Subject: "The CARTENTIAL Effect" for California

Comment:

We used a USA 3rd party to test "The CARTENTIAL Effect"; attached please find the final report from the CAFEE Lab www.cafee.wvu.edu. The testing was conducted on "as new" equipment; meaning flushed, with none of the normal sediment, rust and other normal wear conditions. Cartential shows even better results when introduced into Vehicles manufactured on or before 2004. The purpose of Cartential is to make exhaust emissions a non-factor worldwide in Automotive, Commercial Trucking and other Industries where combustion motors are used. The up to 80% reduction in exhaust emissions will help California and other States reach the daily goal of removing an extra 100 tons of smog-forming emissions from the air; which will help the air quality worldwide.

Comment 9 for Low Emission Vehicles III (leviiighg2012) - 45 Day.

First Name: Loren

Last Name: Marz

Email Address: lmarz@charter.net

Affiliation:

Subject: Comments on LEV III Proposed Regulation

Comment:

While fully supporting the spirit of the proposed LEV III Regulation, it doesn't appear that the impacts of a significant shift to "ZEV" technology such as electric vehicles (EV) have been fully considered.

According to a National Academies report (National Academies, "Hidden Costs of Energy: Unpriced Consequences of Energy Production and Use.")...

"...Electric vehicles and grid-dependent (plug-in) hybrid vehicles showed somewhat higher nonclimate damages than many other technologies for both 2005 and 2030. Operating these vehicles produces few or no emissions, but producing the electricity to power them currently relies heavily on fossil fuels; also, energy used in creating the battery and electric motor adds up to 20 percent to the manufacturing part of life-cycle damages...."

This is supported by the latest version of Argonne National Laboratory's GREET model (GREET1_2011 - <http://greet.es.anl.gov/>) which shows that WTW emissions of particulate matter (PM) in California are higher for EV technology than current "clean diesel" technology. Based on the default "mid-sized" vehicle assumed in GREET for the year 2020...

WTW PM10 (diesel) = 0.004 (Feedstock) + 0.009 (Fuel) + 0.030 (Vehicle Operation) = 0.043 g/mi

WTW PM10 (EV) = 0.060 (Feedstock) + 0.006 (Fuel) + 0.021 (Vehicle Operations) = 0.087 g/mi

WTW PM2.5 (diesel) = 0.003 (Feedstock) + 0.005 (Fuel) + 0.016 (Vehicle Operations) = 0.024 g/mi

WTW PM2.5 (EV) = 0.015 (Feedstock) + 0.004 (Fuel) + 0.007 (Vehicle Operations) = 0.026 g/mi

All of these values are based on the California electric generation mix assumed in GREET in 2020.

Exhaust PM from the diesel vehicle assumed in GREET = 0.009 g/mi (PM10); 0.0084 g/mi (PM2.5).

Furthermore, based on certified emissions of the 2003 VW Jetta TDI (example of an "old tech" diesel vehicle), exhaust PM emissions = 0.05 g/mi

(http://www.arb.ca.gov/msprog/onroad/cert/pcltdmdv/2003/volkswagen_pc_a0070228_1d9_1_diesel.pdf).

$0.05 - 0.009 = 0.041$ g/mi more exhaust PM for the "old tech" diesel than that assumed for "clean diesel" in GREET.

0.043 g/mi + 0.041 g/mi = 0.084 g/mi WTW PM₁₀ for the "old tech" diesel car, actually less than the 0.087 g/mi WTW PM₁₀ calculated by GREET for EV in California for 2020.

"Old tech" diesel vehicles have been effectively banned for many years under LEV II regulations, to the Air Resources Board's credit, yet mandates are being proposed for vehicle technology (e.g., EV) which may actually increase PM emissions from a WTW perspective above "old tech" diesel engine technology. EPA acknowledges in the Draft RIA for the Proposed Rule to Extend the National Program to Reduce Greenhouse Gases and Improve Fuel Economy for Cars and Trucks - Docket ID No. EPA-HQ-OAR-2010-0799, that all PM_{2.5} is treated as equally potent in causing premature mortality regardless of source (page 6-35 of the Draft RIA), even specifically mentioning PM_{2.5} from diesel engine sources. So there appears to be no valid reason from a public health perspective to displace the reduction in PM_{2.5} emissions from diesel engines with increased PM_{2.5} emissions from power plants to support EV/PHEV technology. The regulatory push for these "advanced technologies" defies logic from an emissions perspective.

A massive shift to EV/PHEV technology would potentially offset gains made from diesel PM emission reduction mandates. It appears superfluous to propose significant reductions in PM emissions from gasoline/diesel vehicles under LEV III to trivial levels (which I support) yet essentially mandate technology which not only doesn't decrease WTW PM emissions from current technology, it increases WTW PM emissions with respect to pre-2004 (Tier 1) diesel vehicles.

I would like to state unequivocally that I support EV/PHEV technology for certain niches (e.g., urban commuter travel), but upstream emissions of this technology really need to be taken into account.

As a disclaimer, I am in no way associated with the auto industry or any support industries to the auto industry, including diesel engine manufacturers.

