

Cap-and-Trade Program Vintage 2019 Allowance Allocation Summary

This document provides a summary of vintage 2019 allowance allocation under the Cap-and-Trade Program (Program) aggregated by allocation methodology. Industrial allowance allocation data are disaggregated by general industrial activity. The methodologies for allowance allocation can be found in [Cap-and-Trade Regulation](#) sections 95852(k) and (l), 95870, and 95890 through 95895. Details on allowance allocation to electrical distribution utilities are not included in this document and are instead posted online at <https://www.arb.ca.gov/cc/capandtrade/allowanceallocation/edu-ng-allowancedistribution/electricity-allocation.xlsx>.

Because facility-level allowance allocation data could reveal confidential business information, the total allocation for each allocation methodology, and allocation to each industrial sector with fewer than five companies, are grouped together. For waste-to-energy facilities and liquefied natural gas suppliers, allowance allocation is provided at the entity level. These entities receive vintage 2019 allowance allocation equal to their 2017 covered emissions, which are already publicly available data and therefore not confidential.

Entities that received no vintage 2019 allocation or that have a negative allocation balance that will carry over to the following year do not appear in this document. Also, pursuant to section 95835(c), an entity with emissions below the Program inclusion threshold for a full compliance period may request to exit the Program. Facilities exiting the Program are not eligible to receive vintage 2019 allowance allocation and do not appear in this document.

The “Total Allocation” values in the tables below are the sum of vintage 2019 allowances allocated to eligible entities. “Total Allocation” values do not include any negative allocation balance that will carry over to the following year. “Total Allocation” values include allowances that have true-up value. Vintage 2019 allowances with true-up value are eligible to be used for compliance for covered emissions in 2017 and subsequent years, and the quantity “Total True-Up Value” is a subset of “Total Allocation” in the tables below.

Detailed information regarding allocation for industrial and other sectors may be found on CARB’s Allowance Allocation web page (<http://www.arb.ca.gov/cc/capandtrade/allowanceallocation/allowanceallocation.htm>). Questions regarding allowance allocation may be directed to David Allgood at (916) 445-8238 or David.Allgood@arb.ca.gov.
