Subject: Heavy Duty Omnibus Regulation

Comment:

Oxides of nitrogen, or NO_x, is a precursor to smog which can cause or exacerbate numerous respiratory and other health ailments and is also associated with premature death. All combustion engines produce NO_x and although technology has advanced markedly through the decades, California must still do more to reduce NO_x emissions from mobile sources, especially trucks.

As someone born and raised in the Central Valley, an area that has been identified as having the worst air quality in the nation, we must do all that we can to reduce air pollution. No more children should be born with asthma and dependent on their inhaler just to get by.

First Name: Bill

Last Name: Thunberg

Email Address: billthunberg@gmail.com

Affiliation: International Hydrail Conferences

Subject: Heavy-Duty Engine and Vehicle Omnibus Regulation

Comment:

There is always the temptation to take half measures even when the best solution is up for consideration if the best solution is even a little bit out of the box. Hydrogen Fuel Cells are the best option for heavy duty vehicles given the range advantages existing fueling site locations, sustainability and synergies between applications - creation of smart grids, potential for grid stability uses and resilience in the form of backup during natural disasters. As a leader in environmental consciousness, California has the opportunity to create a clean industry and the workforce of the future, make significant improvements in air quality and noise reduction by incentivizing hydrogen technology. Existing vehicles can be retro-fitted with fuel cell prime movers extending or meeting the life cycle needs of capital investments already made and deploying new capital investment that meets or exceeds current life cycle needs.

Subject: Pre 1960 Heavy-Duty Vehicle

Comment:

I have a pre 1960 Commercial vehicle and pre 1960 Engine, both of these are fall out of the data for reporting and consideration of engine manufacture year and truck manufacture year. I propose an exemption for a heavy duty truck that falls within these standards, especially for a small business of owner operator type that have a small number of trucks, and is trying to start a grass roots business. I could use a car that's pre 1975 and does not have to be smogged to run a business, or a diesel pick-up truck that is pre 1997 and doesn't have to be smogged. A Semi-truck that is pre 1960, should be allowed the same exemption.

Subject: Phase in for low load cycle and clean idle regulations

Comment:

Thank for the opportunity to comment on the Proposed Amendments to the Heavy Duty Engine and Vehicle Omnibus Regulation and Associated Amendments.

Some of the proposed amendments enable a phase in for low load cycle and clean idle regulations.

I wish to call attention to a recently published technical paper from Achates Power showing that testing and analysis of a 10.6L heavy duty diesel opposed-piston engine indicates the engine is able to comply with the 2027 low load cycle and clean idle regulations with a substantial margin (as well as the FTP and RMC regulations). I've attached the technical note. It can also be found here:
