First Name: Clayton
Last Name: Heard
Email Address: claytonpheard@gmail.com
Affiliation:

Subject: Zero Emission Trucks
Comment:

Include zero-emission requirements for all truck classes starting in 2024, not 2027.

Increase the percentage of sales requirements so at least 15% (instead of 3%) of trucks on the road in 2030 are zero-emission, this will speed up deployment and create a strong trajectory.

Set a goal for all trucks to be zero-emission by 2040.

Accelerate the development and implementation of the fleet rule so it is adopted by July 1, 2021 and effective January 1, 2024.

Subject: The proposed Advanced Clean Trucks (ACT) Regulation

Comment:

I am moved to comment on the proposed Advanced Clean Trucks regulation by an Orange County Register Susan Shelley op-ed 11/24/19 that implies that the proposed ACT regulation would impose expensive requirements on diesel engine performance and would impact small business badly. Reading the digest of proposed action I see that none of this the case. On the contrary, ACT seems to me to be well thought-out, and I strongly support the proposed action.

Subject: Electric trucks
Comment:

Requiring all trucks to be electric is not sustainable. These rules must be voted on by taxpayers and not decreed by an unelected board. These rules, not laws, will put businesses out of business and raise the cost of living in an already expensive state. Based on recent experience electricity is an unreliable source of energy. Just ask PG&E customers. These rules should not be implemented at all.

Comment:

Why are you proposing to kill California. We are already over taxed. Almost everything in California moves by truck. Only the very rich will be able to afford anything, as your proposal will increase the price of everything exponentially. Also what happens when the electrical power is shutoff as has happened many times this year, how will the trucks be charged? Also, there is no man-made climate change. Worry about pollution, including that created in the production of all of this electricity. Will these rules apply to illegal aliens as they seem to be above the law? A very mad legal resident of California.

Subject: Advanced Clean Trucks rule

Comment:

CARB is unelected and accountable to no one - and the rules coming from CARB are harmful. This is the same agency that mandates that my tire pressure be checked each time my car is serviced - never mind that I travel 30 miles to the service center and the tires are HOT so I have to re-do the pressure after every visit. With the truck rule - making so many trucks illegal, and forcing manufacturers and even other companies NOT in CA to get to "zero-emissions" is completely upending small businesses while achieving nothing. Until China and India do their part, there is no way CARB's various rules will have any more than an infinitesimal effect - but it will affect and ruin so many businesses. CA already suffers high gas prices because of the summer and winter gas formulations - we can't get gas from other states. The truck rule will increase the cost of trucking, which therefore raises prices on goods. In addition, the diesel particulate filters have caused fires and mechanical malfunctions - this is just a case of a small group's wishes being forced on the rest of us. You're OK with housing construction close to freeways - but you claim diesel trucks are a threat to public health. CA has the highest poverty rate in the nation and this rule will make it worse - with so little to gain - VOTE IT DOWN!

Comment:

YOU HAVE DONE ENOUGH HARM TO THE TRUCK DRIVERS IN CA. THEY ARE BARELY MAKING IT AS IT IS AND NOW YOU DUMP MORE ON THEM. THE SMALL BUSINESS DOESN'T STAND A CHANCE. IF YOU PAID OUR BILLS AND PUT FOOD ON MY TABLE AND CLOTHES ON MY KIDS BACK THEN YOU COULD GET INVOLVED BUT YOU DON'T. STAY OUT OF OUR POCKETS..THE OLDER TRUCKS HAVE TO BE IN GOOD RUNNING CONDITION FOR US TO CONTINUE MAKING A LIVING. IF YOU ARE ALLOWED TO DO THIS WE WOULD HAVE TO BUY A NEW TRUCK EVERY COUPLE OF YEARS AND NEVER BE OUT OF DEBT. JUST ANOTHER WAY TO GET RID OF SMALL BUSINESSES THAT ARE THE BACKBONE OF CA. THINK ABOUT IT YOU ARE GOING TO SHUT DOWN TRUCKERS EVERY DAY.

Subject: Growing Public Awareness Makes Sense for a Results-Oriented Timeline

Comment:

The zero-emissions technology for vehicles has been around for a good number of years and its use is ready to be expanded from passenger vehicles to delivery vehicles. The public support is there to improve our air quality and support companies that DO BUSINESS BETTER. I believe a plan to take 5% of the polluting trucks and vans off the road, starting with older/more polluting ones, would be economically feasible. After 10 years half of the delivery vehicles would be emissions-free, if registrations for new delivery vehicles require that the new vehicles be emission-free. The public would see what a difference the new policy in CA makes in the span of several years! Please consider a results-oriented approach and timeline to make a substantial improvement to CA's air quality.

Subject: Need STRONG Advanced Clean Trucks Rule
Comment:

There are many reasons why we need to get diesel trucks off
California roads.

1. Reduce climate-changing carbon emissions
2. Improve social justice -- the well-established increase in human morbidity due to diesel emissions and particulates disproportionately impacts lower-income people who cannot find housing except near heavily-traveled roads.
3. Stimulate economic growth by developing all the new technology and infrastructure needed for an all-electric economy

I urge the Board to be bold -- you have the opportunity to make a significant difference in the lives of all Californians !!

Thank you
Adrian Byram

Subject: Proposed Advanced Clean Trucks Rule
Comment:

I oppose the rule and every other misguided CARB electric quota. Electric cars are not a public benefit, they are neutral as they don't pollute. What needs to be done is for polluting trucks/cars to be taxed and or regulated to reduce emissions including by getting older noncompliant vehicles off the road. Inflexible mandates are costly, ignore other possible solutions such as natural gas trucks, and do not solve the problem they purport to. Thanks,
Joshua Blumenkopf

Subject: Strengthen the Clean Trucks Rule!
Comment:

Our demands to improve the standard are simple, reasonable and achievable:

Ensure by 2030 no less than 15 percent of medium and heavy-duty trucks on the road are zero-emission;
Include Class 2b pickup trucks in the mandates beginning in 2024;
Outline longer-term objectives for achieving 100 percent zero-emission trucks in various categories, and explain how this phase of the rule is consistent with those objectives and attaining federal and state air quality and greenhouse gas objectives; and
Commit to adopt corresponding fleet purchase requirements in 2021.

Subject: Public Comment on act2019
Comment:

I want to express my opposition to this act as currently proposed. Its' impact on the health (financial and other) aspects of all of California. We are very dependent on the economic benefits that our current transportation methods provide. To make such severe changes without clear and concise understanding of the collateral damage that this act may inflict is inexcusable. You really need to re-examine what your professed goal with this type of legislative action is.

Additionally, you should be ashamed of yourselves in the funds spent on your new "palace" which surely could have provided far more benefit to the people of California if used in a more respectful manner. It appears you, without what I consider proper oversight, have simply ignored what most of us believe you should be doing. That is, DOING THE PEOPLES WORK!

Please take these comments, again as my STRONG opposition to act 2019 and I hope you will come to your senses and rethink this posturing.

Sincerely,
Patrick Murphy, California Consumer & Citizen

Subject: clean trucks

Comment:

dear clerk

2 years ago someone i know had to run out of her house, with her guests and 85 y o husband, during the fires around santa rosa. fortunately, it was their vacation home.

last year my wife's friends in paradise fled in a similar manner. as they drove through the inferno, they watched people burn to death.

this year my son's ex-girlfriend's family got away from the fires near healdsburg, but all the houses and barns on their ranch were razed (except one).

would you say the proposed action regarding clean trucks is too little too late...or better late than never?

thank you very much, david page

Subject: Clean (Electric) Trucks ASAP
Comment:

Trucks that are not electric or hydrogen fuel cell are causing cancer by their large emissions of criteria pollutants. This carnage needs to stop, ASAP. A Road Use Charge (RUC) system is needed ASAP. We drivers need to cover all the costs of driving, including the environmental costs and the health costs. Please push hard for legislation to get a good RUC system specified, designed, and installed. SB 1077 proved feasibility.

We also need trucks to emit greenhouse gas (GHG) emissions at a level that will achieve climate-stabilizing targets; which are, for the developed countries of the world, 80% below 1990 levels by 2030. "2030" is not a typo. Don't blame me. The climate scientists are just doing their job and that is what they are saying, as near as I can tell. Physics is not driven by our state mandates. Physics has its own laws and they are the laws that matter. S-3-05 was the best we knew back in 2005. We know better now.

Please get to work for the sake of life on the planet, including my grandchildren and all grandchildren.

I received a notice in April 2019 stating that my 2002 Ford F450 would not be allowed on the road after 1-1-2019. Why wasn't I notified earlier? This was the first notice I have ever received. I had just had \$5000.00 of repairs done to the truck in February. So, CARB or better yet says SCREW the SMALL GUY> I cannot afford purchasing another truck. No financial assistance or grants available either. The local Cement Co Southwest Portland was in the front page in our newspaper with a story of receiving a 350k grant. Again, screw the small guy but help with grant money the multi million dollar companies

Subject: my comment on "advanced clean truck" rule
Comment:

To Whom it May Concern:

I've lived in California since 1971. At that time, this beautiful state was the envy of the whole country. Since then I have witnessed one destructive government policy after another bring this "golden state" closer and closer to ruin. We are no longer the envy of the country, but the laughingstock of it. Our leaders are truly in La La land if they think other states admire us and will follow our lead over the cliff like lemmings. We are in the process of committing suicide.

This "Advanced Clean Trucks" rule is yet another nail in our self-made coffin. Is there no one in our government who understands economics? Or understands that no matter how close California gets to "zero emissions", we share this planet with other countries, namely China and India, who have absolutely no interest at all in harming their economy in order to achieve lower emissions. The minuscule "good" we might do is massively overwhelmed by them.

