# I. General

The Staff Report: Initial Statement of Reasons for Rulemaking (staff report or ISOR), entitled “Public Hearing to Consider Proposed Amendments to the Low Carbon Fuel Standard,” released December 19, 2023, is incorporated by reference herein. The staff report contained a description of the rationale for the proposed amendments. On December 19, 2023, all references relied upon and identified in the staff report were made available to the public.

California is in the midst of a rapid transition to cleaner fuels and carbon neutrality, with just over 20 years to transition from today’s significant fossil fuel usage to a future of clean fuels and technology. In 2022, CARB approved the 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan Update), which charted a path to achieving carbon neutrality by 2045 and reducing greenhouse gas emissions 85% below 1990 levels by 2045. Meeting this goal will require the deployment of greenhouse gas emission reduction strategies at an unprecedented scale and pace. As transportation emissions, primarily from the use of fossil fuels, are California’s single biggest source of greenhouse gas emissions and contributor to poor air quality, the State is working to rapidly increase the numbers of zero-emission vehicles (ZEVs) on the road and deploy cleaner fuels to power them.

The Low Carbon Fuel Standard (LCFS) is a key part of California’s transportation decarbonization strategy and a successful one thus far. The LCFS provides the economic incentives to produce cleaner fuels like electricity, hydrogen, and biofuels that are needed to displace fossil fuels and reduce transportation sector emissions. The LCFS has supported the displacement of billions of gallons of petroleum fuels with lower carbon alternatives, and without these alternative fuels the State risks returning to higher levels of fossil fuel use and fewer climate and air quality benefits. With clear scientific consensus on the need to rapidly decarbonize and achieve carbon neutrality by mid-century, the significant health and economic benefits of phasing down fossil fuel use, and the introduction of federal funding for alternative fuels and clean energy, CARB staff proposed updates to the LCFS regulation.

The proposed amendments would increase both the pre- and post-2030 stringency of the LCFS carbon intensity (CI) benchmarks. The proposed amendments would require a 30% reduction in fuel CI by 2030 and a 90% reduction in fuel CI by 2045 from a 2010 baseline. To accommodate rapid advances in transportation fuel production and use, the proposed amendments also include a near-term step-down and an Automatic Acceleration Mechanism (AAM). The step-down is a one-time 9% reduction in the CI benchmark in 2025 that increases the stringency of the CI target. The AAM is another tool to increase the stringency of the CI benchmark but is activated only when specific regulatory conditions are met. The objective is to send clear, long-term market signals to support investment in low-carbon fuel production and technologies that are needed to achieve deep emissions reductions in the transportation sector while supporting the broader portfolio of zero-emission vehicle regulations and climate statutes. Another goal is to align the crediting opportunities in the LCFS with the fuel and technology pathways identified in the 2022 Scoping Plan Update. To encourage additional GHG reductions in key areas where decarbonization will be important to meet long-term climate goals, staff proposes to expand ZEV infrastructure crediting to the medium- and heavy-duty vehicle sector under the program. Staff are also proposing to incorporate strengthened sustainability guardrails to prevent potential future externalities associated with crop-based fuels. Given the need to quickly scale low-carbon fuel production in this decade and staff’s experience implementing the program for over a decade, staff also proposes to update and streamline several quantification methods and analysis tools to avoid slowing down the

investment in or availability of low-carbon fuels, and to potentially support reductions in administrative needs for other jurisdictions establishing similar programs.

## **A. Mandates and Fiscal Impacts to Local Governments and School Districts**

The Board has determined that this regulatory action will not result in a mandate to any local agency or school district the costs of which are reimbursable by the state pursuant to Part 7 (commencing with section 17500), Division 4, Title 2 of the Government Code.

Three separate impacts related to the proposed amendments affect local government finances: revenue generated from the sale of LCFS credits from transit fleets that use low-CI fuels, increase in local tax revenues from increased purchases of alternative jet fuel and renewable diesel, and an increase in the expenditure on fuels for government fleets.

The proposed amendments are estimated to increase local government revenue by \$2.38 billion, with \$2.18 billion of the revenue from LCFS credit generation and the remaining \$199 million from fuel taxes. Local government diesel fuel costs increase by \$30.3 million. For the current fiscal year, 2024-2025, local government revenues are expected to increase by \$66.5 million and fuel costs are expected to increase by \$595,000. The expected revenue benefits to local governments from the Proposed Amendments far outweigh potential future costs associated with the Proposed Amendments.

The costs to local government are not reimbursable pursuant to Section 6 of Article XIII B of the California Constitution and Part 7 (commencing with Section 17500) of Division 4 of the Government Code. These costs are not reimbursable because the proposed amendments neither compel local agencies to provide new governmental functions (i.e., do not require such agencies to provide additional services to the public), nor do they impose requirements that apply only to local agencies or school districts. Fuel purchase costs and savings apply to all individuals and entities that own or operate vehicles. This proposed regulatory action also does not compel local agencies to increase the actual level or quality of services that they already provide the public. For the foregoing reasons, any costs incurred by local agencies to comply with this regulatory action are not reimbursable.

