We appreciate the opportunity to comment on the proposed ADF amendments that were presented at the December 13 workshop. We support CARB's efforts to include a new public ADF formulation that includes renewable diesel as described in slide 16 of the presentation.

"(a)(1)(B)1. 16 Blends consisting solely of renewable hydrocarbon diesel at not less than 75 percent by volume, biodiesel, and CARB diesel, where the total biodiesel content of the blend does not exceed 20 percent by volume."

We also recommend that you consider allowing this public formulation for immediate use after the ADF amendments are enacted rather than postpone its use until January 1, 2021 so that the air quality benefits of these ADF blends are not further delayed.

Thank you.

Respectfully yours,

**Gary Grimes**
