maintaining a sustainable small family farm based upon the regulatory weight. The lawmakers just do not grasp that it is not a "one size fit's all" State. The diversity in this State's agricultural communities is the single thread that set's us apart from the rest of the world, and the balancing act for the natural resources that will keep this State a leader in the world economy depends on this proper balance, between corporate Ag. and Government Programs designed to manage a non-corporate social conscious mentality. Its obvious what the issue has become as the corporate farmers run to Washington seeking to manipulate lawmakers to keep water flowing for the corporate community in the Central San Joaquin Valley.

The cost of running these larger corporate size "field factories" and the regulations that follow them like tic's on a dog, feed a frenzy and closed loop system that often forgets the basic principles on what the Nation was founded. The individual effort formed this Nation's greatness, and individual effort will prevent us from ruin, unless Big Brother interferes with the natural ebb and flow of that basic truth.

Thank You

Keith A. Freitas

Subject: Agricultural ghg sequestration

Comment:

Soils offer the single largest reservoir for safe and beneficial sequestration of excess atmospheric CO₂. I applaud the ARB's inclusion of sustainable agricultural practices in the draft cap-and-trade investment plan. Investments in the state's existing land resources programs will provide climate and other environmental and health benefits. Additional investments in research, technical assistance and incentives will encourage farming practices that reduce greenhouse gas emissions, sequester carbon and help growers adapt to climate change.

Active engagement with agriculture, as the most effective means of rapidly increasing rates of terrestrial sequestration of carbon, offers the single most effective strategy toward climate change mitigation, while offering the promise of productivity increases, soil and water quality improvement and enhanced quality of life for all Californians.

Thank you for taking decisive action to stop and reverse global warming through effective engagement with California's land managers.

Jeffrey Creque, Ph.D.

Subject: AB 32 support letter

Comment:

SB-Cal AB32 Testimony to CARB - April 25th, 2013

The language in section 38565 of the AB32 legislation states:

The state board shall ensure that the greenhouse gas emission reduction rules, regulations, programs, mechanisms, and incentives under its jurisdiction, where applicable and to the extent feasible, direct public and private investment toward the most disadvantaged communities in California and provide an opportunity for small businesses, schools, affordable housing associations, and other community institutions to participate in and benefit from statewide efforts to reduce greenhouse gas emissions.

Especially in zip code areas designated as disadvantaged communities, small businesses are a vital and hard to reach part of the population regarding energy efficiency investments. There is no reference to small businesses in the Draft Cap & Trade Investment Plan. While investments in some sections may benefit California small businesses, the sections addressing energy efficiency in disadvantaged communities, in particular, should specifically include small businesses. We request two language revisions to add the inclusion of small businesses in the following parts of the document:

Page 28:

In addition, the recommended energy investments offer significant opportunities to provide jobs and to be located in disadvantaged communities (e.g., residential areas, small businesses and local public buildings). Other key advantages include reduced energy costs for consumers, energy independence/diversity, reduced criteria pollutants, and consistency with Scoping Plan priorities.

Appendix B-8

At a minimum, 10% of the funds could be set aside for projects located in disadvantaged communities. In addition, financing mechanisms could be structured to provide different credit support levels to encourage lending to homeowners and small businesses in disadvantaged communities.

Respectfully Submitted,

Scott Hauge

Support for Vessel Speed Reduction Initiative

Dear Ms. Nichols and California Air Pollution Control District
Board Members:

Large cargo ships traveling off our coast produce significant GHG and toxic air emissions that impact our coastal communities. Ship strikes also pose a threat to whales. Slowing down cargo ships meets multiple objectives in your Draft Cap-and-Trade Investment Plan including: reducing GHG emissions and other air pollutants, improving public health, and better protecting whales. I support including vessel speed reduction in your Final Plan as a priority for funding and request Cap-and-Trade money be directed to the Vessel Speed Reduction Initiative.

Thank you

Subject: save the whales and improve air quality

Comment:

I was stand up paddling just off the goleta beach. Out of the corner of my eye, I spotted what i thought was a seal rolling on the surface. It turned out to be a baby whale. I paddled along beside it for 1/4 of a mile as it left the beach area and headed back out into the santa barbara channel. Its mother was no where in sight. I contacted animal rescue agencies when I got a shore but they could not help it without its mother.

I am very much in favor of using less power and slowing our speed so we can protect this planet and the animals on it. This should always be our priority. I hope you will paddle out on your closest beach and get close to what it is you are voting about. It is most certainly one of the ways you can help yourself to wind down from the job that you are called upon to do. Good luck in your efforts to hold on to what is good. even if it is a tree that stands alone.