I understand this proposed rule is currently in a 45 day public comment period.

This is my comment: please throw this damaging proposal into the trashcan where it belongs.

Patricia Michaud

Subject: Concern v. proposed rule

Comment:

News analysis that the proposed rule will be an economic problem for the trucking industry concerns me, as does the news report that required diesel particulate filters have caused fires and other serious problems.

i think the benefits of the rule should be examined carefully in terms of effects on the industry and other mitigation measures that might be more suitable. Industry comments on this should be given careful and supportive attention.

Thank you.

Subject: Require More Zero Emission Trucks

Comment:

Rather than set a conservative goal of only 4% zero emission trucks over the next 10 years, the CARB should set a much more aggressive target, at least 15%. While a more aggressive target will still leave us with too many dirty trucks on the road, it will at least make a sizable dent in the number. Given the rate at which the climate is destabilizing, we can't afford to not take advantage of the growing capabilities of electric trucks.

Subject: Notice of Public Hearing to Consider a Proposed Advanced Clean Trucks Regulation
Comment:

I agree with the main points in the Mercury News Opinion Piece by Leslie Aguayo: " Why California should toughen standards for electric trucks"

Please see the article link below.

<https://www.mercurynews.com/?returnUrl=https://www.mercurynews.com/2019/12/04/opinion-why-california-should-toughen-standards-for-electric-trucks/?clearUserState=true>

SOURCE: MERCURY NEWS ARTICLE, BY LESLIE AGUAYO, DEC. 4, 2019.
Leslie is the environmental equity program manager for the Greenlining Institute.

- We need strong CARB leadership for CA, the US, and the world;
- We can tackle air pollution and create jobs for the clean-air industry;
- With appropriate policies, we have the parts to set a competitive, health protective electric truck standard;
- With training and support, the growing electric vehicle industry can offer family-supporting opportunity to workers from underserved communities.

Thanks for your consideration,
Laura Robinson

Subject: California needs a much stronger Advanced Clean Trucks Rule

Comment:

To the Chairperson Nichols and members of the California Air Resources Board;

As a California resident and supporter of science-based policy, I urge the California Air Resources Board (CARB) to adopt a much stronger Advanced Clean Trucks (ACT) Rule. The current proposal falls short of what's needed to clean up California's air and reach our climate emissions reduction goals.

We need strong action now to curb the climate crisis and the pollution burdens from communities in California. As you know, California still has the worst air quality in the nation, and trucks contribute disproportionately to these emissions. Setting a standard that not only results in four percent zero-emission trucks on the road by 2030 is not good enough.

I support CARB taking stronger and faster measures through the Advanced Clean Trucks Rule. I urge CARB to:

- mandate that at least 15% of trucks on the road are electric by 2030;
- commit to higher sales targets for zero-emission trucks;
- begin sales targets for all types of trucks in 2024; and
- set aggressive goals for zero-emission truck adoption beyond 2030.

Please take stronger and faster measures through the Advanced Clean Trucks Rule in order to protect Californians from diesel pollution, improve air quality, and grow the state's clean energy economy. Please help ensure that the state adopts the strongest Advanced Clean Trucks Rule possible.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish
San Rafael, CA

Subject: Comments urging stronger advanced clean trucks goal

Comment:

In order to comply with the United Nations IPCC findings, California must reduce greenhouse gas emissions by 50% by 2030. In the case of cars, if California achieves a 50 mpg average along with five million electric vehicles, the state should meet this goal.

However, in the case of trucks, there is no such dramatic improvement in mpg envisioned. This means that most of the emissions reductions will have to come from electrification. If an electric truck emits 20% of the equivalent emissions of a diesel truck, then 25% of all trucks will need to be electric by 2030.

I.e. if an average trucks gets 5 miles per gallon and an electric truck gets the equivalent of 25 mpg, and there are 5 million trucks in California, then to achieve an average of 10 mpg requires 1.25 million trucks to be electric ($1.25 \text{ million trucks} \times 25 \text{ mpg} + 3.75 \text{ million trucks} \times 5 \text{ mpg}$) / 5 million trucks = 10 mpg.

In other words for California to do its part to meet the IPCC requirement to have a 2/3 chance of avoiding a catastrophic 1.5 C increase in global temperatures, California will need to ensure that 25% of its trucks are electric by 2030.

I urge you to adopt rules that push for this to happen.

Sincerely,
Jack Lucero Fleck
350 Bay Area

PS I strongly support the comments submitted by Earth Justice, Union of Concerned Scientists, Sierra Club and others on October 15, 2019. The comments above are intended to bolster the case for stronger clean truck regulations.

Comment:

We need a much stronger regulation than the one proposed if we ever hope to reach our California clean energy goals. Instead of adding enough electric trucks to reach 5% of the fleet, we should be adding enough electric trucks to reach 15% of the fleet.

This is an Environmental Justice issue in that pollution from big rigs impacts low income communities and communities of color much more than others.

It's time to do things differently and think big if we are going to impact climate change

Subject: Clean Trucks Regulation

Comment:

The Clean Truck Regulation as proposed does not go far enough. It will not help us reach the clean energy goals for California. Instead of 5% of the fleet being electric trucks, the number should be at least 15%.

This is also an Environmental Justice issue since economically disadvantaged communities receive more truck related pollution than privileged communities.

Please give this due consideration.

Subject: Pass ACT Rule

Comment:

Hello Board,

As a resident of the Inland Empire which has some of the worst air quality in the nation I demand that you pass the ACT Rule. Our communities can no longer afford to withstand the air pollution and danger these trucks produce through the greenhouse gases they emit. The pollution brought by these trucks has made our Inland Empire community substantially more susceptible to respiratory diseases, heart conditions and over all a shorter life expectancy. We deserve clean air. Do what is right for the health of Californians and our planet.

To whom it may concern,

It is our duty as inhabitants of this Earth to do everything in our power to protect it. No longer can we ignore the effects of human fossil fuel use on the environment.

We must pass the Advance Clean Trucks rule and do our part in combating the human driven effects of climate change.

Be on the right side of history on this issue. Do your part so that future generations may prosper.

Sincerely,

Erik Casillas

Subject: Approving ACT regulations

Comment:

Dear Members of the Board:

We should adopt the Advanced Clean Truck regulation to meet the goals set by the state, but more importantly to offer relief to the disadvantaged communities that are disproportionately affected by air pollution.

For example, despite a 31% decrease in black carbon levels county-wide in San Diego for the first five weeks of the COVID-19 shut down, San Diego border and portside communities such as Barrio Logan and San Ysidro did not see this same improvement. By the third week, black carbon levels were back to normal mainly on account of the heavy freight activity that is typically congregated in these communities; 2,500 heavy duty trucks cross everyday on the Otay Mesa Port of Entry.

By adopting this Advanced Clean Truck regulation, we will be able to reduce levels of pollution in California and significantly influence the health of disadvantaged communities that are always disproportionately impacted.

Comment 25 for Proposed Advanced Clean Trucks (ACT) Regulation (act2019). (At Hearing)

First Name: Jane

Last Name: Franch

Email Address: jfranch@numitea.com

Affiliation: Numi Organic Tea

Subject: ACT regulation

Comment:

On behalf of Numi Organic Tea, I urge you to adopt the proposed Advanced Clean Truck rule. As a corporate citizen, we are supportive of collaborative measures that move to decarbonize the transportation sector, as they strengthen our ability to operate sustainably over the long term. And as a California headquartered company, we see increased and expeditious electrification of medium- and heavy-duty vehicles not only as an economic opportunity - we see it as necessary to meet our financial and sustainability goals as well as being a climate and public health imperative. By accelerating the decarbonization of the medium- and heavy-duty transportation sector, this rule will pave the way for Numi, and those in our value chain, to cost effectively reduce air pollution and climate emissions.

Furthermore, we acknowledge that the burden of poor air quality disproportionately falls on disadvantaged communities along transit corridors, such as I-880. It is fundamentally unjust to not take action to reverse this troubling and discriminatory pattern with all available tools, including and especially accelerating the just transition to zero emissions fleets.

Comment 26 for Proposed Advanced Clean Trucks (ACT) Regulation (act2019). (At Hearing)

First Name: Raj
Last Name: Dhillon
Email Address: RDhillon@breathela.org
Affiliation: BREATHE California of Los Angeles County

Subject: Strengthen the Proposed Advanced Clean Trucks Regulation
Comment:

Good morning Board,

My name is Raj Dhillon, and I am commenting on behalf of BREATHE California of Los Angeles County (BREATHE LA), an environmental health nonprofit agency. I am writing to urge CARB to strengthen the Advanced Clean Trucks Regulation.

We know diesel pollution is extremely harmful, and CARB must take the necessary steps to appropriately tackle this issue. By getting more clean trucks on the road, we can make a meaningful impact in reducing the harmful diesel pollution.

In order to get cleaner trucks on the road, CARB must have a comprehensive approach that looks at both short-term and long-term strategies. Zero-emissions trucks should be the goal as soon as possible as a part of the long-term strategy. In the short-term, we believe an on-road Low-NOx medium- or heavy-duty vehicle powered by an engine that is certified to the CARB's Optional Low NOx standard set at 0.02g/bhp-hr should be considered in the near-zero definition.

Thank you for your consideration.

Best,

Raj

Subject: Proposed Advanced Clean Trucks Regulation

Comment:

As a voter long concerned about the already apparent deterioration of our air and its consequences for our collective health due to poorly controlled use of fossil fuels, I strongly urge CARB to adopt the proposed Advanced Clean Trucks Regulation. Having followed efforts on this issue by legislators like Senator Connie Leyva and others and by environmentalist groups like 350 Bay Area and the Sierra Club, I am appalled that the US and CA are so lagging behind China and some European countries in stemming the pollution from diesel driven trucks which contribute disproportionately to global warming and Climate Change. Please ACT to protect all of us, especially the low income, people of color who will continue to suffer most without the Advanced Clean Trucks Regulation! Thank you.

Comment 29 for Proposed Advanced Clean Trucks (ACT) Regulation (act2019). (At Hearing)

First Name: Jessica

Last Name: Geiger

Email Address: jessicareneegeiger@gmail.com

Affiliation:

Subject: We need ACT now!

Comment:

My name is Jessica Geiger, I reside in the city of Montclair and have been a life-long Southern California resident. I also live just a few yards from the 10 freeway, a freeway that sees thousands of trucks every single day. Every single day, my neighbors and I experience the costs of air pollution.

Communities who are burdened with the worst air quality in the United States are also the same communities that are disproportionately affected by Covid-19, a virus that mainly attacks the lungs. There is an obvious connection between this virus and air quality. There is absolutely no justification for weakening or putting off air pollution regulations in the name of economic recovery. The industries pushing back on this rule today, who are using the pandemic to their advantage, are the same industries that have been pushing back on environmental regulations for decades.

ACT is crucial for our communities to begin to breathe without fear.

Thank you,
Jessica

Subject: Truck Emmissions

Comment:

I know you are voting on making half of our truck fleet zero-emission by 2035, and I am BEGGING you to vote yes. I am watching with despair as our state's air quality--especially Los Angeles's, goes down, down, down. So much so that as recently as yesterday my friend and I discussed how we "have to get our kids out of here." We are privileged to be able to consider this. Many are not. Please--if you give in to the oil and gas industry on this you only force more of us to leave the state, killing industry anyway. WE CAN'T SHOP ON A DEAD PLANET--or in an unbreathable state. Please vote yes.

First Name: Misha
Last Name: Askren, MD
Email Address: misha.askren@gmail.com
Affiliation: Sierra Club

Subject: Advanced Clean Truck Rule
Comment:

Good Morning,

I am submitting my comment in support of the ACT before the Board today.

I am a Family Practitioner for over 35 years. My practice started out on the West side, but over the years, I moved to locations that were much more east and south. These are the areas closer to the port, impacted by freeways and truck traffic. Added to that is the additional impact of refineries, oil fields and LAX.

As I moved east and practice the last 16 years in Inglewood, I noticed much more problems with asthma, chronic cough along with other health problems. Families had to spend more money on inhalers which were essential. There were more office visits for health problems, Emergency Room visits, hospital stays and even deaths. Clean Vehicles would decrease the burden on these patients and improve their health, allowing them the benefits of improved health, attend school and work reliably and face a healthy future.

Lest the news reports of "cleaner" air during the pandemic encourage delay in implementing this Rule, air quality during the stay at home period still reached unhealthy for all groups at places in the LA Basin, the Inland Empire. That pollution then extends to the desert and Big Bear Lake, so that this issue affects all of Southern California.

Pass the ACT rule to make progress and improve our Zero Emissions vehicles for health in the future.

Subject: Support ACT rule

Comment:

My Name is Elease Stemp and I am a L.A. resident, mom and a member of the Northeast LA Climate Collective, who support the Advanced Clean Truck rule. I support this rule because I want to breathe clean air. I want my child and family and friends and neighbors to breathe clean air, locally and nationally. Regardless of the reduced traffic during the shelter-at-home order, the air quality in southern California has not significantly improved because the trucks and delivery vans between our ports and warehouses in the Inland Empire continue to traverse our freeways and communities, which causes most of the air pollution in Southern California in the transportation sector, that disproportionately affect low income and communities of color, many of which are located along these travel corridors. Simply, trucking electrification has to happen so that our air gets cleaner and greenhouse gasses are reduced in our atmosphere, as this is something we have the tech to change right now. I urge the CARB board to vote YES for the Advanced Clean Truck rule. Thank you for working towards cleaner air.

Comment:

As a mother of 4, it is absolutely vital that we clean our air and environment here in Los Angeles. The health of our children hangs in the balance. If this regulation is not passed it will mean that commerce has won over safety/health and morality. It will mean that you have chosen business over people. Money over human life. Do the right thing. Yes, there will be costs to this. But financial costs are nothing compared to the loss of life that will occur if we don't start taking care. Thanks for your time.

Subject: Vote YES on ACT Rule
Comment:

Good morning,

My name is Yvonne Martinez Watson. I'm the Chair of the Environmental Justice Committee for the Sierra Club Angeles Chapter.

We urge you to PASS the Advanced Clean Truck Rule.

I'm a resident of Montebello, a SB535 Disadvantaged Community burdened by high levels of environmental pollution including bad air quality from fossil fuel emissions.

As you've heard, communities like mine are being hit hard by COVID-19 and we are at a much greater risk for poor recovery outcomes and substantial organ damage due to our prior exposure to air pollution.

I have severe asthma. Last year I was hospitalized twice with respiratory failure. I know what it's like to be intubated and put on mechanical ventilation. It's a traumatic experience and I wish nobody else would ever have to experience it.

Lives are at risk NOW.
We need the Advanced Clean Truck Rule NOW.
Please ACT NOW.

Thank you.

Subject: YES to Electric Trucks

Comment:

Jeff Bezos got America hooked on easy access to delivered packages via Diesel trucks.

Then, The Pandemic has made this convenience a necessity and contributed to ever worsening air quality in Southern California due to a steady, non stop stream from the LOS ANGELES ports to fulfillment centers located in the Inland Empire.

Polluting and choking our air with deadly particulate matter and chemical toxins!

It is imperative we immediately enact this Clean Truck Rule!

Comment:

This absolutely makes sense. We need to do everything we can to create zero emissions. Developing a fleet of zero-emissions trucks is a no-brainer. I have an electric vehicle and my kids are so confused when "stinky", polluting trucks and cars go by. They are spoiled but it shouldn't be like this. We should all have zero-emission vehicles and solar-panels on our houses. This investment now will be an investment in our future.

Comment:

I support the ACT Rule because, as someone with family members who have asthma, I know that Southern California has the worst air quality in the nation and the causes for this phenomenon are largely related to emissions from trucks and truck transport. Furthermore, I urge CARB to support efforts that advance adoption of zero emission truck technologies to protect our health and environment, both today and well into the future.

Subject: In support of Clean Air

Comment:

I support the Act Rule to regulate clean trucks because of the overwhelmingly negative effect these trucks have on the air quality in Southern California. We have the the worst air quality in the nation so much so that there are days when I and my family can't go outside due to air quality warnings. Our region is beset by asthma because of the air quality. In addition to helping our air quality, regulating these trucks and their emissions would help combat climate change. Climate change is catastrophic for human and animal populations.

Subject: 20-6-3

Comment:

Good afternoon,

My name is Luis Alejandro Montes, executive director and founder of Inside Sustainability Socal, a community-based organization with over 50 members in San Diego, Imperial, Riverside, and San Bernardino Counties, dedicated to growing and implementing racially just, ground-level solutions to regional food insecurity, air pollution, climate change, and affordable housing.

We strongly support the Proposed Amendments to the Advanced Clean Trucking Rule, which sends a strong market signal to suppliers and manufacturers across the State-- judging by prior testimony, across the nation-- that we MUST produce vehicles that prioritize the health of communities like Port Communities from Long Beach to the Inland empire, like Barrio Logan and the border communities that suffer from the Diesel and NOx pollution that causes respiratory illness and cancers to have an incidence rate much higher than communities not on the front lines of the logistics industry.

I grew up in San Diego County, but I lived in the Inland Empire as well, where a lot of my friends and family still lives to this day, feeling some of the harshest impacts of Diesel and NOx pollution in the nation. It is disingenuous, disrespectful, and frankly disgusting to hear Trucking Industry PR officials try to tack "renewable" onto Diesel, and Natural Gas.

These are our children, our nieces and nephews, friends and families who are chewed up by the cogs of the supply chain. As we transition to a 100 renewable energy future, we must center those voices in the just transition away from fossil fuels.

Subject: electrify your truck fleet asap

Comment:

My husband and I support electrifying all CARB vehicles ASAP and installation of numerous recharging stations powered by solar panels. Panels could be installed at rest areas, especially where it gets very hot, on shade structures over parking lots. Other suitable areas on existing roofs or ground that could use a rest from inappropriate, irrigation enabled, artificial chemical based factory farming or ranching would be another public benefit.

The charging stations should be free to all vehicles and local residents should be encouraged to provide concessions at the charging stations to promote local economies. Priority should be given to areas polluted by historic fossil fuel and mining operations.

Local indigenous people should be consulted on appropriate locations for any facilities where ever possible.

Comment:

Hello, my name is Veronica Jauriqui. I grew up in Los Angeles County near the 710 FWY and my family is very acquainted with the poor air quality caused by trucks traveling to and from the Port of Los Angeles. Many members of my family suffer from asthma and other breathing problems that have been attributed to pollution. You have an opportunity to make a real difference to communities (mostly of color) that live along the corridor by passing the Advanced Clean Trucks Regulation. I encourage you to do so. I sincerely hope you do.

This is a time when we must acknowledge the ways that policy and commerce have racist implications. Poorer communities along major freeways bear the brunt of smog. Do the right thing and address the environmental health hazards that plague our neighborhoods.

Thank you for your consideration.

Thank you so much for considering having our trucks go electric. Our Covid-19 quarantine has many negatives, but it has given us a chance to see how much our environment could improve if we took major steps to make that happen. This is a bold step we can take now to make a better, greener future for our kids.

