

APPENDIX F

DESIGNATION VALUE TABLES

APPENDIX F

DESIGNATION VALUE TABLES

The following tables list State standard designation values (DVs) for each monitoring site for pollutants with nonattainment areas. Areas with DVs less than the standard are not necessarily in attainment; data must also meet completeness and representativeness criteria (see Appendix B of this Initial Statement of Reasons (ISOR)) and have been collected following criteria outlined in California Code of Regulations (CCR), title 17, section 70100.

Those pollutants that have a standard with a 24-hour averaging time or less include a valid Expected Peak Day Concentration (EPDC) for the DV year. The DV and EPDC are explained in detail in Appendix E of this ISOR. EPDCs shown are rounded to the precision of the relevant State standard. Only valid EPDCs are shown.

Those pollutants with an annual standard include an indication of annual data representativeness; no value for data representativeness (i.e., neither Y nor N) means the monitor was not in operation at any time during that year. Representativeness is explained in detail in Appendix B of this ISOR.

To be included in this analysis, the cut-off date for 2017-2019 air quality data, except for ozone, used in this analysis was had to be in the Aerometric Data Analysis and Management system by July 1, 2020. Ozone data was received through October 1, 2020, as nonattainment-transitional classification for ozone requires assessment of the current calendar year (see CCR, title 17, section 70303.5(b)). for most pollutants and October 1, 2020 for ozone pollutants. Data received after these dates will be reflected in future analyses.

Monitoring site data that is underlined led to regulation changes described in the ISOR.

Ozone (O₃): 1-Hour Designation Values (DV) and Valid EPDC

Based on 2017 through 2019 Data

State 1-Hour O₃ Standard = 0.09 parts per million (ppm), not to be exceeded

**Data impacted by exceptional or unusual concentration event removed from consideration*

Particulate Matter (PM_{2.5}) : Annual Designation Values (DV) and Annual Data Representativeness

Based on 2017 through 2019 Data

State Annual PM_{2.5} Standard = 12 micrograms per cubic meter (µg/m³), not to be exceeded

**Data impacted by exceptional or unusual concentration event removed from consideration*
