NOTES:

E. Household Roster

BE SURE YOU ARE TALKING TO AN ELIGIBLE ENUMERATION INFORMANT: i.e. A FULL-TIME RESIDENT OF THE HOUSEHOLD AT LEAST 16 YEARS OF AGE.

1. How many people currently live in this home? _____ people

2. What are the names of all the people who currently live here? Let's list them in order of age, starting with the oldest.

CHECKPOINT: DOES THE NUMBER OF NAMES IN THE ROSTER EQUAL THE ENTRY FOR QUESTION 1?

☐ Yes - CONTINUE WITH QUESTION 3

☐ No - RESOLVE WITH RESPONDENT, CORRECT QUESTION OR ROSTER AS NECESSARY, THEN CONTINUE.

3. For each person in the roster, including yourself, I need to know the following:

   a. age (in years at last birthday),
   b. the type of work of each person currently employed outside of the home for at least 30 hours a week or more, and
   c. current smoking status (Yes/No). (Yes = at least 1 cigarette, cigar, or pipeful per day)

INDICATE THE ENUMERATION RESPONDENT BY PLACING "R" IN THE MARGIN BESIDE THE NAME

Household Member Name	(a) Age	(b) Type of Work Outside The Home 30 Hrs a Week Or More	(c) Smoker(Y/N)	(d) Consecutive # for Non-Smoker

4. Is there anyone else, such as a relative or roomer, who is currently living here, who you did not list above?

   Yes - ADD TO LIST AND COMPLETE ALL INFORMATION
   No - CONTINUE

5. How many years of school has the head of the household completed? _____ years

F. Sample Respondent Selection

(PLACE SAMPLING LABEL HERE)

INTERVIEWER: USE THE FOLLOWING SAMPLING INSTRUCTIONS TO DETERMINE WHICH, IF ANY, OF THE ROSTERED MEMBERS SHOULD BE INCLUDED IN THE STUDY.

1. Consecutively number the non-smoking household residents 10 years of age or older in column (d) of the roster.
2. Circle the number of non-smokers aged 10 or more on line 1 of the sampling label.
3. Circle the Y or N on line 2 immediately below the circled number on line 1.
4. If circled letter is N, thank respondent for cooperation. Answer any questions. Leave household. Circle code 20 in Section H.
5. If circled letter is Y, circle the person number on line 3 immediately below the circled number on line 1.
6. Circle the selected number from line 3 in column (d) of the roster. This is your selected respondent. At the same time, circle the respondent's name in column (a) and enter the same number in the "sample person number" blanks on the label on the top of the front page of this document. Enter selected respondents name on line 1, Section G.
7. If the entry in column (b) for the selected respondent indicates that he/she is employed or if anyone in the household is a smoker, continue with the contacting and recruiting process. Otherwise, if the selected respondent is not employed and no one smokes, use the inclusion indicator on line 4 of the sample label to determine if the respondent is to be included. If the indicator is "Y", continue with the contacting and recruiting process. If the indicator is "N", thank the respondent, answer any questions, and leave. Circle code 20 in Section H.
8. Use the random day number found on line 5 of the sample label to determine the selected monitoring day.

INSTRUCTIONS FOR THE MONITORING DAY SELECTION PROCESS ARE IN YOUR FI MANUAL. ENTER SELECTED DAY IN SECTION G, LINE 5, BELOW.

G. Participant Recruitment

1. Selected Participant's Name: _____

2. Recruitment effort completed during enumeration visit.

   Yes - GO TO 5
   No - CONTINUE

3. Appointment to return to complete recruitment of the selected respondent.

   Day: _____ Date: _____ Time: _____

4. Appointment made by:

   Selected participant _____ Enumeration respondent _____

5. Selected Day for Monitoring _____

6. Monitoring Appointment:

   Day: _____ Date: _____ Time: _____

H. Results of Recruitment Effort

10 - Participant agrees to participate on selected date
11 - Participant agrees to participate on other date
12 - Unable to schedule monitoring appointment on available dates
13 - No contact with selected participant after multiple attempts
14 - Refusal
20 - Household not selected

If refusal, indicate main reason: _____

_____

Study Questionnaire

OMB No.: 2080-0037
Expires: June, 1992

THE PERSONAL EXPOSURE STUDY OF AIRBORNE PARTICLES IN RIVERSIDE

Sponsored by:

U.S. Environmental Protection Agency
Environmental Monitoring systems Laboratory
Research Triangle Park, N.C.
and
California Air Resources Board
Sacremento, California

Conducted by:

Research Triangle Institute
Research Triangle Park, NC 27709
and
Harvard School of Public Health
Harvard University
Boston, MA 02115

QUESTIONNAIRE

The Research Triangle Institute and the Harvard School of Public Health are undertaking a research study for the U.S. Environmental Protection Agency and the California Air Resources Board to assess levels of human exposure to particulate matter during normal daily activities. The information recorded in this questionnaire will be held in strict confidence and will be used solely for research into the effects of environmental factors on public health. All results will be summarized for groups of people; no information about individual persons will be released without the consent of the individual. While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.

NOTIFICATION TO RESPONDENT OF ESTIMATED BURDEN

Public reporting burden for this collection of information is estimated to vary from 3.5 to 4.0 hours per response, with an average of 3.75 hours per response, including time for reviewing instructions and completing the survey and log. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM-223, U.S. Environmental Protection Agency, 401 M St., S.W., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA."

Participant ID # ☐☐ - ☐☐☐ - ☐ - ☐ - ☐☐
Seg # SHU # CHK MHU Per ID #

Chemistry ID # _____ (PLACE LABEL HERE) _____

The purpose of this questionnaire is to obtain information about you, your residence, your occupation and the environment in which you work. We are asking the same questions of each respondent in the study.

First, I would like to ask some general questions about you.

1. Sex? (by observation) 1) MALE 2) FEMALE

2. What is your year of birth? 19___

3. What is the last year of school which you completed? (CIRCLE ONE)
(IF CURRENTLY IN SCHOOL, INDICATE CURRENT YEAR)

Elementary	1	2	3	4	5	6
Jr/Sr. High	7	8	9	10	11	12
College (Tech School)	13	14	15	16	17	17+

4. To what ethnic group (race) do you belong?
(RECORD BY OBSERVATION, IF POSSIBLE)

1) White, Non-Hispanic [1]

2) Hispanic [2]

3) Black [3]

4) Asian [4]

5) Other (SPECIFY) [5]

_____

5. About when was your home originally built? Please consider when it was originally built, not when it was remodeled, added to, or converted.
(CHECK ONE BOX)

1)	1985 to Present	[1]	5)	1960-1969	[5]
2)	1980-1984	[2]	6)	1950-1959	[6]
3)	1975-1979	[3]	7)	1949 or Earlier	[7]
4)	1970-1974	[4]	8)	Don't Know	[8]

6. Do you have:

	Yes	No
a. an unvented clothes dryer located in the house or an attached structure, such as a garage?	1	2
b. an unvented kerosene heater in the house or an attached structure?	1	2
c. a fireplace or wood stove in the house or an attached structure?	1	2
d. a whole-house or attic fan?	1	2

7. How many rooms do you have in your home? (Do not count bathrooms, porches, balconies, foyers, or halls.)

_____ rooms

8. Please list each room in your home and estimate the percentage of usable floor space covered by rugs or carpets.

Room	% Of Floor Covered by Rug or Carpet
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
(Other areas not identified as a unique room.)	_____

9. Do you have any pets, such as dogs or cats or other furry animals, which usually spend some time each day in your home?

Yes [1]

No [2]

10. How many people regularly smoke INSIDE YOUR HOME?

[0] 0

[1] 1

[2] 2

[3] 3 or more

Finally, I have a few questions about your occupation and work environment.

11. Do you have a paid job outside of the home?

1) Yes (CONTINUE)
2) No, self-employed in the home. (CONTINUE)
3) No, a full-time student. (CONTINUE)
4) No, full-time homemaker. (GO TO 20)
5) No, out of work just now, but usually employed. (GO TO 20)
6) No, retired or disabled (GO TO 20)
7) No, other (SPECIFY) _____ (GO TO 20)

12. At the present time, how many hours per day and days per week do you normally work at your primary job or attend classes?

1) _____ hours/day 2) _____ days/week

13. What are your primary job duties? _____

14. a. Which of the following describes your primary work or school setting?

[1] Indoors (CONTINUE)

[2] Outdoors (GO TO 15)

[3] In a vehicle (GO TO 16)

b. Which of the following best describes your indoor work or school setting?

[1] office, educational facility, medical facility

[2] warehouse, factory, plant

[3] retail, sales

[4] Other, (SPECIFY): _____

15. What is the address of the specific location where your primary work station is located? (Include the building name or number number, if appropriate.) If student, indicate name and location of school.

_____

_____

_____

_____ ZIP

16. Do you have another job, or if employed, do you go to school part-time?

1) Yes (CONTINUE) 2) No (GO TO 20)

(IF RESPONDENT INDICATES BOTH SECOND JOB AND SCHOOL, ANSWER 17-19 FOR SECOND JOB ONLY)

17. How many hours per day and days per week do you work during a normal week at your second job or are you in school?

1) ____ hours/day 2) ____ days/week

18. What are your primary duties at this job? _____

19. a. Which of the following describes the work or school setting?

[1] Indoors (CONTINUE)

[2] Outdoors (GO TO 20)

[3] In a vehicle (GO TO 20)

b. Which of the following best describes this indoor work or school setting?

[1] office, educational facility, medical facility

[2] warehouse, factory, plant

[3] retail, sales

[4] Other, (SPECIFY): _____

20. Do you have a part-time job or work as a volunteer?

1) Yes (CONTINUE) 2) No (GO TO 24)

21. How many hours per week do you work part-time or as a volunteer?

_____ hours

22. What are your job duties at this job? _____

23. a. Which of the following describe the work setting?

[1] Indoors (CONTINUE)

[2] Outdoors (GO TO 24)

[3] In a vehicle (GO TO 24)

b. Which of the following best describe this indoor work setting?

[1] office, educational facility, medical facility

[2] warehouse, factory, plant

[3] retail, sales

[4] Other, (SPECIFY): _____

24. INTERVIEWER: IF RESPONDENT REFUSES TO RESPOND OR DEMONSTRATES RELUCTANCE, DO NOT ATTEMPT TO FORCE A RESPONSE.

As I indicated before, all your responses are strictly confidential, and you may refuse to answer any question. In order to make comparisons of groups of people, information about approximate household income is important. Please estimate the total gross income of all members of the household. Which of the following categories contains your estimate?

1. less than $10,000 [1]

2. $10,000 to $29,999 [2]

3. $30,000 to $49,999 [3]

4. $50,000 to $79,999 [4]

5. $80,000 or greater [5]

[94] RE [97] DK

This completes the interview. Are there any questions which you have that I can answer? (ANSWER ANY QUESTIONS AND CONTINUE) Thank you very much for your cooperation.

RECORD ANSWERS TO QUESTIONS A, B, AND C BY OBSERVATION.

A. Which best describes this building?

1. A MOBILE HOME OR TRAILER
2. A ONE-FAMILY HOUSE DETACHED FROM ANY OTHER HOUSE
3. A ONE-FAMILY HOUSE ATTACHED TO ONE OR MORE HOUSES
4. A BUILDING FOR 2 FAMILIES
5. A BUILDING FOR 3 OR 4 FAMILIES
6. A BUILDING FOR 5 TO 9 FAMILIES
7. A BUILDING FOR 10 TO 19 FAMILIES
8. A BUILDING FOR 20 OR MORE FAMILIES
9. A BOAT, TENT, VAN, ETC.
10. OTHER, PLEASE SPECIFY: _____

B. Is the house located within 100 yards of a busy roadway?

Yes [1]

No [2]

C. Are any of the following sources of dirt located within 100 yards of this house?

	Yes	No
1) Dirt drive	[1]	[2]
2) Other, (SPECIFY) _____	[1]	[2]

			1	2	3	4	5	00 ____% ____:____ hr/min

*Include: (1) time walking to and from vehicle
(2) time walking, biking, etc. along a roadway
(3) time in a car, bus, truck, etc. on a roadway

C. Potential Exposure Influence During the Monitoring Period

1. a. Did you go to work during this monitoring period?

