

Appendix F - Designation Value Tables

The following tables list State standard designation values (DVs) for each monitoring site for pollutants with nonattainment areas. Areas with DVs less than the standard are not necessarily in attainment; data must also meet completeness and representativeness criteria (see Appendix B of this Initial Statement of Reasons (ISOR)) and have been collected following criteria outlined in California Code of Regulations title 17 section 70100.

Those pollutants that have a standard with a 24-hour averaging time or less include a valid Expected Peak Day Concentration (EPDC) for the DV year. The DV and EPDC are explained in detail in Appendix E of this ISOR. EPDCs shown are rounded to the precision of the relevant State standard. Only valid EPDCs are shown.

Those pollutants with an annual standard include an indication of annual data representativeness; no value for data representativeness (i.e., neither Y nor N) means a monitor was not in operation at any time during that year. Representativeness is explained in detail in Appendix B of this ISOR.

The cut-off date for air quality data used in this analysis was August 28, 2023. Data received after these dates will be reflected in future analyses.

Monitoring site data that is underlined led to regulation changes described in the ISOR.

**Ozone (O3): 1-Hour
Designation Values (DV) and Valid EPDC**
Based on 2021 through 2023 Data

State 1-Hour O3 Standard = 0.09 parts per million (ppm), not to be exceeded

*Data impacted by exceptional or unusual concentration event removed from consideration