Comment:

Dear CARB Members, I am writing to support the proposed Advanced Clean Trucks Regulation. Electrifying our truck fleet as soon as possible is important for many reasons, air pollution and impacts to climate are the top two.

My family lives near two freeways, in an urban area within the LA Basin. As long as our truck and vehicles continue to pollute the air, even with the major strides our city and local homeowners are taking to green our electric grid, we will still be grappling with some of the worst air quality in this country that contributes to climate change and host of respiratory issues. We reside in the LA basin - in Glendale, CA, next to the 5 and 134 freeways. This area holds bad air, which gets worse as temps heat up, and is at the top of the list re: VOCs, NO2 and particulate matter. IF both long haul truckers and local delivery trucks (along with our city fleet) make this transition to clean energy, we will see a profound change here, for the better, to our air quality.

I appreciate the many bridges (incentives, extended timeline) being made available to the trucking companies to make this conversion financially possible for them. I think offering needed support to their critical industry is a big part of making this plan successful. Hopefully charging infrastructure for those big hauling companies can be included in your discussion.

Thank you and I hope you will pass this historic regulation so that other states in our country can once again follow California's lead.

Best wishes,
Monica Campagna

Hello,

I am a founding member of NELA Climate Collective. We began as a group of moms desperate to do as much as we can to combat the Climate Crisis for our future and our kids' future. We all know that Southern California is one of the most polluted regions in the world and we all know that the manifestations of the Climate Crisis are going to continue to worsen by the year. One of the best ways that we can create real change and avoid future disasters is to put electric trucks and transport vehicles on the road. Please pass this proposal!
Thank you,
Katie Covell

Subject: We need clean trucks for clean air

Comment:

We need our trucks to be electric as soon as possible. I chose to raise my family in California because of our amazing natural resources, but the poor air quality means that my kids often have to stay indoors because it's too risky. My seven-year-old has been hospitalized with respiratory issues four times in the past two years. His doctors at CHLA say this is increasingly common and they keep seeing new patients who are having breathing issues for the first time, because of our poor air quality. Trucks are the #1 source of air pollution in our state. Please make them clean and green so we can all breathe more easily.

Comment:

I strongly support the rule of ALL trucks to become zero emission as soon as possible! We need this for better air quality as the pollution has never been higher than it had been recently pre-covid. All human beings should have and be able to breathe clean air, especially in lower income neighborhoods. Where you live shouldn't determine the quality of the air you are breathing.

Respectfully submitted,

Subject: Support For Clean Trucks

Comment:

I am writing to express my strong support for clean trucks. By mandating a certain portion of trucks to be electric, consumer demand will increase organically. Personally I am waiting for electric trucks to be available before purchasing a new vehicle, so I believe that increasing availability will result in an economic gain. I would suggest starting earlier with electric truck sales, possibly 2022, and having a provisional continued increase to 100% at the end of the project, depending on conditions.

Comment 5 for Proposed Advanced Clean Trucks (ACT) Regulation (act2019) - 15-1.

First Name: Allen

Last Name: Genetti

Email Address: ag@caltank.com

Affiliation: CPA, CFO Transportation Company

Subject: Revised Electric Truck Standards

Comment:

The stricter version of the electric truck standard could put a lot of small transportation companies out of business without state grants to help purchase electric trucks. I would hope the Board consults with the truck manufactures and the companies that need to set up the electric infrastructure to handle the transition to electric trucks and see what kind of timeline they need to be ready to handle this major change in industry standards.

Electric trucks will not work for interstate movements but I believe hydrogen/electric trucks will. There are not enough electric truck manufactures to meet the new percentages you propose by 2030.

A lot of transportation companies went out of business when the last emission standards were put in place due to the major repairs that had to be performed on trucks because the manufactures engineering departments did not have enough time to adapt (e.g., turbocharges having to be replaced due to excessive heat from the emissions components at 350,000 miles for \$7,500 that usually last 900,000 miles, EGR valves, particular filters and on and on all VERY expensive emission components).

I would hope the board works with manufactures and discusses the challenges they face before the board puts impractical policies in place. Unrealistic rule making never benefits any industry especially when it has become evident how important trucks are when a pandemic occurs.

I urge you to rethink your timelines and consider the realistic goals you wish to achieve taking in to account all the parties involved. I want clean air just as much as you do and I truly believe we can get to zero emission trucks in a workable timely manner.

Trucking keeps America going and without it the shelves in the stores could empty faster and longer when the next pandemic hits.

Thank you for your consideration.

Allen L. Genetti, CPA, CFO

First Name: Claire

Last Name: Bleymaier

Email Address: cbley12@gmail.com

Affiliation:

Subject: Adopt a Strong Advanced Clean Trucks Rule

Comment:

To: Chair Mary D. Nichols and Board Members, CARB

I am a California resident, nurse, and public health professional with a strong interest in the health and environment. I support CARB taking measures to pass the strongest possible Advanced Clean Trucks (ACT) rule.

This rule would be the first of its kind in the nation promoting the sale of electric trucks, putting our state on a path to reducing air pollution and climate impacts from diesel trucks for years to come. California can and should set a strong precedent for others to follow.

In December 2019, thousands of people submitted public comments calling for a stronger ACT rule. And advocates and community members, including from regions heaviest hit by truck pollution, showed up in numbers at the Dec. CARB board meeting to provide testimony. We appreciate CARB's response that emphasized prioritizing our communities' public health and combatting climate change.

We believe the new proposal, roughly doubling the sales percentages from the last proposal, is a step in the right direction.

In the midst of the COVID-19 crisis, we are aware of numerous industries pressuring CARB to roll back policies such as the ACT rule, and we urge you to reject these attacks. This is exactly the wrong move at a time when protecting public health and creating new economic opportunities is critical.

This rule will have long term benefits for our state, and would not be implemented until several years from now. Furthermore, studies have long shown that diesel pollution is linked to a number of respiratory and cardiovascular conditions. New research suggests that long term exposure to air pollution, such as from diesel emissions, is associated with higher risk of death from COVID-19.

A strong standard for manufacturers is critical for California to act on climate and meet air quality standards, especially in communities disproportionately impacted by air pollution. Considering the health, economic, and environmental benefits from this rules, I URGE YOU TO ADOPT THE STRONGEST ACT RULE POSSIBLE.

Thank you,

Claire Bleymaier, RN, MPH
San Jose, CA 95120

Comment:

You should start requiring more and more electric trucks the latest at the beginning of 2021. This is important to the United States, because you are the leader in environmental standards. All new trucks should be electric by the year 2030. You should also ban all non electric trucks from entering your states by 2040. This will force the rest of the country to transition to electric trucks extremely quickly.

Hope you put this rule into place and quickly. I also hope that you strengthen the rule even more to ban gas and diesel trucks earlier.

Love from your communities.

Subject: We Need Electric Trucks to Clean Up Our Air

Comment:

My name is Kyle Berquist, and I am a resident of Berkeley. I want the Bay Area to have healthy and clean air for everyone, not just those in the right ZIP codes.

Here in California, its more important than ever that we move forward with health-protecting, life-saving pollution protections like the Advanced Clean Truck rule. Weve long known that our air quality crisis leaves Californians gasping for breath, and worsens and shortens lives. In light of new research from Harvard that connects COVID-19 mortality to long-term exposure to air pollution, shifting heavy polluters like diesel trucks in the state to zero emissions solutions has taken on a new significance.

I urge you to stay the course and pass a strong Advanced Clean Truck rule, as well as other transportation regulations that will promote a zero-emissions future. We cant afford to lose ground on key public health measures during a public health crisis.

California has long proven that we can clean up our air and protect our climate while stewarding a strong economy. Regulations like the Advanced Clean Truck rule can spur thousands of new clean energy jobs. They will play an important role in Californias economic recovery while also saving everyday Californians from the economic toll of lost workdays and the healthcare costs of pollution-related illness. Its time for everyone to do their part for Californias air and all of our lungs as we face challenges to public health in the Golden State like never before.

Here in California, its more important than ever that we move forward with health-protecting, life-saving pollution protections like the Advanced Clean Truck rule. Weve long known that our air quality crisis leaves Californians gasping for breath, and worsens and shortens lives. In light of new research from Harvard that connects COVID-19 mortality to long-term exposure to air pollution, shifting heavy polluters like diesel trucks in the state to zero emissions solutions has taken on a new significance.

I urge you to stay the course and pass a strong Advanced Clean Truck rule, as well as other transportation regulations that will promote a zero-emissions future. We cant afford to lose ground on key public health measures during a public health crisis.

California has long proven that we can clean up our air and protect our climate while stewarding a strong economy. Regulations like the Advanced Clean Truck rule can spur thousands of new clean energy jobs. They will play an important role in Californias economic recovery while also saving everyday Californians from the economic toll of lost workdays and the healthcare costs of pollution-related illness. Its time for everyone to do their part for Californias air and all of our lungs as we face challenges to public health in the Golden State like never before.

Subject: We Need Electric Trucks to Clean Up Our Air

Comment:

My name is Kenneth Wertz, and I am a resident of Pine Grove. Written below are my comments on board item act19. To whom it may...