Comment:

I've been involved with agriculture and environmental issues in California for over 35 years, so I was glad to see that sustainable agriculture practices are included in the draft cap-and-trade investment plan. Organic farming and the local food movement have been areas of consistent economic growth for many years, so it is a win-win to invest in the state's existing land resources programs. Additional investments are needed in research, technical assistance and incentives to encourage farming practices that reduce greenhouse gas emissions, sequester carbon and help growers adapt to climate change. I also support investments in farmland protection for growing food and fiber. Energy production should be distributed and as close as possible to where is used, and high value farmland close to urban areas is as important as large farms in rural areas.

Comment:

Thank you for accepting these comments on the Cap-and-Trade Auction Proceeds Draft Investment Plan. The rebates and vouchers proposed in the Draft Plan (pages B-6 and B-7) should be expanded and be called a "Transportation Dividend" and a "Household Dividend." The Transportation Dividend would assist low-and middle-income drivers, transit users, people who rideshare, and others. The Household Dividend would assist low-and middle-income homeowners and renters and encourage the purchase of Energy Star products that renters can also purchase easily. It should be sent to all Californians. It should expire before the next year, and if it is not used, it would default back to the state to be used for other investments. The Dividends can reside on a debit card.

Ms. Shelby Livingston, Chief

Climate Change Program Planning and Management Branch
Air Resources Board

(916) 324-0934

or via email at: slivings@arb.ca.gov

Greetings Shelby,

As we discussed, I have attached the report ("ManuscriptRTP2Court5") I will present in Chicago, in June, at the Air and Waste Management's 106th Conference, at their Sustainable Land Use and Transportation Session. (This is the 2nd paper of mine, that they have accepted. The first one is Reference 6 of the attached report. I have also attached that paper, which deals with car parking.) If you look at Page 11 you will find A PROPOSED SET OF STRATEGIES (REMEDIES) TO ACHIEVE THE REQUIRED REDUCTIONS . The first 5 subheadings there are the 5 "remedies" that will reduce driving as needed.

I would like to focus here on the parking strategy. Note that "charging more for parking" is not a good idea, nor is "reducing the amount of parking". Either strategy will just bring the wrath of angry citizens down upon the process. People are paying the additional cost, between the true cost and the charged cost, in hidden forms: less wage, more cost for all items including food, and more rent. Why should they pay twice? Instead of saying "less parking" or "charging more" we need to say "unbundling the cost of parking". Instead of wrath, we will get puzzlement. That would be better. Then we can educate.

More to the point, first we need a demonstration project. Therefore, I have attached an unpublished paper, describing a demonstration project at an office, that also happens to be a school. It is named "SchoolParkingReport3".

Here in San Diego County, cars and light-duty trucks emit 41% of our total GHG, more than any category. Besides getting cleaner cars and cleaner fuels, we must drive less and we need strategies that will do this without costly development and redevelopment, such as smart growth and complete streets, which are also needed. We need cost-effective strategies that will give people more choice, more fairness and yet create significant reductions in driving.

Please call me so I know what we need to do next.

Highest regards,

Mike Bullock

Subject: Community Environmental Council comments on Cap and Trade Auction Investment Plan

Comment:

Dear Ms. Nichols and California Air Pollution Control District Board Members:

The Santa Barbara Community Environmental Council (SBCEC) is a member-supported environmental non-profit organization formed in Santa Barbara in 1970 and is a leading environmental organization in the Central Coast region of California. In 2004, SBCEC shifted its primary focus to energy and transportation issues and is spearheading a regional effort to move away from our dependence on fossil fuels over the next two decades. SBCEC is almost unique in combining on-the-ground work on a number of energy and climate change-related issues with concurrent work on state and federal policy issues. SBCEC's state policy work is directly informed by experience with what has worked, or is likely to work, at the local level. More information on the SBCEC and its energy programs may be found at www.cecsb.org.

SBCEC would like to thank the Staff and leadership of ARB in their efforts to draft the Cap and Trade Auction Proceeds Investment Plan. We are in full support of the goals of the Plan, as well as the eligible investment categories.

We submitted a letter (attached) to Ms. Shelby Livingston, Chief of the Climate Change Program Planning and Management Branch regarding our support for various GHG reduction programs that have proven effective. We'd like to add support for the Vessel Speed Reduction Initiative.