## **B. Consideration of Alternatives**

For the reasons set forth in the staff report, in staff's comments and responses at the hearing, and in this Final Statement of Reasons (FSOR), the Board determined that no alternative considered by the agency would be more effective in carrying out the purpose for which the regulatory action was proposed, or would be as effective and less burdensome to affected private persons, or would be more cost-effective to affected private persons and equally effective in implementing the statutory policy or other provisions of law than the action taken by the Board.

### **Small Business Alternative**

Government Code subsection 11346.9(a)(5) requires that an FSOR contain an "explanation setting forth the reasons for rejecting any proposed alternative that would lessen the adverse economic impact on small businesses." CARB has not identified any reasonable alternatives that would be as effective in carrying out the purposes of the regulatory action and that would lessen any adverse indirect impacts of the LCFS regulation on small business. Staff expects

that small businesses will see net benefits from the proposed amendments from increased crediting revenue, relative to the baseline.

## **II. Modifications Made to the Original Proposal**

### **A. Modifications Approved at the Board Hearing and Provided for in the 15-Day Comment Periods**

On December 19, 2023, CARB released the Notice of Public Hearing (45-Day Notice) and Staff Report: Initial Statement of Reasons for Rulemaking (Staff Report), titled “Public Hearing to Consider Proposed Amendments to the Low Carbon Fuel Standard,” for public review, and made all supporting references available to the public. The 45-Day Notice comment period began on January 5, 2024, and closed on February 20, 2024. On February 14, 2024, CARB issued a Notice of Postponement, postponing the originally noticed hearing date of March 21, 2024. CARB received a total of 398 written comments, in addition to 8,763 form letter comments, during the 45-Day Notice comment period. On May 20, 2024, CARB released a Notice of Public Hearing for November 8, 2024.

On August 12, 2024, CARB released a Notice of Public Availability of Modified Text and Availability of Additional Documents and Information (First 15-Day Notice). CARB received a total of 253 written comments during the comment period, which closed on August 27, 2024.

On August 16, 2024, CARB released a Recirculated Draft Environmental Impact Analysis. CARB received a total of 23 written comments during the comment period, which closed on September 30, 2024.

On October 1, 2024, CARB released a Notice of Public Availability of Modified Text and Availability of Additional Documents and Information (Second 15-Day Notice). CARB received a total of 307 written comments during the comment period, which closed on October 16, 2024.

On October 11, 2024, CARB posted an Errata to correct an error in the proposed regulatory text.

On November 8, 2024, CARB held a public hearing to consider approving the Proposed Amendments. After considering staff’s presentation of the Proposed Amendments and all public comments received, the Board approved Resolution 24-14, which approved the Proposed Amendments to the Low Carbon Fuel Standard regulations for adoption.

The list below summarizes changes made to the original proposal.

#### **1. 2025 Carbon Intensity Benchmark Step-Down**

The most important update to the proposal made in response to public comment was increasing the stringency of the 2025 carbon intensity benchmark to reflect a 9% step-down, an increase from the previously-proposed 5% step-down. Staff proposed to increase the near-term ambition of the carbon intensity benchmarks in consideration of the continued growth in the credit bank in recent quarters, as well as public feedback stating that a 5% step-down would not be adequate to balance credits and deficits in the market or reduce the size of the credit bank, which continues to increase over time. Staff proposed to maintain the initially proposed stringency of the 2030 carbon intensity benchmark for this scenario, due to the high levels of uncertainty in key modeling inputs.

## **2. Fossil Jet Fuel**

Staff initially proposed to eliminate the exemption for intrastate fossil jet as a deficit-generating fuel. In consideration of public feedback, staff removed that initial proposal, restoring the previous exemption. CARB will prioritize developing effective means for expanding alternative jet fuel (AJF) use, and will continue to monitor the jet fuel market and work with the U.S. EPA and South Coast Air Quality Management District to reduce emissions from aircraft and airports.

## **3. Soy, Canola, and Sunflower Crediting Eligibility Limitation**

Staff proposed to limit eligibility for credits for biomass-based diesel produced and/or imported from virgin soybean oil, canola oil, and sunflower oil to up to 20% of annual biomass-based diesel reported on a company-wide basis. Quantities of soybean, canola, or sunflower oil biomass-based diesel in excess of 20% would not generate credits.

## **4. Biomethane**

Staff proposed modifications to biomethane-related policies to align with the 2022 Scoping Plan Update. These modifications include phasing out pathways for crediting biomethane used in compressed natural gas (CNG) vehicles after December 31, 2040 for projects that break ground after December 31, 2029; regulatory provisions related to avoided methane crediting for projects that break ground prior to January 1, 2030, and after January 1, 2030; new biomethane deliverability requirements; and the expansion of book-and-claim of biomethane to allow for electricity production used for EV charging, if the electricity is generated using fuel cells, and for production of hydrogen used as an input to fuel production.

## **5. Sustainability**

Staff modified the proposal to add sustainability certification requirements for fuels from crop-based or forest-derived biomass to phase in the requirements over time, and incorporated other refinements to the concept.

## **6. Verification**

Staff proposed to increase the threshold for verification deferral for hydrogen and electricity-based transactions from 6,000 credits to 10,000 credits. In response to public comments, this provision helps to reduce administration burden for annual verification by giving hydrogen and electricity reporting entities a higher threshold for deferring verification, given hydrogen and electricity transactions are more likely to have high numbers of smaller-volume entities than liquid fuel providers.

Staff additionally proposed to delay the implementation of the verification requirement for hydrogen and electricity-based transactions by one year. In response to public comment, this provision gives reporting entities additional time to obtain verification services.

Lastly, staff proposed to clarify the site visit requirement for verification services by explicitly stating that in order to verify a Quarterly Fuel Transactions Report, a verifier must visit the central records location annually, which may be the company headquarters. When necessary, verifiers are expected to conduct risk-based site visits to fueling supply equipment (FSE) or fuel dispensing facilities based on the verifiers' professional judgment, but in many cases will

only need to visit the central records facility. These clarifications will provide reporting entities with more flexibility while maintaining the integrity of the LCFS verification process. Verification is critical to maintaining the integrity of the LCFS program and provides a high level of confidence in reported data. While this proposed clarification provides additional flexibility for complying with the verification requirements, the requirement to obtain verification services for all fuels used in the program stands.

## **7. Modifying Crediting Potential for Fixed Guideway Systems in Operation prior to 2011**

Staff proposed to remove the pre-2011/post-2010 delineation for Fixed Guideway System crediting. This creates additional credits in the market.

### **B. Updates to Analysis as a Result of Modifications**

Due to the modifications included in the 15-Day packages, staff updated the emissions and economic impact analyses to reflect the costs and benefits of the updated rulemaking proposal. Largely due to the updated virgin and waste oil supply curves (and resulting increase in renewable diesel) and 2025 CI target step-down, the total direct costs of the proposed regulation over its 22-year lifetime to California businesses decreased to \$84.7 billion, or approximately 2 percent of California's current state annual \$3.9 trillion economy, and credit revenues generated decreased to \$68.7 billion, resulting in a net cost of \$16 billion.<sup>1</sup> Businesses expected to expand as a result of the LCFS program include those in electric power generation, transmission and distribution, and basic chemicals (ex. hydrogen). It is also likely that other existing businesses will expand, such as those related to the production of biofuel-based transportation fuels, electric vehicles and electric vehicle charging stations. Other businesses that may emerge or expand are infrastructure building businesses, including clean fuel stations beyond charging stations. Given modeling constraints, the estimates for industry impacts do not reflect new/emerging industries or businesses that do not exist today. CARB uses the CATS model to estimate future transportation fuel supply changes and the REMI model, which applies economic modeling to national and state level data to make these economic forecasts and is listed on the California Department of Finance website as an analysis tool. The REMI model is a useful tool, but has some constraints. For example, it can only consider existing businesses, industries and jobs – the model cannot calculate the economic benefits associated with new industries the LCFS program incentives such as hydrogen, carbon capture and storage, new clean transportation fuel providers, or infrastructure builders and station operators. The REMI model indicates 94 percent of the businesses impacted by the LCFS regulation are in the petroleum and coal product sector. Modeling constraints also result in dramatic underestimates for the impacts to businesses in electric power generation, transmission and distribution, and basic chemicals (ex. hydrogen) and sustainable aviation fuel producers; the REMI model estimates 1-5 percent of these businesses will be impacted over time. Under the proposed amendments, all fuel producers will have an increased incentive to innovate and deploy new methods that reduce the CI of their fuels under the proposed carbon intensity targets. With the potential for a modest higher price for LCFS credits, the proposed amendments will provide long term price stability for

---

<sup>1</sup> This includes sustainability costs, estimated to average \$4.7 million in costs per year to the industry.

LCFS credits, which is essential for low-CI fuel producers to make investments in long-term capital projects and research and development.

Because higher renewable diesel volumes occurred in both the updated baseline and the proposed regulation, GHG reductions declined slightly to 553 million metric tons reduced, resulting in a cost-effectiveness of \$29 per metric ton CO<sub>2</sub>e reduced. Staff also updated the air quality modeling, with updated alternative jet fuel emission reduction values.<sup>2</sup> The revised analysis resulted in NO<sub>x</sub> reductions increasing to 34,495 tons and PM<sub>2.5</sub> reductions increasing to 9,107 tons. The total statewide health benefits derived from criteria emissions reductions is estimated to be approximately \$11.9 billion, with \$11.7 billion resulting from reduced premature cardiopulmonary mortality and \$209 million resulting the reductions in other adverse health impacts. In addition, Californians should expect to see an estimated 42% reduction in total fuel costs per mile by 2045 - translating to savings of over \$20 billion in fuel expenditures every year. For passenger cars, these fuel cost savings will be even more pronounced, cutting today's costs to Californians by more than 50%. The amount of LCFS proceeds invested in disadvantaged communities for clean fuel and transportation projects is estimated to be approximately \$4.8 billion over the next decade. The LCFS reduces dependence on petroleum and supplies cleaner fuels to meet consumer demand, thereby protecting consumers from the oil industry's associated supply and cost volatility while providing support for cleaner fuels. LCFS-related investments also make electric vehicles (light, medium and heavy duty) more affordable for the total cost of ownership and expand access to electric vehicle charging and hydrogen refueling infrastructure.