I'm a concerned owner of a diesel truck. I am 71, a builder for the last 50 years. Until everyone to benefit from low emissions, EVERYONE needs to qualify for an electric truck, monetarily. Those that have bought influence, are wealthy (Trucking companies) have credit, write off the trucks, (whether diesel, up to current emission standards) Write off the purchase every two to three years. Most small business owners cannot afford to do so. So....Until EVERYONE can get a new electric truck to replace the older, non/exempt & exempt trucks...This is a non starter. If you are really interested in helping with pollution emitted. to remove the polluters... Subsidize/pay for the replacements. I live in a county that produces little of the pollution generated in the state. 39K population in the entire county. What pollution we GET, is from the Sacramento Valley.... We are paying the price for that pollution and losing our trucks to the current CARB laws. No help for us... Loss of making a living by draconian laws. I would like to continue this conversation... But would be surprised if I receive a response. Best to you,
Ken

Here in California, its more important than ever that we move forward with health-protecting, life-saving pollution protections like the Advanced Clean Truck rule. Weve long known that our air quality crisis leaves Californians gasping for breath, and worsens and shortens lives. In light of new research from Harvard that connects COVID-19 mortality to long-term exposure to air pollution, shifting heavy polluters like diesel trucks in the state to zero emissions solutions has taken on a new significance.

I urge you to stay the course and pass a strong Advanced Clean Truck rule, as well as other transportation regulations that will promote a zero-emissions future. We cant afford to lose ground on key public health measures during a public health crisis.

California has long proven that we can clean up our air and protect our climate while stewarding a strong economy. Regulations like the

Advanced Clean Truck rule can spur thousands of new clean energy jobs. They will play an important role in Californias economic recovery while also saving everyday Californians from the economic toll of lost workdays and the healthcare costs of pollution-related illness. Subject: Bridge to Widespread Zero Emissions Trucks

Comment:

A Florida Small Business, Affiliated with IAASP of Calif, is capable of making near zero NOX & reduced particulate emitting truck engines. (Proposal was submitted to CEC for Off-Road Trucks). We were not rated to participate because of insufficient California presence. I suggest that the Zero Emissions Truck mandate consider allowing The Cyclone Engine in these trucks to Alternatively meet the "ZERO" emissions because of its capability to use renewable fuels of liquid and vapor fuels for clean power, applicability, power, range and cost. We however don't have any California truck manufacturers team with us on a parallel hybrid or range extender version that will run on NG, diesel, jet fuel or gasoline. Questions: Could the bill be written to allow this? Could funding be provided or incentive to team a California truck manufacturer to demonstrate a no NOX except during start-up external combustion engine-driven truck?

Comment:

Heavy-duty trucks are large contributors to the bad air quality in California. Requiring manufactures to create zero-emission trucks would ensure better air quality and would save buyers future fuel and maintenance costs. The Advance Clean Truck standard has high goals but is achievable and much needed.

Subject: Advanced Clean Truck Rule act2019

Comment:

I strongly support the Advanced Clean Truck Rule. The goal of 15% of zero emission trucks on the road by 2030 is feasible. With conservatively forecasted improvements in electric trucks over the next 10 years, even more vehicle applications will be suited for electrification, making this goal even more achievable. Moreover, wide-spread truck electrification is estimated to support close to a million manufacturing and construction jobs through 2030. And there are big economic benefits from the Advanced Clean Truck Rule. It's estimated that the rule would result in over \$10 billion in statewide health and carbon dioxide reduction benefits by 2040.

Subject: The Proposed Sales Percentages Are Woefully Inadequate
Comment:

I am extremely disappointed by these proposed standards as they are woefully inadequate if they are meant to tackle California's contributions to climate change and air pollution. Targets that low would allow industry to be far too slow (like they are today) in terms of electric vehicle development when the entire world is in the midst of a combined climate-change/air-pollution pandemic - not to mention COVID-19. For a state that suffers disproportionately from air pollution, those sorts of numbers are simply unacceptable and essentially condemn your citizens to decades more of having to breathe toxic air.

I strongly urge the board to dramatically increase these figures; in fact, I believe 100% of vehicles and machinery sold in and imported into California should be zero-emission by 2030 instead of the "50/15" rule that is currently under consideration.

Electrification of California's vehicle and machinery fleets is a necessity if the state is to meet its clean air and climate change targets.

Thank you for your time and consideration.

Subject: Advanced clean truck regulations.

Comment:

For several years, the State of California has violated CEQA by refusing to respond to public requests to study the reduction of Vehicle Miles Traveled (VMT) as and alternative to emission reduction strategies that will adversely impact interstate commerce.

A reduction of VMT of 25% from baseline will allow areas of the state currently in violation of federal air quality standards to achieve compliance. A reduction of VMT will also have the added benefits of reducing motor vehicle collisions and improving traffic conditions.

I have sent numerous comment letters to CARB and U.S EPA concerning the intentional actions of the State of California to violate CEQA by blocking public requests to study reductions of VMT. Those comments were submitted during the preparation of EIRs and other environmental documents where the state was either Lead Agency, or the project was located in an area where the state had jurisdiction. CARB staff can contact me if they are interested in obtaining copies of those documents.

Subject: Strong support for Zero Emission Trucks

Comment:

The Medical Society Consortium on Climate and Health, representing over a half of a million clinical practitioners in the US has issued a call to action to policy makers and industry to recognize climate change as the greatest threat to public health in this century. A recent Harvard study shows that even a slight increase in exposure to particulate air pollution correlates with a great increase in mortality from COVID-19. I live in Contra Costa County, which received an "F" in air quality in the most recent American Lung Association State of the Air 2020 report.

I strongly urge the members or the CA Air Resources Board to adopt policies to reduce greenhouse gas emissions and air pollution, including the proposed Clean Trucks Regulation.

Respectfully,

Lisa F Chang, MD

Comment:

Good afternoon,

I understand the Air Resources Board is considering a groundbreaking Advanced Clean Truck Rule requiring truck manufacturers to sell clean, zero emission trucks in California. Once again, California has the opportunity to lead.

Passing this rule would revolutionize the heavy duty truck market by creating new demands for clean trucks while cleaning up our air and protecting the climate.

The goal of 300,000 ZEVs by 2035 makes sense on the face of it. Though I do not know the total population of heavy duty trucks, providing 5+ years to work on the technology, and the remainder of time needed for stock turnover/retirement of vehicles

Thank you for the opportunity to comment.

Comment:

I am strongly in support of reducing air pollution from trucks in California. I am concerned about particulate emissions and other emissions that increase immediate health risks, as well as CO2 emissions that will increase hazards from climate change for decades to come.

I also own and drive an electric vehicle and I am impressed with the potential of this technology. I know that as increasing numbers of EVs are produced, costs, which have been raised as a prohibitive factor in making electric trucks an acceptable substitute for diesel or gasoline trucks, will go down and they will be much more acceptable.

I believe that if the Air Resources Board proceeds to bring increasing numbers of electric trucks onto California's highways, the state will greatly benefit.

Comment:

I urge you to support a strong Advanced Clean Truck (ACT) rule that requires that by 2030, at least 30% of the new trucks on California's roads to be electric, zero emissions vehicles.

There are already more than 70 different models of zero-emission vans, trucks and buses that are commercially available from several manufacturers. Most trucks and vans operate less than 100 miles per day and several zero-emission configurations are available to serve that need.

Do this for the health of Californians and the environment.
Thank you.

To whom it concerns,

Please move forward with funding for electric trucks and infrastructure. This will make my community and the air we breathe cleaner. This will also create good jobs to help everyone through these tough times.

I would also encourage you to make sure the EV chargers and the Electric Trucks are built in California, further creating a job domino effect.

Thank you for your consideration in my opinion.

Thanks ,

Andrew Mckercher

Subject: Please adopt the strengthened Advanced Clean Trucks Rule

Comment:

Dear Chair Nichols and Members of the Board,

I urge you to approve the strengthened staff proposal for the Advanced Clean Trucks ("ACT") Rule. I feel strongly about this rule because the sooner and faster we start the transition to zero emission trucks the cleaner the air in the East Bay where I live will become. In addition, please commit to timelines for transitioning to electric trucks in California. This will send a clear signal that most trucks should become electric by 2040. This proposal should add about 8,000 high quality jobs. It will turn what was once a polluting industry into a green one. Electric vehicles save money in fuel and operation costs, which results in lower costs for businesses and consumers. As we come out of the COVID-19 crisis, job creation will be paramount and this proposal would help to get us back on our feet.

Thank you.

Comment:

To the honorable members of CARB,

I strongly support a 30% or higher threshold for electric trucks by 2030.

I want my home state, California, to lead the way, demonstrating that decarbonization of ground transportation is not only possible, but both necessary and beneficial. Our state has long been a leader in making progress on many fronts and especially on clean air. There is little time left to make the transition off of fossil energy and without continued steady progress toward fleet wide zero emissions, I expect that we will not meet the necessary emissions reductions put forth by the International Panel on Climate Change for 2050.

With appreciation,
David K. Fork

Subject: mandating zero-emission vehicles in heavy-duty truck fleet

Comment:

I write to strongly endorse adopting a rule to mandate that at least 30% of the heavy truck fleet in California be converted to zero-emission or electric vehicles by 2033.

The CO2 driven climate crisis needs to be addressed at all levels, and transportation is a major source of emissions for California. This regulation is a badly needed adjunct to the electrical grid conversion that we have undertaken.

Comment:

Thank you for your work to promote zero emission trucks. These new regulations should include all trucks. In particular, more ambitious targets should be created to include trucks in Class 1-3, some of which will be the easiest to electrify (e.g. vans, delivery trucks) and are the ones making short trips all day in neighborhoods. The impacts on improved air quality and carbon emissions reductions are well worth the effort!

Subject: Electrification of heavy duty trucks

Comment:

The proposed rule mandating 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033 is incredibly important. The medium and heavy duty vehicle stock must begin to transition in order to move our transition to full electrification forward. In addition to reducing greenhouse gas emissions and improving air quality and public health in vulnerable communities, adoption of the rule will incentivize and accelerate battery development that will boost EV adoption across the nation. And as usual, the world is watching and California is the leader here in the US. We must move forward to keep up with the advances China is making.