We are part of the working group on the Vessel Speed Reduction Initiative and strongly support inclusion of this initiative in the Cap and Trade Plan. Large cargo ships traveling off our coast produce significant GHG and toxic air emissions that impact our coastal communities. Ship strikes also pose a threat to whales. Slowing down cargo ships meets multiple objectives in your Draft Cap-and-Trade Investment Plan including: reducing GHG emissions and other air pollutants, improving public health, and better protecting whales. CECSB supports including vessel speed reduction in your Final Plan as a priority for funding and request Cap-and-Trade money be directed to the Vessel Speed Reduction Initiative.

Subject: Emerging TORREFICATION technology

Comment:

Subject: Cap and Trade Funding – Emerging TORREFICATION technology

This is additional information on our March 6, 2013 comments.

It is clear that the intention of the Cap and Trade program was to use the collected funds to reduce GHG emissions.

Based on the ARB Cap-and Trade Auction Proceeds:

“The investment plan will identify the State’s greenhouse gas emission reduction goals and priority programs for investment of proceeds to support achievement of those goals.

The Proposed State Budget for 2013-14 includes a brief discussion of Administration priorities for investment, emphasizing investments in the transportation and energy sectors from which large reductions in GHG emissions are possible. In addition, areas to be examined during the planning process include sustainable agriculture practices (including the development of bioenergy), forest management and urban forestry, and the diversion of organic waste to bioenergy and composting. ”

Therefore, funds collected from the Cap and Trade program should primarily be used to help reduce the CO2 being generated in order to help California meet its GHG reduction goals.

A great number of recommendations have been made for using these funds that would result in very little reduction of GHGs for the funds used.

I suggest selecting projects, that receive funding, be based on a cost benefit ratio or other practical economic basis or potential to reduce GHGs long term.

If the Cap-and Trade program is to continue it should show maximum GHG reductions for funding spent.

Consider projects that have the potential to significantly reduce GHGs per dollar spent over other projects.

California was considered a leader in CO2 reduction technology and a good portion of this has been on the promotion and investment in new technology.

Investing some funds in emerging technology such a Torrefication could result in converting hundreds of millions of tons of forest,

agricultural waste, MSW and other woody biomass into useful clean burning fuel that is essentially carbon neutral to offset fossil fuel.

This fuel could be used in Combination Heat and Power CHP systems and gasification systems that reduce the load on the electric grid. Torrefied wood is an ideal form of solid energy that can be used in many applications in lieu of fossil fuels.

When waste biomass is used, not only is the condensed solar energy from the sun utilized a more important benefit is that all the gases including methane gas is prevented from the decomposing biomass. Only waste biomass use has this GHG "avoidance" benefit.

Other countries around the world are now investing in this biomass Torrefication technology and it could result in not only major GHG reductions but it could also reduce forest wildfires, reduce biomass to landfills, utilize and give value to agricultural waste, create new industries and jobs along with many other social and economic benefits.

Subject: City of Benicia Comment on CARB Auction Revenue Investment Plan
Comment:

On behalf of the City of Benicia, we respectfully support investing Cap-and-Trade Auction revenue in local governments. We appreciate that the Draft Cap-and-Trade Auction Proceeds Investment Plan (Investment Plan) lists local governments as eligible recipients for several of the potential funding categories; however, the City strongly supports a more clearly defined role for local governments because they are best suited to identify and implement projects to reflect local needs, leverage other funding, and achieve the greatest reductions in greenhouse gas (GHG) emissions.

The Investment Plan should create a Local Emission Reduction Program for municipalities to access a portion of the funds generated from the Cap-and-Trade Auction. In addition to providing local governments grants for implementation of GHG reducing projects, the City of Benicia also requests that the Investment Plan include a mechanism to direct a majority of proceeds from covered entities within a local jurisdiction back to the municipality. We believe that the addition of a local government-directed return-to-source component of the Investment Plan will promote statewide sustainability by giving communities most affected by pollution opportunities to implement GHG reducing and energy efficiency projects that will create jobs and improve the economy.

The City of Benicia respectfully requests that you consider this recommendation when finalizing the Investment Plan so that local governments can continue helping California meet AB 32 goals.

Comment:

Dear Ms. Nichols and Board Members:

The Environmental Defense Center (EDC) is supportive of the Draft Cap-and-Trade Auction Proceeds Investment Plan: Fiscal Years 2013-14 through 2015-16 (Draft Investment Plan) but recommends including vessel speed reduction (which is missing from the Draft Investment Plan) in your Final Investment Plan as a priority for funding and requests that Cap-and-Trade money be directed to the Vessel Speed Reduction Initiative.

