Air Resources Board

Mary D. Nichols, Chairman 1001 I Street • P.O. Box 2815 Sacramento, California 95812 • www.arb.ca.gov

December 3, 2009

Mr. Jay Warner Engineering Manager, Universal Silencer Technologies 1925 Highway 51/138 P.O. Box 411 Stoughton, WI 53589

Dear Mr. Warner:

The Air Resources Board (ARB) has reviewed the Universal Emission Technologies (UET) application for the verification of the GreenShield[®] Diesel Particulate Filter (DPF) System and determined that the GreenShield[®] DPF System is the same product as the Süd-Chemie Inc. EnviCat-DPF[®]. Since the Süd-Chemie Inc. EnviCat-DPF[®] is an ARB verified Level 3 Plus system based on the evaluation of the same data as provided for the GreenShield[®] DPF System verification application, ARB hereby verifies the GreenShield[®] DPF System as a Level 3 Plus system for the same control group.

The GreenShield® DPF System reduces emissions of diesel particulate matter (PM) by 85 percent or greater and does not increase nitrogen dioxide (NO₂) emissions beyond the 2009 limit of 20 percent of the baseline oxides of nitrogen (NO_X) emissions (Level 3 Plus) when in use in stationary prime and emergency standby (E/S) generators and pumps powered by 1996 or later certified off-road engines meeting 0.2 grams per brake horsepower hour (g/bhp-hr) diesel PM or less based on certification or in-use emissions testing and meet the U.S. EPA Tier 1, Tier 2, or Tier 3 off-road diesel engine certification standards. The Executive Order for the GreenShield® DPF System, including a list of the applicable engine families, is attached.

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website: http://www.arb.ca.gov.

The verification is valid provided the following operating criteria are met:

Parameter	Value
Application	Stationary Prime and E/S Power Generation and
	Prime and E/S Pumping
Engine Type	Diesel, with or without turbocharger, without
	Exhaust-Gas Recirculation (EGR), mechanically or
	electronically controlled, certified off-road engines
	meeting 0.2 g/bhp-hr diesel PM or less based on
DATE OF THE OWNER OWNER OF THE OWNER	certification or in-use emission testing.
Minimum Exhaust Temperature	The engine must operate at the load level required
for Filter Regeneration	to achieve 400 degrees Celsius (°C) for a minimum
	of 30 minutes. Operation at lower temperatures is allowed, but only for a limited duration, as specified
	below.
Maximum Consecutive Minutes	300 Minutes
Operating Below Passive	300 Williates
Regeneration Temperature	
Number of Cold Start and 30	10
Minute Idle Sessions before	
Regeneration Required	
Number of Hours of Operation	2,000 when using diesel with <15 ppm sulfur.
Before Cleaning of Filter Required	
Fuel	California diesel fuel with less than or equal to
	15 ppm sulfur or a biodiesel blend provided that the
	biodiesel portion of the blend complies with ASTM
	International D6751, the diesel portion of the blend
	complies with CCR, title 13, sections 2281 and
	2282 and the blend contains no more than 20
PM Verification Level	percent biodiesel by volume. Level 3 Plus Verification:
Fivi verilication Level	PM – at least 85% reduction
	• NO ₂ – meets January 2009 limit
	1102 moto dandary 2000 mm

Since there may be significant variations from application to application, UET must review actual operating conditions (duty cycle, baseline emissions, exhaust temperature profiles, and engine backpressure) prior to retrofitting an engine with a GreenShield[®] DPF System to ensure compatibility.

Furthermore, the engine on which the GreenShield® DPF System is installed should be well maintained and not consume lubricating oil at a rate greater than that specified by

Mr. Jay Warner December 3, 2009 Page 3

the engine manufacturer. UET must install a UET-DPF Monitor Assembly, or equivalent, backpressure monitor all engines retrofitted with a GreenShield[®] DPF System.

ARB hereby assigns the GreenShield® DPF System the designated family name of:

CA/UET/2009/PM3+/N00/ST/DPF01

This identification number should be used in reference to this verification as part of the system labeling requirement.

Additionally, as stated in the Diesel Emission Control Strategy Verification Procedure, UET is responsible for honoring their warranty (CCR, title 13, section 2707) and conducting in-use compliance testing (CCR, title 13, section 2709).

Should you have any questions or comments, please contact Mr. Kirk Rosenkranz, Air Pollution Specialist at (916) 327-7843.

Sincerely,

/s/

Robert D. Fletcher, Chief Stationary Source Division
