Sustainable Development Goals (SDGs) are a set of 17 global goals adopted by the United Nations in 2015 as a universal call to action to end poverty, protect the planet, and ensure that all people enjoy peace and prosperity by 2030. The SDGs are interconnected and aim to address a wide range of social, economic, and environmental issues, including poverty, hunger, health, education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, industry, innovation and infrastructure, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water, life on land, peace, justice and strong institutions, and partnerships for the goals. The SDGs are intended to be achieved through a combination of government action, private sector investment, and civil society engagement, and they provide a framework for countries to measure their progress and hold themselves accountable for their commitments.