In addition, this Initiative has a broad coalition of supporters including federal, state, regional and local agencies, as well as NGOs, representatives of industry and the scientific community, and members of the public. We would like to have Appendix A in the Final Implementation Plan revised to include the VSR Initiative and acknowledge this coalition.

More details are provided in the attached letter. Thank you for your consideration of these comments.

April 24, 2013

Hon. Mary Nichols
Chair, California Air Resources Board
1001 I Street
Sacramento, CA 95814

Hon. Ana J. Matosantos
Director, California Department of Finance
915 L Street
Sacramento, CA 95815

RE: Draft Investment Plan for Cap-and-Trade Auction Proceeds

Dear Chairman Nichols and Director Matosantos:

We represent economic justice, public health, housing, environmental justice, transportation, faith, and environmental groups in the Bay Area. For the past 3 years, we have been working collaboratively to ensure that the Bay Area adopts a Sustainable Communities Strategy that meets environmental, economic and equity goals – the “three Es” – that are vital our region’s and the state’s future. We submit these comments in response to the Draft Investment Plan (“draft plan”) released by the California Air Resources Board (ARB) and the Department of Finance (DOF) on Tuesday, April 16, 2013.

We commend ARB, DOF and all other the State agencies involved in this effort for their hard work and commitment to eliciting broad public input and participation in the development of the draft plan. In particular, we support the draft plan’s commitment to ensuring that disadvantaged communities benefit from cap-and-trade auction proceeds and the focus on achieving sustainable communities by investing in public transportation and affordable homes near transit-oriented development.

To strengthen the plan, however, we urge ARB and DOF to expressly include transit operations as an investment priority in order to sustain and expand transit service levels and ridership. While the draft investment plan includes funding for transit capital needs, it does not explicitly prioritize the operating funds that are needed to sustain and improve service on the street.

Investments in the State Transit Assistance program and/or new transit operating grants are desperately needed so that the

operators in our region (e.g., Alameda-Contra Costa Transit District (AC Transit), San Francisco Municipal Transportation Agency (Muni), Santa Clara Valley Transportation Authority (VTA), San Mateo County Transit District (SamTrans), etc.) can provide the local transit service our communities depend upon for access to jobs, schools, and healthcare.

It is well-established that spending more on transit operations improves access to opportunity for disadvantaged residents, seniors and youth, while creating jobs for drivers and mechanics and cutting down on pollution. On top of all that, studies demonstrate that investments in local transit service can have a ten-fold economic multiplier effect on the local economy.

Just this month, the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) released further evidence that investing in transit operations is critical to achieving the GHG reductions called for in SB 375 while also performing well on social equity and public health indicators. The Plan Bay Area draft Environmental Impact Report (EIR) recently released by MTC/ABAG includes study of the "Equity, Environment and Jobs" (EEJ) alternative, an alternative that includes nearly \$8B additional dollars to invest in transit service. In combination with an equitable distribution of affordable housing and increased protections against displacement of low-income residents, the emphasis on investing in transit operations led the EEJ alternative to be designated as the "environmentally superior alternative" while also performing best on a series of public health metrics (lowest levels of the polluting emissions that lead to asthma and other respiratory diseases; highest levels of walking and biking; lower increases in residents' injuries and fatalities from collisions) and social equity metrics (lowest combined housing and transportation costs for low-income households; lowest displacement pressure on overburdened renters). In other words, the EEJ alternative demonstrates that investments in transit operations and affordable homes are critical to realizing the promise of SB 375 and achieving the GHG reductions called for in AB 32.

We stand ready to work with you to strengthen the investment plan by prioritizing transit operations as one of the plan's investment areas so that we can demonstrate the benefits of AB 1532 and SB 535 in our communities. Thank you for the opportunity to provide this feedback.

April 24, 2013

Chairwoman Mary Nichols
California Air Resources Board
Sacramento, California

Subject: Cap-and-Trade Auction Proceeds Investment Plan – Passenger Vehicle Aftermarket Products Incentive Program
Thank you for the opportunity to comment on the draft Cap and Trade Auction Proceeds Investment Plan (or “Investment Plan”) released April 16, 2013.