Comment:

I am writing in support of the proposed rule mandating 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033. Many poor communities suffer from air pollution which leads to asthma, lung disease and early death. Electric vehicles will reduce pollution and cancer causing tailpipe emissions in these communities. In addition electrification of transportation will minimize greenhouse gas emissions to limit climate chaos. Please adopt this rule to incentivize and accelerate battery development and boost EV adoption.

Thank you,

Susan Cavalieri

Comment:

I have lived in the Santa Clara Valley since 1972. I have seen dramatic improvements in air quality and quality of life during that time. Much of that appears to be directly attributable to improvements in automobiles and trucks, gas mileage improvements, and the special fuel formulations used in California. In 1972, it was impossible to see downtown San Jose from South San Jose hills. Palo Alto? You must be kidding! Now, most days of the year, downtown San Jose is readily visible, often against a very clear, blue sky. Cities up the peninsula are also visible, and sometimes, so is the San Francisco skyline (not even dreamt of in the 1970s). Electrification will provide even greater improvements. Electrification is clearly doable. I remember 20 or more years ago when there was an initiative that mandated that 2% of all cars sold in California be electric by several years in the future. There was a great hew and cry about how such a thing was impossible, prices would skyrocket, many businesses that supported internal combustion cars would go bankrupt, etc. Now I see that electric vehicles are extremely popular, and often much bigger sellers than internal combustion engine vehicles. The market has spoken and continues to speak. More Advanced Clean Trucks make perfect sense. Start yesterday.

Subject: Clean Truck Rule

Comment:

I am writing to urge you to support the Clean Truck Rule. The proposed rule mandates 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033. In addition to reducing greenhouse gas emissions and improving air quality and public health in vulnerable communities, adoption of the rule will incentivize and accelerate battery development that will boost EV adoption across the nation.

Sincerely,
Carol Ruth

Subject: Not far enough, fast enough, but a good kick in the behind

Comment:

It very much seems like companies won't do the right thing unless forced to. If using clean energy costs \$0.01 more than burning coal, the board of directors will say "nah, burn coal", completely self-focused, without any shred of consciousness aside from the bottom line. Some people are so selfish they don't even see an issue in the preceding statement.

Local running trucks, like garbage collection, should have been electric years ago. Their job is constant start and stop, and would be orders of magnitude more efficient and cheaper to operate, less obnoxiously noisy, if they were electric. But we can't even get trucks with white-noise backup alarms, probably because "bottom line".

In the past 10 years, mostly driven by one company, the EV industry has advanced from a pieced-together electric sports car in 2010, to a selection of mass-produced, practical, reliable, and affordable electric cars today. Just ten years. Having a target goal of 2033 seems like giving up. Maybe the industry disruption will finally take place in that time and the rules won't even come into play. Hopefully this is the kick needed to set this change in motion.

Subject: Clean Trucks Rule

Comment:

Please support this rule. This is a critical rule to achieve our State's GHG reduction milestones. These large vehicles are on the road much more often than a typical car used by citizens. The Truck emissions are particularly toxic due to the formation of particulates and presents of carcinogens in the exhaust.

California has lead the world in the development of electric vehicles. This has spawned the birth of Tesla and other smaller companies. If California maintains its leadership position, it will mean better Air Quality, lower GHG emissions, and more good-paying jobs.

Those most harmed by the emissions are usually living in disadvantaged communities near freeways and narrow streets. Also, the air inversions in the central valley trap these pollutants and expose entire communities to toxic air. Some of the worst air quality in the world can be found in the central valley.

Comment:

Please move to APPROVE the Advanced Clean Truck Regulation.

We need:

- To Create an Electric truck standard
- To Reduce the air pollution that hurts the health of millions of Bay Area residents
- To create high-quality jobs in the electric vehicle industry, a sector that has grown twice as fast as the state average.

Thank you

Jeanie Bunker

Comment:

Dear Chair Nichols and Members of the Board,

I strongly urge you to approve the strengthened staff proposal for the Advanced Clean Trucks ("ACT") Rule. As we know, diesel trucks are one of the largest contributors to air pollution in California. Fortunately, a number of companies are now designing and beginning to make electric trucks. Now is the time to strengthen the requirements to get electric trucks on the road.

Please also formally commit to timelines for transitioning to electric trucks in California. This will send a clear signal that most trucks should become electric by 2040.

regards,
Erin

Subject: Clean Truck Regulations: More Electric Trucks Please
Comment:

Dear Board Members,

I strongly support an aggressive goal of a minimum 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033.

I understand this may increase costs of goods for consumers, but those costs will be more than offset by health benefits and lower health care costs.

Please implement the mandate to help California and the US advance in electric vehicles and battery technology which help slow the climate crisis and particulate emissions.

Terry Barton

Subject: Advanced Truck Regulations

Comment:

I support your advanced truck regulation. Cutting down the pollution for heavy truck and bus vehicles makes sense. Here are some reasons I believe this is necessary.

- o It is easier to convert fleets of vehicles than it is one at a time.(light duty cars and trucks.
- o Trucks and buses can have engines replaced economically during the usage cycle. Autos are generally scrapped at end of life.
- o Trucks and buses represent a significant amount of GHG reduction.
- o We will not get to the CA goal of Carbon Neutral by 2045 without converting this segment to zero carbon fuel.
- o Truck traffic tends to travel through disadvantaged areas. Moving trucks and buses to electric means healthier air for this segment of the population.
- o Truck and bus refueling stations can be placed at optimum locations. This makes large chagrins /fueling stations more economically feasible.
- o Diesel trucks and buses have Nitrogen dioxide in their exhaust. Asthma comes in part from Nitrogen Dioxide.
- o We are in the middle of the COVID crises. We see that COVID aggressively attacks people with respiratory diseases.

Comment:

Hello,

My brother worked at the Port of Oakland as an employee of Union Pacific Railroad where he was exposed to the constant onslaught of polluted air from idling trucks. He died very young of pulmonary fibrosis. So I have a very personal reason for supporting the proposed rule that would mandate 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033. A rule such as this might have helped my brother and will certainly save others from similar health impacts. In addition, this rule will reduce greenhouse gas emissions and improve air quality. Moreover, adoption of the rule will incentivize and accelerate battery development that will boost EV adoption across the nation. Let's take this important step.

Thank you.

Subject: Advanced Clean Truck Rule

Comment:

Thank you for advancing this sound policy. It will spur innovation of electric vehicles and drive down their manufacturing costs. Currently electric vehicles have a lower annual maintenance cost than combustion vehicles. This will keep the truckers smiling for years.

Legislation passed in CA last year requiring big rigs to have smog checks. Electric truckers will not be burdened with this expense.

Large diesel trucks are responsible for nearly 40% of particulate matter emissions from ground transport. This will significantly improve air quality and public health.

More charging stations are needed at truck stops. Please draft a policy to expand the network. Obtain funding from increased sales taxes and annual registration fees for combustion vehicles.

Comment:

Dear Chair Nichols and CARB staff,
I was reading recently how the USA is falling behind Europe and China in the shift to clean energy. In Europe, there will be 20+ models of electric delivery vans/vehicles on the market in the next 2 years. But many of the automakers are only planning on introducing them in Europe because that is where the demand is! I was also reading that Europe is going to spend much of their Coronavirus recovery stimulus on green technologies and zero emission vehicles.

I think that passing the clean truck rules will end up helping consumers and the manufacturers. The costs of cleaning up later would be much higher than the costs of prevention now. There will be significant direct benefits to environment and health, but also green benefits of improving the state of the art for battery technology and reducing battery costs per kWh.

Regards,
John Reister

Comment:

Dear CARB Board Members -

I am writing today to express my STRONG support for a robust Advanced Clean Truck (ACT) rule that requires that by 2030, at least 30% of the new trucks on California's roads to be electric, zero emissions vehicles.

California must continue to lead the nation in the fight for Clean Air and a reduction in Greenhouse Gas Emissions. CA currently leads the nation in NOx emissions. This is unacceptable! When California adopts this standard to speed the transition to a clean, renewable energy truck fleet, other states will quickly follow our lead.

As the world's Sixth largest economy, California MUST set the tempo for the rest of the nation. Please adopt an ACT Rule that requires at least 30% of new trucks to be electric, zero emission vehicles. Thank you!

Brian Haberly

Help speed the transition of dirty, diesel trucks to clean, electric trucks. Heavy-duty trucks are the largest source of smog-forming NOx in California. I support a strong Advanced Clean Truck (ACT) rule that requires that by 2030, at least 30% of the new trucks on California's roads.

Getting this rule passed is one of the most important CA environmental rules of 2020 as it has impact in so many areas:

Don't let trucking lobbyists water down this vital new proposal to clean up California's air and reduce our state's greenhouse gas emissions!

Hello,
I strongly feel that advancing this rule to promote clean truck transportation is crucial. We are in an unprecedented climate crisis that requires urgent action to change how and what we do. The way that we transport ourselves and goods -- particularly as online shopping grows -- is a critical part of this. It is the moral thing to do.

STOP FORCING ELECTRIC VEHICLES ON PEOPLE and BUSINESS. I DO NOT support of the Advanced Clean Truck Rule, which will help speed the transition of dirty, diesel trucks to clean, electric trucks.

If someone wants to voluntarily do it, GREAT! If not, you'll force people who can't afford it out. Let people do what they want.

ONLY provide incentives for people to go towards electric.

Subject: electric trucks

Comment:

I support a strong Advanced Clean Truck (ACT) rule that requires that by 2030, at least 30% of the new trucks on California's roads to be electric, zero emissions vehicles.