Thank you for your consideration of these comments.

Respectfully submitted,

Loren Carl Marz, Certified Consulting Meteorologist (#591)

Subject: Accelerating PM emissions reduction

Comment:

Dear Chairman Nichols and Members of the Board,

We are generally in support of the staff proposal that you would be considering to adopt at the upcoming Board meeting on January 26, 2012. The three sets of Clean Cars regulations have been crafted keeping in mind that the eventual success of these programs requires deployment of large volumes of clean cars that use electricity or hydrogen to power them and can only be accomplished through a matching national program. Together, they will reduce foreign oil dependency; improve air quality; and advance technology.

For more than 30 years we have observed that the vehicle emission standards adopted in California, eventually lead to similar standards at the national and international level. In addition, these regulations have also proved to be a stimulus for developing newer, cheaper and safer technologies that have eventually spread worldwide. The staff has a similar vision for these regulations that would shape the future light-duty vehicle fleet across the world.

We concur with the opinion of many groups that the proposal can be strengthened by increasing the threshold set for over-compliance and placing a cap on the total percentage vehicles that can be allowed into this crediting program. However, we recognize that the agreement between Federal Government, Air Resources Board, automakers and lack of support from many automakers may be a limiting factor to address this issue.

In contrast, we believe that there are no such limiting factors and urge you to modify the compliance date of particle emissions standard (1mg/mile) in the Low Emissions Vehicles regulation to be phased-in from model year 2022 (instead of 2025) as had been originally planned. The Board is fully aware of the magnitude of mortality and other adverse health impact of particulate pollution and the number of air basins violating the fine particle standard. Thus, we feel it is imperative that you take actions to reduce particulate pollution as early as feasible. In addition, we feel that providing extra lead time to gasoline engines and to the gasoline direct injection technology is against the principle of the Board being fuel and technology neutral.

We acknowledge the fact that current measurement and monitoring technologies may have some limitations to assure compliance. However, in our opinion, providing a 10-year lead time is adequate to develop technologies that would ensure proper certification and

compliance. In addition, ARB can choose to conduct a review of technologies in the 2017 timeframe and modify if necessary the final form, stringency, or the compliance timing of the particle emissions standard.

We have learned from our conversations with the Manufacturers of Emission Controls Association (MECA) that our recommended time line is reasonable and is in fact, more in line with the recent European Commission decision to establish a particle number emission standard for light-duty vehicles powered by gasoline direct injection (GDI) engines as a part of their upcoming Euro 6 light-duty emission standards. Many auto manufacturers that sell into the European market are working with MECA members on potential applications of particulate filters on gasoline direct injection vehicles. We concur with MECA's suggestions that ARB needs to make sure that the same ultra-low PM, Euro 6 GDI engines/technologies developed in Europe are also utilized in California.

We urge you to maintain the Board's history, leadership and neutrality in setting technology forcing emission standards with respect to light-duty vehicle particulate emissions.

Sincerely,
Shankar Prasad
Coalition for Clean Air

Subject: Comments on Amendments to the CA LEV III Regulation by CA Members of UCS
1/25/2012

Comment:

The statement below represents the comments of 4,220 Californians who are members and supporters of the Union of Concerned Scientists. Please see the attached document (pdf) to view the full list of signers.

California has led the nation and the world in protecting public health with clean car standards for more than 50 years. Thank you for continuing to make California a leader in innovation with proposed vehicle and fuel policies that will cut vehicle pollution, guarantee consumer access to clean fuels, and foster the development of electric-car technology.

We support the proposed changes to the Zero Emissions Vehicles program while urging California Air Resources Board officials to strengthen the proposal by raising the requirement for battery, fuel cell, and plug-in hybrid electric vehicles to account for 1.8 million new vehicle sales in the state between 2018 and 2025 and by eliminating or significantly modifying provisions that allow automakers to avoid meeting the full requirements.

We support the state's proposals to reduce global warming emissions for vehicles built between 2017 and 2025 to 166 grams per mile.

We support the proposal to reduce smog-forming emissions from new cars and light truck tailpipes by 75 percent by 2025 and a reduction in toxic particulate matter by 2028, while urging California Air Resources Board officials to move up the date on toxic particulates to 2022.

We support the proposals for the Clean Fuels Outlet rules to ensure California consumers have access to hydrogen fuel and electricity for advanced vehicles.

Thank you for providing a vision for a cleaner transportation future for California with this inspiring package of clean car standards.

Mary D. Nichols
Chairman, California Air Resources Board
1001 I Street
P.O. Box 2815
Sacramento CA 95812

June 7, 2011

Dear Assistant Administrator McCarthy, Administrator Strickland, and Chairman Nichols:

Last year, the Environmental Protection Agency (EPA), the National Highway Traffic Safety Administration (NHTSA), and the California Air Resources Board (CARB) worked together to set standards through 2016 that would raise the average fuel efficiency of new vehicles to about 34.1 miles per gallon and cut the average global warming pollution from new vehicles to about 250 grams per mile. Now, your agencies are working together to develop the second phase of standards covering new vehicles sold in model years 2017-2025 that could cut new vehicle global warming emissions up to an additional 45 percent and raise fuel efficiency standards to as much as 60 miles per gallon.