We recommend broadening the Investment Plan’s “Infrastructure” category to encompass additional measures that address the efficiency of the in-use fleet, including fuel efficient replacement tires and engine oil. Such measures were included in the AB32 Scoping Plan, but have not yet been implemented (see p. 51-2 and Appendix C-64). An incentive program in these areas could achieve \$750 million in net annual customer savings and reduce greenhouse gases emission by roughly 2 million metric tons, as noted in our February 25 testimony and March 8, 2013 detailed written comments. In addition, a replacement tire incentive program will complement important efforts to potentially develop labeling information and/or standards for low rolling resistance passenger vehicle replacement tires.

We suggest the following revision on page B-3 of the Appendix to the draft Investment Plan (proposed additions underlined) to recognize the value of these types of programs:

“Infrastructure and Tailpipe Emission Reductions (SB 391): Funding for infrastructure for smooth/GHG pavements [sic], complete streets, ramp meters/traffic management and for vehicle in-use efficiency (such as fuel efficient tires and/or engine oil) programs and incentives.”

Thank you for considering our comments. Please contact me or have your staff contact me at epike@energy-solution.com or (510) 482-4420 x239 if you have any questions.

Sincerely,

Ed Pike, P.E.
Senior Project Manager

Comment:

April 24, 2013

Ms. Mary Nichols
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Re: City of Long Beach Comments – Cap and Trade Investment Plan

Dear Chairman Nichols:

On behalf of the City of Long Beach, I write in support of the progress that has been made by the California Air Resources Board (CARB) to implement the State's Cap and Trade Program. Long Beach supports the three investment priorities described in this draft plan, but urges the Board to consider one additional greenhouse gas reduction strategy within these three priorities. The City is requesting waste-to-energy be included as a potential area for investment in the Energy Efficiency and Clean Energy portion of this investment plan. Long Beach is interested in future discussions with CalRecycle on how these facilities can play a role in increasing diversion from landfills.

Sustainable Communities and Clean Transportation appears to be the focus for investing cap and trade revenues. Long Beach supports this as an appropriate area for investment. The City has worked closely with other local governments in the region through the Gateway Council of Governments (Gateway COG) and SCAG to develop a Sustainable Communities Strategy (SCS) per SB 375 to identify areas for greenhouse gas reduction in the region. This plan is region specific, and the City supports the implementation strategy that has been identified.

Long Beach also supports the proposal to invest in zero-emissions freight movement technology. In particular, zero-emission projects are of significant interest to Long Beach given the volume of goods movement originating from the Ports of Long Beach and Los Angeles. As documented by the CalEnviroScreen, communities along the I-710 freeway are disproportionately impacted by greenhouse gas emissions. Cap and trade investment into zero-emission infrastructure along this major goods movement corridor is important to Long Beach.

The Draft Cap and Trade Investment Plan identifies Energy Efficiency and Clean Energy as a second investment priority.

Though the City of Long Beach agrees clean energy, and energy efficiency programs will reduce greenhouse gas emissions, Long Beach urges CARB to consider including waste-to-energy in this section of the investment plan. The State Department of Resources Recycling and Recovery (CalRecycle) recently published a report that shows California's three existing waste-to-energy facilities help reduce greenhouse gas emissions. Published July 3, 2012, CalRecycle Review of Waste-to-Energy and Avoided Landfill Methane Emissions, concludes, "The three existing California WtE facilities provide net avoided methane emissions over waste otherwise disposed in a California landfill." The City is also encouraged to see the inclusion of energy efficiency retrofits in the Draft Investment Plan. On this issue, Long Beach requests that local government buildings be included in the list of eligible projects.

The City is particularly interested in the implementation of the final investment priority, which is described as Natural Resources and Waste Diversion. Long Beach is encouraged that this investment area will provide competitive grants to local agencies to expand and improve waste diversion and recycling. The City is committed to strategically implementing these goals, and is interested in future discussions with CalRecycle and the California Energy Commission regarding valuable greenhouse gas and clean energy benefits that may be achieved through emerging technologies.

The Draft Investment Plan notes that it does not include dedicated funding levels for each investment priority area due the uncertainty of funds available each year, as cap and trade auctions occur quarterly. However, the Draft Investment Plan also does not set forth a percentage of funding for each investment priority categories. Long Beach strongly prefers that funding continue to focus on Sustainable Communities and Clean Transportation, as this is the area that the City believes will have the most impact on reducing greenhouse gas emissions.

Thank you for the opportunity to comment. Should you have questions, please contact Tom Modica, Director of Government Affairs and Strategic Initiatives at 562-570-5091 or Tom.Modica@longbeach.gov.

