Comment:

We need to plug in to help stop the 60% of imported Oil. We have lots of incentives going the large inefficient vehicles so let's stop that. Then we would not need any new incentives.

The use of better cleaner batteries like NiMH and lithium are the best option for every vehicle. It can work to make alternate fuel and even hydrogen go farther.

We have off peak electric power, wind and solar that can charge all these vehicles. In fact plug in vehicles make wind storage possible so we can have even more renewable energy.

Please give us real choices that are good for everyone.