[1] Yes (GO TO b)

[2] No (GO TO 2)

1. b. Of the time you spent at work during this monitoring period, how long did you spend in the following locations?

INTERVIEWER: ENTER RESPONSES IN i-iii IN HOURS/MINUTES. ACCOUNT FOR ENTIRE WORK DAY.

i) At your usual indoor work location ____/____

ii) At your usual outdoor work location ____/____

iii) At another work location ____/____

2. I am going to read you a list of activities. For each activity, please tell me if you did this activity yourself, were near where this activity was done, or if this activity was done at your home while you were away.

INTERVIEWER: CIRCLE Y OR N BY EACH ACTIVITY AND FOR EACH ACTIVITY WITH A Y CIRCLED, ENTER THE MINUTES THE RESPONDENT ENGAGED IN OR WAS IN THE SAME AREA FOR EACH ACTIVITY AT HOME OR AWAY. ENTER -0- WHERE NECESSARY. NEAR THE ACTIVITY IS GENERALLY WITHIN 100 YARDS OR CLOSE ENOUGH TO SMELL ODORS FROM THE ACTIVITY.

Activity	Done or Nearby	DONE		NEARBY		At Home,
		At home	Away	At home	Away	Resp. Away
a) vacuuming	Y/N	_____	_____	_____	_____	_____
b) dusting	Y/N	_____	_____	_____	_____	_____

d) lawn mowing	Y/N	_____	_____	_____	_____	_____
e) gardening	Y/N	_____	_____	_____	_____	_____
f) burning leaves or rubbish	Y/N	_____	_____	_____	_____	_____
g) outdoor cooking-grilling, frying, barbecuing	Y/N	_____	_____	_____	_____	_____

Activity	Done or Nearby	DONE At home	DONE Away	NEARBY At home	NEARBY Away	At Home, Resp. Away
h) indoor cooking - grilling, frying	Y/N					
i) using clothes dryer	Y/N					
j) woodworking	Y/N					
k) metal working, welding	Y/N					
l) spray painting	Y/N					
m) other painting	Y/N					
n) outdoor recreation	Y/N					
o) other activities near areas with dust, smoke, or pollen	Y/N					

(SPECIFY): _____

3. Which of the following heating, ventilating, or air cleaning devices were used in your home during this period? Please indicate the duration of use, in hours, for each item used.

	Yes	No	Duration
a) natural ventilation (open doors or windows)	1	2	_____
b) central air conditioning or heating (Estimate actual time the device was running.)	1	2	_____
c) whole-house or attic fan	1	2	_____
d) ultrasonic or cool mist humidifiers	1	2	_____
e) filtration systems (including filters, ionizers and electrostatic precipitators)	1	2	_____
f) unvented kerosene heaters	1	2	_____
g) fire place	1	2	_____
h) wood-burning stove	1	2	_____

4. How many cigarettes, pipefuls, and/or cigars were smoked in your house during this period?

_____ # cigarettes _____ # pipes and/or cigars

5. Did you smoke any tobacco products (cigarettes, cigars, pipes) during this period?

[1] Yes

[2] No

6. Were there any other sources of smoke present in the home during this period, such as burnt food or candles?

[1] Yes

[2] No

7. a. Was a vehicle started or run in a garage attached to your home during this period?

[1] No (GO TO END)

[2] Yes (CONTINUE)

b. For how long? _____ minute(s)

c. Was it diesel powered?