Sincerely,

Patrick H. West

Subject: Farm and Rangeland Carbon Sequestration as a Near-term Opportunity for Climate Mitigation

Comment:

April 22, 2013

Chairman Mary Nichols
California Air Resources Board
1001 "I" Street
Sacramento, CA 95814

Dear Chairman Nichols,

Sustainable agricultural practices implemented in California can play a significant role in helping the State meet its goals and GHG targets under AB32. While emissions reductions and mitigation is a critical step in solving the climate change problem, emissions reductions alone are not sufficient to reverse climate change. Even if we reduce our emissions, we are still likely to be increasing the atmospheric burden of these gases. We need to explore other strategies that remove greenhouse gases from the atmosphere, including soil carbon sequestration.

When funded with cap-and-trade revenues, the RECOMMENDATIONS OFFERED IN THE ATTACHED COMMENT LETTER can:

- Fund on-the-ground projects in agriculture that can reduce GHG emissions and sequester carbon;
- Generate new jobs in some of our most economically depressed rural communities, especially in the Central Valley;
- Provide additional environmental and health benefits such as cleaner water, increased soil water holding capacity, wildlife habitat, pollinator services and open space protection;
- Produce transformative projects, making the benefits of AB 32 tangible to our rural and peri-urban communities;
- Assure the on-going food production capacity of the state and increase the resilience of our agricultural ecosystems and economy.

Subject: Include in Final Plan - Vessel Speed Reduction Incentive Initiative

Comment:

RE: Revise the Final Investment Plan to include the Vessel Speed Reduction Incentive Initiative

Dear Chair Nichols and Board Members:

The National Oceanic and Atmospheric Administration, Office of National Marine Sanctuaries, West Coast Region (WCR) appreciates the opportunity to review the Draft Cap-and-Trade Auction Proceeds Investment Plan: Fiscal Years 2013-14 through 2015-16 (Draft Investment Plan) . We offer one comment - please include in the final plan the widely supported Vessel Speed Reduction (VSR) Incentive program as a priority for Cap and Trade auction funding.

We have partnered with the Santa Barbara County Air Pollution Control District (SBCAPCD) and the Environmental Defense Center to develop a VSR Incentive program that would provide financial incentives to large marine ships to voluntarily reduce speeds along the California coast to reduce greenhouse gas (GHG) emissions, improve air quality, and protect whales. The VSR Initiative tiers off the very successful vessel speed reduction program of the Ports of LA and Long Beach. We have built a strong coalition of local, state and federal agencies, shipping interests and non-government organizations who support the program. The VSR Incentive program fulfills multiple objectives of AB 32 (Global Warming Solutions Act of 2006), AB 1532 and SB 535 (Greenhouse Gas Reduction Fund), and priorities in the Draft Investment Plan while also meeting California's clean-transportation goals and sustainable freight strategies.

We recognize that CARB and the Department of Finance face considerable challenges in determining how investment funds should be deployed equitably and efficiently. Thank you for considering our comment and including a vessel speed reduction (which is missing from the Draft Investment Plan) in your Final Investment Plan as a priority for funding and request Cap-and-Trade money be directed to the Vessel Speed Reduction Incentive program.

Sincerely,

William J. Douros
West Coast Regional Director
Office of National Marine Sanctuaries

Subject: Comment - Draft Investment Plan

Comment:

Dear ARB Staff,

The Trust For Public Land was pleased to see a range of natural resource investments reflected in the 'Draft Investment Plan' uncluding 'urban forests' and 'urban greening'. We would like to emphasize we think it's important that local parks are included in the term 'urban greening' and that when we discuss any Sustainable Community Strategy', that urban forestry, and local parks are included in that calculus.

The built environment plays a powerful role in human behavior and by extension our transportation choices. Local parks provide walking trails and bike paths that connect people to their destinations and reduce vehicle miles traveled. Urban green spaces also reduce our energy consumption by cooling our cities and re-charging our ground water. Obviously trees, shrubs and grasses, sequester carbon.

Parks demonstrateGHG benefits by providing transportation choices like bike paths and walking trails, water resource benefits from permeable surfaces and bioswales and are helping to reduce the temperature of the city neighborhood by replacing blacktop and concrete with lawns, trees and gardens. Parks also demonstrate impressive cobenefits. The Center for Disease Control says if you put a park within walking distance of people, people use it for exercise. Parks can often also feature outdoor fitness machines, a multi-purpose basketball court and a playground. In addition many parks now are designed with space for the community to garden, families to picnic and barbeque.

Thank you again for recognizing the importance of investing in natural resources.

Sincerely,
Rico Mastrodonato
Senior Government Relations Manager