Strong, cost-effective standards will provide consumers with a wider choice of cleaner and more fuel efficient vehicles that save

drivers money. In the absence of standards, market barriers prevent drivers from realizing these savings, leaving drivers without the options they need to respond to volatile and rising gasoline prices. Standards are the right policy approach given the realities of this marketplace.

Our continued dependence on oil puts our economy at risk from the effects of oil price volatility and energy insecurity. Oil price spikes were associated with most of the U.S. recessions in the past 40 years.¹ The United States currently sends \$1 billion each day to foreign countries to pay for oil and other petroleum products—that is equivalent to more than half of the average daily U.S. trade deficit over the last decade.²

Strong standards that save drivers money can also support robust employment. Increasing standards will promote new vehicle technologies and increase investment in the auto industry, generating new jobs throughout that sector. The savings consumers realize at the pump will also shift consumer purchases away from the petroleum and wholesale industries to other parts of the economy that generate more jobs for every dollar spent.³

Finally, strong standards will help reduce the heat-trapping emissions that cause global warming. Current and projected climate change impacts pose significant risks to public health, the economy, and the environment. Delaying action now and waiting for the future before initiating accelerated action to reduce global warming emissions would be more costly than initiating action now.

We support these efforts to reduce global warming emissions, improve the fuel efficiency of our vehicles, reduce our dependence on oil, and protect public health by ensuring drivers have more choices for clean cars and light trucks through the use of strong, cost-effective standards.

Subject: CA Scientists & Engineers on Advanced Clean Cars & Reducing Heat-Trapping Emissions

Comment:

The statement below represents the comments of 159 scientists and engineers who live or work in California. Scientists have published and have a Ph.D. or are in a Ph.D. program. Engineers have a Ph.D., or a master's degree with at least five years of career experience, or a bachelor's degree with at least ten years of career experience. All signers have expertise relevant to our understanding of climate change, its impacts, or solutions. Please see the attached document (pdf) to view the full list of signers.

An Open Letter from California Scientists and Engineers on Advanced Clean Cars and Reducing Heat-Trapping Emissions

We write to urge California leaders to seize the opportunity, once again, to demonstrate that the nation can begin to meet the climate challenge by adopting strong policies that will further reduce heat-trapping emissions from cars and trucks.

The causes and risks of climate change are clear and well documented. In May 2010, a report by the U.S. National Academy of Sciences concluded "Climate change is occurring, is caused largely by human activities, and poses significant risks for—and in many cases is already affecting—a broad range of human and natural systems."

Global average surface temperatures have increased at a rate of 0.7°C (1.3°F) per century since 1900, with the rate accelerating to approximately 0.16°C (0.29°F) per decade since 1970(1), and impacts are now being observed worldwide.(2) These temperature changes, driven by human-caused emissions, have locked in further changes, such as sea-level rise that intensifies coastal flooding and dramatic changes in snowpack that risk disrupting water supplies in the western United States.(3) If emissions continue unabated, California will face continued warming with more temperature extremes, faster sea-level rise, increasing risks and cost for agriculture, and severe public health challenges for at-risk populations.(4)

The longer we wait to bring down emissions, the harder and more costly it will be to limit climate change impacts and to adapt to those that cannot be avoided. We already have the solutions and technology to start significantly reducing emissions.

Informed by the threats to California from climate change, the

state has set a long-term goal to reduce its heat-trapping emissions 80 percent below 1990 levels by 2050. Cars, trucks, and other mobile sources account for nearly 40 percent of these emissions in California. (5)

We urge you to adopt policies that will reduce heat-trapping emissions from cars and trucks over the next decade and beyond, while promoting advancements in vehicle and fuel technologies that will create jobs and will be needed to meet the state's long-term emissions reductions goals.

Subject: Small volume manufacturer comment - LEVIII 15 day notice

Comment:

This comment is submitted on behalf of Aston Martin Lagonda Limited, Lotus Cars Limited and McLaren Automotive Limited. Each of these companies is classified as a "small volume manufacturer" (SVM) under CARB regulations. We support the proposed changes in CARB's 15 day notice dated February 22, 2012. The proposed modified text adds clarity to the timing of the LEV III FTP and SFTP requirements for SVMs.

Subject: LEV III California Greenhouse Gas Regulation
Comment:

Dear Sir or Madam:

Attached please find the comments of Ferrari SpA and Ferrari North America, Inc. on the 15-Day Notice of Amendments to the California Zero Emission Vehicle Program Regulations and the proposed "LEVIII" amendments to the California Greenhouse Gas, Criteria Pollutant Exhaust and Evaporative Emission Standards and Test Procedures, and to the On-Board Diagnostic System Requirements for Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles, and to the Evaporative Emission Requirements For Heavy-Duty Vehicles.

Thank you for the opportunity to comment. Please contact me if you have any questions.

Sincerely,

David M. Wertheim
Vice President & General Counsel
Ferrari North America, Inc.