Overall, the costs declined while benefits increased as compared to those estimated in the ISOR. The REMI model estimates the total statewide benefits of this regulation to be ~\$81 billion over its 22-year lifetime. These benefits include monetized benefits of the reduced environmental and health impacts and fuel cost savings to California businesses and consumers.

- Monetized health benefits: \$11.9 billion
- Credit Revenue to CA Businesses: \$68.7 billion
- Total CA Benefits and Savings: \$80.6 billion (greater if the social cost of carbon were included).

The total CA benefits and savings number does not include the Social Cost of Carbon Benefit and underestimates the total benefit. Due to the range of Social Cost of Carbon estimates depending on the discount rate, those values are excluded from the total and are also not part of the REMI modeling outputs, but are included below to provide a more complete assessment of the total benefits the proposed regulation would provide:

- Social Cost of Carbon benefit: \$14.7 to \$61.2 billion
- Social Cost of Methane benefit: \$6.5 to \$16.2 billion
- Total social cost benefits (in addition to the \$80.6 billion): \$21.2 to 77.4 billion

The updated analysis does not alter the determinations that both alternatives should be rejected. The complete updated scenario modeling, GHG, and air quality modeling workbooks were all posted with the First 15-Day Notice.

---

<sup>2</sup> Staff updated the AJF NO<sub>x</sub> and PM<sub>2.5</sub> reduction percentages based on a recent synthesis of published studies evaluating the emissions benefits of AJF indicating that AJF reduces PM<sub>2.5</sub> by 65% by mass during landing and takeoff, while not resulting in definitive NO<sub>x</sub> reductions.

## C. Non-Substantial Modifications

Subsequent to the two 15-Day public comment periods mentioned above, staff identified the following additional non-substantive changes to the regulation:

- Corrected/updated cross references, which do not change or point to new or different requirements, but rather may have been erroneously omitted in earlier versions, or changed as a result of 15-day changes, or were simply transcription errors:
  - Section 95481(a) “Credits” and “Deficits” definition: Added new sections 95486.3(a)(5) and (b)(5), 95486.4(a)(5) and (b)(5) to the definition since these new sections include how credits and deficits are calculated
  - Section 95481(a) “Temporary Method” definition: Corrected “section 95488(a)(1),” which is no longer about measurement accuracy, to the corresponding new “section 95491.2(a)(1)”
  - Section 95482(b): Corrected “sections 95484(b) through (d)” to the corresponding renumbered “sections 95484(d) through (f)”
  - Section 95483(c)(1)(A)5.b.: Corrected “section 95483(c)(1)(A)6.a., which does not exist, to “section 95483(c)(1)(A)5.a.”
  - Section 95483(c)(3): Corrected “sections 95491(d)(3)(A), paragraphs 3. through 5.,” which does not exist, to “section 95481(d)(3)(A)”
  - Section 95484(a), 95486(b): Added new sections “95486.2, 95486.3, 95486.4, and 95489” since these new sections include how credits and deficits are calculated
  - Section 95486.1(a)(1): Corrected “sections 95484(b), (c), and (d)” to the corresponding renumbered “sections 95484(d), (e), and (f)”
  - Sections 95486.2(a)(5), 95486.2(b)(5): Corrected “sections 95484(b)” to the corresponding renumbered “sections 95484(d)”
  - Section 95488.5(c): Corrected subsection “(F),” which does not exist, to subsection “(E)”
  - Section 95488.8(c): Corrected “section 6254.7” with “section 7924.510”
  - Section 95488.9(g)(5)(C)2.: Corrected “section 95488.9(g)(1)(B)(10)” to the corresponding renumbered “section 95488.9(g)(5)(A)(10)”
  - Section 95488.9(g)(5)(H): Corrected “section 95488.9(g)(1)(B)” to the corresponding renumbered “section 95488.9(g)(5)(A)”
  - Sections 95491.1(c)(1)(K), 95489.1(c)(2)(E): Corrected “section 95488.8(j),” which is no longer about measurement accuracy, to the corresponding new “section 95491.2(a)”
- Sections 95481(a) “Avoided Cost Calculator” definition, 95488(c)(1), 95488.6(a)(1)(B): Deleted stray period
- Section 95481(a) “Break ground” definition: Corrected “digestor” to “digester”

