Comment:

This is Part 2 of Comments. Part 1 was written on April 25, 2014 and submitted both for Comment 29 For Draft Proposed First Update To The Climate Change Scoping Plan and to The Draft Environmental Analysis Prepared For Proposed First Update To The Climate Change Scoping Plan ...Today is Monday April 28, 2014

The Environmental Analysis is Illegal and not a sick bird rather a bird...

Solar Energy makes the wind blow the water flow and the plants grow . It is the engine of our ecosystem. It's the way things work.

Solar systems have become life cycle cost effective as the costs of systems and interest rates have declined in recent years.

CARB approved on Dec 25, 2012 the SCAQMD South Coast Air Quality Management Districts December 2012 Air Quality Management Plan . This is illegal and fattening. Both SCD and CARB as well as San Joaquin District and the Bay Area District as well as the rest of the State must be converted to IMMEDIATE TOTAL SOLAR ENERGY BY 2020 AS SOON AS POSSIBLE. WE (THE REGAL WE) HAVE BEEN IN TOUCH WITH EPA AND WILL OPPOSE THE 2012 SIP AND SDISTRICTS PLANS THAT ARE NOT IMMEDIATE TOTAL SOLAR CONVERSION PLANS & IMPLEMENTATIONS.

In the State of CA Supreme Court Case of SCAQMD v Coalitions Association of 2012 the SCD won and established that BARCT Best Available Retrofit Control Technology is a technology forcing law and while solar is life cycle cost effective now it will be more so by 2020 and must be required to be retrofitted now for building and for processes as well as electric vehicles in the state.

While the current peak electricity load is approx. 60 GW Gigawatts a total of 180 GW Gigawatts peak will be needed to convert to solar electric vehicles and hydrogen electric either fuel cells electrolysis of water to hydrogen or hydrogen directly which work at from 50-80% efficiency and can store solar energy daily weekly months seasonally or for years .

CPUC ordering plus 1 GW of Storage is a modest start but we will need approx 180 GW Hours plus to convert CA.

AB32 and othewr parts of CALaw require CARB etc to convert to Solar Renewables ASAP by 2020. The law ssays thou shalt implement the best technology that is possible that is cost effective whivch solar is. Incorpoprated herein by reference is State Health and safety code 3800 as well as 40404.5 and 40405 and 40406 ie as SCD Solar conversion (immediate) and implementation plan as well as other District and the CA

SI{P StateImplimentation Plan. Distreicts use low nox burners as BACT etc to can use Solar as BARCT BACT etc now. Do it already.

US DOE Department of Energy Sunshot will have solar e;lectricity at 5 cents per KWH by 2020 noquestion do itnow...

ITSC using CHP Combined Solar Heatand Colling (absorbtion chillers district heatingand cooling and pv and thermas systems or hybrids are cost effective now (also rember CA Supremes Tech Forcing Colar 5cents by 2020.

PG&E went bankrupt and Comissioner Florio told me that Senator Pro Tem John Burton put together a deal what the state would buy out their T &

D transsssssssssssitition and distribution system for \$1 but even thought this was a go with a republican governor and was gpo for a few weeks it fvell thought . But they are going BK Gin when the share holders have topay for a minimun fof 250,00 0 year of storage of nuclear waste as well as bankkruptcy for SCE and SDG&E and Sempra Dirty Gas is 80-100 plus temmmmmmes the GWP global warming potential impact compared to CI02 must6 896dirty gas care and asall heat etd,.etc,. more to come ...
