Diesel Engine Compliance Center

EMA Certification Workshop
April 27-29, 2021
Certification Assignments

HD On-Highway Engines and Vehicles*
- Fakhri (FJ) Hamady
- Steve Healy
- Ron Schaefer
- Houshun Zhang
- Ryleigh Wright
- Marie St. Peter

Nonroad
- Steven Debord
- Peter Smith
- Melvis Strickland
- Ryleigh Wright
- Houshun Zhang
- Nydia Yanira Reyes-Morales

Marine
- Steven DeBord
- Peter Smith
- Lauren Steele
- Melvis Strickland
- Marie St. Peter
- Ryleigh Wright

Locomotive
- Peter Smith
- Ryleigh Wright

*Including IMO

**Sector Lead Contact

U.S. Environmental Protection Agency

Compliance Reporting and COVID 19

- EPA Guidance Issued, CD-2020-05
- [https://iaspub.epa.gov/otaqpub/display_file.jsp?docid=49390&flag=1](https://iaspub.epa.gov/otaqpub/display_file.jsp?docid=49390&flag=1)

- “If you are unable to meet the compliance deadline because of COVID-19 impacts, we ask that you instead submit a placeholder document through the EV-CIS system. Please submit the same type of compliance document that is due, but instead of the compliance information that you would normally report, explain in the document your inability to report the compliance information. Additionally, you may also contact your EPA certification representative to explain any extenuating circumstances.”
EV-CIS Production Volume Reporting Module

• Launch was on schedule. MY 2020 data may be entered via this module

• First release only supports HD engines (Phases I and II)
  – Support for other industries will be phased in over time.
  – Long-term intent is to replace the many different collection points and processes for submitting production volume data with one consistent method.

• Webinar presentation:
Certification Focus

• Certification review for new engine families in all sectors, emphasizing the following:
  – DF Validation for Tier 4 > 56 kW and on-highway, DF Carry-Across proposals
  – Continued oversight on screening AECDs for defeat devices
  – Ensuring appropriate phase out of NTE deficiencies
AECD Reviews

• Reviewing AECDs is often the most time-consuming components of certification

• To facilitate screening process:
  – Be sure all AECDs are disclosed
  – Develop one comprehensive document that represents all AECDs
    • Describe AECDs that are present in every engine family you plan to certify
    • For an individual certification application, “gray-out” those AECDs which do not apply
  – Use the template found at the end of guidance letter CCD-04-12 (June 15, 2004) for reporting each AECD and provide thorough information to support your statements
AECD Reviews, cont’d

– Group AECDs by justification that they are not defeat devices:
  • Those that do not reduce the effectiveness of the emission controls
  • Those that are substantially included in the applicable test procedures
  • Those that are necessary to prevent engine damage
  • Those that are active only during starting of the engine
  • Those that are a part of the design for engines installed in emergency vehicles/equipment

– Familiarize yourself with past Agency guidance on the topic, including VPCD-98-13 and CCD-01-02

– Err on the side of disclosure
Carryover Engine Families

- Manufacturers routinely submit running changes after certification and certify the same family as a carryover in subsequent years.
- For carryover engine families, it’s helpful for manufacturers to identify any changes from the previous model year.
  - Time is wasted in the review process if we have to determine for ourselves what has changed from one model year to the next.
  - Creates challenges later if we find issues with a significant running change that has not been thoroughly vetted.
- When submitting running changes, we encourage you to also communicate with your EPA contact about the submittal outside of Verify.
Certification Data

• Posting of Manufacturer Certification Data
  – Using Class Determination (CD-13-05 – Class Determination of Confidential Business Information) to organize and expand the certification data we currently post on EPA’s website: https://www.epa.gov/compliance-and-fuel-economy-data/engine-certification-data
  – Certification data for all industries is posted on a quarterly basis (January, April, July, and October)
  – Data is not posted until the manufacturer-submitted “Introduction into Commerce” date has passed
Manufacturer Compliance Reporting

• Data will be reviewed in conjunction with certification applications

• Failure to report may result in:
  – Referral of violation to OECA for possible assessment of civil penalties
  – Revocation, suspension, or voiding of current or prior model year certificates
  – Delay issuance of new certificates

• Information contained in reports is used to make stand-alone compliance determinations (e.g., PLT and ABT), to prioritize compliance oversight activities, and as a data source to assess rule effectiveness

• Refer to CISD-10-17 (September 3, 2010)
EPA Compliance Testing

• Compliance testing program continues with goal to:
  – Ensure benefits stated in rulemakings are reflected in real world operation
  – Address level playing field issues for all market participants
  – Address compliance issues for new and in-use engines
EPA Compliance Testing

• Compliance testing and analysis will utilize all of the available tools, including:
  – Confirmatory tests
  – Selective enforcement audits
  – General laboratory and records audits
  – In-use data evaluation from manufacturer and EPA test programs
  – Informal site visits

• Important that manufacturers submit certification and production plans
  – Ensures timely selection and performance of compliance testing
  – See CD-13-06 (March 2013) for further instructions

• Also important that manufacturers maintain up-to-date contact information in Verify
Emission-Related Defects and Voluntary Recalls

• Part 1068 –
  – EV-CIS Defect/Recall Module Rollout is Complete

• Please keep your certification representative informed of submissions!
Transition Program for Equipment Manufacturers
(2021 = last year of TPEM!!)