- Sections 95481(a) “By-product” definition, “Wastewater Sludge” definition, 95488.7(a)(2)(A)8., 95489(c)(2)(C)3., 95489(c)(2)(C)4.: Hyphenated “Byproduct” for consistency throughout the regulation
- Sections 95481(a) “Clean Fuel Reward” definition, 95486.1(a) Table 5, 95486.1(g), 95488.3(a), 95488.3(b)(7), 95488.8(g)(1)(D), 95488.8(g)(1)(D)3.e., 95488.8(i)(1), 95488.9(b) Table 8, 95488.10(b), 95489(c)(3)(C), 95489(e)(4)(C), 95489(f)(2)(A), 95489(f)(2)(B), 95489(f)(4)(C), 95490(a)(2)(B), 95491(c)(1), 95501(b)(13)(A)3.: Deleted an extra space
- Section 95481(a): Moved definition of “Jet Fuel” to keep it in alphabetical order
- Section 95481(a) “Credits and “Deficits” definition, “Renewable Hydrogen” definition: Added a comma for improved punctuation
- Section 95481(a) “Distiller’s Grains and Solubles” definition: Hyphenated “coproduct” for consistency throughout the regulation
- Section 95481(a) “Electric Power for Ocean-going Vessel (eOGV)”: Hyphenated “ocean-going” for consistency throughout the regulation
- Section 95481(a) “Emission Factor” definition: Corrected “lifecycle” to “life cycle” for consistency throughout the regulation
- Section 95481(a) Transaction Type for “EV Charging-Grid” definition, Transaction Type for “EV Charging-Non-Grid” definition, Transaction Type for “EV Charging-Smart Charging” definition, Transaction Type for “Fuel Cell Vehicle (FCV) Fueling-Smart Electrolysis” definition: Deleted extra hyphen
- Section 95481(a) “Transaction Type” definition: Corrected the numbering of subsections (21) through (24)
- Section 95482(a): Corrected the numbering of subsections (11) through (13)
- Sections 95482(g), 95483(c)(1)(A)2., 95488(c)(2), 95488.8(i)(2)(B)1., 95488.8(i)(2)(D), 95489(e)(1)(A), 95500(e)(2): Added a comma after a date
- Section 95483(c)(1)(A): Lowercased “below”
- Section 95483(c)(1)(A)5.a.: Corrected “recognizes” to the past tense “recognized”
- Section 95483(c)(1)(A)5.a.viii.: Lowercased “electrification”
- Section 95483(c)(1): Corrected the numbering of subsections (B) through (F)
- Section 95483.2(c)(2): Corrected the numbering of subsections (C) through (E)
- Section 95484(a): Lowercased “sections”
- Section 95484(b)(1): Updated “four quarters” to “calendar year” and corrected “follow” to “follows”. As part of the Second 15-Day Notice, staff proposed to change the data evaluation period for the Automatic Acceleration Mechanism (AAM) to a rolling four quarter evaluation, rather than the previous compliance year. When proposing this change throughout section 95484(b), staff inadvertently modified the text in section 95484(b)(1) from “calendar year” to “four quarters”, in conflict with the trigger frequency specified in the initial rulemaking proposal and First 15-day Notice. The Second 15-day

Notice specified that the shift to a four-quarter rolling evaluation period would not affect the frequency of when the LCFS benchmarks would be adjusted, but instead would simply provide earlier notice to stakeholders of the AAM being triggered. As described in the Second 15-day Notice (pages 5-6): “If triggered, the benchmark schedules would still be adjusted on the same frequency and timing as previously proposed; however, basing the trigger on the most recent four quarters may provide earlier notice to stakeholders that the AAM has been triggered, providing further market certainty and lead time to LCFS participants.” Staff have corrected the transcription error in section 95484(b)(1) back to “calendar year”, rather than “four quarters”, consistent with all applicable Notice documents.

- Section 95485(a)(2)(B): Added “the” where grammatically appropriate
- Section 95485(c)(3)(C)1.: Hyphenated “pro-rata” for consistency throughout the regulation
- Section 95486(b): Corrected the first “section” to “sections” and deleted the second “section”
- Section 95486.1(a) Table 5: Corrected spelling of “Forklifts” and “lift”
- Section 95486.1(f)(1): Corrected “a carbon intensity for hydrogen found in the Lookup Table in section 95488.5, or a carbon intensity value certified through the Tier 2 pathway application process,” to “using a carbon intensity value certified through the Tier 1 or Tier 2 pathway application process” to align with updated hydrogen pathways
- Section 95486.2(b)(1): Corrected “designate” to “designee”
- Section 95488.1(b)(1): Corrected the numbering of subsections (C) through (E)
- Section 95486.2(b)(3): Corrected the numbering of subsections (A) through (G)
- Section 95488.3(b): Replaced a colon with a period
- Section 95488.3(b)(7): Added a space between “CI” and “Calculator”
- Section 95488.3(d): Corrected the numbering of subsections (1) through (2)
- Section 95488.7(a)(2)(G): Replaced dash with “through” for consistency throughout the regulation
- Section 95488.8(g)(1)(A): Corrected the numbering of subsections 3. through 6.
- Section 95488.9(f)(3)(A): Corrected “years” to “year”
- Section 95488.9(g)(5): Corrected the numbering of subsections (A) through (I)
- Section 95488.10: Corrected the numbering of subsection (b)
- Section 95488.10(b): Replaced a semicolon with a period
- Section 95489(a): Corrected “are” to “is”
- Section 95489(c)(1)(D): Corrected spelling of “joint”
- Section 95490(b)(8)(B): Deleted stray colon

