Subject: HVIP Voucher Suggestion

Comment:

The HVIP voucher amount should be lowered to allow more units on California roadways.

There should be an annual cap on the number of vouchers a fleet can obtain to allow more disadvantaged businesses to take part in the program. Five per year, for example.

Subject: Revise Carl Moyer for Locomotives to allow leasing of advanced technology locomotives

Comment:

Rail vehicles are the off-road application that ARB and local air agencies have the least ability to coerce into using cleaner technology; they have a solid federal pre-emption. Locomotives built in the 1960's are simple, reliable and economical to rebuild.

Modern replacement gensets purchased at government expense have been a failure due to poor performance and high maintenance costs when compared to older locomotives.

Recent NOx inventories of Rail Equipment in the SCAQMD air basin indicate that rail NOx emissions are going up, not down due to the railroads retiring most of the gensets and bringing older locomotives back into the area.

Seeing that 'no change' is the preferred alternative to the rail industry, incremental change has been painful and resistance is incredibly strong. Non-optimal application of public policy and tax payer funds has further entrenched the 'no change' alternative.

The bright side is that this industry that was dragging its feet on embracing change is now ripe for a leapfrogging technology that will come from a pool of smaller more flexible companies under small pilot programs that are willing to take more risk. This requires smarter public policy and application of incentive funding that leads to private investment covering some of the risk. Leasing equipment for 5 years based on annual cost effectiveness is one promising approach.

The uploaded document has more details and suggestions on this topic

Comment:

October 26, 2021

Attn: California Air Resources Board

Re: Clean Mobilities in schools - Fundingplan2021 Letter of Support

Dear Assemblyman Frazier:

On behalf of Twin Rivers Unified School District, I am writing in support of funding the next highest ranked applications for the FY 2018-2019 Clean Mobility in Schools solicitation.

We are a public school district located in a disadvantaged community; student enrollment is 32,000. We are the first school district to deploy the largest fleet of electric school buses in the nation.

California has some of the oldest school buses in the nation, and thousands of diesel school buses are nearing or beyond their useful life. In addition to school buses, vehicles (trucks, cars, and lawn equipment) create dangerous air pollution. Students, bus maintenance technicians, teachers, and bus drivers are exposed daily to high levels of hazardous air pollution. Inhaling diesel exhaust, a dangerous carcinogen, causes respiratory diseases and worsens existing health conditions like asthma. These negative effects especially impact children whose lungs are still developing.

Zero-emission school buses can save schools thousands of dollars in maintenance and fuel costs while providing quieter, healthier student transportation. With this proposed funding, electric powered trucks, vehicles, and lawn equipment could be showcased to build clean mobility in schools model.

Clean Mobility in Schools safeguards the health of our schoolchildren, helps schools save money while upgrading their vehicle fleet, and improves the air quality of our neighborhoods.

Sincerely,

Linda Lemon

RE: Comments on Proposed Changes to the Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project Program as Presented in the Fiscal Year 2021-2022 Funding Plan

Dear Peter:

ROUSH CleanTech (Roush) appreciates the opportunity to provide comments on the California Air Resources Board's (CARB) draft Fiscal Year (FY) 2021-2022 Funding Plan and specifically on CARB's Clean Truck and Bus Voucher Program (HVIP). CARB plays an important role in driving and supporting fleets to adopt alternative fuel technologies both in general and ahead of regulatory deadlines. Roush acknowledges the benefits the transportation industry reaps from such support and will continue to support CARB while providing important real-world feedback- something we have a lot of experience with, having nearly 40,000 vehicles operating in our communities and more than a billion miles driven.

Roush is an advanced clean transportations solutions company focused on developing innovative and reliable clean fuel system technology. As an original equipment manufacturer (OEM) and approved HVIP equipment provider, Roush offers its perspective on proposed changes to HVIP. ROUSH has been a proud participant of the HVIP program and has continued to support CARB in its endeavors to encourage the expansion of zero-emission heavy-duty (ZE HD) vehicles in California. HVIP allows for market growth that would otherwise not be possible and the opportunity to comment proves that CARB is committed to designing programs to benefit the most parties the greatest amount.

ROUSH is concerned that limiting eligibility to only those fleets with less than 100 trucks in 2023 and 50 trucks in 2024 will disrupt the growing success of HVIP and the ZE HD market, counteracting the program's intent to "drive commercial technology transformation." Our customers are telling us that capital costs

are the biggest impediment to the large-scale adoption of ZE HDVs. Large fleets are currently leading the way towards a clean electric transportation future, in part because they possess the capital to do so. They are also able to take on a level of risk that smaller fleets cannot. Thus, the exclusion of large fleets from future HVIP eligibility may not translate to an increase in small fleet's ability or interest in adopting electric technologies. However, what is certain is that this new proposed requirement will impede large fleets with available capital who have yet to widely adopt EVs and wish to scale their ZE operations. Continued successful deployments by large fleets is critical in driving down prices, increasing exposure, and establishing scalability for smaller fleets.

Over the last several years, HVIP has successfully created momentum for fleets to transition away from petroleum-based fuels towards electric alternatives. Early and large-scale adopters of electric technologies still have a role to play in making the HD electric space more accessible to small fleets at a lower cost and a lower risk. The market benefits from model deployments of all size fleets which provide a variety of best practices and lessons learned for others to study.

Informed by experience manufacturing clean vehicles, communication with customers, and previous engagement with HVIP, Roush appreciates the opportunity to share input with CARB on proposed changes to the HVIP program. Roush is hopeful that CARB will consider the possible negative consequences of limiting eligible fleet size for HVIP, effectively removing large fleets from the opportunity to participate. Thank you for the opportunity to submit comments on CARB's draft FY 2021-2022 Funding Plan. Roush looks forward to continued engagement with and improvements to the HVIP program as the HD transportation industry further adopts electrification.

Sincerely,

Chelsea Jenkins
Vice President, Government & Industry Relations

Subject: Income cap is too low

Comment:

This is California and the the proposed joint filing \$200k income cap is too low. My husband and I both work and with California housing costs eating up much of our income, the CVRP is most definitely a large factor in whether we can purchase an EV. I know it is the smart thing to do and will save us money while we own it, but the upfront cost is still high. This change to the income caps is overly aggressive and will exclude us from being able to purchase an EV.

Please reconsider keeping the income caps as is.

Also, please get rid of the rebate for PHEVs completely. As noted in the report, there are so many BEV options available now. We should not be subsidizing anything that has a tailpipe.