[1] Yes

[2] No

APPENDIX H

Field Control Losses

February 6, 1991

Ms. Liz Ota
Indoor Exposure Assessment Section
Air Resources Board
1102 Q Street
P. O. Box 2815
Sacramento, CA 95812

Dear Liz:

The purpose of this letter is to provide a project update and to apprise you of a change in our QC procedures. In early January, we started our sample analyses for the PTEAM project. This began with a simple laboratory validation of spiked and unspiked XAD/filter cartridges similar to the experiments performed in September. The results of the analyses showed little background contamination and high recovery (>75%) of all PAHs and phthalates. Based on these results, we proceeded to analyze several field control and field blank samples. Field blanks were XAD/filter cartridges that were prepared then shipped to the field and handled with field samples. The field controls were XAD/filter cartridges that were spiked with known amounts of target compounds, as shown in Table 1 then shipped to the field and handled with field samples. As indicated on the table, the lower molecular weight PAHs and phthalates were spiked into the XAD cartridges, the higher molecular weight PAHs were spiked directly onto the filter. Analytical results for these samples showed little background contamination on the field blanks, although some background was found for the phthalates. Recovery of the field controls was good (80-110%) for those chemicals spiked onto the XAD. However, poor recovery was seen for those chemicals spiked directly onto the filter, with BaP giving the lowest result (30-40%).

Since this appeared to be a very significant problem, I did a survey (both literature and personal contact) to determine the validity of using spiked filters as field controls for the higher molecular weight PAHs. The results of this review are summarized in Table 2. Essentially, there is no good way to prepare field controls for the high molecular weight PAHs including BaP. Further, our approach of spiking onto the filters would probably accelerate both volatilization and chemical decomposition losses compared to the actual particulate matrix found on field sample. As a consequence, the approach will not provide a valid indicator for sample behavior.

Based on this information and in keeping with procedures used in other laboratories, we now propose to run laboratory controls, (i.e. material spiked onto the XAD/filter cartridge with no storage) in lieu of field controls to demonstrate method recovery for the high molecular weight PAHs. We will also analyze multiple samples of the NBS urban particulate to demonstrate efficiency of the extraction and analysis procedure. Field controls will still be used to assess the method performance for those chemicals spiked onto the XAD resin. We are currently working on methods for embedding NBS urban particulates on filters that can be used as field controls during future studies.

We are now analyzing samples using these QC procedures. Approximately 60 samples have been analyzed to date. Recoveries for all control samples look good with the exception discussed above. In addition, recovery of surrogate compounds added to each sample prior to extraction look good. We are hoping to analyze 12 to 14 samples/day and finish sample analyses toward the end of March.

I will call you to discuss this later today but thought a summary of this information would be useful prior to our phone conversation. Talk to you shortly.

Sincerely,

Linda S. Sheldon, Ph.D.

LSS:mhg

Benzo(e)pyrene	10
Benzo(a)pyrene	5
Indeno(c,d)pyrene	5
Benzo(g,h,i)perylene	12
Coronene	10

Table 2. Summary of Field Control Survey

Contact	Information
Nancy Wilson - EPA	They have not spiked filter with neat PAHs for field control. Would expect significant compound losses during storage.
Jane Chuang - Battelle	They have not spiked neat PAHs onto filter. For PTEAM prepilot they spiked some low molecular weight PAHs into XAD as field controls, did not prepare field controls for higher molecular weight PAHs. Published study in ES & T (21:748, 1987) shows stability of PAHs on particulate on filter but no data on neat compounds on filters.
Paul Leoy	Published data (Arch. of Env. Health, 43:304, 1988). Did not use field controls for high molecular weight PAH. Rather used spiked filters in lab to demonstrate recovery from medium. Analyzed NBS urban dust as additional control.
Joan Daisey	CARB report. Did not prepare field controls for PAHs collected on particulate. Used urban dust to demonstrate extraction efficiency.
Roger Ailkson, Janet Ary	CARB report. Did not prepare field controls for PAHs.
Draft ASTM method: PNN in Indoor Air	No field controls specified. Recovery study without storage required before calibration and analysis. NBS SRM specified for instrument calibration.