- Section 95490(f)(1): Corrected spelling of “Reports”
- Section 95491(d)(3)(B)3.b.: Added “and”
- Section 95491(d)(3)(B)3.c.: Deleted “and”
- Section 95481.1(c)(2)(H): Deleted stranded forward slash
- Section 95500(b)(2)(B): Added “and” and deleted “for fuel transaction types identified in section 95500(c)(1)(A) through (C), or 10,000 or more credits for fuel transaction types identified in section 95500(c)(1)(D) through (E) and also does not result in”. As part of the Second 15-Day Notice<sup>3</sup> modifications package, staff proposed to increase the verification deferral threshold from 6000 credits to 10,000 credits, for quarterly fuel transactions reporting verification. However, staff mistakenly applied this deferral threshold increase to the annual fuel pathway reporting text, section 95500(b)(2)(B), instead of to the quarterly fuel transactions reporting verification section 95500(c)(2)(B), which matches the Notice justification. Staff corrected this typographical error by moving the new text introduced in the Second 15-Day Notice into the correct and originally-intended section, 95500(c)(2)(B).
- Section 95500(c)(1)(A)7.: Deleted “and”
- Section 95500(c)(1)(D)2.: Added a period
- Section 95500(c)(2)(B): Added “for fuel transaction types identified in section 95500(c)(1)(A) through (C), or 10,000 or more credits for fuel transaction types identified in section 95500(c)(1)(D) through (E) and also does not result in” and deleted “and”. See explanation above for change to Section 95500(b)(2)(B).
- Section 95501(b)(4): Corrected the numbering of subsections (F) through (I)
- Section 95501(h): Corrected the numbering of subsection (4)
- Tier 1 CI Calculator for Hydrogen, Site-Specific Inputs Tab, Section 2.4: Changed “Low-CI electricity” option to “Direct Supply Low-CI Electricity” to improve the consistency of the input in the calculator with other proposed amendments in section 95488.8(i)(1).
- Tier 1 CI Calculator for Hydrogen: Corrected a macro error that caused the calculator to display the hydrogen CI results under book-and-claim of biomethane when both liquid and gaseous hydrogen production methods were selected
- Tier 1 CI Calculator for Hydroprocessed Ester and Fatty Acid (HEFA) Fuels, HEFA Production Inputs Tab, Section 6: Updated duplicate section number “6.5” to “6.6” and renumbered sections “6.6”, “6.7”, and “6.8” as “6.7”, “6.8”, and “6.9”, respectively

---

<sup>3</sup> The Notice (on page 10) justification specifically described the modification in terms of transactions (emphasis added): “staff proposes to increase the threshold for verification deferral for hydrogen and electricity-based transactions from 6,000 credits to 10,000 credits. In response to public comments, this provision helps to reduce over administration burden for annual verification by giving hydrogen and electricity reporting entities a higher threshold for deferring verification, given hydrogen and electricity transactions are more likely to have high numbers of smaller volume entities than liquid fuel providers.”

- Tier 1 CI Calculator for Hydroprocessed Ester and Fatty Acid (HEFA) Fuels, CA-GREET4.0 Tab: Corrected the unit for Natural Gas from “MMBtu. LHV” to “gCO<sub>2e</sub>/MMBtu, LHV”
- Tier 1 CI Calculator for Hydroprocessed Ester and Fatty Acid (HEFA) Fuels Instruction Manual: Corrected date of release from “September 27, 2024” to “October 1, 2024” to be consistent with intended date as explained in the Second 15-Day Changes.
- CA-GREET4.0 Supplemental Document, Section D: Updated the sources of tailpipe CH<sub>4</sub> and N<sub>2</sub>O emissions data for biodiesel and renewable diesel to reflect updates made in the 15-Day Changes

The above-described modifications constitute non-substantial changes to the regulatory text or incorporated documents because they more accurately reflect the numbering of a section and correct spelling and grammatical errors, but do not materially alter the requirements or conditions of the proposed rulemaking action.