Diesel pollution is a cause of asthma and black soot. The soot washes into water ways and contaminates natural environments of plants and animals. The impact of this is unknown.

We have two electric vehicles and I will never buy a gas powered car again in my lifetime.

Sincerely,

Elizabeth Jacqueline Garcia Mann

Subject: Zero carbon emission trucks

Comment:

Please vote for zero carbon emission trucks. We must do all we can to curb climate change and improve our air quality. The virus is tiny compared to the devastation we will experience from climate change. Or should I say, we are already experiencing? Many scientists believe the pandemic is just one of the effects of climate change. More to come.

Subject: proposed advanced clean truck regulation

Comment:

It is past time that all commercial vehicles in California are electric, ridding the environment of toxic diesel fumes which pollute the air we breathe and contribute to lung disease. Further these diesel fueled trucks contribute the largest amount of GHG emissions in California. With climate disaster bearing down on us, we MUST decrease GHG emissions and that is the job of the Air Resource Board. So this regulation makes good sense and is also the moral and right thing to do for California residents. Its a win for trucking companies too. No diesel fuel to buy, no upkeep on internal combustion engines, quiet environment while driving with clean air to breathe for their drivers. The cost savings would ultimately and quickly pay for the outlay of money to buy the electric truck. Please act quickly to approve this regulation as time is running out.

I support the proposed rule that mandates 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033.

In addition to reducing greenhouse gas emissions and improving air quality and public health in vulnerable communities, adoption of the rule will incentivize and accelerate battery development that will boost EV adoption across the nation.

Thank you

Comment:

Hello California Air Resources Board,

My name is Yayla Sezginer. I am a life time resident of California and a biological oceanographer monitoring the ocean's capacity for carbon storage. If there is one thing that my work has made abundantly clear, and that has been clear for some decades now, is that reducing greenhouse gas emissions needs to be a priority before it becomes an emergency in the very near future. Improving standards for trucking vehicle emissions is one way California can lead the country in working towards what should be a common goal.

Yayla

Subject: Advanced Clean Truck rule
Comment:

Dear Board Members,

Please support the Advanced Clean Truck rule that will support transitioning diesel trucks to cleaner electric trucks . With the federal government weakening our environmental controls, we must stand up to the dirty fuel lobbies and stand firm on clean fuel requirements. Climate change is already in motion and, with multiple effects and ecosystems that feed back on themselves, is gaining momentum. Please don't ignore the momentum that this global change is gaining. We must act now.

Heavy-duty trucks are the largest source of smog-forming NOx in California. Getting this rule passed is one of the most important environmental actions.

Thank you for your serious consideration of this issue: your children and grandchildren will thank you.
Ann Rothschild.

First Name: John
Last Name: Cordes
Email Address: mrjohncordes@gmail.com
Affiliation: Sierra Club

Subject: Advanced Clean Truck rule
Comment:

Hello, I understand the proposed rule mandates 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033. This is not aggressive enough and should be implemented gradually. Trucks have long operating lives and contribute a substantial portion of road related GHGs. Please consider the following implement plan.

Year.	% of Heavy duty truck to electric or zero emission
2025.	1
2026	2
2027	4
2028	8
2029	16
2030	32
2032	64%

Comment:

Hello, trucks are some of the largest polluters, emitting greenhouse gases and smog forming gases. Even with the recent stay at home orders, there are still serious amounts of air pollution, much of which is coming from trucks. There must be some pressure on the trucking industry to reduce their impact.

Comment:

I am writing in strong support of the Advanced Clean Truck rule that will require that at least 30 % (please make it more than 30%, how about 40%) of all new trucks in the state are zero emission vehicles by 2030. California's doing this will help drive the demand for clean trucks and set a model for other states. It will also be a significant. It will also help clean up the air and improve the health of Californians, particularly residents of poor, environmental justice communities that are so often located next to freeways and polluting industries and have high rates of asthma and other diseases caused by poor air quality. The Advanced Clean Truck rule will also result in. the need to build electric charging infra structure to support clean trucks and, in so doing, will create jobs that provide good wages, something California needs much more of.

Subject: Advanced Clean Truck Rule

Comment:

Hello CARB board members I am emailing you to express the urgent need to strengthen the ACT rule in this upcoming board meeting in June. In this day and age respiratory problems due to poor air quality are all too common. One factor that contributes to this problem are big rigs and semi trucks emitting harmful pollutants in our air that we breathe in everyday. Therefore, we need CARB to adjust zero-emission vehicle (ZEV) for class 7-8 trucks to start with 12% in 2024 and 80% by 2035. Also, due to the ongoing global pandemic (Covid-19) it is now more important than ever that people with respiratory problems have cleaner air making it necessary to act now and strengthen the ACT ruling. Thank you for your time and please consider my statement in your decision.

Subject: Need for a Strong Rule on Advanced Clean Trucks

Comment:

Dear Chair Nichols, CARB Members and Staff,

I and others in the Peninsula Interfaith Climate Action organization (representatives from 15 congregations in the SF Peninsula area) are in favor of the proposed Advanced Clean Truck rule that would require at least 30% of the new trucks on our state's roads to be electric vehicles. With the demonstrated overabundance of clean solar and wind energy now available in California, it's time we quickly phase out gasoline burning vehicle and take advantage of California's magnificent supply of renewable energy!

By requiring 30% of new trucks within the next ten years to be electric, we will not only make a big dent in our current GHG emissions, but we will improve air quality by reducing the particulates and smog-producing gases that affect the health of millions of Californians. At the same time, we will create many new jobs in the automotive industry -- and make California the leader in this emerging industry.

Finally, by creating demand for the production of such a large number of new trucks, this will encourage development of the battery industry. That will have further ripple effects for electricity storage in other situations, too, such as homes and commercial/industrial facilities.

Please act to establish the Advanced Clean Truck rule and move California forward into the new energy economy and the many benefits that will create.

Thank you for your service to all of us in this state -- and the leadership you will provide for the rest of our country.

Comment:

Dear CARB,

We love and need the beautiful clean blue skies we see these days!
It's tragic that it takes a pandemic to remind us again of the
happier and much healthier way we should be living and treating our
environment.

Please support strong Clean Truck regulations!! They will be a
big help in making our civilization more civilized and moving us
beyond the foolish, self-damaging behavior of living in our own
toxic waste.

Thank you!

Sincerely,
Kelly Jones
Marin County

Subject: ACT rule

Comment:

Hello Good Afternoon My name is Karla I am a mother to two boys and I live in San Bernardino. The contamination of the railroads and the semi trucks and the warehouses concern me. Due to that my oldest son has breathing problems and is allergic to the air pollution that all these things bring to the San Bernardino area. He has to use an inhaler every time he has to go outside and play. This cannot be the new normal for anyone in the Inland Empire. It affects everyone including those that have health issues. We are happy to see that CARB has improved the ACT rule. But we need for the rule to reflect the severity of the problem we have in our communities. Thank you for all the work that has been done so far, please consider strengthening the ACT at the June CARB meeting.

Comment:

I support a strong Advanced Clean Truck (ACT) rule that requires that by 2030, at least 30% (preferably more) of the new trucks on California's roads are all-electric, zero-emission vehicles.

I am 16 years old. This is important to me. We have 10 years left before the worst of climate change is irreversible, according to a recent UN report. Please use your influence to be part of the solution.

Thank you.

Please support the "Advanced Clean Trucks" rule that mandates 30 percent of heavy-duty trucks sold to be electric, zero-emission vehicles by 2033. In addition to reducing greenhouse gas emissions and improving air quality and public health in vulnerable communities, adoption of the rule will incentivize and accelerate battery development that will boost EV adoption across the nation and the world.

Comment:

Hola, quiero comentarles que tengo tres hijos y 5 nietos , soy residente de la ciudad de San Bernardino Ca. Una ciudad como muchas otras , donde existe el racismo ambiental , donde han llegado bodegas sin importar la salud de los residentes y sus familias. Donde las bodegas , ferroviarias , plantas de gas y los cruces de fways son muy comunes pero peligrosos para sus residentes y muy cercanos a nuestros hogares y escuelas, donde la mayoria de los habitantes son de raza latina y de color y donde la clase media existe. Estoy contenta por que la regla que se esta poniendo para la limpieza de camiones . Espero se pueda reflejar en los cambios ese porcentaje de la regla autorizada.

Tambien he podido mirar como durante el Covid-19 esta mayoria de gente que sufre por la comntaminacion problemas respiratorios, cancer, alergias y mas, son las mas munerales a contraer el Coronavirus.Gracias por todo el trabajo realizdo.

Subject: ACT

Comment:

My name is Brenda Huerta and I work in Riverside County. I work for an environmental justice and organization. We are happy to see that CARB has improved the ACT rule but we definitely need this to reflect in our communities and the health and well being of our people. We need the CARB to adjust to zero emissions vehicles sales percentage for Class 7-8 trucks to start with 12% in 2024 and 80% by 2035. Thank you for all the work that has been done so far, please consider strengthening the ACT at the June CARB Board meeting. We have seen during COVID 19 that people with more respiratory issues are more vulnerable to COVID19 we need to prioritize the health of our people.

Comment:

I strongly support the Advanced Clean Truck (ACT) rule that requires that within the next 10 years, at least 30% of new trucks on California's roads be electro, zero emission vehicles. We have seen the impact - because of the corona virus - that fewer gas cars on the road have had on the environment!!! Look at India!! Please support this ACT. One step - or mile - at a time!

Thanks!

Eileen

Comment:

This is critical for California, which suffers from the most polluted air in the nation and transportation being the single largest source of poor air quality and the greenhouse gas emissions causing climate change.