APPENDIX I

Air Exchange Rate Information Generated During PTEAM Pilot Study

PTEAM Pilot Study – Equations Used to Calculate Air Exchange Rate

The air exchange rate (AER) is calculated as follows:

$$AER=\frac{n\times S\div V}{C}$$

where n: number of PFT sources

S: emission rate (pL/hr)

V: house volume (m^3)

C: PFT concentration (pL/L)

The emission rate is defined by the equation:

$$S=E\times 10^6\frac{\mu g}{g}\times\frac{24.5\mu L}{350\mu g}\times 10^6\frac{pL}{\mu L}$$

where E is PFT emission rate (g/hr) and the other quantities are physical constants. Two emission rates are used: 4.57×10^{-5} for sources labeled by HSPH as "NN" series and 4.92×10^{-5} for all other sources. The emission rate used in the equation is the weighted average of these, i.e.:

$$E=4.57\times10^{-5}\times(\%\ NN\ series\ sources)+4.92\times10^{-5}\times(1-\%\ NN\ series\ sources)$$

There are typically either six or eight sources per household. House volume was estimated in ft^3 in the field; this is converted to m^3 using the relationship 28.31685 cubic feet = 1 cubic meter.

The PFT concentration is calculated as:

$$C=\frac{P}{ELP\times SR}$$

where P: amount of PFT collected by the CAT (pL)

ELP: elapsed time CAT was exposed (hr)

SR: CAT sampling rate = 0.00892 L/hr

PTEAM pilot study AER and associated fields
Created 3/16/92 HSPH, Butler Key below

CAT ID	PID	LOC	Amt PFT collected (pL)	Comments	Date of Analysis	PID house vol (ft3)	tot PFT sources	% NN ser. sources	elapsed time (hr)	AER (hr-1)
C8150	001A	BED	3.00	<	30-Jul-91	4,940	6	100.0%	13.5	5.50
C8164	001A	BED	4.90	<	05-Aug-91	4,940	6	100.0%	8.1	2.03

...

KEY:

Eqs: AER = (n * S)/(V * C)

S = E * 1E+6μg/g * 24.5μL/350μg * 1E+6pL/μL

C = P/(ELP * SR)

where: n – tot PFT sources

S – emission rate

V – PID house vol

C – PFT concentration

E – PFT emission rate = 4.57E-5 for NN ser. sources
4.92E-5 for other sources
(emission rate weighted avg of above using "% NN series sources" field)

P – Amt PFT collected

ELP – elapsed time CAT was exposed

APPENDIX K

Quality Assurance Statement

QA Statement

Quality Assurance activities undertaken by the Analytical and Chemical Sciences (ACS) Quality Assurance Office in support of this program (RTI Project No. 070N-4570, ARB Contract No. A933-144) included:

-meetings with the Project Leader on matters affecting data quality,
-conducting periodic reviews and audits of the data measurement systems, and
-monitoring situations requiring corrective action.

The ACS QA Office conducts systems audits of current ACS studies to ascertain that data are being recorded properly, SOPs are being implemented, and that the results reported reflect the raw data of the study. Written reports of all reviews and audits are maintained by the ACS QA Officer, and results have been reported to the program management.

Audit/Review	Reported
Data Review (QC Data)	June 20, 1991
Review of Internal QC Systems and Data	July 8, 1991
Review of Preparation of Materials	July 8, 1991
Review of Data Processing	July 15, 1991
Data Review (Sample Data)	Aug. 2, 1991

Regularly scheduled Inspections conducted during the course of this study include:

Inspection	Reported
Instrument Log Notebook (ACS-SOP-815-003)	September, 1991
Notebook (ACS-SOP-815-002)	July, 1991
Laboratory (Systems) (ACS-SOP-815-001)	July, 1991
SOP Review (ACS-SOP-100-001)	August, 1991

Doris Smith
ACS QA Officer