### **III. Documents Incorporated by Reference**

The regulation adopted by the Executive Officer incorporates by reference the following documents:

- Hydrogen Fueling Capacity (HyCap) Model. September 16, 2024, section 95481(a)
- Oil Production Greenhouse gas Emissions Estimator Version 3.0b, May 14, 2022, section 95481(a)
- Lookup Table Pathways Technical Support Documentation, August 12, 2024, section 95488.1(b)
- California-modified Greenhouse Gases, Regulated Emissions, and Energy use in Transportation version 4.0 (CA-GREET4.0) model, August 12, 2024, section 95488.3(b)
- Tier 1 CI Calculator for Corn or Sorghum Ethanol, August 12, 2024, section 95488.3(b)(1)
- Tier 1 CI Calculator for Sugarcane Ethanol, August 12, 2024, section 95488.3(b)(2)
- Tier 1 CI Calculator for Biodiesel, August 12, 2024, section 95488.3(b)(3)
- Tier 1 CI Calculator for Hydroprocessed Ester and Fatty Acid (HEFA) Fuels, August 12, 2024, section 95488.3(b)(4)
- Tier 1 CI Calculator for Landfill Biomethane, August 12, 2024, section 95488.3(b)(5)
- Tier 1 CI Calculator for Wastewater Sludge Biomethane, August 12, 2024, section 95488.3(b)(6)
- Tier 1 CI Calculator for Dairy and Swine Manure Biomethane, August 12, 2024, section 95488.3(b)(7)
- Tier 1 CI Calculator for Organic Waste Biomethane, August 12, 2024, section 95488.3(b)(8)
- Tier 1 CI Calculator for Hydrogen, October 1, 2024, section 95488.3(b)(9)

- Tier 1 CI Calculator for Corn or Sorghum Ethanol - Instruction Manual, August 12, 2024, section 95488.6(a)(1)(B)(1)
- Tier 1 CI Calculator for Sugarcane Ethanol - Instruction Manual, August 12, 2024, section 95488.6(a)(1)(B)(2)
- Tier 1 CI Calculator for Biodiesel - Instruction Manual, August 12, 2024, section 95488.6(a)(1)(B)(3)
- Tier 1 CI Calculator for Hydroprocessed Ester and Fatty Acid Fuels - Instruction Manual, October 1, 2024, section 95488.6(a)(1)(B)(4)
- Tier 1 CI Calculator for Landfill Biomethane - Instruction Manual, August 12, 2024, section 95488.6(a)(1)(B)(5)
- Tier 1 CI Calculator for Wastewater Sludge Biomethane - Instruction Manual, August 12, 2024, section 95488.6(a)(1)(B)(6)
- Tier 1 CI Calculator for Dairy and Swine Manure Biomethane - Instruction Manual, October 1, 2024, section 95488.6(a)(1)(B)(7)
- Tier 1 CI Calculator for Organic Waste Biomethane - Instruction Manual, October 1, 2024, section 95488.6(a)(1)(B)(8)
- Tier 1 CI Calculator for Hydrogen - Instruction Manual, October 1, 2024, section 95488.6(a)(1)(B)(9)
- SB 350 Low-Income Barriers Study, February 2018, section 95491(e)(5)(A)2.
- ISO 14065:2020(E), *General principles and requirements for bodies validating and verifying environmental information*, section 95488.9(g)(8)(A)10.c.
- ISO/IEC 17065:2012(E), *Conformity assessment – Requirements for bodies certifying products, processes and services*, section 95488.9(g)(8)(A)10.c.

These documents were incorporated by reference because it would be cumbersome, unduly expensive, and otherwise impractical to publish them in the California Code of Regulations. In addition, some of the documents are copyrighted, and cannot be reprinted or distributed without violating the licensing agreements. The documents are lengthy and highly technical test methods and engineering documents that would add unnecessary additional volume to the regulation. Distribution to all recipients of the California Code of Regulations is not needed because the interested audience for these documents is limited to the technical staff at a portion of reporting facilities, most of whom are already familiar with these methods and documents. Also, the incorporated documents were made available by CARB upon request during the rulemaking action and will continue to be available in the future. The documents are also available from college and public libraries, or may be purchased directly from the publishers.

## **IV. Summary of Comments and Agency Response**

Chapter IV of this FSOR contains all comments submitted during the 45-Day comment period, the April workshop comment period, the two 15-Day comment periods, and the November 8, 2024 Board Hearing that were directed at the proposed amendments or to the procedures followed by CARB in proposing the amendments, together with CARB's responses. CARB

received a total of 398 comment letters, in addition to 8,763 form letter comments, during the 45-Day comment period; 197 comment letters with written feedback on the April 10, 2024 workshop; 253 comment letters during the First 15-Day comment period; 307 comment letters during the Second 15-Day comment period; and 102 comment letters during the Board Hearing. In addition, 188 stakeholders gave oral testimony at the November 8, 2024 Board Hearing. Each comment letter and the transcript of the testimony are responded to in this FSOR. Commenters included representatives from the electricity and natural gas sectors, refining sectors, health and environmental sectors, reporters and verifiers, airlines, and others.

