Component Swapping means the movement of designated parts between different vehicles/applications utilizing the same diesel emission control strategy (DECS) as defined in the Verification Procedure, Warranty, and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines (the verification procedure or procedure) in Section 2701, Title 13, California Code of Regulations.

Re-designation means the removal, within the same common ownership fleet, of a complete used verified DECS from an appropriate engine in a vehicle/application and installation to another appropriate engine in a vehicle/application that meets the terms and conditions of the DECS Executive Order as defined in the Procedure.

No component swapping or re-designation is allowed for the DCL ROADWARRIOR™ diesel particulate filter.

If component swapping or re-designation occurs, DCL International Incorporated may deny your warranty claim. Selling a used, verified, or conditionally verified DECS is not permitted.