In addition, this will help the state meet its climate targets, as well as create new jobs and support the clean economy.

Subject: In Support of "Advanced Clean Trucks" rule and beyond....

Comment:

Dear CARB Decision Makers,

I am writing in strong support of any actions you can take to insure the electrification of all types of transportation in California. The Blue Skies and Clean Air we have been experiencing during Shelter in Place -- Should set the standards for the post Covid-19 highways.

The Advanced Clean Trucks rule should begin immediately! Start with supporting the switch to EV Pickup Trucks and Vans now. Then 30 percent of heavy-duty trucks to be zero-emissions by 2025. The current goal of 2033 is just too far away.

Incentivize production via truck manufacturers to speed up their goas. I am the volunteer parent for the Los Altos High School Green Team, these students held a conference at Samsung in San Jose for over 100 students from over 25 high schools. They want action Today! not in 2033. Surely, the voices of California's youth should be heard.

Will CARB step up your pace for electrification of transportation? Please, email me and I will pass on the message to the young people. Thank you for all you do, but PLEASE, consider doing more -- and more quickly!

Thank you,

Sybil Cramer - sybilcramer@mac.com

First Name: Belen

Last Name: Gutierrez

Email Address: Bgutierrezcmt@gmail.com

Affiliation:

Subject: Advanced Clean Truck Rule

Comment:

Good evening,

I want to begin by thanking everyone for the progress that has been done so far for the Advance Clean Truck Rule.

However, we need to implement stricter rules for the health and well being of the communities.

My name is Belen Gutierrez and I live in Jurupa Valley California, in a small community called Bell Town. All around our homes there are warehouses and businesses that utilize trucks all day and every day. I don't see children playing anymore. What I see now are semi-trucks constantly passing by. My father has lived in this home for 30 years and for the past 5 years he has struggled with lung issues. The air had gotten so bad that the doctors recommended him to spend less time outside the house. Right now with COVID 19, these implications are worse for him. I urge you to consider the lives of those who have been struggling with health issues because of truck pollution and are now hit with COVID 19. There is uncertainty with this virus, but you all can make the future more certain for my father and other communities in regard to air pollution. Please help reduce the risk of health complications and death.

We need CARB to adjust zero-emission vehicle (ZEV) sales percentages for class 7-8 trucks to start with 12% in 2024 and 80% by 2034.

Thank you for your time.

Comment:

My name is Carmen Lua and I live in the city of riverside, the pollution of Trucks affects me and my community because it puts us at risk for developing respiratory related health issues or increase the severity of health issues we are already facing. We are happy with the improvements CARB has done with the ACT rule, but more could be done to address the problem of pollution from trucks such as adjusting zero emission trucks vehicle sales percentage for class 7-8 trucks to start with 12% in 2024 and 80% by 2035. First Name: William

Last Name: Benson

Email Address: wkbrr@hotmail.com

Affiliation:

Subject: Advanced Clean Trucks Regulation

Comment:

I'm writing to strongly support the proposed rule mandating at least 30% of heavy-duty trucks sold be electric, zero-emission vehicles by 2033. This rule will have multiple benefits:

- * improving public health by reducing pollution, particularly in heavily-impacted areas like ports that have heavy truck traffic
- * addressing a major gap in efforts so far to fight climate change
- * spurring development of a new industry and the accompanying jobs

Furthermore, the proposed time frame provides ample opportunity for advances in electric truck technology and development of supporting infrastructure. If anything it should be more aggressive.

In summary, please approve a strong electric truck rule.

Subject: Advanced Clean Truck Rule

Comment:

Dear Chair Nichols and Staff,

I urge the California Air Resource Board (CARB) to enact the Advanced Clean Truck rule in order to substantially reduce our carbon footprint, the challenge of our lifetime. This rule would have an especially good impact in low income communities, and would help provide jobs, as well as reduce the price of battery storage and reduce the need for storage based on fossil fuels.

While it would be wonderful to require more than 30% of trucks to be electric in the stated time frame, this is a major step in the right direction, and even so will be opposed by powerful people in the fossil fuel business. (I guess they don't have grandchildren!)

Thank you for your consideration,
Carol Kiparsky and Ian Irwin
Palo Alto, CA

Subject: Adopt this Rule, Ideally Make It Even Stronger

Comment:

When car traffic fell by nearly 40% due to Covid-19-induced Shelter-In-Place policies, it was thought dramatic improvements in air quality would follow. However, NPR recently reported that ozone levels have fallen by much less than car traffic has. In Los Angeles, heavy duty transportation is now the largest source of this toxic air pollution, and truck activity was down by much less than passenger vehicle activity (<https://www.npr.org/sections/health-shots/2020/05/19/854760999/traffic-is-way-down-due-to-lockdowns-but-air-pollution-not-so-much>). To make any more improvements in air quality for our most vulnerable people and communities, we need a strong clean trucks rule like what is being proposed.

CARB should make this rule even stronger. If Norway could adopt a 50% goal for new truck sales by 2030 back in 2017, then California can surely do better than 30%. (see attachment)

If CARB is concerned that battery technology will not be economical enough to support widespread adoption, battery costs continue to fall faster than initially estimated. In 2017, ICCT forecasted battery costs of \$228/kWh by 2020 and \$120/kWh by 2030. Now, BNEF projects battery prices will drop below \$100/kWh by 2024 and hit \$61/kWh by 2030 (<https://bnef.turtl.co/story/evo-2020/page/6/1?teaser=yes>). In fact, in 2019, they calculated prices were already \$156/kWh. (<https://about.bnef.com/electric-vehicle-outlook/>)

There is both a moral and economic imperative to adopt a stronger rule. We hope CARB does that.

Comment:

Dear Chair Nichols and Members of the Board,

I urge you to approve the strengthened staff proposal for the Advanced Clean Trucks ("ACT") Rule. We are short on time to mitigate climate change and for decades we have allowed the lives of countless future generations to be severely impacted by those who call for delayed action in order to maximize short-term profits today. That is a shameful legacy. This rule represents a step in the right direction. Likewise, I urge the board to formally commit to timelines for transitioning to electric trucks in California. This will send a clear signal that most trucks should become electric by 2040.

Respectfully,

Kenneth Higa
Berkeley, CA

First Name: Gabriela

Last Name: Mendez

Email Address: Non-web submitted comment

Affiliation:

Subject: Advanced Clean Truck Rule

Comment:

My name is Gabriela Mendez, I live in the Inland Region of Southern California. The Truck traffic impacts me and my community because diesel pollution is very dangerous to our health. When we have thousands of trucks passing behind our homes per day, our chances of developing respiratory illnesses are very high. These are serious matters as we have elementary schools in the radius of a 5 minute walk to the freeway. Students are not allowed to play outside on certain days because of the air quality. This can be resolved with a higher percentage of zero emissions trucks. As I am happy to see CARB taking a move towards reducing pollution in our communities I would like to suggest moving towards achieving 12% by 2024 and 80% by 2035 on zero-emission vehicles (ZEV) for Class 7-8 trucks. We are already faced with a huge threat being climate change. We look to you for a bold move in the right direction which prioritizes public health to better our quality of life.

Thank you,
Gabriela Mendez

Subject: Comment on CARB improving ACT Rule

Comment:

My name is Katherine Palomares. I grew up in the city of Montclair and currently reside in Rancho Cucamonga. I'm writing to share my perspective as an Inland Empire resident, but also as the daughter of a truck driver in the region.

I'm glad to see that CARB has decided to improve the ACT rule. However, we are at a point where more action needs to be taken in order to prioritize the community's health. In the Inland Empire, we live with the highest concentration of warehouses in the state.

We need CARB to adjust zero-emission vehicle (ZEV) sales percentage for Class 7-8 trucks to start with 12% in 2024 and 80% by 2035.

Last December, my family faced the tragic loss of my oldest brother. Now as we struggle through the COVID-19 crisis and look forward into the coming years, we are concerned more than ever for our health. My father has continued to work as an essential worker while mourning. I hope to see more decisions being made to protect his health as a driver and the health of the communities he drives in.

We don't need market-based solutions for change. We don't need to allow corporations to pay for their ability to harm the environment. We need to be bold with regulations that guarantee protection for environmental and worker health. We are not able to live any of our lives fully when we suffer from poor air quality, which we know is disproportionately impacting communities of color, including my own family.

Please consider strengthening the ACT at the June CARB Board meeting. We have already lost too many lives from the ongoing climate crisis, we can make this a turning point to protect as much life as possible.

I appreciate your time in considering my comment.

Comment:

I support the strongest measures possible to reduce emissions from trucks. As one who lives in a very clean suburb, I empathize with those who must suffer lung damage from living in areas constantly encased in bad air. The recent wildfires reminded us that bad air can strike any of us. It is wrong to impose that on the least fortunate when it is not really necessary.

The advances in electric propulsion has made it possible to implement that technology. I have owned an electric car since 2017. It is so abundantly clear that electric (or fuel cell) is the way to go. The maintenance is almost non-existent. You don't even have to clean off brake dust from the wheels. Now it is just a matter of nudging truck makers and buyers to move forward and change their fleets. I applaud your regulations proposal.

Hello. As a long-time resident of California, I have traveled all over the state and have seen many trucks on Highway 5 and 199. I hope that you pass the strongest possible regulations for the truck sector to make truck emissions cleaner in order to protect our air and health. Thank you.

Comment:

These products must be regulated as they are potent greenhouse gases that can be sunset over time to reduce their impact on climate change. California is a leader in reducing GHGs and can show the world it can be done and must be done to reduce the most severe impacts of climate change. market signals and sunset schedules help businesses transition to a cleaner economy and we all benefit. I fully support the proposed amendments.