The individually submitted written comment letters for the 45-Day, First 15-Day, and Second 15-Day comment periods, as well as the Board Hearing, are available here:

[https://www.arb.ca.gov/lispub/comm/iframe\\_bccommlog.php?listname=lcs2024](https://www.arb.ca.gov/lispub/comm/iframe_bccommlog.php?listname=lcs2024)

Note that some comments were scanned or otherwise electronically transferred, so they may include minor typographical errors or formatting that is not consistent with the originally submitted comments. However, all content reflects the submitted comments. All originally submitted comments are available on the public comment docket online. For ease of reference to match comment codes with responses, comments have been grouped in attachments to this FSOR based on their Commenter Code and the associated Table below.

The transcript of verbal testimony presented during the first Board Hearing is available here:

<https://ww2.arb.ca.gov/sites/default/files/barcu/board/mt/2024/mt110824.pdf>

Comments that address the draft Environmental Analysis are responded to in the “Response to Comments on the Draft and Recirculated Environmental Analyses Prepared for the Amendments to the Low Carbon Fuel Standard.”

CARB has summarized and responded to the written and oral comments on the LCFS amendments and the process by which they were adopted. These comment summaries and responses are contained in multiple appendices to the FSOR, sorted by subject matter listed below.

The following notes about the comments and responses will help with understanding how the comments are structured and labeled:

- Each comment has a unique code, as identified in the tables above. Each code indicates the comment period or context of the submission, followed by a unique number for each comment submitted within that comment period or context. For example, comment “45d-001.1” indicates a comment received during the original 45-day comment period: “001” is the unique number identifying the letter that contains the comment and “.1” indicates a specific comment within that letter. These additional sub-comment codes are shown in the copies of the comments included in the rulemaking file. For ease of reference to match comment codes with responses, comments have been grouped in attachments to this FSOR based on their Commenter Code and the associated Table above (e.g., Table 3 comments are grouped together in *FSOR Attachment 3 - Table 3 1st15-Day Comments*).

- Comments are grouped thematically by section and subsection. Each individual comment excerpt is preceded by “Comment:” and followed by its comment identification code, allowing readers to distinguish among individual comment excerpts.
- Comments are excerpted verbatim unless otherwise noted. In some instances, comment excerpts are preceded by the statement, “Commenter says,” with the comment excerpt in quotation marks. In other instances, the verbatim excerpt is presented without any preface or quotation marks. Comments that have been summarized, rather than quoted, are preceded by “Summary:” and are not followed by quotation marks.
- In verbatim comment excerpts, CARB has not corrected or noted errors in the original (for example, by adding “[sic]”). Comment excerpts’ formatting may differ from the formatting of the original comment.
- Footnotes in comments generally have been omitted, though the footnote numbers may remain in the text of the comment excerpt.
- In general, CARB has noted where it made changes in response to the comment. Where it is not noted, no changes were made in response to the comment.

The summary of comments and agency responses are provided in the following Appendices:

- **Appendix A:** General Support, Definitions, Carbon Intensity Target, Regulatory Alternatives, Modeling, Air Quality, Pricing, Gas Prices, Base Credit Spending Requirements, Zero Emission Infrastructure Programs, Bidirectional Charger, Book-and-Claim Provisions, EV Charging, Electricity Crediting, Hydrogen, Fuel Supply Equipment Registration, Transit and Public Fleets, Environmental Justice, Rulemaking Procedure, Authority and Other Legal Objections
- **Appendix B:** Combustion, Jet Fuel, Marine, Forklifts, eTRU, Biomethane, Land Use Change Modeling, Crop-Based Fuels, Definitions Under Sustainability Requirements, Sustainability Requirements, Woody Biomass, Intermediate Crops, Specified Source Feedstock Attestations, Higher Ethanol Blend
- **Appendix C:** Application Submission and Review Process, Life Cycle Analysis, CA-GREET4.0, Lookup Table, Lookup Table Pathways, Tier 1 CI Calculators, Fuel Pathways – General, Temporary Fuel Pathways, Deemed Complete Date, Margin of Safety, Credit True Up, Deficit Obligation, Verification, Vehicle EERs, Dairy and Swine Manure Pathways, Project-Based Crediting, Crude Oil CI and OPGEE, Carbon Capture and Sequestration, Market Functioning, Carbon Isotopic Analysis, Miscellaneous

Coded comments can be referenced in the FSOR attachments below:

- **Attachment 1.a** - Table 1 45-Day Comments
- **Attachment 1.b** - Table 1 45-Day Comments
- **Attachment 2** - Table 2 April Workshop Comments
- **Attachment 3** - Table 3 First 15-Day Comments
- **Attachment 4** - Table 4 Second 15-Day Comments
- **Attachment 5** - Table 5 Board Hearing Written Comments
- **Attachment 6** - Table 6 Board Hearing - Oral Testimony

## **V. Peer Review**

Health and Safety Code section 57004 sets forth requirements for peer review of identified portions of rulemakings proposed by entities within the California Environmental Protection Agency, including CARB. Specifically, the scientific basis or scientific portion of a proposed rule may be subject to this peer review process. CARB determined that the rulemaking does not contain new scientific basis or a new scientific portion subject to peer review requirements set forth in section 57004, and thus no new peer review was required.