• **2021 = last year of TPEM!!**
  – Program has already ended for all power categories except >560 kW
  – Ends completely on December 31, 2021

• **Web site**
  – Resource for program participants

• **Hardship relief**
  – Equipment manufacturers in need of hardship relief should be referred to [https://www.epa.gov/vehicle-and-engine-certification/hardship-relief-participants-transition-program-equipment](https://www.epa.gov/vehicle-and-engine-certification/hardship-relief-participants-transition-program-equipment)
Marine CI/Locomotive update

- Working on appropriate SCR DF validation guidance with Marine/Locomotive Committee
- Expect to release update of Marine CI Remanufacturing Q&A Document (EPA-420-F-2009) next month (May, 2021)
Compliance Report

  - Reports present convenient reference for environmental data collected from manufacturers and generated in our test programs
Diesel Engine Compliance Center

EMA Certification Workshop
On Highway Breakout Session
April 28, 2021
Transmission and Axle Selective Enforcement Audits

SEA Provisions: Subpart E of 40CFR 1068

• We expect to conduct an axle or transmission audit during calendar year 2022.

• What do we envision?
  – EPA identifies an axle or transmission of interest (production volume, GEM input values)
  – EPA contacts a vehicle OEM that sells a vehicle configuration utilizing the axle or transmission of interest to obtain information
Transmission and Axle Selective Enforcement Audits, continued

– OEM receives a Selective Enforcement Audit Test Order
– OEM reaches out to supplier
– OEM/Supplier determine which entity will interact with EPA during SEA (one or both)
Transmission and Axle Selective Enforcement Audits, continued

– EPA intends to test at the test lab used to originally quantify performance or an independent test lab

– Audit will include evaluation of test cell calibration/verification processes and QA/QC processes associated with both test procedures and test cell.

– 40CFR 1037.560 and 1037.565 define the Axle and Transmission efficiency tests

– 40CFR 1037.320 provides a high level description of audit procedures for axles and transmissions.
Transmission and Axle Selective Enforcement Audits, continued

• Typical SEA Timeline:
  – January: Contact OEMs for Q/A interaction
  – January: Delivery of Test Order to OEM
  – Early Q1: Initial meeting with OEM and axle/transmission manufacturer
  – Q1 – ~Q2: Regular meetings with component and/or OEM
  – Q3: Lab audit and component test completion
  – Late Q3/Early Q4: SEA Completion (40CFR 1068.450)
Aerodynamic Testing – Selective Enforcement Audits

• We expect to conduct Coastdown Tests Q2, 2023. (40CFR 1037.305)

• What do we envision?
  – EPA identifies tractors of interest
  – EPA contacts vehicle OEMs for discussion
  – EPA delivers Test Order to OEM
  – Testing by contractor at KSC late Q2 or early Q3, 2023
Phase 2 Readiness

- MY 2024 Complete Engine Confirmatory Test with Fuel Maps
- What do we envision?
  - EPA identifies engine families of interest
  - EPA contacts engine manufacturers
  - EPA delivers Test Order to manufacturer Q2, 2023
  - Confirmatory Tests occur Q3, Q4, 2023 in NVFEL Test Cell #5
Phase 2 Readiness

• MY 2024 Complete Engine Confirmatory Test with Fuel Maps

• How do we prepare?
  – We dedicate Q1 and Q2, 2023 to Phase 2 Readiness in Cell 5.
  – Looking for an appropriate engine with established, high confidence manufacturer data set
Phase 2 ABT

• Determining Available Phase 1 Engine Credits in Phase 2: (see Tech Amendments 40CFR 1036.701, Phase 1 vocational engine credits available to Phase 2)?
  – We plan to recalculate based upon data provided in appropriate MY “270 day report”.
  – Outdated vocational engine CO$_2$ standard will be replaced with the new standard to determine the effects upon MY 2016 - 2020
  – Updated calculations will be supplied to manufacturer (for review) after MY 2020 calculations are completed
Diesel Engine Compliance Center

EMA Certification Workshop

OBD

April 29, 2021
OBD Demonstration Guidance for MY 2022

- Guidance issued 26 April:
  - [https://iaspub.epa.gov/otaqpub/display_file.jsp?docid=52574&flag=1](https://iaspub.epa.gov/otaqpub/display_file.jsp?docid=52574&flag=1)
    - Contact DECC staff to discuss

- Additional guidance forthcoming on MY ‘23
- Working with ASD on other issues (UDS, MY ‘24)
